Ishlab chiqarilgan mahsulot sifati mahsulot ishlab chiqarishning barcha bosqichlarida yuzaga keladigan ko'plab tasodifiy omillarga ham bog'liq. Sifat menejmenti tizimini joriy qilish tashkilotdagi barcha bo'limlarning muvofiqlashtirilgan faoliyati orqali ushbu omillarning paydo bo'lishining oldini olish uchun zarurdir. Bu holda sifat menejmenti tizimi ishlab chiqarish jarayoniga doimiy ta'sir ko'rsatadigan tuzatish choralarini va ishlab chiqarilgan mahsulotni oxirgi foydalanuvchini qoniqtiradigan sifat darajasi bilan sotishni ta'minlaydi [5].

Sifatni boshqarishda tizim, muhit, maqsad, dastur kabi tushunchalar doimiy ravishda qo'llaniladi. Nazorat tizimi va boshqaruv tizimi ham mavjud. Korxonani boshqarishning ko'p darajalari boshqariladigan tizim kabi ko'rinadi. Sifat menejmenti tizimi boshqaruv tizimi tomonidan yaratiladi va qo'llabquvvatlanadi.

Sifat bilan bog'liq muammolarni hal qilish uchun mahsulotning hayot aylanishining barcha bosqichlarida sifatni to'g'ri baholash kerak. Sifatni baholash mahsulotni ishlab chiqarish va foydalanishning har qanday bosqichida sifat menejmentini shakllantirishga asoslangan.

Mahsulotning sifat darajasi, u baholanayotgan mahsulotning sifat ko'rsatkichlarini tegishli asosiy ko'rsatkichlar bilan taqqoslashga asoslanadi. Asosiy qiymat, ma'lum vaqt davomida erishishi mumkin bo'lgan maqbul daraja sifatida namoyon bo'ladi. Asosiy qiymatlarning namunasi ishonchli sifat ma'lumotlari bilan ma'lum vaqt ichida erishilgan ko'rsatkichlarning eng yaxshi mahalliy va xorijiy namunalari bo'lishi mumkin [6].

Mahsulot sifati darajasini baholash baholanayotgan mahsulot sifat ko'rsatkichlarini tanlash, ushbu ko'rsatkichlarning qiymatlarini aniqlash va ularni asosiy sifatida tanlangan ko'rsatkichlar bilan taqqoslash bo'yicha harakatlardir. Mahsulot sifati ko'rsatkichlarini tanlash uni qo'llashning maqsadi va shartlarini, iste'molchilarning talablarini hisobga olgan holda, shuningdek mahsulotni qo'llash sohasidagi amaldagi sifat talablarini hisobga olgan holda amalga oshiriladi. Sifat darajasini baholashni bosqichlarga bo'lish mumkin [7].

Mahsulot ishlab chiqarishning tartibga solinadigan va tartibga solinmagan davlat qonunchiligida ham sifat menejmentining yagona tizimini ishlab chiqish,

shuningdek, ishlab chiqaruvchi bajarishi kerak bo'lgan turli xil standartlar, ko'rsatmalar, qoidalar va boshqa hujjatlarning umumiy sonini kamaytirishga yordam beradi. ularning soni va nomuvofiqligi tufayli u ko'pincha qila olmaydi bajarish.

Sifatni boshqarish sohasidagi korxonalar oldida turgan barcha muammolarni hal qilishni ta'minlash uchun maxsus tayyorlangan mutaxassislar kerak. Bular sifat menejmentlari. Ularning funksiyalari, birinchi navbatda, sifat tizimi darajasida sifatni tashkil etish va boshqarish, shuningdek operatsion darajada boshqaruvni tashkil qilishni o'z ichiga oladi.

Xalqaro bozorda o'z mahsulotlari bilan zamonaviy kompaniya rejalashtirilgan mahsulot sifatiga erishish uchun yuqorida aytib o'tilgan barcha sifat menejmenti tizimlaridan foydalanadi. Natijada sifat menejmenti tizimini joriy etishning zamonaviy usullari korxonaning raqobatbardosh ustunligini oshiradigan tizimli ishlarga imkon beradi. Mijozlar, ayniqsa yirik mijozlar, ko'pincha shartnoma tuzishdan oldin mahsulot sifatiga ishonch hosil qilishni afzal ko'rishadi. Taqdimot, rasm va ko'rgazma namunalari ishonch bera olmaydi. Shuning uchun xalqaro standartlar tizimi joriy etish va unga rioya qilish mijozlarga ma'lum sifat darajasini kafolatlaydi [8,9].

Uning yordami bilan:

- mijozlarning ishonchini oshirish orqali doimiy mijozlarni ishonchli ushlab turish orqali mijozlar bilan yanada samarali ishlash mumkin;
- xodimlar natijalar uchun javobgarlikni his qilganda korxonaning ishlab chiqarish madaniyatini yaratishga ta'sir qilish;
- kompaniyaning investorlar uchun jozibadorligi oshadi;
- kompaniyaning ijobiy obro'si shakllanadi; korxonalar moliyaviy jihatdan barqarorlashadi.

Sifat masalasi har bir ishda, u qanday ish bo'lishidan qat'iy nazar, uning asosiy baholash kriteriyasi (ko'satkichi) bo'lishi kerak. Agarda har bir inson o'z ishiga yuqori ma'suliyat bilan qarab asosiy baholash kriteriyasiga munosib ravishda ish ko'rsa hayotimiz kundan – kunga yaxshilanib borishi turgan gap, bu esa butun mamlakat bo'ylab sifat masalasini yuqori darajaga ko'taradi [10].

Xulosa: Bugungi kunda mamlakat iqtisodiyotini rivojlantirish uchun xususiy tadbirkorlik, kichik va o'rta biznesni rivojlantirish, mamlakatimizning eksport salohiyatini oshirish va mahalliy mahsulotlarni ilgari surish vazifasi turibdi. Xalqaro standartlarga muvofiq sifat boshqaruvi tizimlarini joriy etish ushbu chora-tadbirlarni samarali amalga oshirish uchun dolzarb vazifaga aylandi.

Korxonalarda sifat menejmenti uslublarini takomillashtirishning dolzarbligi so'nggi yillarda zamonaviy ilg'or korxonalar tashkilotlarda sifat vositalari va usullarini joriy etish orqali mahsulot va xizmatlar sifatini oshirishga qaratilganligi bilan izohlanadi. Sifat menejmenti uslublarini takomillashtirish tashkilotni baholashning eng muhim mezonlaridan biri uning raqobatbardoshligini oshiradi.

QURILISH, SANOAT KORXONALARIDA SIFAT MENEJMENTI TIZIMINI JORIY QILISH - DAVR TALABI

Annotatsiya: mazkur maqolada qurilish korxonalarining sifat menejmentini jahon tajribasi asnosida tizimga joriy qilish va O'zbekiston iqtisodiyotini modernizatsiya qilish va jamiyatni isloh qilish jarayonida qurilish sohasini rivojlantirishga qaratilayotgan chora-tadbirlar to'g'risida so'z ketadi.

Kalit so'zlar: menejment, modernizatsiya, investitsiya, eksport va import, ISO tizimi, sifat.

IMPLEMENTATION OF THE QUALITY MANAGEMENT SYSTEM IN CONSTRUCTION AND INDUSTRIAL ENTERPRISES - THE REQUIREMENT OF THE TIME

Abstract. This article talks about the implementation of the quality management of construction enterprises in the system based on the world experience and the measures aimed at the development of the construction industry in the process of modernization of the economy of Uzbekistan and the reform of the society.

Keywords: management, modernization, investment, export and import, ISO system, quality.

Kirish. O'zbekistonda iqtisodiyotni modernizatsiya qilish va jamiyatni isloh qilish jarayonida qurilish sohasini rivojlantirishga qaratilayotgan choratadbirlar alohida o'rin egallaydi. Bu borada hukumat va davlat rahbarining farmon hamda qarorlari, qabul qilingan davlat dasturlari, ular ijrosini ta'minlash, tarmoqda islohotlar samaradorligini oshirish bo'yicha olib borilayotgan tadbirlar natijasida bunyodkorlik ko'lamlari tobora kengayib bormoqda.

Bugungi kunda mamlakatimizda 10 mingga yaqin qurilish materiallari ishlab chiqaruvchi korxonalar faoliyat yuritadi. Bundan ikki yil muqaddam bu borada 120 turdagi mahsulot tayyorlangan bo'lsa, bugungi kunda ularning soni 180 tadan oshdi. "O'zsanoatqurilishmateriallari" uyushmasiga a'zo korxonalarining o'zida joriy yilning yanvar-sentyabr oylarida 6-trillion so'mlik

mahsulot ishlab chiqarilgan, o'sish sur'ati o'tgan yilning shu davriga nisbatan 112,8 foizni tashkil qilgan.

Ta'kidlash joizki, sohaga investitsiyalarni keng jalb etish orqali mahsulot turlarini ko'paytirish va sifatni oshirish ustuvor vazifalar sirasiga kiradi. Jumladan, 2020 yilning to'qqiz oyida investitsiya dasturiga asosan 27 ta loyiha doirasida 228 million dollarlik (103,6 foiz) mablag'lar, shu jumladan, 150,7 million dollar (100,5 foiz) to'g'ridan-to'g'ri xorijiy investitsiyalar o'zlashtirilgan. 2021 yilda dasturga asosan 32 ta loyiha doirasidagi sarmoyalar 394,2 million dollarga yetishi, 284 mln dollar to'g'ridan-to'g'ri xorijiy investitsiyalar jalb etilishi ko'zlanyapti.

So'nggi yillarda qurilish materiallari sanoati sohasida olib borilayotgan tub islohotlar natijasida yangi turdagi innovatsion, eksportbop va import o'rnini bosuvchi qurilish materiallaridan gulqog'oz, suyuq gulqog'oz, zoloblok, gazoblok, penoblok, polistrolblok, kompozit (asbestosiz) shifer, o'tga chidamli g'isht, yumshoq tom yopqich materiallari, issiqlik izolyatsiyalash materiallari va mahsulotlari (bazaltli, mineralli, toshdan olingan), bazaltdan armatura, bazaltdan tola, bazaltdan setka, frita (kafellarga rang berishda ishlatiladigan xom ashyo), dekorativ bo'yoqlar, geotekstil, geomembrana, bentonit mat (to'shama), geosetka, georeshetka, geokompozitlar mahalliy ishlab chiqaruvchilar tomonidan o'zlashtirildi va ishlab chiqarilmoqda. Shuningdek, qurilish materiallarining sifatini belgilovchi standartlar xalqaro talablar bilan uyg'unlashtirilmoqda hamda 5458 ta xalqaro standartlar qabul qilindi (xalqaro va Yevropa (ISO, YEN) – 3987 ta, MDH mamlakatlari – 949 ta va milliy standartlar – 522 ta).

Jumladan, O'zbekiston Respublikasi Prezidentining 2019 yil 23 maydagi PQ-4335-son qarori 6-ilovasiga muvofiq, sifatli va xavfsiz yangi turdagi qurilish materiallarini ishlab chiqarishga joriy qilish maqsadida, qurilish materiallarini ishlab chiqarish bo'yicha 2019 yilda 340 ta va 2020 yilda 626 ta (qaror bilan 542 ta xalqaro standartlarni qabul qilish vazifasi belgilangan) xalqaro standartlar qabul qilindi, shu bilan birga 2021 yil oxirga qadar 505 ta xalqaro standartlar qabul qilinishi rejalashtirilgan.

Jahon tajribasi shuni ko'rsatadiki, korxonada ISO 9001 standarti talablariga javob beradigan sifat menejmenti tizimi (SMT)ni yaratish samaradorlik va rentabellikni oshirish, mijozlar ehtiyojini qondirishni ta'minlash, bozordagi mavqeyini mustahkamlash, mahsulot va xizmatlar tannarxini pasaytirish, korxonaga (tashkilotga) ishonchni sezilarli darajada oshirish imkonini beradi.

Mahsulotlar sifati va raqobatdoshligini oshirish uchun milliy standartlarni jahon talablariga moslashtirish hamda korxonalarga joriy qilish juda muhim hisoblanadi. So'nggi yillarda mamlakatimizda standartlarning 43 foizi xalqaro me'yorlar bilan uyg'unlashtirilib, ularning soni 12 mingtaga yetkazildi. Bunday ishlar natijasida eksport imkoniyatlari kengaymoqda.

Zero, prezidentimiz ta'kidlaganidek, agar mahsulot xalqaro sertifikatga ega bo'lmasa, u hech qachon raqobatbardosh bo'la olmaydi. Mamlakatda har bir tadbirkor standartni bilishi, tanishi kerak, shunday muhit yaratish zarur.

Korxonada xalqaro standartlarga mos keladigan sifat menejmenti tizimini joriy etish uchun belgilangan me'yorlarda ko'zda tutilgan bir qator harakatlar amalga oshirilishi kerak. Tajribalar shuni ko'rsatadiki, ISO tizimi korxonada hayotiga "noldan" qat'iy kirishi uchun olti oydan 18 oygacha davom etadi. Bunday sharoitda rahbarlar mutaxassislarning yordamidan foydalanishlari yoki o'zlari zarur choralarini ko'rishlari talab etiladi.

Zamonaviy qarashlarga ko'ra, sifat menejmenti tizimi sifat menejmentini to'liq amalga oshirish imkonini beradigan bir qancha elementlarning mavjudligini nazarda tutadi. Bu elementlarga quyidagilar kiradi:

- ❖ sifat siyosati;
- ❖ sifatni rejalashtirish tizimi (sifat maqsadlarini belgilash, kerakli resurslarni aniqlash va boshqalar);
- ❖ tashkilotning jarayon modeli (jarayonlarning tavsifi, sxemalar, protseduralar, ko'rsatmalar va boshqalar);
- ❖ sifatni nazorat qilish tizimi (kiruvchi resurslar, yarim tayyor mahsulotlar, mahsulotlar, jarayonlar va boshqalar);
- ❖ mijozlar ehtiyojini qondirish monitoringi tizimi;
- ❖ ichki sifat nazorati tizimi;
- ❖ tashqi sifatni ta'minlash tizimi (ayniqsa, sertifikatlash holatida);
- ❖ jarayonlar va mahsulotlar uchun sifatli axborotni boshqarish tizimi (sifat yozuvlari);
- ❖ rahbariyat tomonidan sifatni tahlil qilish tizimi;
- ❖ sifatni doimiy yaxshilash tizimi;
- ❖ nomuvofiqliklarni boshqarish;
- ❖ tuzatish choralari;
- ❖ profilaktika choralari;
- ❖ tashqi yetkazib beruvchilarni boshqarish tizimi.

Sifat menejmenti tizimining arxitekturasini va uning elementlarini muayyan tashkilotda amalga oshirishning o'ziga xos usullari uning ko'lamini, profili, tuzilishi, madaniyati, boshqaruv uslubi, maqsadlari va boshqa omillarga bog'liq.

Sifat menejmenti tizimini ishlab chiqish va joriy etish ISO 9000 standartlariga muvofiq, qat'iy belgilangan tartib asosida amalga oshiriladi. U quyidagi bosqichlarni o'z ichiga oladi:

1-bosqich. Korxonada xodimlarini ISO 9000 seriyali standartlarda belgilangan sifat tamoyillariga o'rgatish. Nafaqat tashkilot va bo'limlar/bo'limlar rahbarlari, balki oddiy xodimlar ham.

2-bosqich. Korxonada amaldagi sifat menejmenti tizimini tahlil qilish. Ushbu bosqichning maqsadi mavjud SMT ISO 9000 seriyali standartlar talablariga qanday mos kelishini va unda nimani tuzatish / takomillashtirish kerakligini tushunishdir.

3-bosqich. Kelajakdagi SMT asoslarini ishlab chiqish. Ushbu bosqichda korxonaning asosiy va yordamchi jarayonlari aniqlanadi, tashkiliy tuzilma

yaratiladi yoki to'g'rılanadi, sifatni boshqarish sohasidagi boshqaruv va xodimlarning vazifalari taqsimlanadi.

4-bosqich. SMT hujjatlari to'plamini ishlab chiqish.

5-bosqich. SMTni joriy etish. Ushbu bosqichda xodimlarni SMT talablarini hisobga olgan holda ishlashga o'rgatiladi, korxonaning ichki auditini muntazam ravishda amalga oshiradigan auditorlar guruhini tanlash va o'qitish, ishlab chiqilgan talablarni hisobga olgan holda korxonaning ishlash jarayonlarini qayta qurish.

6-bosqich. Sertifikatlash. Sifat menejmenti tizimi sertifikatlashtirish organining mutaxassislari tomonidan sinovdan o'tkaziladi, agar u ijobiy bo'lsa, kompaniya ISO 9001 yoki 9000 oilasining boshqa standartiga muvofiqlik sertifikatini oladi.

Xulosa: Bir so'z bilan aytganda, sifat menejmenti tizimini samarali amalga oshirish uchun korxonada sifat menejmenti sohasidagi ishlarni, biznesjarayonlarni batafsil tahlil qilish, korxonada sifat menejmenti tizimini ishlab chiqish va joriy etish bo'yicha ishchi guruh tuzish, kompaniyaning sifat strategiyasini aniqlash kerak. Qurilish korxonalarida SMTni joriy qilish korxonada faoliyatini doimiy ravishda takomillashtirish hamda tashkilotning ichki va yashqi bozorda raqobatbardoshligini oshirish uchun ximat qiladi hamda har qanday tashkilotning raqobatbardoshligini belgilaydi.

USMON AZIM SHE'RIYATIDA TABIAT TASVIRI VA INSON KECHINMALARI

Annotatsiya. Ushbu maqolada iste'dodli shoir Usmon Azim she'riyatidagi tabiat va tabiat hodisalarini tasvirlash, tarannum etish jihatlari o'rganildi. Tabiat tasviri bilan yo'g'rilgan she'rlar tahlili orqali ijodkor she'riyatining ayrim muhim xususiyatlari ochib beriladi. Peyzaj lirikasidagi insonning ruhiy holati va kayfiyatini manzaralashtirish masalalari o'rganildi.

Kalit so'zlar: tabiat lirikasi, peyzaj tasviri, psixologik tasvir, badiiy detallar, lirik qahramon, poetik ko'chim, metafora, lirik kechinma

IMAGERY OF NATURE AND HUMAN EXPERIENCES IN USMAN AZIM'S POETRY

Abstract. In this article, the aspects of describing and glorifying nature and natural phenomena in the poetry of the talented poet Usman Azim were studied. Some important features of the artist's poetry are revealed through the analysis of poems with nature images. The issues of beautifying the mental state and mood of a person in landscape lyrics were studied.

Key words: nature lyric, landscape image, psychological image, artistic details, lyrical hero, poetic movement, metaphor, lyrical experience.

Tabiat barcha san'at turlari va janrlari singari lirikaning ham boqiy mavzularidan biridir. San'at asarlarining qaysi birini olib qaramaylik, undagi peyzaj tasvirida albatta inson ishtirok etadi, tabiatning u yoki bu xossasi unga bo'lgan inson munosabati orqali qayta kashf etiladi; shu sababdan badiiy asardagi tabiat kartinalarida emotsional bo'yoqdorlik ufurib turadi. Shu ma'noda peyzaj lirikada inson his-tuyg'u va kechinmalarining yorqin tajassum topishi uchun fon va ayni vaqtda organik hujayra vazifasini o'taydi. Usmon Azim chizgan poetik manzaralar ko'z o'ngimizda yaqqol jonlanadi:

Tong titraydi kech kuzakning quchog'ida Yulduzlarni o'chirmoqda gulgun
shafaq Jonim, qalbm she'riyatning pichog'ida Zamin – tilsim, osmon – tilsim,
she'r beshavqat¹⁰¹

¹⁰¹ Usmon Azim. Saylanma. T.: „Sharq“, 1995. 1-bet

Misralardagi har bir soʻz shunday tanlangan va joylashtirilganki, soʻz yoki soʻzlar oʻrnini almashtirish badiiy mazmunga putur yetkazadi, deyarli har bir soʻzni poetizm (kuzak, gulgun, shafaq, zamin) darajasida baholash mumkin, har bir soʻzda metaforik koʻchim (titramoq, quchoq, oʻchirmoq, pichoq, tilsim, beshafqat) vujudga keltirilgan va ularning birikuvidan poetik talablarga mos keladigan obrazli ifodalar yuzaga keltirilgan. Usmon Azim uchun sheʼr – beshafqat, sheʼr – sheʼriyatning pichogʻi. Sheʼrda tabiat tasviri va mazmun goʻyo bir-birini inkor etgan individual metafora, oʻxshatish va parafrazalardan tuzilgandek, aslida maqsad bitta: individual betakror obraz yaratish.

Ohista-ohista yogʻadi yomgʻir, Ohista-ohista qoʻzgʻalar shamol. Ohista-ohista toʻkar yumshoq nur Bulutlar bagʻridan koʻringan hilol.¹⁰²

Shoir oʻz hislarini qalamga koʻchiradi. Fikrlarini hayotiy tafsillar bilan asoslashga intiladi-ki, sheʼrni oʻqiganimizda tabiiy lavhalarga hamohang boʻlgan asosli vaziyat koʻz oʻngimizda gavdalanadi. Tabiatdagi narsa va hodisalarni jonlantirish, shaxslantirish orqali hosil boʻluvchi tashxis sanʼati qoʻllangan ushbu parchada lirik qahramonning ruhiy holatini ifoda etadi. “Oʻxshatish - sheʼriyat, kartina-sheʼriyat, voqea sheʼr bop boʻlishi mumkin, tabiat – sheʼriyat, his-tuygʻu-sheʼriyat”¹⁰³ Koʻrinadiki, lirikada peyzajning vazifasi gʻoyat keng va rang-barangdir. U atrof-tevaragimizdagi narsa va buyumlar tabiatidagi goʻzallikni namoyon etish orqali estetik didimizni oʻstiradi; shuningdek, ona oʻlka timsoli, uning poetik obrazlari sifatida ham tajassum topadi.

Quyosh oʻzi ming-ming asrkim, Oʻt ismini yillarga oʻymish Tush. Saraton ketmon chopar jim –U ismini unutib qoʻymish.¹⁰⁴

Tabiat “oʻtli quyosh” dan iliqlik olib yana tilga kiradi. Shoir “saraton” obrazi orqali xalqimiz bagʻriga yashiringan oʻzlikni sheʼrxonga anglatmoqchi. Saraton - zahmatkash, sodda, ayni paytda, odamzodga xos mehr-oqibat va hamiyatni, birdamlikni oʻzida mujassamlashtirgan dehqon. Ushbu lirik chizgi shoiraning inson va tabiat rishtalarini ifoda etishdagi ijodiy metodi sifatida koʻzga tashlanadi.

Bogʻ qoʻynida ikki daraxt Bir-biriga intizor. Sen — bir daraxt, Men — bir daraxt Kuyib-kuyib oʻtdik, yor.¹⁰⁵

Usmon Azim lirik chizgilari orqali tabiatni inson botiniga koʻchiradi. Lirik qahramon – daraxtga qiyoslanadi. Demak, tabiat ham insonga aylanyapti, insonlar kabi his-tuygʻulari bilan boʻlishyapti. “Tabiat barcha sanʼat turlari va janrlari qatori lirikaning ham boqiy mavzularidan biridir. Sanʼat asarlarining qaysi birini olib koʻrmaylik, undagi peyzaj tasvirida, albatta, inson ishtirok etadi, tabiatning u yoki bu xossasi unga boʻlgan inson munosabati orqali qayta kashf etiladi”¹⁰⁶

¹⁰² Oʻsha manba. 24-bet.

¹⁰³ Olimjon H.. III tomlik, “Tanlangan asarlar”, III tom, 132-bet.

¹⁰⁵ Oʻsha manba.39-bet

¹⁰⁶ Rahimjonov H. Davr va oʻzbek lirikasi. – T.:Fan, 1979. 156-bet

Yomg'irli kechada falakka uchdim, Shamollar yuzimga yopishdi – ivib.
Yulduzlar armonli shivirga tushdi:–Yomg'irning hidi-ku, –Yomg'irning hidi.¹⁰⁷

Demak, tabiatning insonga ko'rsatuvchi eng buyuk ta'sir kuchlaridan biri uning fikr va his-tuyg'u uyg'otishidir. Sharros urib quygan yomg'ir, yulduzlarning armonli shivirlashi, gir-gir aylanib yurib yuzimizga qo'nguvchi laylak qor, dengiz shovullashi, shamollarning munis ertagi, momoqaldiraq sadosi, tog'lar salobati – hamma-hammasi muayyan o'y-fikrlar va his-tuyg'ular silsilasini vujudga keltirish bilan barobar ana shu tashqi dunyoni idrok etishga bo'lgan kuchli intilishni yuzaga keltiradi. Bu intilishning mohiyati obyektiv voqelikni yanada chuqurroq idrok etishdan iboratdir.

Osmon cho'g' elaydi. Tunni tiralab Uchqunlar – og'ritib botadi ko'zga. Men sezib turibman titranmoqda lab, O'chgan yulduzlarday yosh oqar ko'zdan.

Tabiat tasviri, lirik kechinmalar orqali shoirning teran tuyg'ulari va fikrlaridan, shuning bilan birgalikda, davr, voqelik, odamlar, hayot to'g'risidagi, insonning voqelikdagi o'rni xususidagi chuqur o'y-mushohadalaridan voqif bo'lamiz. Bunday asarlarda tabiat faqatgina fon emas, balki asar umumiy g'oyasi va mazmunining ajralmas qismiga aylanadi va ma'lum darajada shoir kechinmalarining, u ilgari surmoqchi bo'layotgan g'oya va mazmunning bir qismi bo'lib qoladi.

Bir sovuq qayg'uga duch keladi qo'lqayga borishini bilmaydi shamol. Daraxtga urilar, barglarni yular, Uning g'azabidan bo'lmaydi poymol – Bizning jim turishdan uchgan qayg'ular.¹⁰⁸

Usmon Azimning har bir peyzaj she'rini uning lirik e'tirofidek qabul qilamiz. Shoirning she'rlarida peyzaj insoniy ruh, muhabbat, dard, sevinch, xullas, emotsional kechinmalarni o'ziga singdirgan holda tasvirlanadi. Barcha poetik vositalar ana shu maqsadga xizmat qiladi. Shoir tasvirida tun, oqshom, bahor suvlari, dengiz manzaralari, o'tloqlar va boshqa omillarning o'quvchiga ta'sir ko'rsatishiga, emotsional kechinma va fikr uyg'otishiga sabab, shoir ular orqali inson qalbini, insonning ichki dunyosini ochib beradi.

Odatda poetik soddalik har xil bo'ladi. Usmon Azim lirikasida yuksak soddalik san'ati borki, bu ilhombaxsh izlanish, ijodiy mehnat samarasidir. Soddalik – bu poetik shakl va mazmunning organik birligi mevasidir. Bu mukammallik va yaxlitlikka erishishda shoirning ulkan ijodiy mashaqqatlari u qadar sezilmagandek, she'r go'yo shundoqqina yozilib qolgandek, yurakdan oqib tushgandek, ko'ngilning tub-tubidan quyilib kelgandek bo'ladi. Vaholanki, bu poetik soddalik shoirning yetuk mahorati hosilasidir.

O'RTA MASOFAGA YUGURISH TEXNNKASI

Annotatsiya. O'zbekiston o'z mustaqilligini qo'lga kiritgan dastlabki kunlardanoq jismoniy tarbiya va sportni rivojlantirish, sog'lom turmush tarzini targ'ib qilishishlariga katta e'tibor berib kelinmoqda. Ushby maqola barkamol yosh avlodni sog'lom hayot uchun yurish va yugurish mashg'ulotlati haqida texnikalarni qo'llashlari haqida fikrlar bayon etilgan.

Kalit so'zlari: Tizza, siyosat, burilish, xarakat, sog'lom

MIDDLE DISTANCE RUNNING TECHNIQUE

Abstract. Since the first days of independence in Uzbekistan, much attention has been paid to the development of physical culture and sports, and the promotion of a healthy lifestyle. Ushby's article provides ideas on how to use walking and running training techniques for healthy younger generations.

Key words: Knee, politics, turn, movement, healthy.

Inson butun umri davomida o'zgarib boradi. U xam ijtimoiy, xam psixik jixatdan kamolga yetadi, bunda bolaga berilayotgan tarbiya maqsadga muvofiq bo'lsa, u jamiyat a'zosi sifatida kamol topib, murakkab ijtimoiy munosabatlar tizimida o'ziga munosib o'rin egallaydi. Chunki rivojlanish tarbiya ta'siri ostida boradi. Shaxsning fazilatlarini to'g'ri ko'rish va bexato baxolash uchun uni turli munosabatlar jaoayonida kuzatish lozim.[1]

Barkamol yosh avlodni tarbiyalash davlat siyosatining ustivor yo'nalishlaridan biri sifatida belgilandi. Bu borada qator farmon va qarorlar qabul qilindi. Mamlakatimizda olib borilayotgan keng ko'lamlı ishlar oliy ta'lim muassasasi jismoniy tarbiya va sport kafedralari professor-o'qituvchilari xamda murabbiylar zimmasiga ulkan ma'suliyat yuklaydi. Jismoniy tarbiya va sport yoshlarni xayotga, ijtimoiy foydali mexnatga tayyorlash, jismoniy qobiliyatlarini mukammallashtirish, Vatan mudofaasiga tayyorlash, ularning bekamiko'st kamol topishlariga xizmat qiladi.

Yugurishni kursatuvchi to'g'ri yulda xam, burilishda xam (burilishni to'la utmasa xam bo'ladi) yugurib kursatishi kerak.

2-vazifa. To'g'ri yulkada yugurish texnikasini o'rgatish.

Mashqlar. 1. To'g'ri yulkada yugurish texnikasini tushuntirish va kursatish. 2. 80-100 m masofalarda takror-takror yugurish. 3. Tizzani baland-baland kutarib yugurish, sakrab-sakrab yugurish, bedana kadam yugurish, boldirii orkaga siltab yugurish, joyda turib kul xarakatlariga taktid kilish va x.k.

Uslubiy kursatma. Bu vazifani xal etishda o'qituvchi oyoq tagini erga to'g'ri kuyishni, depsinishni, silkinch oyoq sommni olg'a chikarishni, yugurish paytida kullarni to'g'ri xarakatlantirishni o'rgatishi kerak.

Dastlabki yugurib utishlarda tezlik kam, keyin esa o'rtacha tezlikda yuguriladi. Bunda turux-guruh bo'lib xam, yakka-yakka xam yuguriladi.

O'qituvchi avvalo ko'pol xatolarni tuzata boshlaydi: xarakatlar umuman kovushmayotganini, son bilan, kutarilmayotganini, depsinish to'la bulmayotganini, gavda oldinga yoki orkaga xaddan tashkari ogib ketayotganini, yon tomonlarga tebranishlarni va shu kabilarni, yugurib o'tish paytlarda o'qituvchi xar qaysi sportchining texnikaviy shaxsiy kamchiliklarini va o'z xususiyatlarini belgilaydi.

3-vazifa. Yulkaning burilishida yugurish texnikasini o'rgatish.

Mashqlar. Burilishda yugurish texnikasini tushuntirish va k o'rsatish.

2.Norman kichraytirilgan radiusli yulaklarda takror-takror yugurish. 3. To'g'ri yulakdan burilishga kirib borishda va aksincha, burilishdan to'g'ri yulga chikishda yugurish.

Uslubiy ko'rsatma. Uchinchi vaznfaning xal etilishy o'quvchining tufi yulakda yugurishni kanday uzlashtirgan ekaniga boglik Agarda burilishda yuguruvchining xarakaglari erkin bulmasa, u paytda tufi yulakda yugurishga kaytish ma'kul.

Aylana radiusni kichraytirib, 10-15 m gacha keltirish mumkin. Gavdaning aylana ichkarisi gomon engashish darajasi burilish radiusi kanchalik keskin ekaniga va yugurish tezligiga botik. Burilish radiusi kancha kichik bo'lib, yugurish tezligi kancha yuqori bulsa, gavda shuncha ko'p engashadi.

4-vazifa. Yuqori start texnikasini va start tezlanishni o'rgatish.

Mashqlar. 1. Yuqori startdan yugurishni kursatish. 2. "Startga!" va "Diqqat!" buyro'qlarini bajarish va "Marsh!" buyrugidan keyin 20-30 m ga yugurish. 3. Yuqori startdan keyin start tezlanishiga, undan keyin esa erkin yugurishga o'tish. Masofa 60-70 m gacha. 4. Burilish boshlanishida yuqori start olish.

Uslubiy qo'rsatma. Urganishning boshida yuqori start olishni buyro'qsiz, talabalarining o'zlari mustaqil, keyin 3-5 tadan guruh-guruh bo'lib buyro'q bilan bajaradilar.

O'rganish vaqti da "Diqqat" buyrugidan keyin "Marsh!" buyrugi gacha (o'quzilsa tuzo'qroq) bulgan pauza ancha Uzoq, (4-5 sek) bo'ladi, chunki to'g'ri turib olishga ulgurishlari kerak. Bora-bora pauza normal darajada qisqartiriladi. Boshni tufi tutishga (dastlabki qadamlar tushadigan joyga qaraladi) etibor berish lozim. Start tezlanishida tetik o'rgangan sari gavda tuklana boradi.

5-vazifa. Oʻrta va uzoq masofacharga yugurish texnikasini takomshshashtirish.

Mashqlar. 1. 100 m dan 200 m gacha yugurishni takrorlash. 2. 400 m masofada tezlikni oʻzgartirib va gevlanib yugurish. 3. Yuqori startdan 400-800 m ga yugurib, masofa oxirida tezlanish.

Uslubiy koʻrsatma. Talabalardan baʼzanlari ortiqcha kuchlanib, juda xam tirishib kluradilar, lekin xech qanday maslaxat yoki tushuntirishdan foyda chiqmaydi. Bunday xollarda 400 m ga va undan xam ortiqroq masofaga oʻrtacha tezlikda yugurish tuzoʻq natija beradi. Chunki charchay boshlagan odam bemalolroq tejamlirorq klura boshlaydi. Depsinishga (depsinadigan oyoq toʻgʻrilanishiga) aloxida eʼtibor berish lozim.

1. Oʻrta va uzoq masofalarga yugurishning toʻgʻri texnikasini bilib olish.
2. Sportchining umumiy jismoniy tayyorgarligi darajasini yaxshilash.
3. Umumiy va maxsus chidamliliknm oʻrta va uzoq masofalarga yugurishga moslab rivojlantirish.

4. 100, 200 va 400 m ga sprintcha yurishda tezlikni oshirish.

5. Yugurishda “tezlikni his etishni” tarbiyalash.

6. Nafas olish ritmini urganib olish.

7. Yuguruvchining axloqiy va irodaviy fazilatlarini oshirish.

8. Masofani yugurib utishning optimal taktik variantlarini topish.

9. Nazariy tayyorgarlik olib borish.

Oʻqituvchi oyoq tagini erga toʻgʻri qoʻyishni, depsinishni, qoʻllarning toʻgʻri harakatlariga eʼtibor berishi lozim. Yugurishda avval tezlik kam, keyin esa oʻrtacha tezlikda boʻlishi kerak. Bunda guruh-guruh boʻlib hamda yakka-yakka yugurish mumkin. Oʻqituvchi har bir sportchi kamchiliklarini koʻrsatib berishi lozim.

3-vazifa. Yoʻlkaning burilishida yugurish texnikasini oʻrga-tish.

Vositalar:

1. Burilishda yugurish texnikasini koʻrsatish va tushuntirish.

2. 80-100 m masofani takror-takror yugurish.

3. Maxsus yugurish mashqlarini avval katta radiusli yoʻlkada, soʻngra asta sekin kichik radiusli yoʻlkada bajarish.

4. Toʻgʻri yoʻlkadan burilishga kirib borishda va aksincha, burilishdan toʻgʻri yoʻlkaga chiqishda yugurish.

Uslubiy koʻrsatma. Burilishda shugʻullanuvchining harakati erkin boʻlishi kerak. Aylana radiusini kichraytirib, 10-15 m gacha keltirish mumkin. Gavdaning aylana ichkarisi tomon egilish darajasi burilish radiusining oʻtkirlikiga va yugurish tezligiga bogʻliq. Burilish radiusiga qarab yugurish tezligi yuqori boʻlsa, gavda shuncha koʻp egiladi.

DEVELOPMENT OF COGNITIVE EMOTIONAL RESPONSE TO MUSIC IN CHILDREN

Abstract. This article presents the theoretical foundations of the development of perception and emotional response to music in children. Music is an art form that reflects human emotional experiences, thoughts, imagination through a set of musical sounds, therefore it is necessary to teach it from preschool age.

Key words: Music, human, emotional, experiences, imagination, musical artistic image, perception, emotion.

Music is an art form that reflects human emotional experiences, thoughts, imagination through a set of musical sounds. Its content consists of specific musical artistic images that represent changing mental states. He has the ability to penetrate deeply into the human heart and express this feeling of the soul vividly. The interest in music awakened from youth has a strong influence on the further musical development of a person, ensures the formation of other skills and tastes, cultivates a good musical taste. In addition, music clearly reflects the willful qualities of a person, his nature. These expressive and pictorial possibilities of music were highly appreciated by Eastern thinkers - Farabi, Ibn Sina, Jami, Nawai, Babur and others. According to the Greek philosopher Plato, the power of the state directly depends on what music, what tone and rhythm it plays. He believed that the country needs music that helps people to rise to the top. Aesthetic perception is a combination of two main components: emotionality and comprehensibility, but imagination and movement moment-rhythm are also added to it. Music is a great source of aesthetic and spiritual mood.

We will be able to see the bright future of our country in the form of musical education of preschool children and its development. Taking into account the great impact of music on the child's emotions and formation, on understanding and feeling its content, the appropriate use of correctly presented musical works takes place in the category. The main source of the formation of musical images is directly related to the compatibility of nature and human speech, perception of beauty in the surrounding world. It is important to define the function and content of musical perception. These are determined by the general goals related to the all-round development of the individual, including the tasks of aesthetic education. Such tasks should be to attract children to activities in the field of music, to develop aesthetic perception and emotional assimilation of artistic music, to cultivate love for it, to develop musical ability, to form musical taste, and to develop children's artistic creativity. The most striking features of the

development of musical perception in children are the sense of hearing, the musical ear, the quality and levels of emotional response to music of various natures. When properly organizing music lessons in a preschool educational organization, the music director should take into account the young characteristics and psychological development of each child. A child's perception of music goes through several stages in its development. Music and happiness are inextricably linked in the child's mind.

When choosing a repertoire for children of a small group, choosing more figurative works will help children to perceive these works through figurative imagination when listening and singing. Children begin to accumulate musical impressions based on the development of feelings, hearing, and perception. Day by day, the boundaries of perception of the environment expand, and certain feelings and images of children begin to form under the influence of music. Children act figuratively to the selected works, for example: jumping as a rabbit, walking like a bear, helps them to easily perceive these works, they know familiar music, distinguish march, run, alla music, distinguish the quiet and cheerful nature of music, but it is young due to the strength of their characteristics, they cannot express it in words.

In addition, when working with 3-4-year-old children, the use of guided-visual methods: color pictures, toys, referring to various manuals will help a lot. At the age of 4-5, children detail the images, partially distinguish the contrasting characters of music, understand the forms and means of expressiveness of musical works. In order to create active activity during the training, the music director illuminates the content of the work through singing, playing, and listening through figurative and poetic words, stimulates the children's imagination, calls images involves him in the act of thinking based on the content to the content of the piece of music.

When the music director talks to the children about the studied works, it makes it easier for the children to understand these works, and the scope of the children's imagination expands. Children of this age respond verbally to the questions and demands of the music director. They can sing a small song independently without the help of adults, accustoming children to dance to selected works to a certain extent and perform many actions that allow them to play independently serves to further develop cognitive features. 6-7-year-old children's perception of the works they listen to can be summarized using the following terms: introduction, verse, refrain, tempo, dynamic signs, familiarity, differentiation, comparison of opposite and similar parts of the work, sound, rhythm, etc. They understand the character and means of expressiveness of the music and pay attention to the images of the game, so it is reasonable for the music director to choose larger works. Listening to works of various genres and teaching songs to children of this age helps to develop children's intellectual abilities. Based on the acquired knowledge and impressions of music, children can not only

answer the question, but also independently describe a piece of music, understand its means of expression, and feel the different moods conveyed by music.

1) Thus, the education of musical perception goes as follows:

2) Extraction of musical material

3) Systematization of education and training methods.

4) Using different stages of work

5) Using different themes of musical works.

6) Gradually increasing the complexity of musical works depending on the number and form of images.

The works of E. Mach, K. Stumpf, M. Meyer, O. Abraham, W. Köhler, W. Wundt, G. Reves and other foreign scientists also made a great contribution to the development of music psychology. Musical perception is a very complex and multifaceted process. As E.N. Fedorovich and E.V. According to Tikhonov, musical perception involves combining in the mind of the perceiver a large number of different elements belonging to different levels and systems. When studying the processes of musical perception, the following are analyzed:

a) connection of the result of perception with previous experience, which depends not only on the properties of the object, but also on the properties of the perceiving subject.

b) It defines qualitative differences in musical perception of professionals and non-professionals, children and adults, individual differences;

c) the temporary nature of music, which determines the need to perceive a continuous flow and its separate points at the same time, which is related to both individual psychic mechanisms and the content and structure of musical works;

d) formation of preferences for the perception of music of different levels of complexity (serious or light) in the public mind, which allows analyzing the socio-cultural characteristics of society

While perceiving music, the child should be able to feel its beauty and perfection. The main characteristics of knowing a musical work are integrity, emotionality, consciousness and imagery. The whole provides the perception of a musical work based on the expressiveness of individual elements of musical speech: melody, harmony, rhythm, timbre. Emotionality means experiencing the beauty of the music, the feelings and moods evoked by the music.

Awareness is related to aesthetic evaluation and understanding of the content of music, its ideas, the nature of experiences and all the expressive means that make up the musical image. Finally, imagery is the listener's creation of an image of a piece of music based on his ideas about music as a whole and its particular means of expression.

The process of music perception begins in early childhood, the mental characteristics of the child at each age stage affect the course of this process and its results.

ACCELERATION OF AUTOCAD TRAINING PROCESS IN DRAWING GEOMETRY AND ENGINEERING COMPUTER GRAPHICS

Annotation. The work of Auto Cad sites provides very effective engineering graphics. One of the important factors of training of highly qualified, competitive specialists operating in the conditions of the market economy with accelerated development of science and technology is to accelerate the graphic preparation of students studying in the higher education system.

Keywords: technology, creativity, engineer, interactive, imagination, space.

Fan va texnika taraqqiyoti jadallashgan bozor iqtisodiyoti sharoitida faoliyat ko`rsatuvchi yuksak malakali, raqobatbardosh mutaxassislar tayyorlashning muhim omillaridan biri oliy ta`lim tizimida ta`lim olayotgan talabalarni tasavvur grafik tayyorgarligini jadallashtirishdir.

Hozirgi zamon ishlab chiqarishida chizmaga g`oyat katta talablar qo`yilmoqdaki, bu talabalarni barchasini bilish va chizmani bajarishda qabul qilingan turli belgilashlarni tushuna bilish ishchidan boshlab, to muhandis konstruktorgacha bo`lgan mutaxassislarning keng doirasi uchun mutlaqo zaruriy shart bo`lib hisoblanadi. Muhandislar o`z ijodiy ish faoliyatlarida albatta chizmalardan foydalanadilar, shuningdek chizma loyihalarni ishlab chiqadilar.

Zamonaviy oliy ta'limda muhandisning grafik tayyorgarligi uning professionallik sifatlaridan biri bo'lib, grafik bilim va malakalarning muayyan darajasi, keng fazoviy tasavvur va politexnik tafakkur bilan uyg'unlashgan tayyorgarlikdir.

Hozirgi zamonaviy oliy ta'limda kompyuter grafikasi professional tayyorgarligining eng muhim omili sifatida namoyon bo'ladi. Oliy ta'limda muhandislarning grafik tayyorgarligini jadallashtirishdagi asosiy g'oyalar sifatida quyidagilarni qarash mumkin:

- Grafikaviy ta'limni jadallashtirish ma'lum tizimga soling tamoyillarga asoslanishi lozim.

- Grafik ta'limni jadallashtirish ma'lum vositalar asosida amalga oshiriladiki, ularni aniqlash va tartiblash muhim ahamiyatga ega.

Grafik tayyorgarlikni jadallashtirish vositalarini shartli ravishda uch turga ajratish mumkin: o'quv materialining o'zgargan shakllari sifatida qo'llaniladigan vositalar; dasturiy vositalar; kompyuter bilan bog'liq texnik vositalar (kompyuter grafikasi).

Grafik tayyorgarlik jarayonini jadallashtirish predmeti o'quv materialini turli shakllarda ifodalanadi. Ularni talabalarga yetkazishda jadallashtirish imkoniyatlarini o'rganish grafikaviy ta'lim jarayonini jadallashtirishning asosini tashkil etadi. Talabalarning grafik tayyorgarlik jarayonini kompyuter grafikasi vositasida jadallashtirishda grafikaviy dasturlar muhim rol o'ynaydi. Shu bois, bunday vositalaridan foydalanishga qo'yiladigan talablarni oydinlashtirish joiz.

Grafikaviy dastur vositalaridan foydalanish grafikaviy tasvirlash xususiyatlariga asoslanadi, xususan illyustratsiya yaratish (vektorli - (CoreIDRAW!)), tasvirlarni tahrir qilish (rastrlı - Adobe PhotoShop) va ikki hamda uch o'lchamli tasvirlar hosil qilish uchun dastur (ArhiCAD, AutoCAD) lardan foydalaniladi. (1-rasm)

1-rasm. O'lchamli tasvirlar hosil qilish

Oliy ta'limdagi mutaxassislarni grafik tayyorgarlik jarayonini jadallashtirishda kompyuter grafikasi o'qitish vositasi emas, balki bo'lajak mutaxassislarni zamonaviy ishlab chiqarish talablari asosida ALT (SAPR)da loyihalash faoliyatiga tayyorlash vositasi sifatida o'rgatiladi.

Bunda kompyuter grafikasi (kompyuterda chizmani bajarish) ta'limida o'qituvchining faoliyati yetakchi o'rin tutadi. Bu holda kompyuterda chizmalarni bajarishni o'rgatishda ta'limning interaktiv usullari qo'llaniladi. Interaktivlik o'zaro harakat qilish, ya'ni suhbatlashish, nima bilandir (masalan, kompyuter bilan) yoki kim (o'qituvchi) bilandir muloqat qilishi natijasida amalga oshiriladi.

Shuni ta'kidlash lozimki, interaktiv ta'lim –bu aniq va rejalashtirilgan maqsadga ega bo'lgan, bilish faoliyatini tashkil etishning maxsus shaklidir. AutoCAD chizma ishlarini bajarish uchun mo'ljallangan bo'lib, demak siz ushbu elementar ob'ektlarning barchasini chiziqlar, doiralalar shaklida tasvirlashingiz, o'lchamlarni pastga tushirishingiz, ob'ektlarni siljitishingiz, o'chirishingiz va nusxalashingiz kerak. Shunday qilib,

AutoCAD ni ishga tushiring, ekranga qarang, bu vositalarning barchasi shunchaki ajoyib!

Bu Excel bilan ishlashga o'xshash narsa. Ko'pchilik, ular hech qachon elektron jadval protsessorini ishlamaganliklari haqida shubha qilishmaydi, ular buni juda yaxshi bilishadi ha, Excel bizning jadvallar bilan "qog'ozdagi" barcha ishimizga taqlid qiladi.

Keyin biz Excelni ishga tushiramiz va ushbu jadvalni ko'z o'ngimizda ko'ramiz, ma'lumotlarni kiritishni boshlaymiz, ko'zlarimiz oldida hamma tanish Word vositalari.

Albatta, nuances bor, lekin unchalik ko'p emas, ikkinchisidagi asosiy narsa yangi narsalarga oddiy va o'ychan qarash, bu holda ekran sizga nimani taklif qilayotganini tahlil qilishdir. Ushbu xulosalar har qanday dastur uchun juda muhimdir, ularni oddiy ibora bilan ifodalash mumkin hamma narsa ko'rinadiganidan ancha sodda.

Davom etamiz biz o'zimizga yordam berishimiz kerak, hamma narsadan qo'rqmasdan, hatto ekranga qaramasdan.

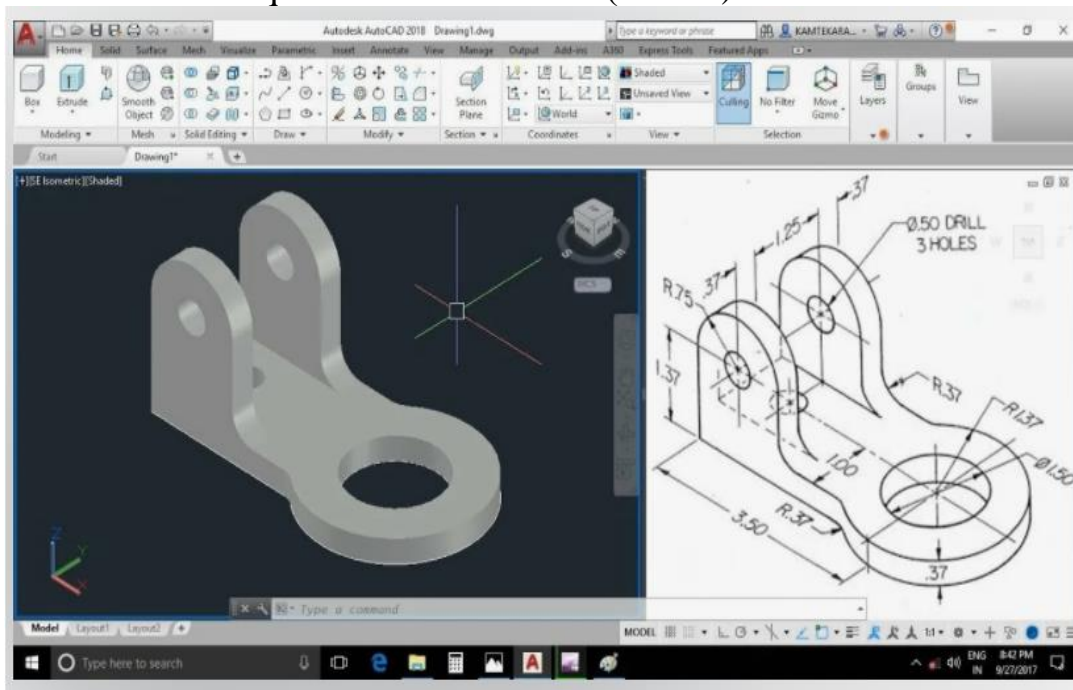

Bu xulosalar AutoCAD-da ishlash uchun printsiplial jihatdan muhimdir, 2000, 2011, 2017 yoki 2019 versiyasi bo'ladimi, bundan buyon ahamiyati yo'q. Nuances orasida biz o'zlashtirishga to'g'ri va eng muhimi ijodiy yondashuvni aniqlaymiz.

O'zingizning vaqtingizni oling, kichkina ishlang avval 2D elementlari bilan ishlash tamoyillarini ishlab chiqishni boshlang, so'ngra rivojlangan 3D unchalik qiyin ko'rinmaydi. Keyin yorug'lik manbalarini sozlash, rang berish va hatto 3D Max bilan aloqani o'rnatish kerak bo'ladi. Jamoalar juda ko'p, shuning uchun undagi barcha jamoalarni muhimlik darajasi foydalanish chastotasi bo'yicha saralash orqali o'zingiz uchun kutubxona yaratishga to'sqinlik qilmaydi.

AutoCAD ning sozlash qobiliyatining alohida kutubxonasini yaratganingizga ham ishonch hosil qiling juda ko'p sozlamalar mavjud, ular o'nlab boshqa dasturlarda davom etadi.

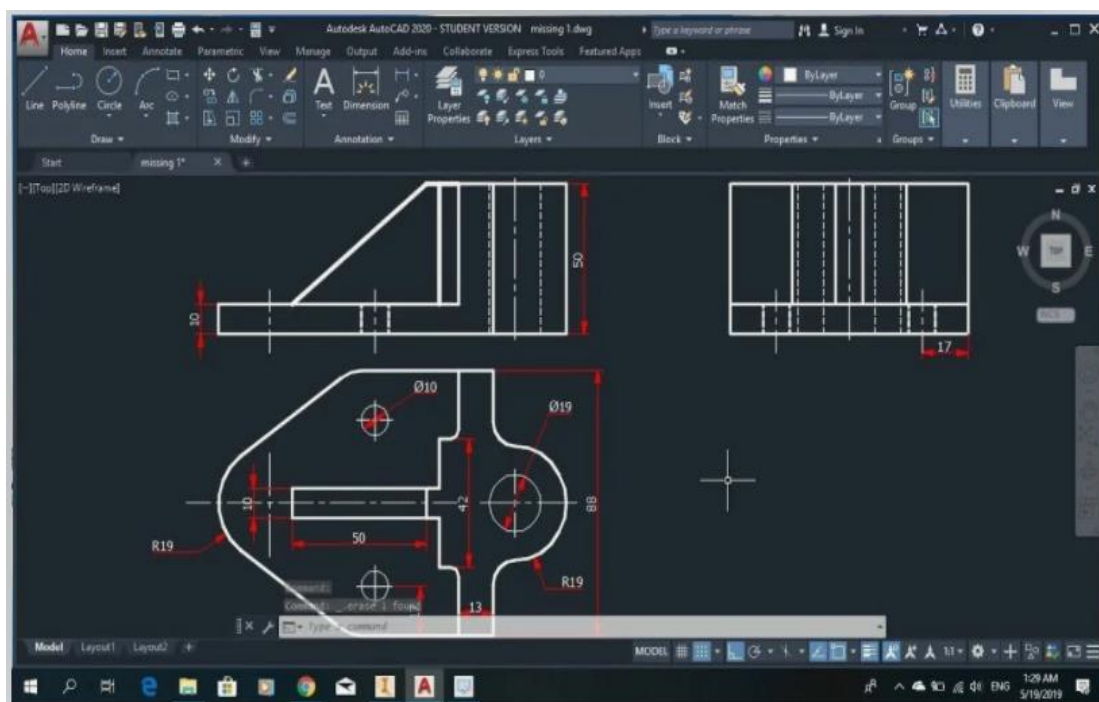

Sozlamalarni o'rganish dasturni o'zlashtirishda katta yordam beradi. Albatta, ushbu sozlamalar va asboblar paneli sozlamalari orasida.

Ular boshidanoq o'zlashtirilishi kerak.(2-rasm)

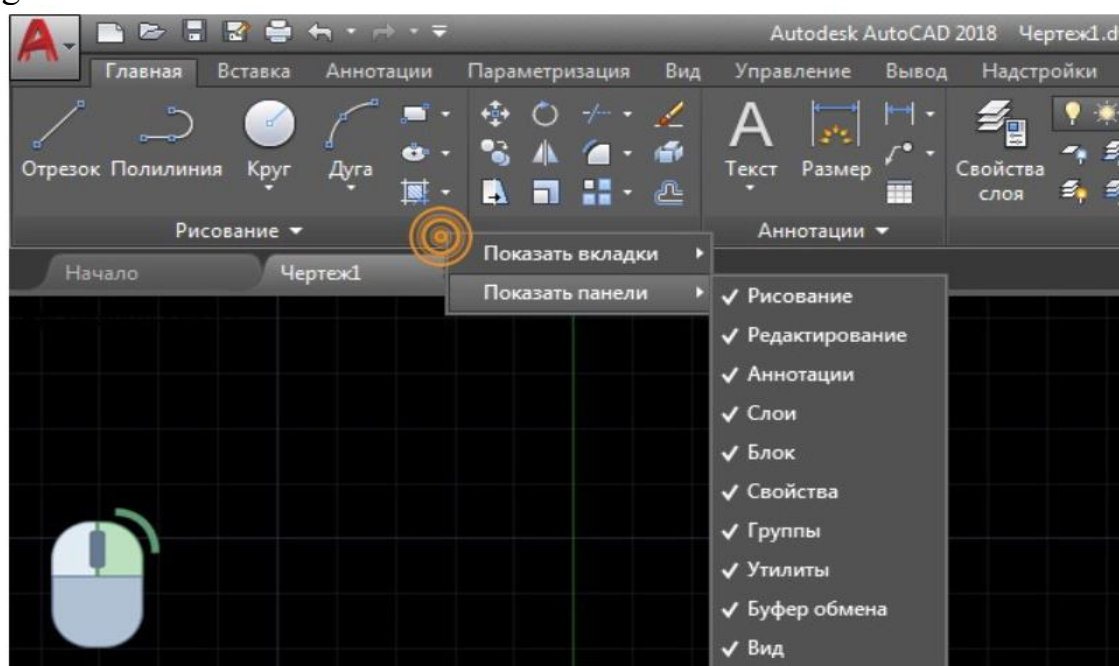

2-rasm. AutoCAD chizma ishlarini bajarish

Birinchidan, dasturda deyarli yigirma o'nga yaqin asboblar paneli mavjud, ammo dastlab faqat ko'rsatiladi Ikkinchidan, vositalarga kelsak, ular odatdagidek, doimiy ravishda bo'lishga zarar keltirmaydigan narsalarning beshdan bir qismidan kamrog'ini tashkil qiladi.(3-rasm)

3-rasm. AutoCAD chizma ishlarini bajarish

Oliy talimdagi mutaxassislarni grafik tayyorgarligini mazmun va tuzilmasini ishlab chiqishda quyidagilarga rioya etiladi:(4-rasm)
 grafikaviy tayyorgarlikda uzluksizlik va uzviylik;
 grafikaviy faoliyat ob'ekti nazariyasining ustivorligi;
 nazariya va amaliyot birligi;
 standart va nostandart ijodiy grafik masalalarni yechish usullarini o'rgatish.

4-rasm. Grafik masalalarni yechish usullarini

Shunday qilib, oliy ta'limida bo'lajak muxandis mutaxassislarning grafik tayyorgarligini jadallashtirish muammosi qo'yidagi masalalarni yechish vazifasini qo'ymoqda:

1. Fan-texnika va texnologiyalar taraqqiyoti hamda zamonaviy ishlab chiqarish talablariga asosan bo'lajak mutaxassislarning grafik tayyorgarlik tuzilmasi va mazmunini modernizatsiya qilish;

2. Bo'lajak muxandislarni grafik faoliyatga tayyorlashning pedagogik psixologik jihatlarini o'rganish.

Foydalanilgan adabiyotlar:

1. O'zbekiston Respublikasi qonuni. "Kadrlar tayyorlash milliy dasturi" Toshkent, 1997 y. "Sharq" –63 b.
2. Spravka po AutoCAD 2007.

O‘ZBEKISTON RAQAMLI IQTISODIYOTIDA SUN’IY INTELEKTNING AHAMIYATI VA SAMARADORLIGI

Annotatsiya. Sun'iy intellekt hozirgi axborot asrida nihoyatda dolzarb bo'lib, insoniyat sun'iy intellekt orqali XXI asrning global muammolariga ilmfanda yangi imkoniyatlarni kashf etish yo'li bilan ijobiy yechimlarni topdi. Shuningdek, bu tibbiyot, ta'lim, energetika, qishloq xo'jaligi, shaharsozlik va ayniqsa raqamli iqtisodiyot sohalarda sifatli xizmat ko'rsatish imkoniyatlarini oshiradi.

Kalit so'zlar: axborot-kommunikatsiya texnologiyalari, raqamli iqtisodiyot, sun'iy intellekt, istiqbolli loyihalar, global, zamonaviy axborot texnologiyalari.

THE IMPORTANCE AND EFFECTIVENESS OF ARTIFICIAL INTELLIGENCE IN THE DIGITAL ECONOMY OF UZBEKISTAN

Annotation. Artificial intelligence is extremely relevant in today's information age, and humanity has found positive solutions to the global problems of the 21st century by discovering new opportunities in science through artificial intelligence. It also increases the possibilities of providing quality services in the fields of medicine, education, energy, agriculture, urban planning, and especially the digital economy.

Keywords: information and communication technologies, digital economy, artificial intelligence, promising projects, global, modern information technologies.

Mamlakatimizda ham so'nggi yillarda axborot texnologiyalarini rivojlantirish, soha va tarmoqlar faoliyatiga raqamli texnologiyalarni joriy etish, "aqli dasturlar"ning qo'llanish sohasini kengaytirish bo'yicha davlatimiz rahbari va hukumatimiz tomonidan qator huquqiy hujjatlar qabul qilindi va ijro etilmoqda. Loyihada esa bevosita sun'iy intellekti rivojlantirish uchun muhim bo'lgan hujjatlar keltirilgan. Ilm-fan va axborot-kommunikatsiya texnologiyalari jadal taraqqiy etib borayotgan bugungi sharoitda dunyoning rivojlangan mamlakatlarida davlat va jamiyat boshqaruvi, iqtisodiyot, sanoat, ijtimoiy himoya, ta'lim, tibbiyot, bandlik, qishloq ho'jaligi, mudofaa, xavfsizlik, turizm va boshqa sohalarda zamonaviy axborot texnologiyalari va sun'iy intellekt imkoniyatlaridan keng foydalanish urfga kirmoqda. O'zbekistonda ham axborotlashtirish va raqamli iqtisodiyotni rivojlantirish orqali 2030-yilga qadar innovatsion taraqqiy etgan yetakchi davlatlar qatoridan o'rin egallash ustuvor vazifa sifatida belgilangan. Qayd etish joizki, «Ilm, ma'rifat va raqamli iqtisodiyotni rivojlantirish yili»da axborot texnologiyalari va raqamlashtirish borasida jiddiy o'zgarishlar amalga oshirilib, bir qator muhim dasturlar qabul qilindi. Xususan, O'zbekiston Respublikasi Prezidentining «Raqamli iqtisodiyot va elektron hukumatni keng joriy etish chora-tadbirlari to'g'risida»gi hamda «Aholiga davlat ijtimoiy xizmatlari va yordam taqdim etish tartib-taomillarini avtomatlashtirish bo'yicha qo'shimcha chora-tadbirlar to'g'risida»gi qarorlari va boshqa normativ-huquqiy hujjatlar mamlakatimizda raqamlashtirishni jadallashtirish va ijtimoiy-iqtisodiy sohalarga zamonaviy texnologiyalarni joriy qilishga qaratilgan. Shu bilan birga, so'nggi yillarda axborotlashtirish va ilg'or texnologiyalarni turli sohalarda tadbiq etish borasida chora-tadbirlar natijasida O'zbekistonda AKT va sun'iy intellekt sohasida o'ziga xos salohiyat asoslari yaratildi. Bu borada Innovatsion rivojlanish vazirligi va vazirlik tizimidagi tashkilotlar, AKT bo'yicha ilmiy tadqiqot markazlari, oliy ta'lim muassasalari va ularning iqtidorli bitiruvchilari hamda texnoparklar, xususiy sektordagi bir qator tashkilotlar faoliyatini alohida e'tirof etish mumkin. Shuningdek, sun'iy intellekt va zamonaviy axborot texnologiyalari yo'nalishida Farg'ona shahridagi maktablarda «Aqli maktab» dasturi, Andijon viloyatida «Monterra» ekin maydonlarining holatini baholovchi onlayn platforma joriy etilgan bo'lsa, Toshkent viloyatining Nurafshon shahrida «Aqli shahar», Toshkent shahrida esa «Xavfsiz shahar» va «Raqamli Toshkent» loyihalarini amalga oshirish rejalashtirilgan.

Ma'lumki, zamonaviy sun'iy intellekt turli amallarni bajarishga mo'ljallangan algoritm va dasturiy tizimlardan iborat bo'lib, inson ongi bajarishi mumkin bo'lgan bir qancha vazifalarni axborot bazasiga kiritilgan ma'lumotlar asosida amalga oshiradi. Shuningdek, sun'iy intellekt murakkab tahlillar va katta ma'lumotlar bilan ishlovchi dasturlarni o'z ichiga olib, mantiqli izchil mulohaza qilish hamda tavsiya berish qobiliyatiga ega «aqli» texnologiya hisoblanadi. Mutaxassislar tomonidan sun'iy intellektga to'rtinchi sanoat inqilobining asosi sifatida qaralmoqda. Mutaxassislar fikricha, aholini ijtimoiy ximoya qilishning

asosini ijtimoiy yordam, ijtimoiy sug'urta va bandlik bilan bog'lik dasturlar tashkil qiladi. Rivojlangan mamlakatlarda ijtimoiy sohada, xususan, sog'liqni saqlash, ta'lim, bandlik, ijtimoiy himoya va boshqa yo'nalishlarda sun'iy intellekt va zamonaviy axborot texnologiyalari imkoniyatlaridan foydalanish keng tus olmoqda. Aholini ijtimoiy himoya qilish sohalarida rivojlanayotgan davlatlarda amalga oshirilgan muvaffaqiyatli xorijiy tajribalardan quyidagi loyihalarini ko'rib chiqish mumkin. Masalan, Janubiy Afrika Respublikasida amalga oshirilgan «Harambee» loyihasi ijtimoiy yoshlar bandligini ta'minlashga ko'maklashishga yo'naltirilgan bo'lib, ushbu dastur sun'iy intellekt yordamida kasbiy-malakaviy moslikni aniqlab, ish izlovchilar bazasini shakllantiradi va ularga turli me'yorlarga asosan tegishli mos bo'sh ish o'rnini taklif qiladi. «Harambee» qisqa davr ichida asosan xususiy va norasmiy sektorda yoshlarni ish bilan ta'minlagan. Sun'iy intellekt asosida ishlovchi kasbiy-malakaviy moslik bo'yicha dasturning O'zbekiston sharoitida qo'llanilishi norasmiy sektorda band bo'lgan, ayniqsa, bir martalik ish bozorlaridagi ish qidiruvchilarning bandligini ta'minlashga va ularni ijtimoiy himoya bilan qamrab olishga imkon beradi. Dastlabki bosqichda sun'iy intellekt texnologiyalarini mobil qurilmalardan foydalanish mumkin bo'lgan dasturlar orqali taklif qilib, norasmiy sektordagilarni kunlik va mavsumiy ishlarga jalb qilish, ularning bandligini ta'minlash mumkin. Sun'iy intellektga asoslangan loyihalarni O'zbekiston sharoitida mavjud dasturlar va davlat idoralariidagi ma'lumotlar bazasini integratsiyalashtirish va kengaytirish orqali bir qator istiqbolli loyihalarni ko'rib chiqish mumkin.

Ta'kidlash lozimki, sun'iy intellekt asosini ma'lumotlar bazasi tashkil etib, ularning manbasi turlicha bo'lishi mumkin. Ma'lumotlar bazasini esa muntazam to'ldirish va kengaytirish sun'iy intellekt tahliliy imkoniyatlarini va samaradorligini oshiradi. O'zbekistonda hozirda mavjud ma'lumotlar manbalaridan sun'iy intellekt ma'lumotlar bazasini shakllantirish va ulardan samarali foydalanish mumkin. Jumladan:

Identifikatsiyalash yagona tizimi – (id.gov.uz);

O'zbekiston Respublikasi ochiq ma'lumotlar portali – (data.gov.uz);

Elektron hukumat tizimi ma'lumotlar bazasi – (my.gov.uz);

Davlat xizmatlari agentligi ma'lumotlar bazasi – (davxizmat.uz);

turli vazirlik va idoralarning ma'lumotlar bazasi.

Shuningdek, jahon tajribasida ijtimoiy sohaga yo'naltirilgan dasturlarda sun'iy intellekt ma'lumotlar bazasini shakllantirishda milliy ID tizimlari ma'lumotlari, aholini ro'yxatga olish va soliq to'lovchilar bazasi, tibbiyot, bank, sug'urta kompaniyalari, do'kon va bozorlar xaridorlari, mobil aloqa operatorlari ma'lumotlari hamda aholining kommunal to'lovlar va qarzdorlik, kredit tarixi, ijtimoiy tarmoqlardagi faolligi kabi manbalardan qonun doirasida foydalaniladi. Qayd etish joizki, sun'iy intellektni ijtimoiy va boshqa sohalarga joriy qilishda shaxsga doir ma'lumotlar daxlsizligi, ularni saqlash va boshqarish muhim ahamiyatga ega. Chunki, sun'iy intellektidan foydalanishning axloqiy jihatlari, ayniqsa, AQSh, Buyuk Britaniya, Yevropa Ittifoqiga a'zo davlatlar va yetakchi

xalqaro tashkilotlar diqqat markazida bo'lib, inson huquqlari va shaxsiy ma'lumotlar masalasi hamda sun'iy intellektdan siyosiy va buzg'unchi maqsadlarda foydalanish xavfi dolzarb hisoblanadi. Ayrim davlatlar, xususan, Xitoy va Rossiyada sun'iy intellekt va AKTdan fuqarolar shaxsiy huquq va erkinliklarini cheklash va siyosiy maqsadlarida foydalanilmoqda, degan ayblovlar yangramoqda. Shuning uchun sun'iy intellektdan foydalanishning huquqiy asoslarini yaratishda bu masalalarga ham alohida e'tibo qaratilishi maqsadga muvofiq. Shuningdek, sun'iy intellekt va AKTni joriy qilishda shaxsga doir ma'lumotlar va shaxsiy hayotga oid huquqlar hamda ulardan milliy xavfsizlikni ta'minlash yo'lida foydalanishda muvozanatni saqlash muhim ahamiyatga ega.

Xulosa o'rnida qayd etish mumkinki, mamlakatimizda sun'iy intellekt imkoniyatlari va texnologiyalarini ijtimoiy himoya dasturlarida qo'llash imkoniyatlari va zarurati mavjud bo'lib, tegishli dasturlash yo'nalishlaridagi yetakchi mahalliy mutaxassislar va xorijiy kompaniyalarni jalb qilgan holda sun'iy intellekt texnologiyalarini joriy qilish va mamlakatimizda raqamli iqtisodiyot sohasida keng qo'llash maqsadga muvofiq. Chunki hozirgi davr bevosita har bir sohada raqamlashtirishni ya'ni har bir sohada raqamli texnologiyalardan foydalanishni talab qiladi.

INGLIZ BA O'ZBEK TILLARIDAGI IQTISODIY TERMINLARDA MA'NO KENGAYISHI VA TORAYISHI

Annotatsiya. Mazkur maqola ingliz va o'zbek tillari iqtisodiy terminlaning leksik-semantik jihatdan olib borilgan qiyosiy tahlil natijalarini yoritib, soha terminologiyasida ma'no Kengayishi va ma'no torayishi hodisalari bilan tanishtirib o'tadi. Maqoladan ko'zda tutilgan maqsad maxsus lug'at tizimida leksik modifikatsiyalarning yuzaga kelish sabablari, shart-sharoitlarini aniq misollarda asoslab berishdan iborat. Shuningdek, ushbu tadqiqot ishi har ikki til terminosistemasida, xususan, iqtisodiyot terminlarida ma'no bo'yoqdorligining ifodalanish darajasini aniqlash, kengayishi va torayishi holatlarining tadqiq etish vazifalarini qo'yadi

Kalit so'zlar: termin, terminologiya, iqtisodiy terminlar, ma'no kengayishi, ma'no torayishi, leksik-semantik munosabat.

ENGLISH AND UZBEK ECONOMIC TERMS' EXPANSION AND NARROWANCE IN MEANING

Abstract. This article discusses the the results of a lexical-semantic analysis of English and Uzbek economic terms and introduces the phenomena of expansion and narrowing of meaning of economic terms. The purpose of the article is to justify the causes and conditions of the occurrence of lexical modifications in the system of special vocabulary with particular examples. Moreover, the research work sets the tasks of determining the level of expression of meanings in the terminological systems of the both languages, in particular, economic terms researching their expansion and narrowing in meaning.

Key words: term, terminology, economic terms, expansion of meaning, narrowing of meaning, lexical relationship, semantic relationship.

Har bir tilda vaqt o'tishi bilan qadimdan ma'lum bo'lgan ko'plab so'zlarda sezilarli o'zgarishlar yuz beradi. Lug'aviy birliklarning ma'no jihatdan o'zgarishi yangi voqelikni nomlash bilan bir qatorda tilning so'z boyligini kengaytirish va boyitishga yordam beradi. Lug'aviy birlikning yangi ma'no kasb etishi yangi so'z vujudga kelishiga olib keladi va bu bilan lingvistik semantika mustahkamlanadi.

Soʻzlar maʼno-mazmunida roʻyberadigan har qanday oʻzgarish uning etimologik ildizi bilan aloqani qaysidir jihatdan bogʻlab turadi.

Shu oʻrinda Y.A.Zemskayaning yangi soʻzni oʻzaro semantik aloqalarni eʼtiborga olmay yasalishi borasidagi fikrini keltirib oʻtishni lozim deb hisoblaymiz: "... U holda tilni egallash juda qiyin bir ahvolga kelib qolar yoki buning umuman imkoni ham boʻlmas edi. Lugʻat tarkibini kengaytirish yoʻsini undan foydalanishni yanada qulaylashtirish, eng asosiysi, tildagi mavjud oʻzaro bogʻlangan soʻzlar orqali real hayotdagi oʻzaro bogʻlangan voqea-hodisalarni ifodalashdan iboratdir. Demak, soʻzlarning tildagi oʻzaro aloqasi real predmet va mavjud voqea-hodisalar oʻrtasidagi oʻzaro aloqalarni aks ettiradi"[, Земская, 1963;11].

Lugʻatdagi har qanday maʼnoviy oʻzgarishlar yangi voqelik ifodasi bilan birga soʻz boyligini kengaytirish yordam beradi. Soʻzning yana bir yangi maʼnoga ega boʻlishi yangi soʻzning tugʻilishiga olib keladi.

Tilda yuz berayotgan innovatsiya jarayoni borasida M.V.Marchuk fikricha, "...jamiyatning maʼlum bir kollektiv lingvistik xotirasi mavjud boʻlib, u davr sinovidan oʻtgan soʻzlarni oʻz ichiga oladi. Tildagi innovatsiyalar tez-tez sodir boʻladi, ammo ularning konsolidatsiyasi har doim ham sodir boʻlmaydi" [Marchuk, 1996]. Aytish mumkinki, bu holat yetarlicha oʻrganilmagan.

Ingliz va oʻzbek tillaridagi iqtisod terminlarining leksik- semantik tahlili boʻyicha amalga oshirilgan tadqiqotlar, koʻrib chiqilgan misollarga tayangan holda, ularning oʻzaro munosabatlari, terminlashuv jarayonlarini quyidagi transit usullarga koʻra tahlil qilamiz:

- 1) soʻzlarning maʼno kengayishi orqali terminlashuvi;
- 2) soʻzlarning maʼno toryishi natijasida terminlashuvi;

Til terminologik qatlamining shakllanishi va rivojlanish jarayoni oʻziga xos yangi soʻz yasaliş strategiyalari til lugʻat boyligiga asoslangan holda sodirboʻladi. Umumisteʼmoldagi soʻzlarning terminlashuvi tarixiy jarayonlar bilan bogʻliq holda amalga oshadi. Bu jarayondan koʻrish mumkinki, tildagi umumadabiy soʻzlar va terminlar orasida oʻzaro uzviylik mavjud: "Terminologiyaning shakllanishi va taraqqiy etish jarayoni umumadabiy leksika va terminologik leksika oʻrtasidagi jips aloqalarda yaqqol namoyon boʻladi" [Dadaboyev, 2022; 31]. Mazkur aloqalarni yuqorida eʼtirof etilgan tasnif boʻyicha tahlil qilishni lozim topdik.

Soʻzlarning maʼno kengayishi natijasida terminlashuvi

Soʻnggi yillardagi ijtimoiy-siyosiy jarayonlar jiddiy oʻzgarishlar sodir boʻlishiga ham olib keldi. Ijtimoiy munosabatlarning yangi shakllari turli semantik oʻzgarishlarda eng faol tarzda namoyon boʻldi. Ijtimoiy tarmoqlar bu borada, ayniqsa, faol taʼsir qildi. Aynan shu yerda yangicha dunyoqarash aks etdi. Birinchidan, neytral, koʻpincha oʻziga xos soʻzlar guruhida siyosiy lashuv bilan bir vaqtning oʻzida maʼnoning kengayishi mavjud. Masalan, *economic drivers* – *iqtisodiyot drayverlari*, *investing attractiveness* – *investitsion jozibadorlik*, *development* – *taraqqiyot*, *prize* – *yutuq* kabi soʻzlar yangi kontekstga kirib,

ijtimoiy-siyosiy ahamiyatga ega bo'ldi. *Openness – oshkoralik, green economy – yashil iqtisod* so'zida siyosiy-iqtisodiy termin sifatida nominal xarakter kuchaydi. Yangi ma'no butun bir so'z uyasini shakllantirish uchun turtki bo'lib xizmat qildi.

Ma'noning o'ziga xos kengayishi huquqiy, ijtimoiy-siyosiy tushunchalarni bildiruvchi so'zlarda ham uchraydi. Bular tilda qadimdan ma'lum bo'lgan *private property – xususiy mulk, entrepreneur – tadbirkor, yakka tadbirkor, financier – sarmoyador, founder – ta'asischi, stock-holder – aksiyador* kabi so'zlar bo'lib, ular juda tor ma'noga ega edi. Bu esa, so'zlardan aniq kontekstga ega bo'lishi, doimiy ta'riflarga ega bo'lishini talab qilgan. Bunday ta'riflar so'zlarning ma'nolari torayishi, ularning tor soha so'zi sifatida xoslanishiga olib keldi va so'zlarning ma'nolarining universal darajasiga chiqishiga imkon bermadi.

Ingliz tilida umumiste'moldagi so'zlarda ma'noning kengayishi natijasida iqtisod sohasiga oid ko'plab terminlar hosil bo'lgan, ulardan bir nechtasini ko'rib chiqamiz:

Budget – *budjet, mablag'*, ingliz tiliga XV asr boshlarida kirib kelgan bu termin qadimgi fransuz tilida “*bougette*” – charm sumka, hamyon ma'nosidagi “*bouge*”ning kichraytirish-erkalash shakli bo'lgan. Fransuz tiliga lotin tilidan o'zlashgan: *bulga* – charm sumka. Zamonaviy termin sifatida “ehtimoliy daromadlar va harajatlar” degan kinoyali ma'nosi 1733 yildan boshlab, Angliya moliya vazirining davlat moliyaviy rejalarini hamyonida saqlashi tushunchasidan kelib chiqqan [Wedgwood, 1859;287].

Broker – broker, qadimgi vino savdosi bilan bog'liq bo'lgan bu termin, dastlab “vino bochkasi”(a cask) ma'nosida, keyinroq, “vino bochkasini tashimoq, ko'tarmoq, vino hajmini o'lchamoq” (broach a cask) [Wedgwood, 1859; 140] ma'nosida, keyinroq esa “chakana vino sotuvchisi” ma'nosida qo'llangan. Shu paytdan boshlab har qanday “chakana savdogar”, “vositachi”, “dallol” ma'nosini anglatgan. Ularning kichik xaridlar qilishi ba'zan two-dollar broker, a dollar broker tarzida ham ifodalangan. O'sha davrni yoritgan Teodor Drayzerning “Sarmoyador”asarida quyidagicha ifodani uchratish mumkin: “*These men who were known to be minor partners and floor assistants were derisively called "eighth chasers" and "two-dollar brokers", because they were always seeking small orders...*” [Dreiser, 1912; p-74]. (“Mayda sheriklar va mahalliy yordamchilar sifatida tanilgan bu kishilarni istehzo bilan "sakkizinchi izquvarlar" hamda "ikki dollarlik brokerlar" deb atashardi, sababi ular doim mayda buyurtmalar izlashardi...”). Keyinchalik “broker” terminidagi dastlab nazarda tutilgan xarid miqdori o'z ahamiyatini yo'qotib, ma'no yanada kengaydi: broker – o'rtada turib vositachilik qiluvchi dallol, makler (Tovar, valyuta, savdo birjalarida oldi-sotdi bitimlari tuzishda vositach(dallol)lik qiladigan ayrim shaxs yoki firma [O'TIL, B 228].

Dicker – 1802-yildan boshlab, “*savdolashmoq*”, “*chiroyli tarzda savdo qilmoq*”[Harper, 2001 – 2024] ma'nosida qo'llana boshlagan bu termin mo'yna savdosi bilan shugullanuvchi qadimgi German va Rim savdogarlari tilida “*o'nta mo'yna o'rami*” ma'nosini beruvchi so'zdan kelib chiqqan [Ayers, 1986; 253]. U

paytlarda mo'ynaning bir o'ramda o'ntadan qadoqlanishi *decurlae* (*qad. lot. desim*) tarzida ma'lum bo'lgan. German tilida *decher va dan* tilidagi *deger* – o'n, o'ninchi o'ntalik qadoq ma'nosini bergan.

O'zbek tilida ham terminlarda ma'no kengayishi kuzatiladi, masalan yunon tilidan o'zlashgan *pul* so'zi dastlab, chaqa ma'nosidagina ishlatilgan, ba'zi joylarda yarim tiyinga, ba'zi joylarda bir tiyinga teng bo'lgan pul o'lchov birligi va shu qiymatdagi mayda pulning o'zini ifodalagan, hozir bu arxaik ma'no hisoblanadi, shuningdek, fors tilidan baliq tangasi ma'nosi ham o'zlashgan. Keyinroq ma'no doirasi kengayib, 1. Oldi-sotdi yoki to'lov muomalarida narx, baho, qiymato'lchovi bo'lgan metal yoki qog'oz belgi; 2. Sarmoya, mablag'; 3. Ish haqi, maosh. [O'TIL, P, 124]. Shu o'rinda *tanga* so'zidagi ma'no kengayishiga ham to'xtalib o'tsak, dastlab qadimda buxoro xonligida 15 tiyinga, Qo'qon xonligida 20 tiyinga teng bo'lgan kumushpul [O'TIL, T; 321]ni ifodalagan bu termin, keyinchalik, qog'oz puldan tashqari oltin, kumush, mis kabilardan zarb etilgan pul birliklarini ham qamrab oldi. O'tgan asrning ikkinchi yarmidan tiyin pul birligining zarb qilingan metal birliklaridan tashqari turli avtomatik qurilmalar uchun ishlab chiqilgan, xalq tilida "jeton" deb ataluvchi dumaloq, yassi metal yoki plastik vositalar ham shunday atala boshlandi.

Misollardan ko'rinib turibdiki, iqtisodiyot sohasiga oid maxsus tushunchalarni ifodalovchi maxsus terminologik qatlamning tashkil topishi va taraqqiy etishida ijtimoiy-siyosiy va savdo aloqalarining ma'lum darajada muayyan leksik-semantik qamrovning kengayishi yoki quyida tahlil qilinadigan semantik torayishiga hissasi katta.

So'zlarning ma'no torayishi natijasida terminlashuvi. Ingliz va o'zbek tili iqtisodiy terminologiyasining yana bir xarakterli xususiyati shundaki, birikmali terminlar ma'anoni aniqlashi va to'liqroq ifodalashiga ko'ra sodda terminlardan ustundir. Ma'noda torayish yuz bergani sari hodisa mohiyati toroq, aniqroq ifodalanadi. Quyidagi misollarda so'z + termin ko'rinishida so'zlarning birikma tarkibida terminlashuvini kuzatish mumkin, bunday birikish usuli terminlarning barqarorlik xususiyatini ta'minlaydi: *venture* – tashabbus (so'z), *business venture* – biznes tashabbusi (termin); *affair* – yumush, ish (so'z), *business affairs* – biznes ishlari (termin); *relations* – aloqalar (so'z), *business relations* – biznes aloqalar (termin); *opportunity* – imkoniyat (so'z), *business opportunities* – biznesdagi imkoniyatlar (termin);

Shu o'rinda ta'kidlash joizki, bu kabi birikmalar tarkibidagi adabiy tilga tegishli so'zlar o'zaro erkin o'rin almashish xususiyatiga ega: *business relations* – biznes aloqalar = *economic relations* – iqtisodiy aloqalar = *financial relations* – moliyaviy aloqalar;

Termin + termin birikuvidan ham ma'no torayishini kuzatish mumkin: *financial crisis* – moliyaviy inqiroz, *financial enterprise* – moliyaviy korxonalar, *financial investment* – moliyaviy investitsiyalar, *fair trade* – adolatli savdo, *market price* – bozor narxi, *stock-market quotations* – birjada belgilangan narx.

Terminlar semantikasidagi o'zgarishlar umumiylikdan xususiylikka tomon yuz berganda ma'no torayishi, xususiylikdan umumiylikka tomon yuz berganda esa ma'no kengayishi yuz beradi. Xullas, davrlar o'tishi bilan ayrim terminlar hodisaning ma'nosini yanada aniq ifodalash zarurati bilan ma'no torayishiga uchradi. Masalan, *treasury – g'azna, cashier – hisobchi, poverty – kambag'allik, investition attractiveness – investitsion jozibadorlik, economic growth – iqtisodiy o'sish, break – sinish, demand – talab, lackness – taqchillik* kabi. Ma'noda torayish yuz bergan sari hodisa mohiyati torroq, aniqroq ifodalanadi.

Fan-texnika rivojlana borgani sari, parallel ravishda, aynan shu taraqqiy etib borayotgan sohalarga tegishli terminologik tizim ham o'ziga xos tarzda boyib, rivojlanib bormoqda. Har bir fan tarmog'i qachon paydo bo'lgani, qanday rivojlanish bosqichlarini boshdan kechirgani, o'z rivojlanish yo'lining qanday darajasida ekaniga, kuzatilayotgan yangiliklar, islohotlar va qilinayotgan ixtirolar va kashfiyotlar ko'lami orqali soha terminosistemi hajmini baholash mumkin.

RAQAMLI TEXNOLOGIYALARNING TA'LIM JARAYONIDAGI AHAMIYATI

Annotatsiya. Maqolada raqamli texnologiyalari va ularning ta'lim jarayonidagi ahamiyati yoritilgan. Darsni raqamli texnologiyalari va kompyuter ko'magidan foydalanib tashkil etilganda, talabalar va o'qituvchilar uchun eng samarali, mos va qiziqarli bo'lishi uchun rejalashtirish mumkin hamda bilish faoliyatini tashkil etishning eng ko'p tarqalgan shakllari individual va frontal ta'lim shakllarining har ikkalasidan bir vaqtda foydalanish mumkinligi yoritilgan.

Kalit so'zlar: Raqamli texnologiyalari, kompyuter, axborot texnologiyalari, elektron ta'lim texnologiyalari, multimedia, axborot, dastur.

THE IMPORTANCE OF DIGITAL TECHNOLOGIES IN THE EDUCATIONAL PROCESS

Annotation. The article describes digital technologies and their importance in the educational process. When the lesson is organized using digital technologies and computer support, it can be planned to be the most effective, relevant and interesting for students and teachers, and the most common forms of organizing cognitive activities are both individual and face-to-face learning forms. simultaneous use is highlighted.

Keywords: Digital technologies, computer, information technologies, electronic education technologies, multimedia, information, program.

Kirish. Bugungi kunda raqamli texnologiyalaridan o'quv jarayonining turli bosqichlarida foydalanish zamon talabi hisoblanadi. Jumladan, prezidentimiz Shavkat Mirziyoyevning "Pedagogik ta'lim sohasini yanada rivojlantirish chora-tadbirlari to'g'risida"gi 2020-yil 27-fevraldagi PQ-4623-sonli qarorida, oliy pedagogik ta'limga raqamli texnologiyalarni joriy etish, zamonaviy axborot-kommunikatsiya va ta'lim texnologiyalarining mustahkam integratsiyasini ta'minlash pirovardida pedagog kadrlarning kasbiy mahoratini uzluksiz rivojlantirib borish, tarbiya va o'qitish usullari, axborot-kommunikatsiya texnologiyalari hamda xorijiy tillarni puxta o'zlashtirgan, ta'lim jarayonida

zamonaviy pedagogik texnologiyalarni qo'llash ko'nikmalariga ega professional pedagog kadrlar tayyorlash hamda pedagogik ta'lim sohasining ta'lim yo'nalishlari va mutaxassisliklari bo'yicha o'quv reja va dasturlarini ilg'or xorijiy tajribasi asosida takomillashtirish, innovatsion o'quv-me'yoriy va ta'lim texnologiyalarini yaratish hamda amaliyotga joriy etish ustuvor vazifa qilib belgilangan[1]. Bundan ko'rinadiki, raqamli texnologiyalarini uzluksiz ta'lim tizimiga qo'llashning yangicha yondashuvlarini joriy etish hamda amaliyotga qo'llash muhim ahamiyat kasb etadi.

Materiallar va uslublar. Bugungi kunda deyarli barcha ta'lim muassasalari kompyuterlar va elektron ta'lim texnologiyalari to'plamiga ega hamda o'quv jarayonini takomillashtirish uchun raqamli ta'lim texnologiyalari paydo bo'lmoqda.

O'quv jarayoniga raqamli ta'lim texnologiyalarini joriy etish o'quv-tarbiya jarayonining yangi usullarini qo'llash, o'qituvchining pedagogik malakasini oshirishga olib keladi.

Raqamli ta'lim texnologiyasi o'quv jarayonida foydalanish uchun qo'llaniladigan raqamli shakldagi ma'lumotlar to'plami[3]. Elektron qurilmalarda namoyish etish, foydalanish uchun ishlatiladigan o'quv materiallari - elektron ta'lim texnologiyalari (ETR) deb ataladi. Eng umumiy holatda, ETR o'quv videofilmlari va yozuvlar, ularni ijro etish uchun yetarli uy yozuvchisi yoki CD-pleerlarni o'z ichiga oladi. Ta'lim uchun eng zamonaviy va samarali ETR kompyuterda namoyish etiladi. Ba'zan, bu kichik ETR to'plamini ta'riflash uchun ular - raqamli ta'lim texnologiyalari (RTT) deb ataladi, bu esa kompyuterning raqamli ro'yxatga olish usullarini qo'llashini anglatadi.

Dinamik ravishda rivojlanib borayotgan axborot texnologiyalari ko'plab o'qituvchilar o'zlarining uslubiy tizimiga tobora ko'proq tayyor bo'lgan ta'lim jarayoni uchun an'anaviy vositalarni samarali ravishda to'ldiradi. Raqamli ta'lim texnologiyalaridan foydalanish o'quv jarayonining samaradorligini oshirish uchun yangi imkoniyatlar beradi. RTT-o'quv jarayonida tezkorlik vositasi, talabalarning amaliy ko'nikmalarini ishlab chiqish, so'rov va nazoratni tashkil etish hamda o'tkazish, shuningdek, uy vazifalarini nazorat qilish va baholash, chizmalar, jadvallar, grafikalar bilan ishlashda yordamchi vazifasini bajaradi. Dasturlashtirilgan ta'limning o'ziga xos xususiyati talabalarning mustaqil faoliyatini bosqichma-bosqichligi bo'lib, bu o'quv jarayonini faollashtirishga yordam beradi, shuningdek, ta'limni shaxsiylashtirish va farqlash mumkin bo'lgan tezkor qayta aloqa mavjudligi.

Asosiy ta'lim ta'siri va boshqaruvi kompyuterga uzatilganda o'qitishda o'qituvchi talabalarning fazilatlarini namoyon qilish, masalan, qidiruv maqsadini tushunish, ilgari o'rganilgan bilimlarni faol takrorlash, tayyor manbalardan yetishmayotgan bilimlarni to'ldirishga qiziqish, mustaqil qidirish kabi imkoniyatlarga ega bo'ladi. Bu o'qituvchiga o'z boshqaruv faoliyatini loyihalashtirish va talabalarning ta'limga bo'lgan ijodiy munosabatini bosqichma-bosqich rivojlantirish imkonini beradi. O'quv mashg'ulotlarini (o'quv

topshiriqlari yoki kompyuter dasturlari orqali) tekshirish uchun standartlarni taqdim etish, xatolar sabablarini tahlil qilishda talabalarni har bir darsda foydalanilishi kerak bo'lgan o'z-o'zini nazorat qilish va o'quv-ma'rifiy faoliyatni, o'z-o'zini tarbiyalash uchun asta-sekin o'zlashtirishga imkon beradi.

Raqamli ta'lim texnologiyalari zamonaviy ta'limning maqsadlari va vazifalarini amalga oshirishga qaratilgan grafik, matn, raqamli, nutq, musiqa, video, foto va boshqa ma'lumotlarni o'z ichiga olgan axborot manbai hisoblanadi[2].

Raqamli ta'lim texnologiyalaridan foydalanishning quyidagi asosiy pedagogik maqsadlari aniqlanishi mumkin:

–zamonaviy axborot texnologiyalari vositalarini qo'llash orqali o'quv-tarbiya jarayonining barcha darajalarini jadallashtirish;

–ta'lim oluvchining shaxsini rivojlantirish, shaxsni axborot jamiyati sharoitida zamonaviy, axborotlashgan hayotga tayyorlash.

Raqamli ta'lim texnologiyalarini boshqa ta'lim vositalaridan ajratib turadigan sifat ko'rsatkichlarini ikki qismga ajratish mumkin: multimedia va interaktivlik.

Multimedia-bir xil media manbasida turli xil axborot formatlarini taqdim etish. Bunday formatlar matn, ovoz, foto va video tasvir bo'lishi mumkin.

Interaktivlik-ushbu tizimning elementlarini axborot almashinuvi orqali erishilgan tizimni tashkil etish tamoyilidir.

Dasturlashtirilgan RTT "stimul-reaktsiya" tizimi bo'yicha ta'lim tizimining talablariga javob beradi. Bunday resurslar talabaniq mustaqil ishiga qaratilgan, bilim olish asoslari va usullarini, ularning kasbiy mahoratga bo'lgan munosabatlarini ochib beradi. Bunday resurslarning o'ziga xos xususiyatlari: o'rganilayotgan ob'yektlar yoki jarayonlarning matematik modellarini va talabalarni boshqariladigan tadqiqot rejimida o'quv muammolarini hal qilishda qo'llab-quvvatlaydigan maxsus interfeysdan foydalanish; jarayonlar modellari; tabiiy hodisalar modellari; laboratoriya ishlari modellari; tajriba modellari; interaktiv amaliy vazifalar.

Muammoli RTT muammoli ta'limni amalga oshirishda foydalaniladi va talabalarda mantiqiy fikrlashni rivojlantirishga, bilimlarni idrok etishning ijodiy tarkibiy qismini rag'batlantirishga qaratilgan.

Raqamli ta'lim texnologiyalari foydalanishda ta'lim jarayonining yuqori interaktivligi va multimediyasini ta'minlash, mustaqil, guruhli, individual va tabaqalashtirilgan ish turlaridan foydalanish imkoniyati paydo bo'ldi.

Xulosa. Shuni aytish mumkinki, darslarda raqamli ta'lim texnologiyalaridan foydalanish davr talabidir. Bugungi kunga kelib, darsni kompyuter ko'magidan foydalanib tashkil etilganda, talabalar va o'qituvchilar uchun eng samarali, mos va qiziqarli bo'lishi uchun rejalashtirish mumkin.

Bu kabi o'qitish vositalari kompleksidan foydalanilgan holda talabaga ta'sir ko'rsatish birgina axborot kanallari orqali amalga oshiriladi. Bu esa ta'lim samaradorligini oshiradi. Ta'lim jarayonida axborot-kommunikatsiya

texnologiyalaridan foydalanilganda, talabalarning bilish faoliyatini tashkil etish shakllarini tiklash muammosi yangicha hal etilishi lozim. Agar, an'anaviy ta'lim sharoitida bilish faoliyatini tashkil etishning eng ko'p tarqalgan shakllari individual va frontal shakllar bo'ladigan bo'lsa, axborot-kommunikatsiya texnologiyalaridan foydalangan holda ularning har ikkalasidan bir vaqtda foydalanish mumkin.

Ta'lim jarayoniga RTTning joriy etilishi pedagog vazifasining o'zgarishiga olib keladi, ya'ni pedagog ta'lim-tarbiya berishdan ko'ra ko'proq tadqiqotchi, tashkilotchi, maslahatchi va dasturlovchiga aylana boradi.

JIZZAX SHAHAR MARKAZIY KO'CHALARI KESISHGAN CHORRAHASINING MAVJUD HOLATINI TAHLIL QILISH

Annotatsiya. Ushbu maqolada Jizzax shahridagi ma'lum chorrahadagi holat tahlil qilindi va yo'l sharoitlarini yaxshilash bo'yicha bir nechta chora tadbirlar haqida xulosalar bayon qilingan.

Kalit so'zlar. Harakat sharoiti, ko'rsatgichlar, yo'l transport hodisalari, chorrahalar, yo'l kengligi, o'tkazuvchanlik.

ANALYSIS OF THE CURRENT SITUATION OF THE INTERSECTION OF THE CENTRAL STREETS OF JIZZAH CITY

Abstract. In this article, the situation at a certain intersection in the city of Jizzakh was analyzed and conclusions were drawn about several measures to improve road conditions.

Keywords: Traffic conditions, signs, road traffic incidents, intersections, road width, throughput.

Harakat sharoiti – yo'lda avtomobillar oqimi harakatlanayotganda havoiy iqlim, transport oqimi va yo'l sharoiti omillarining «avtomobil-haydovchi» tizimiga ko'rsatadigan ta'sirining umumiy bir ko'rinishida ifodalanishidir. Yo'l sharoiti deganda avvalom bor, avtomobil yo'llarining geometrik o'lchamlari va transport-foydalanish sifatleri yig'indisidan iborat ko'rsatkichlarni tushinamiz. Yo'l sharoitini tashkil qiluvchi ko'rsatkichlar ikki guruhga: doimiy va o'zgaruvchan ko'rsatkichlarga bo'linadi;

Doimiy ko'rsatkichlarga;

-yo'l qatnov qismi va cheti kengligi, harakat tasmasi soni yo'l qarshiligi, bir sathda kesishish va tutashishlar, sun'iy inshootlar va muhandislik qurilmalari;

O'zgaruvchan ko'rsatkichlarga;

-yo'l qatnov qismi va cheti holati, rejada va bo'ylamada ko'rinish, yo'l ravonligi, tishlashish sifati va qoplama g'adir budirligi, yo'l poyi va to'shamasi mustahkamligiga bog'liqdir.

Avtomobillashtirish o'zining shubhasiz ijobiy natijalarini berish bilan birga, ayrim salbiy holatlarning o'sishiga, shu jumladan yo'l-transport hodisalari sonining o'sib ketishi kuzatilmoqdaki, buning oqibatida xalq xo'jaligiga juda katta zarar etkazmoqda.

Yo'l-transport hodisasi deb – yo'lda xarakatlanayotgan loaqal bitta transport vositasi ishtirokida sodir etilib, odamlar o'limi, jarohatlanishi, transport vositasi, yo'l inshootlari, yuklarning shikastlanishi natijasida moddiy zarar keltirgan hodisalarga aytiladi.

Respublikamizda amaldagi me'yoriy hujjatlarga ko'ra yo'l-transport hodisalari quyidagi turlari mavjud:

To'qnashuv – bunga transport vositalarini qarama-qarshi tomonidan, bir yo'nalishda yoki yon tomondan xarakatlanayotgan vaqtdagi to'qnashuv kiradi.

Ag'darilib (to'ntarilib) ketish – xarakatlanayotgan transport vositasini o'z turg'unligini yo'qotib ag'darilishi.

To'xtab turgan transport vositasini urib ketish – xarakatlanayotgan transport vositasining xarakatlanmayotgan transport vositasiga urilishi.

To'siqlarga urilish – transport vositalari qo'zg'almaydigan to'siqlarga (ko'prik tayanchiga, stolba va machta tayanchiga, yo'l to'siqlariga, daraxtlarga va hokazo) urilishi.

Piyodalarni bosib (urib) ketish – transport vositalari piyodalarni urishi yoki piyodalar transport vositalariga urilishi.

Velosipedchini bosib (urib) ketish – transport vositasi velosipedchini bosishi (urishi) yoki velosipedchi transport vositasiga urilishi.

Aravani bosib (urib) ketish – xarakatlanayotgan transport vositasi xarakatlanayotgan aravani yoki aravaga qo'shilgan hayvonni urib ketishi.

Yuqoridagi yo'l transport hodisalari Jizzax shahrida qay darajada ekanligini tahlil qilish maqsadida ba'zi chorrahalarda kuzatuv ishlarini olib bordik. Shundan, A.Navoiy-O.Azimov ko'chalari chorraxasi Jizzax shahrining shimoli-sharqida joylashib muxim ahamiyatga ega chorraha bo'lib, O.Azimov ko'chasi Jizzax shaxridan A376 magistraliga chiqish uchun xizmat qilsa A.Navoiy ko'chasi (eski nomi "Xalqlar do'stligi prospekti") esa shahar markaziy ko'chalaridan biri hisoblanadi. Chorraxaning ahamiyatligining yana bir sababi bu chorraxaning bir tomonida O.Azimov ko'chasining tugash joyi hisoblanadi. Bu ko'cha shahar "Temir yo'l stansiyasiga" borish va "Ko'k bozor" bozoriga chiqish imkonini beradi.

Chorraxa O.Azimov ko‘chasi tomonidan turli xildagi xizmat ko‘rsatish binolari mavjud. A. Navoiy ko‘chasi tomonidan esa aholi turar joylari joylashgan. Chorraxaning har tomonida manzarali daraxtlar bor.

1-rasm. A. Navoiy – O.Azimov ko‘chalari chorraxasi

2-rasm. A. Navoiy ko‘chasi chorraxaga tutash qismining ko‘ndalang kesimi

A. Navoiy ko‘chasi yo‘l qoplamasi tamirlangan hech qanday chuqurliklar mavjud emas. A. Navoiy ko‘chasi boshlanish qismi hisoblangan chorraxaning boshqa qismi talab darajasida emas, turli o‘lchamdagi chuqurliklar mavjud va yo‘l qoplamasining ahvoli qoniqarsiz. O. Azimov ko‘chasining chorraxa bilan tutash qismi ham chuqurliklarga ega. A. Navoiy ko‘chasi 3,5m dan 2 polasali qarama-qarshi yo‘nalishlardan iborat. Yo‘lning umumiy eniligi $3.5 \cdot 4 = 14\text{m}$. O.Azimov ko‘chasi ham huddi shunday enilikda. A. Navoiy ko‘chasining chorraxaga tutash qismi 3,5m li qarama-qarshi yo‘nalishdan iborat ($3.5 \cdot 2 = 7$).

3-rasm. O. Azimov ko'chasining chorraxaga tutash qismi ko'ndalang kesimi

Chorraxaning jihozlanishi: yo'l belgi chiziqlari 1.1 (qarama-qarshi yo'nalishda harakatlanayotgan transport vositalarini ajratuvchi), 1.2 (enli sidirg'a chiziq), 1.3 (to'rt va undan ko'p harakatlanish bo'lagi bo'lagi bo'lgan qarama-qarshi yo'nalishdagi transport oqimini ajratadi), 1.5 (bir yo'nalishli va qarama-qarshi yo'nalishli transport oqimini ajratadi) 1.12 (to'xtash) 1.14.1 (zebra) ko'rinmaydi o'chib ketgan.

Chorraxa tartibga solingan chorraxa bo'lib, u svetafor va 2.1 (asosiy yo'l), 2.4 (yo'l bering) va 5.16.1 5.16.2 (piyodalar o'tish joyi) belgilari bilan jihozlangan.

Statistik malumotlarga qaraganda, uch yil davomida Jizzax shaharlarida sodir etilgan 1731 yo'l-transport hodisasi oqibatida 480 nafar odam halok bo'lgan, 1775 kishi turli tan jarohatini olgan.

Jizzax shaharlaridagi yo'l transport hodisalarini yillar bo'yicha tahlil qilganimizda, yo'l transport hodisasi soni va jarohatlanganlar soni yildan yilga o'sganligini, halok bo'lganlar esa kamayib borgan.

Umumiy yo'l-transport hodisalarining 25-35% shaharlar miqyosiga to'g'ri keladi. Sodir etilgan yo'l-transport hodisalarining 18-21% chorraxalarda, 79-82% chorraxalardan tashqarida sodir etilmoqda.

Kuzatishlar shuni ko'rsatadiki, yo'l-transport hodisalarining asosiy sababini, ya'ni har 5 ta yo'l-transport hodisasidan 3 tasi yoki umumiy yo'l-transport hodisasining turlari bo'yicha 65% piyodani bosib ketishi hamda yo'l-transport hodisasi qatnashchilari bo'yicha 31% piyodaning aybi bilan sodir bo'lmoqda.

Xulosa o'rnida yuqorida biz kuzatuv olib borgan chorraxada umumiy shahar hududida sodir bo'lgan yo'l transport hodisalarining ba'zilar sodir bo'layotganligi sababli qayta rekonstruksiya qilish, ya'ni yo'l chiziqlarini qayta chizish va ba'zi yo'l belgilarini daraxtlar ko'rinish ehtimolligini pasaytirmasligi uchun ularni qirqish va cheklangan tezlik belgilarini o'rnatishni tavsiya qilamiz.

IMPORTANT FACTORS OF INCREASING LESSON EFFICIENCY IN TECHNOLOGICAL EDUCATION

Abstract. In the article, the use of new pedagogical technologies in educational processes, based on the tasks of the Science of Technology, gives the expected results. The use of educational technologies, which give a new spirit to the activity of the teacher and the student, gives a good result. All technologies used in the educational process have their own educational potential. Also, a methodological analysis was made about the role and importance of the teacher in the application of educational technology.

Keywords. Technology Efficiency. Problem. responsibility, social activity, communication, flexibility.

The rapid development of science, technology and other fields in our independent republic sets high tasks for public education workers, including our teachers, which requires high general training of our teachers and the effectiveness of each lesson. For example, the methodological recommendations "Continuity and continuity" on the use of educational tools in institutions of the Ministry of Public Education of the Republic of Uzbekistan states: "An effective lesson is based on general teacher training, and general training is based on the principles of continuity and succession." Improving the effectiveness of the lesson is the main direction of modern didactics and pedagogical practice. The practical nature of the modern lesson and its further formation in new conditions is to achieve the goal of not only acquiring knowledge, skills and abilities from students, but also forming the independence of their cognitive activity and increasing interest in knowledge, developing a creatively thinking, independent, free person.

One of the important conditions for improving the effectiveness of the lesson is its intensification. Intensification of education means achieving high educational productivity in a given unit of time. The intensification of the educational process means the ability to achieve high results easily and innovatively, using effective teaching methods, methods and technologies during the lesson. Intensification is a system of achieving high results through the use of science and best practices at each stage of the lesson.

The modern level of scientific, technical and social development is extremely accelerated, setting the most important tasks for the public education system.

The acceleration of socio-economic development has a strong impact on the content and essence of the public education system, leading to its further

deepening. The changes taking place in the content of education, the introduction of new directions in curricula and standards require the organization of classes at a high level based on world standards. This requires the use of active forms and methods of new learning technologies. To do this, it is necessary to intensify teaching and the educational process, which is its main link.

A means of facilitating the work of the teacher and the student and achieving maximum effect in a particular situation is to build the optimal lesson option. Optimal lesson construction means using the simplest, best and most reliable way to form the steps and methods of the lesson.

The effectiveness and optimality of the lesson also depends on its organization on a scientific basis.

In order to improve the educational process, it is also meant to create the necessary conditions for it - conditions, educational and material base, hygienic, moral and psychological climate.

Such areas of lesson improvement require the organization of pedagogical work on a scientific basis, that is, the maximum use of every moment of the lesson.

The constant increase in scientific information leads to an expansion of the content of education. This means that there may be less time to transfer information during the lesson. Well-established deductive approaches in the field of education also have a negative impact on the effectiveness of the lesson.

The above-mentioned shortcomings and defects should not be considered only as mistakes of didactics and methodologists. In the early stages of school education, sometimes in practice, a lot of space is given to extensive forms of education. And this led to a decrease in the development of the educational process.

Achieving high results through the intensification of the educational process makes it easy to achieve educational goals and objectives. Accelerating the development of science and society requires further intensification of the education system and the educational process, which is the main link of the education system responsible for the comprehensive development of young people and their upbringing in the spirit of the best traditions..

Currently, favorable opportunities have been created for the intensification of the educational process. In particular, the educational and material base of schools has been improved, scientific, methodological and professional training of teachers has increased, provision of teachers with methodological support and literature has been strengthened, special courses, trainings and seminars are being organized.

According to the generalization of advanced pedagogical experience, it is advisable to use the following methods and means of intensifying the educational process:

- to increase educational motivation;
- Increasing students ' interest in learning;
- consider learning as a duty and obligation;

to increase the purpose and effectiveness of the lesson;
effective use of active forms and methods of the lesson;
creating favorable conditions for students' educational activities;
Reliance on students' independence, creativity and initiative.

From the above it can be seen that improving the effectiveness of the lesson depends on the pedagogical skills of our respected teachers.

SANOAT KORXONALARIDA INNOVATSION FAOLIYATNI BOSHQARISH TIZIMI

Annotatsiya. Sanoat korxonalarida innovatsion loyihalarni joriy etish uchun uning iqtisodiy va ijtimoiy samaradorligini baholash zarur. Shu sababli texnologik innovatsiyalarni joriy etish asosida sanoat ishlab chiqarishida yuqori samaradorlikka erishish uchun texnik chora-tadbirlarning qaysi biri foydali ekanligini aniqlash zarur.

Kalit so'zlar: Sanoat, ishlab chiqarish, innovatsion faoliyat, korxonalar, innovatsiya.

INNOVATIVE ACTIVITY MANAGEMENT SYSTEM IN INDUSTRIAL ENTERPRISES

Abstract. In order to introduce innovative projects in industrial enterprises, it is necessary to evaluate its economic and social efficiency. Therefore, it is necessary to determine which of the technical measures are useful to achieve high efficiency in industrial production based on the introduction of technological innovations.

Key words: Industry, production, innovative activity, enterprises, innovation.

O'zbekistonda iqtisodiyotning yetakchi tarmoqlari, jumladan, sanoat tarmogini jadal rivojlantirishga e'tibor qaratilmoqda. 2024-yilning yanvar-fevral oylarida viloyatimizda xorijiy investitsiyalar ishtirokidagi korxonalar tomonidan 581,0 mlrd. so'mlik sanoat mahsulotlari ishlab chiqarilgan bo'lib, o'tgan yilning mos davriga nisbatan 144,2 mlrd. so'mga ko'paydi. Umumiy sanoat ishlab chiqarishdagi ulushi esa 18,7 % ni tashkil etdi.

Innovatsion rivojlanishning maqsadlari va vazifalarini aniqlashdagi xatolar innovatsion faoliyatga yo'naltirilgan moliyaviy va boshqa resurlarni natijasiz sarflashga olib kelishi mumkin. Ayniqsa, korxonaning innovatsion faoliyatga samarasiz sarflangan vaqti sanoat tarmogida fan sig'imi yuqori ishlab chiqarishni rivojlantirishning mavjud yuqori sur'atlari bilan bog'liq moliyaviy resurslar qatorida kam bo'lmagan yo'qotish hisoblanadi.

Sanoatni innovatsion rivojlanishining belgilangan yo'nalishlari doirasida loyihalar o'rtasidagi o'zaro bog'liq va to'liq bo'lmagan realizatsiyani amalga oshirish korxonaning faoliyatining alohida yo'nalishlari bo'yicha ijobiy samaraga ega bo'lishi mumkin, biroq korxonaning umumiy innovatsion rivojlanishi sinergetik samaradan mahrum bo'ladi. Innovatsion loyihani amalga oshirish to'g'risida qaror qabul qilishda resurslar manbalari va yakuniy innovatsiyalar iste'molchilari tahlil qilingan bo'lishi zarur, ya'ni korxonaning tashqi muhit tahlili o'tkazilishi kerak. Mazkur omillar bir vaqtning o'zida innovatsion loyihani amalga oshirish va qaror qabul qilish jarayonida hisobga olinishi kerak. Aynan shuning uchun moliyaviy va resurs ta'minotidagi mavjud cheklolarni hisobga olgan holda, innovatsion faoliyatni amalga oshirish doirasida ulardan foydalanishni optimallashtirish natijasida innovatsion rivojlanishning maqsad va vazifalari asosida korxonaning innovatsion faoliyatini kompleks boshqarishni amalga oshirish muhimdir.

Korxonaning innovatsion faoliyatini boshqarish sxemasini amalga oshirishda quyidagi vositalarni kiritish muhim hisoblanadi:

- innovatsion g'oyalarni joriy etish uchun istiqbolli loyihalarni tanlash vositasi;

- innovatsion faoliyatning tashqi va ichki omillarini hisobga olgan holda innovatsion loyihalarni baholash vositalari;

- sanoatning fan sig'imi yuqori tarmoqdari korxonalarida innovatsion loyihalarni amalga oshirishni optimallashtirish vositalari.

Korxonaning innovatsion faoliyatini boshqarishning yuqorida keltirilgan vositalarini hisobga olgan holda uni realizatsiya qilish algoritmi quyidagi bosqichlardan iborat (1-rasm).

Birinchi bosqichda korxonaning rivojlanishiga davlat, tarmoq va korxonaning rahbariyati qarashlarining rasmiyligidan iborat korxonaning innovatsion faoliyatini boshqarish mezonlarini shakllantirish zarur. Bu qarashlar korxonaning innovatsion faoliyati samaradorligi ko'rsatkichlari, korxonaning faoliyatining alohida ustuvor yo'nalishlari, realizatsiya qilinayotgan loyihalarning yo'l qo'yilishi mumkin bo'lgan risk darajasi, loyihalarning innovatsionligi va iqtisodiy samaradorlikning maqsadli ko'rsatkichlarida ifodalanadi.

Ikkinchi bosqichda korxonaning innovatsion infratuzilmasi holati va uning innovatsion faoliyati ko'rsatkichlari hamda ushbu sohada mavjud statistik axborotlar tahlilini o'tkazish kerak. Mazkur axborot turli yo'nalishlarda innovatsion faoliyatni muvaffaqiyatli amalga oshirish uchun korxonaning imkoniyatga ega ekanligini ifodalaydi.

1-rasm. Korxonaning innovatsion faoliyatini boshqarish algoritmi

Turli xil yo'nalishlar bo'yicha innovatsion faoliyatga qo'yilmalar samaradorligi qarab chiqilayotgan korxonada doirasida texnik jihozlanishi, kadrlar salohiyati, mavjud an'analar va u yoki bu innovatsion ishlanmalar tajribasiga bog'liq holda bir-biridan farq qiladi.

Uchinchi bosqichda innovatsion rivojlanishning mavjud jahon trendi va hamda innovatsion mahsulotlar, xizmatlar va texnologiyalarga davlat va tarmoq ehtiyojlari tahlilini o'tkazish zarur. Innovatsion faoliyat samaradorligining ajralmas qismi bo'lib, uning natijalariga talab hisoblanadi. Innovatsion faoliyatning kutilayotgan natijalariga talabni istiqbollashtirishga harakat qilish uchun korxonada faoliyatining yo'nalishlariga innovatsion qarorlarda davlat buyurtmalari, tarmoq va bozor talabini aniqlash zarur. Biroq innovatsion loyihalarni amalga oshirish yetarlicha uzoqroq vaqtni qamrab olishi mumkin.

Buning asosiy sababi davlat buyurtmasi, tarmoq va bozordagi talabga qarab innovatsion qarorlar o'zgarishi mumkin. Shuning uchun innovatsion faoliyatning turli yo'nalishlarida trendlar va tendentsiyalarning o'zgarishini monitoring va tahlil etish kerak.

To'rtinchi bosqichda korxonaning innovatsion rivojlanishini istiqbolli yo'nalishlarini aniqlash zarur. Korxonaning innovatsion loyihalarini realizatsiya qilishning ustuvor yo'nalishlarini aniqlashda quyidagi omillarni e'tiborga olish kerak:

- korxonaning ichki resurslarining miqdor va sifat ko'rsatkichlari;
- innovatsion faoliyat sohasida mavjud tendentsiyalar;
- innovatsion faoliyatni amalga oshirish doirasida korxonaning manfaatlari;
- innovatsion faoliyatni amalga oshirish doirasida tarmoq manfaatlari;
- innovatsion faoliyatni amalga oshirish doirasida davlat manfaatlari;
- innovatsion faoliyatni moliyalashtirishni amalga oshirishda investor manfaatlari.

Sanoat korxonalarida ishlab chiqarishni rivojlantirish, mahsulot hajmini oshirish, uning sifatini yaxshilash, ishlab chiqarish samaradorligiga erishish uchun fan-texnika taraqqiyotini jadallashtirish zarur. Bu faoliyat ma'lum iqtisodiy chora-tadbirlarni ishlab chiqish asosida amalga oshiriladi. Chora-tadbirlar albatta samarali bo'lishi kerak. Uni hisobga olmasdan, baholamasdan innovatsion loyihalarni ishlab chiqarishga joriy etib bo'lmaydi.

INSON TUSHUNCHASINING G'ARB VA SHARQ FALSAFASIDAGI GNOSEOLOGIK TAHLILI

Annotatsiya. Maqolada insonni kelib chiqishi, uni g'arb va sharq falsafasida tutgan o'rni, shuningdek turli faylasuf olimlarning inson to'g'risidagi fikrlar o'rin olgan.

Kalit so'zlar: Inson, "kosmobiopsixososiomadaniy" mavjudot, insoniy ruh va ma'naviyat, sharq falsafasi, g'arb falsafasi, falsafiy antropologizm, shaxsiy najot, ijtimoiy taraqqiyot.

GNOSEOLOGICAL ANALYSIS OF HUMAN CONCEPT IN WESTERN AND EASTERN PHILOSOPHY

Abstract. The article is devoted to the origin of man, his role in Western and Eastern philosophy, as well as the views of various philosophers on people.

Keywords: human, cosmobiopsychosociocultural creature, human spirit and spirituality, Eastern philosophy, western philosophy, philosophical anthropology, personal salvation, social development.

Insonning yaralishi, mohiyati va jamiyatda tutgan o'rni masalasi barcha davrlarda muhim o'rin tutishi bejiz emas. Turli ta'limotlarda bu masalalar turlicha talqin etib kelingan. Shunday bo'lishi tabiiy ham edi, chunki inson mohiyatan ijtimoiy-tarixiy va madaniy mavjudot sifatida har bir yangi tarixiy sharoitda o'zligini chuqurroq anglashga, insoniy mohiyatini ro'yobga chiqarishga intilaveradi. Binobarin, Suqrotning "O'z-o'zingni anglagin va bilgin" degan hikmatli so'zi har bir tarixiy davrda yangicha ahamiyat kasb etadi. Inson o'tgan davr mobaynida ne-ne mashaqqatlarga duch kelganiga qaramay tabiatning buyuk sirlarini hamda o'z-o'zini asta-sekin, izchillik bilan anglab bormoqda.

Bugun kunda insonni "kosmobiopsixosotsiomadaniy" mavjudot deb ta'riflashimiz mumkin bo'lmoqda. Ya'ni insonni koinotning bir bo'lami, ruhiyat

sohibi, ijtimoiylashgan va madaniyat bilan uyg'unlashgan mavjudot sifatida ko'rmoqdamiz.¹⁰⁹

Ha, odamzot tabiat sirlarini ochish yo'lida sobitqadamlik bilan ildamlamoqda, ammo u o'zligini anglash borasida ham shunday muvaffaqiyatga erishdi deb ayta olamizmi? E'tirof etmoq lozimki, inson hali o'z tabiati haqida aniq tasavvurga ega bo'lolgani yo'q. Unga insonni bilishdan ko'ra olam sirlarini ochish osonroq. Deyarli uch ming yildan beri faylasuflar inson o'zi kim, qaydan keladi-yu qayga ketadi degan savollarga javob topishga urinadilar. Ammo haligacha bu savollarga aytarli javob topilgani yo'q. Shunisi aniqki, inson o'z tabiatini anglamaguncha, o'zining cheksiz koinotdagi o'rnini bilib olmaguncha, inson ko'nglidagi kechinmalarga, ijtimoiy, milliy va xalqaro munosabatlarga oid muammolarni hal qila olmaydi. Inson tabiati - g'oyat murakkab. Unda hayvoniy va ilohiy sifatlar mujassamlashgan. Lekin u - hayvon ham, farishta ham emas. Insoniy ruh va ma'naviyat uni boshqa mavjudotlardan yuqori darajaga ko'taradi.

Butun dunyoda inson fikrlash va mantiqning bir xil usullariga rioya qiladi. Inson ongining xususiyatlari umumiy va bir xildir. Inson ongi o'xshash bo'lishiga qaramay turli mintaqalarda yashovchi odamlar bir qator umumiy muammolarga turlicha yondasha boshladilar. Shu bois sayyoramizning turli mintaqalarida yashovchi odamlar bir xil muammolarning har xil jihatlariga e'tibor qaratishgani tabiiy hol.

Sharq va G'arb faylasuflarining qarashlarida o'xshashliklar ko'p, biroq Hindiston, Yunoniston va Xitoydagi dunyoqarashning har xil jihatlariga beriladigan urg'udagi tafovutlar qadim zamondan hozirgacha yozilgan kitoblarda yaqqol ko'zga tashlanadi. Hind falsafasi insonning ichki olamiga ko'proq e'tibor qaratgan. Faylasuflar insonning tabiatini tushunishga intilishgan.

Yunon faylasuflarini asosan atrofimizni qurshab turgan tashqi olam xususiyatlari qiziqtirgan. Ular insonning borliqdagi o'rnini aniqlashga intilganlar. Shu bois ular tutgan yo'l hindlar tutgan yo'ldan ko'ra osonroq va yengilroqdir. Xitoyda ham faylasuflarni insonning ichki va tashqi olami unchalik qiziqtirmagan. Bugun buddaviylikning Xitoy taraqqiyotidagi o'rniga urg'u berilishi bejiz emas. Bu farqlar falsafaning ushbu mintaqalardagi keyingi taraqqiyotiga katta ta'sir ko'rsatgani bizga ma'lum.

Yevropa tafakkurining taraqqiyotiga Aflotunning g'oyaviy konsepsiyalari va nasroniylik kuchli ta'sir ko'rsatgani shubhasiz. O'rta asr G'arb falsafasi insonga ikki negiz: oliy (ruh) va past (tan) bir-biri bilan uzluksiz kurash olib boruvchi mavjudot sifatida qaradi. Yevropadagi din falsafasining "otasi" Avreliy Avgustin insonning mohiyatini aynan ruh va tana tashkil etadi, deb hisobladi. Tana vaqtinchalik qobiqdan, ruh "zindoni"dan boshqa narsa emas deb ta'kidladi. Din falsafasining yana bir vakili Foma Akvinskiy esa odam ruh bilan tanning uyg'un birligidan iborat va bu hol uni quyi, hayvoniy dunyo bilan oliy, ilohiy, farishtalar olami o'rtasida arosatda qolgan mavjudot qilib qo'yadi. Unda

¹⁰⁹ Khoshimov S. INTERPRETATION OF HUMAN PROBLEMS IN PHILOSOPHICAL THINKING OF EAST AND WEST // Экономика и социум. 2021. №11-1 (90).

jismoniylik qancha ko‘p bo‘lsa, u hayvonga shunchalik yaqinlashadi, ruhiyat qancha ko‘p bo‘lsa u shuncha farishtalarga yaqinlashadi.

Yangi davr boshlanishi bilan Yevropa falsafiy tafakkuridagi diniy-idealistik yo‘nalish o‘z o‘rnini falsafiy dunyoqarashga bo‘shatib berdi. G‘arb insonga ob‘yektlar ichidagi bir ob‘yekt deb qarab, inson hayotining barcha sohalarida ilmiy konsepsiyalar va ilmiy metodlarni qo‘llashga urindi. Shu bois nemis faylasufi I.Kant “inson dunyodagi eng asosiy mavjudotdir”. U bir tomondan, tabiatga tegishlidir, ikkinchi tomondan - axloqan erkin va uchinchidan, doimo qadriyatlar bilan ish ko‘radi. Bu sifatlarning birinchisida inson zaruriyat oldida tursa, ikinchisida ma‘naviy erkinlikka egadir deb ta‘rifladi.¹¹⁰ Vaqt o‘tishi bilan materialistik va ilmiy yo‘nalish G‘arbda keng tarqalgan dunyoqarashga aylandi.

G‘arbda XIX asr falsafiy fikrning inson haqidagi ta‘limotni rivojlantirishdagi eng muhim yutuqlaridan biri - bu L.Feyerbaxning falsafiy antropologizmidir. U inson mohiyati muammosini falsafaning “birdan-bir, universal va eng oliy” muammosi sifatida qaradi va birinchi o‘ringa olib chiqdi.¹¹¹ Biroq Feyerbax, aslida, insonga biologik nuqtai nazardan qaraydi, uning ijtimoiy mohiyatini izohlamaydi, ya‘ni, yuqorida qayd etilgan “sotsio” mavjudot ekanligi e‘tiborsiz qolgan.

Inson to‘xtovsiz rivojlanayotgan jonzot degan qarashning aksi o‘laroq Sharqda biz mutlaqo boshqa inson tushunchasiga duch kelamiz. Sharq-musulmon falsafasi doirasida inson muammosiga ikki xil yondashuvni ko‘rishimiz mumkin. Ulardan biri ko‘proq taqdir haqidagi islom aqidasiqa suyanadi. Qadim zamonlardan oq Sharq mutafakkirlari ma‘naviyat insongagina xosligini ta‘kidlashgan. Inson qalbini mushohada qilish, ma‘naviyatli inson tushunchasi Sharqdagi barcha mamlakatlarda falsafiy tafakkurga salmoqli ta‘sir ko‘rsatdi. Inson mohiyati, uning hayotdagi o‘rni va qadr-qimmat, iymon-e‘tiqodi, odob-etikasi masalasiga sharq faylasuflari alohida e‘tibor berganligini ko‘rishimiz mumkin.

Sharqcha inson tushunchasi odamni “Hazrati Inson” deya ulug‘lar ekan, unda komillik, olimlik, qodirlik kabi ollohga xos ko‘pdan-ko‘p xususiyatlarni ko‘rishni istaydi. Shu bois insonda ularga intilishdan boshqa ulug‘ maqsad bo‘lishi mumkin emas. Shu jihati bilan u boshqa barcha jonzotlardan ustundir. Mavlono Jaloliddin Rumi ta‘kidlashicha “Mo‘min so‘fiy Xudoning vujudini isbotlamasligi kerak, balki uni qalban his etishi lozimdir”.¹¹²

Shuni esda tutish lozimki, inson real ijtimoiy munosabatlarning in‘ikosidir. Insonning shakllanishi va rivojlanishining muhim omili sifatida uning ijtimoiy faoliyati, ijtimoiy hayotda muayyan rolni bajarishida namoyon bo‘ladi. Inson shaxs sifatida faqat turli tuman ijtimoiy munosabatlardagina o‘z-o‘zini namoyon etishi mumkin. O‘z vaqtida Arastu “insonning vazifasi uning ongli faoliyatidan

¹¹⁰ Kant I. Soch. T.N.Ch 1. M., 1965. 153-b.

¹¹¹ Философия. Ростов-на-Дону, 1996. 264-b.

¹¹² Jaloliddin Rumi. Ichindagi ichingdadir. Toshkent: Yozuvchi, 1998. – B. 107.

iborat” deb hisoblagan edi. A.Jomiy “Qo‘llaring baquvvat ekan, mavjud ekan kundalik mehnatga ko‘ngil qo‘y” deya da’vat etgan bo‘lsa, Ibn Sino “Bekorchiilik va ishyoqmaslik faqat nodonlikka sabab bo‘libgina qolmay, ayni paytda kasalliklarga ham sabab bo‘ladi” deb ogohlantirgan edi. Prezidentimiz Shavkat Mirziyoyevning 2018 yil Oliy Majlisga Murojaatnomasida Najmiddin Kubroning “Muvaffaqiyatni – sa’y-xarakatda, muvaffaqiyatsizlikni esa – loqaydlik va dangasalikda ko‘rdim” degan so‘zlari bejiz keltirilmagan.¹¹³

Insonning hayotiy faolligi uning shaxsining shakllanishining asosiy omili sifatida namoyon bo‘ladi. Mazkur jarayon davomida faqat tabiiy va ijtimoiy dunyoga moslashish yuz berib qolmasdan balki inson uni o‘z xohishiga mos ravishda o‘zgartiradi. Bunda chinakam insoniy, shaxsiy, ijtimoiy taqozo etilgan olam shakllantiriladi. Jamiyatning o‘zi, uning tizimi va tuzilishi, undagi munosabatlarni tashkil etuvchi unsurlar - bularning hammasi shaxs bunyodkorlik faoliyatining, uning dunyoni o‘zgartiruvchi ijodiy faoliyatining natijasi. I.Kant insonning jamiyatdagi o‘rni va roli haqida “Inson faqat vosita sifatida emas, balki maqsad sifatida ham o‘z-o‘zicha mavjud bo‘ladi..., o‘zining barcha xatti-harakatlarida u maqsad sifatida ham qaralishi zarur”, - deb ta’kidlaydi.¹¹⁴

Kelajak uchun inson tushunchasining sharqcha va g‘arbcha sintezi nima uchun bu qadar muhimligining sabablari bor albatta. Ilm-fan o‘z-o‘zidan xolisdir. Ilmiy kashfiyotni bunyod qilish uchun ham, vayron qilish uchun ham qo‘llash mumkin. Bu ilmni egallagan kishining aql-idroki va fikrlash tarziga bog‘liq. Agar insonga faqat rivojlanuvchi mavjudot sifatida qarasaq, unda hech nima hayvoniy nafs va ehtiyojlarini qondirish uchun foydalanishiga to‘sqinlik qilolmaydi. Agar insonga hazrati inson, ma’naviyatli inson sifatida yondashsak, u egallagan ilm yer yuzida tinchlik va totuvlikka erishilishiga va hamma odamlarning ezgu orzuniyatlarini ro‘yobga chiqishiga xizmat qiladi.

Yakunda esa sharqcha va g‘arbcha inson tushunchasi ma’lum darajada birbirini to‘ldirishi lozim. Birida insonning azizu-mukarramligi ta’kidlansa, boshqasida inson erishgan va o‘z kuchi bilan erishishga qodir bo‘lgan taraqqiyotga alohida ahamiyat beriladi. Birida inson tabiatining ma’naviy asosiga e’tibor qaratilsa, ikkinchisi ma’naviy ustunlik moddiy asosga ham tayanishini qayd etadi.

O‘rtadagi mavjud farqlar ta’lim sohasiga ham o‘z ta’sirini o‘tkazganini ko‘rishimiz mumkin. Sharqda ham, G‘arbda ham ta’lim tizimlarining o‘z qoidalari mavjud. Sharqda shaxsiy najot tushunchasiga katta e’tibor qaratiladi. Inson o‘zini qutqarish uchun ilmga intiladi. Shaxsiy najot muammosini birinchi o‘ringa qo‘yuvchi Sharq tafakkuri ijtimoiy farovonlik va taraqqiyotga har doim ham yetarlicha e’tibor qaratmagan. G‘arbda esa aksincha, ijtimoiy taraqqiyot masalalariga ustuvor ahamiyat berilgan. Haqiqatda esa ijtimoiy farovonlikka bunday katta e’tibor qaratilishi ba’zan inson qadr-qimmatini kamsitiladigan totalitar

¹¹³ O‘zbekiston Respublikasi Prezidenti Shavkat Mirziyoyevning Oliy Majlisga Murojaatnomasi. “Xalq so‘zi” gazetasi, 2018 yil 29 dekabr.

¹¹⁴ Kant I. Soch. T.N.Ch 1. M., 1965. 269-b.

jamiyatlar paydo bo'lishiga olib kelgan. Ilm-fan rivojlanishi tufayli Sharq va G'arbda bugungi kunda shaxsga, jamiyatga nisbatan bo'layotgan turlicha pessimistik munosabatlarga barham berilib, ikkovining ham muhimligi e'tirof etilishi va har ikkalasiga yetarlicha e'tibor qaratiladigan ta'lim tizimi yaratilishi lozim.

Shu tariqa ta'limning bugungi kunimizdagi ahamiyati ayon bo'ladi. Tadqiqodlardan bizga ma'lumki, ta'lim insonni, u orqali esa jamiyatni o'zgartirishga qodir. Kishi shaxsga aylanmagan joyda jamiyat mukammal bo'la olmaydi. Shu bois hozirgi zamonda ta'lim barkamol insonni tarbiyalashga xizmat qilishi, sharqcha va g'arbcha inson tushunchalari esa bu jarayonga o'z ulushlarini qo'shishlari lozim.

DUNYO XALQLARINING TARKIBIY TUZILMALARI VA ULARNING GEOGRAFIK NAMOYON BO'LISHI

Annotatsiya. Ushbu maqola orqali siz, qadimgi dunyo xalqlarining qanday paydo bo'lganligi va qay yo'sinda shakllanganligini, shu bilan birga, ulaning tarkibiy tuzilmalarining o'rtasidagi farqlar natijasida yuzaga kelgan omillar va ularning geografik namoyon bo'lishida hududning ahamiyati qanchalik muhim ekanligi haqida ma'lumotlarga ega bo'lasiz. Bundan tashqari, yo'lga qo'yilgan kamchiliklar tahlil qilinib, bugungi kundagi dunyo xalqlarining o'rtasidagi farq taqqoslangan va yuzaga kelgan muammolar yuzasidan taklif va yechimlar berilgan.

Kalit so'zlar: Dunyo aholisi, tarkibiy tuzilmalar, geografik jihat, muammolar, rivojlanish, etnik tarkib, etnografiya, zichlik.

COMPOSITION STRUCTURES OF THE NATIONS OF THE WORLD AND THEIR GEOGRAPHICAL DISTRIBUTION

Abstract. Through this article, you will learn how the peoples of the ancient world arose and how they were formed, at the same time, about the factors that arose as a result of the differences between their structural structures and how important the territory is in their geographical manifestation. you will have information. In addition, the shortcomings were analyzed, the differences between the nations of the world today were compared, and suggestions and solutions were given for the problems that arose.

Key words: World population, structural structures, geographical aspect, problems, development, ethnic composition, ethnography, density.

Insoniyat paydo bo'libdiki, jamoaviy bo'lib yashab kelgan. Tarixiy taraqqiyotning yuksalishi davomida jamoalar kengayib, turli xil etnografik

birliklarning rivojlanishi natijasida turli xil xalqlar paydo bo'lgan. Ma'lumki, bundan 10-15 ming yillar muqaddam Yer yuzida aholi son jihatidan juda kam bo'lgan va sekinlik bilan ko'paygan. O'sha vaqtlarda inson tabiatga qaram bo'lgan. Odamlar ovchilik, termachilik va oziq-ovqat yig'ish bilan kun kechirganlar. Keyinchalik chorvachilik va dehqonchilikning rivojlanib borishi bilan aholining o'sishi ham birmuncha tezlashdi. Hozirgi vaqtda aholi sonining o'sishi ayrim Qit'alar, davlatlar o'rtasida va hatto yirik mamlakatlarning ichida ham farq qiladi. Bu juda ko'p omillarga bog'liq, masalan, ijtimoiy-iqtisodiy taraqqiyoti, farovonlik darajasi kabi ko'rsatkichlarga bog'liqdir. Hozirda Yer yuzida "Deutsche Welle"ning turkcha nashri xabariga ko'ra 2024 yilning boshidan hisoblaganda dunyoda 8 milliard 73 million 859 ming 407 kishiga yaqin odam yashaydi. Ular turli xalqlarga mansub. Har birining soni 100 milliondan ortiq xalqlar mavjud bo'lib, ularning asosini ko'proq bir millat vakillari tashkil etadi. Masalan, xitoylar, yaponlar, ruslar, bengallar misol bo'lsa, nemislar, italiyanlar, fransuzlar esa bir necha milliondan iborat. Shuningdek, kam sonli xalqlar ham bor. Bular orasida eng kichigi – Fillipin orollarida yashovchi **TASADAY** qabilasining vakillari kiradi. Bu qabila vakillarining soni 50 kishiga ham yetmaydi. Ular tog' yonbag'irlarida yashaydilar. Ovchilik va yovvoyi o'simliklarni terish bilan kun kechiradilar. Yaqinga qadar ular o'zlaridan boshqa odamlar borligini bilmaganlar ham. Yer yuzida hammasi bo'lib, 2 mingga yaqin katta va kichik xalq mavjud. Ular turli tillarda so'zlashadilar, ularning urf-odatlariga ham turlicha. Xalqlar tashqi ko'rinishi bilan ham farqlanadilar. Masalan, yaponlar dag'al qora sochli va bodomko'z, barcha bengallar qorachadan kelgan, tropik Afrikada yashovchi xalqlar esa qora tanli, sochlari jingalak bo'ladi.

Har bir xalq o'zining maxsus tilida so'zlashadi. Biroq bundan mustasno holatlar ham mavjud. Masalan, inglizlar va amerikaliklar bir xilda ya'ni inglizchada, lyuksemburgliklar va avstryaliklar esa nemis tilida, ispanlar hamda Janubiy va Markaziy Amerikaning ko'pchilik xalqlari ispancha so'zlashadilar. Lekin ular ham turli xalqlardir. Ularning har biri o'z tarixi, turmush tarzi va urf-odatlariga ega. Xalqlar o'rtasida tafovutlar ko'p, lekin ularning o'xshashlik va umumiylik tomonlari ham mavjud. Xalqlarning hammasi bir bo'lib, insoniyatni tashkil etadi.

Mana shu insoniyatning tarkibiy tuzilmalari va ularning geografik manzarasini ilmiy asosda o'rganish zamonaviy geografiyaning dolzarb mavzularidan biridir. Xalqlarning hududiy joylashuvi va tarkibiga ta'sir etuvchi omillar kabi bo'limlarga bo'lib oldik. Aholi moddiy ne'matlarning asosiy ishlab chiqaruvchisi va ayni vaqtda uning asosiy iste'molchisidir. Demografik jarayonlar, ya'ni aholinning ko'payishi, o'sishining xususiyatlariga oid sur'ati, tug'ilishi, o'lim, nikohda bo'lish darajasining o'zgarishi, avlodlar almashinuvi, umr ko'rish davomiyligi, jinsiy balog'at va oila tarkibi kabilar butun jamiyat rivojlanishi bilan o'zaro jips hamda uzviy aloqadordir.

Ular jamiyat rivojlanishiga tobe bo'lib, unga ta'sir o'tkazadi. U yoki bu davlatlarda ijtimoiy-iqtisodiy o'zgarishlar kechishini osonlashtiradi yoki

qiyinlashtiradi. Shuning uchuun ham aholi sonining o'zgarishiga aloqador muommolar, uning hududiy joylashuvi va mamlakat iqtisodiyotiga ta'siri ko'plab olimlar, demogroflar, iqtisodchilar, geograflar, faylasuflar, huquqshunoslar, tibbiyotchilar va boshqalar diqqatini doimo jalb etib keladi. Aholi sonining o'sib borishi, mehnat resurslaridan foydalanish, aholini oziq-ovqat va boshqa kunlik ehtiyojlarini qondirish hamda boshqa muammolar aholi geografiyasi fanining eng asosiy muommolaridir. Aholini tadqiq etish va jamiyat rivojlanishidagi ro'lini ta'riflash, shuningdek jamiyat taraqqiyotida turlicha o'ringa ega bo'lgan aholi qatlamlarini o'rganishda juda ko'plab ish qilingan va nazariyalar yaratilgan. Bunday nazariyalar va qonuniyatlar ishlab chiqarish negizida aholining rivojlanishini tushuntirib berishga qaratilgan bo'lib, insoniyat kelajagi va taraqqiyotini boshqarish hamda prognoz qilishda muhim ro'l o'ynaydi. Aholining rivojlanishi haqidagi nazariyalar vaqt nuqtayi-nazardan nisbiydir va bu nazariyalarning qanchalik hayotiy ekanligini vaqt ko'rsatadi. Aholi va uning faol qismi bo'lgan mehnat resurslari makroiqtisodiyotning asosiy qismi hisoblanadi. Makroiqtisodiyot aholi va mehnat resurslarining ijtimoiy iqtisodiy yo'nalishlarini tadqiq etish orqali uni samarali boshqarish va milliy iqtisodiyotni rivojlantirishni maqsad qilib oladi. Chunki, mehnat resurslari va uning faol qismi bo'lgan ishchi kuchi ishlab chiqaruvchi kuchlarning eng asosiy qismidir. Shu bilan birga mehnat resurslari bozor iqtisodiyoti munosabatining tarkibiy elementlaridir. Shu sababli mehnat resurslarini har tamonlama o'rganib, uni iqtisodiy geografik jihatdan baholash maqsadga muvofiq.

Bundan tashqari aholi joylashuvi haqida gapiradigan bo'lsak, u ma'lum vaqt davomida aholining hududlar bo'ylab tarqalishi va aholi maskanlari to'ring shakllanishi natijasida yuzaga keladigan jarayondir. Bu jarayon qator omillar bilan bog'liq. Ularga tabiiy sharoit va aholi manzilgohlari shakllanishining tarixiy xususiyatlari, demografik o'tish bosqichlari, rivojlanish darajasi, sotsial-iqtisodiy omillar bilan bir qatorda xo'jalik tarkibini kiritish mumkin. Aholi joylashuvida eng asosiy omil bu tabiiy sharoit hisoblanadi. Dunyo aholisining asosiy qismi ham inson yashashi uchun qulay tabiiy sharoitga ega bo'lgan, shuningdek, qishloq xo'jaligi bilan shug'ullanish imkoniyati bor hududlarda joylashgan. Tabiiyki, bu mehnat resurslarining ham shakllanishida muhim ahamiyat kasb etadi. Masalan, tabiiy sharoiti inson yashashi uchun qulay, suv resurslari mavjud hududlarda, ya'ni, O'rta dengiz atroflarida, Shimoliy Afrika, Yevrosiyo materigining janubida aholi zichroq joylashgan. Eramizning boshlarida aholi asta-sekin dehqonchilik va chorvachilik bilan shug'ullana boshlaydi. Odamlar moddiy ne'matlarni o'zlari mehnat qilib yaratishga o'tganlar va ishlab chiqarish jarayoni yetakchilik qila boshlaydi. Ular ma'lum bir hududlarda o'troq bo'lib yashashga, o'tadilar va aholi punktlarini quradilar. Natijada, avval qishloq maskanlar, keyinchalik shahar maskanlari paydo bo'la boshlaydi. Aholining turmush tarzi yaxshilana borishi bilan, insonlar hayotida ijtimoiy o'zgarishlar sodir bo'ladi.

Hozirgi davrda esa Yer yuzi bo'ylab aholi juda notekis joylashgan. Sayyoramizda aholi juda zich (1 km. kv.ga 1000 kishi) yashaydigan hududlar ham

uchraydi. Bundan tashqari, aholi juda siyrak joylashgan hududlar ham mavjud. Bu yerda havo haroratining juda pastligi, mavjud bo'lgan suvning muz holatida ekanligi va shu kabi bir qancha sabablar mavjud. Bunday hududlar Yer sharidagi quruqlikning 10 % ini tashkil etadi. Ularga Shimoliy va Janubiy qutblar, balandligi 5000 metrdan ziyod bo'lgan tog'lar va sahrolar kiradi. Yer sharidagi quruqlikning 50 % aholi uchun tabiiy sharoiti noqulay hudud hisoblanib ularda aholi zichligi 1 km. kv.ga 1 kishidan to'g'ri keladi.

Dunyo aholisining etnik tarkibi haqida gapiradigan bo'lsak, Yer sharida, etnik birliklarning tarkibi asosan, ibtidoiy jamoa tuzumidan toki hozirgacha bo'lgan kategoriyalari, urug', qabila, elat va millatlardan iboratdir. Kishilarning eng qadimgi etnik birligi "*urug*" bo'lib, u asosan ibtidoiy jamoa tuzumida vujudga kelgan. Jamoa tuzumining vujudga kelishi, odamlarning qon-qarindoshliklariga asoslangan. Urug'chilikning asosiy belgilari quyidagilardir:

- 1) urug' a'zolarining bir-biri bilan qarindoshligi
- 2) xo'jalik faoliyatining birligi
- 3) ijtimoiy hayotning, turmush tarzining va o'sha davrga xos bo'lgan madaniyati bilan tavsiflanadi.

Etnik tarkibning ikkinchi yuqoriroq qismi "*qabila*" dir. Uning tavsifini o'z tili va shevasiga, hududiga ega bo'lgan, shuningdek maxsus kengash tomonidan boshqarilgan jamoa sifatida ifodalash mumkin. *Elat* esa keng qamrovli tushuncha bo'lib, asosan feodalizm jamiyati davrida ya'ni quldorlik davrida shakllana boshlagan. Elat kishilarning millatdan oldingi tarixiy birligidir. Elatlarning o'z nomlari, tili, umumiy madaniyati va psixik xususiyatlari tarkib topgan. Elatlar o'zining hududiga ega bo'lishi bilan birga ma'lum darajada iqtisodiy aloqalar ham qilishgan. Millat bir so'z bilan aytganda yuqorida nomi qayd etilgan xususiyatlarni o'zida mujassamlashtirishi bilan birga, milliy ongning rivojlanganligi bilan farqlanadi. Ammo rivojlanishning kapitalizm sharoitida barcha xalqlar ham alohida millat sifatida tashkil topadi deb bo'lmaydi. Chunki xalqlar o'rtasida tenglikning yo'qligi, ko'p sonli va kuchli xaqlarning ekspluatator sinflar tomonidan mayda xalqlarning shafqatsiz ekspluatasiya qilinishi, madaniyat va iqtisodiyotning rivojlanishi yo'lida sun'iy g'ovlarning vujudga keltirilishi ularning millat sifatida tashkil topishi va rivojlanishiga to'sqinlik qiladi.

Umuman olganda xalqlar geografiyasida etnik jarayonlar, turli xalqlarning madaniyati, hududiy joylanishi, bir-biri bilan o'zaro aralashuvi, mehnat halqalari kabi masalalar muhim ahamiyat kasb etadi. Etnografiya fani esa mamlakatlar va rayonlar aholisining etnik tarkibi, xalqlarning hududiy munosabatlarini, turli etnik guruhlarning oldingi davrlarida, shuningdek, hozirgi hududiy yashash formalarini o'rganuvchi fan hisoblanadi. Ya'ni aholining etnik tarkibini har tomonlama geografik o'rganish ko'pgina demografik jarayonlarni tushunishga yordam beradi. Masalan aholining takror barpo bo'lishini bunga misol qilib keltirish mumkin. Chunki bu borada geografik joylashuv va ijtimoiy-iqtisodiy kelib chiqishi muhim ahamiyat kasb etadi. Aytaylik dunyo aholisining o'sish

su'ratining sekinlashishi ayollarning o'rtacha hisobdan kamroq bola tug'ishi bilan bog'liq. DSWning hisob- kitoblariga ko'ra, iqtisodiy jihatdan anchagina ortda qolgan Afrika aholisi 2080 yilga kelib bugungi kunga nisbatan aholisi 2 barobarga ortib, 2,5 milliardga yetishi prognoz qilingan. Buning asosiy sababi sifatida esa tug'ilishning nazorat qilish usullariga erishishning murakkabligi va gendir tenglikning yo'qligi kabi sabablar asos qilib keltirilmoqda. Mutaxasislarning fikricha, bu kabi salbiy holatlar ko'pincha ayollarning erta yoshdan boshlaboq ko'p farzandli bo'lishga olib keladi.

Xulosa qilib aytganda dunyo xalqlarining tarkibiy tuzilmalari geografik namoyon bo'lishi, Yer yuzidagi insoniyatning paydo bo'lgandan boshlab, rivojlanishi, keng yoyilishi Yer yuzi bo'ylab, tabiiy sharoiti qulay bo'lgan hududlarda tezroq rivojlanib svilizatsiyani hosil qilishi, shuningdek, etnik tarkibiga ko'ra bir-biridan keskin farqlanishi va boshqa turli sabablarni o'z ichiga olgan holda namoyon bo'ladi. Bir so'z bilan aytganda geografik namoyon bo'lishi barcha tabiiy jarayonlarni qamrab oladi.

O'ZBEKISTONDA DEMOGRAFIK JARAYONLAR SHAKLLANISHI VA RIVOJLANISHI

Annatsiya. Aholi sonining o'sib borishi (tug'ilish) yoki kamayishi (o'lim), shuningdek, nikoh, ajrim va migratsiya ko'rsatkichlari bilan uzviy chambarchas holda kechadi. Ushbu maqolada demografiyaning fan sifatida paydo bo'lishi, uning rivoji va O'zbekiston aholisining demografik ko'rsatkichlari haqida boradi.

Kalit so'zlar: Demografiya, A.Giyar, O'zbekiston, tug'ilishi, o'lim, nikoh va ajralish, yosh-jinsiy tarkib, oilaviy tarkib, demografik vaziyat, demografik prognoz.

FORMATION AND DEVELOPMENT OF DEMOGRAPHIC PROCESSES IN UZBEKISTAN

Annotation. Population increases (births) or decreases (deaths) are closely related to marriage, divorce, and migration rates. This article deals with the emergence of demography as a science, its development and demographic indicators of the population of Uzbekistan.

Key words: Demography, A. Giyar, Uzbekistan, birth, death, marriage and divorce, age-sex composition, family composition, demographic situation, demographic forecast.

Demografiya - har yili turli sabablarga ko'ra vafot etgan aholi o'rnini yangidan dunyoga kelgan avlod hisobiga to'ldirib borilishi qonuniyatlarini ijtimoiy-tarixiy sharoitlarga bog'liq holda o'rganadigan fandır. Demografiya terminini 1855-yilda fransuz olimi A.Giyar qo'llagan. XIX asr oxiri va XX asr boshlarida keng tarqaldi. O'zbekistonda asosan 1960-yildan qo'llanila boshladi.

Demografiyaning vazifalari quyidagilardir:

◀ demografik jarayonlar ya'ni tug'ilishi, o'lim, nikoh va ajralish, aholining yosh-jinsiy va oilaviy tarkibi va ularning omillarini o'rganish, demografik prognoz; ◀ hudud aholisining soni, yosh-jinsiy tarkibi va demografik vaziyatlarni oldindan ilmiy prognoz qilish.

Demografik jarayonlarni o'rganishda ko'p ma'lumotlardan foydalaniladi. Tug'ilish, o'lim, nikoh, aholi soni va tarkibi kabi demografik jarayonlar ilmiy jihatdan o'rganilib, tahlil qilinadi va ushbu ma'lumotlar asosida diagrammalar va jadvallar tuziladi. Demografiya aholining miqdoriy va sifatiiy o'zgarishlarini, aholining takror barpo bo'lishining asosiy omillari sifatida o'rganadi. Demografiya asosiy e'tiborini tug'ilish va o'lim asosida aholining takror barpo bo'lish jarayonlariga qaratadi. Bu jarayonlarni o'rganish uchun demografiya jamiyat taraqqiyoti, bosqichlari, tarixiy sharoitlarni o'rganishi lozim. Demografiya tug'ilishni, unga ta'sir etuvchi barcha ijtimoiy-iqtisodiy va tabiiy omillarni alohida tahlil etadi.

O'zbekistonda ham demografik tadqiqotlar rivojlanishi o'z tarixiga egadir. 2000-2010-yillarda O'zbekiston Milliy Universiteti geografiya fakulteti qoshida "Demografiya " kafedrasini faoliyat yuritdi. Shuningdek, "Demografiya" kafedrasini Markaziy Osiyoda yagona bo'lgan. Demografik bilimlar qadimdan bo'lgan, buni tarixiy manbalar orqali ko'rganmiz. Lekin O'zbekistonda maqsadli tadqiqotlarni o'tkazish asosan, 1960-yildan boshlangan. Ana shu yillarda demografiya sohasida ko'plab yutuqlarga erishgan olim Q.Qoraxonov hisoblanadi. Q.Qoraxonov demografiya sohasida o'zining ko'plab meroslarini qoldirgan. Q.Qoraxonov aholi o'sishi, tug'ilishi, o'lim, nikoh va ajralish kabi demografik jarayonlarni hamda bu jarayonlarga ta'sir etuvchi omillar, muammolarni ham o'rgandi. Olimning olib borgan izlanishlari, tadqiqotlari asosida monografiya, risolalar va maqolalar chop etilgan. O'lkamiz demografik tarixini va aholi muammolarini o'rganishda R.I.Mullajonov, R.A.Abdullayeva, E.A.Ahmedov, A.S.Soliyev, N.S.Aliqoriyev, A.A.Qayumov, O.E.Ergashev kabi olimlar olib borgan tadqiqotlar demografiya sohasida alohida ahamiyatga ega.

Aholi soni va uning ijtimoiy-iqtisodiy va demografik tarkibi davrlar hamda hududlar bo'yicha doimo o'zgarib turadi. Aholi soni va tarkibida sodir bo'lgan barcha o'zgarishlar mamlakat iqtisodiyotining rivojlanishiga bevosita ta'sir etadi. Har bir mamlakat, davlatning ijtimoiy-iqtisodiy rivojlanishida aholi sonining ortishi va kamayishi, aholi tarkibida mehnat yoshidagi kishilar hamda bolalar va qariyalar salmog'i ham juda muhimdir. Aholi soni va tarkibini hisobga olish uslublari, dasturlari jamiyat rivojlanishi bilan monand rivojlanib boradi. Aholini hisobga olishda to'plangan ma'lumotlar aniqligi, to'la qamrovi va muntazamligi juda muhimdir. Barcha davlatlarda aholining ijtimoiy-iqtisodiy va demografik holatlari hisobga olinib, ma'lumotlar muntazam to'planib boradi. O'zbekiston aholisining ijtimoiy-iqtisodiy va demografik rivojlanishi XIX asrning 2-yarmidan boshlandi. Podsho Rossiyasi bosib olgandan so'ng keskin o'zgardi. 1897-yil aholini ro'yxatga olish jarayonlari o'tkazildi va bu davrda O'zbekistonda 3,9 mln kishi yashagan. Shahar aholisi ulushi juda past bo'lgan, shuningdek tub aholisi

migratsion harakati ham sust bo'lgan. Aholi ko'chib keluvchilar hisobiga o'sgan. Natijada, O'zbekiston hududida yangi qishloqlar, shaharlar va aholi punktlari vujudga kelgan. Biroq shunga qaramay XX asrning boshlarida aholi sonining o'sishida sezilarli o'zgarish bo'lmadi. 1924-1940-yillar davomida O'zbekiston aholisi 2,1 mln. kishiga oshdi, aholining o'sishi yiliga 3% ga teng bo'ldi. 1939-1950-yillarda esa 6,4 mln.dan 6,3 mln.ga kamaydi. Bunga sabab ikkinchi jahon urushi edi. Ikkinchi jahon urushi O'zbekiston aholisining soniga, uning tarkibiga hamda joylashuviga salbiy ta'sir ko'rsatdi. Urush tugagandan so'ng aholi soni oshib bordi. 1959-1970 yillar davomida aholi soni 8,1 mln. kishidan 11,8 mln. kishiga oshdi. Bunga aholining tabiiy ko'payishidan ko'ra chetdan kirib kelganlar salmoqli o'rin egallardi. 1980-1990 yillar aholi soni qariyb 5 mln. kishiga ko'paygan. 2013 yilga kelib esa 30 mln. aholi O'zbekiston hududida istiqomat qilgan. Shuningdek, 1989-2013 yillar oralig'ida aholining milliy tarkibida ham o'zgarishlar ro'y bergan. 1989 yil o'zbeklar ulushi 71,5 foizga teng bo'lsa, 2013 yilga kelib 82,9%ga oshgan, ya'ni aholining milliy tarkibida o'zbeklar salmog'i oshgan. Shu bilan birga mamlakatda 2% dan 3,5% ga Qoraqalpoqlar va 4,5 % dan 4,8% ga tojiklarning salmog'i oshgan. Aksincha ruslar ulushi 8,2% dan 2,7% ga kamaygan va qozoqlar ulushi sezilarli darajada kamaygan. Mamlakatda tub aholi o'zbek millatiga mansub aholi soni 2021 yilga kelib 1989 yilga nisbatan ikki baravardan ziyodga (107% ga) ko'paygan. Mamlakatda millatlar ning geografik joylashi shi ham bir tekis emas. Buning birinchi sababi millatlarning tarixiy rivojlanishi bo'lsa, ikkinchidan respublikada xalq xo'jalik tarmoqlari ning rivojlanish xususiyatlaridir.

Aholining tabiiy ko'payishi birinchi navbatda tug'ilishga bog'liq. 1865-1917 yillarda tug'ilishning umumiy koeffitsiyenti (har 1000 ta bolaga nisbatan tug'ilganlar soni) 45%o ni tashkil etgan. Oilada farzandlar tug'ilishi cheklanmagan. Buning asosiy omili o'zbek ayollarining ijtimoiy ishlab chiqarishda juda kam ishtiroki va qadriyat ta'sirining yuqoriligidir. Shuningdek, bu davrlarda aholining o'lim ko'rsatkichi ham yuqori bo'lgan. 1886-1890 yillarda 1000 ta aholiga nisbatan 49,8 ta bola tug'ilgan bo'lsa, o'lganlar soni esa 44,8 taga teng edi. Bu ko'rsatkichlar o'lim darajasining yuqori ekanligidan dalolat beradi. O'rtacha umr ko'rish davri ham juda qisqa bo'lgan (32 yosh) 1991 yilda O'zbekiston iqtisodiy munosabatlarida ijtimoiy-iqtisodiy o'zgarishlar sodir bo'ldi va bu o'zgarishlar demografik holatga ham o'z ta'sirini ko'rsatdi. O'zbekistonda tug'ilishning yuqoriligi, oila qadriyatlari hamda nikohdan o'tish jarayonlarining yuqoriligidir. Respublikada 1980-1995 yillarda o'lim koeffitsiyenti 7,5 promilledan 6,4 promillegacha qisqardi hamda go'daklar va bolalar o'rtasidagi o'lim darajasi kamaydi. Tibbiy xizmatlarning yaxshilanishi hamda aholi o'limining keskin kamayishiga olib keldi. Shahar hududlarida aholining o'limi qishloq joylardagiga nisbatan yuqori. Bunga sabab shaharda ekologik vaziyatning o'zgarishi, shahar turmush tarzi, aholining muntazam harakatda bo'lmasligi va sof-tabiiy mahsulotlarni iste'mol qilmasligidir.

O'zbekiston aholisi sonining o'zgarishida migratsiyaning ahamiyati ham katta. Aholi migratsiyasi (lotincha "migratsion"- ko'chish) - yashash joyini doimiy yoki vaqtincha o'zgartirish maqsadida ko'chishdir. Hozirgi kunda aholining tabiiy o'sishi, zichligi, uning hududlar bo'ylab joylashuvida ham migratsion harakatlarning ta'siri bor. Migratsiyaning asosiy belgilaridan biri ma'muriy chegarani kesib o'tishidir. Shunga ko'ra migratsiya: tashqi va ichki migratsiyaga bo'linadi.

Tashqi migratsiya - bir davlatdan ikkinchi davlatga, bitta Qit'adan ikkinchi Qit'aga ko'chishidir. Bu jarayonda davlat aholisi qayta taqsimlanadi va ularda aholining ko'payishi yoki kamayishi kuzatiladi.

Ichki migratsiya-bitta davlat ichida aholining hududlar bo'ylab ko'chishidir. Bunda migratsiyada ma'lum davlat ichida shahar va qishloq, tumanlar bo'ylab aholining qayta taqsimlanishi sodir bo'ladi. O'zbekistonda o'tkazilgan aholi ro'yxatlarida respublikaga ko'chib kelib, ikki yildan kam yashagan aholi migrant hisoblangan. O'zbekistonning Podsho Rossiyasi tomonidan bosib olingandan so'ng migratsiya harakatlari ya'ni ko'plab oilalarning ko'chib kelishi kuzatilgan. Hamda ular uchun qulayliklar, ko'plab imkoniyatlar taqdim etilgan. XX asr boshlarida ko'chib keluvchilar salmog'i juda yuqori bo'lgan. Ayniqsa, Mirzacho'lni o'zlashtirish, u yerda qurilish, sanoat korxonalarining barpo etilishi natijasida migratsion oqim kuchlari bo'lgan. Natijada, 1963 yil Sirdaryo va 1973 yil Jizzax viloyatlari tashkil topgan. Respublika aholisi, asosan, qadimdan o'zlashtirilgan, sug'orma dehqonchilik uchun sharoit qulay bo'lgan voha va vodiylarda zich joylashgan.

Mamlakatning shahar aholisi nihoyatda notekis joylashgan. 2022 yilning 1 yanvar holatiga ko'ra, 1 km² o'rtacha 78,6 kishi to'g'ri kelgan. Bu esa o'tgan yilning mos davriga nisbatan solishtirilganda 1,6 kishiga ko'proq (2021 yilda 1 km² 77,0 kishi). Hududlar bo'yicha qaraydigan bo'lsak, aholi zichligining eng yuqori ko'rsatkichi Toshkent shahri (8035,1 kishi), Farg'ona (576,4 kishi) va Andijon (756,6 kishi) viloyatlarida, eng past ko'rsatkichlar Navoiy viloyati (9,3 kishi), Qoraqalpog'iston Respublikasi (11,7 kishi) va Buxoro viloyatida (49,1 kishi) qayd etilgan.

MAQOLLARDA HAYVONLAR OBRAZLARINING TASVIRI

Annotatsiya. Maqolada, hayvonlarni nomi keltirilgan maqollar o'z aksini topgan. Ana shu hayvonlarning har biri timsol qilib olinib, ular vositasida muayyan sifatlar (ijobiy, salbiy) kishilarning obrazlari gavdalanir.

Kalit so'zlar: maqol, hayvon nomlari, timsol, zoonimlar, obraz.

IMAGES OF ANIMALS IN ARTICLES

Abstract. This article reflects the proverbs about animals. Each of these animals was personified, and through them images of people of certain qualities (positive or negative) were embodied.

Keywords: proverb, animal names, symbol, zoonyms, image.

Ulug' rus yozuvchisi L.N.Tolstoy "Har bir maqolda shu maqolni yaratgan xalqning siymosi ko'rinadi", - degan edi. Darhaqiqat, maqollarda ota-bobolarimiz bosib o'tgan yo'lni, kechirgan turmushlarini, shodliklarini va chekkan azob-uqubatlarini ajdodlarimizning urf-odatlarini, an'analarini ko'ramiz, his etamiz.

V. Dalning maqol va matallar haqidagi ta'rifi o'ta to'liq aniq va ifodalidir: "Maqollar to'qilmaydi. Sharoit taqozasiga ko'ra yaratiladi va qalb isyoni yoki da'vati sifatida yaratiladi."

"Xalqimizning boshidan kechirgan barcha kechinmalari, ko'p asrlik urushlari o'z aksini topgan folklorni o'rganish juda muhimdir. Chunki u xalqimizning shu kunlardagi ruhiyatini yaxshiroq tushunishga yordam beradi." (G'afur G'ulom)

Maqollar xalqning turmush jarayonlari, mehnat faoliyatlari, tabiatni kuzatish va madaniyatlari asosida yuzaga kelgan.

Maqollarni o'rganish nutq madaniyatini o'stirishga yordam beradi. Tilning milliy xususiyatlarini o'zida mujassam etadigan maqollar o'z ichiga xalqning boy tarixiy an'analarini, mehnat jarayoni bilan bog'liq bo'lgan ko'rinishlarini va insonlarning hayoti va madaniyatini oladi.

Tilimizda hayvon nomlari bilan ifodalangan maqollar, frazeologik birliklar ko'p uchraydi. Hayvonlarni kuzatish natijasida tashkil topgan maqollar o'ziga xos bo'lib, katta o'rin egallaydi. Bu maqollar yordamida atrofimizdagi olam, predmet

va narsalarning obrazli emotsional tasviri, harakatlar va belgilar aniq va chiroyli tarzda ochib beriladi.

Ular insoniyat taraqqiyotining doimiy yo'ldoshlari bo'lmish hayvonlarni kuzatish natijasida yuzaga keladi va xalqning yillar davomida yig'ilgan til boyligi hisoblanadi. Ularning kichik aniq forma va ish harakati asosida chuqur ma'no yotadi. Ayrim olimlar ushbu maqollarni oz ilmiy ishlarida zoonimlar deb yuritishadi.

Zoonimlar hayvonlar dunyosining tashqi ko'rinishi va xususiyatlariga bog'liq bo'lgan obrazli metoforik negizida kishilarning metoforik xarakterini yoki qandaydir harakatning ko'rinishini o'z ichiga oladi.

U yoki bu maqolning ko'chma ma'nosini, unda nima deyilmoqchi bo'layotganini aniqlash uchun maqolda keltirilgan obrazlarning mohiyatini to'g'ri anglamoq kerak xalq og'zaki ijodining ko'pchilik janrlarida, jumldan, maqollarda xalq jamiyatidagi munosabatlar, hodisa va holatlarni soddaroq ifodalamoq maqsadida tabiatdagi o'z xususiyatlari bilan shunga mos keladigan turli hayvonlar obrazidan ustalik bilan foydalanadi. Ana shu hayvonlarning har birini timsol qilib olib, ular vositasida muayyan sifatlariga (xoh ijobiy, xoh salbiy) ega bo'lgan kishilarning obrazini gavdalantiradi.

Eshak va xo'kizni, befahm, befarosat dangasalarga tashbeh qilinadi:

Qanoat aylagan shox-u jahondur,

Tama qilgan eshakdan ham yomondir.

Eshakka xudo shox bersa, hammani
suzadi,

Arpaning ichida kesak bor,
Yomonning ichida eshak bor.

Tuyaga xudo qanot bersa, tomingni
buzadi.

Xarakash eshak yo'lga yaramas.

Yotgan xo'kiz somondan quruq
qoladi.

Eshagiga yarasha tushovi.

Xo'kiz bo'lib, buzoq odatingni
qilmagin.

Eshagidan tushovi qimmat.

Eshak ishi bilan kuchli,
To'ng'iz – tishi bilan.

Yer qattiq bo'lsa, xo'kiz xo'kizdan
ko'rar.

Eshakka ergashgan kulga ag'nar.

Echkini - ayyorlarga, yengil tabiatlilarga tashbeh qilinad:

Echkining o'lgisi kelsa, cho'ponning
tayog'iga suyanar.

O'zini aka degan,
Echkisini taka der.

Echkining yog'i bo'lmas,
Yaxshining – dog'i.

Echki yugurib – kiyik bo'lmas.
Echkida et yo'q, orsizda – bet.

Echkini ajali etsa, qassobni suzar.

Bo'ta, buzoq, to'y, qulun, qo'zi, uloq, kuchuk, xo'tik, poloponni – bolalarga tashbeh qilinadi:

Buzoqni bo'sh qo'ysang, xurmachani
ag'darar.

Buzoq somonxonani bo'shatar,
Bola – nonxonani.

Buzoq ko'p emsa bo'kadi, bo'sh
qo'ysang to'kadi.

Bo'ladigan buzoq tezagidan ma'lum.

Yaxshi buzoq ikki onani emadi,

Ensasi qotgan bittadan ham qoladi.

Itni-ochko'z, tamagir, urishqoq, kaltafahm, ahmoq, dangasa va shu kabi insoniy illatlarga ega bo'lgan kishilarga tashbeh qilinadi:

Itni siylasang, to'rga o'tar.

Itni ursang, aldab ur.

Itni suyak bilan ursang, qopmas.

Itidan suyak kutma.

Itning ajali etsa, mehrobgga o'tirar.

It qorni to'ygan uydan ketmas.

Bo'rini – qonxo'r, zolimlarga tashbeh qilinadi:

Bo'ring bolasini bo'rkingda boqsang
ham, el bo'lmas.

To'y bo'risiz bo'lmas,
To'qay arslonsiz bo'lmas.

Bo'ri qarisa ham bitta qo'yga kuchi
etar.

Dasht bo'risiz bo'lmas,
El o'g'risiz.

Bo'ri bo'ronda quturar.

Sen bo'rini ayasang,
Bo'ri seni talaydi

Tulkini - ayyor, ikkiyuzlamachilarga tashbeh qilinadi:

Bir tulki etti bo'rini yetaklar.

O'xshamagin tulkiga,
Qolarsan ko'p kulkiga.

Ko'z bo'yamachi tulki bo'lar,
El ichida kulki bo'lar.

Hayvonlar ichida ayyori – tulki,
Ma'nisiz g'iybatning oxiri – kulki.

Bir tulkining hiylasi necha yerda pand
berar.

Tulki bo'ridan to'qroq yashaydi.

Quyinni – qo'rqoqlarga tashbeh qilinadi:

Quyvon o'z ko'lankasidan ham qo'r qar.

Quyvon bolasini botirim der,

It bolasini qoplonim der.

Osilmagan qozonga otilmagan quyvon tushar.

No'noq mergan oqsoq quyvon izlar.

Sichqon, kalamush, chumchuq, chigirtkani – tekinxo'r va zararkunandalarga (ayrim hollarda sichqonni - mazlumlariga) tashbeh qilinadi:

Supraga tushgan sichqonning

Boshi oqarmay qolmas.

Ikki sichqon biriksa,
Yo'lbars quyrug'in kertar.

Dushmaning sichqoncha bo'lsa ham,
Beparvo bo'lma.

Tegirmonda tug'ilgan sichqon,
Momaqaldiriqdan qo'rqmas.

Dushmaning sichqoncha bo'lsa ham,
Kuching arsloncha bo'lsin.

Vahti kelsa, fil sichqondan qo'r qar.

Hiyla bilan arslon tutilar,
Kuch bilan sichqon tutilmas.

Chumolini-mehnatkash, mazlumlarga tashbeh qilinadi;

Chumoli iniga cho'p tiqma.

Chumolining sovg'asi – chigirtkaning oyog'i.

Qurbaqani - ishyoqmas, dangasa, quruq, maqtanchoqlarga tashbeh qilinadi:

Ovloq ko'lda baqa xon.

Qurbaqada qomat bo'lmas,
Kambag'alda omad bo'lmas.

Chumolidan qurbaqa xayr so'rabdi.

O'ush yo'q joyda qurbaqa ham bulbul.

Oyda ham dog' bor,
Ko'lda – qurbaqa.

Loysiz suv, qurbaqasiz ko'l bo'lmas.

Xalqimiz sherni-mard, dovyurak, botirlarga tashbeh qiladi:

Sher bolasi ovni engar,
Er bolasi – yovni.

Sherning o'ligi ham ot hurkitar.

Sher izini it bosmas.

Gungqarg'a bo'lib ming yil
yashagandan,

Zo'r ovchi sher otar.

Sher bo'lib bir yil yashagan afzal.

Sherning urg'ochisi ham sher.

Tuya - el – yurt og'alariga, buzruklariga, shuningdek kuchli, chidamli sabotmatonatli, ba'zi hollarda esa takabbur kishilarga tashbeh qilinadi:

Tuyani tuya desa,
hamma erni payhon qilar.

Tuyaning dumi kalta bo'lsa ham,
tulkidan dum so'ramas.

Dushmaning kuya bo'lsa ham, tuya bil.

Tuya mingan uzoqni ko'zlar,
Eshak mingan – yaqinni.

Ignadek teshikdan tuyadek sovuq
kirar.

Yuvosh tuya yulishga yaxshi.

Barcha yukni ko'targan tuya,
Cho'michni ham ko'tarar.

Yomon yo'ldan yurgan tuya cho'kar.

Umuman insoniyat yaratgan maqollarning tematikasi keng va rang-barangdir, ularda ijtimoiy hayotning eng murakkab muammolaridan tortib oilaviy hayotning eng kichik urf-odatlarigacha, oliy axloqiy normalardan tortib kishilar xarakteridagi mayda-chuyda nuqsonlargacha, falsafiy dunyoqarashdan tortib eng kichik jonivorlarning xususiyatigacha o'z aksini topgan.

Zoonimlar kuchli obrazlikka ega bo'lib, nafaqat jonli muloqat tilida, balki badiiy adabiyotda ham kishilarning jismoniy xarakteri, ruhiy, axloqiy, ijtimoiy, tashqi ko'rinishi, ichki kechinmalari, hissiyotlari, kayfiyati va boshqa xususiyatlarni mukammal, ochiq oydin yoritib berishda keng qo'llaniladi.

Adabiyotlar

SHAHAR KO'CHALARIDA HARAKAT XAVFSIZLIGINI YAXSHILASH CHORA-TADBIRLARI

Annotatsiya. Ushbu maqolada avtomobil yo'llarida harakat havfsizligini tashkil etish, yo'l harakatini tashkil qilishning asosiy maqsad va vazifalari hamda yo'l harakati xavfsizligini oshirishga qaratilgan chora tadbirlarni takomillashtirish usullari yoritilgan.

Kalit so'zlar: yo'l harakati, xavfsiz harakat, transport oqimi, avtomobil, haydovchi, yo'l, piyoda, yo'l-transport hodisasi, harakat qatnashchisi, qonun, me'yoriy hujjatlar, yo'l tarmoqlari, tirbantlik, tezlik, yo'l sharoitlari, tartibsiz harakat, piyodalar o'tish joylari.

MEASURES TO IMPROVE TRAFFIC SAFETY ON CITY STREETS

Abstract. This article describes the organization of traffic safety on highways, the main goals and tasks of traffic organization, and methods of improving measures aimed at increasing road safety.

Key words: traffic, safe traffic, traffic flow, car, driver, road, pedestrian, traffic accident, traffic participant, law, regulations, road networks, traffic jam, speed, road conditions, irregular traffic, pedestrian crossings.

Barchamizga ma'lumki, so'ngi yillarda yurtimizda avtomobilsozlik sanoati yuqori ko'rsatkichlarda rivojlanib, yo'llarda avtotransport vositalarining soni izchil ortib bormoqda. Bu o'z navbatida yo'llardagi harakat havfsizligining tartibga solinishi dolzarb masala ekanligining yorqin ifodasidir. Yo'l harakatini tashkil etish bu transport vositalarini yuqori samaradorlik bilan harakatlanishga qaratilgan tadbirlar tizimi.

- hisobdagi tezlikni ta'minlovchi foydalanish koeffitsient – bitta yengil avtomobilning ta'minlangan yo'lda harakat xavfsizligi, yoki avtomobilning xar bir yo'l uchastkasi bilan o'zaro ta'siri sharoitidagi maksimal tezligini (V_{fmax}), mazkur darajadagi yo'l va joyning rel'efi uchun xisobiy tezlikka (V_r) bo'lgan nisbati:

$$K_{fxt} = \frac{V_{fmax}}{V_p}(1)$$

- hisobiy tezlikni ta'minlanish koeffitsienti – V_{fmax} ning negizoviy hisobiy tezlikka (V_r^b) nisbati:

$$K_{xt} = \frac{V_{fmax}}{V_p^b} \quad (2)$$

bazaviy xisobiy tezlik qilib $V_r^b = 120$ km/s olingan.

Bunda,

$$K_{xt} = \frac{V_{fmax}}{120} \quad (3)$$

Amaliy xisoblarda xisobiy tezlikni ta'minlanish koeffitsientidan foydalanish qulayroq. ko'rsatilgan koeffitsientlarning nisbatlari quyidagi formulalar bilan aniqlanadi:

$$K_{fxti} = \frac{120 * K_{pi}}{V_{pi}} \quad (4)$$

bu yerda, V_{pi} va K_{fxti} – mazkur darajadagi yo'l uchun mos ravishda xisobiy va xisobiy tezlikni ta'minlash va foydalanish koeffitsienti.

Avtomobil yo'llarini transport-foydalanish sifatlarini 4 turkumga ajratishimiz mumkin: avtomobil xarakatiga bog'liq bo'lgan; yo'l sharoitiga bog'liq bo'lgan; harakat xavfsizligiga; harakat iqtisodiyligiga.

Quyidagi grafikda avtomobil yo'llarida paydo bo'ladigan yoriqlarning ob-havo ta'sirida o'zgarishi keltirilgan (1-rasm).

rasm. Yoriqlarning kengligini havo xarorati ta'sirida o'zgarishi grafigi (boshlang'ich kenglik 5 mm).

Grafikdan shuni ko'rish mumkinki havo haroratini musbat tomonga o'zgarishi oqibatida yoriq kengligi qisqarib boradi. Bir hisobda bu yo'llar tekis bo'lishini ta'minlash lozim edi. Lekin havo haroratini ortishi qoplamadagi haroratini ikki marotaba ortishiga olib keladi va bunday paytda yoriqlar qisqarib ular ustida ko'tarilishlar yuzaga kela boshlaydi (2 – rasm).

2 – rasm. Sementobeton asosli asfaltobeton qoplamalarida yuzaga keladigan ko'tarilishlarni joylashish sxemasi. Rasmdan shuni taxlil qilish

mumkinki, haroratni ortishi yo‘llarning ravonlik ko‘rsatgichini yomonlashishiga va ortib ketishiga olib ketar ekan.

1 – xolat. Har xil kenglikdagi yoriqlarning harorat ta’sirida o‘zgarishi (3 - rasm).

3 – rasm. Ko‘tarilishlarni havo harorati ta’sirida o‘zgarishi.

Rasm tahlili shuni ko‘rsatadiki, yoriq kengligi qanchalik kichik bo‘lsa ko‘tarish balandligi shuncha katta bo‘ladi.

Demak yoriq kengligi qanchalik kichik bo‘lsa ravonlik qiymati shuncha yuqori bo‘ladi. Bu esa yo‘lning transport-ekspluatatsion sifatlarini payishiga va transport oqim tezlikni kamayishiga buning oqibatida avtomobil yo‘llariga tushadigan kuchni ortib ketishiga olib keladi.

Chiziqli grafikni qurish va yo‘lning umumlashtirilgan sifat ko‘rsatgichini baholash MSHN 05-2005 “Avtomobil yo‘llarini tashxis qilish va baholash qoidasi”ga asosan bajariladi.

Ishlar o‘z ichiga yo‘lning alohida uchastkalarida yo‘lning umumiy sifat ko‘rsatgichlari (K_y), qaysiki TFH hamda uning umumlashtirilgan ko‘rsatgichlari (K_y), muhandislik jihozlari va jihozlanishi ko‘rsatgichi (K_{ob}) va yo‘lning saqlanganlik ko‘rsatgichi (K_e) o‘z ichiga oladi va quyidagi formula orqali aniqlanadi.

$$K_y = K K_y * K_{ob} * K_e (5)$$

bu erda, $K K_y = K_{xt}^{jam} = K_{xt}^{min}$ ko‘rilayotgan yo‘l uchastkasini transport-ekspluatatsion xolatini kompleks ko‘rsatgichi – 10 ta xisobiy tezlikni ta’minlanganlik xususiy koeffitsientni eng kichik qiymati.

Hisobiy tezlikni ta’minlanganligi xususiy koeffitsientini haqiqiy qiymati $V_r^b = 120$ km/s teng qilib olingan negizoviy tezlikka nisbatan aniqlanadi hamda yengil avtomobilning ko‘rilayotgan yo‘l uchastkasidagi haqiqiy maksimal tezligini 85% ta’minlangandagi qiymati. Xulosa o‘rnida shuni ta’kidlab o‘tish joizki, avtomobil yo‘llarida harakat xavfsizligini tashkil etish borasidagi turli chora tadbirlarni tezlik bilan real hayotda amalga oshirish asosiy vazifalardan

hisoblanadi. Ushbu jarayonlar davomida qilinayotgan har bir amaliy va ilmiy asoslangan ishlar harakat xavfsizligini oshishiga, yo‘l transport hodisalarining kamayishiga, yo‘llarda harakatlanishning murakkab bo‘lmasligiga xizmat qilishi lozim.

O'ZBEKISTONDA ALOQA XIZMATLARINING SHAKLLANISHI VA RIVOJLANISHI (MOBIL ALOQA XIZMATLARI MISOLIDA)

Annotatsiya. Maqolada xizmat ko'rsatish sohalarining yirik tarmog'i bo'lgan aloqa xizmatlarining shakllanishi va rivojlanishi yoritilgan. Aloqa xizmatlarining O'zbekistonda shakllanish tarixi, rivojlanishi va uning amaliy ahamiyati, shuningdek mamlakat aholisining (mobil aloqa) aloqa xizmatlaridan foydalanishi tadqiq etilgan

Kalit so'zlar: Aloqa, xizmat ko'rsatish, aloqa xizmatlari, mobil aloqa, kosmik aloqa, telegraf aloqa, elektr aloqa

FORMATION AND DEVELOPMENT OF COMMUNICATION SERVICES IN UZBEKISTAN (EXAMPLE OF MOBILE COMMUNICATION SERVICES)

Abstract. The article describes the formation and development of communication services, a large network of service industries. The history, development and practical importance of communication services in Uzbekistan, as well as the use of (mobile communication) communication services by the country's population have been studied.

Key words: Communication, service, communication services, mobile communication, space communication, telegraphic communication, electrical communication.

Aloqa – turli vositalar yordamida axborotlarni uzatish va qabul qilish; xalq xo'jaligining pochta, telefon, telegraf, radio, televideniya va boshqalar orqali axborotlarni uzatish va qabul qilishni ta'minlaydigan tarmog'i. Aloqa jamiyatning ishlab chiqarish xo'jalik faoliyatida, davlat, qurolli kuchlar va jami transport turlarini boshqarishda, shuningdek aholining madaniy-maishiy ehtiyojlarini qondirishda muhim ahamiyatga ega.

Qadimda xabarlar bir manzildan ikkinchisiga choparlar, kabutarlar yordamida yetkazilgan, ularni uzatishda shartli signallar – gulxanlar, chiroqlar, har xil ovoz chiqaruvchi asboblar qoʻllanilgan. Keyinchalik xabarlar yozma holda joʻnatiladigan boʻldi, natijada pochta aloqasi paydo boʻldi. Sanoat va savdo taraqqiyotining jadal surʼatlari axborotlarni tez yetkazishga imkoniyat yaratadigan yangi Aloqa usullariga katta ehtiyojni yuzaga keltirdi. XVIII asr oxirida optik aloqa paydo boʻldi, XIX asrda axborotlarni sim orqali katta tezlikda uzatishning elektr usullari kashf etildi. 1832-yilda P. L. Shilling elektr telegrafi yaratdi. 1837-yilda Samuel Morse elektromagnit telegraf apparatini, 1876-yilda Alexander Graham Bell aloqa telefonni kashf etdi. Aloqa taraqqiyotida navbatdagi eng muhim bosqich – aloqa S. Popov tomonidan simsiz aloqa – radioaloqaning yaratilishi boʻldi. Shundan soʻng aloqa vositalarining texnika taraqqiyoti tez surʼatlarda bordi, axborotlarni ishonchli va tez uzatishi, quvvati va liniyalari soni jihatidan katta ustunlikka ega boʻlgan yangi tizimlar paydo boʻldi va keng qoʻllanila boshladi. XX asrning 60–70-yillarida aloqa vositalarining kosmik (Yerning sunʼiy yoʻldoshlari orqali) tizimlari yaratildi.

Qoʻllaniladigan texnika vositalari xarakteriga koʻra aloqa pochta aloqasi va elektr aloqasiga boʻlinadi. Hozirgi davrda aloqa barcha mamlakatlarda iqtisodiyotning eng muhim tarmoqlaridan biri hisoblanadi. Aksariyat rivojlangan mamlakatlarda aloqani rivojlantirish ishlariga yetarli hajmda mablagʻlar sarflanadi.

XX asrning 90-yillarida Oʻzbekistonda rivojlangan aloqa korxonalari aholiga hamda xalq xoʻjaligiga pochta, telegraf mahalliy, shaharlararo, xalqaro telefon aloqa xizmati koʻrsatadi, shuningdek respublikada radioaloqa, radioeshittirish va televideniyaning texnika vositalari bilan taʼminlaydi. Respublikaning aloqa majmuasi pochta, matbuottarqatish, uyali aloqa, elektr aloqa, kosmik yoʻldoshlar orqali aloqa turlarini qamraydi. Oʻzbekiston mustaqillikka erishganidan keyin bozor iqtisodiyotiga oʻtish jarayonida milliy telekommunikasiya tarmogʻini rivojlantirish va uni mustaqil boshqarish muhim vazifaga aylandi. 1992-yil 13-yanvarda Oʻzbekiston Respublikasining “Aloqa toʻgʻrisida” qonuni qabul qilindi. Pochta aloqasi, axborot tizimlari va telekommunikatsiyalar sohasida boshqaruvni yanada takomillashtirish maqsadlarida 1997-yil 23-iyunda Respublika Aloqa vazirligi Pochta va telekommunikatsiyalar Agentligiga aylantirildi. Agentlik tarkibida aloqaning ishlab chiqarish xoʻjalik, texnologik masalalari bilan shugʻullanadigan “Mahalliy telekom”, “Xalqaro telekom” aksiyadorlik kompaniyalari hamda “Oʻzbekiston pochta” davlat-aksiyadorlik kompaniyasi tashkil etildi. 1992-yili Oʻzbekiston Xalqaro elektr-alloqa ittifoqiga aʼzo boʻlib kirdi. Bu esa Oʻzbekistonning telekommunikatsiya sohasida xalqaro hamkorlik qilishi uchun keng yoʻl ochdi. Oʻzbekistonda aloqa tarmogʻini jahon andozalariga javob beradigan darajaga koʻtarish uchun Xalqaro elektr aloqa ittifoqi muntazam koʻmak berib kelmoqda. 1992-2000-yillarda AQSh, Yaponiya, Germaniya, Indoneziya, Italiya, Malayziya, Buyuk Britaniya, Janubiy Koreya, Turkiya, Xitoy mamlakatlaridagi yetakchi

firmalar bilan O‘zbekistonda elektr aloqa tarmoqlarini rivojlantirish bo‘yicha xalqaro hamkorlik yaxshi samara berdi.

Telegraf aloqa — diskret (harfaqamli) xabarlarini uzoq, masofaga tez uzatish va qabul qilish hamda qabul punktida qayd etish; elektr aloqaning bir turi. Sim orqali uzatiladigan elektr signallar va simsiz radiosignallar orqali, telegraf apparati va fototelegraf (faksimil) apparat yordamida amalga oshiriladi. Telegraf aloqa elektr aloqaning bir turi sifatida XIX asr 30-yillarida paydo bo‘lgan. Axborotlarni uzatishda dastlab (pochta aloqasidan tashqari) yorug‘lik va tovush signallaridan foydalanilgan.¹¹⁵ Rossiyada 1832-yilda P.L. Shilling tomonidan telegraf apparati yaratilishi bilan Telegraf aloqaga asos solindi. So‘ngra B. S. Yakobi tomonidan elektromagnit telegraf apparati (1839) va harf bosish telegraf apparati (1850), S. Morze tomonidan elektromexanik telegraf apparati (1844) yaratilishi Telegraf aloqaning rivojlanishiga yordam berdi. O‘zbekistonda Telegraf aloqa XIX asr oxiriga kelib Toshkent Orenburg telegraf liniyasi ochilishi bilan boshlangan. Hozir “O‘zbektelekom” aksionerlik kompaniyasi telegraf va telefon aloqani tashkil etadi.

Uzatiladigan xabarlarning turiga qarab, Telegraf aloqa umumiy foydalanish, abonent, idora, faksimil xillarga bo‘linadi. Umumiy foydalanish Telegraf aloqasi aloqa korxonalariga keluvchi telegrammalar, pul o‘tkazmalari va boshqalarni uzatish uchun xizmat qiladi. Abonent telegraf yordamida abonentlarning xonalariga bevosita o‘rnatilgan telegraf apparatidan foydalanib muloqotlar olib borish mumkin. Idora Telegraf aloqasi ko‘plab hujjatli xabarlar uzatish va qabul qilishni talab qiladigan xalq xo‘jaligi tarmoqlari (temir yo‘l, transport, fuqaro aviatsiyasi va boshqalar)da tashkil etiladi.

Kosmik aloqa — Yer sun‘iy yo‘ldoshlari orqali yerdagi punktlar orasida yoki kosmik apparatlar orasidagi aloqa. Yerdagi punkt bilan kosmosdagi inson o‘rtasida aloqa birinchi marta 1961-yilda Yu.A.Gagarin “Vostok” kosmik kemasida parvoz kilganda o‘rnatildi. Kosmosda, asosan, radioaloqa, ba‘zan, optik aloqa qo‘llaniladi.¹¹⁶ Kosmik aloqa tizimida ko‘proq radioaloqadan, Yerdagi punktlar orasida aloqa bog‘lash uchun elliptik va doiraviy statsionar orbitalar bo‘yicha harakatlanuvchi YESY dan foydalaniladi. Kosmik apparatlar orasida Kosmik aloqa birinchi marta 1962-yilda “Vostok-3” va “Vostok-4” kemalari orasida amalga oshirilgan. Yerdagi punktlar orasida Kosmik aloqa o‘rnatish uchun kuchli antennalar, radioshovqin darajasi juda kichik bo‘lgan qabul qiluvchi asboblari, qidirilayotgan signalni ajratib oladigan maxsus apparatlardan foydalaniladi. Kosmik apparatning bort apparaturalari juda puxta, yengil va ixcham bo‘lishi kerak. Kosmik aloqa kanallari uchun ularning vazifasi va yo‘nalishlariga ko‘ra turlicha chastota dia-pazonidan foydalaniladi. Chastotalarni taqsimlash va ulardan foydalanish tartibi radioaloqa reglamenti bilan belgilanadi. Kosmik aloqa tizimlarining Yerdagi aloqa tizimlaridan asosiy farqi Kosmik apparat vaziyatining uzluksiz o‘zgarib turishi, Kosmik apparatning har ondagi

¹¹⁵ O‘zbekiston milliy ensiklopediyasi. Birinchi jild. Toshkent, 2000-yil.

¹¹⁶ O‘zbekiston milliy ensiklopediyasi. Birinchi jild. Toshkent, 2000-yil.

koordinatalarini bilish zarurligi, qabul qilinayotgan signallar chastotasining tez-tez o'zgarib turishi, Kosmik apparat bortidagi radiouzatkichlar quvvatining cheklanganligi, masofaning uzoqligi va boshqalardan iborat.

Yer bilan Kosmik apparat orasidagi aloqa yordamida kosmovideniya asos solinadi, natijada insoniyat odamning ochiq kosmosga chiqishi va Oyda yurishining shohidi bo'ldi. Sayyoralararo avtomatik st-yalar Venera va Marsga uchirilganda 350 mln. km masofa

da ikki tomonlama turg'un radioaloqa o'rnatildi. "Mars" va "Mariner" tipidagi kosmik stansiyalarga o'rnatilgan apparatlar yordamida Mars va Venera sayyoralarining atrofi, atmosferasi, temperaturasi tekshirildi va telemetrik kanallar orqali tasvirlari Yerga uzatildi.

Elektr aloqa — axborotlar (nutq, harfraqamlar, tasvir va boshqalar) sim yoki radiosignallar orqali elektr signallari tarzida hamda optik aloqa tizimi yordamida uzatiladigan aloqa. Signallarni uzatish usuliga qarab, simli aloqa va radio aloqa; uzatiladigan axborotlarning turiga qarab, telefon aloqa, telegraf aloqa, faksimil aloqa, bir vaqtning o'zida nutqiy va tasviriy axborotlarni saqlaydigan va uzatadigan videotelefon aloqa va boshqalarga bo'linadi. Uzatuvchi va qabul qiluvchi punktlar orasida Elektr aloqa o'rnatish uchun uzatuvchi va qabul qiluvchi apparatlar, aloqa kanali, kommutatsiya tizimi qurilmalari qo'llanadi. Uzatuvchi apparat signallar (nutqlar, telegramma matni belgilari, perforatsion lentalar yozilgan belgilar va boshqalar)ni elektr signallariga aylantiradi.

Mobil aloqa — telefon apparati yordamida abonentlar o'rtasida tovushli aloqa bog'lashga imkon beradigan elektr aloqa vositasi. Telefon tarmoqlari orqali amalga oshiriladi, amalda istalgan masofa orasida, yer yuzidagi istalgan joy o'rtasida tovushli aloqa o'rnatishga imkon beradi.¹¹⁷ Shotland ixtirochisi A.G.Bell 1876-yilda birinchi elektrakustik qurilma — telefon ixtiro qilganidan hamda AQSH (NyuXeyven) da 1878-yilda birinchi telefon stansiya qurilganidan keyin telefon aloqa tarmog'i shakllangan. Amerikalik ixtirochi T.A.Edison (1847—1931) ko'p yillar mobaynida Telefon aloqani takomillashtirishga doir ishlar olib bordi. Birinchi oddiy ATS loyihasini rus ixtirochisi K. Mossitskiy 1887-yilda taklif qildi. Murakkab ATS loyihasini 1893-yilda rus olimi M.F.Freydenberg ishlab chiqdi. Birinchi xalqaro telefon liniyasi (Moskva — Peterburg) 1908-yilda ochildi, 1939-yilda dunyoda eng uzun ko'p karrali Telefon aloqa liniyasi (Moskva — Xabarovsk) ishga tushdi. O'zbekistonda (Toshkentda) Telefon aloqa 1887-yil ishlay boshlagan, 1914-yil Toshkent sh. telefon tarmog'i ishga tushgan. Respublikada dastlabki telefon stansiyalar 1929-yil qurilgan, birinchi ATS 1932-yil ishga tushirilgan, Koordinat ATS 1974-yil paydo bo'lgan. Dastlabki shaharlararo Telefon aloqa Toshkent — Samarqand, Samarqand — Qo'qon, Toshkent — Piskent, Toshkent — To'ytepa liniyasida 1924-yil ochilgan. XX asr

¹¹⁷ O'zbekiston milliy ensiklopediyasi. Birinchi jild. Toshkent, 2000-yil.

60-yillaridan havo aloqa liniyalari astasekin yer osti kabellariga o'tkazildi. Toshkentda dastlabki telefonavtomatlar (taksofonlar) 1935-yildan o'rnatila boshlandi, birin-ketin boshqa yirik shaharlarda ham ishga tushdi. XX asr 90-yillaridan raqamli va uyali telefon tizimi paydo bo'ldi. Hozir respublika va jahonning barcha shaharlari bilan aloqa o'rnatishga imkon beradigan xalqaro telefonavtomatlar mavjud. Respublikamizdagi barcha shaharlar orasida va xalqaro Telefon aloqa yo'lga qo'yilgan. Respublikada Telefon aloqaga doir barcha ishlar "O'zbektelekom" AK tarmoqlari orqali amalga oshiriladi.

Mamlakatimizda raqamli iqtisodiyotni faol rivojlantirish, barcha tarmoqlar va sohalarda, eng avvalo, davlat boshqaruvi, ta'lim, sog'liqni saqlash va qishloq xo'jaligida zamonaviy axborot-kommunikatsiya texnologiyalarini keng joriy etish bo'yicha kompleks chora-tadbirlar amalga oshirilmoqda.

Xususan, elektron hukumat tizimini takomillashtirish, dasturiy mahsulotlar va axborot texnologiyalarining mahalliy bozorini yanada rivojlantirish, respublikaning barcha hududlarida IT-parklarni tashkil etish, shuningdek, sohani malakali kadrlar bilan ta'minlashni ko'zda tutuvchi 220 dan ortiq ustuvor loyihalarni amalga oshirish boshlangan. Bundan tashqari, 40 dan ortiq axborot tizimlari bilan integratsiyalashgan geoportalni ishga tushirish, jamoat transporti va kommunal infratuzilmani boshqarishning axborot tizimini yaratish, ijtimoiy sohani raqamlashtirish va keyinchalik ushbu tajribani boshqa hududlarda joriy qilishni nazarda tutuvchi "Raqamli O'zbekiston" kompleks dasturi amalga oshirilmoqda.¹¹⁸

Mabil aloqa tarmoqlarini jadal sur'atlar bilan rivojlanishi va takomillashtirilishi natijasida O'zbekiston Broadband Genie tomonidan tuzilgan Mobil ma'lumotlarni narxlarining arzon yoki qimmatligi indeksida¹¹⁹ 179 ta davlat o'rtasida o'rtacha oylik va kamida 10Gb internet ishlatish ushbu oylikni qancha qismiga to'g'ri kelishi tahlil qilingan. O'zbekiston ushbu ko'rsatkich bo'yicha Markaziy Osiyo davlatlari orasida eng yaxshi va dunyoda 43-o'rinni egalladi. Ushbu jadvalni 10Gb internetni ishlatish narxi (Mobile data cost) bo'yicha tahlil qilinganda ushbu ko'rsatkichda O'zbekiston dunyoda 5-o'rinda eng arzon mobil internetga ega davlat sifatida ko'rsatilgan.

Xulosa qilib aytish mumkinki, insonyat tarqqiyoti davomida har doim aloqa xizmatlaridan foydalangan, hozirgi kunga kelib axborot almashinish jarayonida mobil aloqa tarmog'i eng qulay tarmoqqa aylanib ulgurdi. Broadband Genie tomonidan tuzilgan jadval ma'lumotlarini tahlil qilinganda, O'zbekiston eng arzon internetga ega ekanligi va bu sohada ilmiy izlanish davom etayotganligi ko'rinib turibdi. Hozirda respublikaning barcha hududlarida mabil aloqa xizmatlarini ko'rsatishni takomillashtirish uchun keng ko'lamli ishlar amalga oshirilmoqda, jumladan yangi antennalarning o'rnatilishi, o'rnatilganlarini esa rekonstruksiya qilinishi natijasida mabil aloqa internet sifati yaxshilandi. Yaqin

¹¹⁸ "Raqamli O'zbekiston — 2030" strategiyasini tasdiqlash va uni samarali amalga oshirish chora-tadbirlari to'g'risida

¹¹⁹ <https://www.broadbandgenie.co.uk/mobile-data-world-affordability>

kelajakda mabil aloqa xizmatlarini ko'rsatish uchun respublikaning barcha hududlarida 5G internet tarmog'ining ishga tushurilishi tarmoqda yangi yirik qadam bo'ladi va bu orqali mabil aloqa xizmatlarini ko'rsatish yanada rivojlanadi.

BO‘LAJAK INFORMATIKA FANI O‘QITUVCHILARINING KASBIY TAYYORGARLIGINI RIVOJLANTIRISHDA XORIJIY TAJRIBALAR

Annotatsiya. Dunyoning turli mamlakatlarida ta‘lim tizimini rivojlantirishning strategik yo‘nalishi shaxsga yo‘naltirilgan ta‘lim muammosini hal qilish yo‘lidan iborat. Ushbu maqolada bo‘lajak informatika fani o‘qituvchisini kasbiy tayyorgarligini rivojlantirishda xorijiy tajribalar bo‘yicha nazariy asoslangan yondashuvlarini umumiy tahlili bayon qilingan.

Kalit so‘zlar: innovatsion fikrlash, pedagogik kompetentlik, uzluksiz, integrativ yondashuv, ko‘nikmalar va malakalar, pedagogik faoliyat, kompetensiya.

FOREIGN EXPERIENCES IN DEVELOPING PROFESSIONAL TRAINING OF FUTURE IT TEACHERS

Annotation. The strategic direction of the development of the education system in different countries of the world is the way to solve the problem of person-oriented education. In this article, a general analysis of theoretically based approaches to the development of professional training of future informatics teachers based on foreign experiences is described.

Key words: innovative thinking, pedagogical competence, continuous, integrative approach, skills and competencies, pedagogical activity, competence.

Informatika o‘qituvchilarini tayyorlash pedagogik ta‘lim tizimida amalga oshiriladi, bu esa o‘z navbatida maktab va oliy ta‘lim tizimi bilan uzviy bog‘liqdir. Shuning uchun chet elda informatika o‘qituvchilarini tayyorlash tahlili ushbu mamlakatlarning ta‘lim tizimini tashkil etish va ularning pedagogik ta‘limining umumiy masalalarini o‘z ichiga olishi kerak, bu esa informatika o‘qituvchilarini tayyorlashni tashkil etishni yaxshiroq tushunish imkonini beradi.

Mamlakat taraqqiyoti aholi ta‘lim darajasining o‘sishiga tobora ko‘proq bog‘liqligini anglash ko‘plab xorijiy mamlakatlarni xususiy ta‘limga katta e‘tibor qaratuvchi “Ta‘lim barcha uchun” global dasturini qabul qilishga majbur qildi, bu mamlakatlarning xususiy ta‘lim dasturlarini rivojlantirishga qaratilgan, ular o‘quvchilarning rivojlanishiga, ularning qiziqishlari va moyilliklarini hisobga olish uchun shart-sharoit yaratishga, ta‘lim ehtiyojlarini qondirishga katta e‘tibor

beradilar. Xorijiy mamlakatlar ta'lim tizimidagi o'zgarishlar shaxsga yo'naltirilgan ta'lim metodikasining rivojlanishi tufayli pedagog kadrlarni, jumladan, informatika o'qituvchilarini tayyorlash va qayta tayyorlash tizimlarini takomillashtirishga olib keldi.

Xorijda zamonaviy o'qituvchini tayyorlashdan maqsad katta ijodiy salohiyatga ega bo'lgan, uni o'quvchi shaxsi, uning bilim va ijodiy qobiliyatlarini o'rganish va rivojlantirish jarayonida o'quvchi – shaxs va fuqaroning manfaatlaridan kelib chiqqan holda amalga oshira oladigan insonparvar o'qituvchini shakllantirishdan iborat. Pedagog kadrlar tayyorlash maqsadlarining o'zgarishi o'quv rejalari va dasturlarida, o'qitish tuzilmasida, shaxsga yo'naltirilgan ta'limni amalga oshirishga yordam beruvchi pedagogik texnologiyalar va metodikalarda o'z ifodasini topadi.

Quyida AQSh, Buyuk Britaniya, Germaniya va Polsha kabi mamlakatlarda informatika o'qituvchilarini tayyorlash tajribasi tahlil qilingan. Bu tutash nuqtalarni aniqlash, informatika o'qituvchilarini tayyorlashni tashkil etishga yondashuvlarning umumiyliigi va farqlarni aniqlashga imkon beradi, bu ayniqsa Boloniya jarayonida dunyoda ko'proq tan olinayotgan "Umumavropa bilimlar uyi" konsepsiyasi doirasida muhim ahamiyatga ega. Rivojlangan xorijiy mamlakatlardagi pedagogik ta'lim tizimlarida informatika o'qituvchilarini tayyorlash tajribasini nazariy jihatdan umumlashtirish ushbu tajribadan Rossiyada aniqlangan tendensiyalar asosida informatika o'qituvchilarini tayyorlashni rivojlantirish imkonini beradi.

Xorijda informatika fani o'qituvchilarini tayyorlash masalasini ko'rib chiqishdan oldin shuni ta'kidlash kerakki, xorijiy manbalardan olingan ma'lumotlarni tarjima qilish va tahlil qilish jarayonida hisobga olingan terminologik xususiyatlar mavjud. AQSh va boshqa ba'zi mamlakatlarda informatika o'qituvchisi Axborot texnologiyalari (Information Technology) o'qituvchisi yoki texnologiya (Technology) o'qituvchisi, Irlandiyada informatika o'qituvchisi AKT o'qituvchisi (ICT) deb ataladi.[3]

Ushbu maqolada o'qituvchilar uchun o'quv, ijtimoiy va kasbiy qo'llab-quvvatlash tizimini rivojlantirish istiqbollari belgilashda mamlakatimiz uchun ham, umuman jahon hamjamiyati uchun ham katta qiziqish uyg'otayotgan informatika fanlari bo'yicha o'qituvchilarga bo'lgan ehtiyojlarni o'rganish asosida pedagog xodimlarni tayyorlash va ular bilan samarali ishlash tufayli yuqori pedagogik ta'lim jarayonlariga erishgan mamlakatlar tajribasi tahlil etiladi. Ma'lumki, hozirgi kunda mamlakatimizda ta'lim tizimini, xususan, pedagogikani jamiyatning yangi talablariga muvofiq, tez o'zgaruvchan ijtimoiy-iqtisodiy shart-sharoitlar, umuman ta'lim paradigmasining o'zgarishi bilan isloh qilishga katta ahamiyat berilmoqda.

Buyuk Britaniyada informatika o'qituvchilarini tayyorlash ta'lim tizimiga muvofiq tashkil etilgan, bunda o'qituvchilarga oliy ta'limning barcha bosqichlaridan o'tish imkoniyati berilgan.[3]

Buyuk Britaniyadagi boshlang'ich maktablar uchun informatika o'qituvchilarini tayyorlash Ta'lim kollejlarda amalga oshiriladi, bu yerda o'quvchilar 3 yillik ta'lim bakalavri (Bachelors Degree) darajasini oladilar. Har bir ta'lim kolleji ilmiy daraja beruvchi universitet bilan bog'langan yoki unga aloqador. O'rta maktab o'qituvchilarini tayyorlash ham ushbu kollejlarning ayrimlarida amalga oshiriladi. O'qituvchilarni (va boshqa mutaxassislarini) tayyorlash bo'yicha eng mashhur oliy ta'lim muassasasi Irlandiyadagi Limerik universiteti (University of Limerick) bo'lib, u yerda o'quvchilar to'rt yillik o'quv dasturini tamomlaydi va ilmiy daraja oladi.

Buyuk Britaniyada informatika o'qituvchilarini tayyorlash ham uzluksizdir. Bir necha o'n yillar oldin ta'lim olgan ko'plab o'qituvchilar uchun Angliya Milliy O'qituvchilar Ittifoqi (NUT) "O'qituvchilar uchun axborot - kommunikatsiya texnologiyalari" kurslarini tashkil qilgan. Ushbu kurslarni tugatgandan so'ng, mamlakat bo'ylab minglab o'qituvchilar darsda AKTdan foydalanish sohasida o'z kasbiy mahoratini oshirishga muvaffaq bo'ldilar.[4]

Buyuk Britaniyada informatika o'qituvchilarini tayyorlash tahlili, uni rivojlantirishning aniqlangan tendensiyalari asosida shunday xulosaga kelish mumkinki, Buyuk Britaniyada informatika o'qituvchilarini tayyorlash tizimi kasbiy va shaxsiy rivojlanishning turli usullarini ta'minlaydi, ta'lim jarayoni o'zgaruvchanligini ta'minlaydi, o'qituvchilarning shaxsga yo'naltirilgan yondashuv elementlari bo'lgan o'z-o'ziga o'rgatish qobiliyatini shakllantirish uchun sharoit yaratadi; kadrlar tayyorlash tizimida informatika fanining rivojlanishiga, axborotlashtirish jarayoniga, o'qituvchilarning kasbiy qiziqishlariga mos ravishda dasturlar doimiy ravishda tuzatilib, o'zgartirilib boriladi, o'qitish jarayonida bo'lajak o'qituvchilarning shaxsini o'z-o'ziga o'rganish va o'z-o'zini rivojlantirish jarayonlarni jadallashtirish uchun shart-sharoitlarni ta'minlaydigan rivojlantiruvchi ta'lim metodlarini ishlab chiqishda foydalaniladi, bu sinergik yondashuvning elementlari hisoblanadi.[3]

Shunday qilib, Buyuk Britaniya informatika va AKT bo'yicha o'qituvchilar tayyorlashning rivojlanish tahlili quyidagi tendensiyalarni aniqlash imkonini berdi:

- pedagog kadrlar tayyorlash holati monitoringini joriy etish, uning natijalari asosida bo'lajak o'qituvchilarni tayyorlash dasturlari, malaka oshirish kurslari, pedagogik ta'limni tashkil etishdagi tarkibiy o'zgarishlar, pedagogika oliy ta'lim muassasalarining oliy ta'lim muassasalari bilan birlashishi, pedagogik kadrlar tayyorlashning yangi modellarini ishlab chiqish hisobiga, informatika o'qituvchilarini tayyorlash sifati yaxshilanadi;

- fanlardan tayyorlashni chuqurlashtirish va kengaytirish hisobiga (informatika yo'nalishi bo'yicha o'qitish mazmuni multimedia tizimlari va vositalari, masofaviy ta'lim vositalari va boshqalar kabi yangi mavzular bilan to'ldirildi; ta'limni axborotlashtirish sohasida kadrlar tayyorlash takomillashtirildi - yagona axborot ta'lim makonidan foydalanish, multimedia didaktik vositalarining predmet bazalari, o'quv serverlari va platformalari,

masofaviy ta'limdan foydalanish asosida ta'lim jarayonida AKTdan foydalanishning yangi usullari o'rganildi), informatika fanini o'qitish metodikasi sohasida o'qituvchilarining malakasini oshirishni kengaytirish orqali informatika o'qituvchilarini tayyorlash dasturlari takomillashtirildi;

O'tkazilgan tahlillar va aniqlangan tendensiyalar Buyuk Britaniyada informatika o'qituvchilarini tayyorlash tizimlarida shaxsga yo'naltirilgan va sinergetik yondashuvlarni qo'llashning alohida yo'nalishlari mavjud, degan xulosaga kelish imkonini beradi.

Bo'lajak informatika o'qituvchisining kasbiy tayyorgarligi malakasini oshirish jarayonida uzluksiz kasbiy tayyorgarligini rivojlantirishda *tizimli, shaxsga yo'naltirilgan, sinergetik, kompetentli, faoliyatli va andragogik yondashuvlar* tanlab olindi. Mazkur yondashuvlar informatika o'qituvchilarini kasbiy tayyorgarligini rivojlantirishga xizmat qiladi;

Shaxsga yo'naltirilgan va sinergetik yondashuvlar informatika o'qituvchilarining uzluksiz kasbiy tayyorgarligi metodologiyasi va amaliyotining bir qismidir, u bir vaqtning o'zida ta'lim maqsadlaridan biri bo'lishi-o'qituvchilarning kelajakdagi kasbiy faoliyatida ushbu yondashuvlarni qo'llashga tayyorligini shakllantirishi kerak;

METHODS AND ALGORITHM OF CONTROL OF OPTICAL COMMUNICATION NETWORKS

Abstract. The main trends in the development of modern long-distance backbone optical systems are considered. This is, first of all, the complication of signal modulation formats, an increase in the symbol rate in the optical path, the use of superchannels and the formation of the signal spectrum, spectrum management (FlexGrid), the development of amplifiers in new spectral ranges, and the study of low-mode and multi-core optical fibers. It has been shown that existing technologies theoretically make it possible to achieve a throughput of about 100 Tbit/s over a single fiber. Further increases in capacity require the use of new spectral bands or spatial multiplexing using new types of optical fibers.

Keywords: DWDM, coherent reception, fiber optic communication network, modulation format, spectral efficiency, spectrum shaping, spectrum management, FlexGrid, symbol rate.

INTRODUCTION

The needs for traffic transmission are constantly growing, which creates a demand for increasing the performance of long-distance optical systems [1]. At the end of the 2000s, the first commercial coherent systems 40G and 100G were created; in 2013-2014, there was a large-scale transition of the world's largest telecom operators to coherent 100G channels as the main type of backbone channels (in Infinera terminology - optical reboot - optical reboot). A 100 Gbps channel in terrestrial DWDM systems is typically transmitted in the 50 GHz band (spectral efficiency $SE = 100/50 = 2$ bps/Hz).

In 2015, the first commercial optical units were created, providing 200 Gbit/s transmission over a single carrier in the 50 GHz band. By the beginning of 2016, all leading manufacturers had already presented such units, including Acacia, ClariPhy, NEL. The spectral efficiency of these types of optical units is 4 bit/s/Hz, which is twice as high as that of 100G systems. At the beginning of 2017, optical units with a speed of 400 Gbit/s over one carrier are expected to appear.

Thus, the capacity of existing DWDM communication systems over a single fiber is 9.6 Tbit/s in the C-band (96 100G channels), and 27 Tbit/s (270 100G channels) in the extended C+L-band. When moving to systems with $SE = 4$ bit/s/Hz, the maximum capacity increases accordingly to 19.2 or 54 Tbit/s. According to existing theoretical estimates, a 400G channel can also be transmitted in the 50 GHz band ($SE = 8$), which theoretically will allow achieving a capacity of 100 Tbit/s in a single fiber in the C+L-band (270 400G channels).

MATERIALS AND METHODS

In practice, the use of an extended spectral range (C+L), as well as an increase in spectral efficiency, requires solving a number of technological problems. In this regard, today there is active research into technologies that will increase the speed of long-distance optical systems. To continue the sustainable development of long-distance optical systems, it is vital not only to develop existing technologies and approaches, but also to search for new physical ideas and principles, with the use of which breakthrough technologies of the next generation will be created.

The main scientific and technological problems that scientists and engineers around the world are currently actively working on can be divided into four groups [2]:

1. Improving coherent communication systems:
 - multi-level modulation formats;
 - increasing the symbol rate of transmitters and receivers;
 - superchannels and spectral engineering;
 - use of photonic integrated circuits in transponders;
 - software-reconfigurable networks.
2. Improving signal processing methods in coherent communication systems:
 - compensation of distortions during digital signal processing;
 - development of error correction algorithms.
3. Improving methods of amplification and regeneration of optical signals:
 - the use of distributed amplifiers and amplifiers with remote pumping;
 - use of currently unused spectral ranges;
 - optical regeneration.
4. New infrastructure of fiber-optic communication networks:
 - special fibers with reduced nonlinearity;
 - fibers with low physical delay;
 - spatial multiplexing methods: multi-core and few-mode fibers.

RESULTS AND DISCUSSION

Coherent communication systems allow the use of all four degrees of freedom of the electromagnetic field: amplitude and phase (or two quadratures) in each of the two polarizations. This allows, for example, in the DP-QPSK format (dual polarization – quater phase shift keying) to transmit 4 bits per symbol using only one power level. Accordingly, the transition to coherent detection makes it possible to increase the information transmission rate without increasing the symbol rate, i.e. without changing the currently accepted frequency grid (50 GHz) in wavelength multiplexing.

Thus, the transition from direct detection to coherent detection in the new generation of communication systems is natural. It allows you to increase the volume of transmitted information using spectral and polarization multiplexing of channels, as well as spectral-efficient modulation formats, in particular the DP-

QPSK format. It is no coincidence that literally over the last few years, power modulation systems (PMS) operating at a repetition rate of 10 Gbit/s have been replaced by coherent modulation formats at repetition rates of 40 and 100 Gbit/s [2–4].

The structure of the optical signal in the DP-QPSK format is shown in Fig. 1. The signal contains two information components in the QPSK format on orthogonal polarizations. This means that polarization multiplexing is carried out (see Fig. 1, a), therefore, to denote this format, along with the abbreviation DP-QPSK, the abbreviation PM-QPSK is used, i.e. polarization multiplexed QPSK. In turn, each of two orthogonally polarized signals in the QPSK format can be represented as a combination of two binary phase BPSK signals, phase shifted by $\pi/2$ (see Fig. 1, b).

Fig. 1. Optical signal structure in DP-QPSK format:
a – polarization multiplexing of two signals in QPSK format; b – QPSK signal structure

Multi-level modulation formats. Further development of fiber-optic communication systems, as can be seen from the trends of 2014–2015, will most likely be based on the use of more complex modulation formats (DP-16QAM, DP-64QAM, etc.) [5], which make it possible to significantly increase the spectral efficiency and, accordingly, the speed in the bandwidth familiar to the operator. However, the complication of the structure of the modulation format inevitably leads to a significant decrease in the transmission range.

CONCLUSION

In the coming years, progress in increasing the performance of communication systems will be based on the introduction and improvement of spectrally efficient modulation formats in combination with coherent detection and digital signal processing. In the future, apparently, the priority areas for the development of backbone communication systems will be the expansion of the used spectral range, the integration of photonics and electronics, the development of multimode and multi-core fibers and corresponding optical amplifiers.

THE ROLE AND IMPORTANCE OF THE SYSTEM OF PROTECTED NATURAL AREAS IN THE FORMATION OF AN ECOLOGICAL NETWORK

Abstract. This article considers the creation of an ecological framework, one of the most effective forms of nature use and use. Also, the concept of the ecological framework and its elements is analyzed.

Keywords: Ecological framework, protected natural areas, representativeness, biological diversity, sustainable development, optimization, ecosystem, geoecology.

ВВЕДЕНИЕ. Деградация биологического и ландшафтного разнообразия в глобальном масштабе становится как серьезная угроза для

среды обитания человека и снабжения жизненно важными ресурсами. Несмотря на установление ряда политических и экономических обязательств, сосредоточенных на предотвращение деградации биологических видов и природных ландшафтов на международном уровне, снижение качества и количества БЛР все ещё продолжается. Особенно, цели и задачи стратегического плана Айти, который был предусмотрен на 2010-2020 годы, не были реализованы во всех странах одинаково. В целях предотвращения и борьбы с этими проблемами международными организациями, в том числе Саммитом ООН по биоразнообразию, выдвинуты задачи по «присвоению статуса охраняемых природных территорий не менее 30% поверхности Земли к 2030 году»¹²⁰.

В мире ведутся научно-исследовательские работы по совершенствованию системы охраняемых природных территорий, в том числе по следующим приоритетным направлениям: создание глобальных экологических сетей и обеспечение их репрезентативности; восстановление деградированных ландшафтов и сохранение в них уникальных биологических видов; присвоение охранного статуса водно-болотным угодьям международного значения, особенно, местам обитания водоплавающих птиц; расширение системы существующих охраняемых природных территорий и использование их в целях экотуризма; создание трансграничных охраняемых природных территорий и др.

Основные критерии и принципы организации системы ОПТ были разработаны в Конвенции «О биологическом разнообразии» (1992) и «Пан-Европейской стратегии (1995). Впервые «Пан-Европейской стратегии» было заявлено о создании системы экологических сетей (ЭКОНЕТ) по всему миру, на основании которой в Европейском Союзе был создан «Зеленый пояс Европы», объединяющий около 3200 ОПТ из 24 государств. В этой связи подходы и критерии, используемые при формировании системы ОПТ в глобальном масштабе, особенно на региональном уровне, нельзя считать удовлетворительными.

МЕТОДЫ ИССЛЕДОВАНИЯ. В настоящее время всемирная система ОПТ состоит из различных географически и функционально размещенных объектов и территорий, и такие всеобъемлющие экологические сети характеризуются тем, что они не в состоянии осуществить поставленные в перспективе задачи, то есть поддерживать биологическое и ландшафтное разнообразие (БЛР) и обеспечить экологический баланс окружающей среды. Сегодняшние подходы к наименованию, размеру, составу, структуре и организации системы ОПТ нельзя назвать идеальными. Поэтому важно определить научное объяснение понятий, связанных с ОПТ, и излагать теоретический подход и

¹²⁰Генеральная Ассамблея ООН 75-я сессия. Саммит по биоразнообразию. 30 сентября 2020 года. <https://www.un.org/ru/ga/75/meetings/>.

приоритетные аспекты, которые могут стать методологической основой для организации их системы.

Исследования по вопросам создания и совершенствования системы охраняемых природных территорий, составляющих основу экологических сетей, проводили многие известные ученые, такие как R.H.MacArthur, E.O.Wilson, N.T.Bishoff, K.Sepp, I.M.Bouwma, R.H.G.Jongman, G.Bennett, L.Miklós, Н.Ф.Реймерс, Ф.Р.Штильмарк, Б.Б.Родоман, А.А.Чибилёв, А.А.Тишков, Б.И.Кочуров, Н.А.Соболев, З.Г.Мирзаханова, Н.В.Стойцева, А.А.Рафиков, О.В.Зуева, И.Абдуганиев, Ю.И.Ахмадалиев, Ш.М.Шарипов, О.И.Абдуганиев и др. В исследованиях выше отмеченных ученых изучены создание экологических сетей, оценка общего экологического состояния государств и регионов, охрана биологического и ландшафтного разнообразия, освещена сущность ландшафтного, биогеографического, системного и комплексно-географического подходов к оценке экологической ситуации регионов.

В статье исследовании использованы такие методы, как полевые исследования, картографический, ГИС-технологии, ландшафтно-индикационный, маршрутно-экспедиционный, математический анализ, статистический, системный и сравнительный анализ, исторический, классификационный.

Результаты и обсуждение. На международном уровне прогресс системы ОПТ координируется такими организациями, как WCSA, IUCN и WWF. Международными организациями уделяется особое внимание объединению ОПТ в интегрированную систему и совершенствованию управления ими в глобальном масштабе. Отношения в области создания, охраны и использования ОПТ в нашей республике регулируются Законом Республики Узбекистан «Об охраняемых природных территориях» (2004) и другими нормативно-правовыми актами. В статье 4 данного Закона отмечается, что «Охраняемые природные территории составляют единую экологическую систему, предназначенную для обеспечения биологического, ландшафтного разнообразия и поддержания экологического равновесия». Также, исходя из требований Конвенции о биологическом разнообразии в Республике Узбекистан, принят новый Стратегический план¹²¹ по сохранению биологического разнообразия в Республике Узбекистан на период 2019-2028 годы. В данном Стратегическом плане один из самых надежных способов восстановления и сохранения БЛР, обеспечения экологической безопасности и стабильности, адаптации к процессам глобального изменения климата является производство системы ОПТ.

По мнению О.И.Абдуганиева система ОПТ – это комплекс структурно-функционально связанных между собой по определенному

¹²¹Постановление Кабинета Министров Республики Узбекистан № 484 от 11 июня 2019 года.

назначению и функциям, которые имеют разные категории и режимы охраны, и должны сохранить и поддерживать рациональное использование БЛР, улучшить до уровня экологических каркасов, способных обеспечивающие экологическое равновесие и устойчивое развитие. Система ОПТ должна быть создана таким образом, чтобы она сохраняла БЛР в природе, целостность и взаимосвязь, норму в процессе обмена веществом и энергией. Каждый элемент системы должен иметь возможность получать и передавать «информацию» в процессе обмена веществом и энергией в природе. Это, также приводит к специализации категорий и типов ОПТ, которые формируют основу экологического каркаса при выполнении соответствующей задачи. По этому для того, чтобы ОПТ обеспечивали полноту и целостность системы, целесообразно классифицировать их категории полностью (Абдуганиев, 2023). В классификации О.И.Абдуганиева, основанной на приведенном выше анализе, все категории охраняемых территорий геоэкологически квалифицированы по их экологической функции и режиму охраны, а также использованию (таблица 1). В классификации уделялось внимание полному масштабу и видов ОПТ по установленной задаче и режиму, которые отмечены в действующем Законе Республики Узбекистан «Об охраняемых природных территориях» (2004).

Таблица 1.

Геоэкологическая классификация охраняемых природных территорий

№	Основные элементы экологического каркаса	Экологические группы ОПТ		Категории и типы ОПТ	
		Экологическая функция	режим охраны и использования	Согласно Закону об ОПТ Республики Узбекистан	По данным МСОП
I	Центральное ядро	Заповедно-эталонные	Строгий режим охраны	Государственные заповедники	Ia
				Комплексные (ландшафтные) заказники	Ib
				Государственные биосферные резерваты	Ib
		Сохранение и устойчивое использование природной среды	Имеет многоцелевой режим использования	Национальные парки	II
				Природные парки	II
				Земли лесного фонда (XIX)	II
					Частично режим заповедности
Заказники	IV				

II	Территории экологического восстановления	Восстановление и сохранение ресурсов	Воспроизводимость и восстановление	Природных питомников	IV

Таблица составлена О.И.Абдуганиевым (2023) на основании Закона Республики Узбекистан «Об особо охраняемых природных территориях» (2004 г.).

Этой классификацией может быть использована для обоснования функциональной структуры системы ОПТ, оценки ее полноты и целостности, а также для разработки общей схемы экологического каркаса. Следовательно, вначале в классификации были определены основные элементы системы ОПТ и составляющие их категории и, идентично, прикреплены к 4 основным элементам экологического каркаса (таблица 1).

Такие подходы дает возможность создать систему ОПТ, направленную на обеспечение взаимосвязь социальных, экономических и экологических интересов и организацию устойчивого развития районов. В стратегических планах концепции устойчивого развития и сохранения биоразнообразия аргументировано, что сохранение БЛР и обеспечение устойчивого развития общества производится за счет усовершенствования системы ОПТ.

В экологическом каркасе наблюдается комплекс функций, связанных с поддержанием экологического баланса, а также БЛР. Одним из условий, необходимых для выполнения этой функции, является систематический характер сети ОПТ. Это осуществляется путем объединения ОПТ с

природными, природно-антропогенными и антропогенными ландшафтами отдельной и отличающейся категории в единую систему.

Экологический каркас состоит из двух систем, противопоставленных друг другу по форме и функциям систем, т. е. уникальных природных и антропогенных структур. Экологический каркас должен сочетать в себе демоэкономический каркас с природным каркасом и соединять их друг с другом. Поэтому экологический каркас не считается единой системой по своему структурно-функциональному составу. Населенные пункты, промышленные центры и связанные с ними коммуникационные структуры и сельскохозяйственные угодья составляют основу демоэкономического каркаса. С помощью этих двух частей экологического каркаса, то есть элементов демоэкономического каркаса, система ОПТ должна быть выпитана друг другом и образовывать единое целое.

Экологический каркас выступает в качестве компенсирующей системы между демоэкономическим и природными каркасами. Поэтому при формировании экологического каркаса требуется в первую очередь определить элементы каркаса на основе эколого-функционального районирования территории, то есть анализа структуры землепользования. При проектировании и обосновании экологического каркаса в землестроительных работах, важно рассмотреть категории земельного фонда.

Потому что экологическое состояние территории и показатели антропогенной нагрузки в основном зависят от структуры использования категорий земельного фонда. В связи с этим в составе экологического каркаса должен быть корреляционная связь в территориальном расположении элементов демоэкономического каркаса с ОПТ. Например, в Ферганской долине создать древесные насаждения вдоль железных и автомобильных дорог, санитарно-защитные зоны на промышленных предприятиях, экологические леса вокруг насаждений и т. д. Разнообразие структурного состава экологического каркаса связано с его функционально-территориальной структурой, такое состояние также определяет функцию каждого элемента в системе. Некоторые исследователи выделяют следующие элементы экокаркаса, независимо от его функционально-территориальной структуры: центральное ядро, экологический коридор, буферную зону, зоны восстановления и ступенчатые части.

Согласно анализу взглядов, приведенных на функционально-территориальную структуру экологического каркаса, система ОПТ является основой экологической инфраструктуры. Поэтому в качестве основных элементов, определяющих функционально-территориальную структуру экологического каркаса, рассматривались центральное ядро, эколого-восстановительные зоны, экологические коридоры и защитные зоны, приведенные в геоэкологической классификации ОПТ (табл. 1). Ландшафтный подход является одним из широко используемых и научно

обоснованных подходов к проектированию экологических каркасов. Использование такого подхода дает возможность учитывать степень и действие антропогенного воздействия на исследуемой территории, особенности природных комплексов. Одним из широко используемых методов определения степени антропогенного воздействия на основе ландшафтного подхода является оценка эколого-хозяйственного состояния территории.

Такая парадигма считается важным при определении состояния и состава экологического каркаса в структуре землепользования региона и выработке рекомендаций по его улучшению. Соответственно разработка проекта структуры экокаркасов в рамках административно-территориальных единиц должна поддерживаться государством. Подобные сооружения также внедряются в Республике Узбекистан в последующие годы в рамках общенационального проекта «Зеленое пространство». В настоящее время показатель охвата основными категориями ОПТ в Ферганской долине равен 1,7 %. Для сохранения БЛР и обеспечения устойчивого развития необходимо расширение категорий земель, входящих в состав природно-заповедного фонда (ПЗФ).

Уделено внимание совершенствованию состава элементов экологического каркаса с учетом природно-экологических, экономических и социальных характеристик Ферганской долины. Экологический каркас включает типичные природные комплексы, имеющие особое экологическое, научное и культурное значение для Ферганской долины, бассейны рек, ареалы редких и малозаметных видов, опорные орнитологические районы, генетические резервации лесов, уникальные геологические объекты, районы повышенной рекреационной ценности. Одним из направлений решения этих проблем является проведение землеустроительных работ на основе концепции экологического каркаса административно-территориальных единиц Ферганской долины.

ЗАКЛЮЧЕНИЕ

Исследование, проведенное в рамках темы исследования, позволяет сделать следующие выводы, выработать рекомендации и предложения:

1. В зарубежной и отечественной литературе в различных источниках и нормативных документах выявлено, что существуют различия в описаниях, данных с точки зрения содержания, структурно-функциональной структуры системы ОПТ. Это указывает на необходимость совершенствования нормативно-правовых актов, связанных с ОПТ, подходов, которые являются приоритетными в национальном законодательстве, а также критериев и принципов, используемых при организации системы охраняемых природных территорий. В исследовании вопросы организации системы ОПТ изучались на основе взаимосвязанных научных подходов, таких как ландшафтный, системный, исторический, административно-территориальный, функциональный и экологический.

Эти подходы, в свою очередь, служат основой для правильной организации исследований, связанных с расширением и совершенствованием системы ОПТ.

2. Для обеспечения полноты и целостности системы ОПТ было определено, что вопросы геоэкологической классификации всех их категорий, исходя из их экологической функции, режима охраны и использования, являются приоритетными. Впервые была предложена классификация, позволяющая объединить все категории и виды ОПТ, перечисленные в нормативно-правовых документах Республики Узбекистан, в единую систему. Эта классификация была использована для определения структурного состава системы ОПТ, оценки ее полноты и целостности, а также разработки общей схемы экологического каркаса.

3. По функциям ОПТ в перспективном экологическом каркасе Ферганской долины были разделены на центральное ядро, эколого-восстановительные территории, экологические коридоры и буферные зоны. Для формирования перспективного экологического каркаса были введены 2 государственных заповедника, 5 национальных природных парков, 6 частных заповедников, 3 экологических зон строгого природопользования, памятники природы и экологические коридоры.

**OPTIMIZATION OF THE LOAD GRAPHICS OF THE ENTERPRISES
WITH SOLAR PHOTOELECTRIC PLANT TAKING INTO ACCOUNT
THE POSSIBILITIES OF ELECTRICITY SALES**

Abstract. In this article, optimization algorithm and mathematical model of the problem of optimization of the load graphs of enterprises with solar photoelectric power plants, taking into account the possibilities of selling electricity, has been developed.

Key words: optimization, solar photovoltaic power plant, load, power system, inverter, storage battery.

Бугунги кунда ўрнатилаётган қуёш фотоэлектр станцияларида ишлаб чиқарилаётган электр энергияси нафақат корхоналарда истеъмол қилинмоқда, балки электр энергетика тизимига ҳам сотилмоқда. Бундай вазиятларда корхоналарда электр энергетика тизимидан олинадиган ва тизимга сотиладиган электр энергиясини ҳисобини олиш учун махсус электр энергиясини ҳисоблаш ускуналаридан фойдаланилмоқда. Бундай вақтларда қайта тикланувчан энергия манбаларида ишловчи электр станцияларидан оқилона фойдаланиш учун маълум вақтларда энергияни тўплаш ва қувват дефицити мавжуд бўлган вақтларда истеъмолчиларга бериш учун хизмат қиладиган аккумулятор батареяларидан фойдаланиш мумкин [1]. Ушбу мақолада қуёш фотоэлектр станциясига эга бўлган

корхоналарнинг юклама графикларини электр энергиясини сотиш имкониятларини эътиборга олиб оптималлаштириш масаласини кўриб чиқамиз. 1-расмда электр энергетика тизимига хусусий қуёш фотоэлектр станциясида ишлаб чиқарилувчи электр энергиясини сотиш имкониятига эга бўлган истеъмолчининг электр таъминоти принципиал схемаси келтирилган.

1-расм. Электр энергетика тизимига хусусий қуёш фотоэлектр станциясида ишлаб чиқарилувчи электр энергиясини сотиш имкониятига эга бўлган истеъмолчи электр таъминоти принципиал схемаси

Ушбу муаммони ҳал қилишда аккумулятор батареясининг электр сиғими W , режалаштирилган кун учун истеъмолчининг юклама графиги $P_L(t)$, электр энергетика тизимидан олинувчи электр энергиясининг сотиб олиш тарифи C_t , қуёш фотоэлектр станциясининг қувват графиги $P_{PV}(t)$, аккумулятор батареясини зарядлашнинг минимал ва максимал чегаравий қувватлари (разрядланиш қуввати манфий белги билан олинади), электр энергетика тизимига сотилувчи электр энергиясининг нарҳи C_s маълум маълумотлар ҳисобланади. Масалани ечиш натижасида аниқланувчи номаълумлар бўлиб қуёш фотоэлектр станцияси истеъмолчига берувчи оптимал актив қувват графиги $P_{G,PV}(t)$, электр энергетика тизимидан олинувчи оптимал актив қувват графиги (истеъмолчининг электр энергетика тизимига нисбатан оптимал юклама графиги) $P_{PS}(t)$ ва аккумулятор батареясининг оптимал зарядлаш/разрядланиш қувватлари графиги $P_{B,PV}(t)$ қуёш фотоэлектр станциясида ишлаб чиқарилиб электр энергетика тизимига берилувчи актив қувват $P_S(t)$ лар ҳисобланади.

Бундай кўринишдаги оптималлаштириш масалани ҳал қилиш учун қуйидагича математик модел таклиф этилади. Унга кўра минималлаштирилувчи мақсад функцияси бўлиб сутка давомида қуёш фотоэлектр станциясида ишлаб чиқарилувчи электр энергиясини электр

энергетика тизимига сотиш имкониятини ҳисобга олган ҳолда қуёш фотоэлектр станцияси ва электр энергетика тизимидан олинувчи электр энергия билан боғлиқ бўлган умумий харажатлари функцияси ҳисобланади [2,3]:

$$Z = \sum_{t=1}^{24} [C_t P_{PS}^{(t)} - C_s P_S^{(t)} + \beta P_{G.PV}^{(t)}] \rightarrow \min .(1)$$

бу ерда, C_t – сутканинг t - соатида электр энергетика тизимидан олинувчи электр энергиясининг нархи (тариф); $P_{PS}^{(t)}$ – сутканинг t - соатида электр энергетика тизимидан олинувчи актив қувват; C_s – сутканинг t - соатида электр энергетика тизимига сотилувчи электр энергиясининг нархи (тариф); $P_S^{(t)}$ – сутканинг t - соатида электр энергетика тизимига берилувчи актив қувват; $P_{G.PV}^{(t)}$ – сутканинг t - соатида қуёш фотоэлектр станциясидан берувчи актив қувват; β – қуёш модуллари ва унга хизмат қилувчи ускуналарни ишлаб чиқариш, ўрнатиш, фойдаланиш ва техник хизмат кўрсатиш харажатларини ўз ичига олган коэффицент ҳисобланади [4].

Чегаравий шартлар

Сутканинг ҳар бир соатида истеъмолчиларнинг қувват баланси бўйича:

$$P_{PS}^{(t)} - P_S^{(t)} + P_{G.PV}^{(t)} = P_L^{(t)}, \quad t = 1, 2, \dots, 24 \quad (2)$$

Сутканинг ҳар бир соатида қуёш фотоэлектр станциясининг аккумулятор батареясини зарядлаш/разрядланиш қувватини эътиборга олган ҳолатдаги қуввати бўйича:

$$P_{PV}^{(t)} - P_{B.PV}^{(t)} = P_{G.PV}^{(t)}, \quad t = 1, 2, \dots, 24 \quad (3)$$

Аккумулятор батареясининг мумкин бўлган максимал зарядланиш (разрядланиш) қуввати бўйича (разрядланиш манфий ишора билан олинган):

$$-P_{B.PV.\max} \leq P_{B.PV} \leq P_{B.PV.\max}, \quad t = 1, 2, \dots, 24 \quad (4)$$

Сутканинг ҳар соатида қуёш фотоэлектр станциясининг инверторини максимал қуввати билан белгиланадиган чекланган қуввати бўйича:

$$0 \leq P_{G.PV}^{(t)} \leq P_{G.PV.\max}^{(t)}, \quad t = 1, 2, \dots, 24 \quad (5)$$

Аккумулятор батареясининг сифими бўйича

$$W_{bal.PV} + \sum_{k=1}^{t-1} [P_{PV}^{(k)} - P_{G.PV}^{(k)}] * \Delta t^{(k)} \leq W_{PV}, \quad t = 2, 3, \dots, 24 \quad (6)$$

Сутканинг ҳар бир соатида электр энергетика тизимидан олинувчи актив қувват бўйича:

$$0 \leq P_{PS}^{(t)} \leq P_{PS.\max}^{(t)}, \quad t = 1, 2, \dots, 24 \quad (7)$$

Сутканинг ҳар бир соатида электр энергетика тизимига берилувчи актив қувват бўйича:

$$0 \leq P_S^{(t)} \leq P_{S.max}^{(t)}, \quad t = 1, 2, \dots, 24 \quad (8)$$

бу ерда: $P_{PV}^{(t)}$ – сутканинг t инчи соатида куёш фотоэлектр станциясининг актив қуввати; $P_L^{(t)}$ – сутканинг t инчи соатида истеъмолчининг умумий актив қувват юкламаси; $P_{B.PV.max}$ – аккумулятор батареясининг мумкин бўлган максимал зарядланиш ёки разрядланиш қуввати; $P_{G.PV.max}^{(t)}$ – сутканинг t инчи соатида куёш фотоэлектр станцияси томонидан истеъмол учун ишлаб чиқариш мумкин бўлган максимал қувват; W_{PV} – куёш фотоэлектр станциясида ўрнатилган аккумулятор батареясининг электр сиғими; $W_{bal.PV}$ – куёш фотоэлектр станциясига ўрнатилган аккумулятор батареясининг олдинги кундан қолган электр заряди, $P_{PS.max}^{(t)}$ – сутканинг t инчи соатида электр энергетика тизимидан олиш мумкин бўлган максимал қувват; $P_{S.max}^{(t)}$ – сутканинг t - инчи соатида электр энергетика тизимида бериш мумкин бўлган максимал актив қувват.

Ушбу моделда ишлаб чиқариш қувватидан қатъий назар куёш фотоэлектр станциясида ишлаб чиқарилувчи электр энергиянинг нархи ўзгармас деб қабул қилинган.

Ҳосил бўлган математик моделда мақсад функцияси ва чегаравий шартлар чизиқли кўринишда бўлганлиги сабабли уни ечиш мос чизиқли дастурлаш усулларида *Симплекс* усули ёрдамида амалга оширилади.

Алгоритмнинг самарадорлиги ишлаб чиқарувчи электр энергиясини электр энергетика тизимида сотиш имконияти мавжуд бўлган хусусий куёш фотоэлектр станциясига эга корхонанинг электр юкламасини электр энергетика тизимидан олинувчи ва куёш фотоэлектр станция ишлаб чиқарувчи қувватлар ўртасида оптимал қоплаш мисолида ўрганилади.

БИОЭКОЛОГИЧЕСКИЕ ОСОБЕННОСТИ ПОЧВЕННЫХ КЛЕЩЕЙ

Аннотация. В статье рассматриваются биоэкологические особенности почвенных клещей. Почвенные клещи питаются разлагающейся органикой и участвуют в процессе почвообразования. Если состав почвы меняется в сторону увлажнения, повышается ее температура, то нарушается экологический баланс грунта, и почвенные клещи превращаются из благотворно влияющих насекомых во вредителей.

Ключевые слова: температура, почва, органика, увлажнения, метод, корень.

BIOECOLOGICAL FEATURES OF SOIL MITES

Annotation. The article discusses the bioecological characteristics of soil mites. Soil mites feed on decaying organic matter and participate in the process of soil formation. If the composition of the soil changes towards moisture, its temperature rises, then the ecological balance of the soil is disrupted, and soil mites turn from beneficial insects into pests.

Key words: temperature, soil, organic matter, moisture, method, root.

Почвенный клещ – насекомое семейства акаридных. Этот тип клещей включает довольно много разновидностей. Очень многие почвенные клещи совершенно безопасны и даже приносят некоторую пользу растениям.

Многочисленность видов почвенных клещей, обитающих под поверхностью земли, предполагает их классификацию и разделение по группам, в зависимости от численности, распространенности, способу питания и степени влияния на жизнь человека. Выделяет две группы почвенных клещей:

➤ *Tirophagus* – акаридный клещ, называемый гнилостным, удлиненным;

➤ *Rhizoglyphus echinopus* – луковичный корневой, также из отряда акариформных.

Взрослый клещ (имаго) имеет овальное, сужающееся к голове, тело, покрытое щетинками. Цвет - светло-желтый, тело покрыто у основания мягким хитиновым щитком. Толстые короткие лапы снабжены шипами и такими же щетинками, как на теле.

Самки немного больше самцов, их размер - немного больше 1 мм. Яйца белого цвета, крупного размера. Личинки – это эмбрионы, вылупившиеся из яиц, имеют 3 пары лап.

Следующая за личинкой фаза развития - нимфа, немного меньше имаго, имеет 4 пары лапок. Есть еще одна фаза нимфы, если насекомое живет в неблагоприятных климатических условиях, когда замедляется его жизнедеятельность. Эта стадия называется "гипопус". Смена фаз развития клеща происходит в виде линьки. При этом сбрасывается хитиновый панцирь, и клещ переходит в следующую стадию своего развития.

Почвенные клещи, размножаются по двуполому типу:

- ✓ самец оплодотворяет самку;
- ✓ в матке ее яйцеклетка оплодотворяется;
- ✓ самка откладывает яйца.

Примерно 10 суток после отложения яйца находятся в эмбриогенезе. Срок может сокращаться при наилучшем соотношении влажности и температуры. Одна самка может отложить в сутки до 24 яиц, а за всю свою жизнь - до 800.

Созревание личинок и нимф идет по постоянному сценарию, только временные рамки разных стадий зависят от условий окружающей среды. Оптимальная для развития влажность составляет от 80 до 100 процентов, и развитие личинок и нимф замедляется при ее снижении с 60 процентов.

Если почва прогрелась до 15 градусов тепла - личинка развивается за 22 дня. Если температура окружающей среды составила 20 градусов - за 4 дня. Через 3 дня сбрасывается панцирь при температуре +23 градуса. 2 дней хватает для быстрого развития при температуре 25 градусов тепла и выше. Среди почвенных клещей луковичные половозрелые клещи теплолюбивы, и если температура среды обитания снижается до 9.5 градусов, то они переходят в стадию диапаузы.

Клещи питаются гниющими остатками и разлагающейся органикой, также поедают луковицы и корни живых растений. Если состав почвы

меняется в сторону увлажнения, повышается ее температура, то увеличивается популяция насекомых. При этом нарушается экологический баланс грунта, и почвенные клещи превращаются из благотворно влияющих насекомых во вредителей.

Микроскопический размер почвенного клеща (до 0,5 мм) не влияет на развитие корнеплодов и корней, если вред от насекомых не переходит в большой объем наносимого ущерба. Безостановочное поедание корня растения большой колонией паразита приведет к неминуемой гибели растения. Почвенные клещи:

- ✓ наносят повреждение рассады;
- ✓ оставляют пыльцу на листьях, тем самым ускоряется увядание растений;
- ✓ переносят грибковые и другие болезнетворные бактерии;
- ✓ портят семена.

Опасность этого вредителя заключается в активизации гнилостных процессов в тканях насаждений. Это помогает клещам проникнуть внутрь, так как ослабленные растения легче поддаются негативным внешним воздействиям. Такие вредители характеризуются микроскопическими размерами (от 0,2 до 1 мм), из-за чего их сложно обнаружить. Для таких особей характерна скрытая жизнедеятельность – в слое почвы. По мере размножения их количество увеличивается, что вынуждает клещей выбираться на поверхность грунта. Прекрасные условия для их развития создаются в теплицах, изобилующих теплом, влагой и свежей пищей. Нужно бороться с почвенными клещами нижеследующими методами:

- следует снижать численность клещей при сильном их размножении.
- применять физические методы, например, как, очистка грунта и подземных частей насаждений, а также химические методы.
- нормализовать уровень влажности почвы и воздуха.

Эти представители большой группы членистоногих, обитающие в верхних слоях почвы, в естественной среде, надо признать, являются важной частью экосистемы. Почвенные клещи питаются разлагающейся органикой и участвуют в процессе почвообразования. А вот попав в «тепличные» условия (в квартиру, в оранжерею и так далее), клещи переключаются на здоровые домашние растения и становятся вредителями.

Таким образом, можно сделать вывод, что почвенный клещ приносит пользу, только если его численность совсем мала. В случаях его распространения и увеличения колоний нужно принимать срочные меры по его уничтожению.

РЕГЕНЕРАЦИЯ ПЕРЛИТА ПОСЛЕ ВЫМОРАЖИВАНИЯ ПОДСОЛНЕЧНОГО МАСЛА

Аннотация. В данной статье изучены способы регенерации и влияние их на фильтрующие способности перлита. Установлено, что с повышением концентрации щелочи до 40% при различных соотношениях степень очистки растительного масла повышается, однако с увеличением степени регенерации она уменьшается. С повышением концентрации кислоты приводит к увеличению дистиллированной воды, что приводит к повышению себестоимости и нерациональной трате воды. Определено, что регенерированный перлит после вымораживания фильтрует насыщенные жирные кислоты, т.к. при снижении температуры с восковыми веществами, также насыщенные жирные кислоты начинают кристаллизоваться и податать с фильтрующим агентом в осадок. За счёт этого в системе повышается ненасыщенные жирные кислоты.

Ключевые слова: перлит, рафинация, растительное масло, вымораживание, вермикулит, прокалка, вспучивание, адсорбенты, восковое вещество, кислотное число, перекисное число.

REGENERATION OF PERLITE AFTER FREEZING SUNFLOWER OIL

Annotation. This article examines regeneration methods and their effect on the filtering abilities of perlite. It has been established that with an increase in alkali concentration to 40% at various ratios, the degree of purification of vegetable oil increases, but with an increase in the degree of regeneration it decreases. As the acid concentration increases, the amount of distilled water increases, which leads to increased costs and wasted water. It has been determined that regenerated perlite filters saturated fatty acids after freezing, because When the temperature decreases, waxy substances and saturated fatty

acids begin to crystallize and precipitate with the filtering agent. Due to this, unsaturated fatty acids increase in the system.

Keywords; perlite, refining, vegetable oil, freezing, vermiculite, calcination, swelling, adsorbents, waxy substance, acid value, peroxide value.

Один из современных трендов в развитии масложировой промышленности в мире является производство конкурентоспособных функциональных продуктов питания с улучшенной биологической ценностью, которые безопасны для потребления. Поэтому создание и улучшение методов возделывания и переработка растительных масел, способных производить высококачественные масложировые продукты, представляют собой одну из ключевых задач [1-3].

Узбекистане активно внедряются новая техника и технология для производства светлых растительных масел из подсолнечника, сои и сафлора, которые имеют отличие хлопкового масла по составу и свойствам. Например, в светлых маслах содержатся восковые (стерины, воски и т.п.) вещества, которых относительно мало в хлопковых маслах. Напротив, в хлопковом масле наряду со значительным содержанием госсипола и его производных имеются фосфолипиды различного строения [4].

Восковые и высокоплавкие вещества выводятся из рафинированного или дезодорированного масла способом вымораживанием (винтеризацией) с целью получения салатного масла, т.е. более очищенного и готового к реализации как вымороженное товарное масло [5,6].

Товарный вид растительных масел также является одним из главных критериев при производстве, однако за последние годы из-за нехватки масличных культур, промышленность столкнулась с трудностями, т.е. получение прозрачных масел, из-за дороговизны фильтрующих материалов из-за рубежа. Известные насыщенные восковые вещества, благодаря их высокой температуре плавления (от 32 до 98 °С), при охлаждении масла образуют тонкую и очень устойчивую взвесь кристаллов, которая часто называется "сеткой". Это явление существенно ухудшает внешний вид масла и его качество. Ни один из этапов процесса рафинирования масла (включая гидратацию, щелочную нейтрализацию, отбеливание и дезодорацию) практически не способствует удалению восковых веществ из него.

Поэтому наличие восковых веществ в масле (обычно в диапазоне от 0,02% до 0,3%) не только мешает достичь высокого товарного качества масла, но и вызывает затруднения в его обработке и хранении. Восковые вещества создают проблемы при процессах полировочного фильтрования рафинированных масел. Также имеются данные о негативном воздействии на катализаторы при гидрировании масел.

На сегодняшний день существует много способов удаления или выведение восковых веществ из растительных масел.

Известен метод очистки растительных масел от восков с использованием процесса замораживания. Он включает охлаждение масла с добавлением специальных фильтрующих порошков, которые способствуют образованию центров кристаллизации. После выдержки масла при низких температурах осуществляется отделение осадка путем фильтрации [7]. Недостатком известного метода является то, что вспомогательные фильтрующие порошки (такие как цеолиты, фильтр перлит и другие) содержат поры и капиллярные каналы, которые заполняются как воском, так и нейтральным маслом. Это приводит к большим потерям масла вместе с использованным фильтрующим порошком и увеличенному его расходу. Кроме того, в этом методе фильтрующие порошки используются однократно, а адсорбированный на них воск не подлежит утилизации.

Существует метод очистки растительных масел от восковых веществ, который включает добавление инициатора кристаллизации в масло и отделение образовавшихся кристаллов путем использования восковых веществ, извлекаемых из растительных масел. В этом методе источником восковых веществ служит отработанный фильтрующий порошок, который образуется в результате процесса замораживания растительных масел. [8]. Существуют недостатки в известном методе, связанные с тем, что в процессе замораживания масла с использованным фильтрующим порошком в масло попадает большое количество продуктов окисления, таких как перекисные, анизидиновые, диеновые и триеновые соединения масла. Эти соединения находятся в порах и капиллярах использованного фильтрующего порошка, что приводит к ухудшению качества масла.

Однако применяемые фильтрующие материалы применяемые в данный момент на предприятиях республики после использования накапливаются отходами, что приводит к экологическим проблемам. С этой целью в данной работе проведены исследования их регенерации.

Регенерацию проводили с различными концентрациями щелочи (NaOH, KOH). Регенерацию проводили в следующем порядке: образцы отработанного перлита смешивали щелочью при различных соотношениях и концентрациях. Смешивали при постоянном перемешивании при температуре 40-45 °С в течении 30 минут. Далее нейтрализовали дистиллированной водой до pH -7. Нейтрализованный материал сушили и измельчали.

Результаты исследований приведены в табл.1.

Таблица 1.

Влияние обработки щелочью (KOH) перлита на степень их очистки от восковых веществ

Концентрация щелочи, %	Соотношение щелочи к перлиту,	Степень очистки растительного масла после регенерации, %		
		1	2	3

10	1:0,5	73,5	68,7	62,4
	1:1	78,4	75,1	72,4
	1:1,5	85,0	81,4	77,2
	1:2	89,1	84,4	77,9
20	1:0,5	75,6	72,7	68,4
	1:1	82,6	79,6	74,5
	1:1,5	88,4	85,2	80,1
	1:2	91,2	88,6	81,4
30	1:0,5	76,9	72,8	70,6
	1:1	79,7	76,8	73,8
	1:1,5	87,8	84,3	81,3
	1:2	93,4	90,7	87,8
40	1:0,5	77,2	68,7	62,4
	1:1	81,6	78,4	76,2
	1:1,5	89,4	84,6	81,6
	1:2	95,7	92,3	89,4

Как видно из табл.1 с повышением концентрации щелочи до 40% при различных соотношениях степень очистки растительного масла повышается, однако с увеличением степени регенерации она уменьшается. С повышением концентрации кислоты приводит к увеличению дистиллированной воды, что приводит к повышению себестоимости и нерациональной трате воды. Когда в республике остро стоит вопрос о нехватке воды.

По вышеуказанной таблице можно сделать вывод, что для регенерации достаточно 20% - ный щёлочь, при соотношении 1:2, при котором в первый раз можно получить со степенью чистоты 91,2%.

После регенерации перлита проведено вымораживание различных светлых масел и изучено их органолептические и физико-химические показатели. Данные приведены в табл. 2.

Как видно из табл.2. все показатели после вымораживания соответствуют по требованиям ГОСТа, однако эти данные 1-ой стадии после регенерации. Регенированный перлит как видно из табл.1. после –ой или 3-ий степени снижает свои свойства, поэтому далее будет изучен другие способы регенерации.

Таблица 2.

Показатели растительных масел регенерированным перлитом

Показатели	Растительные масла			
	Рафинированное подсолнечное масло вымораживание		Рафинированно соевое масло	
	до выморажива- ние	после вымора- живание	до выморажи- вание	после вымора- живание
Кислотное число, мг КОН/г	0,4	0,36	1,6	0,09

Перекисное число, ½ ммоль О/кг	4,6	3,4	5,4	4,6
Прозрачность	мутное	прозрачное	легкое помутнение	прозрачное
Запах и вкус	Специфический запах и вкус	Свойственно по ГОСТу для данного типа	Специфический запах и вкус	Свойственно по ГОСТу для данного типа

Далее изучен жирнокислотный состав растительных масел (подсолнечное, соевое), вымороженных регенированным перлитом.

Таблица 3.

Жирно кислотный состав (ЖКС) до и после вымораживания с регенированным перлитом

Название жирных кислот подсолнечного масла	Исходный ЖКС подсолнечного масла, %	ЖКС после вымораживания рафинированного подсолнечного масла с регенированным перлитом, %	Исходный ЖКС соевое масла, %	ЖКС после вымораживания рафинированного соевое масла с регенированным перлитом, %
Стеариновая (C ₁₈ H ₃₆ O ₂)	4,1	2,9	2,5	1,8
Пальмитиновая (C ₁₆ H ₃₂ O ₂)	6,4	3,4	9,3	6,6
Миристиновая (C ₁₄ H ₂₈ O ₂)	0,07	-	0,2	-
Арахидиновая (C ₂₀ H ₄₀ O ₂)	0,25	-	0,17	2,4
Олеиновая (C ₁₈ H ₃₄ O ₂)	19,1	22,5	21,5	27,2
Линолевая (C ₁₈ H ₃₂ O ₂)	67,09	71,2	52,9	61,4
Другие ЖК	2,99	100,0	13,43	99,4

Как видно из табл. 3. регенированный перлит после вымораживания фильтрует насыщенные жирные кислоты, т.к. при снижении температуры с восковыми веществами, также насыщенные жирные кислоты начинают кристаллизоваться и податать с фильтрующим агентом в осадок. За счёт этого в системе повышается ненасыщенные жирные кислоты.

Для сравнение исходного и регенированного перлита проведен сравнительный анализ данные которых приведены в рис 1.

Рис. 1. Влияние температуры на растворимость восков
 1 -перлит регенированный после 2-ой стадии; 2- регенированный после 1-ой стадии; 3- исходный перлит.

Из рис.1. видно, что с повышением температуры до 40 °С максимально растворяется восковые вещества. Растворимость определяли, нагревая до 40 °С масло медленно охлаждали. Затем масло отфильтровали осадок, обезжировали охлажденным до 0 °С гексаном, высушивали и взвешивали. Концентрация растворенность в масле восков (растворимость) рассчитывали по формуле:

$$K_B = \frac{M_{BB.} - M_0}{M_M}$$

где: K_B – концентрация восков в масле; мг/кг; $M_{BB.}$ -исходное количество восковых веществ, мг; M_0 - осадок на фильтре,мг; M_M - масса отфильтрованного масла, кг.

Как видно из графика исходный перлит лучше фильтрует после вымораживания, по сравнению с регенированными. Однако после каждого ренерированного перлита ухудшается его фильтрующая способность. Интенсивность процесса кристаллизации протекает двумя способами, т.е. путём переохлаждения, или с использование инициаторов для кристаллизации затравочных материалов. Увеличение пересыщения ускоряет образование зародышей, но это приводит к резкому увеличению вязкости системы, затрудняющие диффузионные процессы масспереноса, в результате которого размеры кристаллов уменьшаются, что затрудняет процесс осаждения. Поэтому рационально использовать инициатор для образования центров кристаллизации, которым является перлит.

Далее изучен влияние времени на качественные показатели вымороженных масел регенированным перлитом. Данные которых приведены в рис.2.

Рис.2. Влияние времени хранения на кислотное число вымороженных подсолнечных масел

1-исходный перлит; 2-перлит регенированный после 1-ой стадии; 3-регенированный после 2-ой стадии;

Сравнительные данные из рис.2. показано, что вымораживание исходным перлитом долгое время максимально удерживает кислотное число подсолнечного растительного масла. Вымораживание с применением регенированным перлитом после 1-ой или 2-ой стадии близки к исходному образцу. Это подтверждает о правильности проведения процесса регенерации с подобранными щелочью. Кислотное число при вымораживании исходным перлитом, повышается с 0,3 мг КОН/г повышается 0,36 мг КОН/г через 60 дней хранения. При использовании регенированных образцов перлита кислотное число повышается с 0,3 мг КОН/г до 0,45 мг КОН/г спустя 60 дней, это подтверждает о наличии остатков щелочи или других примесей в составе перлита.

Таким образом, регенерация со щелочью позволит сэкономить импортный фильтрующий материал, что позволит снизить себестоимость получаемого растительного масла. Установлено, что с повышением

концентрации щелочи до 40% при различных соотношениях степень очистки растительного масла повышается, однако с увеличением степени регенерации она уменьшается. С повышением концентрации кислоты приводит к увеличению дистиллированной воды, что приводит к повышению себестоимости и нерациональной трате воды. Определено, что регенированный перлит после вымораживания фильтрует насыщенные жирные кислоты, т.к. при снижении температуры с восковыми веществами, также насыщенные жирные кислоты начинают кристаллизоваться и податься с фильтрующим агентом в осадок. За счёт этого в системе повышается ненасыщенные жирные кислоты.

NATURAL-MECHANICAL MOVEMENT OF THE POPULATION OF SURKHONDARYO REGION

Abstract. This article is devoted to the issues of natural and mechanical movement of the population in the Surkhandarya region, differences in the migratory movement of the population of the regional districts, and the processes of the mechanical movement of the population.

Key words: mechanical movement, natural reproduction, migration, external migration, internal migration, migration balance.

Роль населения в развитии общества неопределима, и оно активно участвует в его развитии как неотъемлемая часть общества. Население создает материальные и духовные блага и в то же время считается потребителем этих созданных благ.

Сурхандарьинская область является одним из регионов с самыми высокими темпами естественного прироста населения в Республике Узбекистан. Основной причиной этого является высокая доля сельского населения (63,7% - на 1 января 2023 г.), сохранением большого количества детей в соответствии с историческими национальными традициями, высокой средней продолжительностью жизни и стабильностью смерти.

Естественный прирост населения происходит в основном за счет соотношения рождаемости и смертности среди населения. Одним из основных показателей, определяющих прирост населения, являются показатели баланса рождаемости, смертности и миграции на тысячу человек среди населения региона или определенной местности.

На прирост населения стран и регионов влияет не только естественный прирост населения, но и миграционные процессы населения.

Миграция населения— это переезд с постоянной или временной сменой места жительства. Люди всегда перемещаются между регионами с целью жить, работать, учиться и отдыхать. Их территориальные перемещения определяются на разные периоды в соответствии с их целями. Определенная часть населения, главным образом с целью учебы и работы, в течение одного дня отправляется в ближайшие города или села, не меняя места жительства.

Эксперты рассматривают такое движение населения как «маятниковую миграцию» и не включают его в реальное миграционное движение. Большинство специалистов по миграции населения исходят из процесса смены места жительства населения.

В переписях населения, проводимых в Узбекистане, мигрантами считалось население, иммигрировавшее и проживавшее в республике менее двух лет.

В конце XIX века и с начала XX века в регион начали иммигрировать русские и представители других национальностей. Во время Второй мировой войны в результате эвакуации населения из прифронтовых районов определенная часть населения была переселена регион.

В 1960-1970-е годы в регионе активизировались процессы внутренней миграции. В этот период в целях освоения Сурхан-Шерабадской долины и развития производительных сил согласно плану осуществлялось переселение из густонаселенных северных районов, горных и предгорных районов.¹²²

122 М.Р.Бўриева, З.Н.Тожиева, С.С.Зокиров Аҳоли географияси ва демография. «Тафаккур» Т.: 2011

Миграция населения в Сурхандарьинской области

Годы	Прибывшие	Выбывшие	Миграционный баланс
2000	11122	14034	- 2912
2005	10684	14041	- 3357
2010	11600	12742	- 1142
2011	11464	12770	- 1306
2012	12007	13528	- 1521
2013	13081	12326	+ 755
2014	10976	12055	- 1079
2015	11748	13027	- 1279
2016	12925	143388	- 1463
2017	14456	16134	- 1678
2018	11936	13824	- 1888
2019	10378	13283	-2905
2020	8456	19518	-11062
2021	11911	17699	-5788
2022	9 577	13 767	-4190

Из данных таблицы известно, что сальдо миграции в нашей республике и области отрицательное, а в структуре населения вес эмигрантов по сравнению с иммигрантами составляет большинство.

В 2017 году количество иммигрировавших в Сурхандарьинскую область составило 14 456 человек, количество выехавших – 16 134, а сальдо миграции сложилось отрицательным – 1 678 человек.

В 2021 году количество переехавших и покинувших нашу республику людей было самым высоким. В этом году число иммигрировавших в нашу республику составило 256 814 человек, а число эмигрантов – 275 079 человек. Сальдо миграции сложилось отрицательным – 18 265 человек.

В 2022 году количество иммигрировавших в Сурхандарьинскую область составило 9 577 человек, количество эмигрантов – 13 767 человек. Сальдо миграции составило отрицательное 4190 человек.

Таблица 2

Миграция населения Сурхандарьинской области, чел.

Т/г	Города и районы	Количество иммигрантов		Количество эмигрантов		Миграционный баланс	
		2021	2022	2021	2022	2021	2022
	По области:	11911	9577	17704	13767	-5793	-4190

8	Кумкурганский	405	410	1443	1129	-1038	-719
9	Кизирикский	387	388	941	870	-554	-482
10	Сариасийский	425	342	1172	903	-747	-561
11	Термезский	917	826	1161	897	-244	-71
12	Узунский	406	378	1066	859	-660	-481
13	Шерабадский	563	583	919	954	-356	-371
14	Шурчинский	572	392	1035	856	-463	-464

Таблица составлена авторами на основе информации официального сайта управления статистики Сурхандарьинской области «Сурхонстат.уз».

Анализ данных таблицы показывает, что существенных различий в миграционном движении населения районов области нет. Сальдо миграции имеет отрицательный показатель во всех сельских округах, за исключением города Термеза – областного центра. То есть количество эмигрантов превышает количество иммигрантов. Особенно в Денауском, Кумкурганском, Сариасийском, Джаркурганском районах сальдо миграции отрицательное и является высоким показателем. Рост населения региона был самым высоким за последние годы вместе с Кашкадарьинской областью.

На рост населения стран и регионов влияют также процессы механического перемещения населения. В 2022 году миграция населения в регионе имела отрицательное сальдо. На уровне районов только административный центр Термез имел положительное сальдо миграции населения. Во всех остальных сельских округах области сальдо миграции было отрицательным. Особенно высоким оно было в Денауском, Кумкурганском, Сариасийском, Джаркурганском, Кызырикском, Узунском районах и средним в Алтынсайском, Шурчинском, Музрабатском Байсунском районах, остальных Шерабадском, Ангорском районах. Низкий показатель имелся в Термезском, Бандиханском районах.

Подводя итог, к районам с высоким приростом населения области относятся Денауский, город Термез, Кумкурганский, Джаркурганский, Шурчинский районы. Показатель остальных округов был значительно ниже.

В 2017 году число родившихся в регионе составило 64,4 тыс., число умерших – 11,3 тыс., миграционный баланс – минус 2,3 тыс. Общий прирост населения составил 50,8 тыс. человек или естественный прирост по сравнению с предыдущим годом (2016) составил 1,02 процента.

К 2018 году число родившихся в регионе составило 68 000, число умерших – 10 700, естественный прирост – 57 400. В этом году сальдо миграции составило -2,2 тыс. человек, общий прирост населения составил 55,2 тыс. человек.

В 2022 году число родившихся в области составило 81 598 человек, число умерших – 13 853 человека, естественный прирост – 67 745 человек.

Причин высокой рождаемости в регионе несколько. Среди них большое количество представителей местных национальностей (узбеки, таджики) с высокой склонностью к многодетности в национальной структуре общей численности населения, низкие уровни урбанизации и занятости населения, а также некоторые традиции и другие факторы.

COMPOSITION OF THE POPULATION OF SURKHONDARYO REGION

Annotation. This article examines the gender, age, and ethnic composition of the population of the Surkhondaryo region. In particular, changes in the composition of the region's population over the years of independence are described.

Key words: Sex composition of the population, age composition of the population, national composition of the population.

Разделение населения по половому признаку является одним из важнейших демографических аспектов населения и одним из основных критериев воспроизводства населения. В разные исторические периоды

наблюдались разные различия в половом составе населения региона. Например, в середине прошлого века, точнее, в период после Второй мировой войны, для населения региона характерно уменьшение количества мужчин по сравнению с женщинами. К 50-м годам прошлого столетия различия в половой структуре населения региона были снижены.

В настоящее время существенных различий в гендерном составе населения региона нет. Из данных таблицы 1 ниже известно, что в 2015 году общая численность населения региона составляла 1170,1 тыс. женщин и 1188,2 тыс. мужчин. Мужчин было на 18 100 больше, чем женщин. В этом году доля женщин в общей численности населения составила 49,7 процента, а доля мужчин – 50,3 процента. В 2019 году общая численность населения региона составила 1271,8 тыс. женщин и 1298,1 тыс. мужчин.

Таблица №1

**Половой состав населения Сурхандарьинской области
(тысяч человек)**

№	Годы	Общая численность населения	В том числе		В процентах от общего	
			Женщины	Мужчины	Женщины	Мужчины
1	2014	2358,3	1170,1	1188,2	49,7	50,3
2	2015	2411,5	1125,1	1216,4	49,6	50,4
3	2016	2462,3	1219,8	1242,5	49,5	50,5
4	2017	2514,2	1244,9	1269,3	49,5	50,5
5	2018	2569,9	1271,8	1298,1	49,5	50,5
6	2019	2629,3	1301,5	1327,8	49,5	50,5
7	2020	2681	1326,2	1354,8	49,5	50,5
8	2021	2743,2	1356,2	1387	49,4	50,6
9	2022	2806,7	1387,2	1419,5	49,4	50,6

Таблица составлена авторами на основе информации официального сайта управления статистики Сурхандарьинской области «Surhostat.uz».

В 2022 году количество женщин в общей численности населения региона составило 1387,2 тыс., мужчин – 1419,5 тыс. человек.

Анализируя население региона по возрастным группам, можно сделать следующие выводы. По состоянию на 1 января 2023 года 34,7 процента общей численности населения региона моложе трудоспособного возраста, 56,1 процента трудоспособного возраста и 9,3 процента людей старше трудоспособного возраста. Существенных различий в доле возрастных групп населения в общей численности населения по городам и районам нет. Однако Деновский район выделяется по количественным показателям по возрастным группам населения. В районе проживает 15,3% населения моложе трудоспособного возраста, 14,2% трудоспособного возраста и 14,3% населения старше трудоспособного возраста.

Формирование национального состава населения каждой страны или региона происходит на основе ряда природных, экономических,

социальных, исторических и политических факторов. В частности, миграционные процессы играют решающую роль в формировании национального состава населения регионов.

В эпоху глобализации активизация миграционных процессов оказывает существенное влияние на состав населения различных регионов и стран. После формирования национального состава населения Сурхандарьи он создавался на основе исторических политических процессов, происходивших на протяжении полутора веков. Во второй половине XIX века, с оккупацией Средней Азии Россией и последующим осуществлением Октябрьского переворота 1917 года в России, русские подданные начали мигрировать в Среднюю Азию и на территории нашей нынешней республики. В годы Второй мировой войны в результате массового перемещения населения из районов, где шла война, национальный состав населения региона изменился в результате переселения в нашу республику представителей разных национальностей.

Таблица №2

**Национальный состав населения Сурхандарьинской области
2021 год**

№	нации	Население, чел.	Доля от общей численности населения, в %
1	узбеки	2264979	84,49
2	таджики	334120	12,46
3	туркмены	32925	1,23
4	русские	21324	0,80
5	татары	6,960	0,26
6	украинцы	3545	0,13
7	цыгане	3276	0,12 %
8	казахи	2719	0,10
9	белорусы	1502	0,06
10	азербайджанцы	978	0,04 %
11	корейцы	734	0,03 %
12	армяне	306	0,01 %
13	евреи	220	0,01 %
14	молдаване	210	0,01 %
15	каракалпаки	194	0,01 %
16	киргизы	159	0,01 %
17	грузины	157	0,01 %
18	другие нации	6,492	0,22 %

Источник: <https://ru.wikipedia.org/wiki/Uzbekistan>

Из данных таблицы 2 выше известно, что в настоящее время в Сурхандарьинской области проживают представители более 20 национальностей. В 2021 году узбеки составляли 84,5 процента от общей численности населения региона, таджики - 12,4 процента, туркмены - 1,2 процента, русские - 0,8 процента, татары - 0,2 процента, украинцы - 0,1

процента и казахи - 0,1 процента. Остальные национальности (белорусы, азербайджанцы, корейцы, каракалпаки, кыргызы и другие национальности) имеют небольшую долю.

Имеются существенные различия в размещении проживающих на территории области этносов по административным районам. Узбеки проживают во всех районах области. 14,3% всех узбеков, проживающих в области, проживают в Деновском районе, 9,9% - в Кумкурганском районе, 9,3% - в Жаркурганском районе, 9,1% - в Шорчинском районе. Представители таджикской национальности в основном проживают в горных, северных районах области. 21,4% от общего числа таджиков региона проживают в Сариосии, 17,8% в Деновском районе, 15,7% в Узунском районе и 17,7% в Байсуне. Туркменские национальности проживают в южных районах области на берегах Амударьи, в Термезском, Ангорском, Музработском районах и в городе Термез. 29,7% туркмен, проживающих в регионе, проживают в Термезском районе, 29,6% в городе Термезе, 16,1% в Ангорском районе, 8,2% в Музработском районе. К поселениям туркменских национальностей можно отнести села Хушман Музработского района, Новшахар Ангорского района, Халкабад и Паттакесар, Джойджангал Термезского района. Большая часть остальных национальностей проживает в городе Термезе – административном центре области. В том числе в городе проживают 74,5% корейцев, 64,4% русских, 64,4% украинцев, 62,4% белорусов, 59,0% татар, 37,5% азербайджанцев, 35,8% каракалпаков, 36,8% казахов. В этом плане город Термез отличается статусом многонационального города по сравнению с другими сельскими районами области.

Доля узбеков в общей численности населения Шорчинского, Жарорганского, Кумкорганского, Бандиханского, Шерабадского, Алтынсойского, Ангорского районов составляет более 90 процентов. По доле узбеков Термезский, Деновский и Музрабатские районы находятся на среднем уровне, а следующие места занимают Узунский район, город Термез, Сариосинский и Байсунский районы.

Таджики составляют 42,2% от общей численности населения Байсунского района, 33,8% - Сариосийского района, 30,2% - Узунского района, 15,9% - Музробадского района, 15,6% - города Термеза, 15,2% - Деновского района.

За последние 25-30 лет национальный состав населения региона существенно изменился. Можно привести пример изменений, связанных с распадом бывшего СССР в 90-х годах прошлого века.

За последние 30 лет вклад узбеков, представителей местного населения, в регионе значительно увеличился. В 1989 г. их доля в общей численности населения области составляла 79,5%, в 1993 г. - 79,5%, в 1999 г. - 82,5%, в 2019, 2021 гг. - 84,4%.

В 1989 и 1993 годах доля таджикских национальностей в общей численности населения составляла 12,9 процента, в 1999 и 2019 годах — 12,3 процента, а в 2021 году — 12,4 процента.

В начале 90-х годов прошлого века доля русских национальностей в национальной структуре населения региона составляла 3,0 процента, в 1999 году — 1,8 процента, а в 2019 и 2021 годах — 0,8 процента. Большая часть российских граждан иммигрировала в Россию и ряд стран СНГ на постоянное место жительства в начале 90-х годов прошлого века. Доля местных этнических туркмен в общей численности населения не очень велика. В 1993 году доля туркменских национальностей составляла 1,5 процента, в 1999 году — 1,3 процента, а в 2019 и 2021 годах — 1,2 процента. Число представителей других национальностей в общей численности населения невелико. Если кратко, то в национальном населении региона высокий процент узбеков и таджиков, несколько меньший процент туркмен и небольшой процент русских, татар, украинцев, казахов и представителей других национальностей.

После обретения независимости Республики Узбекистан, следуя принципам мира и согласия между народами, представители всех национальностей, проживающих в нашей стране, живут в мире и согласии, как единая семья. Созданы национально-культурные центры, прославляющие культурное наследие разных национальностей и народов, созданные особенно в годы независимости.

**GEOGRAPHICAL FACTORS AFFECTING THE TERRITORIAL
LOCATION OF AGRICULTURAL INDUSTRIES IN SURKHANDARYA
REGION**

Annotation. In this article, geographical factors influencing the territorial location of agricultural sectors in the Surkhandarya region are studied on a

scientific basis. In particular, the article reveals the role and importance of agroclimate, land and water resources in the regional location and development of regional agricultural production.

Key words: Agroclimate, land and water resources, positive beneficial temperature, land fund, hydraulic structures, agricultural regions.

Сурхандарьинская область расположена в самой южной части нашей республики. Такое географическое положение региона оказывает влияние на формирование его экономики, в том числе на региональный состав отраслей сельского хозяйства.

Сурхандарья расположена на юге, для нее характерно большое количество годовой суммы солнечной радиации (160 кл. на 1 см² поверхности), а также солнечные дни и большое количество положительных температур. Кроме того, вместе с факторами рельефа здесь сформировался уникальный сухой субтропический климат. К западу от него расположена гора Кохитанг (высота 3137 м), являющаяся юго-западным продолжением горы Бойсун, к северо-западу — гора Бойсун, к северу — Хисарские горные хребты, к востоку — хребты Боботог. Южная часть провинции представляет собой равнину и через Амударью граничит со страной Афганистан.

Рельеф региона разнообразен и сложен, он оказывает сильное влияние на формирование почвенного покрова, использование сельскохозяйственной техники, строительство и размещение предприятий перерабатывающего и нематериального производства. Морфологически рельеф региона представлен равнинами, долинами, реками, холмами и высокогорьями, разделен на высокие хребты. Их условно можно разделить на горную и равнинную части. Равнинная часть региона включает Сурхан-Шерабадскую долину, Шерабадскую степь и многочисленные долины горных рек. Сурханско-Шерабадская долина интенсивно эксплуатируется по сравнению с горной и предгорной зоной, где «плотно» расположены производительные силы.

Рассматриваемая долина с трех сторон окружена высокими горными хребтами. От этих хребтов берут начало такие реки, как Топалангдарья, Сангардакдарья, Ходжайпак, Шерабаддарья, являющиеся источниками орошения сельскохозяйственных культур региона. В долине их несколько.

строительство водохранилищ, в том числе Южно-Сурханского, Учкизильского, Октепинского, Топалангского водохранилищ, ряда магистральных каналов, привело к быстрому расширению сельскохозяйственных пашен и улучшению мелиорации земель.

Горная часть региона состоит из ряда параллельных гор разной высоты, ориентированных меридионально с севера на юг. Он окружен Хисарским хребтом в широтном направлении с севера. Здесь же расположена самая высокая вершина Узбекистана – Хазрат Султан (4643 м).

Хисарский хребет спускается на юго-запад и разделяется на несколько рукавов. Они идут параллельно друг другу с севера на юг.

В части Сурхандарьинской области, граничащей с Кашкадарьинской областью, расположена гора Чаччар. Хребты восточной части горы Бойсун представляют собой относительно длинные хребты. Гора Бойсун отделена от горы Кохитанг коридором «Железные ворота», образованным рекой Шерабад. Кохитанг – юго-западное продолжение горного хребта Байсун, который находится на территории Туркменистана.

Через территорию соединяется с Амударьей. К востоку от хребта Кохитанг, параллельно ему, расположены сильно эродированные возвышенности (низины), а именно хребет Келиф-Шерабад.

Сурханские горы восточнее горы Бойсун простираются до реки Шерабад в юго-западном направлении, а в восточном направлении постепенно понижаются и сливаются с равниной Сурхандарьинской долины.

В восточной части района расположен безводный, невысокий хребет Боботог Хисарского хребта, вытянутый с севера на юг. В целом 70% территории Сурхандарьинской области занимает предгорная и горная зоны. Здесь «горный коэффициент» (выражение А.Солиева) гораздо выше, чем в других регионах республики. Например, в Узбекистане этот показатель составляет 0,21, в Сурхандарьинской области – 0,70.

Исходя из этого, ученый Т. Джумаев (1989), изучавший горы нашей страны, делит территорию региона на три части:

1. Горно-пастбищная (адырская) зона 0,7 млн.чел. га или 34% от общей площади региона представляет собой;
2. Горно-пастбищная зона занимает 103 тыс. га или 5% от общей площади региона;
3. Высокогорная зона составляет 144 тыс. га, что составляет 7% от общей площади.

Горные районы Сурхандарьинской области считаются основной кормовой базой отрасли пастбищного животноводства, в горных районах имеются благоприятные возможности для развития виноградарства, плодовоовощеводства и частично хлопководства.

Также Т. Джумаев делит административные районы, расположенные в горной части Сурхандарьинской области, на 2 группы. К районам первой группы, состоящим из гор и равнин, относятся Сариосийо, Денов, Узун, Алтынсой, Шерабад, Шорчи. В горных районах этих округов было создано множество специализированных садоводчески-виноградарских, пастбищных животноводческих и других хозяйств. Например, Алтынсойский район – единственный специализированный виноградарский район региона. На его долю приходится 37% существующих виноградников региона и 53% общего урожая.

Байсунский район включен в состав административных районов горного и предгорного типа. Здесь созданы условия для развития горно-пастбищного животноводства, зерноводства, садоводства и виноградарства. На территории района расположено 19% всей кормовой пашни, 25% овец и коз.

В равнинной части региона созданы благоприятные условия для развития сельскохозяйственных отраслей, в частности ирригационного земледелия. Например, Сурхан-Шерабадская долина с севера, северо-запада и востока окружена высокими горами, в результате чего формируется уникальный субтропический климат из-за того, что сюда не могут проникнуть холодные воздушные массы. Это позволило выращивать цитрусовые и тонковолокнистый хлопок с относительно продолжительным вегетационным периодом. Климат Сурхандарьинской области характеризуется низкой и короткой зимой и жарким и продолжительным летом. С мая по ноябрь, иногда до декабря, в регионе почти не бывает осадков. Высокие температуры воздуха и почвы характерны для равнинных регионов, считающихся сельскохозяйственными. Среднегодовая температура воздуха здесь составляет 14,5-18,0С.

Термальные ресурсы равнин позволили выращивать теплолюбивые сельскохозяйственные культуры, в том числе сорта хлопчатника с длительным вегетационным периодом.

Период, создающий условия для развития теплолюбивой сельскохозяйственной культуры, в частности хлопка, в регионе длится в среднем от 226 до 266 дней.

Сумма полезных температур в равнинной части региона составляет 55 000 градусов, сумма полезных температур за весь период роста растения более 1500 0 градусов.

Наряду с тепловыми ресурсами при выращивании хлопка важное значение имеет количество осадков и их распределение по сезонам. Лето в Сурхандарьинской области жаркое и сухое, большая часть осадков выпадает весной. В равнинной части региона осадков выпадает сравнительно меньше. Например, в Термезе выпадает 133 мм осадков, в Денове - 360 мм, в Байсуне - 445 мм, в горных районах - 625 мм.

Л.Н.Бабушкин и Н.А.Когай разделили Сурхандарьинскую область на три природно-географические области: Нижне-Сурханскую, Средне-Сурханскую и Верхне-Сурханскую.

Основные агроклиматические показатели Нижнего или Южно-Сурханского природно-географического региона иные по сравнению со Средней (Центральной) и Верхней (Северной) природно-географическими районами. Например, средняя температура июля в нижнем Сурхане +31,5; +32 градуса, а в других регионах этот показатель не превышает +29 градусов, количество осадков в 1,5-2 раза меньше, чем в других регионах, а сумма полезных температур несколько выше.

Сурхандарья и Шерободарья являются крупнейшими реками региона и используются для орошения всех посевных площадей региона. По расчетам В. Л. Шульца и Л. И. Шалатовой (1965) площадь водосбора Сурхандарьи и Шерободарьи составляет 8406 кв/км, а модуль стока - 13,2 м/сек кв/км. Все реки региона гидрографически относятся к бассейну Амударьи.

Сурхандарья образуется в результате слияния рек Топалангдарья и Каратогдарья. Топалангдарья более чем в два раза беднее Каратогдарьи, ее средний многолетний расход воды в устье гор составляет 52 м³/сек, а Каратогдарья – 23 м³/сек.

В реках области в октябре-феврале наблюдается снижение водопотребления, а в марте происходят разливы воды, особенно в мае, подъем воды находится на самом высоком уровне.

К июню вода начнет убывать. Разнообразие режима таких рек затрудняет их использование для орошения.

К концу 1950-х годов общая мощность воды крупнейших рек региона составляла 800 млн. куб.м. был кубический метр

Южно-Сурханское водохранилище введено в эксплуатацию в 1964 году. Его площадь 65,0 кв. км, средняя глубина 12,3 м. немного раньше, то есть в 1960 году, емкость воды составляла 160 млн. куб м., площадь 10,0 кв.км. Построено Учкизильское водохранилище (Хикматовское, Сирлибоево и др., 2000, с. 74-75). Также объем составляет 12,8 млн. Также достроены Дегрез и другие резервуары кубометром. В результате за счет освоения новых земель расширились орошаемые пашни, в экстенсивном порядке выросли объемы выращивания хлопка. По использованию в хозяйственных целях почвенные ресурсы делятся на почвы горной и предгорной зоны и почвы равнинной зоны. Сероземы (светлые, равнинные, темные) распространены от горных равнин до высокогорья. На равнинах региона распространены светлые сероземы с содержанием гумуса 1-1,5%, а на участках выше 500 метров над уровнем моря - сероземы обыкновенные с содержанием гумуса 1,5-2%. В юго-западных районах также встречаются засоленные почвы и бесплодные сероземы. Расположенные в южной части области массивы Хатинработ и Каттакум имеют песчаные пустынные почвы, а в низовьях Сурхандарьи и Амударьи – аллювиальные луга и лугово-болотные почвы. В зоне орошаемого земледелия Сурхан-Шерабадской долины сероземы изменили свои природные характеристики и стали культурными почвами.

Таким образом, подводя итог, можно сказать, что природные условия региона по-разному влияют на размещение и развитие сельскохозяйственных производств. Например, агроклиматические условия здесь создают благоприятные условия для выращивания тонковолокнистого хлопка с длительной вегетацией, садоводства и виноградарства. В то же время теплый местный «афганский» ветер, дующий с юга, отрицательно

влияет на выращивание сельскохозяйственных культур и их экологию. Также под воздействием ветровой эрозии ухудшается мелиорация земель и ускоряется процесс опустынивания.

РАССЕЛЕНИЕ НАСЕЛЕНИЯ СУРХАНДАРЬИНСКОЙ ОБЛАСТИ В СЕЛАХ И ГОРОДАХ

Аннотация. В данной статье изучены расселение населения Сурхандарьинской области в городах и селах, территориальный состав городских и сельских поселений, а также процессы урбанизации.

Ключевые слова: город, село, населенные пункты, урбанизация, география сельской местности, исследования.

RESETTLEMENT OF THE POPULATION OF SURKHANDARYA REGION IN VILLAGES AND CITIES

Annotation. This article studies the settlement of the population of the Surkhandarya region in cities and villages, the territorial composition of urban and rural settlements, as well as the processes of urbanization.

Key words: city, rural areas, settlements, urbanization, rural geography, research.

Города и сельские поселения образовались в результате социального и территориального разделения труда в ходе длительного исторического развития человеческого общества. Городские и сельские поселения

отличаются друг от друга степенью специализации жителей в отраслях экономики. Обычно города густонаселены, эти места отличаются широким распространением городского образа жизни, наличием многоэтажной жилой застройки, развитием предприятий промышленного производства, транспорта и других современных отраслей инфраструктуры. Большая часть населения, проживающего в сельских поселениях, занимается сельским хозяйством.

Деревни являются территориальными, социальными и историческими единицами населения. Деревни — это поселения с более давней историей по сравнению с городами. Когда речь идет о сельской местности, то понимают территории, находящиеся за пределами города и экономически развитые. Известно, что в эпоху глобализации, когда современный научно-технический прогресс находится на высоком уровне, важно определить различия в социальном образе жизни деревень и городов. В частности, городская жизнь быстро впитывает инновации в области науки и техники. Здесь быстро развиваются наука и производство.

Села, издавна сохраняющие культуру человеческой цивилизации, играют несравнимую роль в передаче национального культурного наследия разных народов будущим поколениям. В этой связи не будет ошибкой сказать, что сельская местность является «музеем цивилизации, культуры и ценностей человечества» на нашей планете.

География сельской местности в нашей республике в годы независимости стала постепенно развиваться. Особенно в развитие этой области большой вклад внес известный географ и учёный профессор А. Солиев. Под руководством профессора А. Солиева многие научные исследователи защитили диссертации по географии сельской местности. Также изданы монографии и учебные пособия.

По мнению А.С. Солиева, села являются «неудачной» областью в этой науке и менее изучены, чем города. В частности, в монографии «Села Узбекистана», написанной ученым совместно с М. Назаровым в 2009 году, посвященной «Году развития и благосостояния села», проанализировано географическое описание сельских поселений, расположенных в различных экономических районах нашей республики. Среди них на научной основе изучены долинные села Андижанской области, села-оазисы Хорезмской области, пустынные села Бухарской области, горные села Сурхандарьинской области.

В Сурхандарьинской области, южном регионе Республики Узбекистан, важную роль в территориальном расположении населенных пунктов играют природные условия, в частности климат, рельеф и гидрологические бассейны. Территория района с трех сторон окружена горами разной высоты, только южная часть открыта реке Амударье, поднимается от уровня моря с юго-запада (равнина) на северо-восток (горы).

Более 70 процентов площади области составляют горные районы (следовательно, коэффициент «холмистости» равен 0,70). В области населенные пункты плотно расположены в Сурхан-Шерабадской долине, которая с экономической точки зрения сильно эксплуатируется.

В области большая часть сельских населенных пунктов расположена на берегах рек Сурхан и Шерабад, а также дороги Шерабад-Термиз-Денов и железной дороги Термиз-Денов, являющейся продолжением Великого Узбекского тракта. Кроме того, сельские поселения были созданы в 1950-60-х годах прошлого столетия при освоении земель Шерабадского заповедника, в Шерабадском, Музработском, Ангорском, Кызырикском районах. По состоянию на 1 января 2023 года в области насчитывается 859 сельских населенных пунктов. Это 75,1 процента от общего количества поселений области.

В состав районов области, образованных в 1926 году, входят Деновский, Сариосийский, Термезский и Шерабадский районы.

Самыми последними районами области были Ангорский район, отделенный от Термизского района в 1979 году, Олтинсойский район, отделенный от Шорчинского района в 1981 году, Узунский район, отделенный от Сариосийского района в 1991 году, и Бандихонский район, отделенный от Кызырикского района в 1992 году. Бандихонский район был включен в состав Кызырикского района в 2011 году, а в 2020 году район был реорганизован. Крупнейшими по площади являются Байсунский, Сариосийский, Шерабадский, Кумкурганский районы, которые в совокупности занимают 12,6 тысяч квадратных километров или 62,6% площади региона. По состоянию на 1 января 2023 года численность населения этих сельских округов составляет 799,7 тыс. человек, или 28,4% населения региона.

По количеству сельских округов области наибольшее количество сельских населенных пунктов находится в Сарысянском районе, 106 - в Деновском районе, 96 - в Шерабадском районе. В среднем 61,3 сельских населенных пункта соответствуют существующим 14 сельским округам области.

По данным на 2023 год, в Сурхандарьинской области 8 городов и 112 поселки городского типа. Из 8 городов только Термез имеет статус города областного подчинения. Остальные 7 городов находятся в подчинении района. В регионе 35,5 процента населения проживает в городах. Уровень урбанизации региона является низким показателем, и в этом отношении область опережает только Хорезмскую область в нашей республике. (33,2%) (таблица).

Уровень урбанизации региона был очень низким даже в прошлом веке. Для сравнения, доля городских жителей в общей численности населения региона была следующей. Например, в 1959 г. она составляла

15,4%, в 1970 г. - 16,0%, в 1979 г. - 19,3%, в 1989 г. - 19,5%. Этот показатель существенно изменился даже к началу 1990-х гг.

Уровень урбанизации составлял 19,3% в 1990 году, 19,1% в 1991 году, 18,9% в 1992 году и 20,2% в 1993 году. В 2008 году уровень урбанизации региона составил 19,1%.

По состоянию на 1 января 1994 года в области действовало 9 городов, 7 поселков городского типа, 109 сельских советов, 855 сельских поселений.

Таблица №1

Рост городского населения и уровень урбанизации в Сурхандарьинской области

	Годы												В 2022 году в % к 1926 году
	19 26	19 39	1959	1970	1979	1989	19 98	20 09	2010	2015	2018	2022	
Общая численность населения региона. Тысяча человек	20 3,0	31 5,0	422, 3	662, 0	894, 7	1253 ,8	16 87, 9	20 75, 0	2175 ,1	2411 ,5	2569, 0	2806 ,5	13,8 р
Из этого: горожан в тысяче человек	16, 6	29, 2	65,0	106, 2	172, 3	244, 4	33 9,2	76 7,9	794, 7	861, 1	910,6	1016 ,8	61,2 р
Уровень урбанизации в процентах	8,2	5,4	15,4	16,0	19,3	19,5	20, 9	37, 0	36,5	35,7	35,4	36,2	4,4 р

*Таблица составлено по данным Управления статистики
Сурхандарьинской области на основе информации официального сайта
"Surxanstat.uz"*

На основании решения Кабинета Министров Республики Узбекистан от 13 марта 2009 года № 68 на основании объявления 2009 года Годом «Развития и процветания села» в нашей стране многие сельские поселения получили статус городов.

107 сельских населенных пунктов Сурхандарьинской области присвоен статус городов, а их число достигло 114. Агророгодки,

специализирующиеся на аграрном секторе региона, расположены во всех сельских округах.

Если рассматривать расположение существующих посёлков городского типа по районам, то они распределяются следующим образом:

Алтынсойский (14), Деновский и Ангорский (по 11), Кумкурганский и Музработский (по 10), Термезский, Узунский, Шорчинский районы (9), Шерабадский (7), Бойсунский (5), Расположен в Джаркурганском районах. и Кизырик (4), Сариясия (по 3), Бандихон (по 1).

Из данных табл. 1 выше известно, что в 2022 г. общая численность населения региона увеличилась в 13,8 раза по сравнению с предыдущими анализируемыми годами (1926 г.). При этом население города за исследуемые годы увеличилось в 61,2 раза. После 1959 года население города постепенно увеличивалось.

Население города увеличилось на 179 400 человек за 30 лет с 1959 по 1989 год. Именно в эти периоды были созданы новые поселения с освоением сухих серых земель Сурханско-Шерабадской долины, достройкой и вводом в эксплуатацию многих водохранилищ и гидротехнических сооружений. Также построены и введены в эксплуатацию предприятия легкой и пищевой промышленности по переработке сельскохозяйственной продукции. Примерами таких предприятий являются хлопкоочистительные, молочно-мясные, маслоэкстракционные, хлопко-молочные, хлопкоочистительные предприятия в Деновском районе, мукомольные, хлопкоочистительные предприятия в Шорчинском районе, хлопкоочистительные предприятия почти во всех других райцентрах, которые мы можем показать.

Рисунок 1. Динамика роста населения Сурхандарьинской области

Диаграмма составлена авторами на основе данных официального сайта Surkhostat.uz Управления статистики Сурхандарьинской области.

В 2022 году население областных городов увеличилось на 1 млн 200 человек по сравнению с 1989 годом. В частности, в 2009 году, объявленном годом «Развития и процветания села», население города увеличилось на 523,5 тысяч человек по сравнению с 1989 годом. За эти годы уровень урбанизации увеличился на 17,5%. В 2022 году количество жителей города увеличилось на 248,9 тыс. человек по сравнению с 2009 годом. Уровень урбанизации снизился на 0,8% (рисунок 1).

РАЗВИТИЕ УГОЛЬНОЙ ПРОМЫШЛЕННОСТИ В СУРХАНДАРЬИНСКОЙ ОБЛАСТИ

Аннотация. В данной статье рассмотрено становление и развитие угольной промышленности Сурхандарьинской области, в том числе становление угольной промышленности региона, увеличение объемов добычи угля за счет ретехнологической модернизации отрасли на основе привлечения полезных ископаемых. иностранные инвестиции в угольную отрасль за годы независимости.

Ключевые слова: Горнодобывающая промышленность, накопление топливно-энергетических ресурсов, специализация, условное топливо, модернизация, диверсификация.

DEVELOPMENT OF THE COAL INDUSTRY IN SURKHANDARYA REGION

Annotation. This article examines the formation and development of the coal industry in the Surkhandarya region, including the formation of the region's coal industry, an increase in coal production through re-technological modernization of the industry based on the attraction of minerals. foreign investments in the coal industry over the years of independence.

Key words: Mining industry, accumulation of fuel and energy resources, specialization, standard fuel, modernization, diversification.

Исходя из задач, определенных в принятой в нашей стране Стратегии развития Республики Узбекистан на 2022-2026 годы, актуальным является повышение благосостояния населения за счет повышения экономической компетентности регионов в экономическом развитии. и социальное развитие регионов и регионов с эффективным использованием имеющихся у них местных природных, экономических и социальных ресурсных возможностей, указанных в качестве задачи.

В связи с этим, учитывая, что экономические и социальные потребности в продукции топливно-энергетического комплекса с каждым днем увеличиваются, необходимо увеличить производство видов топлива и объемы производства электроэнергии за счет коренной модернизации и диверсификация этой отрасли.

Согласно 22-й цели главы 3 новой стратегии развития Узбекистана на 2022-2026 годы, озаглавленной «Ускоренное развитие национальной экономики и обеспечение высоких темпов роста», «Продолжение промышленной политики, направленной на обеспечение стабильности национальной экономики и увеличение доли промышленности в валовом внутреннем продукте и производстве промышленной продукции» планируется увеличить ее объем в 1,4 раза.

В последние годы возрастает значение угольной отрасли в топливной отрасли Сурхандарьинской области.

Становление и развитие угольной промышленности региона относится к 30-40-м годам 20 века.

Разведка угольных шахт в районе ведется с 1934 года. Первые угольные шахты в регионе были открыты в 1941 году геологом А. Идентифицирован Репманом. Тогда же в горах Бойсуна был открыт и введен в эксплуатацию угольный разрез Туда.

Шаргунский уголь высококалорийный, но пласты тонкие, средняя толщина составляет 2,5 метра, а местами достигает 12 метров. Поскольку угольные пласты расположены на высоких и крутых склонах, их добыча представляет собой сложный процесс. Мощность угольных пластов и условия разработки шахты Бойсун такие же сложные, как и на Шаргунской шахте.

Строительство Шаргунского угольного разреза началось в 1943 году. От железнодорожной станции Сариосие до Такчияна (ныне город Шаргун) построена 12-километровая железная дорога, введены в эксплуатацию 18-километровая подвесная канатная дорога для перевозки угля и 20-километровая автодорога. В 1958 году было создано горнодобывающее управление «Шаргункомир» и введен в эксплуатацию угольный разрез

мощностью 400 тысяч тонн в год. Объемы добычи угля в угольной промышленности региона увеличились. В 1965 году

На базе Шаргунского угольного разреза построен и введен в эксплуатацию брикетный завод. В 1980 году на Шаргунском угольном разрезе было добыто 220 тысяч тонн угля.

В 90-х годах прошлого столетия в угольной промышленности региона наблюдалось значительное снижение объемов добычи угля, основная причина которого объясняется моральным и физическим износом горнодобывающего оборудования. В годы независимости на базе Шаргунского угольного разреза было создано акционерное общество «Шаргун».

Мы можем наблюдать, что объем добычи угля в регионе за последние годы увеличился. Например, в 2012 году было добыто 19,8 тыс. тонн угля, в 2013 году – 20,1 тыс., в 2014 году – 107,2 тыс. тонн, в 2015 году – 127,0 тыс. тонн. произведено продукции на сумму 26 миллионов 781,0 миллиона сумов. Решение Президента Республики Узбекистан от 17 ноября 2014 года об инвестиционной программе на 2015 год и постановление Кабинета Министров Республики Узбекистан от 6 июня 2013 года о модернизации, техническом и технологическом обновлении угольной отрасли предприятий под управлением АО «Узбеккомир» в период 2013-2018 годов АО «Шаргункомир» в целях оснащения и его сбалансированного развития

реализуется инвестиционный проект модернизации. Общая стоимость проекта составляет 105,5 млн долларов США, реализуется он с сентября 2017 года китайской компанией China Railway Tunnel Group (GROUP). В ходе реализации проекта была очищена закрытая 1500-метровая часть старых 10 шахт шахты и пройден 2227-метровый участок тоннеля до дополнительного угольного пласта. Также шахта будет полностью оснащена современным угледобывающим оборудованием, импортированным из-за границы, а ее годовая мощность добычи угля будет увеличена до 900 тысяч тонн. С запуском нового рудника будет создано более 450-500 новых рабочих мест.

Осуществляется ряд инвестиционных работ по реконструкции Тодинского угольного разреза Байсунского района, который является вторым по важности участком угольной промышленности Сурхандарьинской области. Среди них выполняются проектные работы на сумму 50 миллионов долларов США. цель добычи угля в «Центральном» и «Восточном» районах этого района.

Рост добычи угля в Сурхандарьинской области

№		2018	2019	2020	2021	2022	2023	Рост в 2023 году по сравнению с 2018 годом, в %
1	Добыча угля, тыс. тонн	181,0	241,9	263,7	275,1	282,3	352,2	1,9м
2	Рост добычи угля по сравнению с предыдущими годами в %	146,6	137,6	105,9	104,3	102,6	282,3	1,9м

Источник: информация сайта Surkhostat.uz.

Мы можем наблюдать, что объем добычи угля в регионе за последние годы увеличился. В 2023 году по сравнению с 2018 годом добыча угля выросла в 1,9 раза. Объем добычи угля увеличился на 171,2 тыс. тонн. Мы можем наблюдать, что темпы добычи угля увеличились по сравнению с предыдущими годами (Таблица 1, Рисунок 1).

Рисунок 1. Объем добычи угля в Сурхандарьинской области прирост, тыс.т.

Если кратко, то в развитии угольной отрасли региона, прежде всего, добыча угля и его переработка глубоким технологическим путем, в частности организация производства в сети на кластерной основе, через «Горнодобывающая промышленность → переработка». промышленность → оказание услуг», связанное с угольной отраслью самого региона и

потребительскими секторами», создаст целую интегрированную систему. Это служит повышению экономического потенциала Сурхандарьинской области, очистке окружающей среды и улучшению благосостояния населения.

PROSPECTS FOR FURTHER DEVELOPMENT OF INVESTOR ACTIVITY IN UZBEKISTAN

Abstract. The rights of foreign investors and local investors, the legislation on investment and investment activities, the obligations of investors of enterprises with foreign investments, the purpose and application of the law on investment and investors.

Key words: Foreign investors, domestic investors, investment, state security center, single window principle.

Анализ литературы по теме.

Зарубежные экономисты по-разному интерпретировали свои взгляды на тему инвестиций и развития инвестиционной деятельности. Зарубежные экономисты в целом высказали следующие мнения по теме рассмотрения и развития колебаний глобальной экономической системы, инвестиционного климата, финансовых показателей и других факторов: Джозеф Стиглиц: Лауреат Нобелевской премии американский экономист Джозеф Стиглиц, исследование основных проблем инвестиционного развития и других факторов. настаивает на том, чтобы посвятить себя решению. Его взгляды касаются реформы финансовой системы, безопасности и развития методов производства. Нуриэль Рубини: Иностранный экономист Нуриэль Рубини подчеркивает важность безопасности и уверенности в инвестиционном развитии. Он рекомендует развивать восприимчивое поле финансовой

системы и реформировать глобальную инвестиционную систему. Дэни Родрик: Дэни Родрик подчеркивает роль экономической политики в инвестиционном развитии. По его словам, для привлечения инвестиций важно проводить правильную политику, развивать коммерческую среду и увеличивать сферу инвестирования.

Такие зарубежные экономисты подчеркивают применение финансовой, безопасности и доверия, экономической политики и мирового опыта в развитии инвестиций.

Введение.

В последние годы в целях облегчения и стимулирования осуществления предпринимательской деятельности в Узбекистане в результате пересмотра ряда стимулирующих мер, связанных с отраслью, созданы широкие возможности для субъектов предпринимательства и частных инвесторов в республике. Введение дополнительных требований, усложняющих процедуру возврата доходов (прибыли) иностранного инвестора, переведенных за пределы территории Республики Узбекистан, в свою страну или уменьшающих их размер, а также банкротство и неплатежеспособность предприятия с иностранными инвестициями или защита прав кредиторов, иностранного инвестора - физического в случае совершения лицом преступления или административного правонарушения, либо когда возникает иная необходимость приостановить возврат денежных средств в свою страну в соответствии с решением суда или арбитража, за исключением случаев приостановления возврата средств иностранного инвестора в свою страну компетентным государственным органом в условиях недискриминационного применения правовых документов.

Анализ и результаты.

Иностранные инвесторы – иностранные государства, административные или территориальные органы иностранных государств, международные организации, созданные в соответствии с соглашениями или иными соглашениями между странами или являющиеся субъектами международного публичного права, юридические лица, созданные и действующие в соответствии с законодательством иностранных государств, любые другие компании, организации или объединения, граждане иностранных государств и лица без гражданства, постоянно проживающие за пределами Республики Узбекистан; Местные инвесторы – граждане Республики Узбекистан, осуществляющие инвестиционную деятельность, иностранные граждане, имеющие статус резидентов Республики Узбекистан и предприниматели без гражданства, а также юридические лица Республики Узбекистан, в том числе физические лица; Ограничение использования государственными органами средств на счетах иностранных и местных инвестиционных предприятий или их принудительное изъятие может осуществляться только в соответствии с законодательством.

В целях стимулирования создания цепочки добавленной стоимости на предприятиях и обеспечения занятости населения путем реализации строительства внешних инженерно-коммуникационных систем проектов с привлечением прямых инвестиций иностранных и местных инвесторов в Республике: Инвестор: уплачивает налоги и сборы; выполнение договорных обязательств, которые он принял в связи с инвестицией; соблюдение требований законодательства, в том числе требований законодательства о конкуренции, противодействии коррупции, инвестициях и инвестиционной деятельности, труде, градостроительстве, охране окружающей среды и безопасности, санитарных нормах, а также технических регламентах; Государство гарантирует недискриминацию инвесторов на основании их гражданства, места жительства, места экономической деятельности, а также страны происхождения инвесторов или инвестиций.

Осуществление прав инвестора не должно нарушать охраняемые законом права и интересы других инвесторов. При этом государство как учредитель (акционер, участник) хозяйствующего субъекта имеет те же права и обязанности, что и другие учредители (акционеры, участники). Министерство реализует единую государственную инвестиционную политику, координирует привлечение иностранных, прежде всего прямых инвестиций, сотрудничество с международными финансовыми институтами (управлениями) и иностранными государственными финансовыми организациями, а также внешнеторговое и международное экономическое сотрудничество, внешнее нефинансовое сотрудничество. партизанская помощь республике — уполномоченный государственный орган, ответственный за формирование и координацию единой государственной политики в области привлечения финансовых средств (грантов, технической помощи, адресной непартийной помощи). Компетентный государственный орган в сфере государственного регулирования инвестиций и инвестиционной деятельности организует работу по принципу «одного окна» в целях оказания помощи инвесторам во взаимном сотрудничестве с другими государственными органами.

Уполномоченный государственный орган в сфере государственного регулирования инвестиций и инвестиционной деятельности и его территориальные подразделения обеспечивают предоставление государственных услуг в целях организации работы по принципу «единого окна», в том числе через соответствующие Центры государственных услуг. Организация дел по принципу «единого окна» также включает в себя следующее: прием и консультации по вопросам существующих государственных услуг; помощь в подготовке и оформлении документов, необходимых для получения государственных услуг; помощь в оформлении электронной цифровой подписи, электронного заявления и других документов; помощь в получении услуг в органах государственного управления и местного самоуправления; Не менее пятнадцати процентов

акций (долей, долей) или уставного фонда (уставного капитала) предприятий с участием иностранных инвестиций на территории Республики Узбекистан являются иностранными инвестициями. Государственная поддержка инвестиций и инвестиционной деятельности осуществляется в целях создания благоприятной инвестиционной среды, нового конкурентоспособного и инновационного, экспорта и обновления. Стимулирование инвестиций в организацию направленных и (или) импортозамещающих производств, расширение существующих производств с использованием современных технологий и внедрение современного опыта управления. Государственная поддержка инвестиций и инвестиционной деятельности осуществляется следующими способами:

- предоставление льгот и преференций;
- при совместном финансировании инвестиционного проекта;
- предоставление финансовых консультаций и информационной поддержки.

Остановимся на возможностях, предоставляемых инвесторам. Первое: в 2017 году введение свободной конвертации нашей национальной валюты – сума и снятие всех ограничений на репатриацию прибыли иностранными инвесторами.

Во-вторых, в целях обеспечения политики открытости в нашей стране создание безвизового въезда для граждан 90 зарубежных стран и возможности получения виз в упрощенном порядке для граждан еще 60 стран.

В-третьих, борьба с коррупцией стала наиболее приоритетным направлением государственной политики Узбекистана. Для реализации наших усилий в этом направлении было создано отдельное агентство. В-четвертых, высшим приоритетом было поставлено обеспечение и всесторонняя защита прав и свобод каждого человека, проживающего в нашей стране.

Дебаты.

Также в целях защиты прав и интересов инвесторов в стране принят новый Налоговый кодекс, Закон «Об инвестициях и инвестиционной деятельности» и Закон о медиации. Также для создания благоприятных условий для инвесторов создан Международный Ташкентский арбитражный центр, а также внедрены новые механизмы, такие как «инвестиционный кредит», «инвестиционная субсидия» и «инвестиционная виза». Эксперты также отметили, что изменения в законодательстве и созданные возможности положительно влияют на инвестиционную среду в стране. В 2017 году объем прямых иностранных инвестиций в страну составил 2,2 миллиарда долларов, а к концу 2022 года этот показатель увеличился в 1,5 раза и достиг 3,3 миллиарда долларов. В ноябре 2022 года состоялось первое пленарное заседание Совета иностранных инвесторов, а

в ближайшие 5 лет планировалось увеличить объем инвестиций до \$120 млрд и привлечь не менее \$70 млрд иностранных инвестиций.

Наша страна имеет большие возможности и потенциал для привлечения иностранных инвесторов. Двери открыты для всех иностранных инвесторов, которые хотят инвестировать в нашу страну подземные и наземные ресурсы. Самое отрадное, что в Узбекистане царит мир, а это первая возможность для инвесторов. Недавно в Ташкенте состоялось первое пленарное заседание Совета иностранных инвесторов при Президенте Республики Узбекистан, в котором приняли участие руководители ведущих мировых компаний и финансовых институтов. Выступая на конференции, глава нашего государства заявил, что в результате реализованных реформ по созданию благоприятной инвестиционной среды объем иностранных инвестиций, поступивших в нашу экономику, за последние 5 лет увеличился в 10 раз и составил почти 40 миллиардов долларов. Особо было подчеркнuto, что цель – удвоить объем валового внутреннего продукта в течение следующих 10 лет по сравнению с текущими показателями. Инвесторы «Нового Узбекистана» выразили удовлетворение тем, что для них создаются все возможности чувствовать себя свободно, с большой уверенностью смотреть в будущее и стабильно работать. Самое главное, что при Президенте Узбекистана создан Совет иностранных инвесторов и в нем открыто решаются проблемы инвесторов, что вызывает большое доверие к иностранным инвесторам.

Заключение.

Подводя итог, можно сказать, что экономика не может развиваться без инвестиций. Если мы создадим среду и инфраструктуру для инвесторов, появятся рабочие места, вырастет производство, снизятся налоги. Необходимо обратить внимание на дальнейшее развитие деятельности предприятий. При поощрении инвестиций каждая Договаривающаяся Сторона разрешает и поощряет инвестиции инвесторов другой Договаривающейся Стороны в соответствии с правом, предоставленным законодательством своего государства. Каждая договаривающаяся сторона поддерживает различные формы взаимного инвестирования в рамках законодательства своего государства, а экономическое сотрудничество обеспечивается путем защиты инвестиций инвестора на своей территории государством другой договаривающейся стороны.

ПРЕДЕЛ ПОГРЕШНОСТИ ДОПУСТИМОГО ИЗМЕРИТЕЛЬНОГО ИНСТРУМЕНТА И ПРАВИЛА ВЫБОРА СРЕДСТВ ИЗМЕРЕНИЯ

Аннотация. В статье рассмотрен анализ предела погрешности, где, проведя расчет на точность измерения – уровня качества, показывающий насколько близок результаты измерения к действительному значению измеряемой величины.

Ключевые слова: предел измерения, погрешность, нормативы, качество, результат, надежность, сравнение, параметр, размеры, количество, точность.

ERROR LIMIT OF PERMISSIBLE MEASURING INSTRUMENT AND RULES FOR SELECTION OF MEASUREMENT INSTRUMENTS

Abstract. The article considers the analysis of the margin of error, where, after calculating the accuracy of the measurement, the quality level, showing how close the measurement results are to the actual value of the measured value.

Keywords: measurement limit, error, standards, quality, result, reliability, comparison, parameter, dimensions, quantity, accuracy.

При анализе результатов измерений действительные количества физических величин сравниваются с результатами измерений [1,2]. Разница между результатом измерения (X) и фактическим количеством измеряемой величины (Q) называется Δ погрешностью измерения:

$$\Delta = X - Q \quad (1)$$

Точность измерения – уровень качества, показывающий, насколько близки результаты измерения к действительному значению измеряемой величины. Погрешности измерений классифицируются по их причинам и видам. Погрешности размеров подразделяются на следующее содержание в зависимости от причин их образования. Ошибка метода является результатом несовершенства метода измерения. Ошибка стиля также является структурной, и некоторые ее составляющие включают в себя совокупность ошибок, таких как: ошибка отображения прибора, ошибка, связанная с изменением температурного режима [3,4]. Ошибка подсчета

возникает в результате недостаточно точного подсчета результатов измерений и зависит от личных особенностей человека, производящего подсчет. Погрешность прибора – это погрешность используемого средства измерения. Погрешности средств измерений делятся на основные и дополнительные. В качестве основной погрешности принимают погрешности, характерные для средств измерений, применяемых в нормальных (нормативных) условиях. Дополнительная погрешность состоит из погрешности измерительных переключателей и погрешности, вызванной отклонениями от стандартных условий. Погрешности средств измерений нормируются путем установления предела допускаемой погрешности. Предельно допустимой погрешностью средства измерений является наибольшая погрешность, при которой средство измерения может считаться действительным и допущенным к использованию. При выборе средств измерений соблюдают следующие правила: Параметр точности средства измерений должен быть достаточно выше точности изготовления измеряемого объекта. Затраты на рабочую силу и стоимость измерений должны быть как можно ниже, чтобы обеспечить высокую производительность и экономичность. Недостаточная точность измерений приводит к тому, что часть годной продукции оказывается бракованной, при этом брак признается годной продукцией. Излишняя точность измерений обычно приводит к чрезмерному увеличению затрат на трудозатраты и контроль качества продукции [5]. При выборе средств измерений учитываются организационно-технические условия осуществления процесса контроля или измерений, особенности контролируемых деталей в системе, точность подготовки, а также ряд других факторов, влияющих на эффективность применения средств измерений. учитываются факторы приборов и метрологических показателей.

Основные факторы, на которые следует обратить внимание при выборе средств измерений: тип производства; конструктивные особенности и размеры контролируемых деталей; погрешность измерений, допускаемая стандартами.

Допустимая погрешность измерения $\Delta_{мет}$ служит важнейшим фактором при выборе средств измерений. Величина встреченного Δ зависит от скорости подготовки T детали, а в свою очередь связана с номинальным размером и качеством. Фиксированная погрешность измерения $\Delta_{мет}$ должна быть меньше контролируемой величины T изделия.) погрешность (Δ_{lim}) и допустимая погрешность измерения ($\Delta_{мет}$) на основе взаимного сравнения. Часто допускаемую погрешность измерения ($\Delta_{мет}$), по отношению к припуску на подготовку (T) детали находят по следующей формуле:

$$\Delta_{мет} = (0,2 - 0,35)T \quad (2)$$

Таким образом, при выборе средства измерения (прибора) его предельная погрешность ($\pm\Delta_{lim}$) сравнивается с допустимой погрешностью измерения (Δ_{met}). В этом случае проверяется следующее соотношение:

$$\Delta_{lim} \leq \Delta_{met} \quad (3)$$

Из-за ошибок измерения отдельно измеренный размер обычно не считается фактическим размером этого размера. Необходимо провести несколько измерений, чтобы оценить точность измерения и определить количество измеряемой величины с определенной вероятностью. В этом случае измеряемая величина x является действительной [4]. Вместо его количества принимается его среднее арифметическое количество \bar{x} :

$$\bar{x} = \frac{1}{N} \sum_{i=1}^N x_i \quad (4)$$

где N – количество измерений;

x_i – результат отдельного измерения.

Таким образом, $x \approx \bar{x}$ мы имеем приближенное уравнение, чтобы оценить его точность, ε_{β} нам необходимо знать его вероятную погрешность, то есть $x - y_{\varepsilon_{\beta}} < x < x + y_{\varepsilon_{\beta}}$, используя распределение Стьюдента, можно оценить надежность через величину данной вероятной ошибки ε_{β} , или наоборот, β вероятность через заданную достоверность результата ошибки ε_{β} можно найти:

$$y_{\varepsilon_{\beta}} = \text{tg}\beta S / \sqrt{N} \quad (5)$$

здесь: $\text{tg}\beta$ - коэффициент Стьюдента β зависит от вероятности надежности и степени свободы;

S - значение среднего арифметического отклонения измеряемой величины x [5]:

$$S = \sqrt{\sum_{i=1}^N (x_i - \bar{x})^2 / (N-1)} \quad (6)$$

Степень свободы (K) — это количество наблюдений (N), уменьшенное на количество, равное количеству определяемых деталей (1) ($K=N-1$). При заданной степени свободы K β коэффициент Стьюдента находится по достоверности:

$$\text{tg}\beta = y_{\varepsilon_{\beta}} / \sigma_x = y_{\varepsilon_{\beta}} \sqrt{N} / \sigma, \quad (7)$$

где σ_x - \sqrt{N} среднее σ x_i — средний квадрат ошибки для набора величин. Если ($\sigma_x = \sigma / \sqrt{N}$). значения известны, $y_{\varepsilon_{\beta}} = \text{tg}\beta \cdot \sigma_x$, можно $\text{tg}\beta$ и σ_x также определить доверительный интервал для величины x . Тогда результат измерения можно записать в следующем виде [6]:

$$x = \bar{x} \pm y_{\varepsilon_{\beta}}. \quad (8)$$

Проведя расчет составляющих дополнительной погрешности, обусловленной изменениями воздушного зазора. Анализ показывает,

что составляющие погрешности и чувствительность элементарного преобразователя зависят от значения начального воздушного зазора $W_{\mu\delta 0}$ [7]

Мультипликативная относительная погрешность в этом случае определяется по формуле:

$$\gamma_{\text{мз}} = \frac{t}{2\tau_u} = 7,3 \cdot 10^{-5} \quad (9)$$

Для уменьшения погрешности преобразования необходимо обеспечение максимума параметра $R_{\mu k}$ [8,9].

ASSESSMENT OF MEASUREMENT UNCERTAINTY WHEN MAKING DECISIONS ABOUT THE COMPLIANCE OF PHYSICAL AND CHEMICAL VALUES

Abstract. The article discusses the issues of assessing the uncertainty of measurements when deciding on the compliance of physico-chemical quantities, which determines the compliance of the product, process and technological process with the relevant standards and requirements.

Keywords: objective criterion, probability of error, product testing, tolerance limit, supplier, consumer, quality.

В настоящее время в Республике Казахстан реализуются следующие проекты: нормативные документы, правые акты и согласованные улучшения, с целью сохранения доверия к спросу, безопасности и качеству. Сегодня это эффективное влияние на мирную экономику, мессенджерские мероприятия и

обнаружение объектов, влияющих на анализ, деловые решения и поступления, на репутацию и финансовые операции.

При аутентичной координации не только количественные результаты, но и разнообразные сценарии, такие как мощные искатели или приблизительные крайние конкретные слуги (варианты: У дона рисунок 1).

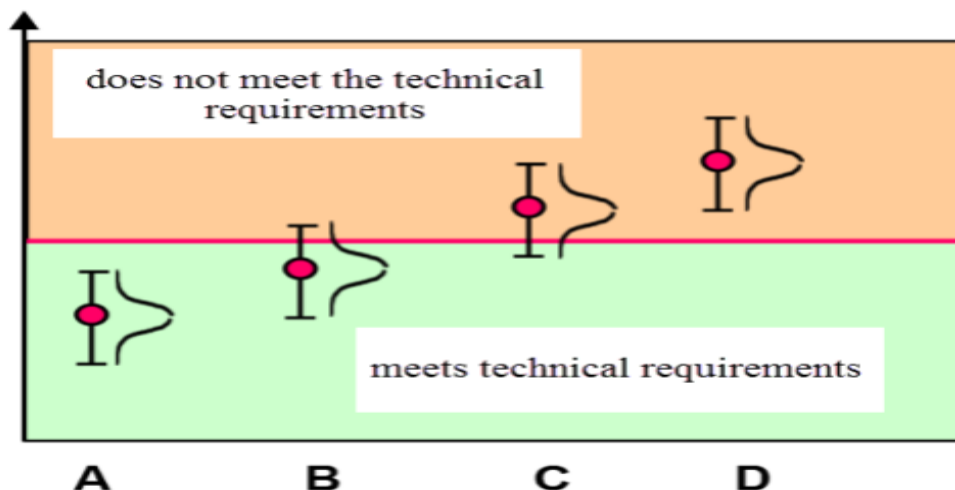

Рисунок 1. Результаты Испания и их непредставленность в отношении превосходства (Примечание: не соответствует техническим требованиям, соответствует техническим требованиям)

В этом случае варианты А и D приводят к общему разрешению, а не к возникновению и влиянию непредставительства. Однородный вариант V и S, с переносимым интервалом неопределенности. Такой анализ должен иметь объективный критерий (закономерность) принятия результатов, который имеет повышенную частоту интервала неопределенности, за которым следуют элементы допуска. Наиболее решающий в определении первичного закона вопрос о принятиях, следует доказать при уценке соответствия: соответствий или несвоевременное уточнение (техно-растительность) или ограничение. Риск поставщика (α) или риск- (β). Стандартная неопределенность измерения $u(y)$ и для определенного уровня Доверия расширенная неопределенность измерения. Единственный предел допуска (верхний или нижний) или пределы допуска, установленные в графике. Установите зону соответствия, зону несоответствия и полосу безопасности для предполагаемой вероятности ошибки типа I (риск поставщика α) или ошибки типа II (риск потребителя β).

Правило принятия решения. На рисунке 2 показаны основные международные стандарты правил принятия решений.

Рисунок 2. Международные стандарты правил принятия решений на основе риска.

При оценке соответствия (соответствует/несоответствие) решение принимается на основании наблюдаемых данных (измеренных величин). Полученные данные испытаний продукции фиксируются в журналах работы работника аккредитованной испытательной лаборатории с указанием идентификационных данных (дата, метод испытаний, фамилия, имя, отчество работника аккредитованной испытательной лаборатории и т.п.).

Аккредитованная испытательная лаборатория применяет следующие правила принятия решений при оценке соответствия с учетом конкретных 3 случаев. Главное правило Объект соответствует заданному требованию, если истинное значение его свойства Y находится в пределах поля допуска. Знание Y представлено функцией плотности вероятности (PDF) $f(x_i)$ таким образом, что утверждение о соответствии всегда является выводом, имеющим некоторую вероятность того, что оно истинно. Случай № 1 для одного нижнего предела поля допуска (например, не менее 50 мг/л). Вероятность соответствия определяется по следующим формулам (1). Если вероятность соответствия $p_c > 95\%$ принимается решение о соответствии. Если $p_c < 95\%$, принимается решение о несоответствии. Формула расчета p_c выглядит следующим образом:

$$p_c = \Phi\left(\frac{y - T_L}{u}\right). \quad (1)$$

Случай № 2 для одного верхнего предела поля допуска (например, не более 50 мг/л). Вероятность соответствия определяется по следующим формулам: При вероятности соответствия $p_c > 95\%$ принимается решение о соответствии. При $p_c < 95\%$ принимается решение о неисполнении. Формула расчета p_c выглядит следующим образом:

$$p_c = \Phi\left(\frac{T_U - y}{u}\right). \quad (2)$$

Случай № 3 для двустороннего поля допуска (например, от 50 мг/л до 80 мг/л). Вероятность соответствия определяется по следующим формулам: При вероятности соответствия $p_c > 95\%$ принимается решение о соответствии. При

$p_c < 95\%$ принимается решение о неисполнении. Формула расчета p_c выглядит

следующим образом:

$$p_c = \Phi\left(\frac{T_U - y}{u}\right) - \Phi\left(\frac{T_L - y}{u}\right). \quad (3)$$

При измерении неуказанных физических величин решение о соответствии образца продукции принимается заказчиком.

На рис. 3 представлены результаты экспериментальной работы с обработкой данных и расширенной неопределенностью измерений.

Выберите правильный размер подгруппы. В случае сомнений выберите размер подгруппы. Частичны подгруппы не отображаются (рисунок4).

Рисунок 4. Оценка результатов измерения с использованием карты управления.

Закключение Оценка соответствия – это любая деятельность, предпринимаемая для того, чтобы прямо или косвенно определить, соответствует ли продукт, процесс, систему, лицо или тело соответствующие стандарты и соответствует определенным требованиям.

Поскольку результат измерения представлен в форме набора значений (измеренное значение значения и расширенная неопределенность формирует интервал покрытия), а требования устанавливаются в форме допусков или максимальных допустимых значений, существуют риски принятия неправильных решений по соблюдению. В области экоинженерии учет неопределенности измерений сводит к минимуму риск принятия решений.

**DEVELOPMENT OF COGNITIVE INTEREST IN PHRASEOLOGISTS
IN RUSSIAN LANGUAGE CLASSES IN NATIONAL GROUPS OF THE
INSTITUTE OF ARTS AND CULTURE OF UZBEKISTAN**

Abstract. This article discusses proposals and recommendations for teaching the Russian language and its phraseology to students at the Institute of Arts and Culture.

Key words: Russian phraseological units, nationally oriented teaching, Russian as a foreign language, development of communication skills.

Настоящее время в практике обучения русскому языку иностранцев существует довольно сложная в методическом аспекте проблема освоения русской фразеологии, несмотря на то, что в учебной литературе теме преподавания русской фразеологии в иностранной аудитории уделяется достаточно много внимания. Интерес к фразеологизмам русского языка объясняется тем, что в данных языковых единицах представлено огромное количество внеязыковых сведений, что и составляет их специфику. Актуальность данной темы обосновывается тем, что освоение русских фразеологизмов иностранными учащимися является не только важным познавательным и общеобразовательным этапом в изучении русского языка, но и становится одной из ступеней развития коммуникативно

деятельностного подхода в изучении лексики. Знание и понимание смысла устойчивых оборотов дает возможность верно воспринять прочитанный отрывок текста или услышанную фразу. Умение правильно и в нужном контексте использовать паремии приводит к росту общей языковой культуры, позволяет образно, свободно и красочно излагать мысли, улучшает технику перевода, углубляет страноведческие познания обучаемых [1, с. 70].

Процесс образования фразеологизмов формируется из взаимных лексических сочетаний слов, построение словосочетаний является носителем определенного смыслового компонента, не зависящего от текущих лексических значений составляющих его членов. Мы должны различать конструктивное значение подобных сложных слов и лексическое значение его составляющих. Также часто утверждается, что значения этих словосочетаний зависят от какого-то неязыкового фактора — употребления местными носителями в обычных ситуациях [2]. Слова образуются путем сложения их вместе, чтобы сформировать лексические единицы, фразы или словосочетания. Нужно помнить, что это связано с лексикологическими словами, словообразовательными морфемами и словосочетаниями. Словосочетания отличаются структурными и семантическими связями. Некоторые словосочетания, например, по крайней мере, точка зрения, посредством, иметь место и т. д. кажутся функционально и семантически неразделимыми. Обычно они описываются как клише, словесные эквиваленты или фразеологические сочетания и изучаются в разделе фразеологии лексикологии. Части других словосочетаний типа брать уроки, добры к людям, неделю назад обладают более широкой семантикой и структурной самостоятельностью. Этот тип фразы называется самостоятельной фразой и изучается в синтаксисе. Вскоре началось изучение английской фразеологии. Английские и американские лингвисты обычно заняты сбором различных слов, фраз и предложений, которые интересуют их с точки зрения происхождения, стиля, использования и других характеристик. Все эти единицы принято называть «идиомами», но нецелесообразно описывать эти фразеологизмы как отдельный класс языковых единиц или особый класс словосочетаний. Различия в терминах (устойчивых словосочетаниях, идиомах и словосочетаниях) отражают ключевые особенности в различении свободных словосочетаний и фразеологизмов.

Во фразеологизмах национальная самобытность языка получает наиболее яркое и непосредственное проявление, так как они соотнесены прямо с внеязыковой действительностью. Выявление собственно-национальных свойств семантики фразеологической единицы одного языка может осуществиться только в сопоставлении данной фразеологической единицей родного языка учащихся, и выделение общих черт двух языков способствует быстрому пониманию семантики национально-культурного

компонента. Цели сопоставительных представлений национальных идиоматик и фразеологизмов вполне очевидны: «знание пословиц и поговорок того или иного народа способствует не только лучшему знанию языка, но и лучшему пониманию образа мыслей и характера народа. Как говорят англичане, *As the people, as the proverb* (Каков народ, таковы и пословицы)» [3].

Основную трудность для учащихся представляют ограниченно изменяемые фразеологизмы: устойчивые сравнения, фразеологические сочетания и некоторые структурные типы непредикативных афоризмов (поговорки, крылатые слова). Они требуют от учащихся знания закономерностей своей изменяемости. Во фразеологизмах наблюдается вариативность лексем, словоформ, структурных схем, факультативность компонентов. В связи с включением фразеологизмов в речь возникают трудности, обусловленные: общими и особыми средствами межфразовой связи, ограничением и отсутствием сочетаемости по общим правилам, индивидуальными правилами сочетаемости, постановкой знаков препинания по особым правилам, невозможностью включения членов предложения между компонентами фразеологизма. Многие из указанных трудностей усиливаются под влиянием внутриязыковой и межъязыковой интерференции [4].

Овладение иностранным языком для исполнения им главной – коммуникативной – функции предполагает и формирование (приобретение) культурной компетенции. При обучении русскому языку китайских учащихся возникает много сложностей именно из-за того, что культуры России и Китая далеки друг от друга. Это необходимо учитывать и строить процесс обучения студентов из Китая русскому языку так, чтобы происходило поэтапное формирование личности студента, развитие его творческих возможностей, пробуждение интереса к культуре, традициям и мироощущению русского народа. Каждый язык располагает своим арсеналом языковых средств и приемов, обслуживающих речевую деятельность на данном языке. «Сопоставляя русский язык с крайне далекими от него по строю языками Востока, – писал А. А. Леонтьев, – мы постоянно сталкиваемся с фактами, указывающими не просто на различия в характере оформления высказывания, но и на известное расхождение в способе семантической и семантико-грамматической категоризации действительности» [5]. В этом высказывании ясно выражены сущность и задачи межъязыкового сопоставления в связи с задачами обучения русскому языку как иностранному, а именно сравнительно сопоставительного анализа русской фразеологии и фразеологии родного языка учащихся. Сопоставление фразеологизмов приобретает особый практический смысл в страноведческом аспекте, который способствует расширению фоновых знаний учащихся и формированию у них лингвострановедческой компетенции, а также позволяет предупредить специфические ошибки,

вызванные интерференцией, и устранить интерферирующее влияние родного языка и культуры учащихся.

Исследование фразеологизмов дает возможность показать своеобразие русского языка, повысить эрудированность обучаемых через усвоение ими исторических, культурных и бытовых реалий русских. Паремии являются вместилищем этнографической и страноведческой информации, тем самым помогая студентам иностранцам в изучении русского языка. Подобное обучение содействует развитию положительной мотивации при усвоении лексики русского языка и приобретению не только лингвистических, но и лингвокультурологических и страноведческих знаний. Знакомство с богатым внутренним миром русских фразеологизмов стимулирует речемыслительную деятельность студентов, повышает качество преподавания русского языка иностранцам, предоставляет возможность планировать учебный процесс на новый лад, неординарно и результативно

ОСОБЕННОСТИ СПЕЦИАЛИЗИРОВАННОЙ ПОДГОТОВКИ СТУДЕНТОВ НА ОСНОВЕ ДИДАКТИЧЕСКОЙ МОДЕЛИ В ПРОЕКЦИИ ЦИФРОВОГО ОБРАЗОВАНИЯ

Резюме. В данной статье рассматривается важность задачи профессионального образования являющейся выработкой умений сознательной и эффективной работы студентов с информацией и грамотного применения современных технологий в любом виде образовательной деятельности. Стремительное насыщение информацией, свойственное современному обществу, требует переосмысления и изменения процессов обучения с использованием всех возможных средств, обозначающих существующую на сегодняшний день степень развития информационных и цифровых технологий.

Ключевые слова: педагогика, модель, информация, цифровое образование

FEATURES OF SPECIALIZED STUDENT TRAINING BASED ON THE DIDACTIC MODEL IN THE PROJECTION OF DIGITAL EDUCATION

Summary. This article discusses the importance of the task of vocational education, which is the development of the skills of conscious and effective work of students with information and the competent use of modern technologies in any kind of educational activity. The rapid saturation of information, characteristic of modern society, requires rethinking and changing the learning processes using all possible means that indicate the degree of development of information and digital technologies that exists today.

Key words: pedagogy, model, information, digital education.

Обучение каждого специалиста, в том числе и учителя музыки, необходимо держать в поле зрения различные виды компетенции. С этой точки зрения посмотрим на компетенции, нужные учителю при выполнении своих педагогических обязанностей в сфере применения информационных и коммуникационных технологий в образовательном процессе. Проанализируем требования, предъявляемые государственным образовательным стандартом республики Узбекистан высшего

профессионального образования к образовательным нормам будущего специалиста степени бакалавр по направлению музыкальное образование.

На сегодняшний день существует определенная система моделей, которая активно используется исследователями для того, чтобы детализировать изучаемые свойства, отличительные стороны, специфику педагогических явлений. Самыми распространенными типами моделей являются: организационные модели – система для управления объектом, процессные модели – система взаимосвязи непрерывных действий, функциональные модели – система исследуемая взаимосвязь работы внешних и внутренних объектов, образовательные модели – система оценки обучающего процесса, математические модели – система представления информации о другой системе.

Процессная модель, которая отличается от других моделей обозначением очередности перехода изучаемого объекта из начального состояния в иное, часто используется для исследования проблем, связанных со становлением свойств личности [1].

Используя методологический и педагогический анализ сущности моделирования, а также руководствуясь требованиями государственного образовательного стандарта, мы рассмотрим структуру модели подготовки будущего учителя музыки в среде цифрового образования.

Первый блок процессной модели - целевой. Следует правильно поставить цель при данном исследовании, т.к. именно она выступает доминантой направленности процесса становления специализированной компетентности студентов, и имеет важное значение при определении процесса структурирования модели, эффективность её практического применения и решении вопросов модели.

Второй блок – методологический. В блок модели необходимо включение описания научно-исследовательских подходов и принципов, методов изучения, способствующих совершенствованию профессиональных качеств студентов в условиях цифрового образования.

Слову "подход" в педагогике принято давать такое определение, как главная теоретическая и методологическая стратегия исследования [1]. Ведущие специалисты считают, что профессиональная подготовленность учителя музыки в полной мере может проявляться только в его повседневной деятельности. В связи с этим, было решено использовать такой подход в качестве основного.

В качестве дополнительного подхода принято использование ценностного подхода, как необходимого средства описания понятия профессиональной компетенции преподавателей музыки в их будущей деятельности, с учетом важности обозначения их отличительных сторон и информационной базы современного технологического окружения.

Рассматривая профессиональное образование с позиции деятельности, можно отметить, что она функционально является

структурной составляющей совершенствования профессиональных свойств личности, в проекции будущего специалиста. Главные проблемы образовательного процесса, которые необходимы для профессионального становления студента, как правило, не могут решаться вне зависимости от его деятельности. Студент, получая навыки, знания и умения предстоящей профессиональной деятельности, переживает разные испытания. Содержание и направленность видов деятельности определяется особенностями выбранной профессии. Узкопрофильная специализированная деятельность студента музыкального направления базируется на взаимоотношениях его творчества с информационной средой, в которой оно находится, и не может быть претворена без определения своей ценностной личности в этом измерении.

Данные ценности, составляющие окружение студента, имеют важное значения в создании цели деятельности и мотива ее определяющего, поскольку всегда имеется риск затруднения в реализации полученных знаний в случае отсутствия таких ценностей [2].

То как студент относится к своим поступкам, определяющим его образ жизни, выявляет его подход к своей будущей профессии в условиях информационной трансформации, ставящей во главу угла, именно, знания в цифровой области. Это обусловлено тем, что в данной проекции происходит поочередный процесс преобразования информации в знания, а затем уже они становятся инструментом практического применения в своей работе.

За последнее десятилетие стремительно развивается аксиологический, то есть ценностный подход, который приобретает положение междисциплинарного подхода. Данный подход используется при изучении явлений и фактов социально-нравственного характера. Актуальность ценностного подхода обуславливается преобразованиями социокультурного пространства и социальной нестабильности общества, когда особое значение приобретает нахождение новых ценностей, отражающих ситуации в обществе объективно. Современная жизнь требует раскрытия, выявления, упорядочения, систематизации таких ценностей, которые может присвоить информационное общество в нынешнее время [3]. Итак, ценностный подход на сегодняшний день считается механизмом решения различных вопросов педагогики и психологии, культурологи и социологии и т.д.

Аксиологический подход, связывающий теорию музыкальные знания с цифровой компьютерной практикой, является одной из составляющих деятельностного подхода. Это тем более важно на фоне невозможности оценить информационные знания без учета его деятельности, где они и получают свое конкретное выражение.

Информативность, ценностность, творческая активность выступают ведущими принципами, которые обеспечивают результативность процесса

совершенствования профессиональной компетенции будущих преподавателей музыки, учитывая условия цифрового образования.

Методы исследования представляются в методологическом блоке разработанной модели. В исследовании использованы такие методы, как: информационный просмотр, анализ и сортировка научной литературы по теме исследования, обработка нормативно – правовых документов, применение моделирования, наблюдение за деятельностью педагогов и студентов, тестирование и анкетирование, опрос, изучение результатов обучения студентов музыкального направления, констатирующий эксперимент, математическая статистическая обработка данных полученных в процессе экспериментов.

Процессный блок предложенной модели содержит в себе организационно – педагогические условия, этапы, технологическую основу, придающие динамичность и результативность изучаемому процессу. Соответственно сам процесс совершенствования профессиональной подготовки студентов становится эффективным, в случае внедрения в него определенных организационно – педагогических условий.

Говоря об условии как философском понятии, мы принимаем его как «то, от чего зависит нечто другое». Трансформируя это выражение в более понятное и конкретное, условия можно обозначить как внешнюю канву события, определяющую возможность его появления, а с позиции временной характеризующую особенности внутренней сути предмета. Исходя из этого можно прийти к выводу о побудительной стороне условия, обуславливающей причины отдельных явлений, ситуаций и поступков. В этом случае, педагогическим условием считается компоновка педагогических обстоятельств, ставящих единой целью эффективное выполнение студентами задач и выделенное как результат их экспериментальных работ [4].

Выделим организационно-педагогические условия формирования профессиональной компетенции учителей музыки с учетом тенденций развития образования в современном мире.

Выделение данного педагогического условия напрямую основано на специфике современного молодого поколения, сформировавшегося в условиях широкого и регулярного применения компьютерных технологий и обозначенного как «цифровые аборигены» [3].

Свойствами среды, совмещающей в себе информационную и образовательную составляющую являются особенности распределения, создающиеся посредством свободно доступного мирового контента, процесс передачи знаний в котором не ограничивается однонаправленностью вектора движения преподавателя в сторону студента, но дополняется другими векторами: «студент — студент», «студент — преподаватель». Цифровые технологии значительно ускоряют информационный обмен и делают более доступным взаимодействие

участников в процессе их обучения. Результатом становится гибкость и доступность образования.

Использовании в образовательном процессе практических заданий, созданных на основе компьютерных технологий и ориентированных на переключение от репродуктивного типа образовательной деятельности к творческому подходу, является следующим вторым условием в педагогическом развитии профессиональной компетенции студентов в реалиях цифрового образования.

Полное понимание студентами всей значимости современных технологий в информационном поле появится при практическом применении специальных, ориентированных на будущую профессию, учитывающих ценностную составляющую, заданий в различных векторах, способствующих появлению мотивации при изучении предметов, связанных с музыкой, деятельности, включая навыки вариативного мышления и поиска неординарных методов решения профессиональных целей и задач. В массив предполагаемых задач включаются разные типы работы с информацией, в частности поиск необходимых сведений, их последующий анализ и дальнейшая обработка.

Установочный, адаптационный и проектировочные этапы развития подготовки компетенции студентов отражены в процессном блоке предлагаемой модели.

Установочный этап ориентирован на подготовку студента к работе с современными цифровыми технологиями в целях сбалансированной деятельности во время учебы. Адаптационный этап определен подключением к ранее не известным видам деятельности, работы со свежими программными информационными средствами, по итогам которых студент создает свой собственный потенциал, дающий возможность встречного движения по направлению к предлагаемым событиям и требованиям. Этап, представляющий проектную составляющую процесса подразумевает активную деятельность, направленную на преобразование своего опыта с целью саморазвития и проектирования дальнейшей деятельности в изменяющейся информационной среде.

Для описания профессиональной компетенции будущих учителей-музыкантов применяется блок, состоящий из следующих компонентов: критерии, показатели и уровни компетенции. Уровни формирования компетенции определяются такими характеристиками, как адаптивность, продуктивность, открытость и креативность.

Для определения уровня сформированности профессиональной компетенции будущих учителей музыки, необходимо выделить критерии получения объективной оценки.

В качестве критериев выступают компоненты профессиональной компетентности: познавательный, действенный и мотивационный.

Контрольный блок ставит своей целью создание критериев контроля и применение их в функции оценки для качества обучения.

Этот блок создается в границах общей методической системы обучения педагогических вузов, которая объединяет структурную систему контроля качества подготовки учителей музыки, подразумевающую на контроль:

- результата преподавания;
- качества обучения;
- научной и педагогической деятельности и его результаты.

Результаты обучения, проверка и оценка эффективности и качества организации учебного процесса используются на нескольких уровнях, представляющих преподавателя, кафедру, деканат и ректорат.

Результативный блок предлагаемой модели предусматривает функцию обратной связи и дает возможность анализа и корректировки процесса формирования профессиональной компетенции студентов.

Таким образом, в спроектированной процессной модели представлена последовательность и взаимозависимость всех рассмотренных блоков.

БЕХИ МЕВАСИННИНГ ФОЙДАЛИ ХУСУСИЯТЛАРИ ВА КАСАЛЛИКЛАРИ

Abstract. In the gardens of our country, due to the disease moniliosis, the quality and quantity of fruits drops sharply. One of the main factors is the correct diagnosis of moniliosis disease, the ability to distinguish it from other diseases, the correct organization of the fight against it and the correct use of fungicides against the disease.

Key words: gardens, disease, fruits, basic, diagnosis, moniliosis, other, control, correct, fungicides, against.

THE USEFUL PROPERTIES AND DISEASES OF PINE FRUIT

Аннотация. Мамлакатимиз боғларида монилиоз касаллиги туфайли меваларнинг сифати ва миқдори кескин пасайиб бормоқда. Монилиоз касаллигини тўғри таъхислаш, уни бошиқа касалликлардан ажрата олиш, унга қарши курашни тўғри таъкил этиш ва касалликка қарши фунгицидлардан тўғри фойдаланиш асосий омиллардан биридир.

Калит сўзлар: боғлар, касалликлар, мевалар, асосий, диагностика, монилиоз, назорат, тўғри, фунгицидлар, қарши.

БЕХИ —раънодошлар оиласига мансуб мевали дарахт. Ўзбекистондаги бехизорларнинг 80% Фарғона водийсида. Барги оддий, яшил, чети бутун. Гуллари якка холда, ок ёки оч пушти, апрель ойида гуллайди. Кўчати ўтказилгач, 3—4 йилда ҳосилга киради, 30—40 йил яшайди. Катта ёшдаги дарахтлари ўртача 60—70 кг ҳосил беради. Меваси сентябрь—октябрь ойларида териб олинади; вазни, навига караб 150—500 г. Беҳи мевалари лимон рангда ёки тук сарик, тук билан копланган; етилганда туки тўкилиб кетади, хушбўй. Янги узилган меваси кам истеъмол қилинади.

Беҳи энтомофил (ҳашаротлар билан чангланадиган) ўсимлик. Беҳи таркибида 74,7—83,5% сув, 8,5— 15,2% қанд, 0,2—1,5% кислота бор, шунингдек ошловчи моддалар ва тош хужайралар бўлади. Меваси дағал бўлиб, узоқ сақлангандан кейин тош хужайралар юмшаб қолади.

Беҳидан мураббо, компот, мармелад, цукат, киём, жем тайёрланади, овқатга (кўпинча паловга босиб) ишлатилади.

1-расм. Беҳининг монилиоз касалликлари

Мамлакатимиз боғларида монилиоз касаллиги туфайли қосилнинг сифати ва миқдори кескин даражада тушиб кетиш ҳолатлари кузатилмоқда. Монилиоз касаллигига тўғри ташхис қўйиш, уни бошқа касалликлардан фарқлай олиш, унга қарши кураш ишларини тўғри ташкил этиш, касалликка қарши фунги- цидларни меъёрида ва ўз муддатида қўллашнинг асосий омилларидан бири ҳисобланади. Маълумки, монилиоз касаллиги уруғли мева дарахтларининг гуллари, барглари, мевалари ва новдаларида кузатилади. Олма ва нок, беҳи дарахтларидан иборат интенсив боғларда монилиоз кўйиш ва монилиоз чириш кўриниши кузатилади. Олма ва нокда монилиоз кўйиш касаллигини *Monilia cinerea* Bonard.f. *mali* замбуруғлар келтириб чиқаради. Касалликнинг бу кўринишида энг аввал гулларининг уруғчиси, кейин чангчиси, гултожибарглари, сўнгра барглари ва ҳосил бўлган ёш мевалари қуриб куйганга ўхшаш кўринишга эга бўлиб, новдада осилиб қолади. Зарарланган аъзоларида жигарранг доғлар ҳосил бўлади, кейинчалик мева тугунчалари юмшаб, замбуруғ спораларидан иборат 1-2 мм диаметрли ёстиқчалар билан қопланади. Касалликнинг бу кўриниши тез кечганлиги сабабли гуллар совуқ урганга ўхшаб қолади. Зарарланган новдаларда ярачалар ҳосил бўлиб, учки қисмидан қурий бошлайди. Касалликнинг тез кечишига илиқ ва нам ҳавода замбуруғ кўплаб конидийлар ҳосил қилгани ҳамда намлик сабаб бўлади, ҳавога тарқалган конидийларни гулларга ёпишиб, уни зарарлаши учун қулай имконият яратади. Касалликнинг бирламчи инфекция манбаи зарарланган новдалар, барг ва гулларнинг қолдиқлари бўлса, иккиламчи инфекция манбаи эса ўсув даврида зарарланган ўсимлик аъзолари ҳисобланади. Бу замбуруғ микроскоп остида кузатилганда унинг конидийлар шакли лимонсимон кўринишда бўлиб, конидийларининг учки қисмида сўрғичсимон

Ўсимталари бор ва бу конидийлар бир-бирига занжирсимон тарзда бирикканлиги кўрилади. Замбуруғ конидийларнинг ўлчамлари ўлчанганда 5-9x14-19 ни, сўрғичи билан биргаликда 16-17x7-8 ўлчамга эга эканлиги кузатилди. Беҳида монилиоз куйиш касаллигини *M.cydoniae* Schell, замбуруғлари кўзғатади. Касаллик туфайли фақат гуллари эмас, балки новдалар учигаги барглари, мева ва новдалар зарарланади. Натижада новдаларда ярачалар ҳосил бўлади. Зарарланган барг ва мевалар ривожланмайди, куйганга ўхшаш кўнғир тусга кириб, дарахтда ўсув даврининг охиригача сақланиб қолади. Новдалар эса учки қисмидан қуриб қолади. Беҳининг зарарланган баргларида сарғиш-жигарранг, кейинчалик тўқжигар рангга кирувчи доғлар юзага келади ва бу доғлар кейинчалик барг пластинкасини тўлиқ қоплаб олади. Зарарланган аъзолари ва баргларида кулранг ғуборлар ҳосил бўлади. Баргларидаги бундай ғуборлар кўпроқ асосий томир бўйлаб юзага келади. Олма, нок ва беҳида монилиоз чириш касаллигини кўзғатувчиси *Monilia fructigena* Pers. замбуруғи бўлиб, уруғли меваларда монилиоз чириш касаллигининг биринчи белгилари мевалар ўсишдан тўхтаб шира тортиш давридан бошлаб кўзга ташланади. Уруғли меваларнинг навига қараб бу муддат август ойидан сентябрь ойининг охиригача давом этади. Зарарланган мева сиртида оч кўнғир тусдаги майда доғлар ҳосил бўлади. Доғлар ҳосил бўлган қисмида мева тўқимаси юмшайди. Бу доғлар катталашиб 5-6 кун ичида бир неча сантиметргача етади. 8-10 кун давомида эса бу доғлар мева сиртининг катта қисмини ва ҳатто бутунлай қоплаб олади. Бундай мевалар ўз кўринишини йўқотиб, бўтқасимон массага айланиб қолади. Доғлар катталашиб даврида меваларнинг сиртида касаллик кўзғатувчи замбуруғнинг кетма-кет концентрик айланалар ҳосил қилган конидийларидан иборат кулранг-кўнғир тусдаги ёстиқчалар юзага келади. Бундай мевалар тўкилиб кетади ёки дарахтларда қолиб, мумланган кўринишга эга бўлади. Кейинчалик олма ва беҳи меваси қораяди, нок меваси оч кўнғир рангга қовжираган кўринишда осилиб қолади. Монилиоз чириш фақат ўсув даврида эмас, балки меваларни омборхонада сақдаш даврида ҳам учрайди ва тез ривожланиб катта зарар келтиради. Касаллик кўзғатувчи замбуруғ зарарланган мева сиртида ҳосил қилган ёстиқчаларидаги конидийлар бир-бирига ёпишиб занжирча кўринишига эга бўлади. Занжирча ҳосил қилган конидийлар етилганда узилади ва атрофга тарқалади. Замбуруғнинг мицелийлари бошланғич даврда меванинг зарарланган қисмида бир текис тарқалган бўлса, кейин чалик зарарланган тўқиманинг четки қисмида тўпланиши туфайли бу жойдаги тўқима қаттиқлашиб қорамтир тусга кириб қолади. Олма, нок ва беҳи меваларининг монилиоз чириш касаллиги билан зарарланган меваларидан замбуруғининг соф культуралари ажратиб олиниб, ташқи кўриниши микроскоп остида кўрилганда бу замбуруғнинг конидийлари тухумсимон ёки эллипссимон шахлда бўлиб, рангсиз, улар оддий ёки шохланган занжирларга бирлашганлиги кўрилди. Уруғли мева

боғларида монилиоз касаллиги икки хил: монилиоз куйиш ва монилиоз чириш кўринишида зарар келтириб, монилиоз куйиш касаллигини олма ва нокда *Monilia cinerea* Bonard.f. *mali*, беҳида *M.cydoniae* Schell., монилиоз чириш касаллигини *Monilia fructigena* Pers. Замбуруғлари келтириб чиқаради.

ВАЖНОСТЬ ИСПОЛЬЗОВАНИЯ ТЕРМОЭЛЕКТРИЧЕСКИХ ПРЕОБРАЗОВАТЕЛЕЙ ЭНЕРГИИ И УСТРОЙСТВ

Аннотация. Термоэлектрические преобразователи энергии (ТЭП) и устройства представляют собой значимую технологическую инновацию с огромным потенциалом в различных областях промышленности и научных исследований. Этот обзор исследует важность использования ТЭП и устройств, анализируя их роль в повышении энергетической эффективности, сокращении выбросов парниковых газов, развитии возобновляемых источников энергии, а также в увеличении автономии мобильных устройств. Обсуждаются математические модели, описывающие принцип работы ТЭП, и их важность в контексте современных технологических вызовов, таких как экологическая устойчивость и энергетическая эффективность. В заключении подчеркивается необходимость дальнейших исследований и инноваций в этой области для достижения более широкого внедрения и оптимизации термоэлектрических технологий во всем мире.

Ключевые слова: термоэлектрические преобразователи, технология, энергетическая эффективность, полупроводник, термоэлектрических устройств, энергетическую эффективность.

IMPORTANCE OF USING THERMOELECTRIC ENERGY CONVERTERS AND DEVICES

Abstract. Thermoelectric energy converters (TECs) and devices represent a significant technological innovation with enormous potential in various fields of industry and research. This review explores the importance of TECs and devices, analyzing their role in improving energy efficiency, reducing greenhouse gas emissions, developing renewable energy sources, and increasing the autonomy of mobile devices. Mathematical models describing the operating principle of TECs and their importance in the context of modern technological challenges such as environmental sustainability and energy efficiency are discussed. The conclusion highlights the need for further research and innovation

in this area to achieve wider adoption and optimization of thermoelectric technologies worldwide.

Keywords: thermoelectric converters, technology, energy efficiency, semiconductor, thermoelectric devices, energy efficiency.

Сегодня производство термоэлектрического оборудования является одной из наиболее быстро развивающихся отраслей во всех развитых странах. Теоретические аспекты применения термоэлектрических эффектов, созданные академиком А. Ф. Иоффе и его коллегами, позволили широко использовать полупроводниковые термоэлектрические преобразователи энергии в различных отраслях промышленности. Средний рост мирового производства за последние годы. Термоэлектрические устройства (ТЭД) различного назначения составляют около 14-15%.

Столь высокие и стабильные темпы роста особенно важны для таких высоких технологий, как информационные технологии. В последние годы эта отрасль производства достигла значительного развития, так как позволила создать малогабаритные устройства для регулирования температурных условий работы различного оборудования, получения локальных значений теплоты и активации процессов теплопередачи в также были достигнуты сложные системы и производство электроэнергии с использованием различных альтернативных методов.

В настоящее время производство ТЭМ осуществляется на стандартной основе. Во многих публикациях имеется достаточно информации о параметрах и характеристиках таких модулей. Данные высокого уровня описывают ранние тенденции в разработке термоэлектрических устройств, и основной упор при производстве ТЭМ делается на относительно сильные охлаждающие ТЭМ. Такая мощность охлаждения ТЭМ очень велика и находится в пределах 75-100 Вт. ТЭМ рассчитаны на большие плотности питающего тока, размеры их спаев находятся в пределах 4x4-9x9 мм², высота ветвей ТЭ 3-5 мм. Основными причинами, определявшими большие размеры термопар и высокие значения токов питания, были технологические трудности создания малогабаритной термопары. В настоящее время ведущими предприятиями освоено серийное производство сильно- и слаботочных ТЭД, выполненных в виде полноценных конструктивных элементов, помещенных в защитные оправки и снабженных собственными токопроводами. Основные виды современных, промышленно выпускаемых ТЭМ и их характеристики представлены на сайтах компаний-производителей. Анализ тенденций развития российских и зарубежных технологий позволяет сделать вывод, что сфера применения ТЭМ расширяется и это хорошо. Также возрастает потребность в миниатюрных охлаждающих устройствах с техническими характеристиками. Основными потребителями таких ТЭП являются электроника, микроэлектроника, медицинская и измерительная техника, в

частности устройства, включающие в себя датчики и преобразователи инфракрасного излучения, используемые в термометрии, системах ночного видения и т. д. В последние годы еще одной крупной категорией потребителей термоэлектрических устройств являются элементы когерентной технологии, изготавливаемые в полупроводниках, особенно в инжекционных лазерах. В последнее время много работ по этой проблеме опубликовано в России, Китае, США, Японии и Европейском Союзе. Ключевым вопросом считается возможность использования эффекта Пельтье в полупроводниковой структуре прямого лазера с использованием интегрированных технологий.

Фотоприемникам, фотоумножителям, параметрическим усилителям, генераторам видеосигналов, интегральным схемам, усилителям на полевых и биполярных транзисторах, модуляторах света, многим из которых связано использование термоэлектрических преобразователей энергии для обеспечения температурного режима фотоэлементов, посвящены научные лекции. Светодиоды, преобразователи изображения, элементы компьютерной техники, электронные системы управления ракетами, радиоаппаратура, наземные и космические исследования - в результате практических экспериментов во всех этих областях существенно изменились параметры и характеристики тепловых электростанций.

Следует отметить термоэлектрические преобразователи энергии (ТЭП) и устройства играют важную роль в современном мире по нескольким причинам.

1. Энергетическая эффективность: ТЭП могут преобразовывать тепловую энергию, которая обычно теряется как отходы в процессе работы многих систем, в электрическую энергию. Это позволяет увеличить энергетическую эффективность и сократить потери энергии.

2. Возобновляемая энергия: Одним из примеров применения ТЭП является использование тепловых источников, таких как солнечная энергия или отходы тепла от промышленных процессов, для генерации электричества. Это содействует развитию возобновляемой энергии и снижению зависимости от источников энергии, истощающихся с течением времени.

3. Мобильные устройства: ТЭП также используются в мобильных устройствах, таких как некоторые типы датчиков, где они могут преобразовывать тепловую энергию от человеческого тела или окружающей среды в электричество. Это может помочь увеличить автономность таких устройств и снизить зависимость от батарей или других источников питания.

4. Промышленные приложения: ТЭП находят широкое применение в промышленности, например, для охлаждения или нагрева объектов, контроля температуры и поддержания устойчивости процессов.

5. Экологическая эффективность: Использование ТЭП может способствовать сокращению выбросов парниковых газов и других загрязнений, так как это помогает оптимизировать использование энергии и снизить необходимость в использовании источников энергии, работающих на основе ископаемого топлива. Использование ТЭП и устройств на их основе продолжает развиваться и расширяться в различных областях, что способствует улучшению энергетической эффективности и уменьшению негативного воздействия на окружающую среду.

Ниже мы можем видеть некоторые математические выражения с использованием термоэлектрических преобразователей и устройств:

Вот несколько примеров математических выражений, связанных с применением термоэлектрических преобразователей (ТЭП) и устройств:

1. Коэффициент термоэлектрической эффективности (η):

$$\eta = \frac{T_h - T_c}{T_h}$$

Где (η) - коэффициент эффективности, T_h - температура нагрева, T_c - температура охлаждения. Этот коэффициент показывает эффективность преобразования тепловой энергии в электрическую.

2. Напряжение термоэлектрической ЭДС (Электродвижущая сила):

$$E = S \cdot (T_h - T_c)$$

Где E - напряжение ЭДС, S - коэффициент термоэлектрической силы.

3. КПД термоэлектрического преобразователя:

$$\eta_{\text{ТЭП}} = \frac{\Delta T}{\Delta T + \frac{T_h + T_c}{2}}$$

Где $\eta_{\text{ТЭП}}$ - КПД термоэлектрического преобразователя;

$\Delta T = T_h - T_c$ - разность температур между нагревом и охлаждением.

4. Мощность, вырабатываемая ТЭП:

$$P = \frac{S^2 \cdot (T_h - T_c)^2}{R}$$

Где P - мощность, T_h - температура нагрева, T_c - температура охлаждения,

S -коэффициент термоэлектрической силы, R - сопротивление нагрузки. Эти выражения позволяют оценить эффективность и потенциал ТЭП и устройств на их основе в конкретных условиях.

Математическое выражение для описания работы полупроводников с использованием термоэлектрических преобразователей энергии часто связано с явлением термоэлектрического эффекта. Одним из основных математических выражений, описывающих этот эффект, является закон Сеебека.

Закон Сеебека описывает эффект термоэлектрического напряжения в полупроводниках при наличии температурного градиента. Математически он может быть выражен следующим образом:

$$E = S \cdot \Delta T$$

Где: E - термоэлектрическое напряжение (ЭДС), создаваемое в полупроводнике;

S - коэффициент Seebeck (также известный как термоэлектрическая сила), который является свойством материала и обозначает количество термоэлектрического напряжения, создаваемого при единичном температурном градиенте;

ΔT - разность температур между двумя концами полупроводника.

Это выражение демонстрирует, как термоэлектрический эффект может использоваться для создания напряжения в полупроводниках при наличии разности в температуре между их концами.

ИССЛЕДОВАНИЕ АСПЕКТОВ ТЕСТИРОВАНИЯ ПРОГРАММНОГО КОДА С ИСПОЛЬЗОВАНИЕМ SMT- РЕШАТЕЛЕЙ

Аннотация. В статье рассматриваются различные аспекты тестирования программного кода с использованием SMT-решателей (Satisfiability Modulo Theories). Использование SMT-решателей для поиска ошибок в программном коде и доказательства его корректности по отношению к заданным спецификациям и свойствам. Эта публикация будет полезна разработчикам программного обеспечения, которые заинтересованы в повышении надежности и качества своего кода, а также специалистам по тестированию, которые ищут методы оптимизации процесса тестирования.

Ключевые слова: SMT-решатель, тестирование кода, методы тестирования (модульное, интеграционное, системное, приемочное), статический анализ кода, дилемма статического анализа.

STUDYING ASPECTS OF PROGRAM CODE TESTING USING SMT SOLVERS

Annotation. The article discusses various aspects of testing program code using SMT solvers (Satisfiability Modulo Theories). Using SMT solvers to find errors in program code and prove its correctness in relation to given specifications and properties. This publication will be useful to software developers who are interested in improving the reliability and quality of their code, as well as testing professionals who are looking for methods to optimize the testing process.

Keywords: SMT solver, code testing, testing methods (unit, integration, system, acceptance), static code analysis, static analysis dilemma.

Тестирование кода — это процесс проверки программного кода на соответствие определенным требованиям и ожиданиям. Основная цель тестирования состоит в обнаружении ошибок и дефектов в программном обеспечении до его выпуска, чтобы уменьшить вероятность возникновения проблем в реальной эксплуатации.

В процессе тестирования применяются различные методы, включая модульное тестирование, интеграционное тестирование, системное тестирование, приемочное тестирование и другие. Каждый из этих методов обладает своими особенностями и применяется на различных этапах разработки программного обеспечения.

С развитием выявления уязвимостей и дефектов в языках программирования стали появляться статистические анализаторы, способные автоматически обнаруживать подозрительные участки кода по заранее заданным шаблонам. Такие анализаторы легко интегрируются в среду разработки и могут предупреждать о возможных проблемах. Однако существует известная проблема статического анализа - дилемма: либо применяются строгие методы, которые избегают пропуска ошибок, но могут породить множество ложных срабатываний, либо уделяется приоритет поиску точного списка проблем, что может привести к упущению реальных ошибок.

Для проверки соответствия логики исходного кода заявленным функциональным требованиям часто формируются специальные команды, которые используют различные инструменты для тестирования кода. Однако иногда бывает сложно гарантировать, что алгоритм всегда достигнет ожидаемого результата во всех возможных случаях, и не всегда можно убедиться, что учтены все возможные состояния программы. Многолетний опыт показывает, что тестирование кода может быть ошибочным наравне с самой программой. Поэтому для проверяющего эксперта было бы желательно наличие инструмента, который позволил бы проводить проверку в автоматическом режиме.

Одним из инструментов, который может быть полезен, это программа, которая преобразует исходный код в скрипт, представляющий программу в формате, совместимом с SMT-решателем. Тестированию будут подвергаться только публичные методы, поскольку только они доступны для вызова пользователями. Чтобы убедиться, что все ожидаемые состояния могут быть достигнуты, а некорректные состояния недостижимы при любых условиях, будет достаточно следующего набора данных:

- Переменные, которые участвуют в алгоритме, включая внутренние переменные метода.
- Логические выражения изменения каждой из этих переменных. Берем во внимание от каких переменных зависит, при каких условиях изменяется и как.

- Условие перехода. Условием перехода является выполнение логических выражений всех переменных в правильной последовательности.
- Начальное состояние системы - набор значений для всех переменных программы после ее инициализации.
- Конечное состояние системы - набор значений для переменных программы, которые должен получить решатель.
- Количество переходов, через которое программа должна пройти, чтобы система из начального состояния превратилась в конечное.

Программа автоматически извлекает или создает все данные, кроме окончательного состояния системы и количества переходов, на основе исходного кода, а остальные данные запрашивает у пользователя. После этого программа генерирует скрипт для SMT-решателя, который затем пытается найти условие, при котором состояние программы после определенного числа переходов будет эквивалентно заданному конечному состоянию.

ОСНОВНЫЕ ПОДХОДЫ К ЗАЩИТЕ ОБЪЕКТОВ ИНТЕЛЛЕКТУАЛЬНОЙ СОБСТВЕННОСТИ В ВЕБ-САЙТАХ

Аннотация. В данной статье проводится анализ существующих подходов к понятию «веб-сайт» и к его элементам. Основные и наиболее ценные элементы сайта, такие как дизайн программное обеспечение, контент, и база данных подвергаются анализу, а также определяется юридическая природа.

Также раскрыты проблемные моменты защиты объектов интеллектуальной собственности в веб-сайтах, проведен анализ законодательств зарубежных стран и сделаны выводы по усовершенствованию законодательства Республики Узбекистан.

Ключевые слова: интеллектуальная собственность, объект интеллектуальной собственности, веб-сайт, авторское право, смежные права, защита, охрана.

BASIC APPROACHES TO PROTECTING INTELLECTUAL PROPERTY OBJECTS IN WEBSITES

Annotation. This master's thesis analyzes the existing approaches to the concept of "website" and its elements. The main and most valuable elements of the site, such as design, software, content, and database, are analyzed and the legal nature is determined.

The problematic aspects of protecting intellectual property objects in websites are also disclosed, an analysis of the legislation of foreign countries is carried out and conclusions are drawn on improving the legislation of the Republic of Uzbekistan.

Key words: intellectual property, object of intellectual property, website, copyright, related rights, protection, protection.

Введение

Согласно данным агентства «We are social» и медиа-аналитической платформы Meltware, указанных в отчете Global digital за 2023 г., по состоянию на апрель 2024 года общая численность населения мира составила 8.10 млрд человек. К началу 2023 года 64,4% (приблизительно 5 млрд человек) из общего числа населения мира имеет доступ в Интернет. Согласно показателям счетчика, на официальном сайте Агентства статистики при президенте Республики Узбекистан, к 22 апреля 2024 года в Узбекистане общее число населения превысило 37 миллионов, из которых 31 миллион являются пользователями сети Интернет.

Однако, эти внушающие показатели не могут стать гарантией урегулирования многих вопросов юридического характера, которые возникают параллельно с колоссальным развитием Интернета. Так, на протяжении многих лет важные вопросы, непосредственно касающиеся вопросов урегулирования недостатков данной области, к сожалению, по сей день остаются открытыми. В частности, одним из таких вопросов является определение в гражданско-правовой системе официального правового статуса основных компонентов сети Интернет - интернет-ресурсов и их реализация.

Методы исследования. При написании данной работы использованы: общенаучные методы, такие как исторический метод, аналитический метод, методы дедукции и индукции, а также методы, характерные для юридических наук, такие как: сравнительно-правовой, формально-юридический и другие. Для выявления наилучших международных норм для внедрения, применения и реформирования системы защиты объектов интеллектуальной собственности в веб-сайтах в Республики Узбекистан, основным методом выступает системно-структурный метод исследования.

Результаты оригинального авторского исследования. Есть несколько причин, чтобы принять меры для защиты вашего сайта:

Первая причина заключается в том, что, дав разработчику возможность заблокировать использование его идеи кем-либо, он может получить конкурентное преимущество. Авторское право или патент можно рассматривать как единственную монополию, которая может быть достигнута любой страной и также поощряется страной.

Вторая причина — возможность заработать на продаже своих прав третьим лицам.

Третья причина заключается в том, что, обладая личными, немущественными правами, можно удовлетворить собственные амбиции.

Четвертая причина заключается в том, что защита защищает разработчиков от недобросовестной конкуренции.

Помимо вышеперечисленных причин, есть еще множество, которые напрямую связаны с внешним видом и не имеют никакого отношения к

самому объекту охраны. Например, если имеется патент или иной документ, подтверждающий, в свою очередь, наличие исключительных прав на объект интеллектуальной деятельности, то цена этого объекта почти в два раза превышает цену незапатентованного объекта.

В большинстве случаев создание эффективного финансового плана или использование налоговых льгот более выгодно для защиты.

Как осуществляется охрана интеллектуальной собственности?

Объекты интеллектуальной собственности охраняются законодательством Республики Узбекистан. Кроме того, существует большое количество международных договоров в этой сфере, которые, в свою очередь, определяют способ решения некоторых проблем, в том числе процедурных, или позволяют регистрацию прав интеллектуальной собственности в нескольких странах. Оно может быть передано, лицензировано или иным образом уничтожено. Для защиты объекта интеллектуальной собственности используются различные методы:

- Литературные и художественные произведения, такие как книги, картины, фильмы, музыка, аудио- и видеозаписи, и программное обеспечение, как правило, защищены авторским правом или смежными правами;

- Изобретения и технологии защищены патентами;

- Средства идентификации, отличающие один продукт или услугу от другого, такие как слова, символы, запахи, звуки, цвета и формы, могут быть товарными знаками;

- Физические свойства таких вещей, как мебель, части тела, столовые приборы или украшения, могут охраняться агентствами по промышленным образцам;

- Наименования мест происхождения и коммерческие секреты также являются формами интеллектуальной собственности, и большинство правительств обеспечивают определенный уровень правовой защиты таких объектов;

- Законодательные действия, направленные на предотвращение недобросовестной конкуренции в коммерческой деятельности при одновременном усилении защиты коммерческой тайны и некоторых других видов интеллектуальной собственности.

Многие страны обеспечивают специальную правовую охрану топологий интегральных схем и баз данных. Один и тот же объект может одновременно охраняться несколькими правами интеллектуальной собственности в разных странах.

Авторское право

Оригинальные произведения искусства, музыки и литературы, включая все, от книг и картин до фильмов, видео- и аудиозаписей, и программного обеспечения, подпадают под авторское право.

Эта система прав позволяет авторам получать прибыль от своей работы и поощряет самовыражение. Помимо имущественных прав предоставляются и неимущественные права, которые, с одной стороны, позволяют авторам требовать признания своего авторства, а с другой стороны, защищают свое произведение от любого искажения или изменения, наносящего ущерб репутации автора. Охрана в качестве объекта авторского права предназначена для уникальных и оригинальных творческих произведений и должна быть выражена в какой-либо материальной форме.

Авторское право сопровождает автора с момента создания произведения, а в некоторых странах существует принцип добровольной регистрации, что означает дополнительные преимущества. Авторы могут уступать или передавать эти права по лицензионным соглашениям с момента создания авторского права.

Защита авторских прав дает произведению исключительное право, которое начинается с момента создания произведения и заканчивается через пятьдесят или семьдесят лет после смерти автора.

Что касается авторских прав на аудиозаписи, то их защита обычно заканчивается в течение семидесяти лет после публикации. Закон об авторском праве позволяет правообладателям ограничивать использование своей работы определенным образом. Деятельность по распространению и воспроизведению включается в список запрещенных видов деятельности по единоличному усмотрению автора. В некоторых странах авторы не имеют права запрещать использование своей работы, но они оставляют за собой право на получение оплаты за такие действия. Однако в каждом штате есть исключения на законодательном уровне, позволяющие третьим лицам использовать произведение без оплаты автору или получения его согласия.

Примером этого является использование произведения в иллюстративных или образовательных целях. Важнейшим компонентом авторского права являются средства защиты, предоставляемые законом объекту, а также ограничения и исключения. Обеспечивая равновесие в этих правоотношениях, они способствуют и облегчают создание новых творческих произведений, определяют новые способы их использования и распространения.

Такая же защита распространяется на производителей звукозаписи, вещательных компаний и исполнителей в большинстве стран. В некоторых из этих стран интересы создателей произведений и интересы авторов этих произведений также гарантируются законами об авторском праве. В других странах эти же интересы охраняются соответствующими законами.

Роль авторского права особенно возросла в последние годы в связи с развитием цифровых технологий и всемирной паутины. Это связано с тем, что онлайн-контент требует защиты, а в этой сфере существует множество

сложностей для правоприменительной и судебной защиты, а в основе защиты этого объекта лежит закон об авторском праве.

В настоящее время многие международные договоры определяют защиту авторского права и смежных прав. К таковым относятся Бернская Конвенция об охране литературных и художественных произведений 1886 года, Международная конвенция об охране прав исполнителей, изготовителей фонограмм и вещательных организаций 1961 года, Женевская конвенция об охране интересов производителей фонограмм от незаконного воспроизведения их фонограмм 1971 года, Договор ВОИС по авторскому праву 1996 года, а также Договор ВОИС по исполнениям и фонограммам 1996 года. Последние два упомянутых выше соглашения регулируют защиту музыкальных продюсеров и исполнителей, напрямую связанных с цифровыми технологиями. На сегодняшний день действуют соответствующие конвенции в области охраны и защиты авторского права и смежных прав: Пекинский договор по аудиовизуальным исполнениям 2012 года и Марракешский договор об облегчении доступа слепых и лиц с нарушениями зрения или иными ограниченными способностями воспринимать печатную информацию к опубликованным произведениям 2013 года. Соглашение Всемирной торговой организации (ВТО) по торговым аспектам прав интеллектуальной собственности (ТРИПС) 1994 года, который является первым в истории многосторонним международным договором, регулирующим вопросы торговли в сфере интеллектуальной собственности, в охват которого также входят авторские и смежные права.

Патенты

Предоставление права запрещать другим третьим лицам использовать, производить, продавать и импортировать изобретение достигается путем получения патента. Патенты выдаются государственными органами и имеют больше запретительных функций, чем редакционные. После получения патента изобретатель должен предоставить подробное описание своего изобретения в патентном документе, после чего патент будет размещен в открытом доступе. По сути, патенты — это общественный договор между обществом и изобретателями. Новые изобретения, то есть информация, которую изобретатели не желают разглашать, известны как «ноу-хау» или «коммерческая тайна», и их защита основывается на других законах. Срок патентной защиты в большинстве стран составляет 20 лет с момента подачи необходимых регистрационных документов. Национальные или региональные патентные ведомства предоставляют охрану на основании заявок, поданных изобретателями. Изобретения, отвечающие следующим условиям, могут быть запатентованы:

- Изобретение должно быть новым, что означает, что ранее о нем не публиковались никакие сведения, и оно не использовалось публичным образом;

- Изобретение должно быть промышленно применимым, то есть иметь возможность использования в промышленности или воспроизведения в промышленных масштабах;

- Изобретение должно быть «неочевидным», то есть оно не должно быть решением, которое пришло бы в голову любому, кто имеет определенные навыки в соответствующей сфере.

С течением времени в большинстве штатов возникли национальные патентные системы благодаря нескольким факторам:

- Патентная система поощряет раскрытие информации всем без исключения членам общества, тем самым повышая уровень доступа к техническим и научным знаниям. В отсутствие гарантии, предоставляемой патентом, изобретатель или компания, разрабатывающая изобретение, скорее всего, предпочтут сохранить информацию о своем изобретении;

- Патентная система поощряет инновации и инвестиции в исследования и разработки, а также разработку будущих изобретений и обеспечивает стимулирующие возможности для такой деятельности;

- Ограниченный срок действия патента способствует скорейшему вводу изобретения в коммерческий оборот, позволяя обществу быстрее извлечь из него пользу;

- Поощряя раскрытие подробной информации об изобретениях, патенты позволяют избежать повторных исследований, стимулируя исследования в новых областях, инновационную деятельность и развитие конкуренции;

- Патент воспринимается как надежный правовой титул в сфере интеллектуальной собственности, предоставляемый в большинстве стран по результатам проведения тщательной экспертизы. В течение всего периода своего существования патентная система непрерывно развивалась, чем объясняется ее устойчивость в долгосрочной перспективе.

Целью патентной охраны в настоящее время является регулирование национальной патентной системы, согласование процедурных вопросов, решение вопросов по существу, возникающих при получении патентов в национальных и региональных патентных ведомствах. Имеющими особое значение в данной сфере являются Парижская конвенция по охране промышленной собственности 1883 года и Соглашение ВТО по торговым аспектам прав интеллектуальной собственности (ТРИПС) 1994 года, в то время как основными международными соглашениями, касающимися процедурных вопросов в области патентного права, являются Договор о патентной кооперации 1970 года и Договор о патентном праве 2000 года. Среди региональных договоров можно выделить Европейскую патентную конвенцию (ЕПК) 1973 года. Европейская патентная конвенция определяет порядок получения европейских патентов, которые после их предоставления действуют в заявленных государствах в качестве

национальных патентов. Новая редакция Конвенции (ЕПК 2000 года) и Процедура ее применения вступили в силу в 2007 году.

Промышленные образцы

Защита внешнего вида и упаковки обеспечивается получением прав на промышленный образец. Существует два основных стандарта, в соответствии с которыми промышленные образцы могут охраняться. К ним относятся: 1. Новизна предмета. 2. Оригинальность. Эти термины заимствованы из законов об авторском праве и патентах. Охраняемый промышленный образец должен иметь эстетическую ценность, а это означает, что его техническая функция не должна быть ограничительной и не должна иметь ничего общего с той же схемой дизайна. Промышленные образцы могут быть (2D) чертежами или (3D) моделями. Товар добавляет коммерческую ценность, влияет на конкурентоспособность товаров и является ключевым продуктом во многих отраслях, таких как индустрия моды, производство пользовательского оборудования для мобильных телефонов и так далее.

Охрана промышленных образцов различается в разных странах, но в большинстве стран охрана предоставляется посредством регистрации и постэкспертизы. Объем правовой охраны промышленных образцов в значительной степени превалирует благодаря гармонизации различных этапов международной регистрации, включая гармонизацию применимых норм материального права. Гаагское соглашение о международной регистрации промышленных образцов 1925 года с учетом изменений, внесенных Женевским Актом ВОИС 1999 года, позволяет коллективно направить одну заявку на предоставление правовой охраны промышленным образцам сразу в 65 стран, подписавших соглашение. Недавнее подписание соглашения между Южной Кореей и Соединенными Штатами, а также планы по присоединению к соглашению ряда других стран показывают, что правовая охрана промышленных образцов существует повсюду.

В Европейском союзе наиболее распространенным способом подачи заявки на охрану промышленного образца является подача обращения в Ведомство по интеллектуальной собственности Европейского союза в Аликанте. Управление системой зарегистрированных промышленных образцов осуществляется этим Ведомством.

В результате принятия Регламента № 6/2002 положения материального права были гармонизированы на уровне Европейского союза. Данный регламент ввел право на промышленный образец Сообщества, которое признается во всех государствах участника Европейского союза. Зарегистрированные промышленные образцы могут быть защищены на срок до 25 лет. Срок охраны незарегистрированных промышленных образцов и моделей составляет три года.

Правообладатель промышленного образца имеет полное право предотвращать несанкционированное копирование третьими лицами и

запрещать производство, импорт или экспорт продукции, в которой каким-либо образом используется промышленный образец или модель.

В связи с возрастающим коммерческим значением и интересом к промышленным образцам в современной экономике. Дизайнеры и создаваемые ими промышленные образцы часто уже вовлечены в концептуальную стадию, и что касается технологических разработок в этой области, то можно сказать, что этот прогресс способствует созданию инновационных продуктов и услуг. Но все же, в целях того, чтобы промышленные образцы стали полноценными, широко используемыми и имеющими большой спрос как объект интеллектуальной собственности, есть необходимость в дальнейшей гармонизации законов, регулирующих их использование, кроме того, требуется разработка рекомендаций в отношении возможности и объема их защиты. Однако для того, чтобы промышленные образцы стали ценными, широко используемыми и востребованными в качестве объектов интеллектуальной собственности, необходимо дальнейшее согласование законов, регулирующих их использование, и, кроме того, необходимо предложить объем и возможность их защиты.

Товарные знаки

Потребители и предприятия обращаются к брендам, чтобы дифференцировать товары и услуги от разных производителей. Брендинг хорошо работает для производителей, защищая их продукцию от несправедливой прибыли и повышая доверие к бренду и репутацию. В результате поддерживается честная конкуренция, и компании, производящие продукт или услугу, имеют стимул выделять ресурсы для повышения качества и поддержания высокого мнения о своем продукте.

Защита торговых марок охватывает: товарные знаки, имена, символы, логотипы, цвета и даже запахи и звуки. Владельцы торговых марок имеют право запрещать другим использовать их товарные знаки или названия, которые слишком похожи или похожи, если такое использование может ввести потребителей в заблуждение.

Помимо всего вышеперечисленного, охрана товарного знака во многих странах также имеет место при получении необоснованной выгоды от репутации владельца товарного знака.

В настоящее время почти все владельцы коммерческих предприятий имеют собственные товарные знаки, в то время как в развитых странах товарные знаки в основном используются во имя защиты прав и интересов компаний.

Заключение

По итогу проведенной попытки комплексного анализа и исследования особенностей правового регулирования «веб-сайтов» как объектов интеллектуальной собственности в Республике Узбекистан, а также их защиты и договорного регулирования, путем изучения зарубежного опыта,

позволили обозначить то, что в современном, развивающемся и правовом обществе, веб-сайты, с каждым днем становятся все более актуальными и связанными с каждой сферой деятельности человека.

Исследования в сфере договорных отношений позволили нам сделать вывод о том, что немаловажным фактором является необходимость путем внесения дополнений и изменений в законодательство, создания обязательных условий для заключения договоров между субъектами правоотношений в сфере интеллектуальной деятельности, таких как «договор авторского заказа» и «договор возмездного оказания услуг», что в свою очередь позволит закрепить законное право одной из сторон договора на обладание им защиты, в случае возникновения спорной или конфликтной ситуации, когда необходимо вмешательство государственных органов для полного, точного и скорейшего её разрешения.

РАЗВИТИЕ ИНТЕЛЛЕКТУАЛЬНОЙ СПОСОБНОСТИ СТУДЕНТОВ В ОБУЧЕНИИ ХИМИЧЕСКИХ ДИСЦИПЛИН

Аннотация. В статье рассматривается необходимость развития интеллектуальной способности студентов в обучении химических дисциплин в педагогическом вузе. Предлагаются пути развития развивающих способностей студентов на примере учебных дисциплин “Аналитическая химия”, “Физ-коллоидная химия”, “Химия лекарственных веществ” факультета “Естественных наук” Чирчикского государственного педагогического университета. Речь идёт об этапах развития интеллектуальной способности студентов в процессе их обучения химических дисциплин.

Ключевые слова: естественные науки, аналитическая химия, физ-коллоидная химия, химия лекарственных веществ, развитие, интеллектуальность, способность.

DEVELOPMENT OF STUDENTS' INTELLECTUAL ABILITY IN TEACHING CHEMICAL DISCIPLINES

Annotation. The article considers the need to develop the intellectual ability of students in teaching chemical disciplines in pedagogical universities. The ways of developing students' developing abilities are proposed using the example of the academic disciplines “Analytical Chemistry”, “Physical colloidal chemistry”, “Chemistry of medicinal substances” of the faculty “Natural Sciences” of Chirchik State Pedagogical University. We are talking about the stages of developing the intellectual ability of students in the process of their study of chemical disciplines.

Keywords: natural sciences, analytical chemistry, physic colloidal chemistry, chemistry of medicinal substances, development, intelligence, ability.

Сегодня в мире проблемы успешности университетского образования и развития интеллектуальных способностей студентов находятся под пристальным вниманием ученых всего мира, что обуславливает проведение

широкомасштабных научно-методических исследований [1;2]. Учёные - методисты отмечают [3], эффективность образовательного процесса зависит не только от того, насколько высоки возможности подготовки выпускников средней школы в прединiversитетский период, но и от того, как организован учебный процесс, а также от педагогических способностей и возможностей педагогов[4]; индивидуальных психологических особенностей студентов[5]. На последнем факторе остановимся подробнее. Под индивидуальными психологическими особенностями студентов подразумевается уровень интеллекта (способность усваивать знания, умения, навыки и успешно применять их для решения задач) [6], креативность (способность самому вырабатывать новые знания) [7], учебная мотивация и владение навыками планирования и контроля учебной деятельности [8]. К сожалению, в научных публикациях на эту тему отсутствует четкая стратегия формирования и развития интеллектуального потенциала студентов [9]. По их мнению, [10], именно развитие интеллектуальных способностей позволяет повысить продуктивность учебной деятельности. Период адаптации студента первого года обучения к условиям высшей школы проходит всегда очень тяжело, а у студента, отсутствие фундамента по химическим дисциплинам, особенно выделяется [11]. Это связано, прежде всего, с необычной социокультурной средой, трудностями восприятия учеником незнакомой ему информации и часто с недостаточностью знаний и умений, полученных в средней общеобразовательной школе, и слабой подготовленностью к предметам. По данным вступительного тестирования, проводимого на кафедре химии и факультета естественных наук, общеобразовательных дисциплин ЧГПУ, доля сильных и средних абитуриентов, которые дали более 65% правильных ответов на вопросы по профилирующим предметам, составляет менее одной трети. При этом очевидно, что 15-20% абитуриентов имеют практически очень слабые базовые знания по химии, а потому целесообразно их переподготовить на ускоренной основе, чтобы не отставать в развитии интеллектуальных способностей от студентов основной группы [12]. Интересно отметить, что студенты естественнонаучных специальностей обладают зачастую более высоким интеллектуальным потенциалом и поэтому быстрее усваивают учебную программу. Проведение дополнительных занятий с целью дальнейшего развития интеллектуальных способностей и аналитического мышления учащихся создает для них широкие возможности в освоении предметов и вселяет в них уверенность в своих силах [13]. Задача студента первого года обучения не только овладеть языком предмета и углубить знания в предметной области, но и научиться быстро и эффективно усваивать новую научную информацию [14]. Для развития интеллектуальных способностей можно использовать специальные курсы-тренинги, например: — «Развитие памяти» — эффективные приемы запоминания информации; — «Учись учиться» —

навыки самостоятельной работы с текстовой информацией; — «Психология сдачи экзамена» — коммуникативные навыки общения с преподавателями и однокурсниками; — «Планирование учебного времени» и т.д. Элементы данных тренингов могут быть включены в систему преподавания каждой учебной дисциплины. Решение на учебном занятии логических задач, выполнение упражнений на развитие внимания и приемов активизации мышления позволит добиться желаемых результатов. Кроме того, все естественные науки, как науки экспериментально-теоретические, служат прекрасным учебным пространством для развития интеллектуальных и творческих способностей студентов. В основе их изучения лежит познавательная деятельность. Так, например, в химических дисциплинах изучение свойств веществ и закономерностей химических процессов основано на анализе экспериментальных данных, их интерпретации и обобщении. Так развивалась наука химия, делались великие открытия. Процесс познания уже открытых законов и теорий проходит тот же путь — от накопления экспериментальных фактов к их пониманию. Способность анализировать, обобщать полученную информацию и интерпретировать ее, используя уже известные законы, необходима для овладения химическими знаниями. При этом используются все мыслительные операции: анализ, синтез, обобщение, сравнение, классификация. Поэтому для понимания химии необходимо иметь развитое мышление, внимание, воображение. В свою очередь, наука химия развивает познавательные способности учащихся, так необходимые для изучения и других предметов. Студент запоминает информацию во время чтения учебного текста, слушания лекции, проведения эксперимента и самостоятельного размышления. В это время активно используются все виды речевой деятельности: говорение и слушание, чтение и письмо. Для качественного владения всеми речевыми навыками необходимо иметь развитое внимание, мышление и воображение. Именно эти способности формируют умственный потенциал студента, обеспечивают качественное понимание и запоминание любой учебной информации. Практические занятия — это не только наблюдение за опытами, которые демонстрирует преподаватель, но и самостоятельное проведение простейших химических экспериментов, и решение экспериментальных задач. Демонстрационные опыты проводятся в основном на лекционных занятиях. В качестве демонстрационных опытов наиболее интересны эксперименты по химии элементов. Преподаватель предлагает прогнозировать результаты эксперимента. Такой тип химического эксперимента стимулирует познавательную активность учащихся, побуждает к сознательному совершенствованию знаний, дает эмоциональную разгрузку. Самостоятельно студенты учатся работать с химической посудой и реактивами на примере практических работ по лабораторные работы «Качественные реакции катионов и анионов» и «Буферные системы и потенциометрические титрования», «Качественный

анализ лекарственных веществ» просты в исполнении, относительно безопасны, не требуют большого времени на подготовку и проведение и отличаются наглядностью демонстраций. Преподаватель предлагает студентам самостоятельно проследить изменение свойств исследуемых веществ в зависимости от среды реакции и сформулировать выводы. Проведение самостоятельного исследования предлагается на экспериментальной работе «Количественное изучение обратимого гидролиза соли». Работа заключается в экспериментальном определении водородного показателя рН раствора, расчете степени гидролиза соли, константы гидролиза и константы диссоциации слабого электролита. Расчетное значение константы диссоциации сравнивают с табличным. Практическая часть работы проста и требует только умения приготовить растворы заданной молярной концентрации. Дидактическая ценность заключается в закреплении понятий «степень и константа гидролиза». Экспериментальные задачи интересно поставлены также на примере качественных реакций на анионы и катионы. Такие практические задания могут быть полезны в теме «Свойства солей» в тематическом блоке «Кислотно - основные метода анализа». При решении экспериментальных задач студенты не только совершенствуют свои знания, применяя их на практике, но и учатся выделять, анализировать, сопоставлять существенные признаки и обобщать полученные результаты. Программа любого вида учебного эксперимента ориентирована не на запоминание, а на понимание изучаемых химических явлений. Только при таком подходе учащийся способен выявить взаимосвязь строения и свойств веществ. По всем видам практических работ (демонстрационным, самостоятельным экспериментам, экспериментальным задачам) студенты составляют отчет: описывают последовательность проведения эксперимента, приводят химические реакции, записывают наблюдения и делают выводы о свойствах веществ или заключения о качественном составе веществ в случае решения экспериментальных задач. В конце занятия студенты защищают свои идеи в устной форме. Таким образом, на практических занятиях используются все виды речевой деятельности (чтение, письмо, говорение и слушание). На уроках большая часть времени отводится решению расчетных и расчетно-экспериментальных задач, которые развивают мыслительные способности учащихся, то есть логичность, активность мышления. Необходимо, чтобы студенты научились моделировать «свои», нестандартные способы решения. Использование разработанных алгоритмов решения обедняет учебный процесс, не позволяет развить так называемое «химическое мышление». Задача преподавателя — «разбудить» креативные способности студента, найти оптимальный для него способ мышления и запоминания информации. Раскрыть творческий потенциал учащихся позволяет проектная деятельность в форме написания реферата. Умение самостоятельно составить план, выбрать необходимую информацию,

скомпоновать ее и сделать выводы является необходимым условием для дальнейшего успешного обучения на основных факультетах. Студенты учатся индивидуально работать с учебной литературой, расширяют словарный запас и глубоко прорабатывают учебный материал по заданной теме. На кафедре разработано специальное пособие, в котором представлены требования к учебному проекту, модель проекта и учебного плана, рекомендуемая литература и правила составления ссылок на учебную литературу. Самые успешные студенты имеют возможность выступить перед однокурсниками с небольшим докладом и ответить на их вопросы. Правильная формулировка вопроса — непростая задача для иностранного учащегося. Таким образом, в этой форме учебной работы также удастся сочетать все виды речевой деятельности (чтение, письмо, говорение и слушание). Именно на этапе подготовительного обучения следует отрабатывать навыки, необходимые не только для учебной, но и исследовательской деятельности: умение видеть проблему, находить пути и методы ее решения, классифицировать явления, структурировать материал, выдвигать гипотезы, защищать свои идеи. Преподаватель-предметник, учитывая социально-психологические особенности иностранного студента, может и должен помочь ему раскрыть свой интеллектуальный потенциал, найти наиболее продуктивный способ усвоения учебного материала, развить креативность, активность и гибкость мышления, открыть путь для полноценного профессионального роста.

THE ROLE OF PROJECT WORK IN THE FORMATION OF SOCIO-LINGUISTIC COMPETENCE

Key words: collaboration, socio-linguistics, socioculture, context, competence, training, argot

Введение. Современное образование ставит перед учащимися потребность не только в усвоении языковых навыков, но и в развитии более широкого спектра компетенций, включая социолингвистическую компетенцию. Социолингвистическая компетенция играет важную роль в формировании у студентов понимания языковых явлений в контексте социокультурной среды.

Проектная работа предполагает активное участие студентов в исследовательской деятельности, позволяя им самостоятельно изучать языковые явления в различных социокультурных контекстах, анализировать их и взаимосвязь с общественной действительностью. В данной статье мы рассмотрим важность проектной работы в обучении языкам, особенно в контексте формирования социолингвистической компетенции. Будет рассмотрено определение социолингвистической компетенции, роль проектной работы в ее развитии, а также конкретные методы и этапы использования проектов для эффективного формирования данной компетенции у учащихся. Данная статья призвана проанализировать

важность использования проектной работы как инструмента обучения, способствующего не только повышению языковых компетенций, но также развитию понимания языка как социокультурного явления.

Социолингвистическая компетенция представляет собой ключевую составляющую языковой компетенции, обеспечивающую способность индивида к адекватному использованию языка в различных социокультурных ситуациях. Эта компетенция включает в себя не только знание языковых структур, но и понимание языковой среды, влияния социокультурных факторов на языковое поведение, а также умение адаптировать свое языковое поведение в соответствии с социокультурными нормами и ожиданиями. В контексте обучения языкам, социолингвистическая компетенция включает в себя умение анализировать языковые явления в социокультурном контексте, интерпретировать языковые проявления с учетом социальных, исторических и культурных особенностей, а также использовать языковые ресурсы для эффективного общения в различных сферах жизни.

Основные аспекты социолингвистической компетенции включают в себя понимание диалектов, аргота, жаргона, умение анализировать языковые среды и их воздействие на коммуникацию, а также критическое отношение к языковым явлениям с учетом социокультурного контекста. Развитие данной компетенции позволяет учащимся не только более эффективно использовать язык в общении, но и быть осведомленными об уникальных особенностях языка как социокультурного явления.

Социолингвистическая компетенция: понятие и значение

Основные аспекты социолингвистической компетенции включают в себя умение адаптировать свою коммуникативную стратегию в зависимости от социокультурных норм и ценностей, анализировать языковые проявления в различных контекстах и оценивать их влияние на взаимодействие. Другими словами, социолингвистическая компетенция помогает расширить спектр языковых знаний студентов, включая в него их социокультурное измерение. **Значение развития социолингвистической компетенции для учащихся**

Социолингвистическая компетенция является важным аспектом языкового образования, который играет значительную роль в формировании учащихся не только как эффективных языковых носителей, но и как культурно осознанных и компетентных членов общества. Давайте рассмотрим, какое значение имеет данная компетенция для учащихся.

1. Межкультурное взаимодействие: Развитие социолингвистической компетенции обогащает учащихся пониманием разнообразных культур и традиций. Они учатся адаптировать свое языковое поведение в зависимости от социокультурного контекста и строить эффективное взаимодействие с представителями других культур, способствуя толерантности и межкультурному диалогу.

2. Критическое мышление: Развитие социолингвистической компетенции стимулирует учащихся к критическому анализу языковых явлений с учетом социокультурного контекста. Это способствует формированию способности критически мыслить, анализировать информацию и оценивать различия в языковом поведении.

3. Эффективное общение: Умение осознанно использовать язык в социокультурном контексте позволяет учащимся строить эффективные коммуникативные стратегии и успешно общаться с людьми из разных культур и языковых групп.

4. Профессиональное развитие: В современном мире, где международное сотрудничество становится все более важным, развитие социолингвистической компетенции дает учащимся преимущество на рынке труда. Умение эффективно взаимодействовать с представителями разных языковых и культурных групп способствует развитию международных деловых связей и карьерному росту.

Возможности проектной работы для развития социолингвистической компетенции

Современное образование ставит перед собой задачу не только передать знания, но и формировать у учащихся комплекс навыков и умений, необходимых для успешной адаптации в современном обществе.

1. Многоязычное общество: Современное общество становится все более многоязычным, и умение эффективно общаться на различных языках становится ключевой компетенцией.

2. Межкультурное взаимодействие: Развитие социолингвистической компетенции помогает учащимся понимать межкультурные различия, быть толерантными и уважительно относиться к другим культурам.

3. Коммуникативные навыки: Социолингвистическая компетенция развивает коммуникативные навыки учащихся, позволяя им эффективно общаться, учитывая социокультурные особенности аудитории.

4. Толерантность и уважение: Развитие социолингвистической компетенции способствует формированию толерантного отношения к различиям, уважению к многообразию культур и языковых традиций.

5. Готовность к глобальному рынку труда: В современном мире, где международное сотрудничество становится все более важным, социолингвистическая компетенция дает учащимся преимущество. Умение эффективно общаться на разных языках, адаптировать свое поведение к культурным особенностям различных стран и успешно работать в международных коллективах становится важным конкурентным преимуществом.

Заключение В заключение, можно отметить, что проектная работа играет значительную роль в формировании социолингвистической компетенции у студентов. Через участие в проектах студенты не только улучшают свои языковые навыки, но и развивают понимание

социокультурного контекста, умение взаимодействовать с представителями других культур, а также критически анализировать языковые явления и стереотипы.

СОВРЕМЕННЫЕ ПРОБЛЕМЫ ЛИНГВИСТИКИ: ИЗУЧЕНИЕ ПЕРЕМЕЩАЮЩЕГОСЯ ЯЗЫКА, ПСИХОЛОГИИ, ТЕХНОЛОГИИ И ОБЩЕСТВА

Аннотация. В данной статье рассматриваются наиболее видные современные проблемы, с которыми сталкивается лингвистика в настоящее время. Развивающаяся природа языка вместе с интеграцией с другими областями, такими как психология и технологии, создала проблемы, включая языковые вариации и изменения, многоязычие, технологии, язык и мышление, искусственный интеллект и машинное обучение, диалектологию, влияние социальных сетей, речь и язык, патология, транслингвистика и корпусная лингвистика. Для эффективного решения этих проблем требуется междисциплинарный подход, и они открывают возможности для инноваций и развития лингвистики.

Ключевые слова. Лингвистика, языковые вариации и изменения, многоязычие, технологии, язык и мышление, диалектология, патология речи и языка, транслингвизация, корпусная лингвистика.

CONTEMPORARY ISSUES IN LINGUISTICS: THE STUDY OF MOVING LANGUAGE, PSYCHOLOGY, TECHNOLOGY AND SOCIETY

Abstract. This article identifies the key challenges facing linguistics today, including the complexities of language variation and change, multilingualism, and the impact of technology and social media on language use. The field is also grappling with the integration of linguistics with psychology, artificial intelligence, and machine learning, as well as the study of dialectology, pathology, and corpus linguistics. To effectively address these challenges, linguistics requires an interdisciplinary approach that fosters innovation and development.

Keywords. Linguistics, language variations and changes, multilingualism, technology, language and thinking, dialectology, speech and language pathology, translanguaging, corpus linguistics.

Лингвистика, отрасль социальных наук, за последние годы стала свидетелем значительного развития и прогресса. Однако он также столкнулся с различными современными проблемами, с которыми постоянно сталкиваются исследователи и лингвисты. Эти проблемы возникли в результате развития природы языка, а также интеграции лингвистики с другими областями, такими как психология и технология. В этой статье мы рассмотрим некоторые из наиболее известных современных проблем языкознания.

Одной из основных задач современной лингвистики является изучение языковых вариаций и изменений. Язык — это динамическая сущность, которая постоянно развивается во времени благодаря использованию его носителями в разных контекстах. Лингвисты стремились понять факторы, влияющие на языковые вариации, такие как географическое положение, социальный класс и возраст. Однако с глобализацией и развитием цифровой коммуникации языки все чаще контактируют друг с другом, что приводит к языковой конвергенции или даже к утрате языка. Это явление создает проблемы с точки зрения поддержания языкового разнообразия и сохранения языков, находящихся под угрозой исчезновения, а также понимания последствий изменения языка для общения и идентичности. По данным Хау и Иноуэ (2017), некоторые лингвисты изо всех сил пытаются найти коренных носителей языков меньшинств, тем самым затрудняя всесторонний анализ их синтаксиса, морфологии и фонетики.

Еще одной актуальной проблемой современной лингвистики является изучение многоязычия. В условиях глобализации и роста миграции общества становятся все более многоязычными. Многоязычие имеет как лингвистические, так и социокультурные последствия. Лингвисты работают над пониманием когнитивных аспектов, связанных с овладением языком, двуязычием и языковой обработкой. Они исследуют такие вопросы, как то, как языки хранятся в мозгу и как они взаимодействуют друг с другом. Кроме того, многоязычие поднимает вопросы о языковой политике и планировании, поскольку обществу необходимо учитывать потребности различных языковых сообществ. Лингвистическое разнообразие является реальностью в современном глобализованном мире, где во всем мире говорят на более чем 7000 языках. Уловить, понять и использовать это лингвистическое разнообразие для создания глобальных платформ, способных обслуживать все языковые группы, остается непростой задачей для лингвистов. Важность отражения этого разнообразия невозможно переоценить. По данным Всемирного экономического форума (2018 г.), многоязычие является фактором роста экономики и международной торговли. Во время Global Wellness Summit 2018 Пааво Вирккунен, финский специалист по образованию, заявил, что обучение детей нескольким языкам удваивает их когнитивные способности, а это повышает их перспективы

трудоустройства в будущем (Всемирный экономический форум, 2018). Поэтому крайне важно собирать и использовать эти разнообразные лингвистические знания.

Одной из наиболее важных проблем, с которыми сегодня сталкиваются лингвисты, является исследование языка и мышления. Эта междисциплинарная область, известная как когнитивная лингвистика, исследует взаимосвязь между языком и познанием. Исследователи стремятся понять, как язык формирует наше восприятие и понимание окружающего мира. Они также исследуют влияние языка на различные когнитивные процессы, такие как память и принятие решений. Однако изучение сложной связи между языком и мышлением требует сложных экспериментальных планов и всестороннего анализа, что делает эту задачу сложной задачей для лингвистов.

Технологии также поставили новые задачи в области лингвистики. В последние годы компьютерная лингвистика быстро развивается, и исследователи используют компьютерные модели и алгоритмы, чтобы лучше понять структурные аспекты языка, а также для разработки таких приложений, как машинный перевод и программы изучения языка. Однако этот технологический прогресс имеет свой собственный набор проблем. Например, системы автоматического перевода часто сталкиваются с нюансами и культурными отсылками, что приводит к неточным переводам. Кроме того, сбор и анализ огромных объемов лингвистических данных, особенно в контексте онлайн-общения, поднимает вопросы о конфиденциальности, безопасности и этике.

С появлением искусственного интеллекта и машинного обучения традиционный ландшафт лингвистики претерпевает значительные изменения. Разработка моделей, которые смогут понимать, интерпретировать и генерировать человеческий язык, является постоянной задачей. Это также привело к появлению новых лингвистических областей, таких как компьютерная лингвистика. С появлением искусственного интеллекта и машинного обучения растет спрос на более совершенные алгоритмы обработки естественного языка. Однако это требует более глубокого понимания человеческого языка, и некоторые лингвисты пытаются понять, как интегрировать сложности языка в алгоритмы машинного обучения (Huang & Xu, 2020).

Быстрый взрыв платформ социальных сетей привел к всплеску «нестандартных» и гибридных языков. Понимание этого нового ландшафта и того, как он влияет на лингвистические правила и положения, является захватывающей и важной задачей. По словам Андроутсопулоса (2015), развитие социальных сетей привело к появлению новых форм языка, которые являются «нестандартными» и «гибридными». Он утверждает, что необходимо понять влияние этих новых форм языка на лингвистические

правила и положения. Это представляет собой интересную и серьезную задачу для лингвистов и исследователей в этой области.

Большое количество языков мира находится на грани исчезновения. Сохранение и возрождение этих языков, а также документирование их словарей и грамматических структур до того, как они исчезнут, является неотложной задачей. Важность сохранения языков, находящихся под угрозой исчезновения, невозможно переоценить. Как заметил лингвист К. Дэвид Харрисон: «Когда язык умирает, уникальное окно в человеческое познание, социализацию и культурную идентичность закрывается навсегда» (Harrison, 2007). Поддерживая усилия по документированию и возрождению этих языков, мы можем помочь гарантировать, что это богатое разнообразие сохранится для будущих поколений.

Поскольку многоязычие становится нормой во многих частях мира, лингвисты сталкиваются с проблемой понимания и определения «транслингвизма» – практики переключения между языками в рамках одного разговора. Транслингвизация — это не просто переключение кода, поскольку оно предполагает использование множества лингвистических ресурсов для построения значения, а не просто замену слов из одного языка в другой (García & Li, 2014). Эта практика подчеркивает сложные взаимоотношения между языками и изменчивость языковой идентичности в многоязычных сообществах.

Растет интерес к пониманию того, как наш мозг обрабатывает речь, включая нейробиологические основы овладения, понимания и воспроизведения языка. Однако отсутствие надежных моделей и методов представляет собой проблему. Гродзинский и Санти (2008) отметили, что существует ряд различных подходов к исследованию нейробиологических основ языка. Некоторые исследователи используют методы визуализации мозга для изучения активности мозга во время языковых задач, в то время как другие исследуют генетические и молекулярные механизмы, участвующие в развитии речи. Однако для достижения значительного прогресса необходимы более надежные модели и методы, которые помогут исследователям понять сложную природу языковой обработки в мозге.

Диалекты представляют языковое разнообразие внутри языка. Выявление, классификация и понимание социокультурных последствий различных диалектов является сложной задачей. Это особенно актуально в крупных, многоязычных и мультикультурных странах. По мнению Лабова (2013), диалекты — это не просто вариации стандартного языка, а местные разновидности, которые могут демонстрировать различия в произношении, словарном запасе и грамматике. Эти различия часто отражают социальные и культурные факторы, такие как регион, этническая принадлежность или социально-экономический статус. Поэтому понимание диалектов требует не только лингвистического анализа, но и культурного и исторического контекста.

Речевые и языковые расстройства затрагивают значительный процент населения мира. Понимание, диагностика и лечение этих состояний, особенно у многоязычных людей, продолжают оставаться сложной областью исследований. Диагностика и лечение речевых и языковых расстройств, особенно у многоязычных людей, является сложной областью исследований. Текущие исследования показывают, что необходима комплексная оценка, учитывающая языковой и культурный фон человека (Gildersleeve-Neumann, 2016). Кроме того, была доказана эффективность вмешательств, учитывающих культурные особенности и адаптированных к потребностям человека (Васкес и Пенья, 2012).

Сбор, управление и анализ огромных наборов данных о языках, особенно о недоминирующих языках, остается сложной задачей. Одной из проблем корпусной лингвистики является потребность в специализированном программном обеспечении и инструментах для управления и анализа больших наборов данных. Как отмечают Файзи, Нур и Ахмад (2018), многие программы, используемые в корпусной лингвистике, были разработаны для работы с доминирующими языками, такими как английский, и могут не подходить для работы с наборами данных на недоминирующих языках. Это может затруднить точную обработку и анализ языковых данных на этих языках, которые могут иметь структуру и соглашения, отличные от доминирующих языков.

Для эффективного решения каждой из этих проблем требуется междисциплинарный подход и обширные исследования. Мы надеемся, что благодаря постоянному развитию технологий будут разработаны более надежные инструменты и методы для решения этих сложностей. Это захватывающая эпоха для лингвистики, полная возможностей революционизировать наше понимание языка и коммуникации.

В заключение отметим, что современная лингвистика решает множество сложных проблем, обусловленных меняющейся природой языка, глобализацией, технологиями и постоянно растущей интеграцией лингвистики с такими областями, как психология, искусственный интеллект и нейробиология. Такие проблемы, как изменение и утрата языков, многоязычие, язык и познание, а также технологические последствия, представляют собой насущную проблему. Несмотря на сложную задачу, которую они представляют, они также предоставляют огромные возможности для развития, инноваций и лучшего понимания языка, и общения. Благодаря постоянному развитию технологий и продолжающейся эволюции междисциплинарных подходов лингвисты хорошо подготовлены к решению этих сложностей, стремясь найти эффективные решения для улучшения нашего глобального лингвистического ландшафта.

ТАКОМИЛЛАШТИРИЛГАН СЎТАЯНЧГИЧ ҚУРИЛМАНИНГ ТЕХНОЛОГИК ИШ ЖАРАЁНИ

Аннотация. Қобиқли сўтанинг физик-механик хоссаларини ўрганиш мақсадида Республикамизда етиштирилаётган маккажўхорининг навлари ҳақида маълумот тўпланди. Ҳозирги даврга келиб, мамлакатимизда экин учун маккажўхорининг йигирма бир турдаги навлари тавсия этилган. Улардан уч тури ўрташиар, етти тури кечшиар ва ўн бир тури эрташиар навлардир.

Калит сўзлар: Қобиқли сўталар, физик-механик хоссалар, ўлчам-масса, навлар, сўталарнинг таркиби, қобиқлар сони, массаси, қобиқларнинг узунлиги, эни ва қалинлиги, вариация коэффицентлари.

MORPHOLOGICAL COMPOSITION AND DIMENSION-MASS INDICATORS OF SHELLED STUFF

Annotation. In order to study the physico-mechanical properties of husked corn, information was collected about the varieties of corn grown in our Republic. To date, twenty one varieties of corn have been recommended for planting in our country. Among them, three types are medium-ripening, seven types are late-ripening and eleven types are early-ripening varieties.

Keywords: Shelled beans, physical-mechanical properties, size-mass, varieties, composition of pods, number of shells, mass, length, width and thickness of shells, coefficients of variation.

Такомиллаштирилган сўтаянчгич қурилманинг технологик иш жараёни қуйидаги усулда амалга оширилади (1-расм): қобиқли сўталар

сўтаянчгичнинг қабул қилиш бункери 1 орқали бошланғич қисмида сидирадиган планкалар 2 га эга бўлган янчиш барабани 3 га ташлаб берилади. Янчиш барабани 3 қобикли сўталарни сидирадиган планкалар 2 билан барабан 3 ва унинг декаси 6 орасидаги ишчи тирқишга олиб киради.

- 1 – қабул қилиш бункери; 2 – сидирадиган планка; 3 – янчиш барабани; 4 – электр двигател; 5 – дон шнеги; 6 – барабан декаси; 7 – тўқмоксимон янчгич ишчи қисм;
 8 – ғилдирак; 9 – дон шнеги тағлиги; 10 – нов; 11 – ғалвир; 12 – дон юклаш транспортери; 13 – ўзак ва қобик чиқиш туйнуги; 14 – ирғитадиган планкалар

1-расм. Такмиллаштирилган сўтаянчгичнинг технологик схемаси.

Бу қисмда барабаннинг сидирадиган планкалари сўталарнинг қобикларини титиб беради ва уларни барабаннинг янчиш қисмига ўтказиб юборади. Ишчи ораликда барабан юзасига ўрнатилган тўқмоқли янчгичлар 7 сўталарга механик таъсир бериб, уларни ўқ бўйича ҳаракатлантиради ҳамда бутун янчиш аппарати юзаси бўйлаб янчади. Сўта ўзаклари ва қобиклари планкали ирғитгич 14 ёрдамида чиқиш туйнуги 13 орқали ташқарига чиқади ва ғалвирли мослама 11 устига келиб тушади. Ғалвир юзасида ўзак ва қобикқа қўшилиб чиқаётган дон ғалвир ёрдамида ажратилади ва нов 10 орқали дон шнеги 5 устига қайтариб ташланади. Янчилган донлар дека 6 тешикларидан пастга ўтиб, дон шнегига келиб тушади. Дон шнек орқали юклаш транспортери 12 га етказиб берилади ва у ёрдамида қошларга ёки ташиш воситаларига юкланади. Доннинг ўлчамларидан кичик бўлган майда аралашмалар дон шнегининг тағлиги 9 нинг тешиклари орасидан ажралиб пастга тушади. Сўтаянчгич электр

двигател 4 ёрдамида ёки тракторнинг қувват олиш валидан ҳаракат олиб ишлайди.

THE PROCESS OF CUTTING OF SOD SHELLS IN THE SHIFTING ZONE OF THE IMPROVED DEVICE

Annotation. Based on the theoretical studies, a laboratory stand of the heating device was prepared and experimental studies were carried out in order to study the effect of the heat-absorbing plate heater with a defined surface on the work quality indicators.

Keywords: Shelled beans, physical-mechanical properties, size-mass, varieties, composition of pods, number of shells, mass, length, width and thickness of shells, coefficients of variation.

Мухтарам Президентимиз Шавкат Мирзиёев 2020 йил 29 декабрь куни Олий Мажлисга йўллаган Мурожаатномасида, камбағалликни қискартириш ва қишлоқ аҳолиси даромадларини кўпайтиришда энг тез натижа берадиган омил бу—қишлоқ хўжалигида ҳосилдорлик ва самарадорликни кескин ошириш эканлигини алоҳида таъкидлаб ўтдилар.

Ўтказилган назарий тадқиқотлар асосида аниқланган юзага эга бўлган сидирадиган планкани сўтаянчгичнинг иш сифат кўрсаткичларига

таъсирини ўрганиш мақсадида сўтаянчгич қурилманинг лаборатория стенди 1-расм) тайёрланиб, экспериментал тадқиқотлар ўтказилди.

1-расм. Сўта қобикларини титилиш жараёнини ўрганиш учун лаборатория стенди

Шунингдек, олиб борилган тажрибавий тадқиқотларнинг натижалари таҳлил қилинди.

Ушбу тажрибаларда барабаннинг айланишлар сони 600 айл/мин., сидирадиган планкалар сони 6 донани ташкил этган ҳолда, сидирадиган планка ва дека орасидаги тирқиш 36 мм дан 44 мм гача 2 мм оралиқда ўзгартирилиб, иш сирти тўғри тишли, қия тишли ва рифелли планкалар таққослаб кўрилди.

Тўғри тишли планка ва дека орасидаги тирқиш 36 мм дан 44 мм гача ўзгартирилиб тадқиқ этилганда, планка ва дека орасидаги тирқиш 36, 38 ва 40 мм бўлганда, сўта қобикларининг тўлиқ титилиши, мос равишда, 99,8, 99,3 ва 97,2 фоиз бўлди, янчилган донларнинг миқдори эса 97,0 фоиздан 83,4 фоизга камайди, донларнинг шикастланиши 3,1 фоиздан 1,5 фоизга камайиши аниқланди. Аммо, тирқиш 42 ва 44 мм бўлганда, қобикларнинг титилиши, мос равишда, 96,8 ва 96,2 фоизга, донларнинг янчилиши хар бир ўзгаришда 50,8 ва 24,2 фоизга тушиши кузатилди, донларнинг шикастланиш эса рўй бермади (1-жадвал).

Юқорида келтириб ўтилган тажриба усулидан фойдаланиб, қия тишли планка ҳам тадқиқ этилди. Бунда планка ва дека орасидаги тирқиш 36 мм дан 44 мм гача бўлган оралиқда ўзгартирилганда, тирқишнинг 36 мм ўлчамида сўта қобикларининг титилиш даражаси 100 фоиз, 38 мм ўлчамида эса бироз камайиб 99,6 фоизни ташкил этиши аниқланди.

1-жадвал Сидирадиган планка иш юзаси турининг қобикларни титилиш зонасидаги иш сифат кўрсаткичларига таъсири

Иш сифат кўрсаткичлари	Барабан декаси ва планкалар орасидаги тирқиш, мм														
	Тўғри тишли					Қия тишли					Рифелли				
	36	38	40	42	44	36	38	40	42	44	36	38	40	42	44
Қобикларнинг титилиши, %	99,8	99,3	97,2	96,8	96,2	100	99,6	98,3	97,8	96,7	100	100	99,4	98,7	98,0

Янчилган дон, %	97,0	92,4	83,4	50,8	24,2	97,0	91,8	72,3	28,9	15,0	93,8	97,4	88,1	27,1	25,9
Дон синиши, %	3,1	2,2	1,5	0	0	2,8	0	0	0	0	7,7	2,6	0	0	0

Ушбу ҳолатларда янчилган доннинг миқдори, мос равишда, 97,0 ва 91,8 фоизни ташкил этди. Донларнинг шикастланиши эса тирқиш 36 мм ростланганда 2,8 фоизни ташкил этган бўлса, тирқиш 38 мм ва ундан кейин 40, 42 ва 44 мм бўлганда умуман кузатилмади.

Қия тишли планка ва дека орасидаги тирқиш 40 мм, 42 мм ва 44 мм ораликда ростланганда, қобиқларнинг титилиши камайиб бориб, мос равишда, 98,3 фоиз, 97, 8 фоиз ва 96,7 фоизга тенг бўлган бўлса, донларнинг янчилиши худди шу ростланишларда 72,3, 28,9 ва 15,0 фоизни ташкил этди.

Рифелли планка ва дека орасидаги тирқиш 36 мм дан 44 мм гача ўзгартирилиб тадқиқ этилганда, планка ва дека орасидаги тирқиш 36 ва 38 мм бўлганда, сўта қобиқлари тўлиқ титилиши, донларнинг янчилиши 93,8 фоиздан 97,4 фоизга ортиши, шикастланиши эса 7,7 фоиздан 2,6 фоизга камайиши аниқланди. Аммо, тирқиш 40, 42 ва 44 мм бўлганда, қобиқларнинг титилиши 98,0 фоизга, донларнинг янчилиши 25,9 фоизга тушиши кузатилди, донларнинг шикастланиш эса рўй бермади.

Олинган натижаларнинг таҳлили шуни кўрсатадики, тўғри тишли ва рифелли планкаларда сўта қобиқларини титиш ва донларни янчиб, ажратиш қобилияти қия тишли сидирадиган планкаларга нисбатан юқори бўлсада, уларда донларнинг шикастланиши қия тишли планкага нисбатан кўпроқни ташкил этади. Қия тишли сидирадиган планка ва дека орасидаги тирқиш 38-40 мм бўлганда сўталарнинг қобиқлари яхши титилишига, донларнинг нисбатан яхши янчилишига ва энг асосийси донларни умуман шикастланмаслигига эришилди.

TRANSPOSITION CHARACTERISTICS OF LINGUISTIC ELEMENTS IN THE FORMATION OF NEW WORDS AND MEANING IN THE SPANISH LEXICON

Abstract. This article talks about the importance of the formation, development and improvement of communicative competence and lexical competence in teaching new languages, also practical and theoretical problems of communicative competence.

Key words: Lexical competence, communicative competence, competence, vocabulary, word formation, language elements, lexical unit, linguistic dictionary.

Хар қандай тилни ўргатиш ва ўрганишда лексик компетенцияни шакллантириш жараёни катта қизиқиш ҳамда аҳамият касб этиб қўшимча изланишларни талаб қилади, чунки профессор Павлованинг сўзи билан айтганда "айнан лексик захирани бойитиш, ривожлантириш ва такомиллаштириш тингловчиларнинг чет тилини билиш малакаларининг барча босқичларида асос бўлиб хизмат қилади"¹²³

123 Павлова, Л.П. Формирование иноязычной лексической компетенции у студентов экономического вуза / Л.П. Павлова // Инновационные образовательные технологии. – 2011. – №2. – С. 44-50.

Ишимизнинг коммуникатив компетенциянинг таркибий қисми сифатида лексик компетенция борасида фикр ва мулоҳазалар билан давом эттирамиз.

Э.Г.Азимовнинг таъкидлашича, **Лексик компетенция** ўзлаштирилган тил белгилари билан кўп сонли гаплар ва уларнинг бирикмаларини тушунишни ва ифода қилишни англатади. Бу ўрганилаётган тилнинг фонетик, морфемик, лексик, синтактик қатламлари тўғрисида ахборотга эга бўлишни назарда тутади.¹²⁴ Яни талаба тилнинг тизими ҳамда элементлари ҳақида етарлича билимга эга бўлса лексик компетенцияни яхши эгаллайди. Шунингдек, **Лексик компетенция** деганда икки тилдаги лексик билимларни ҳажмини таққослай олиш, сўз маъносининг тузилишини аниқлай олиш ва сўздаги миллий маънони англай олиш ва лексик билимлар, малакалар, кўникмаларга асосланган билимлар назарда тутилади.¹²⁵ Шунингдек Е.Н.Соловованинг фикрича “Лексик компетенция бу лексик элементларни ўзида жамлаган тилнинг луғат таркибини билиш ва уни нутқда ишлата олиш қобилиятидир, лексик элементлар деганда сўз бирикмалари, турғун сўз бирикмалари (фразали иборали феъллар), сўз ясовчи лингвистик элементлар (кўшимчалар), мураккаб предлоглар назарда тутилади.¹²⁶ Лексик компетенцияни етарли даражада ўзлаштириш нутқ фаолиятининг барча турларида ижобий самара беради. Айнан шунинг учун ҳам Чет тилини ўргатишда асосий эътибор асосан лексикага қаратилади. **Лексик компетенция** продуктив ва рецептив турдаги лексик малакаларни такомиллаштириш асносида шакилланади, ривожланади ҳамда такомиллашади.

Бизнинг назаримизда испан тили лексикасини нутқда ишлатишда транспозиция жараёнини тавсифловчи ҳамда функционаллик хусусиятига эга лингвистик элементлар (аффикслар) ни билиш алоҳида аҳамият касб этади бинобарин лексикани ўргатиш бу сўз ишлата олишни эгаллашдир. Сўзни ишлатиш бу фақатгина сўзларни билишни эмас балки улардан ўз нутқида фойдалана олиш ва бошқаларнинг ҳам нутқида уни тушуна олишни талаб қилади. Бизнинг вазифамиз лексикани талабаларнинг хотирасида узок вақтга қолишини, зарур пайтда улардан фойдалана олишни, сўзни нутқ фаолиятига тўғри кирита олишни таъминлашдир.

Олийгоҳлардан бакалавр талабалар ўқув соатлари ва режаларидан келиб чиққан ҳолда чет тилини билиши учун маълум бир сондаги сўз билишлари керак. Шунинг учун лексикани танлаш мураккаб илмий жараён ҳисобланади ва танлашнинг самарали усуллари талаб қилади. Лексик материал ҳажми учун аниқ талаблар мавжуд. Олий ўқув юрти дастурига

126 Соловова Е.Н. Методика обучения иностранным языкам: базовый курс лекций: Пособие для студентов пед. вузов и учителей / 2-е изд. - М.: Просвещение, 2003. - 145 с.

мувофиқ фаол лексик минимум ўқишнинг бошидан охиригача маълум бир сондаги лексик бирликни ташкил этади. Мана шу миқдор CEFR талабларига (B2,C1) мос келади ва чет тилда эркин мулоқот қилиш имконини беради. Шундай қилиб бир лексик бирликни ўзлаштириш бир неча бўлимлардан ташкил топади:

- а) эшитганда лексик бирликни тушуниш ва уни талаффуз эта олиш,
- б) лексик бирликни ёзув шаклини билиш ва уни ёза олиш,
- в) лексик бирликни морфологиясини тўғри ифодалай билиш,
- г) лексик бирликни бир неча маъноларини билиш ва контекстга мослаб тўғри ишлата олиш,
- д) грамматик категориясини билиш,
- е) лексик бирликни синтактик туза олишини билиш,
- з) лексик бирликларни бирикмаларда ишлата олиш,
- и) тез-тез ишлатилиш соҳасини билиш,
- к) лексик бирлик қандай маданий ахборотни етказа олаётганлигини билиш,
- л) бошқа тилларда унинг эквивалентларини билиш.

Хулоса қиладиган бўлсак бу руйхат **Лексик компетенциянинг** асосий тамойилларини ўз ичига олади. Virginia De, Alba Quiñonesлар **Лексик компетенцияга** “el conocimiento del vocabulario de una lengua y la capacidad para utilizarlo” (2002:108)¹²⁷ дея таъриф берадилар. Хулоса қилиб айтадиган бўлсак **Лексик компетенцияни** ўргатишда лингвистик луғатларнинг асосий турлари, улардаги сўзнинг маъно тузулиши, тилнинг актив ва пассив лексикаси, янги ўзлаштирилган сўзлар идиомаларнинг таржимаси, янги сўзлар ясалиши ва маъно хосил бўлишида лингвистик элеменларнинг транспозицион, функционал, мутацион, хусусиятлари ва бошқа жиҳатлар жуда муҳим ҳисобланади.

ВОПРОСЫ ЭФФЕКТИВНОГО ИСПОЛЬЗОВАНИЯ ТРАНСГРАНИЧНЫХ РЕКРЕАЦИОННО-ТУРИСТСКИХ РЕСУРСОВ СРЕДНЕЙ АЗИИ

Аннотация. В данной статье анализируются природные, экономические и историко-культурные предпосылки развития в Средней Азии трансграничной индустрии отдыха и туризма. При этом выделяются ключевые рекреационно-ресурсные регионы трансграничного характера. Показаны преимущества, которые способно обеспечить развитие отдыха и туризма на межгосударственной основе, вместе с тем, обозначены ключевые проблемы, решение которых имеет определяющее значение для интенсификации трансграничного туризма в Средней Азии.

Ключевые слова: экскурсия, туристический объект, минеральные воды, рекреационный объект, экзотика, дома отдыха и санатории.

ISSUES OF EFFECTIVE USE OF CROSS-BOUNDARY RECREATIONAL AND TOURIST RESOURCES OF CENTRAL ASIA

Annotation. This article analyzes the natural, economic, historical and cultural prerequisites for the development of the cross-border recreation and tourism industry in Central Asia. At the same time, key recreational and resource regions of a transboundary nature are identified. The advantages that the development of recreation and tourism on an interstate basis can provide are shown, at the same time, key problems are identified, the solution of which is of

decisive importance for the intensification of cross-border tourism in Central Asia.

Key words: travelling, excursion object, mineral water, recreation object, exotic, health resorts and sanatoriums.

Введение. В последние годы расширились рамки географических исследований, ведутся научные исследования по проблемам социальных направлений, таких как медицинская география, рекреационная география, география туризма. Географические исследования в этом направлении важны, поскольку направлены на решение актуальных сегодня социальных проблем [7].

В условиях перехода стран Средней Азии на рыночные отношения, качественного преобразования структуры их национальных экономик, на пути к обретению ими достойного места в системе мирохозяйственных связей большое значение имеет интенсификация рекреации и туризма в регионе [5]. Важной же особенностью рекреационно-географического потенциала Среднеазиатского региона является наличие многообразных трансграничных ресурсов отдыха и туризма.

Основная часть. В числе основных ресурсно-инфраструктурных предпосылок развития трансграничной индустрии рекреации и туризма в пределах исследуемой территории считаем обоснованным выделить следующие географические факторы.

1. Наличие крупных природно-географических целостностей трансграничного характера, в частности, межгорных котловин, речных долин и бассейнов, дельтовых равнин, обладающих ярко выраженными чертами ландшафтного разнообразия и внутреннего естественноисторического единства территориальной организации [6].

2. Пространственная упорядоченная совокупность сопряжённых друг с другом типов регионального природопользования и культурных ландшафтов – зон пустынно-пастбищного животноводства, орошаемого и богарного земледелия, горно-пастбищного животноводства – в пределах трансграничных природно-хозяйственных геокомплексов.

3. Большое число археологических, историко-культурных и религиозных памятников на соседствующих территориях стран региона, посещение которых способно создать более полное представление о богатстве многовековой истории народов Средней Азии, чем знакомство с соответствующими достопримечательностями в пределах какого-либо одного государства.

4. Пестрота и, одновременно, сложное историко-региональное единство материальных и духовных культур родственных этносов Средней Азии, что предопределяет её богатство трансграничными ресурсами развития этнокультурного туризма.

5. Немаловажной предпосылкой интенсификации внутри региональных трансграничных туристских потоков является наличие многочисленных деловых, семейных других контактов личного характера среди населения сопредельных государств региона [2]. Эти обстоятельства могут считаться потенциально весьма мощным двигателем развития соответствующих разновидностей трансграничного туризма в Средней Азии.

6. Анализируемая территория располагает разветвлённой системой международных путей сообщений, связывающих пограничные страны и их отдельные регионы, что создаёт хорошие инфраструктурные предпосылки для становления трансграничной рекреационно-туристской индустрии.

С учётом вышеназванных факторов, нам представляется, что целостные трансграничные географические образования Средней Азии насыщены рекреационно-туристскими ресурсами, более интересны и аттрактивны в данном отношении по сравнению с их отдельными частями, расположенными в пределах отдельных государств региона [1].

Включая, в качестве двух крупнейших трансграничных рекреационно-туристских регионов Средней Азии мы рассматриваем, долину Зарафшана и дельту низовья Амударьи, обладающих значительными по величине и разнообразными по структуре ресурсами отдыха и туризма.

Долина Зарафшана расположена в центральной части Туранской природно-географической провинции Средней Азии. Она состоит из трёх крупных тектонических и ландшафтно-географических подразделений – верхней долины, административно находящейся в Согдийской области Таджикистана, средней долины, охватывающая сопредельные территории Самаркандской и Навоийской областей Узбекистана, и низовьев (Бухарской и Каракульский дельта), приходящихся, главным образом, на территорию Бухарской области Узбекистана. Каждая из этих региональных структур обладает крупным и своеобразным рекреационно-туристским потенциалом, как естественного, так и историко-культурного характера. На наш взгляд, соединение соответствующих возможностей этих районов в рамках единого территориального рекреационно-туристского комплекса поднимает аттрактивность Зеравшанского бассейна на качественно иной уровень [8].

Практически всё пространство рассматриваемой территории, за исключением, разве что, самых верховий реки, обладает богатой и неповторимой историей, являясь одной из колыбелей цивилизации Среднеазиатских народов. Нам представляется необходимым разработать специальную туристскую программу, способную отразить соответствующий историко-культурный потенциал Зарафшанского пояса. Туристский маршрут, охватывающий исторические и современные города региона, при этом следует протянуть от Пенджикента до Каракуля и Алата, непременно включив в него Ургут, Самарканд, Пайарык, Челек,

Каттакурган, Навои, Гиждуван, Бухару. Такое турне отразит богатое культурное наследие Зеравшанского бассейна во всём его географическом и историческом (согдийская культура, памятники эпох Саманидов, Тимуридов, различных династий бухарских правителей) многообразии. Своеобразные впечатления у путешественников, безусловно, способно составить разнообразие архитектурного и инженерного облика городов, материальных и духовных традиций населения в связи с дифференциацией природной организации территории [9].

Целесообразным представляется в рамках единой программы путешествия сочетать изучение историко-культурных достопримечательностей с посещением привлекательных в ландшафтно-экологическом и рекреационно-эстетическом плане географических объектов, которыми весьма насыщена характеризуемая территория, особенно верховья реки в пределах Республики Таджикистан (долина Матчи, озеро Искандеркуль и т.п.).

Значительны в описываемом регионе и ресурсы развития лечебного туризма. Достаточно назвать в этой связи родники и целебные источники окрестностей Аманкутана в Самаркандской области, санаторий Ситораи-Мохи-Хоса в Бухарской области, обладающий уникальными климатобальнеологическими условиями для лечения заболеваний почек, чтобы создать представление о разнообразном потенциале соответствующего класса рекреационно-туристских ресурсов Зеравшанского бассейна.

Наконец, Зеравшанский бассейн располагает многочисленными культурными объектами, почитаемыми в качестве религиозных святынь, например, медресе и мечети Самарканда, Бухары, Гиждувана, Пенджикента и, конечно же, мавзолеем одного из величайших в истории собирателей хадисов, выдающегося теолога Имама аль-Бухары в городе Челеке Самаркандской области.

Большим богатством многообразных рекреационно-туристских ресурсов располагает ещё одна крупная трансграничная территориальная система Средней Азии - Низовья Амударьи. Этот регион объединяет пространство современных и древних (Хорезмский и Сарыкамьшской) дельт Амударьи в административных границах Республики Каракалпакстан, Хорезмской области Узбекистана и Дашогузской области Туркменистана. Он, так же, как и рассмотренные выше ареалы, обладает привлекательностью для туристов с самых разных позиций – ландшафтно-географических, историко-архитектурных, этнокультурных, экологических.

Дельтовая равнина Амударьи представляет собой целостное естественно-географическое образование, характеризующееся определённым образом упорядоченной внутренней дифференциацией геоэкосистем, образуя весьма интересный с точки зрения экотуризма объект. Специфику экотуристическим свойствам данного региона придаёт

сложная геоэкологическая обстановка, сложившаяся вследствие нерациональности природопользования, как на локальном, так и на регионально-бассейновом уровне. При этом знакомство путешественников с этими особенностями Низовьев Амударьи может иметь большое просветительское и гуманитарное значение. С учётом этого экотуристские маршруты видится возможным и разумным использовать для привлечения инвестиций в экономику этого экологически неблагоприятного региона, в частности, путём создания специальных экскурсионных зон и ареалов как сфер приложения труда и повышения занятости местного населения.

Вместе с тем, пространственная близость таких историко-культурных центров, как Хива, Ургенч, Беруни, Турткуль, Дашогуз и других городов и сельских поселений определяет насыщенность Нижнеамударьинского региона историческими достопримечательностями, также имеющими значительную привлекательность для туристов. На территории всего рассматриваемого региона находится множество археологических памятников, которые также могут считаться объектами трансграничного туризма. Наконец, соседство и взаимодействие материальных и духовные культур этнотерриториальных групп узбекского, каракалпакского и туркменского народов, помимо прочих атрибутов рассматриваемого региона, определяет его рекреационно-туристскую аттрактивность.

В целом всю Среднюю Азию можно рассматривать как единую макро-территориальную рекреационно-туристскую целостность, обозначенные же выше региональные геокомплексы при таком подходе выступают в качестве звеньев её опорного рекреационно-туристского каркаса.

Заключение. На основании вышеизложенного можно сказать, что в нашей стране, помимо использования возможностей рекреационно-туристских ресурсов, а также определения основных задач по их развитию, в области рационального использования рекреационно-туристских ресурсов регионов, знакомя иностранных туристов не только с ландшафтом, богатой и уникальной природой нашей Родины, но и народы, призвана связать узы дружбы между собой.

ОРГАНИЗАЦИЯ ПРОФЕССИОНАЛЬНОЙ ПОДГОТОВКИ БЕЗРАБОТНЫХ ГРАЖДАН В УЗБЕКИСТАНЕ

Аннотация. В данной статье рассматриваются влияние глобальных изменений на рынок труда и уровень безработицы, теоретически исследованы вопросы обучения безработных современным профессиям, проанализированы уровень безработицы в республике, изучены меры профессиональной подготовки и трудоустройства безработных.

Ключевые слова: Рынок труда, безработица, обучение, профессиональная подготовка, конкурентоспособность, занятость, трудоустройство.

ORGANIZATION OF VOCATIONAL TRAINING FOR UNEMPLOYED CITIZENS IN UZBEKISTAN

Abstract. This article examines the impact of global changes on the labor market and unemployment rates. The issues of training the unemployed in modern professions were theoretically studied, the unemployment rate in the republic was analyzed, and measures of vocational training and employment of the unemployed were studied.

Key words: Labor market, unemployment, education, vocational training, competitiveness, employment.

Введение

Одним из наиболее эффективных направлений работы по снижению напряженности на рынке труда и обеспечению социально-экономической стабильности в регионах является переподготовка безработного населения при государственной поддержке и повышение их конкурентоспособности на основе организации дополнительного современного профессионального образования.

Обзор литературы.

В зарубежной и отечественной науке и практике накоплен богатый теоретический потенциал и большой практический опыт реализации различных мер по снижению безработицы.

По утверждению академика Абдурахманова К.Х., безработица – как социально-экономическое явление – это отсутствие занятости в производстве товаров и услуг определенной экономически активной части населения, способной и желающей работать [3].

Методология исследования

В научных исследованиях использовались различные научные методы изучения экономической реальности и процессов: диалектический подход к анализу экономических систем, сравнительный и систематический анализ, базовые расчеты и методы статистической группировки. В качестве информационной базы использованы данные Государственного агентства по статистике при Президенте Республики Узбекистан, Министерства занятости и сокращения бедности Республики Узбекистан, а также материалы Интернет-сайтов ряда средств массовой информации.

Результаты анализа

Причина столь резкого роста уровня безработицы связана с совершенствованием нормативно правовых подходов к определению уровня безработицы и тем, что расчеты производятся на основе требований международных стандартов. Однако стоит отметить, что уровень безработицы за последние 5 лет был намного выше естественного уровня. Конечно, наблюдается относительное снижение данного показателя в 2022 году, но следует отметить, что данная проблема по-прежнему наносит определенный ущерб экономике республики. Если рассматривать регионы, то самый высокий показатель – 9,3% зафиксирован в Бухарской, Джизакской, Самаркандской, Сырдарьинской и Сурхандарьинской областях [5].

Рис. 1. Динамика уровня безработицы в Республике Узбекистан, %

Источник: Составлено автором по данным Агентства по статистике при Президенте Республики Узбекистан. (www.stat.uz)

В республике обучение и переподготовка безработных

осуществляется в государственных Моноцентрах „Ишга мархамат“ (Добропожаловать на работу) и в центрах профессионального обучения при министерстве Занятости и сокращения бедности Республики Узбекистан.

Профессиональная подготовка безработных граждан и незанятого населения включает в себя следующие виды обучения:

профессиональное образование с целью быстрого приобретения навыков, необходимых обучающимся для выполнения конкретной работы или группы работ;

обучение работников в целях обновления знаний, навыков и квалификации, повышения их профессионального мастерства и повышения конкурентоспособности по действующей профессии, а также изучения новой техники, технологий и других навыков, связанных с профилем профессиональной деятельности.

Таким образом, с помощью местных органов труда республики реализуются мероприятия по координации спроса и предложения на рынке труда, по подготовке безработных граждан к различным современным профессиям, а также по их трудоустройству (рис. 2).

Рис. 2. Численность безработных и направленных на профессиональное обучение в Республике Узбекистан

Источник: авторская разработка на основе данных Агентства по статистике при Президенте Республики Узбекистан и Министерства занятости и сокращения бедности Республики Узбекистан.

Как видно из приведенных данных, численность безработных имеет тенденцию к изменению в 2018-2022 годах. В 2019 году количество безработных в республике сократилось на 33,3 тыс. человек (2,49 %), однако ситуация с пандемией COVID-19 оказала негативное воздействие на рынок труда и в 2020 году по сравнению с 2019 годом численность безработных увеличилось на 225,7 тыс. человек (14,45 %). В 2021-2022 годах количество безработных сократилось на 8,27% и 8,19% соответственно. В 2022 году общая численность безработных в стране достиг 1332700 человек. Так же, на анализируемый период динамика численности лиц, направленных на профессиональное обучение, имела тенденцию к росту.

Конечно, перед гражданами, обучающимися современным профессиям, стоит еще одна важная задача: найти работу и получать доход. Не всем подготовленным безработным и частично занятым гражданам это удаётся. Потому что имеют место еще и показатели конкурентоспособности на рынке труда (рисунок 3).

Рис. 3. Численность направленных на профессиональное обучение и трудоустроенных безработных в Республике Узбекистан, чел.

Источник: авторская разработка на основе данных Министерства занятости и сокращения бедности Республики Узбекистан.

Выводы

В процессе исследования изучаемой проблемы установлено, что численность нуждающихся в трудоустройстве в республике все еще достаточно велико. При подготовке безработных к современным профессиям необходимо изучить требования работодателей и усовершенствовать деятельность моноцентра «Ишга Мархамат» исходя из потребностей работодателей, реформировать программы обучения центров профессионального обучения, реформирование учебных программ региональных центров профессионального обучения, подведомственных.

ЭЛЕКТР ЭНЕРГИЯСИ ПАРАМЕТРЛАРИНИНГ ЭЛЕКТРОМАГНИТ ЎЗГАРТГИЧЛАРИ

Аннотация. Электромеханик ўзгартгичларнинг физик асоси – ўлчанаётган тўқнинг ёрдамчи магнит майдонлари ёки ферромагнит массалар билан куч ўзаро таъсирига асосланган. Улар конструкциясининг соддалиги, юқори ишончлилик, мутлақ автономлик, кўп чегаралиликни амалга ошириш, доимий, ўзгарувчан ва импульси тоқларни ўлчашишмконияти каби қатор афзалликларга эга. Шунинг учун ҳозирги вақтда 10 дан 5000 А гача тўқларда ишлайдиган саноат ЭМТЎларнинг кўпчилиги электромеханик ўлчаши механизми асосида тайёрланади.

Калит сўзлар: Тўқ трансформаторлари. Бир ва уч фазали бирламчи тўқларни тўрт элементли датчиклари.

ELECTROMAGNETIC CONVERTERS OF ELECTRICAL ENERGY PARAMETERS

Abstract. The physical basis of electromechanical transducers is based on the force interaction of the measured current with auxiliary magnetic fields or ferromagnetic masses. They have a number of advantages, such as the simplicity of their construction, high reliability, absolute autonomy, the implementation of multiple limits, the ability to measure direct, alternating and impulse currents. Therefore, most of the industrial EMTOs operating at currents from 10 to 5000 A are made on the basis of an electromechanical measuring mechanism.

Key words: Current transformers. Four-element sensors of single and three-phase primary currents.

Электр таъминоти тизимининг комбинациялаштирилган бошқарув тизимларида қўлланиладиган классик бирламчи тўқ ўзгартгичларининг ишлаш тамойилларини батафсилроқ таҳлил қиламиз.

Тўқ трансформаторлари. Ушбу тур датчик – тўқ трансформаторида учта ўзгартириш элементлари мавжуд: Ҳозирги вақтда классик тўқ ўзгартиргичлари иккиламчи ўрамлари чиқувчи тўқларининг энг кўп қўлланиладиган қийматлари – 1 ва 5 А.

Трансформаторларнинг номинал тўк (I_n), номинал кучланиш (U_n), истеъмолчининг юкмасига боғлиқ бўлган аниқлик даражасига қараб қабул қилинади ҳамда электродинамик ва термик турғунлигига ($K_{дин}$ ва K_T) кўра текширилиб кўрилади. Электродинамик чидамлик куйидаги шарт бажарилсагина содир бўлади:

$$K_{дин} \geq \frac{i_y}{\sqrt{2} \cdot I_{H1}} \quad \text{еки} \quad K_{дин} \cdot \sqrt{2} \cdot I_{H1} \geq i_y,$$

бу ерда $K_{дин}$ - Трансформаторлари учун каталогларда келтирилган бўлади;

I_n -тўк трансформаторининг (ўлчов трансформаторлари) бирламчи чулғамининг номинал токи. Тўк трансформаторларининг термик бардошлик қарралиги каталогларда бир дақиқа давомийлик учун берилади

$$K_t \geq \frac{I_k \cdot \sqrt{t_k}}{I_{H1}} \quad \text{еки} \quad (I_{H1} \cdot K_t)^2 \geq I_k^2 \cdot t_k,$$

Электр таъминоти тизими тўқлари ва қувватини бошқариш замонавий электрон ва микропроцессорли қурилмалари талабларини қониқтирмайди. Чунки бунда юкламанинг электр қуввати бир неча юз вольт-амперга етади, бу электр таъминоти тизимида қўшимча мос элементлар ва қурилмалар чиқишига оралиқ ўзгартирувчи трансформаторлар сифатида уланиш заруратини талаб этади.

2-расм. Классик тўк трансформатори. 1 – магнит ўзак, 2 - иккиламчи чулғам - w_2 , 3 –бирламчи ток ўтказгич-бирламчи чулғам - w_1 .

Бир ва уч фазали бирламчи тўқларни тўрт элементли датчиклари. Профессор В. Коваленков яратган бир фазали тўрт элементли магнит бошқарилувчи контактининг-датчиги (геркон) асосий элементлари 3 – расмда келтирилган. Бир фазали тўрт элементли бирламчи ток датчигида 4 - тўк ўтказгич - бирламчи чулғамдан тўк оқиб ўтганда 1 – қўзғалувчи контакт

2 – қўзғалмас контактга уланади, тўк оқиши тўхтаганда 1 – контакт 2 - контактдан узилади.

3-расм. Профессор В. Коваленковнинг магнит бошқарилувчи контактнинг асосий элементлари: 1-қўзғалмас контакт, 2-қўзғалувчан контакт, 3-магнит ўзак, 4-тўк ўтказгич - бирламчи чулғам, 5-изоляция.

Геркон кўринишидаги тўрт элементли датчикда ёрдамчи – изоляцияловчи материал сифатида 5- изоляциядан фойдаланилади.

Тўкнинг ўзгариши аниқлигига, тўк ўзгартиргичлар синфи талабларига келсак, улар жуда хилма-хил. Ўзгаришлар хатоликлари 0,1...0,5 % дан ошмаслиги керак, масалан, электр энергия истеъмолини ҳисобга олиш ва назорат қилишда, электр таъминоти тизими электр қурилмалари синовларида. Электр таъминоти тизимлари электр қурилмалари тезкор назорати ва ҳимоясида электр автоматика элементлари ва қурилмалари аниқлиги жуда юқори бўлиши зарур.

Уч фазали тўклар ўзгартиргичлари юклама кирувчи сигнали қаршилигининг ўзгаришида амплитудали ва бурчакли хатоликлари кичик бўлиши; ишончли бўлиши, вақт ва ташқи таъсирлар асосий характеристикаси стабиллигини таъминлаши, тез ишлашига амал қилиши керак.

Honeywell компаниясининг ўзгартиргичлари – тўк датчиклари.

1-жадвалда машҳур Honeywell компаниясининг энг кўп қўлланиладиган ўзгартиргичлари – тўк датчиклари берилган бўлиб, улар доимий, ўзгарувчан, импульсли тоқларни ўлчаш ва назорат қилишга ва тескари алоқа тизимини яратиш учун мўлжалланган.

Холл эффекти асосидаги датчиклар ва электромагнитли ТТлар 1-жадвалда кўриниб турганидек, Honeywell компаниясининг резистив ўзгартиргичлари – тўк датчиклари таркибида резистив элемент мавжуд ва у ўлчанаётган занжирга киритилган. Холл эффектига асосланган ўзгартиргичлар магнит тизими тўйинганлиги сабабли катта тоқларни ўлчашда юқори аниқликка эга, аниқлиги чекланган, нархи баланд, қўшимча қувват манбаларини талаб қилади.

Honeywell компанияси тўқ ўзгартиргичларининг техник характеристикалари

Асосий кўрсаткичлар	Резистив ўзгартиргичлар	Холл д-ўзгартиргич	Электромагнит ТТ
Аниқлик	0,02–0,5	0,02–0,5	0,2–1
Ностабил хароратда аниқлик	0,12–1	0,2–1	0,5–3
Катта тўқларни ўлчаш, кА	0.1 гача	20 гача	200 гача
Тўқ ва кучланиш орасидаги силжиш	До 20° гача	0°	0°
Изоляция, Мом	0	1000	1000
Манбаига уланиш	Контактли	Контактсиз	Контактсиз
АС/ДС ўлчаш	АС/ДС	АС/ДС	Фақат АС
Нархи	Паст	Баланд	Ўрта
Истеъмол қуввати, ВА	75	5	1

Шундай қилиб, тўқ ўзгартгичларининг кўплаб турлари мавжуд бўлсада, лекин электр таъминоти тизимида назорат ва бошқарувда ўзгартгичларининг оптимал турини танлаш, уларнинг афзалликлари ва камчиликларини кўриб чиқиш, уларни янги туркумларини ишлаб чиқиш талаб этилади.

Электромагнит тўқ ўзгартгичлар тузилмаларининг дастлабки таҳлили ва уларнинг келтирилган имкониятларини нисбий баҳолаш шуни кўрсатдики, электр энергетика тизимида реактив қувватни бошқариш учун тузилма ва уни тайёрлаш технологиясининг оддийлиги, юқори ишончлилиги ва тежамкорлиги туфайли тўла ток қийматини кучланиш кўринишдаги чиқиш сигналига ўзгартирадиган КФИЭМТЎ (кенгайтирилган функционал имкониятли электромагнит токни кучланишга ўзгартгичлар) энг истиқболли ҳисобланади.

ПЕРСПЕКТИВЫ РАЗВИТИЯ АГРОКЛАСТЕРОВ

Аннотация. В результате либерализации экономики и развития науки и техники в нашей стране в аграрном секторе, как и во всех других отраслях, происходят фундаментальные изменения. Развитие этой сферы рассматривается как важный приоритет государства и общества. Основная причина этого в том, что аграрный сектор является основным сектором, решающим продовольственные проблемы страны и снабжающим предприятия пищевой промышленности сырьем

Ключевые слова: агрокластер, рыночные отношения, аграрный сектор, эффективность в АПК, производство, услуга, стабильность, конкурентоспособный продукт, эффективность, экономическая эффективность

PROSPECTS FOR THE DEVELOPMENT OF AGROCLUSTERS

Abstract. In our country, as a result of the development of the economy, science, and technology, changes are occurring in the agricultural sector, like in all other fields. Developing this sector is seen as a crucial strategic task for the state and society. The main reason for this is that the agricultural sector is considered a fundamental link that not only solves the country's food problems but also provides the food industry with raw materials.

Keywords: agrocluster, market relations, agricultural sector, profitability in agribusiness, production, services, sustainability, competitive products, profitability, economic sustainability.

В последние годы в нашей Республике уделяется большое внимание внедрению кластерной системы, которая доказала свою эффективность в международной практике и имеет важное значение для развития экономики и обеспечения её стабильности, а также для применения рыночных отношений и опыта на практике. Это не только способствует развитию экономики, но и увеличивает экспортный потенциал страны и обеспечивает производство конкурентоспособной качественной продукции.

В этом контексте, на совещании под председательством Президента Шавката Мирзиёева 12 декабря 2023 года было подчеркнуто, что необходимо развивать эту отрасль

В последние годы в нашей Республике уделяется большое внимание внедрению кластерной системы, которая доказала свою эффективность в международной практике и имеет важное значение для развития экономики и обеспечения её стабильности, а также для применения рыночных отношений и опыта на практике. Это не только способствует развитию экономики, но и увеличивает экспортный потенциал страны и обеспечивает производство конкурентоспособной качественной продукции.

В этом контексте, на совещании под председательством Президента Шавката Мирзиёева 12 декабря 2023 года было подчеркнуто, что необходимо развивать эту отрасль и важность её поддержки: «Мы должны всесторонне поддерживать деятельность кластеров. Будущее сельского хозяйства, его экономическая эффективность связаны с кластерами. Кластеры должны стать "локомотивом" стремительного развития аграрного сектора». Президент отметил, что развитие кластерной системы в сельском хозяйстве является приоритетным направлением на сегодняшний день.

Инициированная Президентом кластерная система имеет важное значение для развития агропромышленной интеграции и текстильной промышленности. Учитывая, что в мире лидирует экономика, ориентированная на производство готовой продукции, а не сырья, в нашей стране созданы все возможности для внедрения этого метода. В настоящее время решаются вопросы выделения земель для создаваемых предприятий, подготовки квалифицированных кадров, научно-технических инноваций в производстве. Важнейшим аспектом является повышение производительности, улучшение плодородия земли, а также организация агротехнической и биохимической обработки хлопка на основе научно-практического подхода.

В Республике Узбекистан кластерная система была внедрена в 2017 году. На основании Постановления Президента Республики Узбекистан №ПП-2978 от 19 мая 2017 года «О мерах по созданию современного хлопково-текстильного кластера в Бухарской области» в Бухарской области была создана ООО СП «VST cluster». Согласно Постановлению Президента №ПҚ-3279 от 15 сентября 2017 года «О мерах по созданию современного

хлопково-текстильного кластера в Сырдарьинской области» был образован ООО СП «Bek cluster» в Сырдарьинской области в качестве экспериментальных хлопково-текстильных кластеров. После того как кластерная система показала хорошие результаты, по всей стране были созданы различные кластеры. В настоящее время в республике функционируют хлопково-текстильные, зерновые и плодоовощные кластеры.

В последние годы, как и во всех других сферах, в сельском хозяйстве были намечены масштабные планы. Обеспечение развития в этой области служит удовлетворению непосредственных потребностей населения в продуктах питания, обеспечению промышленных предприятий сырьем и поддержанию их стабильной работы. Поэтому в течение следующих пяти лет перед субъектами аграрного сектора стоят основные задачи: увеличить урожайность минимум в 2 раза, углубить переработку сырья, довести экспорт сектора до 7 миллиардов долларов, повысить занятость и доходы населения.

Кластеры рассматриваются как ключевые и ведущие хозяйствующие субъекты, выступающие в качестве основных драйверов производства. Эта система за короткое время создала условия для значительных изменений. Например, в одной только хлопководческой отрасли переработка волокна увеличилась в 2,5 раза и достигла 100%. Производство пряжи увеличилось в 2 раза, производство готовой продукции — в 3 раза, а экспорт к концу 2022 года достиг 3 миллиардов долларов.

Было создано 125 новых предприятий общей стоимостью 2 миллиарда долларов, охватывающих этапы от переработки хлопкового сырья до производства готовой продукции, а также создано 150 тысяч постоянных рабочих мест. Кластеры ввели более 5000 высокопроизводительных машин, а на 126 тысячах гектаров были внедрены водосберегающие технологии.

В результате организации сельскохозяйственного производства на основе инновационных подходов урожайность продолжает расти. Многие кластеры в 2022 году достигли урожайности хлопка на уровне 35-40 центнеров с гектара.

Исходя из этих результатов, в нашей стране расширяются все возможности для повышения эффективности в сельском хозяйстве и агропромышленном комплексе посредством кластеров, которые получают поддержку от государства. В частности, на внедрение этой системы было направлено 10 триллионов сумов из бюджета, выделены финансовые гранты в размере 1 миллиона сумов на каждый гектар хлопковых полей для повышения плодородия почвы и урожайности, перехода на новые технологии орошения, защиты растений, создания современных лабораторий и обучения фермеров. Кластерам выделяются финансовые гранты на покупку оборудования для окрашивания тканей и производства смесовых тканей, а также 150 миллионов долларов для кредитования таких

проектов, с целью увеличения уровня переработки пряжи с нынешних 50% до 70% в течение следующих двух лет.

Кроме того, в нашей республике проводится ряд экономических реформ с целью поддержки деятельности зерновых, плодоовощных, животноводческих и других видов кластеров. В частности, предусматривается переход к рыночным отношениям в выращивании и продаже зерна, предоставление зерновым кластерам и фермерам права полностью свободно продавать пшеницу по рыночной цене, выделение кредитных ресурсов на один год под 10% из фонда оборотных средств для плодоовощных кластеров, а также страхование плодоовощной продукции от климатических рисков. В целях развития данной системы проводится конкурс среди страховых компаний, и государство покрывает 50% страховой премии для кластеров и фермеров, имеющих экспортные контракты.

В сельском хозяйстве создаются агрологистические центры на основе государственно-частного партнерства для обеспечения плодоовощных кластеров и перерабатывающих предприятий инфраструктурой. В целях поддержки фермеров и кластеров с следующего года государство компенсирует часть процентной ставки по кредитам на покупку техники, превышающей 10%. Кроме того, импортируемая техника, комплектующие и запчасти освобождаются от таможенных платежей на срок три года, что позволяет кластерам и фермерам приобретать технику на 35% дешевле.

Благодаря выполненным мероприятиям и последовательному проведению экономических реформ, в республике было создано 463 кластера, которым выделено 2210,4 тысячи гектаров земли, из которых 282,1 тысячи гектаров закреплены за кластерами, и 1931,0 тысячи гектаров распределены между 75283 фермерскими хозяйствами. Число плодоовощных кластеров составляет 245, с закрепленной за ними площадью в 179,2 тысячи гектаров.

В южном регионе нашей республики, в Кашкадарьинской области, также были предприняты позитивные шаги по налаживанию деятельности агрокластеров. Область является одним из крупнейших производителей сельскохозяйственной продукции в республике, и уделяется большое внимание созданию и поддержке агрокластеров в таких секторах, как хлопково-текстильный, зерновой, плодоовощной, животноводческий и других. Анализируя деятельность хлопково-текстильных агрокластеров, можно отметить, что в 2023 году в области функционировали 18 хлопково-текстильных кластеров с общей площадью выделенной земли в 136036 гектаров.

В стране осуществляются экономические реформы, направленные на интеграцию национальной экономики в мировую экономику и занимание соответствующего места в ней. Для этого существуют два основных условия: во-первых, реформы должны базироваться на принципах и механизмах, применяемых в мировом экономическом сообществе; во-вторых, при реализации реформ необходимо учитывать особенности развития национальной экономики, ее текущее состояние, национальную культуру и социальные особенности населения, а также другие факторы и условия, оказывающие влияние на формирование прогресса страны.

Таким образом, поддержка кластерной политики является одной из основных приоритетных задач нашей страны, обеспечивающей устойчивость населения, и следует подчеркнуть, что создание и функционирование агрокластеров в данном вопросе должно быть особенно внимательно рассмотрено. Например, в результате реализации экономических мероприятий в аграрной сфере в последние пять лет в Кашкадарьинской области было обеспечено трудоустройство 7872 человек благодаря развитию деятельности агрокластеров. Это также можно увидеть из данных, представленных в таблице 2, по районам, в которых функционируют кластеры.

Таблица 2

Информация о численности работников, занятых в хлопково-текстильных кластерах, действующих в Кашкадарьинской области

№	Название кластеров	Количество рабочих, (на человека)		
		2021	2022	2023
	ВСЕГО	7 212	8 159	7 872

18	ООО "Chirokchi klaster"	654	374	283

Выводы и предложения:

Наше мнение состоит в том, что в будущем следует рассматривать развитие этой системы как основное и важное направление в сельском хозяйстве. Вместе с этим, агрокластеры также должны реализовываться с учетом интересов государства и народа, и следующие шаги должны быть предприняты с учетом этого:

- Обновление агротехнических мероприятий путем привлечения инновационных технологий в процесс выращивания продукции, увеличение производства на несколько порядков, обеспечение устойчивого снабжения населения и производство конкурентоспособной продукции.

- Создание цепочки добавленной стоимости, позволяющей производителям сельхозпродукции направлять готовую продукцию на экспорт.

- Получение высокой прибыли при минимальных затратах. Создание системы обеспечения финансовой устойчивости и поддержки производителей сельхозпродукции.

- Улучшение материально-технической базы производителей сельхозпродукции и оборудование современными сельскохозяйственными технологиями и средствами. Улучшение инфраструктуры и повышение эффективности предоставляемых услуг.

В заключение следует отметить, что кластеры представляют собой новую форму конкурентных отношений в современной экономике и способствуют развитию всей экономики страны. В частности, в нашей стране в последние годы был сделан значительный прогресс в этом направлении, однако следует учитывать, что политика кластеров нашей страны должна соответствовать особенностям экономического развития страны.

МАҲАЛЛИЙ ВА ХОРИЖИЙ ИНВЕСТИЦИЯЛАРНИ ЖАЛБ ЭТИШНИНГ ИННОВАЦИОН ЖАРАЁНЛАРГА ТАЪСИРИНИ БАҲОЛАШ

Аннотация. Мақолада миллий иқтисодиётга хорижий инвестицияларни жалб қилиш ва улардан самарали фойдаланиш йўлларини такомиллаштириш билан боғлиқжараёнлар тадқиқ этилган. Хорижий инвестицияларни жалб қилиш ва улардан самарали фойдаланиш жараёнларига таъсир кўрсатувчи омилларни мамлакат инвестицион фаолият самарадорлига таъсири баҳоланган. Хорижий инвестицияларни жалб қилиш ва улардан самарали фойдаланиш йўллари доирасида мавжуд камчиликлар аниқланган. Миллий иқтисодиётга хорижий инвестицияларни жалб қилиш тизимини такомиллаштиришга доир илмий таклиф ва амалий тавсиялар шакллантирилган.

Калит сўзлар: технологик ноу-хау, ижтимоий-иқтисодий тизим, патентлаштириш даражаси, инновация муҳити, инновацион самарадорлик.

ASSESSMENT OF THE IMPACT OF ATTRACTING LOCAL AND FOREIGN INVESTMENTS ON INNOVATION PROCESSES

Abstract. The article examines the processes related to attracting foreign investments to the national economy and improving the ways of their effective use. Factors influencing the processes of attracting foreign investments and their effective use were evaluated, and their impact on the effectiveness of the country's investment activities. In the framework of ways of attracting foreign investments and their effective use, existing shortcomings have been identified. A scientific proposal and practical recommendations on improving the system of attracting foreign investments to the national economy have been formulated.

Key words: technological know-how, socio-economic system, level of patenting, innovation environment, innovation efficiency.

Кириш

Объектларни бошқаришнинг сифати ва самараси операцияларни таҳлил этиш усулларини ҳозирги даврдаги тизимли ёндашувининг функционал таҳлил ёрдамида фойдаланиши иқтисодиёт учун XX асрдаги

иктисодий кашфиёт ҳисобланади. Лекин тизимли ёндашув иктисодиётнинг мураккаблиги туфайли кам қўлланилади. Бу бошқариш фалсафаси бўлиб, ўтиш даврида омон қолиш, мураккаб жараёнларни оддий жараёнларга айланиши, абстрактдан конкретга ўтишни ифодалайди.

Бозор тамойилларидан кенг фойдаланиш шароитида янги технологияларнинг кучайиб бориши, маҳсулот ва хизматларнинг рақобатчилик муҳитига мослашган ҳолда яратилишини тақозо қилмоқда ва бу жараёнда инновация ютуқларидан фойдаланиш тизимини ҳаётий зарурат қилиб қўйди. Мамлакатимизда иктисодиётнинг рақобатбардошлигини оширишнинг муҳим омили бўлган инновацияларга устувор йўналиш сифатида эътиборнинг қаратилиши амалга оширилаётган иктисодий ислохотлар жараёни хўжалик юритувчи субъектлар фаолиятини сезиларли даражада ўзгариши ва улар фаолиятини бозор талабларига мослаштириш заруриятидан келиб чиқмоқда. Бу эса ўз навбатида ишлаб чиқариш ва хизмат кўрсатиш соҳаларини самарали ривожланишини таъминловчи инновацион фаолиятни бошқаришга алоҳида эътибор қаратишни талаб қилмоқда. Чунки, инновацион фаолият бозор муносабатлари шароитида тадбиркорликнинг илғор шакли бўлиб ҳисобланади ва у бозор иктисодиётида илмий-техника тараққиётини ривожланиши учун реал имкониятлар яратади.

Мавзуга оид адабиётлар шарҳи

Миллий иктисодиётга хорижий инвестицияларни жалб қилиш ва улардан самарали фойдаланиш йўлларини шакллантириш доирасидаги қатор тадқиқот изланишлари хорижлик иктисодчи олимлардан С.Лиесбетх, М.Миет, С.Жо илмийизланишларида алоҳида аҳамият касб этади. Тадқиқотчилар фикрича, ўтиш даври мамлакатларида иктисодиётни либераллаштириш жараёни тўғридан-тўғри хорижий инвестицияларни жалб қилиш тизimini такомиллаш-тиришнинг муҳим омили ҳисобланади. Тўғридан-тўғри капитални тўплаш ва технологик ноу-хау орқали миллий корхоналарга технологиялар ва билимларни жалб қилиниши иктисодий ўсишнинг барқарор суръатларини таъминлайди.

П.Миҳаела, А.Вақар, Х.Ҳелиан тадқиқотларида миллий иктисодиётга хорижий инвестицияларни жалб қилишнинг институционал механизми тадқиқ этилади. Тадқиқот натижаларига мувофиқ мамлакат иктисодиётидаги институционал сифат ўзгаришларининг тўғридан-тўғри хорижий инвестицияларни жалб этиш тизимига ижобий таъсир кўрсатиши қайд этилади.

В.Д.Андрианов илмий тадқиқотларида миллий иктисодиёт инвестицион салоҳиятининг назарий асослари ўрганилган бўлиб, инвестиция салоҳияти доирасидаги концепциялар назарий жиҳатдан умумлаштирилган, уни ошириш учун молиявий имтиёз-лардан тизимидан фойдаланиш мақсадга мувофиқлиги таъкидланган.

М.В.Чараева илмий тадқиқотларида ташкилотларнинг реал сармояларини молиявий бошқариш жараёнларининг концептуал асослари ўрганилган. Инновацион йўналтирилган иқтисодиёт шароитида реал сармояларни стратегик молиявий бошқариш хусусиятлари баён этилган.

Ф.У.Умаров тадқиқотларида иқтисодиётнинг тегишли тармоқ ва соҳаларига инвестиция жалб қилиш кўламини кенгайтиришнинг ташкилий-иқтисодий механизмлари ва ўзига хос хусусиятлари таҳлил қилинади.

А.Бурханов тадқиқотлари орқали ҳудудларга хорижий инвестицияларни жалб қилишнинг илмий-назарий жиҳатлари ўрганилиб, ҳудудларга хорижий инвестицияларни жалб этишнинг муаммоли жиҳатлари асосланган ҳамда уларни бартараф этишга қаратилган таклифлар ишлаб чиқилган.

Р.Ҳ.Бозоров илмий изланиш-ларида инвестиция муҳитининг омиллари, хусусиятлари, хорижий инвестиция-ларни жалб қилиш миллий иқтисодиётнинг халқаро индексларда иштирокига бевосита боғлиқлиги тадқиқ қилинган.

Тадқиқот методологияси

Илмий мақолани ёзиш жараёнида илмий тадқиқотни амалга оширишнинг тизимли таҳлил, тарихийлик ва мантиқийлик, индукция ва дедукция, анализ ва синтез, қиёсий ва селектив танлаб тадқиқ қилиш, монографик таҳлил ва гуруҳлаш усуллари қўлланилган.

Таҳлил ва натижалар

Кейинги йилларда иқтисодиётимизда юз бераётган жиддий таркибий ва сифат ўзгаришлар натижасида ялпи ички маҳсулотини шакллантиришда саноатнинг улуши 2000 йилда 14,2 фоиздан 2019 йилда 36 фоизга етди. Натижада ҳозирги кунга келиб саноат маҳсулоти умумий ўсишининг қарийб 70 фоизини юқори қўшилган қийматга эга бўлган тайёр маҳсулот ишлаб чиқаришга йўналтирилган соҳаларни ташкил этмоқда. Шунинг учун ҳам сўнгги йилларда қўлга киритилган натижалар халқаро жамоатчилик ва кузатувчилар, Халқаро валюта жамғармаси, Жаҳон банки, Осиё тараққиёт банки ва бошқа нуфузли халқаро молия ташкилотлари томонидан юксак баҳоланмоқда.

Бу эса, мамлакатимиз иқтисодий салоҳиятининг сезиларли даражада ортаётганлигидан далолат беради. Шунинг учун саноат корхоналарида инновацион жараёнларни тезлаштириш эвазига ишлаб чиқаришга замонавий технологияларни кенг жорий этиш, маҳсулот ва хизмат турларини муттасил янгилаб бориш негизида уларнинг рақобатбардошлигини таъминловчи механизмларни ривожлантириш миллий саноатни модернизациялашнинг устувор йўналишига айланган.

Ижтимоий-иқтисодий тизимнинг муҳим хусусиятлари қуйидагилардан иборат:

-илмий билимларнинг интеграллашуви, бир-бири билан боғлиқ бўлган фанлар миқдорининг кўпайиб боришидаги муаммолар;

-муаммоларнинг комплекс ҳолда эканлиги ва уларни техник, иқтисодий, ижтимоий, психологик ва бошқа қирраларини ҳисобга олган ҳолда ўрганиш зарурлиги;

–муаммолар ечими ва объектларнинг мураккаблашуви;

–объектлар ўртасида алоқалар сонининг ўсиши;

–ўзгарувчан ҳолатларнинг динамиклиги;

–ресурсларнинг ноёблиги;

–ишлаб чиқариш ва бошқариш жараёнлари элементларининг автоматлашуви ва стандартлаштириш даражасининг ошиб бориши;

–рақобатнинг, ишлаб чиқаришнинг, кооперациялашуви стандартлашув ва ҳоказоларнинг байналминаллашуви;

–бошқариш ва ҳоказоларда инсон омили ролининг ошиб бориши.

Айтиб ўтилган белгилар тизимли ёндашув усулини қўллашни талаб этади, чунки, бизнинг назаримизда унинг асосида бошқарув қарорлари сифатини оширишга эришилади. Тизимли ёндашув – объектни тизим сифатида таҳлил этиш методологияси ҳисобланади. Ижтимоий-иқтисодий тизим икки қисмдан иборат:

-ташқи муҳит, у кириш ва чиқиш тизимидан иборат ва ташқи муҳит билан алоқа (дастлаб ичига эътибор бериш)ни ифодалайди;

-ички таркиб – бошқариш субъектларини объектга таъсирини тизимга кириш ва чиқишни таъминлайдиган ўзаро боғлиқ бўлган компонентлар йиғиндисидан иборат.

Функционал ёндашув. Менежментга функционал ёндашувнинг моҳияти эҳтиёжларга, уни қондириш учун керак бўлган вазифалар йиғиндиси сифатида қаралишини ифодалайди. Вазифалар белгиланганидан сўнг уларни бажариш учун бир нечта муқобил объектлар ишланади ва уларнинг ичидан ҳаёт даврида фойдали самара бирлигига сарфланадиган минимум ялпи харажатлар талаб этадигани танлаб олинади.

Предметли ёндашув. Ҳозирги даврда бошқаришда асосан предметли ёндашувдан фойдаланилади, унинг ёрдамида мавжуд объект ривожлантирилади. Масалан, мавжуд бўлган техник тизим илмий-техника тараққиёти таҳлили, истеъмолчиларнинг таклифларини маркетинг тадқиқотлари ёрдамида ўрганиш ва унинг натижаларига асосланган ҳолда такомиллаштирилади.

Предметли ёндашувдан фойдаланган ҳолда инвестор ва менежерлар кечаги кунга етиб олишга ҳаракат қиладилар ва ҳеч қачон жаҳон даражасига кўтарила олмайдилар. Ижтимоий-иқтисодий тизимнинг ривожланишига предметли ёндашувдан фойдаланган ҳолда менежерлар такомиллаштиришнинг мавжуд тизимидан фойдаланадилар. Тажрибада менежерлар мавжуд бўлган ишчи ва ходимларга иш топиш муаммоси билан шуғулланадилар. Функционал ёндашувда истеъмолдан ташқарига «чиқиш» талабидан «кириш» имкониятига қараб ҳаракат қиладилар.

Маркетинг ёндашуви. Маркетинг йўналиши менежмент тизимидаги кичик тизимни бошқаришда истеъмолчиларга мўлжалланган ҳар қандай вазифа ечимини топишга қаратилади. Масалан, корхона стратегияси мавжуд бўлган ва келажақда ишлаб чиқариладиган маҳсулотлар ва хизматларга бўлган талаб ва таклифларга асосланади. Келажақда стратегия эҳтиёжларни, бозор сегментацияси стратегиясини функционал ва предметли ёндашувнинг белги-ларини ишлаб чиқишни тақозо этади.

4-жадвал

Инновацион жараёнларда функционал ва предметли ёндашувларнинг фарқлари

Белгилари	Предметли ёндашув	Функционал ёндашув
Маркетинг тадқиқотларнинг кўлами ва сифати	Аҳамиятли эмас	Аҳамиятли
Мавжуд маҳсулотдан бозор эҳтиёжларининг даражаси	Тўлиқ эмас	Тўлиқ
Маҳсулотни такомиллаштиришда техник ёндашув	Ишлаб чиқарилаётган моделдаги маҳсулотга мослаштириш асосида	Мутлақ янги маҳсулотни ишлаб чиқариш асосида
Маҳсулотни янгилашни режалаштиришда таққослаш асоси	Рақобатчиларнинг энг янги намуналари	Бозордаги янги чиқарилаётган маҳсулотларга нисбатан янгиларини ишлаб чиқиш
Маҳсулотнинг янгилик даражаси (патентлаштириш даражаси)	Ишлаб чиқарилган маҳсулотни такомиллаштириш	Янги сифатли маҳсулотларни ишлаб чиқиш
Ишланмаларда меҳнат сиғими ва янги маҳсулотларни ўзлаштириш	Паст	Юқори
Технологияларнинг янгилик даражаси	Паст	Юқори
Ишлаб чиқаришни ва меҳнатни ташкил этиш	Мавжуд тузилмани такомиллаштириш	Янги корхонани лойиҳалаштириш
Бозорни ўзлаштириш даражаси	Тўла ўзлаштирилган	Бозор эски ёки янги бўлиши мумкин
Маҳсулотни рақобатбардошлиги	Паст	Юқори

Маркетинг ёндашувидан фойдаланилганда менежмент мезонини танлашнинг устувор йўналишлари қуйидагилардан иборат бўлади:

- истеъмолчиларнинг истакларига мос равишда объектнинг сифатини ошириш (тизимдан чиқиш);
- объектга хизмат кўрсатиш ва бошқа омиллар сифатини ошириш ҳисобига истеъмолчилар ресурсларини тежаш;
- кўлам омилини амалга ошириш, илмий-техника тараққиёти, менежмент тизимини такомиллаштириш асосида ишлаб чиқариш объектларида ресурсларни тежаш.

Хўжалик юритишнинг марказий-режалаштириш тизимида ишлаб чиқаришга ёндашишнинг устувор муқобил йўналиши қуйидагилардан иборат бўлган:

- маҳсулот таннархини пасайтириш, баъзида таннархни оширишдан фойдали бўлган;
- маҳсулот сифатини ошириш, истеъмолчининг маҳсулотга сарфлари белгиланмаган ва бошқарилмаган.

Замонавий бозор шароитида мурасасиз рақобатнинг тобора кучайиб бориши корхоналарни юқори даражадаги интеллектуал салоҳият ва самарали технологияга асосланган инновацион фаолиятни ташкил этишни талаб қилмоқда. Шу боисдан, инновацион фаолият билан боғлиқ масалаларни ҳал этишда асосий эътиборни инновацияларни яратувчанлик салоҳияти билан биргаликда, илм-фан ютуқларини ишлаб чиқариш жараёнига татбиқ этиш муҳим аҳамият касб этади. Бунинг учун эса мамлакатда инновацион фаолият билан шуғулланувчи корхоналар ва илмий тадқиқот муассасалари ўртасида инновацион ҳамкорликни яхшилаш, уларнинг моддий баъзасини янада такомиллаштириш ва ҳар томонлама қўллаб-қувватлаш, яратилаётган инновацияларни ишлаб чиқариш жараёнига татбиқ этиш бўйича самарали механизмни шакллантириш каби масалаларини ҳал қилиш лозим.

Инновацион фаолият билан шуғулланаётган корхоналарга – янги ёки такомиллаштирилган маҳсулотлар, хизматлар, технологиялар ёки ишлаб чиқариш усуллари ва бошқа инновацион фаолият турларини ишлаб чиқиш ва жорий этиш мақсадида ташкил этилган инновацион фаолият (инфратузилма) субъектига айтилади.

Ўзбекистон иқтисодиёти ривожланишининг ҳозирги босқичида инновация инсоният тараққиёти ва иқтисодий ўсишнинг асосий омилига айланмоқда. Инновацияларни алоҳида корхоналар ва қолаверса, бутун иқтисодиётнинг фаолият кўрсатишига таъсирини муҳим аҳамияти мамлакатимиз ва хорижий иқтисодчилар томонидан тадқиқ этилган ҳамда ўрганилган.

“Инновацион корхоналар” атамаси “инновация” сўзи моҳиятини очиб берилиши билан тавсифланади. Шунини таъкидлаш керакки, бу тушунчага ўзбек, рус ва хориж адабиётларида ҳам кўплаб таърифлар берилган. “Инновацион корхона” тушунчаси негизида “инновация” ҳамда “новация” сўзлари ётади.

Бугунги кунда инновацион корхоналар фаолиятини ташкил этишда хориж тажрибасига таяниб, илмий тадқиқотлар натижасидан келиб чиқиб амалиётга жорий қилиш муваффақият келтиради. Аммо, замонавий корхоналарнинг инновацион фаолиятини самарали ташкил этиш жараёнига бир қатор омиллар таъсир кўрсатади. Буларга:

– корхонанинг инновацион салоҳияти (корхонанинг илмий салоҳияти, ходимларнинг инновацион бизнес соҳасидаги билимларга эгаллик даражаси,

илмий тадқиқотларга жалб қилинган мутахассислар сони, корхонанинг инновацион маҳсулот яратишда замонавий жиҳозлар билан таъминланган лабораторияларнинг мавжудлиги ҳамда улардан фойдаланиш самарадорлиги);

– корхонанинг жойлашган ҳудудлар иқтисодий салоҳияти (фаолият юритувчи корхоналар сони ва фаолият турлари, улар ўртасида рақобат муҳитининг шаклланганлиги, уларнинг географиясидан келиб чиқиб инновацияларни ўзлаштира олиш имкониятлари);

– корхонанинг кадрлар салоҳияти (ходимларнинг мутахассисликлари ва илмий даражалари, айнан инновацион маҳсулот яратиш учун жалб қилинган ходимлар сони ва бошқалар);

– корхонанинг инвестицион салоҳияти (инновацияларни яратиш ёки уларни амалиётга татбиқ этишдаги харажатларни тўла молиялаштириш имкониятлари, инновацияларни яратишдаги тадқиқотлари ва ходимларнинг иш ҳақи бўйича салоҳияти ва бошқалар).

Замонавий корхонанинг инновацион маҳсулотларни яратишдаги илмий салоҳияти унда олиб борилаётган илмий тадқиқот натижаларининг сифати ва сонига таъсир этувчи энг асосий омиллардан бири ҳисобланади. Ходимларнинг хорижий тажрибаларга эгаллиги ва ўз соҳалари бўйича етарли билимга, замонавий фан-техника ютуқларини тезкорлик билан ўзлаштира олиш қобилиятига эгаллиги, турли соҳаларда мавжуд муаммоларни аниқ кўра билиши ва ўз билимларини ана шу муаммоларни ҳал этишда қўллаш олиши корхоналарнинг инновацион фаоллигини, яратилган инновацияларнинг ишлаб чиқаришга татбиқ этилиш имкониятини оширади.

Инновацион корхоналар фаолияти бўйича хориж амалиётига эътибор қаратадиган бўлсак бу борада Жанубий Кореяни мисол келтиришимиз мумкин. Жумладан, Корея Республикаси Халқаро инновацион индексда 12-поғонани эгаллаб, ҳатто Япония, Италия, Финляндия каби мамлакатлардан ҳам юқори ўринда туради. Блумберг Инновацион Индекси рейтингда эса илмий тадқиқотлар, олий таълим тизими ва патент фаолияти бўйича дунёда етакчи ўринни эгаллайди. Корея давлат статистика қўмитасининг маълумотларига кўра, бугунги кунда 3,35 миллиондан ортиқ кичик ва ўрта инновацион корхона фаолият юритиб келмоқда, бу рўйхатга олинган хўжалик юритувчи субъектларнинг 99,9 фоизини ташкил этади. Ўз навбатида, аҳолининг иш билан таъминлаш даражаси эса 87,7 фоизни ташкил этади. Бу инновацион тадбиркорликни қўллаб-қувватлаш, айниқса ёшларнинг стартап лойиҳаларини ишга туширишда ўзига хос қулай шарт-шароитлар яратилиши туфайли эришилган натижалардир.

Корхона ва ташкилотлардаги инновацияларнинг иқтисодий таркиби авваломбор, доимий ҳисобланган ишлаб чиқариш ресурсларини эркинлаштириш учун хизмат қиладиган параметрларда ифодаланади. Бунда энг аввал корхоналардаги материал, меҳнат, фонд сиғимлари кўрсаткичлари ўзгаради. Бу асосий кўрсаткичлар корхоналарнинг иқтисодий тараққиёти

турли босқичларида турли даражадаги инновация жараёнлари таъсири остида бўлади. Жумладан, ишлаб чиқариш жараёнида қўл меҳнатидан автоматлашган меҳнатга ўтиш босқичида ишлаб чиқаришнинг меҳнат сифими ва фонд сифимида ўзгаришлар юз беради, яъни меҳнат сифимининг қисқариши фонд сифими ошишига олиб келади.

Корхоналарнинг инновацион самарадорлигини ҳисобга олиш, таҳлил қилиш ва ошириш учун уларни ички ва ташқи миқёсда асосли классификациялаш зарур. Инновацияларнинг ўйлаб топилган ва илмий асосланган классификацияси уларни нафақат оқилона ҳисобга олиш, балки қўллаш даражасини ҳам ҳар томонлама таҳлил этиш ва шу асосда самарали инновация сиёсатини, жумладан, корхонанинг инновацион салоҳияти учун ишлаб чиқариш ва амалга ошириш борасида зарур маълумотга эга бўлиш имконини беради.

Корхоналар фаолиятига фан-техника тараққиётидан фарқли равишда, инновация жараёнини татбиқ этиш босқичи, яъни бозорда янги маҳсулот, хизматнинг илк бор пайдо бўлиши, янги технологиянинг лойиҳа даражасига етиши билан тугалланмайди. Бу жараён татбиқ этишдан кейин ҳам узилмайди, у ёйилиш даражасига қараб, янгилик мукаммаллаштирилади.

Натижада аввал маълум бўлмаган истеъмолчилик хусусиятлари ҳосил бўлади. Бу эса корхоналар учун янги бозорлар ва қўлланиш соҳаларини очади, ўз навбатида мазкур маҳсулот, технология ва хизматларни ўзлари учун янги сифатида қабул қиладиган истеъмолчиларни топади.

Корхоналар учун бу жараён татбиқ этилгандан кейин ҳам инновацион фаолият узилмайди, унинг қамраб олиш ва ёйилиш даражасига қараб, янгилик мукаммаллаштирилиб борилади ва аввалгисига нисбатан анча самаралироқ кечади. Аввал маълум бўлмаган янги истеъмол хусусиятлари ҳосил бўлади. Бу эса, унинг учун янги бозорлар ва қўлланиш соҳаларини очади, ўз навбатида, мазкур маҳсулот, технология ва хизматларни ўзлари учун маъқул истеъмолчиларни топади. Шундай қилиб, бу жараён бозор талаб қиладиган маҳсулотлар, технологиялар ёки хизматларни яратишга йўналтирилган ва у албатта, амал қиладиган ва ривожланадиган ижтимоий-иқтисодий муҳитнинг суръатлари, мақсадларига боғлиқ бўлади.

Хулоса ва таклифлар

Бугунги кунда Ўзбекистон корхоналари учун иқтисодий ҳолатни баҳолашга мос келадиган “инновация муҳити” ибораси бўлғуси инновациялар учун корхоналар жозибадорлигини тавсифлайди. Инновация муҳитини баҳолашда одатда бир қатор параметр ёки белгилар қўлланилади. Мазкур параметрлар корхонанинг инновацияларни жорий этиш салоҳияти ва уларни амалга ошириш таваккалини тавсифловчи белгилардир. Уларнинг энг асосийлари қуйидагилардир:

- макроиқтисодий барқарорлик;
- инновация фаолиятининг ҳуқуқий асослари;
- солиқ тизимининг сифати ва солиққа тортиш даражаси;

- банк тизими ва бошқа молиявий институтлар ҳолати ва ишончилиги;
- инфратузилманинг ривожланиш даражаси;
- ҳамкорлар томонидан шартнома мажбуриятларининг бажарилиши;
- давлат бошқарув тизими.

РЕШЕНИЕ ИНТЕГРАЛЬНЫХ УРАВНЕНИЙ АБЕЛЯ С ПОМОЩЬЮ ДРОБНЫХ ОПЕРАТОРОВ

Аннотация. В данной работе операторы дробного порядка и интегральные уравнения Абеля используются при решении сложных моделей, уравнений моделирования материалов и движения. Используя интегральное уравнение Абеля, свойства дробных операторов, решение задачи представлено с помощью дробных интегралов и дробных производных.

Ключевые слова: Дробные операторы, дробная производная, дробный интеграл.

SOLUTION OF ABELIAN INTEGRAL EQUATIONS USING FRACTIONAL OPERATORS

Abstract. In this work, fractional order operators and Abel's integral equations are used in solving complex models, materials and motion modeling equations. Using the Abel integral equation, the properties of fractional operators, the solution of the problem is presented with the help of fractional integrals and fractional derivatives.

Key words: Fractional operators, fractional derivative, fractional integral.

Это

$$\frac{1}{\Gamma(\alpha)} \int_{\alpha}^x \frac{\varphi(t) dt}{(x-t)^{1-\alpha}} = f(x), \quad 0 < \alpha < 1(1)$$

интегральное уравнение в виде называется интегральным уравнением Абеля [1].

Уравнение (1) решается следующим образом. В этом уравнении мы смешиваем x с t и t с s , затем умножаем обе части уравнения на выражение $(x-t)^{-\alpha}$ и интегрируем от a до x по t :

$$\int_a^x \frac{dt}{(x-t)^\alpha} \int_a^t \frac{\varphi(s) ds}{(t-s)^{1-\alpha}} = \Gamma(\alpha) \int_a^x \frac{f(t) dt}{(x-t)^\alpha}.$$

Заменив порядок интегрирования по формуле Дирихле,

$$\int_a^x \varphi(s) ds \int_s^x \frac{dt}{(x-t)^\alpha (t-s)^{1-\alpha}} = \Gamma(\alpha) \int_a^x \frac{f(t) dt}{(x-t)^\alpha} \quad (2)$$

мы составляем уравнение. Подставив $t = s + \tau(x-s)$ во внутренний интеграл в левой части уравнения, получим

$$\int_s^x (x-t)^{-\alpha} (t-s)^{\alpha-1} dt = \int_0^1 \tau^{\alpha-1} (1-\tau)^{-\alpha} d\tau = B(\alpha, 1-\alpha) = \Gamma(\alpha)\Gamma(1-\alpha)$$

следует равенство. Тогда согласно (2).

$$\int_a^x \varphi(s) ds = \frac{1}{\Gamma(1-\alpha)} \int_a^x \frac{f(t) dt}{(x-t)^\alpha}. \quad (3)$$

Дифференцируя обе части этого уравнения, формируем решение интегрального уравнения Абеля [1]:

$$\varphi(s) = \frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_a^x \frac{f(t) dt}{(x-t)^\alpha}. \quad (4)$$

Таким образом, если решение уравнения (1) существует, оно выражается в виде (4). Из процесса формулировки следует, что если решение существует, то оно единственно.

Таким образом, можно показать, что это

$$\frac{1}{\Gamma(\alpha)} \int_x^b \frac{\varphi(t) dt}{(t-x)^{1-\alpha}} = f(x), \quad 0 < \alpha < 1 \quad (5)$$

решение интегрального уравнения

$$\varphi(x) = -\frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_x^b \frac{f(t) dt}{(t-x)^\alpha} \quad (6)$$

определяется по формуле.

Как известно из курса математического анализа, для n -кратного интеграла подходит следующая формула:

$$\int_a^{x_0} dx_1 \int_a^{x_1} dx_2 \dots \int_a^{x_{n-1}} \varphi(t) dt = \frac{1}{(n-1)!} \int_a^{x_0} (x_0-t)^{n-1} \varphi(t) dt, \quad n \in \mathbb{N}. \quad (7)$$

$(n-1)! = \Gamma(n)$ с учетом этого правую часть уравнения (7) можно определить даже для дробных значений n [2].

(7) определяем интегралы дробного порядка, соответствующие равенству, в следующем порядке.

Описание. $\varphi(x) \in L_1(a, b)$ ($a < b < +\infty$) будь как будет Этот

$$D_{xb}^{-\alpha} \varphi(x) = \frac{1}{\Gamma(\alpha)} \int_x^b (t-x)^{\alpha-1} \varphi(t) dt, \quad \alpha > 0 \quad (8)$$

выражения в $\varphi(x)$ форме называются интегралами α (дробного) порядка (в смысле Римана-Лиувилля) от функции.

Функции $D_{ax}^{-\alpha} \varphi(x)$ и $D_{xb}^{-\alpha} \varphi(x)$ определены почти во всех точках интервала (a,b) и принадлежат классу $L_1(a,b)$.

На основе этого определения интегральные уравнения Абеля (1) и (5)

$$D_{ax}^{-\alpha} \varphi(x) = f(x), \quad D_{xb}^{-\alpha} \varphi(x) = f(x) \quad (9)$$

можно записать в форме.

Если $0 < \alpha_1, \alpha_2 < +\infty$ почти для всех $x \in (a,b)$.

$$D_{ax}^{-\alpha_2} D_{ax}^{-\alpha_1} f(x) = D_{ax}^{-\alpha_1} D_{ax}^{-\alpha_2} f(x) = D_{ax}^{-(\alpha_1+\alpha_2)} f(x) \quad (10)$$

равенство будет уместным. Действительно,

$$\begin{aligned} D_{ax}^{-\alpha_2} D_{ax}^{-\alpha_1} f(x) &= \frac{1}{\Gamma(\alpha_1)} D_{ax}^{-\alpha_2} \int_a^x (x-s)^{\alpha_1-1} f(s) ds = \\ &= \frac{1}{\Gamma(\alpha_1)\Gamma(\alpha_2)} \int_a^x \left[\int_a^t (t-s)^{\alpha_1-1} f(s) ds \right] (x-t)^{\alpha_2-1} dt = \\ &= \frac{1}{\Gamma(\alpha_1)\Gamma(\alpha_2)} \int_a^x f(s) ds \int_s^x (x-t)^{\alpha_2-1} (t-s)^{\alpha_1-1} dt. \end{aligned}$$

В результате подстановки в последний внутренний интеграл $t = s + (x-s)\tau$ получим следующее уравнение[1]:

$$\begin{aligned} \int_s^x (x-t)^{\alpha_2-1} (t-s)^{\alpha_1-1} ds &= (x-s)^{\alpha_1+\alpha_2-1} \int_0^1 \tau^{\alpha_1-1} (1-\tau)^{\alpha_2-1} d\tau = \\ &= \frac{\Gamma(\alpha_1)\Gamma(\alpha_2)}{\Gamma(\alpha_1+\alpha_2)} (x-s)^{\alpha_1+\alpha_2-1} \end{aligned}$$

Это показывает, что уравнение (10) верно.

По определению,

$$D_{ax}^0 f(x) = f(x) \quad (11)$$

мы так думаем.

Описание. Пусть функция $\varphi(x)$ определена в разделе $[a,b]$.

$$D_{ax}^{\alpha} \varphi(x) = \frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_a^x \frac{\varphi(t) dt}{(x-t)^{\alpha}}, \quad 0 < \alpha < 1, \quad (12)$$

$$D_{xb}^{\alpha} \varphi(x) = -\frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_x^b \frac{\varphi(t) dt}{(t-x)^{\alpha}}, \quad 0 < \alpha < 1 \quad (13)$$

выражения в виде называются производными α (десятичного) порядка (в смысле Лиувилля) от $\varphi(x)$ функции.

На основе этого определения уравнения (4) и (6), дающие решения интегральных уравнений Абеля (1) и (5) соответственно

$$\varphi(x) = D_{ax}^\alpha f(x), \quad \varphi(x) = D_{xb}^\alpha f(x) \quad (14)$$

можно записать в форме.

Напомним, что интегралы дробного порядка $\alpha > 0$ определяются в соответствии с порядком. Но (12), (13) дробные производные определены только тогда, когда они равны $0 < \alpha < 1$. Прежде чем перейти к определению производных дробного порядка при $\alpha \geq 1$, приведем достаточное условие существования производных дробного порядка.

Лемма. Если функция $\varphi(x)$ абсолютно непрерывна на участке $[a, b]$, то почти во всех точках участка $[a, b]$ имеются дробные производные функции $\varphi(x)$ и подходят следующие формулы:

$$D_{ax}^\alpha \varphi(x) = \frac{1}{\Gamma(1-\alpha)} \left[\frac{\varphi(a)}{(x-a)^\alpha} + \int_a^x \frac{\varphi'(t) dt}{(x-t)^\alpha} \right], \quad 0 < \alpha < 1,$$

$$D_{xb}^\alpha \varphi(x) = \frac{1}{\Gamma(1-\alpha)} \left[\frac{\varphi(b)}{(b-x)^\alpha} + \int_x^b \frac{\varphi'(t) dt}{(t-x)^\alpha} \right], \quad 0 < \alpha < 1.$$

Пример. $\varphi(x) = (x-a)^{\alpha-1}$ быть. Тогда, исходя из равенства (1.1.13),

$$D_{ax}^\alpha \varphi(x) = \frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_a^x (x-t)^{-\alpha} (t-a)^{\alpha-1} dt.$$

Если заменить интегральную переменную $t = a + (x-a)z$ формулой,

$$D_{ax}^\alpha \varphi(x) = \frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} \int_0^1 z^{\alpha-1} (1-z)^{-\alpha} dz = \frac{1}{\Gamma(1-\alpha)} \frac{d}{dx} B(\alpha, 1-\alpha) = 0$$

следует равенство. Итак, функция $\varphi(x) = (x-a)^{\alpha-1}$ выступает в качестве постоянного числа для производной второго порядка $\alpha \in (0, 1)$.

Теперь $\alpha \geq 1$, пусть $[\alpha]$ - его целая часть, а $\{\alpha\}$ - дробная часть. Если α - целое число, мы получаем простые производные в классе α порядковых производных:

$$D_{ax}^\alpha = \left(\frac{d}{dx} \right)^\alpha, \quad D_{xb}^\alpha = \left(-\frac{d}{dx} \right)^\alpha, \quad \alpha = 1, 2, 3, \dots$$

Если α - не целое число, мы определяем упорядоченные производные следующим образом:

$$D_{ax}^\alpha \varphi(x) = \left(\frac{d}{dx} \right)^{[\alpha]} D_{ax}^{\{\alpha\}} \varphi(x) = \left(\frac{d}{dx} \right)^{[\alpha]+1} D_{ax}^{\{\alpha\}-1} \varphi(x),$$

$$D_{xb}^{\alpha} \varphi(x) = \left(-\frac{d}{dx}\right)^{[\alpha]} D_{xb}^{\{\alpha\}} \varphi(x) = \left(-\frac{d}{dx}\right)^{[\alpha]+1} D_{xb}^{\{\alpha\}-1} \varphi(x).$$

Итак, в общем, когда $\alpha \geq 1$.

$$D_{ax}^{\alpha} \varphi(x) = \left(\frac{d}{dx}\right)^n D_{ax}^{\alpha-n} \varphi(x), \quad n = [\alpha] + 1, \quad (15)$$

$$D_{xb}^{\alpha} \varphi(x) = (-1)^n \left(\frac{d}{dx}\right)^n D_{xb}^{\alpha-n} \varphi(x), \quad n = [\alpha] + 1. \quad (16)$$

Обычно класс функций, выражаемых в виде дробных интегралов α ($\alpha > 0$), определяется формулой $D_{ax}^{-\alpha}(L_p)$, т.е.

$$D_{ax}^{-\alpha}(L_p) = \{f(x) : f(x) = D_{ax}^{-\alpha} \varphi(x), \quad \varphi(x) \in L_p(a, b), \quad 1 \leq p < \infty\}.$$

Имеет место следующая теорема.

Теорема. $\alpha > 0$ быть. В таком случае

$$D_{ax}^{\alpha} D_{ax}^{-\alpha} \varphi(x) = \varphi(x), \quad D_{xb}^{\alpha} D_{xb}^{-\alpha} \varphi(x) = \varphi(x) \quad (17)$$

равенства для всех $\varphi(x) \in L_1(a, b)$ функций,

$$D_{ax}^{-\alpha} D_{ax}^{\alpha} \varphi(x) = \varphi(x), \quad D_{xb}^{-\alpha} D_{xb}^{\alpha} \varphi(x) = \varphi(x) \quad (18)$$

и все равенства соответственно

$$\varphi(x) \in D_{ax}^{-\alpha}(L_1), \quad \varphi(x) \in D_{xb}^{-\alpha}(L_1)$$

выполняется для функций.

Если $\varphi(x) \in L_1(a, b)$ вместо последних условий, то уравнения (18) будут в общем случае неверными и, например, первое будет заменено следующей формулой [3].

$$D_{ax}^{-\alpha} D_{ax}^{\alpha} \varphi(x) = \varphi(x) - \sum_{k=0}^{n-1} \frac{(x-a)^{\alpha-k-1}}{\Gamma(\alpha-k)} \varphi_{n-a}^{(n-k-1)}(a),$$

$$\text{здесь } n = [\alpha] + 1, \quad \varphi_{n-a}(x) = D_{ax}^{\alpha-n} \varphi(x).$$

Итак, интегральные уравнения Абеля и их решения определяются уравнениями (9) и (14), и чтобы поставить функции в уравнения (14) и (9), необходимо выполнить условие приведенной выше теоремы.

ЎЗБЕКИСТОН РЕСПУБЛИКАСИДА ОИЛАВИЙ ТАДБИРКОРЛИКНИ РИВОЖЛАНТИРИШ МАСАЛАЛАРИ

Аннотация. Бугунги кунда республикамизда оилавий тадбиркорликни ривожлантириши орқали аҳоли даромадларини кўпайтириши, уларнинг яшаш фаровонлигини ошириши мақсадида кўплаб лойиҳаларга қўл урилмоқда. Мазкур саъй-ҳаракатларнинг самараси ўлароқ бугун ўз бизнесини бошлаган тадбиркорлик субъектларининг фаолияти, уларни қийнаётган муаммолар, аҳолининг бизнес ташаббусларини ўрганиб чиқиб, таҳлиллар асосида таклифлар ишлаб чиқиш бугунги кундаги долзарб ҳисобланади.

Калит сўзлар. Бизнес, оилавий тадбиркорлик, тадбиркорлик, кредит, имтиёз, кафиллик, валюта, лойиҳа, солиқ ставкаси, фоииз ставкаси, лизинг, ипотека.

ISSUES OF FAMILY BUSINESS DEVELOPMENT IN THE REPUBLIC OF UZBEKISTAN

Abstract. Today, many projects are being implemented in our republic in order to increase the income of the population and increase their living comfort through the development of family entrepreneurship. As a result of these efforts, it is urgent today to study the activities of business entities that have started their business, the problems they face, the business initiatives of the population, and develop proposals based on the analysis.

Keywords. Business, family business, entrepreneurship, loan, concession, guarantee, currency, project, tax rate, interest rate, lease, mortgage.

Кириш

Ривожланган давлатлар тажрибаси шуни кўрсатмоқдаки, мамлакат иқтисодиётининг барқарор ривожланишида, аҳоли бандлиги ва даромадини оширишда энг асосийси тадбиркорликни ривожлантириш орқали мамлакатда камбағалликни қисқартиришда оилавий тадбиркорлик соҳаси фаолияти муҳим аҳамият касб этибгина қолмай, иқтисодий ҳамда ижтимоий муаммоларни ҳал этишда ўз ўрнига эга.

Президентимизнинг 2023 йил 15 ноябрда “Аҳолини кичик ва ўрта бизнесга кенг жалб қилишнинг қўшимча чора-тадбирлари тўғрисида” ги 366 сонли қарори қабул қилинди.

Қарор бўйича аҳоли ва тадбиркорлик субъектларини ўргатиш, ўқитиш орқали уларнинг бизнес ташаббусларини молиявий ва консултиватив қўллаб-қувватлаш тизими йўлга қўйилиб, “оилавий тадбиркор - микробизнес – кичик бизнес – ўрта бизнес” занжири яратилади ва шу асосда уларнинг фаолиятини кенгайтириш, қўллаб қувватлаш учун шароитлар яратилиши таъминланади.

Мавзуга оид адабиётлар таҳлили

Тадбиркорликни ривожлантириш, шунингдек бизнесни давлат томонидан қўллаб-қувватлаш, уни амалга оширишнинг стратегик ва тактик йўналишлари билан боғлиқ илмий тадқиқотлар узоқ тарихга бориб тақалади. Тадбиркорликни ривожлантириш, уларни фаолиятини ривожлантириш масалалари кенг ўрин олиб келган. Бу масалалар борадаси бир қанча олимлар илмий тадқиқотлар олиб борган. Жумладан, А.Смит томонидан халқларнинг бойлиги моҳияти ва сабабларини ўрганиш, Р.Хизрич ва М.Питерс томонидан тадбиркорликни ривожлантириш омиллари, тадбиркорлик фазилатларини баҳолаш усуллари атрофлича ўрганилган ва керакли таклиф ва тавсиялар келтирилган.

Шунингдек кичик бизнес ва хусусий тадбиркорлик соҳасини тадқиқ этиш ҳамда эконометрик моделлаштириш бўйича В.М.Власова, А.Раиский, А.Шестаков, Н.Е.Егорова, В.М.Савченко, В.М.Шепелов ва М.А.Федотовалар илмий изланишлар олиб боришган.

Ўзбекистонда кичик бизнес ва тадбиркорликнинг умумий муаммолари, статистик кўрсаткичларини такомиллаштириш ҳамда прогнозлаш, оилавий тадбиркорликни ривожлантириш ва уларга давлат томонидан берилаётган имкониятлар бўйича маҳаллий олимлардан С.С.Гуляммов, Ё.Абдуллаев, Б.К.Ғойибназаров, О.Т.Кенжабоев, О.Қ.Рихсимбоев, А.Б.Югай, Н.Қ.Муродова, З.Я.Худойбердиева, Ҳ.П.Абулқосимов А.А. Қулматовлар томонидан илмий изланишлар олиб борганлар.

Тадқиқот методологияси.

Мақолада мантикий усул, таҳлил ва синтез, норматив ёндашув, тизимли ва қиёсий таҳлил усулларидадан фойдаланилган.

Таҳлил ва натижалар муҳокамаси.

Бугунги кунда олиб борилаётган ислохотлар борасида тадбиркорлар қуйидаги молиявий тизим орқали қўллаб-қувватланиши белгиланган:

- “Бизнесни ривожлантириш банки” АТБ
- “Тадбиркорликни ривожлантириш компанияси” АЖ
- Ҳамкор тижорат банклари ва микромолия ташкилотлари

1.Бизнесни ривожлантириш банки томонидан “Кичик бизнесни узлуксиз қўллаб-қувватлаш” комплекс дастурини 2023-2026 йилларда

амалга ошириш учун давлат маблағлари ҳисобидан 6 триллион сўм ва халқаро молия институтларининг 1,2 миллиард АҚШ доллари миқдордаги маблағлари йўналтирилиши кўзда тутилган.

Мазкур дастурни амалга ошириш учун Бизнесни ривожлантириш банки қошида масъулияти чекланган жамияти шаклида Кичик бизнесга кўмаклашиш марказлари ташкил этилади ва улар томонидан кичик тадбиркорлик субъектлари молиявий ва консултатив қўллаб-қувватланади.

Шу асосда дастур доирасида имтиёзлар берилиши кўзда тутилган бўлиб, ушбу имтиёзлар:

- камида бир йил мобайнида фаолият юритаётган якка тартибдаги тадбиркорлар, деҳқон хўжаликлари, ўзини ўзи банд қилган шахслар, ҳунармандлар, касаначилар, нодавлат таълим ташкилотлари, уч ва ундан ортиқ кишини иш билан таъминлаётган кичик тадбиркорлик субъектлари;

- оилавий тадбиркорлик дастурлари доирасида ўз бизнес лойиҳаларини муваффақиятли амалга ошириб, ижобий кредит тарихига эга бўлган юридик ва жисмоний шахслар онлайн ариза юбориш орқали иштирок этади.

Дастурида иштирок этувчи кичик тадбиркорлик субъектларини шаффофлик тамойиллари асосида танлаб олиш босқичлари қуйидагилардан иборат бўлади:

- Ариза берилади ва банклар кўмагида скоринг баҳолаш ўтказилади
- Ҳоким ёрдамчилари томонидан саволнома асосида ўрганилади
- Лойиҳаларни баҳолаш ва танлаш гуруҳлари томонидан ташаббускорларнинг тадбиркорлик кўникмаси ва бизнес-режаларининг яшовчанлигини баҳолаш асосида истиқболли лойиҳалар танлаб олинади
- Марказлар томонидан ўқитиш ташкил этилади ва имтиҳондан муваффақиятли ўтганларга сертификат берилади
- Тижорат банклари, жамғарма ва марказлар томонидан молиявий ва консултатив қўллаб-қувватланади
- Марказлар ва тижорат банклари томонидан бизнес режалари амалга оширилишининг мониторинги юритилади.

Лойиҳалар қуйидаги йўналишларда қўллаб-қувватланиши таъминланади:

молиявий қўллаб-қувватлаш йўналишида:

- 2 йил имтиёзли давр билан 7 йилгача, айланма маблағлар учун револьвер тарзда 3 йилгача муддатга
- фоиз ставкаси (Марказий банк асосий ставкаси + 4)
- 1,5 миллиард сўмгача кредитлар ажратиш ёки асосий воситаларни сотиб олиш учун лизинг бериш. Бунда, 100 миллион сўмгача кредитларни гаровсиз, 150 миллион сўмгача кредитларни гаров талаби 50 фоизгача пасайтирилган ҳолда ажратиш имконияти назарда тутилади

- қиймати 1,5 миллиард сўмгача бўлган асосий воситаларни 7 йилгача бўлиб-бўлиб тўлаш шарти билан қарзга беради

- инновацион ишланмаларни тижоратлаштириш, юқори технологик стартап лойиҳаларига давлат илмий дастурлари доирасида 2 миллиард сўмгача грант маблағларини ажратади.

консультатив қўллаб-қувватлаш йўналишида:

- лицензия, рухсатнома ва сертификатлар олиш, божхона ва солиқ маъмуриятчилиги, экспорт ва импорт шартномаларни расмийлаштириш;

- давлат харидларида иштирок этиш, шунингдек, ер участкалари ва бино-иншоотларни сотиб олиш ёки ижарага олиш ва лойиҳалаштириш;

- тадбиркорликни қўллаб-қувватлаш бўйича амалдаги имтиёз ва преференциялар, мавжуд бошқа енгилликлар ва имкониятлар бўйича маълумот ва маслаҳатлар бериш ишлари амалга оширади.

- Тадбиркорлик фаолиятини қўллаб-қувватлаш давлат жамғармаси Иқтисодиёт ва молия вазирлиги таъсисчилигида “Тадбиркорликни ривожлантириш компанияси” АЖ шаклида қайта ташкил қилинади.

2024 йил 1 мартдан жорий этилаётган молиявий ёрдамлар

Кафиллик ёрдами

Компания томонидан кафиллик хорижий ва миллий валютада ажратиладиган кредитлар учун ажратилади.

Кичик тадбиркорлик субъектлари ҳамда ўзини ўзи банд қилган шахсларга:

микромоллия ташкилотлари томонидан ажратиладиган кредитлар бўйича 100 миллион сўмдан ошмаган миқдорда, бироқ кредитнинг 30 фоизигача кафиллик тақдим этилади.

Кичик тадбиркорлик субъектларига:

тижорат банклари томонидан ажратиладиган кредитлар бўйича 2,5 миллиард сўмдан ошмаган миқдорда, бироқ кредитнинг 50 фоизигача лизинг компаниялари томонидан ажратиладиган лизинглар 800 миллион сўмдан ошмаган миқдорда, бироқ лизингнинг 30 фоизигача

Ўрта тадбиркорлик субъектларига:

тижорат банклари томонидан ажратиладиган кредитлар бўйича 5 миллиард сўмдан ошмаган миқдорда, бироқ кредитнинг 50 фоизигача лизинг компаниялари томонидан ажратиладиган лизинглар 1,5 миллиард сўмдан ошмаган миқдорда, бироқ лизингнинг 30 фоизигача

Хизматлар ипотекаси

24 ойдан ортиқ фаолият юритаётган ҳамда бир йил давомида камида 50 нафар кишини доимий иш билан таъминлаган ўрта тадбиркорлик субъектлари фойдаланиши мумкин. Кўчмас мулк ва асбоб ускуналарнинг 70 фоизи, бироқ 10 млрд. сўмдан ортиқ бўлмаган миқдорда ажратилади. Муддати етти йилгача муддатга ажратилади. Қарздорлик қолдиғига Марказий банкнинг асосий ставкасидан 4 фоизлик пункт юқори ставкада йиллик фоиз ҳисоблаш ёки бўлиб-бўлиб тўлаш мумкин.

Капиталга улуш киритиш

24 ойдан ортиқ фаолият юритаётган ҳамда бир йил давомида камида 50 нафар кишини доимий иш билан таъминлаган ўрта тадбиркорлик субъектлари олиши мумкин. Лойиҳа қийматининг 15 фоизи, бироқ устав капиталининг 20 фоизи ёки 3 млрд. сўмдан ортиқ бўлмаган миқдорда ажратилади. Муддати етти йилгача муддатга.

Компания ресурслари ҳисобидан кредит ажратиш

Бунда компания имтиёздан фойдаланиш учун тадбиркор мурожаат қилади ва банк тадбиркор талаби бўйича компаниядан ресурс жалб қилади.

Компания томонидан тижорат банклари, лизинг компаниялари ва микромолия ташкилотларига:

миллий валютада ажратиладиган кредит лар бўйича ресурс Марказий банкнинг асосий ставкасидан паст бўлмаган ставкада хорижий валютада ажратиладиган кредитлар бўйича ресурс Кузатув кенгаши томонидан белгиланган ставкада жойлаштиради.

Тижорат банкларининг маржаси кўшилган ставкада 7 йил муддатгача, 1,5 млрд. сўмгача кичик тадбиркорлик субъектларига, 5 млрд. сўмгача ўрта тадбиркорлик субъектларига кредит ажратади.

Лизинг компанияларининг маржаси кўшилган ставкада 5 йил муддатгача 500 млн. сўмгача кичик тадбиркорлик субъектларига 1 млрд. сўмгача ўрта тадбиркорлик субъектларига лизинг ажратади.

Микромолия ташкилотларининг маржаси кўшилган ставкада 3 йил муддатгача 300 млн. сўмгача кичик тадбиркорлик субъектлари ҳамда ўзини ўзи банд қилган шахсларга кредит ажратади.

Компания томонидан лизинг компаниялари ва микромолия ташкилотларига жойлаштирилган ресурс ҳисобига ажратиладиган кредит лар учун Компаниянинг бошқа молиявий ёрдами кўрсатилмайди.

Компенсация

Компенсация давлат томонидан бериладиган беғараз ёрдамдир. 3 йилдан ортиқ бўлмаган муддатга компенсация “1+2” тамойили асосида аввал кредитнинг дастлабки йилига тақдим этилади, кейинги икки йил давомида қуйидагиларга асосан давом эттирилади, яъни янги иш ўринларини яратиш режаси бажарилиши ва йиллик реализация қилинган маҳсулот (хизмат) бўйича тушумнинг камида 15 фоизга ошиши ҳисобига.

кичик тадбиркорлик субъектларига 18 фоиздан юқори лекин 24,5 фоиздан кўп бўлмаган миллий валютада 5 млрд. сўмгача ажратиладиган кредитлар бўйича асосий ставкаси 40 фоизгача миқдорда (5,6 фоизи) уч йилдан ортиқ бўлмаган муддатга компенсация тақдим этилади.

фаолият даври уч йилгача бўлган кичик тадбиркорлик субъектларига 3 млрд. сўм кредитлари учун тақдим этилади.

компания кузатув кенгашининг қарорига асосан ташкил этилган давридан қатъий назар кичик тадбиркорлик субъектларига 5 млрд. сўм кредитлари учун тақдим этилади

Компаниянинг молиявий ёрдамидан фойдаланишда тадбиркор қуйидаги талабларга жавоб бериши керак.

компенсация олишда жорий кредитлар ёки бюджетга тўловлар бўйича муддати ўтган қарздорлиги мавжуд эмаслиги;

кафиллик олишда Ўзбекистон Республикаси ҳудудида рўйхатдан ўтган ва фаолиятини амалга ошираётган, тугатилиш босқичида бўлмаган, жорий кредит ёки бюджетга тўловлар бўйича муддати ўтказиб юборилган қарздорлиги бўлмаган ҳамда уларга нисбатан банкротлик тартиботи қўзғатилмаган бўлиши лозим.

кафиллик пулли хизмат ҳисобланади ва 1 фоиз бир марталик тўлов ундирилади.

2024-2026 йилларда қуйидаги мақсадли кўрсаткичларга эришишга қаратилган микромолиявий хизматлар оммабоплигини ошириш дастури амалга оширилади.

- микромолиялаш бозори ҳажмини камида 5 баробарга ошириш;
- микромолиявий хизматлар билан 1 миллиондан ортиқ тадбиркорларни қамраб олиш;
- микромолия ташкилотлари ресурс базасида жисмоний шахслардан жалб қилинадиган маблағлар миқдорини 2 баробарга ошириш;
- микромолиявий хизматлар кўрсатиш орқали расмий даромадга эга бўлмаган 500 мингга яқин шахсларни ўзини ўзи банд қилиш ва бизнесни ривожлантиришга кўмаклашиш.

Хулоса ўрнида айтиш мумкинки, бозор иқтисодиёти шароитида бўлса ҳам, кўринмас қўллар ва ҳуқуқий-сиёсий асослар билан тадбиркорлик субъектларини давлат томонидан қўллаб-қувватлаш механизмини ишлаб чиқиш зарурияти доимо сақланиб қолган.

Шу сабабли, доимий равишда тадбиркорлик субъектларини давлат томонидан қўллаб қувватланиши бугунги кундаги ислохотларнинг амалга оширилишида катта таъсирини ўтказди.

РАЗВИТИЕ ПРОФЕССИОНАЛЬНЫХ КОМПЕТЕНЦИЙ ПО НАПРАВЛЕНИЯМ ГУМАНИТАРНОГО ОБРАЗОВАНИЯ ЧЕРЕЗ ПРЕДМЕТ ЭЛЕМЕНТЫ ТЕОРИИ ВЕРОЯТНОСТЕЙ

Аннотация. В данной статье рассматриваются особенности теоретического подхода к теме элементов теории вероятностей и развития профессиональных компетенций в процессе преподавания математики на факультетах гуманитарного образования высших учебных заведений.

Ключевые слова: гуманитарность, компетентность, опыт, случайность, комбинаторика, проблема, элемент, комбинация, перестановка, множество, расположение, группировка.

DEVELOPMENT OF PROFESSIONAL COMPETENCIES IN THE FIELDS OF HUMANITIES EDUCATION THROUGH THE SUBJECT ELEMENTS OF PROBABILITY THEORY

Annotation. This article examines the features of the theoretical approach to the topic of elements of probability theory and the development of professional competencies in the process of teaching mathematics at the faculties of humanities education of higher educational institutions.

Key words: humanitarian, competence, experience, chance, combinatorics, problem, element, combination, permutation, set, arrangement, grouping.

В нашей стране особое внимание уделяется организации эффективного образовательного процесса на основе современных требований, в том числе применению информационных технологий в системе общего среднего образования, организации инновационного образования в высших учебных заведениях. В постановлениях от 8 октября 2019 года № ПФ-5847 Об утверждении “Концепции развития системы высшего образования Республики Узбекистан до 2030 года” и от 7 мая 2020 года № ПП-4708 “О мерах по повышению качества образования и развитию научных исследований в области математики” были признаны вопросы достижения качества и эффективности образования и приняты основные

внимание уделяется организации инновационного образования с опорой на зарубежные технологии [1,2].

Модернизация системы образования, изменения, происходящие в системе профессионального образования, создают необходимость развития профессиональной компетентности работников образовательного учреждения. В настоящее время в системе высшего образования внедряются государственные образовательные стандарты, широко внедряются инновации в содержание и технологии образования, направленные на повышение качества подготовки будущих специалистов.

Компетенция-это английское понятие” компетенция“, которое в словарном смысле буквально означает” способность“. А по содержанию означает” умение использовать теоретические знания в деятельности, проявлять высокий уровень профессиональной компетентности, умения и таланты“. Образование, направленное на формирование компетенций в образовательном процессе, – это возможность обучающихся практически применять полученные знания, умения и навыки в своей личной, профессиональной и общественной деятельности. Обучение, основанное на компетентностном подходе, развивает у учащихся самостоятельность, активную гражданскую позицию, инициативу, умение рационально использовать медиаресурсы и информационные и коммуникационные технологии в своей деятельности, осознанный выбор профессии, здоровую конкуренцию, а также общекультурные навыки [5].

Человек должен обладать базовыми компетенциями, необходимыми для того, чтобы вступать в личные, социальные, экономические и профессиональные отношения в своей жизни, занимать свое место в обществе, решать стоящие перед ним проблемы, а главное, быть конкурентоспособным в своей области, профессии. Кроме того, в процессе освоения каждой учебной дисциплины в образовании у учащихся формируются и специфические компетенции, относящиеся к отрасли, обусловленные спецификой, содержанием данной дисциплины.

В направлениях гуманитарного образования развиваются следующие компетенции по математике: предмет и этапы развития, исторический прогресс математической науки; логическое рассуждение и математическое наблюдение, правильное умозаключение, обеспечение преемственности и преемственности последовательности предметов; в то время как основные концепции аналитической геометрии заключаются в том, что они могут визуализировать исходную форму исторических памятников и находок, концепция функции заключается в росте населения, построении демографических моделей, построении диаграмм рождений, смертей, браков и разводов, приведении моделей постоянного и постоянного населения; в проведении исторических открытий и археологических раскопок посредством приложений точного интеграла поверхность плоской фигуры геометрической формы, выполненная работа, работа, выполненная

при подъеме груза, расчет прочности на сжатие жидкости; теория вероятностей реализация исторического анализа с помощью математической статистики [5].

Теория вероятностей-математическая наука, изучающая закономерности” случайных экспериментов”, то есть экспериментов, результат которых непредсказуем. При этом рассматриваются такие эксперименты, которые, как считается, могут быть воспроизведены в неизменном (т. е. идентичном) комплексе условий, по крайней мере, теоретически, в произвольном количестве. Результатом каждого из таких экспериментов является случайное событие. Практически во всех сферах человеческой деятельности бывают случаи, когда те или иные опыты можно будет повторять в одних и тех же условиях многократно. Теория вероятностей заинтересована в экспериментах, результаты которых различаются при переходе от теста к тесту. События, которые невозможно предсказать, произойдут они в эксперименте или нет, называются случайными событиями. Например, в эксперименте с подбрасыванием монеты каждому подбрасыванию соответствуют два случайных события: выпадение гербовой стороны монеты или выпадение числовой стороны монеты [3].

Теория вероятностей, в отличие от других математических дисциплин, имеет относительно короткую, но чрезвычайно амбициозную историю развития. Теперь приведем краткую историческую информацию. Систематическое изучение задач, соответствующих массовым случайным явлениям, и появление соответствующего им математического аппарата относится к XVII веку. В начале семнадцатого века знаменитый физик Галилей попытался провести научное исследование ошибок физических измерений, считая их случайными. В эти периоды также были попытки создать общую теорию страхования, основанную на анализе закономерностей заболеваемости, смертности, статистики несчастных случаев и подобных массовых случайных событий. Однако теория вероятностей как математическая наука стала возникать не из изучения сложных случайных процессов, а из анализа простейших азартных игр. Поэтому возникновение теории вероятностей соответствует второй половине семнадцатого века и связано с исследованиями в теории азартных игр таких ученых, как Паскаль (1623-1662), ферма (1601-1665) и Гюйгенс (1629-1695). Большой шаг в развитии теории вероятностей связан с научными исследованиями Якова Бернулли (1654-1705). Ему принадлежит “закон больших чисел”, который считается важнейшим законом теории вероятностей. Еще один важный шаг в развитии теории вероятностей связан с именем де Муавра (1667-1754). Это было наивно обосновано ученым тем, что существует важный закон, называемый нормальным законом (или нормальным распределением). Позже выяснилось, что эта закономерность также играет важную роль в теории вероятностей. Теоремы,

обосновывающие существование этого закона, называются “центральными предельными теоремами”. Большой вклад в развитие теории вероятностей принадлежит и знаменитому математику Лапласу (1749-1827). Он был первым, кто строго и систематически описал основы теории вероятностей, доказал форму центральной предельной теоремы (теорема Муавра-Лапласа) и привел несколько приложений теории вероятностей. Достаточный прогресс в развитии теории вероятностей связан с именем Гаусса (1777-1855). Он дал более общее обоснование нормальному закону и создал важный метод обработки числовых данных из опыта – “метод малых квадратов”. Пуассон (1781-1840) обобщил закон больших чисел и применил теорию вероятностей к задачам стрельбы. Его именем назван закон распределения, играющий большую роль в теории вероятностей. Для XVII и XIX веков характерно резкое развитие теории вероятностей и всесторонний интерес к ней. Дальнейшее развитие теории вероятностей внесли российские ученые В.У. Буняковский (1804-1889), П.Л. Чебышев (1821-1894), А.А. Марков (1856-1922), А.М. Ляпунов (1857-1918), А.У. Хинчин (1894-1959), В.И. Романовский (1879-1954), А.Н. Колмогоров (1903-1987) и их ученики внесли неоценимый вклад. В Узбекистане всемирно известны Саримсоков (1915-1995) и С.Х. Отдельно стоит отметить важную роль творчества сирожиддинова (1920-1988) [3].

Термин "вероятность" представляет собой объективную меру вероятности возникновения события.

В результате эксперимента на бедре e_1, e_2, \dots, e_n может произойти любое из элементарных событий, т.е. $U = \{e_1, e_2, \dots, e_n\}$ будь как будет.

Bu elementar hodisalarga quyidagi shartlarni qo'yamiz:

На эти элементарные события наложим следующие условия:

1) события не объединяются в пары, иными словами, для любых двух e_i и e_j ($i \neq j$) событий, если одно из них произойдет, другое заведомо не произойдет.

2) e_1, e_2, \dots, e_n события единственно возможные события, то есть одно из них должно произойти.

3) e_1, e_2, \dots, e_n события одинаково вероятны. Это обязательно e_1, e_2, \dots, e_n означает, что не существует объективных причин, которые способствовали бы одному из событий случиться больше, чем другим.

Предположим, что событие учитывая, что e_i ($i = \overline{1, n}$) пусть Рой дает только тогда, когда рой дает некоторые из элементарных событий. В этом случае мы e_i ($i = \overline{1, n}$) те из элементарных событий, которые дают гоу, а также те, которые приводят к тому, что событие дает Роу, мы называем событиями, для которых событие создает удобство.

Допустим, рассматриваемый п e_1, e_2, \dots, e_n Пусть m одно из элементарных событий способствует наступлению события А, т.е.

$A = (e_{k_1}, e_{k_2}, \dots, e_{k_m})$ будь как будет

Классическое определение вероятности. Вероятность события A определяется как отношение числа событий, способствующих наступлению события A , к числу элементарных событий с равной вероятностью и определяется следующим образом:

$$P(A) = \frac{m}{n} = \frac{A \text{ ga kirgan elementar hodisalar soni}}{\text{barcha elementar hodisalar soni}}$$

Количество всех группировок (комбинаций) m из n элементов

$$C_n^m = \frac{n!}{m!(n-m)!} = \frac{n(n-1)\dots[n-(m-1)]}{m!}$$

находится по формуле.

Пример. В коллективе из 25 человек четверо должны быть выделены для работы на определенном участке. Сколькими способами это можно сделать?

Решение. Поскольку выбранные 4 человека не важны, ему C_{25}^4 можно сделать следующим образом:

$$C_{25}^4 = \frac{25!}{(25-4)!4!} = \frac{25!}{21!4!} = \frac{21! \cdot 22 \cdot 23 \cdot 24 \cdot 25}{21! \cdot 1 \cdot 2 \cdot 3 \cdot 4} = 12650$$

В этом

$$C_n^k = \frac{A_n^k}{k!}$$

быть,

$$A_n^k = \frac{n!}{(n-k)!}$$

Ответ: Это можно сделать 12650 способами.

Пример. Сколькими способами можно разместить на одной полке шесть разных книг?

Решение. Фактически первую книгу можно выбрать шестью способами, вторую пятью способами и аналогично последнюю книгу одним способом. По правилу умножения общее количество методов равно:

$$P_6 = 6! = 1 \cdot 2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 = 720$$

Ответ: Его можно разместить 720 способами.

Пример. Есть 5 видов конвертов без марок и 4 вида марок. Сколькими способами можно выбрать конверт и марку для отправки письма?

Ответ: 20.

Пример. Из 9 человек вам предстоит выбрать 4 человека и разместить их на четырех пронумерованных стульях (по 1 человеку на стул). Сколькими способами это можно сделать?

Решение. Решение задачи вычисляется путем нахождения количества перестановок элементов.

$$A_9^4 = \frac{9!}{(9-4)!} = \frac{9!}{5!} = 6 \cdot 7 \cdot 8 \cdot 9 = 3024$$

Ответ: 3024.

Пример. Если имеется 7 бегунов, сколькими способами можно сформировать команду из 4 человек для участия в забеге?

Решение. Это решение проблемы n из элементов m количество группировок, составленных из C_n^m найдено через.

$$C_7^4 = \frac{7!}{4!(7-4)!} = \frac{7!}{3!4!} = \frac{5 \cdot 6 \cdot 7}{1 \cdot 2 \cdot 3} = 35.$$

Ответ: 35.

Пример. Сколько способов можно покрыть 6 стульев тканью, если есть ткани 6 разных цветов и все стулья должны быть разных цветов?

Решение. Сколько способов можно покрыть 6 стульев тканью количество перестановок $P_n = n!$ находится по формуле.

$$P_6 = 6! = 1 \cdot 2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 = 720.$$

Ответ: 720.

Чтобы закрепить пройденную тему, уровень знаний учащихся контролируется с помощью вопросов "блиц".

" Блиц " вопросы.

Что называется задачами комбинаторики?	Задачи, связанные с нахождением различных комбинаций элементов и их количества, называются задачами комбинаторики.
Что такое замена?	Комбинации n различных элементов, отличающиеся друг от друга только расположением.
Как найти количество перестановок?	n количество всех перестановок, состоящих из элементов $P_n = n!$ находится по формуле
Что такое упорядоченный набор?	Множество, элементы которого расположены в заданном порядке, называется упорядоченным множеством.
Что такое размещение?	n представляют собой комбинации различных элементов, m которые отличаются друг от друга составом элементов или их порядком.
Как найти количество перестановок n из m разных элементов?	n из элемента m количество размещений от A_n^m находится по формуле $A_n^m = \frac{n!}{(n-m)!}$
Что такое группировка?	Они представляют собой комбинации n элементов, m отличающиеся друг от друга хотя бы одним элементом.
Как найти количество группировок?	n из элемента m количество группировок, состоящих из C_n^m найден через

$C_n^m = \frac{n!}{m!(n-m)!}$

Упражнения для укрепления.

1. Если: 1) $A = \{1\}$; 2) $A = \{5; 6\}$; 3) $A = \{a; b; c\}$ найти все возможные перестановки элементов заданных множеств.
2. $A = \{a; b; c; d\}$ найти возможные перестановки элементов множества.
3. Сколько элементов должно быть максимум в этом наборе, чтобы количество всех перестановок, составленных из элементов набора, не превышало 100?
4. Найдите количество мест: 1) A_{15}^3 ; 2) A_{m-1}^{m-5} .
5. Найдите количество группировок ниже: 1) C_{51}^{13} ; 2) C_6^4 .
6. Сколько разных способов можно отправить на научную конференцию 4 студента из 12 специальностей по истории и 15 специальностей по археологии?

В инновационном образовании такие технологии, как нестандартные тесты, творческие упражнения и проблемные видеоповторы, которые выявляют и развивают математические компетенции, служат для закрепления знаний об изучаемом материале, формирования навыков анализа задач, принятия оптимальных решений по самостоятельному решению задач, формирования и развития ответственности, самостоятельности и предметных компетенций.

СОВЕРШЕНСТВОВАНИЕ НОРМАТИВНО-ПРАВОВЫХ ОСНОВ ТАМОЖЕННОГО ДЕКЛАРИРОВАНИЯ ТОВАРОВ И ТРАНСПОРТНЫХ СРЕДСТВ

Аннотация. В статье рассматриваются проблемы правовых основ, регулирующих процесс декларирования товаров и транспортных средств в Российской Федерации. Большое внимание отведено законодательной стороне вопроса выполнения данной таможенной операции, определена нормативная и правовая база. В ходе исследования проанализировано текущее состояние нормативно-правовой базы таможенных органов, рассмотрен процесс декларирования товаров и транспортных средств. В завершение определены пути совершенствования законодательства в области декларирования товаров и транспортных средств в РФ.

Ключевые слова: декларирование, таможенный орган, правонарушение, таможенный контроль.

IMPROVING THE REGULATORY FRAMEWORK FOR CUSTOMS DECLARATION OF GOODS AND VEHICLES

Abstract. The article deals with the problems of the legal framework governing the process of declaring goods in the Russian Federation. Much attention is paid to the legislative side of the issue of performing this customs operation, the regulatory and legal framework is defined. In the course of the study, the current state of the regulatory framework of the customs authorities was analyzed, the process of declaring goods was considered. In conclusion, the ways of improving legislation in the field of non-declaration and incorrect declaration of goods in the Russian Federation are identified.

Key words: declaration, customs authority, offense, customs control.

Декларирование как совокупность в процессе таможенного оформления товаров определена как один из главенствующих условий, выполнение которых требуется при пересечении товарами границ ЕАЭС. Исходя из данных, которые таможенник или его представитель указывает в таможенной декларации на товары, органы таможни определяют возможность пересечения таким товаром границы ЕАЭС, возможность выпуска этих товаров на территории ЕАЭС, можно сказать, дают возможность использовать эти товары лицам, которые в этом заинтересованы, ориентируясь на выбранный таможенный режим. Недекларирование или неверное декларирование товаров изначально создает неверный фактор работы с этими товарами со всеми вытекающими из этого последствиями. Объективную сторону декларирования, недекларирования или неверного декларирования товаров представляют товары и транспортные средства, перемещающиеся по всей территории ЕАЭС. В современных экономических условиях между странами отлично практикуется научное и техническое сотрудничество, что, в свою очередь, способствует ускоренному росту мировой торговли. В то же время рынок наполняется новейшими товарами, которые становятся все больше технически сложными и наукоёмкими, а покупатели становятся более внимательными относительно качества таких товаров [4, стр. 163]. Также, увеличение ассортимента товаров, перемещаемых через таможенные границы ЕАЭС, вносит сложности и в грамотное декларирование товаров. Так, декларирование товаров, относящихся к транспортным средствам необходимо декларировать, опираясь на 22 главу Таможенного кодекса ЕАЭС, исключая другие возможные нормативно-правовые акты. Декларирование товаров применяется для выполнения следующих задач:

- передача органам таможни основных данных, которые потребуются им для выполнения необходимых требований, о товарах, которые в дальнейшем планируется перемещать через таможенные границы ЕАЭС;
- гарантия отправителя товаров в том, что все действия, которые совершает декларант с товарами, легитимны относительно действующего законодательства;

– начисление и требование о выплате таможенных платежей, начисленных, основываясь на указанные в декларации, данные о товарах, перемещаемых через таможенную границу ЕАЭС [1].

При своевременном определении, остановке и пресечении нарушений, касающихся таможенной процедуры декларирования товаров и транспортных средств, при выявлении нарушений в заполненных на товары декларациях, появляется возможность остановки выпуска таких товаров, следовательно, появляется возможность избежать появления на рынке контрафактных товаров. Также, своевременное определение фактов недекларирования или неверного декларирования товаров и транспортных средств позволяет начислить точное количество таможенных платежей, что, в свою очередь, необходимо для избегания финансовых потерь всего государства. Контроль, позволяющий пресекать вовремя такие виды правонарушений, определяется качественными правовыми основами государственного законодательства. Именно полагаясь на нормативно-правовую базу, таможенные органы проводят контроль в отношении товаров и транспортных средств, пересекающих границы ЕАЭС. Так, грамотно составленные правовые акты в области недекларирования или неверного декларирования товаров и транспортных средств сохраняют не только финансовую стабильность Российской Федерации, но и гарантируют защиту экономических интересов Российской Федерации в условиях ее членства в ЕАЭС. Исходя из статистических данных, в Российской Федерации виден стабильный рост количества дел о правонарушениях касательно недекларирования или неверного декларирования товаров и транспортных средств [5, стр. 138]. Данный факт демонстрирует то, что в Российской Федерации недостаточно полно применяется превентивная функция административного законодательства, касающегося нарушений в области таможенного права, в особенности таможенного контроля товаров и транспортных средств, ошибок их таможенного декларирования или недекларирования. В связи с этим, на сегодняшний день, тема данной статьи актуальна.

Результатами декларирования товаров являются данные о товаре, которые используются не только органами таможни, но и органами налоговых служб, правоохрнительными органами для собственного регулирования внутренней экономической деятельности и внешней экономической деятельности, а также для грамотного ведения и заполнения статистических данных [6, стр. 113]. В случае, когда декларант неверно заполняет декларацию на товары или вообще не заполняет деклараций на свои товары, многие административные органы остаются в заблуждении. От этого, в большинстве своем, страдают экономическая сфера государства, а также рыночная сфера: налоги начисляются неверно, в связи с тем, денежных средств, поступающих в бюджет государства, становится меньше; статистика ведется неверно – спрос и предложение на внутреннем

рынке определяются неверно. Самая важная сфера, в которой важна система декларирования товаров и транспортных средств – сфера таможенно-тарифного регулирования внешнеэкономической деятельности [7, стр. 76].

В тот же момент, основными причинами, по которым действующее законодательство в области недекларирования или неверного декларирования товаров и транспортных средств работает недостаточно эффективно, являются уже накопившиеся проблемные моменты в правовых основах, касающихся данной таможенной процедуры. В большинстве своем, такие проблемы присутствуют на стадиях возбуждения и рассмотрения дел об административных правонарушениях [2]. Также, на основе проведенного анализа, были выявлены проблематичные моменты, как и в правовых основах общего порядка, так и в области декларирования товаров, недостаточно контролируемых законодательством государством. Чтобы их исправить, потребуется вносить изменения, как в общее законодательство, так и в таможенное законодательство. В процессе исследования определилось, что в статистике из всех дел об административных правонарушениях, которые возбуждались органами таможенной власти, а после закрывались по различным причинам, более тридцати процентов таких дел составляли дела, касающиеся декларирования товаров и транспортных средств. В основном такие дела были закрыты до вынесения приговора правонарушителю. Чаще всего такие ситуации происходили по причине того, что во время процесса разбора правонарушения было определено отсутствие состава или события административного правонарушения. Так, более тридцати процентов дел были прекращены, никакого наказания вынесено не было. Это наглядно демонстрирует недостаточное качество в правовых основах в области контроля декларирования товаров и транспортных средств, пересекающих границы ЕАЭС [3, стр. 113]. Всего, в судебной практике выявляется несколько причин, по которым декларант освобождался от ответственности. Таковыми являются:

- примечание к статье 16.2 кодекса ЕАЭС;
- отсутствие события правонарушения. К примеру, известны случаи, когда декларант не отражал некоторую коммерческую информацию в декларации, но, согласно документам производителя, данная информация должна была быть отражена. В таких случаях суд требует дополнительно предоставить информацию, но вопрос злоумышленного сокрытия ее декларантом остается открытым. В правовых актах недостаточно четко указано то, что в декларации должна быть представлена абсолютно вся информация, а в иных случаях требуется признавать это недостоверным декларированием;
- сложности в отношении постановления пленума №79, в котором недостаточно грамотно трактуются правила касательно декларантов на товары, одновременно являющихся представителями этих товаров;

– определение правонарушения недекларирования или недостоверного декларирования товара как малозначительного правонарушения;

– отсутствие состава правонарушения.

В основном, рассмотренные выше проблемы в правовых основах характеризуются противоречивостью среди областей правового регулирования, а также неполноценной определенностью норм административного права. Кроме этого, необходимо упомянуть и о том, что недостаточно развит порядок применения правовых основ, что обуславливает довольно формальный подход в правовом производстве, касающемся определения наказания за нарушение в области недостоверного декларирования товаров и транспортных средств, или совсем отсутствия деклараций на них. Довольно часто не уделяется большое внимание выяснению обстоятельств дела, важных для состава правонарушения. Так, в дальнейшем, в отношении владельца товара практически необоснованно выносятся обвинения, либо наоборот, что практически полностью искореняет возможность использования права на защиту, которое есть у всех. В связи с этим, можно сделать вывод, что проблема недостаточно полного рассмотрения дел, недостаточно полные требования о рассмотрении дел в действующих правовых основах – вопрос, требующий корректировки. Основу нормативно-правовой базы декларирования товаров и транспортных средств определяет статья 16.2 Таможенного кодекса ЕАЭС, однако, при определении такого правонарушения, правоохранительные органы ориентируются и на административное законодательство РФ [1]

В ходе исследования были определены основные проблемные моменты в правовых основах, касающихся декларирования товаров и транспортных средств, а также определены возможные пути совершенствования. Так, была определена несогласованность среди правовых актов Министерства Российской Федерации и Законодательством ЕАЭС. Это вносит разногласия в определение фактов недостоверного декларирования товаров, а также затрудняет работу органов таможни. Правовые основы касательно всех вопросов среди государства РФ и ЕАЭС должны быть согласованы и едины.

Также, довольно часто сложно истолковать правовые основы для декларанта, в связи с чем, декларант может нарушить правила, даже не подозревая этого. В связи с этим, для упрощения действий декларанта в момент оформления своих товаров, требуется упростить толкование правовых актов, либо создать определенный перечень, который будет разъяснять все декларанту.

Анализируя нормативно-правовую базу, касающуюся декларирования товаров и транспортных средств, были выявлены определенные сложности и с определением перечня товаров, которые

должны быть обязательно задекларированы. Так, появляются случаи недостоверного истолкования пункта в Таможенном кодексе ЕАЭС относительно того, какие товары отражать в декларации. Чтобы сгладить этот проблемный вопрос необходимо составить более уточняющую формулировку в Таможенном кодексе ЕАЭС.

Требуется рассмотреть еще один проблемный вопрос. Недостаточное уточнение среди определения момента недеklarирования и неверного декларирования. В законодательстве, на сегодняшний день, возникает большое количество спорных вопросов, касательно этого момента. В случае, если декларант неправильно указывает в декларации, часто определяют правонарушение не как «недостоверное декларирование», а как «недекларирования». В таком случае декларант облагается штрафными санкциями и лишается возможности выпускать товар, что несет еще большие потери для декларанта. Кроме этого, из-за недостаточных формулировок ошибаются и таможенные органы, и суды, и органы правоохранительной власти. В тот же момент, когда декларант решает бороться за свои права и доказывать свою правоту, декларанту приходится пройти огромное количество инстанций.

Конечно, в данной статье рассмотрены не все проблемы в правовых основах декларирования товаров и транспортных средств, есть много недостоверных и неточных формулировок и толкований. Пути совершенствования, рассмотренные в работе, требуют еще более глубокой доработки и корректировки, здесь отмечены лишь некоторые из них. Предложенные пути совершенствования правовых основ и возможности их дополнения не сменяют правила и практические формы применения их, а лишь сделают их более уточняющими и понятными для участников правоохранительной деятельности и участников внешнеэкономической деятельности. Это позволит упростить таможенное оформление товаров, сократить время, затрачиваемое на это. Также, поправки помогут сократить количество нерешенных правонарушений в области декларирования товаров и транспортных средств, что сократит потери из бюджета Российской Федерации.

ПЕРСОНАЛИЗИРОВАННЫЕ СПОСОБЫ ОБУЧЕНИЯ ПРИ ИЗУЧЕНИИ ГЕОЛОГИЧЕСКИХ ПРОЦЕССОВ В ОБЩЕСТВЕ

Аннотация. В статье рассматривается концепция персонализированных образовательных методов изучения геологических процессов и подчеркивается важность специального инновационного подхода в образовательной практике. А также рассматриваются основы персонализированного образования и его значение в повышении эффективности образовательного процесса в области геологии. Затем автор обрисовывает основные образовательные цели, которые могут варьироваться от минералогии до гидрогеологии, и предлагает способы адаптации учебной программы, включив в нее как теоретические, так и практические аспекты.

Ключевые слова: геология, горное дело, персонализированное образование, минералогия, полезные ископаемые, учебная программа, 3D-моделирование, искусственный интеллект.

PERSONALIZED METHODS OF TEACHING WHEN STUDYING GEOLOGICAL PROCESSES IN SOCIETY

Annotation. The article discusses the concept of personalized educational methods for studying geological processes and emphasizes the importance of a special innovative approach in educational practice. The article discusses the basics of personalized education and its importance in increasing the efficiency of the educational process in the field of geology. The author then outlines the

main educational objectives, which can range from mineralogy to hydrogeology, and suggests ways to adapt the curriculum to include both theoretical and practical aspects.

Key words: geology, mining, personalized education, mineralogy, minerals, curriculum, 3D modeling, artificial intelligence.

Геология – естественная наука, изучающая состав, строение и историю Земли, а также процессы, приводящие к ее изменению. Изучение геологии важно для самых разных профессий: от строительства и горнодобывающей промышленности до экологии и экологического планирования. В последние годы образование стало более персонализированным благодаря развитию технологий, что позволяет учащимся создавать персонализированные траектории обучения, соответствующие их интересам и целям.

В этой статье мы рассмотрим, как можно разработать персонализированные пути обучения для изучения геологических процессов. **1. Доступ к персонализированным программам обучения.**

Персонализированное образование предполагает адаптацию методов обучения, учебной программы и учебных материалов к индивидуальным потребностям учащихся. Это включает в себя учет их предшествующих знаний, интересов, стиля обучения и скорости обучения. В геологии, где темы могут варьироваться от минералогии до тектоники плит, персонализация помогает сделать обучение более актуальным и эффективным для каждого учащегося.

2. Определение образовательных целей.

Первым шагом в создании индивидуального пути обучения является определение конкретных целей обучения. Студентов могут заинтересовать следующие аспекты геологии:

- исследование минералов и горных пород;
- понимание истории и стратиграфии Земли;
- изучение палеонтологии и древних организмов [1];
- прогнозирование и изучение землетрясений и вулканов;
- изучение водных ресурсов и гидрогеологии;
- поиск полезных ископаемых.

3. Создать учебную программу.

После того как цели обучения определены, учебная программа может включать необходимые темы в зависимости от уровня сложности, подходящего для учащегося. План может включать в себя:

- теоретические занятия;
- практическая лабораторная работа;
- полевые исследования;
- интерактивные онлайн-курсы;
- проектные работы;

- индивидуальный подход к обучению [2];
- использование технологий.

Современные образовательные технологии предлагают различные инструменты для персонализации процесса обучения. Цифровые учебники, учебные пособия на базе искусственного интеллекта, виртуальные лаборатории и 3D-моделирование позволяют учащимся узнавать о геологических процессах в интерактивном режиме.

4. Оценка уровня знаний.

Регулярные оценки помогают отслеживать прогресс учащихся и корректировать учебную программу по мере необходимости. Тесты, опросы и самооценка являются важными инструментами в этом процессе.

5. Гибкое образование.

Системы адаптивного обучения автоматически корректируют содержание и темп обучения в соответствии с индивидуальными достижениями и трудностями учащихся.

6. Практический опыт.

Для глубокого понимания геологических процессов необходимо сочетать теорию с практикой [3]. Участие в экскурсиях и реальных научных проектах дает студентам возможность наблюдать геологические процессы в действии и применять полученные знания.

Итак, персонализированное образование по геологии открывает перед студентами новые возможности. Они позволяют себе глубоко изучать землю и ее процессы, применять знания в реальных условиях, готовиться к будущей профессии в соответствии с индивидуальными интересами и потребностями. Современные технологии и подходы к образованию делают этот процесс более удобным и эффективным, открывая двери в мир геологии каждому.

TYPES OF COMPETENT APPROACHES TO PROVIDING THE QUALITY AND CONTENT OF EDUCATION IN HEI

Abstract. This article provides detailed information about the quality of education in HEIs today, and the types of competent approaches to ensuring its content.

Keywords: continuous education, pedagogical process, educational institution, quality of education, regulatory and legal documents, information search, analysis, evaluation, necessary information.

Государственные программы, направленные на развитие системы образования на основе комплексных реформ, реализуемых в системе непрерывного образования, совершенствования деятельности субъектов образовательного процесса, создания для них необходимых и достаточных условий, решений правительства, в высших учебных заведениях находят Решение существующих проблем, отказ от традиционных форм и методов

управления образовательной системой, требует формирования управленческой деятельности лидеров на основе демократических принципов и инновационных подходов.

Для организации и управления педагогическими процессами в образовательном учреждении на научной основе, создания комфортной образовательной среды в коллективе управленческий состав вуза должен знать и опираться на различные современные методы управления образовательной системой. уметь определять направление развития идей, необходимо регулярно изучать опыт и научно-технические достижения, применять их в своей деятельности, уметь организовывать инновационную деятельность в процессе управления.

По данным исследований, в процессе организации, управления и оценки качества образования руководители должны выполнять следующие особо важные задачи: предварительное планирование деятельности, выбор направлений реализации, принятие решений, которые необходимо выполнить; подбор специалистов по содержанию и сути задач и распределение выполняемых задач; организация образовательного процесса на научной основе, организация переподготовки и повышения квалификации педагогических кадров; обеспечение материально-технической и современной научно-методической продукцией; обеспечение непрерывной связи социальных связей образовательного учреждения; обеспечение использования передового педагогического опыта и современных информационных технологий; Реализация требований ДТС на практике и организация ее мониторинга; сбор и анализ информации на основе анкетирования и интервью среди ППС и студентов с целью определения тенденции и динамики развития образовательного учреждения; пересмотр и актуализация поставленных задач в направлении развития и совершенствования деятельности образовательного учреждения, подбора и расстановки кадров исходя из государственных требований к должностям; Руководитель должен направлять педагогический персонал на компетентную, целесообразную деятельность, обладающий четкой информацией, организующий инновационную деятельность на основе формирования и стимулирования заинтересованности подчиненных в результатах инновационной деятельности; контролировать исполнение решений и распоряжений. Также управленческий персонал высших учебных заведений должен обладать компетенцией в следующих областях.

Правовая компетентность - знание нормативно-правовых документов образования, правовых норм и умение эффективно использовать их в управленческой деятельности, разрабатывать локальные нормативно-правовые документы, принимать решения в рамках правовых норм.

Управленческая компетентность – методические методы, современные технологии управления, педагогико-психологические

диагностические (опрос, индивидуальное и групповое интервью) технологии, обеспечивающие эффективное решение управленческих проблем и задач, возникающих в реальных ситуациях управленческой деятельности, умение организовать эффективное управленческое общение и непрерывное совершенствование, создание здоровой психологической среды в коллективе, умение использовать эффективные методы в соответствии с управленческими ситуациями, умение использовать педагогические и психологические аспекты переговоров, тайм-менеджмент, формирование взаимоотношений с малыми группами и лидерами, совершенствование контроля в управлении.

Информационная компетентность – это поиск, анализ, оценка и направление необходимой информации, связанной с личной и управленческой деятельностью руководителя, с помощью современных информационно-коммуникационных технологий, организации самостоятельной творческой работы, постоянного развития управленческой деятельности.

Коммуникативная компетентность - обеспечение эффективного общения в процессе управления образованием, управление различными подгруппами с учетом их уникальности, организация эффективного управленческого общения в горизонтальном и вертикальном направлениях коммуникации, соблюдение этикета общения с иностранными партнерами, толерантности, иметь высокую речевую культуру в общении, формировать положительный имидж лидера в коллективе, уметь доносить письменные мысли в процессе общения, правильно выражать устные мысли в письменной форме, владеть манерой выступления перед коллективом, вести эффективные переговоры.

АРПА ДОН КУЯСИ ТУХУМИНИ АЖРАТУВЧИ МОСЛАМАНИ ТАКОМИЛЛАШТИРИШ

Аннотация. Ушбу мақолада дон куяси тухумини элаклардан ажратиб олиш учун тайёрланган мосламада иккитадан элакдаги тухумларни ажратиб олишда фойдаланилганда амалда 3-4 дақиқа вақт сарфланганда бўлиб, 45 та элакдан тухум олиш учун 67,5-90 дақиқа ёки андаза вариантига нисбатан кам вақт сарфланиши аниқланди.

Калит сўзлар: дон куяси, тухум, тангачалар, трихограмма, олтинкўз, вентилатор, патинус, банка ва трубка.

IMPROVEMENT OF DEVICE FOR SEPARATION OF BARLEY GRAIN MOTH EGGS

Annotation. This article found that when using a two-sieve egg separator, it takes 3-4 minutes to remove eggs from 45 sieves, or 67.5-90 minutes, or less time compared to the standard version.

Keywords: goldeneye, grain mole, eggs, scales, trichogramma, fan, jar, correta and tube.

Кўп йиллардан буён биологаторияларда трихограмма ва олтинкўз кўпайтириш учун дон куяси тухумидан фойдаланиб келинмоқда. Албатта бу ишлар ҳамма биологаторияларда оммалашган. Аммо юқорида таъкитлаб ўтилган жараён биологаторияларда бир хил эмас. Оддий биологаторияларда дон куясини кўпайтиришдан то тухум олиш жараёни ҳеч қандай тавсияларда берилмаган ҳолатда мосламаларсиз олиб борилади. Бу эса кўп вақтни сарфланишига ёки бир иш қунидаги берилган фойдали иш коэффициентини орқага сурилишига олиб келади. Бу эса трихограммани ва олтинкўзни озиклантиришни кечикишига олиб келади.

Ҳозирги кунда фанерли ёки темирли элаклардан фойдаланиш оммалашган бўлиб кўпроқ хонадан ташқарида дон қуяси элаб олинади. Бунга сабаб капалакларда ажралиб чиққан қанот тангачаларини ташқарига чиқаришни иложи йўқлигидир. Юқоридаги камчиликларни бартараф этиш

учун Олтинкўл тумани ўсимликлар карантини ва химояси ИТИ ходимлари томонидан дон қуяси тухумини элаклар ёрдамида ажратиб олишда янги мослама яратишди (1-расм).

1-расм. Дон қуяси капалакларидан тухум олиш мосламасини умумий кўриниши.

2-расм. Капалаклар солинган элаклар ва аравагани умумий кўриниши

Дон қуяси тухумини ажратувчи мослама

Мослама баъзи бир қисмлари қурилиш материалдан, металл ва тунукадан тайёрланган бўлиб, ўлчами 600x50x20x20мм бўлган ғилдиракли аравача, диаметри 27x27 бўлган иккита элак (2-расм), дон қуяси тухумлари тўпланувчи патнус (каррета) (3-расм), ичкаридаги чангларни ташқарига чиқариб юборувчи вентилятор, чангни махсус йиғувчи банка ва трубкадан иборат.

Ичида капалаклар жойлашган иккита элак аравачага жойлаштирилади ва қўл ёрдамида чап ва ўнг томонга силкита, бошлайди ва элакдаги дон қуяси тухумлар пастга жойлашган патинусга туша бошлайди бу жараён

тухумлар тўлиқ тушиб бўлгунга қадар давом этади. Бу элаклар чиқариб олинади ва навбатдаги элаклар жойлаштирилади ва тухум олиш жараёни давом этади. Корпус бўйлаб тарқалага тарқалаган элакдаги капалаклардан ажралиб чиққан чанглар вентилятор ёрдамида труба орқали ичида сув қуйилган пластмасса идишга юборилади ва чанглар сувга чўкади, ҳаво эса махсус трубка орқали ташқарига чиқиб кетади.

1-жадвал.

Дон қуясини тухумини олиш учун кетган вақт (дақиқа ҳисобида)
Олтинқўл тумани ўсимликлар карантини ва ҳимояси (илмий марказий биологаторияси, 2024 й.16- март.)

№	Вариантлар	Элак-лар сони, дона	1 элак учун сарфланган вақт, дақиқа ҳисобида	Жами сарфланган вақт, дақиқа ҳисобида	Андазага нисбатан фарқи	
					+	-
1	Янги мослама	45	1,5-2	67,5-90	67,2-90	-
2	Андаза	45	3-4	135-180	-	67,2-90

Иш жараёнида битта элакдан ва махсус мослама ёрдамида тухум олиш учун 3-4 дақиқа сарфланади. Масус моламада 45 та элакдаги тухумни ажратиб олиш учун 67,5-90 дақиқа ёки 1,15соатдан 1,30 соатгача ва бир элакдан фойдаланилганда 135-180 дақиқа ёки 2,15 соатдан 3,0 соатгача вақт сарфланиши маълум бўлди.

Олиб борилган тажриба натижаларига кўра, янги тайёрланган мосламада ўртача 45 та элакдан тухум олинганда 1,1 соатдан 1,28 соатгача давом этиши маълум бўлиб, андазага варантига нисбатан 69 дан 92 дақиқагача кам вақт сарфланган.

METHODS OF TEACHING RUSSIAN LANGUAGE IN NATIONAL GROUPS OF THE INSTITUTE OF ARTS AND CULTURE OF UZBEKISTAN

Abstract. This article discusses the issues of teaching and learning the Russian language in universities not in the linguo-linguistic direction, but also in pedagogical technologies.

Key words: language, Russian language, educational technologies, crossword, rebus, modern education.

От первых лет независимости к сфере образования в нашей стране уделяется особое внимание. Особенно в неузбекских группах узбекского языка введение преподавания на государственном языке Закона «О государственном языке» послужило важным фактором в выполнении требований.

Потому что в Узбекистане их 130 Здесь живут представители разных национальностей и народов. Наше государство обязуется уважать национальные традиции, культуру и родной язык полученный также в общем словаре нашего государства «Государство Республика Узбекистан»

Введение статьи «Язык которых узбекский» является авторитетом узбекского языка и государственного языка. Было бы ошибкой сказать, что

это способствовало еще большему поднятию его репутации этого не произойдет.

Исходя из этих конституционных обязанностей и задач, образование в Узбекистане он будет переведен на 7 языков. Обучение их родному языку в неузбекских группах одновременно будет начато и преподавание узбекского языка как государственного наш Основной Закон и Закон «О государственном языке» в нашей стране послужил важной программой в выполнении ее требований. Образование на других языках преподавание предмета Узбекский язык как государственный язык в школах, по этому предмету Государственный образовательный стандарт формирования отдельных компетенций у обучающихся и определил цели и задачи данного предмета в образовательных программах.

Согласно требованиям ДТС, основная цель обучения узбекскому языку двоякая воплощенная в компетентности:

1. Разговорная компетентность – понимание на слух, чтение, говорение и письмо приобретение коммуникативных навыков.

2. Языковая компетентность – языковой материал (фонетика, лексика, грамматика) и приобрести достаточно знаний, чтобы уметь пользоваться средствами речи, знаниями и освоение видов речевой деятельности (слушание, чтение, говорение, письмо) подразумевается.

Языковой материал, языковые инструменты и определяются грамматические знания, необходимые навыки, которые необходимо сформировать. Сюда входит правильное произношение изучаемых слов и словоформ. письмо, грамматически правильное словообразование, правильный подбор слов, уметь правильно синтаксически и методически оценивать, составлять предложения и тон речи при определении требуется соответствующее использование возможностей литературного языка.

Узбекский язык для реализации этих целей и задач наряду с предоставлением информации о грамматике в учебниках, речевая компетентность литературно-художественные тексты для развития, жизнь узбекских поэтов и писателей и также приведены сведения о его работе. Читатель знаком с этой информацией с узбекского языка, увидев богатые образцы узбекского литературного языка и литературы развивает речевые навыки. То есть наряду с языковой компетенцией также формируется речевая компетентность и формируются необходимые научные знания.

Для образовательных учреждений, где обучение ведется на языках, кроме узбекского цель обучения узбекскому языку:

- деятельность студентов в бытовой и профессиональной сферах
- применять полученные знания узбекского языка в процессе общения
- формирование речевых компетенций, развивающих умения;
- устная и письменная грамотность учащихся на узбекском языке
- формирование языковых компетенций, направленных на развитие;
- самостоятельность на основе полученных знаний учащихся

- развивать, применять полученные знания, навыки и квалификацию в различных ситуациях состоит из формирования базовых компетенций, направленных на получение.

Исходя из вышеперечисленных целей и задач, в настоящее время мы ведем обучение на русском языке. Абдулла, Герой Узбекистана, Народный поэт Узбекистана Преподаявая жизнь и творчество Орипова, речь студентов о некоторых приемах и способах, полезных при развитии компетенций мы хотим поделиться нашими рекомендациями.

Известно, что Абдулла Орипов – настоящий деятель узбекской литературы так же всем известен. Его уникальная поэзия, неповторимое слово его строки пленили многих читателей. Мы поэты Узбекистана Мы известны как автор Государственного гимна республики. Неузбекский

студенты, обучающиеся в группах, особенно в классах русского языка, по учебникам узбекского языка оно представлено через отрывки из произведений поэта. Но больше всего информацию они получают из учебника узбекского языка для 10 класса.

“Абдулла На жизнь и творчество Орипова” был отведен 1 час. Но это данность темы информации сравнительно меньше, и она неполная. Учитель сам Педагогические навыки и достаточные теоретические знания предмета помогает раскрыть тему шире. А только сухая теоретическая информация

дать знания студенту, рассказав или написав лекцию это не оправдано, это естественно. Потому что сегодняшний студент любопытен со всех сторон и любит эффектность и яркость. Вот почему учитель учил эту тему

В этом отношении важное место занимают методы, использованные при объяснении.

Вот некоторые из них, которые мы можем использовать для преподавания этой темы прямо сейчас. Мы хотим поделиться своими мыслями об инновационных технологиях.

1. Метод «Картинный ребус». Этот метод часто используется в разделе урока «Подкрепление». будет уместно, если мы воспользуемся им частично. Мы знаем, что у учеников 10 класса психологически проходят последние этапы «переходного периода». Им трудно увлечься на уроке отдельными играми или командами. Это метод учащиеся должны будут определить произведения поэта, глядя на картинки. Например, если в ребусе показаны изображения рыбки, пруда и золотой монеты, то это оно. Там будет описано стихотворение поэта «Золотая рыбка».

2. Метод «быстрых вопросов и ответов». Используем этот метод в рамках урока «Изложенная тема мы сочли необходимым использовать его в разделе «Повторение и задание на домашнее задание». Студентам задаются вопросы о жизни и творчестве поэта. Учащиеся на вопросы им придется реагировать быстро. Запишите ответы учеников, это уместно, что они дают

таким образом, потому что в этом их партнеры учитывается усвоение ответов.

3. Метод «Проект». Этот метод мы будем использовать в «Заключительной части» урока мы сочли необходимым его использовать. Потому что это дано для литературного чтения в учебнике из-за относительно небольшого объема информации и ограниченности времени занятий, студентам может быть трудно получить обширную и полную информацию. Вот и все В некоторых случаях этот метод может сработать. «Проектный» метод – это метод, который может мотивировать студентов к самостоятельному обучению и поиску. В конце урока преподаватель рассказал ученикам о жизни и творчестве поэта поднимает интересную тему. Учащиеся в классе делятся на группы, группы назначается капитан.

Вышеупомянутые методы обучения воплощают новаторский педагогический дух не только улучшает разговорную компетентность студентов, но и независим от них помощь в привитии исследовательских и желательных качеств мы уверены, что это даст. Но в какой ситуации эти методы и методы или в каких условиях их использовать, как объяснить студентам нельзя забывать, что это зависит от педагогического мастерства учителя. Также устранение проблемных ситуаций, возникающих в процессе обучения существуют методы, используемые для достижения этой цели. Эти методы используются учеником на уроке. Важно обеспечить коммуникацию между преподавателем и эффективный учебный процесс. Представленный метод – это метод, призывающий всех учащихся к активности на уроке.

RESEARCH OF METHODS AND EXERCISES FOR TREATING 12-15 YEAR OLD STUDENTS WITH SPEECH DEVELOPMENT DEVELOPMENT

Abstract. This article discusses neurolinguistic techniques for overcoming pathological disorders of speaking and writing in students aged 12-15 years. The neurolinguistic approach is considered - this is one of the areas of psychotherapy and practical pedagogy and psychology, which considers the copying of verbal and non-verbal behavior of people, as well as the relationship between forms of speech, movements of the eyes, body and hands, with the influence on others.

Key words: neurolinguistic approach, verbal and non-verbal, neurolinguistic techniques, neuropsychological correction.

Нейролингвистические приёмы преодоления патологических нарушений говорения и письма у учеников 12-15 лет. Для устранения дефектов в речи, а также в письме у учеников в 12-15 лет были разработаны упражнения многими учёными нейролингвистами, логопедами, психологами на основе исследований, эти упражнения рекомендуются для устранения отклонения дефектов в речи, как заикание в любой форме,

дислалия, лалия, дислексия и дисграфия¹²⁸ так называемая нейролингвистический подход и нейропсихологическая коррекция. [1]:

Нейролингвистический подход — это одно из направлений психотерапии и практической педагогики и психологии, рассматривающее копирование вербального и невербального поведения людей, а также взаимосвязь между формами речи, движением глаз, тела и рук, с влиянием на окружающих. [2].

Нейропсихологическая коррекция – это исправление, изменение, приведение в норму процессов и функций, связанных с работой головного мозга: восприятия, внимания, пространственной ориентации, эмоционального реагирования, речи, памяти, моторики.

Учёные проводящие исследования в области нейролингвистики используют различные экспериментальные методы для того, чтобы с помощью визуализации мозга делать выводы о том, как язык представлен и обрабатывается в мозге. Эти методы включают парадигму вычитания, дизайннесоответствия, исследования, основанные на нарушениях, различные формы прайминга¹²⁹ и прямую стимуляцию мозга.

На основании рекомендованных упражнений для развития речи у школьников 12-15 лет с отклонением в развитии речи были проведены эксперименты, были использованы приёмы (элемент метода), которые делятся на словесные, наглядные, игровые. Наиболее распространены словесные приёмы:

речевой образец (речевая деятельность, которая должна предшествовать речевой деятельности детей; может использоваться неоднократно);

повторение (неоднократное использование одного и того же речевого элемента: звука, слова, фразы с целью его запоминания;

может быть индивидуальное, совместное ученика и учителя, хоровое);

объяснение (раскрытие воспитателем сущности какого-либо явления или образа действия);

указания (разъяснение ученику, как надо действовать, как достичь результата);

словесное упражнение (многократное выполнение учеником определённых речевых действий для выработки и совершенствования речевых умений и навыков);

оценкаречи ученика (мотивированное суждение об ответе ученика);

вопрос (словесное обращение, требующее ответа, задание ученику, предполагающее использование и переработку имеющихся знаний). [4].

128 дислексия и дисграфия-ребёнок пишет с ошибками, плохо читает. «Логопед для подростка». научная статья. 2023 г. karkusha.su/logoped-dlya-podrostka.

129 Прайминг - это идея о том, что воздействие одного стимула может повлиять на реакцию на последующий стимул без сознательного руководства или намерения

Наглядные приёмы – показ картинки, игрушки, движения или действия, положения органов артикуляции и т.п.

Игровые приёмы очень важны в развитии речи. Интригующая интонация голоса, живость эмоций повышает внимание детей. Можно задавать шутливые вопросы, использовать небылицы, перевёртыши, игру «Так или не так?», игровой персонаж, употреблять игровые формы оценки. Усиливают эмоциональное действие действия по выбору, элементы соревнования, красочность, новизна атрибутов, занимательность сюжетов игр.

Благодаря использованию различных приёмов развития речи происходит взаимопонимание учителя и ученика, родителей, которые первые побуждают к определённому речевому действию. Многие работы над упражнениями с предметами приобретает для ученика 12-15 лет ценностно-смысловой характер, что позволяет ученикам в большинстве случаев достигать значительных результатов в развитии тонкой моторики рук. С целью коррекции речевых нарушений упражнения с мячом выполняются под речевое сопровождение. Применение речевого сопровождения помогает подчинить движения тела определенному темпу, сила голоса определяет их амплитуду и выразительность. Этот прием особенно важен для учеников с речевыми расстройствами, так как индивидуальный внутренний ритм учеников зачастую или ускорен, или, наоборот, замедлен. У них часто изменен тонус мышц, поэтому включение упражнений на активное расслабление и напряжение мышц, особенно в сочетании с речью крайне необходимо. Звуковая гимнастика действует подобно вибромассажу, расслабляя тем самым мышцы гортани, а это, в свою очередь, очень важно для учеников с речевой патологией, не умеющих расслаблять мускулатуру лица, шеи, гортани. Для учеников с речевыми отклонениями проговаривание стихов и другого материала одновременно с движениями дает ряд преимуществ: речь ритмизируется движениями, становится более громкой, четкой и эмоциональной.

С учетом основных недостатков лексической стороны речи учеников с нарушениями развития, система коррекционной работы основывается:

на обогащении словаря, т.е. усвоении ранее неизвестных ученикам слов, а также новых значений тех слов, которые уже имелись в словарном запасе;

активизации словаря, т.е. перенос как можно большего количества слов из пассивного словаря в активный. [5].

CREATION OF CHILDREN'S PRESS BY THE SOVIET AUTHORITY

Annotation. In this state, a historical and critical analysis is given of the development of measures of the former Soviet government on the path of ideological education of the country's children, ix socio-spiritual education on the ideas of "socialist construction" and further expansion ix of activities, the role of the former Soviet press in covering children's lives.

Keywords: "Pioneer", "Pioneer Truth", "Counselor", "Lenin Spark", "Red Seekers", "Pioneer of the East", "Young Leninist", "Public Education", "Secondary Special Education", "Murzilka", "Merry Pictures".

Как и везде, бывшее советское правительство в Узбекистане уделяло особое внимание воспитанию детей «в социалистическом, идеологическом ключе» с точки зрения их собственных интересов. Для этого бывшее советское правительство возглавило мероприятия по созданию прессы, которая воздействовало на сознание и мировоззрение детей и была направлена на привлечение детей в их среду обитания.

Однако из-за войны, начавшейся в 1941 году, бывшее советское правительство было вынуждено приостановить свою работу по этому вопросу. Послевоенные реформы привели к возрождению и развитию детской прессы, а также возобновлению работы некоторых детских газет,

которые прекратили свою деятельность из-за войны. В частности, из-за войны газета "Пионер Востока", которая была временно закрыта 4 июля 1941 года, возобновила свою деятельность с 1 января 1957 года.¹³⁰

Газета "Пионер Востока" была награждена указом Президиума Верховного Совета СССР от 24 ноября 1977 года за активное участие в развитии пионерского движения - жизни детей разных национальностей и братских народов, проживавших в Узбекистане, привлечение "добровольных" пионерских отрядов к популяризации пионерского движения.¹³¹

Эти газеты были выпущены в связи с различными идеологическими организациями, связанными с детьми, октябрятами, пионерами, комсомольцами.

В качестве примера организациям бывших союзных республик, находившихся под их влиянием, бывшее советское правительство впервые возобновило деятельность газет и журналов всесоюзного масштаба, некоторые из которых не прекратили своего существования даже в разгар войны.

В первую очередь свою деятельность осуществлял ежемесячный литературно-художественный и общественно-политический журнал "Пионер" Центрального совета Всесоюзной пионерской организации для освещения работы Пионерской организации, который концентрировал вокруг себя 10-15-летних детей, тогда как с 1924 года он стал издаваться на русском языке в Москве¹³².

В 1958 году в Москве была основана Всесоюзная детская газета "Пионерская правда" (выходило на русском языке 2 раза в неделю)¹³³, а в 1976 году эта газета тиражом в 10 миллионов экземпляров совместно с народными образованием и общественными организациями организовала детские праздники, конкурсы.

На страницах газеты участвовали государственные и общественные деятели, ученые, писатели, учителя и другие, и они активно помогали развиваться школам и воспитывать детей «в духе советской идеологии» в общенациональном масштабе.¹³⁴

В целях пропаганды деятельности Вожатых, возглавлявших пионерские отряды в школах, общественно-политический журнал «Вожатый» (основан в 1924 г.) в каждом номере давал соответствующие указания и рекомендации¹³⁵.

В целях быстрого распространения своих идей среди детей в бывшем Советском Союзе к 1976 году было учреждено 28 газет и 35 журналов для

детей по всей стране, а также для освещения деятельности пионерских и комсомольских организаций, освещавших детей Узбекистана, находящихся под контролем бывшего Советского правительства.

В октябре 1945 года в Ташкенте начала свою деятельность газета «Комсомолец Узбекистана» (на русском языке) - печатный орган Республиканского союза комсомола, в основном освещавшая работу по пропаганде труда молодых земледельцев в республике и призывавшая молодежь осваивать земли.¹³⁶

С 1 июля 1946 года была восстановлена газета «Ленинская искра», которая была печатным органом пионерской организации республики, сначала 1929 года в Самарканде было опубликовано 3000 экземпляров, к 1974 году тираж достиг 780000 экземпляров¹³⁷.

Газета «Ленинская искра» служила главным печатным органом по пропаганде идеологии и идей Коммунистической партии среди детей. Исходя из интересов центра, он стремился через свои страницы распространять различные мероприятия среди детей республики.

Например, начиная с 1930 года, узбекские дети сами выступили с инициативой поставлять собранное ими хлопка в текстильные города России.¹³⁸ Во время сбора хлопка в Республике школьники, собравшие больше всего хлопка в специальных поездах доставляли сотни тонн хлопка в город Иванова, что вошло в привычку.

Также, 24 января 1963 года на ташкентском вокзале прошла церемония провода эшелона «белого золота», груженного хлопком, во главе с трудолюбивыми детьми.¹³⁹ Кроме того, газета обращала внимание на усиление влияния советской власти среди детей посредством таких акций, как «Красные искатели», «Цветы Узбекистана - ноқоратупроқ зона», («Ўзбекистон гуллари-ноқоратупроқ зона») «Пионерский металло-Ташкентскому метрополитену».

В целях дальнейшего совершенствования процесса трудового воспитания детей, особенно в целях повышения опыта детей в выращивании сельскохозяйственной продукции и в области сельского хозяйства, в ее выпусках организована страничка «Малая академия юных фермеров». ¹⁴⁰ В частности, на одной из страниц Академии есть статья для детей «Наш кокон-наше золото» («Пилламиз-тилламиз»), в которой детей обучают секретам выращивания коконов, первым этапам кормления коконов-червей, требованиям соблюдения санитарных правил в помещении¹⁴¹. Но ничего не было сказано о том, что представленные в статье требования и инструкции

не подходят детям школьного возраста, и они всегда нуждаются во внимании и помощи взрослых.

Вместо улучшения качества обучения, газета стала наполнять свои страницы такими темами, как сбор мусора и заниматься сельским хозяйством, и она становилось «коммунистической традицией».

В январе 1952 года начал свою работу литературно-художественный и общественно-политический журнал «Гулхан» (“Костёр”) предназначенный для детей 10-15 летнего возраста, который издавался под названием «Пионер» до 1958 года, освещая жизнь новости и творчества пионеров¹⁴².

В бывшем Советском правительстве усилилось деятельность многочисленной педагогической печати и к 1975 году учредило около 50 педагогических журналов с целью дать указания и рекомендации педагогическим коллективам общеобразовательных школ по идеологическому воспитанию детей.

Самые крупные из них - “Советская педагогика” (1937г), “Народное образование” (1946 г), “Среднее специальное образование” (1954г), “Вечерняя средняя школа” (1961г) и “Воспитание школьников” (1966г) советские журналы педагогики, занимавшиеся широкой пропагандой.¹⁴³

Газеты и педагогические журналы в системе образования играли важную роль в детской прессе Узбекистана, в том числе в Ташкенте выходили два раза в неделю (первый номер вышел 4 июля 1934 года), печатный орган Министерства образования Узбекистана и профсоюз работников образования - «Учительский вестник» публиковал статьи «По пути «коммунистического воспитания» детей республики, давал научно-методические указания работникам народного образования.¹⁴⁴

Советское правительство того времени не оставалось в стороне со своей идеологией в воспитании детей в детских садах, яслях и в своей деятельности ставило такие задачи, как обеспечение того, чтобы воспитанники детских садов росли с идеями системы.

С этой целью Советское правительство основало журналы для дошкольников и первоклассников школ. Потому что с 6-7 лет первой задачей советского правительства было обращено внимание на воспитание детей в духе верности партийным идеям.

Всесоюзные журналы «Мурзилка» (издавались в Москве с 1924 г¹⁴⁵.) и «Веселые картинки» (выпуск с 1956 г¹⁴⁶.) издавались для детей 6-8 лет, и к 1974 году общий тираж этих журналов достигло 5,6 миллиона.

146 «Большая Советская Энциклопедия». Том-4. М.: “СЭ”. 1971. -С. 570

В Узбекистане правительству того времени в этом деле помогал журнал «Гунча» («Бутон») (выпуск с 1958 г.147), предназначенный для детей 6-8 лет. На своих страницах журнал давал такие задания, как «Домашнее задание по труду», а также стихи, пропагандирующие социалистический строй, что свидетельствует о том, что первый этап идеи «воспитания детей 6-8 лет» для детей начальной школы начался таким образом.

Советскими властями была поставлена задача перед детской прессой, выходившей сотнями тысяч тиражей, «воспитывать детей в духе верности» к идеям коммунистического режима, которые охватывали их интересы, но полувековая идеологическая борьба не оправдала себя, уверенность в завтрашнем дне, создание важных условий для воспитания гармонично развитого поколения, и для этих целей была создана национальная пресса независимого Узбекистана для детей. Не секрет, что журналы «Гунча» («Бутон») и «Гульхан» («Костёр»), газета «Марифат» («Просветительство») активно участвовали в обучении и укреплении знаний узбекских детей.

АНАЛИЗ КРЕДИТОСПОСОБНОСТИ ПРЕДПРИЯТИЯ

Аннотация. Последнее десятилетие значимость оценки показателей кредитоспособности значительно увеличилась. Это обусловлено несколькими основополагающими факторами. Во-первых, возросла роль банковской системы в структуре экономики. Производственный сектор весьма тесно связан с банковским, они являются комплиментарными и стимулируют развитие друг друга. В условиях стремительного развития высоких технологий, предприятиям важно использовать актуальные и обновленные производственные фонды. Однако, как известно, затраты на обновление основных средств могут достигать миллионов рублей и большинство предприятий не обладают возможностью покрывать столь высокие затраты собственными средствами. Эти и другие обстоятельства вынуждают организации прибегать к привлечению дополнительных заемных средств.

Во-вторых, на каждом этапе производственного цикла у предприятия могут возникнуть затруднения с обеспечением финансовых потребностей для выполнения базовых хозяйственных операций. В таких ситуациях очевидным решением может стать обращение к внешним источникам покрытия текущих затрат. К тому же, правильно подобранное Правильное соотношение внутреннего и внешнего капитала позволяет в разы повысить показатели эффективности, рентабельности и оборачиваемости активов предприятия.

В данных условиях необходимым становится расчет и анализ показателей кредитоспособности организаций.

Ключевые слова: кредитоспособность, ликвидность, финансовая устойчивость, методы анализа, активы, обязательства.

ANALYSIS OF THE COMPANY'S CREDITWORTHINESS

Annotation. Over the past decade, the importance of assessing creditworthiness indicators has increased significantly. This is due to several

underlying factors. Firstly, the role of the banking system in the structure of the economy has increased. The manufacturing sector is very closely related to the banking sector; they are complementary and stimulate each other's development. In the context of the rapid development of high technologies, it is important for enterprises to use current and updated production assets. However, as you know, the cost of updating fixed assets can reach millions of rubles and most enterprises do not have the ability to cover such high costs with their own funds. These and other circumstances force organizations to resort to attracting additional borrowed funds.

Secondly, at each stage of the production cycle, an enterprise may have difficulty meeting the financial needs to carry out basic business operations. In such situations, the obvious solution may be to turn to external sources to cover current costs. In addition, the correctly selected correct ratio of internal and external capital allows you to significantly increase the efficiency, profitability and asset turnover of the enterprise.

In these conditions, it becomes necessary to calculate and analyze the creditworthiness indicators of organizations.

Key words: creditworthiness, liquidity, financial stability, analysis methods, assets, liabilities

Экономическая сущность кредитоспособности предприятия представляет собой финансово-экономический показатель, который отражает способность предприятия своевременно погашать ссудные средства. В данном контексте важно разграничивать понятия платежеспособности и кредитоспособности. Первый показатель по своему содержанию является больше широким и помимо прочего, включает в себя второй. При этом основным различием выступает то, что платежеспособность характеризует способность предприятия погашать свои обязательства в конкретный, зачастую текущий, момент времени. Кредитоспособность же, напротив, отражает возможность организации стабильно и своевременно выплачивать заемные средства в течение определенного срока времени. Поэтому важно разграничивать два данных понятия.

В условиях динамически развивающихся рынков каждому предприятию необходимо совершенствовать свои товары и услуги, чтобы оставаться конкурентоспособными. Для этих целей необходимо перманентно следить за изменениями спроса, возможностями покрытия потребностей потребителей и бесперебойного выпуска продукции. Однако на практике практически невозможно оставаться на плаву используя исключительно собственный капитал и активы. Поэтому предприятиям важно правильно рассчитать необходимый объем финансовых ресурсов, оценить возможность их покрытия за счет кредитов и займов в банках. Для

таких целей анализ и оценка показателей кредитоспособности являются фундаментальными.

Для оценки данного показателя предприятию необходимо выполнить ряд шагов, которые и представляют собой содержание анализ кредитоспособности:

Во-первых, это определение цели данного анализа. Она во многом зависит от величины привлекаемых средств и ожиданий и планов предприятия в вопросе частоты прибегания к такому источнику финансирования. Возможны такие варианты, как единоразовое, периодичное обращение к кредиту и стабильное его использование для поддержания функционирования и налаженности всех хозяйственных процессов.

Во-вторых, это выбор методов и подходов к анализу кредитоспособности. На данном этапе необходимо учитывать такие аспекты как масштаб фирмы, отрасль производства, в которой фирма осуществляет свою деятельность, организационная основа данного предприятия, а также детализированный характер анализа его функционирования. Третий этап характеризуется четким определением объема и источников той или иной информации, необходимых при анализе кредитоспособности фирмы. В качестве источников информации можно использовать определенные документы, такие как формы бухгалтерской отчетности. В данном аспекте к источникам информации необходимо применить четкие требования. К ним можно отнести: достоверность, объективность и актуальность. Стоит отметить то, что наибольшую ценность представляют бухгалтерская отчетность фирмы, к которой относятся бухгалтерский баланс и пояснительная записка к нему, а также отчетность о прибыли и убытках фирмы, отчеты по обороту капитала предприятия, его движению.

На выведении относительных показателей фирмы строится четвертый этап. К таким показателям можно отнести, рентабельность, финансовую устойчивость, а также показатель оборачиваемости капитала предприятия. К рассмотрению данного аспекта необходимо подходить комплексно, рассматривать все показатели в совокупности, так как отдельно учитывать эти показатели при составлении «финансовой картины предприятия» невозможно. Рассмотрим отдельно каждый показатель. Ликвидность, как показатель финансового положения фирмы, характеризуется способностью предприятия распределить свои активы так, чтобы покрыть обязательства.

Стоит обратить внимание на то, что ликвидность активов имеет существенное отличие от общей ликвидности баланса фирмы. Отличие заключается в том, что ликвидность активов подразумевает под собой быстроту преобразование активов в капитал (деньги). Ввиду этого появляется некая закономерность: чем меньше период преобразования, тем ликвиднее активы фирмы.

При оценке необходимо в первую очередь группировать активы и пассивы предприятия по уровню их ликвидности и сроку покрытия обязательств. Применяется следующая классификация:

A1-высоколиквидные: это определенные денежные средства, а также ценные бумаги, к которым относятся акции, облигации, вексели и т.д.;

A2- активы, которые поддаются быстрой реализации: они включают денежные средства, к которым можно отнести дебиторские задолженности. Они характеризуются наличностью, однако относить их к наиболее ликвидным активам считается неправильно, так как они могут быть использованы фирмой, до поступления их на ее счет. Стоит отметить, что некоторые экономисты к числу быстрореализуемых активов относят только краткосрочные дебиторские обязательства, а другие - готовую продукцию, которую можно путем реализации преобразовать в денежные средства. Но допустимо это только при учете готового товара или услуги, потребительский спрос которых на протяжении определенного периода времени является стабильным. Как правило, к таковым относятся товары первой необходимости;

A3-медленно реализуемые активы: к ним относятся активы, не попавшие в группы A1 и A2: запасы, долгосрочные дебиторские обязательства и другие активы. Это активы, которые возможно реализовать при возникновении угрозы банкротства фирмы, а так в ситуациях необходимости срочного погашения долгов предприятия;

A4-активы с затрудненной реализацией: к ним относятся внеоборотные активы (производственные фонды, нематериальные активы). По сути, их можно отнести к медленно реализуемым активам. Рассмотрим пассив баланса по степени срочности оплаты:

П1-срочные задолженности: к ним относятся страховые обязательства, задолженности перед работниками фирмы, ее поставщиками, налоговые задолженности;

П2- краткосрочные пассивы: это краткосрочные кредиты и другие краткосрочные задолженности;

П3-долгосрочные пассивы: в их число входят долгосрочные кредиты и заемные средства;

П4-постоянные пассивы.

Таким образом для достижения ликвидного баланса фирмы необходимо достичь следующего соотношения:

$$A1 \geq П1; A2 \geq П2; A3 \geq П3, A4 < П4$$

Если хотя бы одно из неравенств не удовлетворяет заданным условиям, можно делать вывод о неликвидности баланса. Тем не менее, делать категоричные утверждения о его неликвидности не является корректным подходом. Поэтому анализ ликвидности сводится к расчету коэффициентов абсолютной, быстрой и текущей ликвидности с целью получения более объективных результатов и принятия необходимых мер.

Коэффициент абсолютной (срочной) ликвидности определяется отношением высоколиквидных активов к текущим обязательствам и рассчитывается по следующей формуле:

$$K_{ал} = A1 / П1+П2$$

Данный показатель отражает уровень платежеспособности компании, показывает долю ее краткосрочных обязательств, которые можно погасить на момент составления финансового отчета. Минимальное значение этого показателя составляет 0,2, это означает, что как минимум 20% обязательств могут быть покрыты наличными средствами.

Коэффициент быстрой ликвидности отражает способность компании погасить текущие обязательства за вычетом запасов. Этот показатель является важным элементом анализа ликвидности, поскольку он показывает, насколько компания может погасить свои обязательства не только за счет наличных средств, но и за счет дебиторской задолженности.

$$K_{бл} = A1+A2/П1+П2$$

Данный показатель служит для оценки способности организации закрыть свои краткосрочные обязательства в случае поступления платежей по краткосрочным долгам от своих клиентов. Рекомендуемое значение этого показателя составляет от 0,8 до 1, однако из-за возможного роста дебиторской задолженности он может значительно превышать данный диапазон. Коэффициент текущей ликвидности позволяет произвести общую оценку финансовой платежеспособности баланса предприятия

$$K_{тл} = A1+A2 + A3/П1+П2$$

Этот показатель отражает общую ликвидность и позволяет оценить, насколько оборотные активы способны покрыть текущие обязательства. Рекомендуемый диапазон для него – от 1 до 2. Значение менее 1 свидетельствует о том, что текущие обязательства превышают текущие активы. Высокий уровень может быть обусловлен замедлением оборачиваемости средств, замороженных в запасах, или слишком высоким уровнем дебиторской задолженности. Эти показатели интересны не только для внутренних, но и для внешних пользователей финансовой отчетности.

$K_{ал}$ — для поставщиков сырья и материалов;

$K_{бл}$ — для банков;

$K_{тл}$ — для покупателей и держателей акций и облигаций.

Показатели рентабельности рассчитываются путем соотношения валовой либо чистой прибыли организации, которая отражена в отчете о финансовых результатах, к различным показателям этого отчета.

При анализе финансового положения кредитной организации, полученная доходность позволяет экономисту оценить достоверность предоставленных заемщиком данных. Высокая доходность бизнеса потенциального заемщика по сравнению с предприятиями того же сектора деятельности может указывать на снижение затрат на производство или неполный учет включаемых расходов. Доходность организации

представлена в относительных величинах. Например, измеряемых в процентах или в виде коэффициентов. В современной мировой практике бухгалтерского учета существует множество показателей доходности деятельности компании. Рассмотрим наиболее значимые из них.

Рентабельность фирмы отражает прибыльность всей ее деятельности, отражая сколько рублей чистой прибыли организации приходится на рубль выручки от продаж. Рассчитывается этот показатель как отношение чистой прибыли к выручке. Нормативным значением данного показателя принято считать 20%, однако на практике стоит учитывать множество факторов, таких как отрасль, к в рамках которой функционирует предприятие, его организационно-правовую форму и т.д. Так же важно сравнивать данный показатель со среднеотраслевыми значениями. В таблице 1 представлен неполный перечень среднеотраслевых значений рентабельности продаж, опубликованный Федеральной Налоговой Службой России.

Таблица 1

Вид экономической деятельности (согласно ОКВЭД-2)	2022 год
	Рентабельность проданных товаров, продукции (работ, услуг), %
Всего	14.6
сельское, лесное хозяйство, охота, рыболовство и рыбоводство	21.2
фермерство, охота и предоставление соответствующих услуг в этих областях	20.0
лесоводство и лесозаготовки	5.7
рыболовство и рыбоводство	36.9
добыча полезных ископаемых	33.0
добыча угля	50.6
добыча сырой нефти и природного газа	25.9
добыча металлических руд	51.6
добыча прочих полезных ископаемых	37.1
обрабатывающие производства	16.9
производство пищевых продуктов	11.1
производство напитков	18.3
производство табачных изделий	49.3
производство текстильных изделий	14.2
производство одежды	16.2
производство кожи и изделий из кожи	11.5
обработка древесины и производство изделий из дерева и пробки, кроме мебели, производство изделий из соломки и материалов для плетения	9.9
производство бумаги и бумажных изделий	24.1

деятельность полиграфическая и копирование носителей информации	20.0
---	------

Еще одним важным показателем в рамках проведения анализа кредитоспособности предприятия группы является рентабельность внешнего капитала. рентабельность внешнего капитала показывает величину чистой прибыли предприятия с единицы рубля заемных средств, вложенного в деятельность предприятия. В развитых странах нормативом этого коэффициента считается диапазон от 10% до 12%. Однако, если в стране высокий уровень инфляции, то увеличивается и рентабельность капитала.

Рассмотрим такой показатель как финансовая устойчивость фирмы. Финансовая устойчивость-способность фирмы сохранять свое финансовое равновесие между пассивами и активами, внешними и внутренними источниками финансирования, при этом необходимо предотвращать резкие скачки в их соотношении.

Проверка соотношений активов и пассивов бухгалтерского баланса фирмы предоставляет собой сущность анализа финансовой устойчивости. Именно посредством ее оценивается соответствие потребностей данного предприятия исходя из существующей структуры бухгалтерского баланса. На данном этапе происходит прогнозирование способности предприятия погашать свои обязательства и определение тенденций ее изменения. Важными показателями этой группы являются:

- 1) Коэффициент соотношения заемных и собственных средств;
- 2) Коэффициент автономии;
- 3) Коэффициент финансовой зависимости;
- 4) Коэффициент финансовой устойчивости.

Первый показатель характеризует величину заемных средств, приходящихся на каждый рубль собственных средств, вложенных в активы фирмы. Снижение финансовой устойчивости предприятия может произойти при росте данного показателя за отчетный год, так как он характеризует зависимость предприятия от привлеченных финансов.

Коэффициент автономии (коэффициент концентрации собственного капитала) характеризует долю собственных средств фирмы в общей сумме источников финансирования. Его определяют следующим образом: чем выше Кавт, тем большей финансовой устойчивостью обладает фирма и тем меньше она зависит от внешних кредиторов.

Коэффициент финансовой зависимости характеризует долю средств внешнего финансирования в общем количестве источников финансирования деятельности предприятия.

Коэффициент финансовой устойчивости показывает какая часть активов организации сформирована за счет постоянных источников. Оптимальное значение этого коэффициента — 0,8 -0,9.

После определения необходимых показателей, на заключительном этапе анализа кредитоспособности, составляются выводы по каждой группе показателей. Здесь важно учитывать, кто и с какой целью проводит анализ. В случае, когда анализ проводится банком или другой ссудной организацией, предприятию присваивается рейтинг кредитоспособности, с помощью которого можно судить о риске невыплаты по обязательствам. Пример шкалы рейтинга кредитоспособности представлен на рисунке 1.

Рисунок 1.

Класс рейтинга	Характеристика
Класс А	Высокая степень кредитоспособности
Класс В	Удовлетворительная степень кредитоспособности
Класс С	Низкая степень кредитоспособности
Класс D	Неудовлетворительная степень кредитоспособности

Итак, подводя итоги, можно констатировать следующее: анализ кредитоспособности предприятия – трудоемкий процесс, требующий особого внимания и точности. Однако его проведение в условиях активно развивающейся рыночной экономики и быстрорастущей роли банковского сектора неизбежно. Существующие методы анализа позволяют в полной мере сформировать выводы о кредитной готовности предприятия, что существенно снижает риски невозвращения средств. Эта форма анализа применяется не только банками, но и финансовыми специалистами при проведении комплексного и финансового анализа предприятия.

**TECHNOLOGY OF APPLICATION OF AEROSPACE MATERIALS IN
COMPILATION OF LANDSCAPE-GEOINDICATION MAPS (USING
THE EXAMPLE OF KASHKADARYA REGION)**

Abstract. The article discusses some issues of the formation of landscape-geoindication maps using sets of multispectral space surveys and its essence as a scientific direction.

Keywords. Remote, decoding, landscape, indication, information content, spectrum, stereoscopic method, generalization, multispectral.

В данной статье, опираясь на результаты дешифрирования многозональных комплектов разного масштаба, раскрываются новые возможности дистанционного метода для составления ландшафтно-индикационных карт.

Возможные области применения космических изображений Земли и общие принципы их ландшафтного дешифрирования в той или иной степени раскрыты и обобщены в монографиях и статьях, а также сборниках [1-6 и 8].

Целенаправленное исследование многозональных комплектов разного масштаба показал, что для изучения геоморфологических объектов

и, особенно, внешних компонентов ландшафта, наиболее информативными являются космоматериалы, выполненные в видимой части спектра 0,5-0,6 и 0,6-0,7 мкм.

С целью составления ландшафтно-геоиндикационных карт, выбранные нами космоматериалы локального и детального уровня генерализации и фотопланы по Кашкадарьинской области были выполнены в видимой части спектра. Они использовались нами для более подробного расчленения элементов ландшафта. При анализе МДС в масштабах 1:1 000 000, 1:500 000 и 1:200 000 применялся стереоскопический метод дешифрирования.

При составлении ландшафтно-индикационной карты на основе дистанционного метода весь процесс работ был разделен на следующие четыре этапа исследования: подготовительный, камеральный, полевой и заключительный – составление оригинала карт.

В период подготовительного этапа были изучены литературные, картографические и фондовые материалы.

На втором этапе, с одной стороны, были заказаны необходимые космоизображения в видимой части спектра разного масштаба (1:1 000 000, 1:500 000 и 1:200 000). С другой стороны, были собраны требуемые топографические и тематические карты (геологическая, геоморфологическая, почвенная, растительная и др.). На камеральном этапе исследования был использован стереоскопический метод дешифрирования. В процессе интерпретации результатов дешифрирования широко применялся универсальный топографический проектор (УТП – 2М). Далее, весь собранный материал был анализирован и систематизирован. Он лег в основу при разработке предварительного макета легенды и составления рабочей схемы ландшафтной карты.

На третьем этапе, во время полевых работ сочетались методы полевого дешифрирования и маршрутного наблюдения с целью комплексного изучения морфологических особенностей ландшафта на ключевых участках. В полевых условиях выяснялась закономерность распространения природно-территориальных комплексов. Определялся характер взаимосвязи рельефа, покровных образований, особенности увлажнения почвы и растительного сообщества. В цели данного этапа входили также задачи уточнения дешифрированных границ ландшафта и определение таксономических рангов.

На заключительном этапе был разработан окончательный макет легенды и составлен авторский оригинал ландшафтной карты региона в масштабе 1:300 000.

При составлении ландшафтной карты в качестве таксономических единиц нами принята следующая иерархия: класс – подкласс – тип – род – вид. Принципы выделения этих таксономических единиц обоснованы в работах А.Г.Исаченко и Н.А.Николаева [7,9]

Эти принципы учитывались нами при интерпретации результатов дешифрирования и использовались при ландшафтном районировании.

Комплексное изучение ландшафтов региона по комплектам сканерного изображения (КСИ) детального и локального уровня генерализации позволило нам оконтурить и классифицировать 2 класса, 5 подклассов, 7 типов, 21 род и 30 видов ландшафта.

При выделении ландшафтных классов учитывались основные морфоструктурные элементы региона – равнинный и горный рельеф. Они оконтуриваются на космоизображениях мелкого масштаба. Горному рельефу присущ темный фототон и шероховатый рисунок изображения. Равнины оконтуриваются светлым фототоном и зернистым рисунком изображения.

При разделении на подклассы учитывались биоклиматические дешифровочные признаки. В частности, в горных морфоструктурах региона выделяются четыре подкласса, а в пределах равнин – лишь один подкласс. Их контуры легко прослеживаются на дистанционных материалах среднего масштаба.

Типы ландшафтов различаются по их гипсометрическому расположению. По этим признакам в пределах равнин были отдешифрированы три типа (I - речные долины, II - песчаные равнины и III - озерные котловины), а в пределах горных морфоструктур – четыре типа (IV - предгорные равнины и адыры, V - поверхность низкогорного уровня, VI - поверхность среднегорного уровня, VII - поверхность высокогорного уровня).

При оконтуривании рода ландшафтов особое внимание было уделено дешифрировочным характерным признакам, а при разделении видов – черты рельефа и отложений.

На основе перечисленной выше таксономии ландшафтов была создана ландшафтно-геоиндикационная карта Кашкадарьинской области масштаба 1:3000000(рис №1).

Легенда к ландшафтно-геоиндикационной карте Кашкадарьинской области

1. Современная поймас комплексом песчаных отмелей, островов и тугаев. Тугайная растительность на пойменно-аллювиально-луговых почвах.
2. Такыровидные понижения с маломощным песчаным покровом, периферии русла. Тростниковые заросли тамарикса и акбаша на солончаковых почвах.
3. Солончаковые понижения. Солянка карабарака на солончаковых почвах.
4. Дельтовые орошаемые равнины. Культурная растительность на светлых сероземах.
5. Дельтовые равнины с такыровидными понижениями. Осачковые мятличники на такырных почвах.
6. Субаэральная часть дельты. Тугайная растительность на луговых почвах.
7. Первая и вторая надпойменная террасы. Культурная растительность на аллювиально-луговых почвах.
8. Третья надпойменная террасы. Культурная растительность (озимая пшеница) на типичных сероземах.
9. Вторая и третья надпойменная террасы. Полынь раскидистая и донашуровая формация на пустынно песчаных почвах
10. Первая и вторая надпойменная террасы. Культурная растительность на сероземно-оазисных почвах.

11. Массивы грядовых песков. Саксаульники, кандым, сюзан на песчано-пустынных почвах.

12. Массивы грядовых песков с такырами и солончаками. Белый саксаул, кандым, сюзан на песчаных почвах.

13. Массивы бугристо грядовых песков. Псаммофильная растительность с саксаульниками, на песчаных почвах.

14. Массивы бугристо ячеистых песков. Псаммофитная растительность на песчаных почвах и полынь на светлых сероземах.

15. Площадь покровных песков. Саксаул, тамарикс, джантак, бояличник на такыре, солончаках и пустынно-песчаных почвах.

16. Такыровидные поверхности. Саксаул, тамарикс, полынь, джантак, на солончаках и такырах.

17. Песчано-щебнистые поверхности на речных террасах. Полынь и солянки на светлых сероземах и песчано-щебнистых почвах.

18. Пухлые солончаки с хемогенными отложениями. Солянки и сарсазаны на солончаках.

19. Мокрые солончаки с озерно- хемогенными отложениями. Рогозово-тростниковая солянка на солончаковых почвах.

20. Бессточные эрозионно-денудационные котловины солончаков и такыров голоцена. Осачковые мятличники и бояличники на такыровидных почвах.

21. Поверхность конусов выноса с плосковолнистыми равнинами на аллювиально-пролювиальных отложениях среднеплейстоцена. Осачковые мятличники и культурная растительность на светлых и типичных сероземах.

22. Предгорные плоские слабоволнистые поверхности. Полынь, каррак, козыкулак-аккурай на светлых и типичных сероземах.

23. Плоские и слабонаклонные поверхности среднеплейстоценовые. Полынь раскидистая и осачково- мятличниковая формация озимой пшеницы на светлых сероземах.

24. Увалисто-холмистые адыры. Козыкулаково-карраковая формация на хрящеватых темных сероземах.

25. Изолированные антиклинальные возвышенности с элементами структурного рельефа значительно расчлененной поверхности палеогена. Эфемероидово-пырейная и осочково-мятличниковая формация на светлых сероземах.

26. Изолированные антиклинальные возвышенности, значительно расчлененные палеогеновые и меловые отложения. Полынно-эфемеровые сообщества на светлых сероземах.

27. Сильно расчлененные поверхности палеозойских и мезозойских пород. Арчевники с ксерофитным разнотравьем и смешанные кустарники на коричневых и дерново-бурых горно-лесных почвах.

28. Выравненные поверхности ниже- и среднепалеозойских пород. Пырейно-зверобойные и пырейно-разнотравные, на коричневых мелкоземистых горно-лесных почвах.

29. Поверхности палеозойских пород со скалистыми склонами и сильно расчлененными речными притоками. Разнотравно-типчаковые, эстрагонные, на горно-луговых и щебнистых почвах.

30. Поверхность выравненная, с формами ледниковой скульптуры и снежниками. Нагорных ксерофитов с вкраплением ковровых “альпийских” лужаек на щебнистых почвах; снежники и ледники.

Таким образом, мы ознакомились с технологией применения дистанционных материалов для составления ландшафтной карты и рассмотрели основные элементы ландшафтов Кашкадарьинской области, отдешифрированных с помощью многозональных комплектов. При использовании предлагаемой нами технологии необходимо учесть следующие:

Во-первых, для изучения морфоструктур элементов и внешних компонентов ландшафта с целью составления ландшафтных карт, наиболее эффективными являются космоматериалы, полученные в видимой части спектра (0,5-0,7 мкм), выполненные в летние и осенние сезоны года;

Во-вторых, в связи с естественной генерализацией на разномасштабных космоснимках, существенно меняется характер дешифрировочных признаков геоморфологических объектов и, соответственно, их информативность, следующим образом:

- на космоснимках мелкого масштаба уверенно выделяются крупные морфоструктурные элементы поверхности, отнесенные нами к классу ландшафтов;

- на космоснимках среднего масштаба оконтуриваются геоморфологические объекты, соответствующие таксономическим единицам подкласса и типов ландшафтов;

- на космоснимках крупного масштаба уверенно распознаются мелкие формы рельефа и их внешние компоненты, составляющие таксономические единицы рода и вида ландшафтов.

МЕТОДЫ ПЕРЕРАБОТКИ НЕФТЯНЫХ УГЛЕВОДОРОДОВ

Аннотация. Вторичная нефтепереработка (вторичные процессы) представляет собой разнообразные процессы переработки нефтепродуктов, полученных методом прямой гонки. Эти процессы сопровождаются деструктивными превращениями содержащихся в нефтепродуктах углеводородов и изменением их природы, то есть являются химическими процессами.

Гидрокрекинг является одним из наиболее экологически чистых процессов нефтепереработки. В комплекс гидрокрекинга, как правило, входят установки очистки газов от сероводорода, регенерации кислых стоков и производства серы (серной кислоты), позволяющие полностью регенерировать и утилизировать технологические отходы.

Важнейшая особенность гидрокрекинга заключается в том, что в нем наряду с реакциями распада тяжелых углеводородов сырья, свойственными крекинг-процессу, протекают реакции гидрирования образовавшихся продуктов распада.

Ключевые слова: деструктив, нефтяные остатки, крекинг, алкан, нафтен, алкены, изомеризация.

METHODS OF PROCESSING PETROLEUM HYDROCARBONS

Annotation. Secondary petroleum refining (secondary processes) is a variety of processes for processing petroleum products obtained by the direct race method. These processes are accompanied by destructive transformations of

hydrocarbons contained in petroleum products and changes in their nature, that is, they are chemical processes.

Hydrocracking is considered one of the most environmentally friendly oil refining processes. The hydrocracking complex, as a rule, includes installations for gas purification from hydrogen sulfide, regeneration of acid waste and the production of sulfur (sulfuric acid), allowing for the complete regeneration and disposal of process waste.

The most important feature of hydrocracking is that, along with the decomposition reactions of heavy hydrocarbons of the raw material characteristic of the cracking process, hydrogenation reactions of the resulting decomposition products occur.

Key words: destructive, oil residues, cracking, alkane, naphthene, alkenes, isomerization.

Главной особенностью отрасли нефтехимического и основного органического синтеза является многовариантность путей получения одного и того же конечного продукта. При этом могут быть использованы различные источники сырья, в то же самое время один вид сырья может быть использован для получения различных продуктов.

Нефть – уникальное невозполнимое природное богатство. Рациональное использование «черного золота» является важнейшей государственной задачей. Таким образом, необходимо повысить глубину переработки за счет более полного извлечения топливных фракций из нефти при ее первичной перегонке, подбора наиболее благоприятного состава топливных продуктов (бензин, реактивное топливо, дизельное топливо), а самое главное, за счет развития деструктивных процессов переработки нефтяных остатков с получением ценных топливных и нефтехимических продуктов.

Вторичная нефтепереработка (вторичные процессы) представляет собой разнообразные процессы переработки нефтепродуктов, полученных методом прямой гонки. Эти процессы сопровождаются деструктивными превращениями содержащихся в нефтепродуктах углеводородов и изменением их природы, то есть являются химическими процессами.

Важнейшими из вторичных процессов является термический и каталитический крекинг, риформинг, алкилирование, коксование и гидроочистка нефтепродуктов.

При температуре крекинга в первую очередь деструкции подвергаются алканы и нафтены преимущественно с высокой молекулярной массой, а наиболее устойчивыми являются ароматические углеводороды и алкены. В результате в продуктах крекинга накапливаются ароматические углеводороды и низшие алкены, которые затем вступают во вторичные реакции полимеризации.

Особую разновидность крекинг-процессов представляет гидрокрекинг, он относится к так называемым гидрогенизационным процессам нефтепереработки. Гидрокрекинг позволит создать оптимальные схемы переработки нефти с максимальным выходом и требуемым ассортиментом моторных топлив.

Гидрокрекинг является одним из наиболее экологически чистых процессов нефтепереработки. В комплекс гидрокрекинга, как правило, входят установки очистки газов от сероводорода, регенерации кислых стоков и производства серы (серной кислоты), позволяющие полностью регенерировать и утилизировать технологические отходы. Топливом для печей служит очищенный от сероводорода собственный газ процесса.

Процесс проводится в среде водорода при высоких температур 260–450 °С и давлении 5–20 МПа, в присутствии бифункциональных катализаторов, катализирующих одновременно реакции расщепления, изомеризации и гидрирования углеводородов.

Гидрокрекинг очень гибкий процесс. Сырьем процесса является тяжелые нефтяные дистилляты, нефтяные остатки (мазут, гудрон), тяжелые и высокосернистые нефти.

Процесс гидрокрекинга остатков имеет в настоящее время два направления: 1) гидрообессеривание мазутов с целью получения маловязкого и малосернистого котельного топлива или сырья для каталитического крекинга; 2) углубленный гидрокрекинг с целью получения дополнительных ресурсов моторных топлив.

Важнейшая особенность гидрокрекинга заключается в том, что в нем наряду с реакциями распада тяжелых углеводородов сырья, свойственными крекинг-процессу, протекают реакции гидрирования образовавшихся продуктов распада.

Основными реакциями при гидрокрекинге являются:

1. Деструкция высокомолекулярных алканов:

деструкция высокомолекулярных алкенов

дегидрирование продуктов деструкции:

2. Гидрирование алкенов сырья, что в условиях гидрокрекинга термодинамически более вероятно, чем их полимеризация и циклизация:

3. Изомеризация алканов:

4. Распад, дециклизация (гидрогенолиз) нафтеных, например:

и деалкилирование нафтеных

5. Деалкилирование ароматических углеводородов:

и гидрирование ароматических углеводородов:

При гидрокрекинге, в отличие от каталитического крекинга, легче всего вступают в превращения ароматические полициклические соединения и образуются с высоким выходом легкие насыщенные углеводороды, в том числе изостроения. При этом одновременно с реакциями углеводородной части сырья, происходит гидрирование и удаление неуглеводородных соединений- гидроочистка нефтепродуктов.

В целом применение гидрокрекинга позволяет повысить глубину нефтепереработки нефти и получить бензин высокого качества, не содержащий сернистых соединений.

ПРОЦЕССУАЛЬНЫЕ СПОСОБЫ КОНТРОЛЯ И НАДЗОРА ЗА ЗАКОННОСТЬЮ ПРОИЗВОДСТВА СЛЕДСТВЕННЫХ ДЕЙСТВИЙ

Аннотация. В рамках представленных тезисов выделяются процессуальные способы контроля и надзора за законностью производства следственных действий. Рассматривается роль прокурорского надзора, как одного из наиболее распространенных способов. Представлены особенности реализации контроля и надзора в соответствии с развитием следственных действий.

Ключевые слова: следственные действия, прокурорский надзор, законность производства, судебный контроль, формы надзорной деятельности.

PROCEDURAL WAYS OF CONTROL AND SUPERVISION OF THE LEGALITY OF INVESTIGATIVE ACTIONS

Abstract. Within the framework of the presented theses, procedural methods of control and supervision over the legality of investigative actions are highlighted. The role of prosecutorial supervision is considered as one of the most common methods. The features of the implementation of control and supervision in accordance with the development of investigative actions are presented.

Keywords: investigative actions, prosecutor's supervision, legality of proceedings, judicial control, forms of supervisory activity.

Производство следственных действий является основным способом собирания доказательств по уголовному делу для установления обстоятельств, подлежащих доказыванию, связанных с предположением и выводами о виновности лица в совершении преступления и необходимости привлечения его к уголовной ответственности либо непричастности к преступлению.

Следственные действия – это мероприятия, проводимые следователями и оперативными работниками для сбора доказательств в

уголовном деле. К ним относятся допросы свидетелей, потерпевших и обвиняемых, осмотр места происшествия, изъятие вещественных доказательств, проведение экспертиз и другие меры. Цель следственных действий – установление обстоятельств дела, выявление виновных и обеспечение доказательной базы для судебного разбирательства. Однако при проведении следственных действий необходимо соблюдать процессуальные права граждан, чтобы избежать нарушений и ошибок в уголовном процессе [4].

В настоящее время в качестве процессуальных способов контроля и надзора за законностью производства следственных действий возможно выделить:

1. Судебный контроль – осуществляется судами по ходатайству участников уголовного процесса или по инициативе суда. Судебный контроль может быть оспорительным (при рассмотрении жалоб на действия следователя, прокурора или судьи) и безосновательным (при проверке законности принятых решений).

2. Прокурорский надзор – осуществляется прокуратурой в целях обеспечения законности и правопорядка. Прокурорский надзор может быть предупредительным (предупреждение о возможных нарушениях закона) и реагированием на нарушения закона (возбуждение уголовного дела, направление жалобы на действия следователя).

3. Контроль за действиями следователя – осуществляется вышестоящим следователем или прокурором. Контроль может быть плановым (проверка законности действий следователя в рамках уголовного дела) и внеплановым (проверка по жалобе на действия следователя).

4. Контроль за действиями оперативных служб – осуществляется вышестоящими органами управления оперативной деятельности. Контроль может быть плановым (проверка законности действий оперативных служб в рамках уголовного дела) и внеплановым (проверка по жалобе на действия оперативных служб).

5. Обращение в суд – гражданин может обратиться в суд с жалобой на действия следователя или оперативных служб в рамках уголовного дела. Суд рассматривает жалобу и принимает решение о ее удовлетворении или отклонении.

6. Обращение в прокуратуру – гражданин может обратиться в прокуратуру с жалобой на действия следователя или оперативных служб в рамках уголовного дела. Прокуратура рассматривает жалобу и принимает решение о возбуждении проверки или об ее отклонении.

Перечисленные способы и формы контроля и надзора в отдельных случаях в своей основе имеют одинаковые субъекты, в частности, органы прокуратуры, но при этом существующие способы инициирования надзорной деятельности могут отличаться.

Отмечая высокую значимость органов прокуратуры для соблюдения прав участников и законности процессуальных действий, важно выделить особенности надзорной деятельности прокуратуры.

Прокурорский надзор за законностью производства следственных действий является одним из важных средств обеспечения допустимости доказательств, с целью получения которых выполняются следственные действия, а также соблюдения законных прав граждан на досудебных стадиях уголовного судопроизводства.

Прокурор осуществляет надзор за законностью производства следственных действий, включая обыск, задержание, арест, допрос и другие мероприятия. Он проверяет соблюдение прав граждан и законных интересов общества при проведении этих мероприятий, а также требует от следственных органов предоставления достаточных доказательств для возбуждения уголовного дела.

Прокурор также контролирует соблюдение правил допроса подозреваемых и обвиняемых, в том числе права на защиту и неприкосновенность личности. Он требует от следственных органов соблюдения процессуальных сроков и правил проведения следственных действий.

В настоящее время законодательно установлены следующие варианты надзора и контроля в рамках следственных действий:

1. Реализация надзора на этапе получения разрешения суда на проведение следственных действий. В данном случае в рамках УПК РФ устанавливаются ограничения, определяющие перечень следственных действий, разрешенных под судебным контролем, то есть, после получения соответствующего разрешения с участием органов прокуратуры. Соответствующие нормы отражены в ч. 2 ст. 29, ч 1-4 ст. 165 УПК РФ. На данном этапе прокурорский надзор реализуется совместно с судебным контролем.

2. В случаях, когда следственные действия подразумевают потребность в немедленной реализации ввиду обстоятельств и интересах следствия, у следователя существует возможность, в соответствии с ч. 5 ст. 165 УПК РФ, заменить судебное решение на собственное постановление. Но при этом судебный контроль и прокурорский надзор данных следственных действий реализуется постфактум, то есть уже после их совершения в полном объеме в течение 24 часов.

3. Комплекс следственных действий при наличии достаточных оснований может проводиться вне судебного контроля, но при этом важно отметить, что часть из них требует вынесения соответствующих постановлений, а в случае возражений одной из сторон – решение суда. Примером подобных действий, которые могут быть реализованы с участием и без участия суда является эксгумация. В случае возражений

родственников покойного, данное действие требует судебного вмешательства [2].

Важно отметить, что надзор и контроль в рамках следственных действий со стороны органов прокуратуры и суда в значительной степени зависит от потенциальной возможности нарушения прав и свобод граждан. Например, обыск и выемка из нежилых помещений в значительно меньшей степени несут в себе риск нарушения прав и свобод гражданина, что определяет возможность реализации подобных действий без предварительного и последующего судебного контроля.

При этом в современном законодательстве, заменив санкцию прокурора на проведение ряда следственных действий согласием суда, возможно назвать решение вопроса о проведении других следственных действий целиком компетенцией следователя. Кроме того, важно учитывать особенности и субъектно-объектную базу следственных действий, так как она определяет возможности и потребность в усилении надзора. Подобным примером могут являться нормы закона, в частности, ч. 3 ст. 183 УПК РФ, согласно которой, выемка документов, содержащих государственную или иную, охраняемую федеральным законом тайну, производится следователем с санкции прокурора [1].

Отдельное внимание в рамках прокурорского надзора уделяется резонансным делам, следственные действия по которым органы прокуратуры обязаны контролировать с целью повышения оперативности в исследовании всех обстоятельств. В подобных случаях надзор не ограничивается только получением оперативных данных от следственной группы, а включает в себя также разработку мер, направленных на формирование оптимальной модели следственных действий.

Кроме того, прокурорский надзор в рамках следственных действий напрямую связан с качеством материалов, передаваемых в суд для обоснования ходатайства о производстве следственного действия. Каждый из видов контроля за процессуальной деятельностью следователя по производству следственных действий, дополняют друг друга и усиливают его, имея вместе с тем различные задачи и различные формы. Деятельность прокурора в этой части его полномочий является публичной, связана с законностью уголовного преследования и защитой общественных интересов, прежде всего, также с обеспечением прав и свобод конкретных участников уголовного судопроизводства.

Надзорная деятельность прокурора состоит в контроле за соблюдением закона в ходе следственных действий и других процессуальных действий, проводимых правоохранительными органами. Он имеет право требовать от правоохранительных органов предоставления информации о ходе следственных действий и других процессуальных мероприятий, а также может принимать меры по пресечению нарушений

закона. В целом, надзорная деятельность прокурора направлена на обеспечение законности и справедливости в уголовном процессе.

В свою очередь суд, рассматривающий ходатайство о производстве следственного действия, не относится ни к одной из сторон состязательного уголовного процесса, его решение основано на изучении представленных в суд материалов и на доводах участников судебного заседания.

Судьи могут отменять незаконные решения следственных органов и обеспечивать защиту прав и свобод граждан в рамках уголовного процесса. В целом, судебный контроль является необходимым элементом правового государства и гарантией справедливости в уголовном процессе.

Цель судебного контроля законности производства следственных действий заключается в защите прав и свобод граждан, а также в обеспечении справедливости и законности в сфере правосудия. Судебный контроль должен гарантировать, что следственные действия были проведены в соответствии с законом, а также что права и интересы подозреваемых, обвиняемых и других участников уголовного процесса не были нарушены. Кроме того, судебный контроль направлен на предотвращение злоупотреблений со стороны правоохранительных органов и обеспечение ответственности за неправомерные действия. В целом, цель судебного контроля законности производства следственных действий состоит в обеспечении справедливости и законности в уголовном процессе.

Важной особенностью надзорной деятельности в рамках следственных действий является то, что прокурор является единственным участником уголовно-процессуальной деятельности на всех ее этапах – от принятия сообщения о преступлении до исполнения приговора.

С момента подписания следователем и руководителем следственного органа обвинительного заключения их власть над обвинением заканчивается. В качестве аргумента достаточно указать на то, что в это время заканчивается и срок предварительного расследования. Переход всей полноты обвинительной власти к прокурору означает, что он получает право и возможность распоряжаться обвинением по своему усмотрению – передавать дело на рассмотрение суда, прекращать уголовное преследование, менять объем обвинения и его уголовно-правовую квалификацию [5].

Таким образом, контроль и надзор за законностью производства следственных действий являются важным инструментом обеспечения прав и свобод граждан, а также защиты интересов государства в сфере правосудия. Неправомерные действия следователя или оперативных служб могут привести к нарушению прав граждан, несправедливому обвинению или оправданию подозреваемых, а также к ухудшению репутации правоохранительных органов и снижению доверия к ним со стороны общества. Поэтому контроль и надзор за законностью производства

следственных действий должны быть осуществлены соответствующими органами и должны быть эффективными и надежными.

ВИДОВОЕ РАЗНООБРАЗИЕ МАКРОЗООБЕНТОСОВ ОЗЕРА САЙКУЛЬ

Аннотация. В статье рассмотрены видовое разнообразие макрозообентосов озера Сайкуль. В озере Сайкуль отмечен 41 вид макрозообентоса: Annelida

- 2 вида, Mollusca - 11 видов, Crustacea – - 2 вида, Heteroptera - 2 вида, Odonata - 4 вида, Chironomidae - 10 видов, Coleoptera - 5 видов, Trichoptera - 1 вид, другие представители двукрылых - 4 вида.

Ключевые слова: вид, макрозообентос, двукрылые, хирономид, компонент, род, водоём, озеро.

SPECIES DIVERSITY OF MACROZOOBENTHOS IN LAKE SAYKUL

Annotation. The article examines the species diversity of macrozoobenthos of Lake Saikul. 41 species of macrozoobenthos were recorded in Lake Saikul: Annelida

- 2 species, Mollusca - 11 species, Crustacea - - 2 species, Heteroptera - 2 species, Odonata - 4 species, Chironomidae - 10 species, Coleoptera - 5 species, Trichoptera - 1 species, other representatives of Diptera - 4 species.

Key words: species, macrozoobenthos, diptera, chironomid, component, genus, reservoir, lake.

Среди изученных водоёмов разных типов озеро Сайкуль занимает первое место по разнообразию макрозообентосов. В этом озере разнообразие моллюсков, двукрылых и твердокрылых за исключением хирономид, велико по сравнению с другими озерами. Однако разнообразие личинок хирономид уменьшилось.

В озере зарегистрировано 2 вида кольчатых червей: *Limnodrilus helveticus* и *Paranais simplex*. Всего в 6 озерах, принятых в качестве водоёмов разного типа, зарегистрировано 18 видов моллюсков, из них 14 видов отмечены также в озере Сайкуль.

Однако разнообразие моллюсков в других озерах не превышает 6 видов. Такие виды моллюсков, как *Cerastoderma isthmicum*, *Colletopterum cyreum*, *Dreissena polymorpha* и *Theodoxus pallasii*, в Сайкуле не отмечены. Однако виды *Lymnaea* sp., *Lymnaea stagnalis* и *Castatella Fontinalis* уникальны для этого озера и не встречаются в других озерах.

Из ракообразных *Turkogammarus aralensis*, который встречается во всех вышеперечисленных озерах, в Сайколе не зарегистрирован.

В озере Сайкуль распространены виды ракообразных *Paramysis lacustris* и *Macrobrachium nipponense*. Также были зарегистрированы *Sigara assimilis* и *Corixidae* sp. Также в озере были обнаружены личинки двукрылых насекомых (Diptera) (от 10 видов), стрекоз (от 6 видов), бабочек и клещей (от 5 видов), жуков (от 4 видов), подсолнечников (от 2 видов).

Интересно, что, хотя это озеро занимает первое место по разнообразию макрозообентоса, оно занимает последнее место по разнообразию личинок хирономид – основного компонента макрозообентоса.

В этом озере зарегистрировано всего 10 видов хирономид. По видовому разнообразию, численности особей и биомассе в макрозообентосе доминирует семейство Chironomidae (Chironomidae) семейства Diptera. Выявлено 54 вида хирономид, принадлежащих к 26 родам. Типичные для всех озёр виды хирономид *Tanytarsus staty*, *Procladius Ferrugineus* и *Cryptocladopelma defektus* в этом водоеме вообще не встречаются. Однако видов, принадлежащих к другим семействам двукрылых, больше, чем в других озерах. Среди них виды *Prodezzia semigra* и *Sphaeromias pictus* встречаются только в озере Сарбас, за исключением Сайкуль.

В этом озере отмечен единственный общий для всех озёр вид *Oecetis intima*. В озере также обнаружены все 5 видов водяных жуков, зарегистрированных в 6 озерах различного качества водоемов.

Следует отметить, что из-за высокого разнообразия в озере Сайкуль происходит снижение уровня доминирования видов, в связи с чем уменьшается количество доминирующих видов.

Численность макрозообентоса увеличивается в зимний сезон. Немного в весенние месяцы, в среднем летом, но чаще встречается в осенний сезон, чем в летний. Биомасса показывает высокий показатель от зимних к весенним месяцам, в летние месяцы он резко падает, а в осенние месяцы сохраняется в среднем по годам.

Зимой средняя за сезон численность 156 экз/м², биомасса 4,5 г экз/м². Показания в весенние месяцы - 420 и 120, в летние - 240 и 3,4, в осенние - 86 экз/2,3 г/м². Среднегодовая биомасса составляет 6,4 г/м².

В зависимости от года и сезона здесь могут доминировать около 10 видов. Доминирующие виды включают *Limnodrilus helveticus*, *Anisus albus*, *Anisus sp*, *Lymnaea auricularia*, *Lymnaea stagnalis*, *Paramysis lacustris*, *Sigara assimilis*, *Camptochironomus pallidivittatus*, *Chironomus cingulatus*, *Cricotopus silvestris*, *Tanytarsus exigious* и *Berosus sp*.

Таким образом, в озере Сайкуль отмечен 41 вид макрозообентоса, которые по основным таксонам распределились следующим образом: Annelida

- 2 вида, Mollusca - 11 видов, Crustacea – 2 вида, Heteroptera - 2 вида, Odonata - 4 вида, Chironomidae - 10 видов, Coleoptera - 5 видов, Trichoptera - 1 вид, другие представители двукрылых - 4 вида. Число доминирующих видов – 10.

КОРХОНАЛАРДА ПУЛ ОҚИМИ ТЎҒРИСИДАГИ ҲИСОБОТИНИ МОЛИЯВИЙ БУХГАЛТЕРИЯ ЖАДВАЛЛАР АСОСИДА ШАКЛИНИ КУРИБ ЧИҚИШ

Аннотасия: мақолада "пул оқимлари тўғрисидаги ҳисобот" шаклини шакллантириш эволюцияси, шунингдек, бухгалтерия (молиявий) ҳисоботларининг турли хил фойдаланувчилари учун ўзбек ва халқаро стандартларга мувофиқ унинг роли ва мақсади кўриб чиқилади. Ҳисобот усуллариининг таҳлили шуни кўрсатдики, ички ҳисобот фойдаланувчилари учун бевосита усул мақбулдир.

Калит сўзлар: нақд пул, ҳисобот, фойдаланувчилар, халқаро стандартлар, жорий фаолият, инвестицион фаолият, молиявий фаолият, пул эквивалентлари.

PREPARATION OF CASH FLOW STATEMENTS IN ENTERPRISES ON THE BASE OF FINANCIAL ACCOUNTING TABLES

Abstract. The article examines the evolution of the "cash flow statement" form, as well as its role and purpose in accordance with Uzbek and international standards for various users of accounting (financial) reports. The analysis of reporting methods showed that the direct method is acceptable for internal reporting users.

Key words: cash, reporting, users, international standards, current activity, investment activity, financial activity, cash equivalents.

Миллий иқтисодиётда ислохотларни чуқурлаштириш ва иқтисодиётни еркинлаштириш молиявий ресурслардан самарали фойдаланишни, хусусан, ҳисоб миллий ва халқаро стандартлар асосида пул оқимларини бошқариш усуллариини такомиллаштиришни талаб этади. Фаолият тури (операцион, инвестиция, молиявий) томонидан молиявий ресурслар ҳаракати тўғрисидаги маълумотларни акс еттириш учун, молиявий ҳисобот таркиби бир "пул оқими ҳисоботи" (шакл Но. 4) сифатида ишлаб чиқилган. Ушбу ҳисобот шакли бизнинг амалиётимиз учун нисбатан янги бўлиб, ҳозирги вақтда кўп ҳолларда фақат 5110 ҳисобида тўлдирилади.

Хўжалик юритувчи субъектларнинг кўпчилигида "пул оқимлари тўғрисидаги ҳисобот"нинг моҳияти, мақсади, ахборот имкониятлари ва тўлдириш усулларига еътибор қаратилди. Шунинг учун тавсияноманинг ушбу бўлимида мазкур ҳисоботни ишлаб чиқаришнинг миллий ва миллий ўзига хос хусусиятлари ва унинг бошқарувга ахборот беришдаги аҳамияти баён қилинади.

Пул оқими жадвалини (шакл сонли 4) бухгалтерия ҳисоби асосий шаклларида бири ҳисобланади, компания маблағлари даромад ва харажатлар ҳақида маълумот умумлаштириш учун ишлатилади қайси. Бухгалтерия ҳисоби ядросини ташкил етувчи маълумотларни сезиларли даражада тўлдиради ва бойитади - "баланс" (1-шакл) ва "молиявий натижалар тўғрисида ҳисобот" (2-шакл). Маълумки, "баланс" (1-шакл) корxonанинг молиявий ҳолатини маълум бир санада (ҳисобот даври охирида) акс еттиради. Пул оқими тўғрисидаги ҳисобот (4-шакл) молиявий ҳисоботларнинг таркибий қисмларидан бири бўлиб, ҳисобот даврининг бошидан охиригача пул оқимларидаги ўзгаришларни тасвирлайди.

Молиявий натижалар тўғрисидаги ҳисобот (шакл йўқ. 2) корxonанинг ҳисобот давридаги молиявий-хўжалик фаолияти натижаларини акс еттиради. Бу фаолият нақд ҳолатини таъсир қилувчи муҳим омил ҳисобланади, пул оқими белгисида айтилганидек (шакл Но. 4). Пул оқими ҳақида маълумот жуда муҳим, чунки у молиявий ҳисоботларни фойдаланувчиларга нақд ва нақд пул эквивалентларини ошириш ва ишлатиш қобилиятини баҳолашга имкон беради. Бу ерда нақд пул ва пул эквивалентлари тушунчасига батафсилроқ тўхталамиз. Халқаро молиявий ҳисобот стандартлари (УФРС) ва АҚШ умумий бухгалтерия тамойиллари (УС ГААП) бўйича нақд пул корxона ва талаб бўйича инвестициялар томонидан нақд пулдан иборат.

НСБ сонли 9 "пул оқими жадвалидан" га мувофиқ, нақд пул эквивалентлари қисқа муддатли юқори ликвидли инвестициялар (молиявий инвестициялар) бўлиб, улар маълум миқдордаги пулларга осон ва тез алмаштирилади, шунингдек қийматнинг ўзгариши туфайли маълум бир хавфга ега.

Бу шуни англатадики, нақд пул эквивалентлари юқори ликвидли қисқа муддатли молиявий инвестициялар бўлиб, маълум миқдорга осонлик билан айланади ва қийматнинг ўзгариши хавфига деярли таъсир қилмайди. Улар хазина облигациялари, муддатли депозитлар, депозит сертификатлари ва шунга ўхшашларни ўз ичига олиши мумкин.

Пул оқимлари тўғрисидаги ҳисоботни тузишда (4-шакл) пул маблағлари ва пул эквивалентлари жамланади ва суммада ҳисобга олинади. Молиявий инвестицияларни пул эквивалентлари шаклида сотиб олиш ва сотиш маблағларни ишлатиш манбаи ёки усули емас, балки корxonани бошқариш жараёнининг бир қисмидир. Корxonадан инвесторга пул

маблағларининг берилиши ва қайтарилиши пул оқимлари тўғрисидаги ҳисоботда акс еттирилмайди (4-шакл).

Пул оқимлари тўғрисидаги ҳисоботда пул оқимларининг таснифи. Пул оқимлари тўғрисидаги ҳисоботда пул оқимлари ва оқимлари асосан уч тоифага бўлинади: операцион фаолият, инвестиция фаолияти ва молиялаштириш фаолияти. Пул оқимларини ушбу тоифаларга гуруҳлаш корхонанинг учта асосий фаолиятидан ҳар бирининг нақд пулга таъсирини акс еттиришга имкон беради. Учта тоифанинг нақд пулга таъсири нақд пул қолдиқларини очиш ва ёпиш даври мобайнида аниқ ўзгаришни англатади.

Нос сонли 9 иловага мувофиқ" пул оқими жадвалидан " (шакл 4), операцион фаолияти бўлган асосий даромад хўжалик юритувчи субъектнинг фаолияти, шунингдек, инвестиция ва молиявий фаолияти билан боғлиқ бўлмаган бошқа хўжалик фаолиятибор.

Одатда, корхонанинг фаолият (асосий) фаолияти маҳсулот, иш ва хизматларни сотишга қаратилади. Операцион фаолиятдан пул оқимлари субъектнинг инвестиция ва молиялаштириш фаолияти таркибига кирмайдиган барча операсияларни ўз ичига олади.

Жадвал 1

Нақд пул тушумлари	нақд тўловлар
сотилган товарлар (ишлар, хизматлар) учун харидорлардан тушумлар	Пайменс Таъминотчиларга тўловлар таъминотчиларга тўловлар

Операцион фаолият билан боғлиқ пул тушумлари ва тўловлар

Инвестиция фаолияти-пул эквивалентларига киритилмаган узок муддатли активларни ва бошқа инвестиция объектларини сотиш ва сотиб олишдан иборат фаолият.

Шундай қилиб, асосий воситалар, номоддий активлар ва бошқа узок муддатли активларнинг олди-сотдиси инвестиция фаолиятининг асосий таркибий қисмидир. Тегишли пул тушумлари ва чиқимлари пул оқимлари тўғрисидаги ҳисоботнинг инвестиция фаолияти бўлимида акс еттирилади (4-шакл). Инвестиция фаолияти билан боғлиқ пул оқими маълумотлари муҳимдир, чунки пекйпкахкелажакда пул оқимларини яратиш ва пул оқимларини яратиш учун кутилган пекйпкахга еътибор қаратиш учун мўлжалланган.

НАС 9-сонли "пул оқимлари тўғрисидаги ҳисобот" (4-шакл) га мувофиқ, молиявий фаолият корхона фаолияти натижасида капитал ва қарз миқдори ва таркибини ўзгартириши мумкин бўлган фаолиятдир.

Флов оф фундс Инвестисия фаолияти билан боғлиқ маблағлар оқими

Нақд пул тушумлари	нақд тўловлар
асосий воситаларни йўқотишдан олинган даромад	асосий воситаларни сотиб олиш
асосий воситаларни сотиб олиш номоддий активларни сотишдан олинган	даромад номоддий активларни
сотиб олиш узоқ муддатли ва қисқа муддатли инвестицияларни	сотиб олиш узоқ муддатли ва қисқа муддатли инвестицияларни

Д
Й

емак, молиявий фаолият натижасида сомпозицион компаниянинг ўзлик ва мажбуриятларининг ҳажми ва омпозицияси ўзгаради. Бундай фаолиятдан келиб чиққан пул оқимлари пул оқимлари тўғрисидаги ҳисоботнинг молиявий фаолият бўлимида акс еттирилади (4-шакл). Шунинг учун молиялаштириш фаолияти билан боғлиқ пул оқимлари ҳақидаги маълумотлар зарур, чунки у келажакдаги пул оқимларини башорат қилишга имкон беради.

Фаолиятни молиялаштириш пул оқимлари

Нақд пул тушумлари	нақд пул тўловлари
фоизлар олинган	фоизлар тўланган
дивидендлар олинган	дивидендлар тўланадиган
даромадлар чиқарилган аксиялардан берилган аксияларга	чиқарилган аксияга пул тўловлари
узоқ муддатли кредитлар даромад	нақд тўловлар узоқ муддатли кредитлардан олинган даромадлар узоқ муддатли кредитлардан олинган
даромадлар узоқ муддатли ижарадан	олинган даромадлар
бошқа пул тушумлари	бошқа пул тўловлари

Шундай қилиб, халқаро молиявий ҳисобот стандартлари (ИФРС) ва миллий стандартлар ўртасидаги асосий фарқ шундаки, УФРС бўйича молиявий фаолият қисқа муддатли инвестициялар каби узоқ муддатли инвестицияларни ўз ичига олади.

Ҳозирги вақтда миллий стандартлар молиявий фаолиятга фақат қисқа муддатли инвестицияларни назарда тутди. Ошкор муносабати билан УФРС асосланган пул оқимларини бир баёнот тайёрлашда, у молиявий фаолияти тегишли таърифларни фойдаланиш тавсия етилади

Нақд пулсиз операсиялар. Кўпгина фаолият турлари пул оқимларига таъсир қилади ва натижада ҳисоботда уларнинг турлари бўйича бўлим мавжуд. Шу билан бирга, операсион, инвестиция ва молиялаштириш фаолияти билан боғлиқ айрим операсиялар пул оқимларига таъсир қилмайди. Моддий ва номоддий активларни конвертасия қилиш учун акциялар ва облигасиялар чиқариш ёки узоқ муддатли активларни бошқа узоқ муддатли активларга айлантириш нақд пулсиз инвестиция ва молиявий операсияларга мисол бўлиши мумкин. Нақд пулсиз операсиялар асосий фаолият билан боғлиқ бартер операсияларида намоён бўлиши мумкин. Баъзи корхоналарда нақд пулсиз операсияларнинг бу тури савдо операсияларининг асосий қисмини ташкил қилиши мумкин. Шунинг учун, бизнинг назаримизда, нақд пул иштирокисиз битимларни (айниқса бартер операсияларини) тўғри очиб бериш пул оқимлари тўғрисидаги ҳисоботни тайёрлаш ва таҳлил қилишда муҳим аҳамиятга ега.

Умуман пулни жалб қилмайдиган инвестиция ва молиявий операсиялар келажакдаги пул оқимларига таъсир қилади. Нақд пулсиз операсиялар бўйича маълумот пул оқими ҳисоботида илова сифатида тақдим етилишини таклиф қиламиз.

Ҳозирги вақтда бухгалтерия ҳисоби миллий стандартлари нақд пулсиз инвестиция ва молиявий операсиялар ва асосий фаолият ҳақида маълумот беришни талаб қилмайди.

Бухгалтерия ҳисоби нақд пул асосида амалга оширилганда даромадлар нақд пул олинганда ва харажатлар улар тўланганда ҳисобга олинади. Бу корхона фаолият пул оқимлари ҳақида ўйлаш учун зарур бўлса, бу тартиби, аниқса, фойдалидир. Аслида, корхона фаолият пул оқимлари соф натижа пул усули билан ҳисоблаб, унинг фойда тенгдир. Операсион фаолиятдан олинган пул оқимларининг соф оқимини ҳисоблаш учун базавий базани ҳисоблаш усулини касса усулига ўзгартириш керак.

Операсион фаолиятни ҳисоблашнинг тўғри усули нақд пул тушумлари ва тўловларининг асосий тоифаларини ҳисобга олади ва моҳиятан нақд пул асосида тайёрланган даромад белгисига ўхшайди. Тўғри бухгалтерия усулини қўллаш орқали турли тоифадаги нақд пул суммаларини қайта ҳисоблаб чиқинг, ёки корхонанинг нақд пулини таҳлил қилиш ва таснифлаш орқали, ёки нақд пул асосида ҳисобланган даромад ва харажатлар, нақд пул асосида ҳисоблаб чиқилади, тегишли миқдорларга конвертасия қилиш йўли билан аниқланиши мумкин.

Кўпгина корхоналар жуда катта миқдордаги пул оқимларига ега бўлиб, бу операсион фаолиятдан пул оқимларини таҳлил қилиш ва таснифлашни жуда қийинлаштиради. Дедуксия тамойилига кўра, энг

самарали усул бухгалтерия ҳисобида акс еттирилган суммаларни асос қилиб олишдир.

**ЭЛЕКТР ТАЪМИНОТИ ИШОНЧЛИГИНИ ОШИРИШДА
ҚЎЛЛАНИЛАДИГАН ИСТИҚБОЛЛИ ЭНЕРГИЯ ЗАХИРАЛАШ
ҚУРИЛМАЛАРИНИ ЎҚИТИШ ЖАРАЁНИДАГИ ТАҲЛИЛИ**

Аннотация. Мақолада энергетик тизимда энергия захиралаш қурилмаларидан фойдаланиш долзарблиги, уларнинг турлари, афзаллик ва камчиликлари кўрсатилган. Энергия захиралаш қурилмаларининг техник ва иқтисодий хусусиятлари таҳлил қилинган. Олиб борилган таҳлиллار асосида республикамиз иқлимига мос, аҳолининг ижтимоий-иқтисодий ҳолатига тўғри келадиган энергия захиралаш қурилмалари танлаб олинган. Бундан ташқари ҳозирги кунда республикамиздаги электр энергияси нархидан, энергия захиралаш технологияларидан олинган электр энергияси нархига яқин ёки past бўлган қурилмалар тавсия қилинган.

Калит сўзлар: ахборот технологиялари, интеллектуал, техник компетенция, технологик таълим.

**ANALYSIS OF PROSPECTIVE ENERGY STORAGE DEVICES USED
IN IMPROVING ELECTRICAL SUPPLY RELIABILITY IN THE
PROCESS OF TRAINING**

Annotation. The article shows the relevance of using energy backup devices in the power system, their types, advantages and disadvantages. The technical and economic characteristics of energy-saving devices are analyzed. Based on the analysis, energy-saving installations were selected that correspond to the climate of the republic, the socio-economic situation of the population. In addition, devices whose cost is close to or lower than the cost of electricity obtained from energy-saving technologies are currently recommended.

Keywords: information technology, intellectual, technical competence, technological training.

Энергияни захиралаш ҳар қандай тизимнинг ажралмас қисми ҳисобланиб табиатда жуда кенг тарқалган. Ҳар қандай жисмнинг мавжуд бўлиши аслида унинг таркибидаги энергиянинг бир тизим сифатида бирлашганини билдиради. Масалан инсоннинг тириклиги ёки

ҳаракатланиши унинг танасидаги молекулаларнинг кимёвий энергияни сақлай олиши аниқлади, агар ушбу кимёвий энергия молекулаларда сақланмаса тана ҳалокатга учрайди ва тизим ишдан чиқади. Инсоннинг кучсизланиб қолиши ҳам аслида молекулалардаги кимёвий энергиянинг камайиши сабабли юзага келади. Бошқа материяларда ҳам худди шундай жараён кузатилади.

Энергия захиралаш қурилмаларидан фойдаланиш айниқса қайта тикланадиган энергия манбаларидан фойдаланишда кенг қўлланилади. Чунки бундай энергия манбаларидан фойдаланишда асосий камчилик, бирламчи энергиянинг табиат томонидан ҳосил қилинишидир. Бу ерда бирламчи энергияни ҳосил қилишда ёки мавжуд энергияни бошқариш фақатгина табиат томонидан амалга оширилади. Ёқилғи энергетик ресурслардан электр энергияси олишни эса инсон омили орқали бошқарса бўлади. Шу сабабли қайта тикланадиган энергия манбаларидан фойдаланишда захиралаш қурилмаларидан фойдаланмаслик электр энергияси таъминоти ишончлигига салбий таъсир кўрсатади. Қайта тикланадиган энергия манбаларида захиралаш қурилмаларидан фойдаланиш, электр энергиясига талаб бўлмаган вақт оралиқларидаги энергия оқимларини захиралаш ва ушбу энергиядан энергия истеъмоли юқори бўлган вақт оралиқларида фойдаланиш имкониятини яратади. Сўнги вақтларда захиралаш қурилмаларидан фойдаланишнинг долзарблиги ушбу қурилмаларга бўлган эътиборни кучайтирди ва ушбу соҳада илмий изланишлар олиб бориш учун етарлича асос бўлмоқда.

Қайта тикланадиган энергия манбаларини марказлашган электр тармоғи билан ишлатишда энергия захиралаш қурилмаларидан фойдаланиш кўпгина камчиликларни бартараф этиши мумкин, яъни қайта тикланадиган энергия манбаларидан чиқадиган қувватни силлиқлаш, тармоқда электр энергияси бўлмаганда электр энергияси билан таъминлаш, шунингдек, паст юкланиш даврида захиралаш қурилмаларини тармоқ қувватини захиралаш орқали қувват балансини сақлаб туриш ва электр энергиясига талаб юқори бўлганда кўшимча қувват билан таъминлаш [1]. Аммо, электр таъминотида энергия захиралаш қурилмаларидан ҳаддан ташқари кўп фойдаланиш катта харажатларга олиб келиши ва бу энергия захиралаш тизимларидан электр энергияси етказиб бериш учун тижорат мақсадларида фойдаланишда ҳалақит бериши мумкин.

Электр энергияси асосий хусусияти шундан иборатки ушбу энергия тури ишлаб чиқарилиши билан истеъмом қилиниши керак [2].

$$E(t) = \int_t p(r)dr = \int_t v(r)i(r)dr;(1)$$

Электр токи бу – вақт бирлиги ичида зарядланган заррачаларнинг оқимидир:

$$i(t) = \frac{d}{dt}q_e(t);(2)$$

Демак электр энергияси фақатгина электр энергиясига талаб бўлган ҳолатдагина ишлаб чиқарилиши керак. Шу сабабли ушбу энергия манбасидан фойдаланишда кўпгина ноқулайликлар кузатилади. Масалан ҳосил бўлган вақтда истеъмолчи бўлмаслиги ёки аксинча истеъмолчи бўлмаган вақтда энергия бўлмасли мумкин. Бундан ташқари электр энергиясини бошқа тур энергия сифатида захираланган энергияни, ишлатиш учун қулай бўлган энергияга генерацияланиши деб қараш мумкин. Масалан, ИЕС ларда кўмир, газ ва нефтнинг захиралаган кимёвий энергиясини электр энергиясига айлантириш, Қуёш ва атом электр станцияларида атом энергиясидан электр энергияси ишлаб чиқариш, гидроэлектростанцияларда сувнинг потенциал ва кинетик энергиясидан электр энергияси ишлаб чиқариш ва ҳоказо. Шу сабабли электр энергиясини захиралашни ҳам фақатгина энергияни бошқа турига айлантириш орқали амалга ошириш мумкин. Мисол учун электр энергиясини иссиқлик энергиясига айлантириш ва иссиқлик энергиясини захиралаш, бундан ташқари электр энергиясини кимёвий энергия кўринишида, потенциал ва кинетик энергия ва ҳоказо энергиялар кўринишида захиралаш мумкин [3].

Тўртинчидан. Механик Э.З. қурилмалари бошқа Э.З. қурилмаларига нисбатан экологик тоза ҳисобланади. Чунки аккумулятор батареяларини ишлаб чиқариш учун ишлатиладиган материалларни қазиб олишда ва қайта ишлашда кўплаб зарали моддалар атмосферага ажралади.

ОПТИМАЛЬНОЕ УПРАВЛЕНИЕ РЕЖИМАМИ РАБОТЫ СИСТЕМ ЭЛЕКТРОСНАБЖЕНИЯ ПРИ ВЫСОКО СКОРОСТНОМ ДВИЖЕНИИ

Аннотация. Наименьшая мощность СТЭ требуется при наиболее равномерном распределении поездов (по их числу и типу) во времени, содержащих в своем составе станций с ограниченным запасом первичных энергоресурсов.

Ключевые слова: распределение нагрузки, номинальная мощность нагрузки, баланс мощности, распределение нагрузки, форсированная мощность.

OPTIMAL CONTROL OF OPERATING MODES OF POWER SUPPLY SYSTEMS AT HIGH SPEED TRAFFIC

Abstract. The lowest power of the STE is required with the most uniform distribution of trains (by their number and type) over time, containing stations with a limited supply of primary energy resources.

Keywords: Load distribution, rated load capacity, power balance, load distribution, forced power.

Минимизация потерь электроэнергии в тяговой сети является целевой задачей участия системы тягового электроснабжения (СТЭ) в формировании энергетической эффективности электрической тяги в целом [1]. Наименьшая мощность СТЭ требуется при наиболее равномерном распределении поездов (по их числу и типу) во времени. Повышение энергетической эффективности режимов работы СТЭ переменного тока с нерациональными потоками реактивной мощности и наличием транзита мощности из-за межсистемных перетоков требует применения

автоматического регулирования напряжения на тяговых подстанциях и ввода в работу рациональных мощностей компенсирующих устройств, [2]

Эффективность применения конденсаторных установок в электроэнергетике известна давно [3]. Они позволяют повысить провозную способность железных дорог при больших нагрузках за счет повышения напряжения в тяговой сети до нормируемых значений. С их помощью также нормализуется баланс по реактивной мощности в рассматриваемом узле электроснабжения для обеспечения приемлемого режима напряжения для потребителя, решаются вопросы снижения потерь мощности и в целом повышается качество электроэнергии.

Компенсация реактивной мощности направлена в основном на экономию (уменьшение потерь) при эксплуатации тяговых сетей и одновременно на улучшение качества напряжения. Для нахождения наилучшего решения необходимо сопоставлять стоимость установки компенсирующих устройств и дополнительной аппаратуры к ним (с учетом расходов на эксплуатацию) с экономией на стоимости потерь в тяговых сетях, а также с выигрышем, полученным за счет улучшения качества напряжения ЭПС и не тяговых потребителей. Эффективный вариант компенсации реактивной мощности тяговой нагрузки - распределенная система КУ в тяговой сети, когда КУ включены на постах секционирования и на тяговых подстанциях.

Для выбора номинальной мощности КУ следует выполнить расчет наименьшего действующего напряжения на токоприемнике ЭПС для заданных размеров движения по нормальной (проектной) схеме СТЭ с учетом сгущения поездов в интенсивный час. Расчеты во всех случаях следует выполнять с использованием программных комплексов с имитацией взаимосвязанных мгновенных схем движущихся нагрузок ЭПС [5].

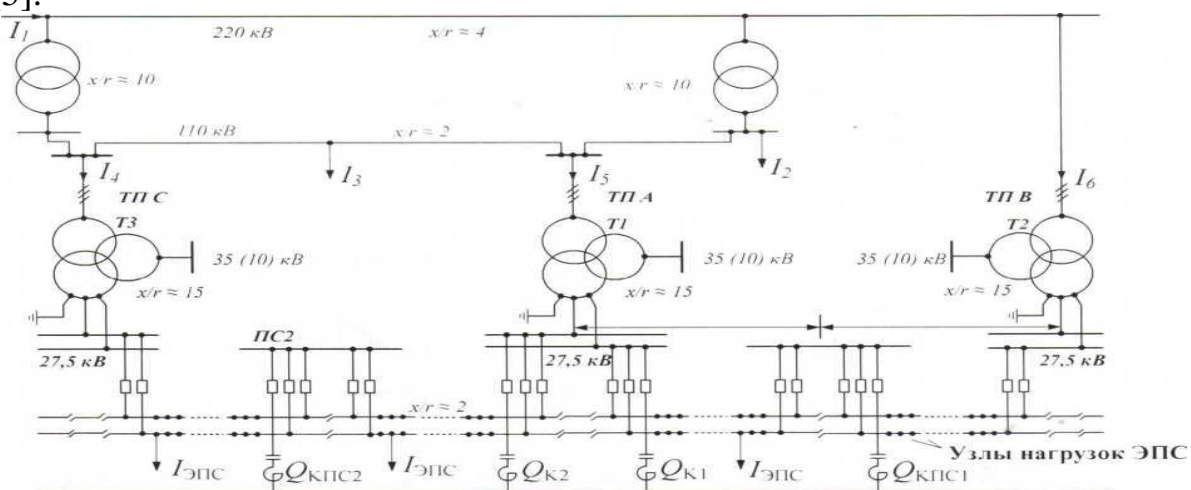

Рис. 1.1. Фрагмент внешнего электроснабжения тяговой сети с распределенной поперечно емкостной компенсацией.

Так для каждой из меж подстанционных зон рассматриваемого участка (рис. 1.1) при заданных размерах движения и нормальной схеме питания определяется фактическое наименьшее напряжение на токоприёмнике ЭПС

$$U_{\text{мин.ф}}: \dot{U}_{\text{мин.ф}} = (\sum_{i=1}^n \dot{U} - \Delta \dot{U}_{\text{max}i})/n,$$

где $\dot{U}_{\text{ши}i}$ - мгновенное значение напряжения на шинах тяговой подстанции; $\Delta \dot{U}_{\text{max}i}$ - мгновенное максимальное падение напряжения в векторе $\Delta \dot{U}_a$ падение напряжений от узлов нагрузок ЭПС до базисного узла; n - количество решенных мгновенных схем за время моделирования T .

$$\Delta \dot{U} = \dot{Y}^{-1} j 1.4$$

где $\dot{Y} = MZ_B^{-1} M_t$ - матрица узловых проводимостей.

Вначале принимаем вариант с размещением КУ на постах секционирования (на рис. 3.1.1. $Q_{\text{кпс}1}$ и $Q_{\text{кпс}2}$). Расчетная мощность КУ, необходимая для повышения напряжения до нормированного значения Q_k , определяется разностью наименьших значений нормированного и фактического действующего напряжения на токоприёмнике ЭПС ($U_{\text{мин. норм}} - U_{\text{мин.ф}}$) и входным индуктивным сопротивлением до КУ ($X_{\text{вх}}$) по формуле, $M_{\text{вар}}$:

$$Q_k = U_{\text{ном}}^2 (U_{\text{мин. норм}} - U_{\text{мин.ф}}) / \{U_{\text{мин. норм}} * X_{\text{вх}}\} 1.5$$

где $U_{\text{ном}}$ - номинальное напряжение КУ ($U_{\text{ном}} = 27,5$ кВ); $X_{\text{вх}}$ - входное индуктивное сопротивление до КУ.

Входное индуктивное сопротивление до КУ поста, секционирования при двухстороннем питании контактной сети от смежных подстанций ТП А и ТП В (рис. 3) определяется по формуле, Ом:

$$X_{\text{вх}} = \frac{A * B}{A + B} 1.6$$

где $A = X_{\text{ТС}a} + 2X_{\text{ТР}a} + 2X_{\text{С}a}$, $B = X_{\text{ТС}b} + 2X_{\text{ТР}b} + 2X_{\text{С}b}$, $X_{\text{ТС}a}$ и $X_{\text{ТС}b}$ - индуктивные сопротивления тяговой сети соответственно от подстанций ТП А и ТП В до КУ, Ом; $X_{\text{ТС}a}$ и $X_{\text{ТС}b}$ - индуктивные сопротивления включённых в работу трансформаторов на подстанциях ТП А и ТП В, Ом;

$X_{\text{С}a}$ и $X_{\text{С}b}$ - индуктивные сопротивления системы внешнего электроснабжения соответственно до подстанций ТП А и ТП В, Ом.

Индуктивное сопротивление включенных в работу трансформаторов на подстанции ТП А (ТП В) определяется по формуле, Ом:

$$X_{\text{ТР}} = U_{\text{кз}} * U_{\text{ном}}^2 / 100 * n * S_{\text{ТР}} 1.7$$

где $U_{\text{кз}}$ - напряжение короткого замыкания трансформатора, %; $U_{\text{ном}}$ - номинальное напряжение трансформатора ($U_{\text{ном}} = 27,5$ кВ), $S_{\text{ТР}}$ - номинальная мощность трансформатора, МВ*А, n - количество включённых в работу трансформаторов.

ANALYSIS OF THE LAW AND REGULATORY DOCUMENTS ADOPTED IN THE FIELD OF ELECTRICAL ENERGY SYSTEM AUDIT IN THE REPUBLIC OF UZBEKISTAN

Abstract. It is known that in the republic, economic recovery, housing and population provision abound with long-term strategic prospects, and in Kazakhstan – energy resources - long-term needs, satisfaction of needs in the nodes of the oil and gas, electric power, chemical, chemical industries.

Keywords: energy saving, energy efficiency, energy saving, reliable activity, energy consumption, renewable energy sources.

Сўнги йилларда мамлакатимизда, аввало, иқтисодиётнинг барча тармоқларини ривожлантиришни жадаллаштириш, инвестицион жозибadorлик ва ишбилармонлик фаоллигини ошириш, ишлаб чиқариш ва хизмат кўрсатиш соҳасини кенгайтириш борасида кенг кўламли ислохотлар амалга ошириш ҳамда Ўзбекистон республикасида энергетикани ривожлантириш ва ундан оқилона фойдаланиш бўйича “Энергиядан оқилона фойдаланиш тўғрисида”, “Электр энергетика тармоғини янада ривожлантириш ва ислох қилиш стратегияси тўғрисида”, “Электр энергетикаси тўғрисида”, “Электр ва иссиқлик энергиясидан фойдаланиш қоидаларини тасдиқлаш тўғрисида”, “Қайта тикланувчи энергия

манбаларидан фойдаланиш тўғрисида” ва бир нечта қонунлар қабул қилинди.

Юқорида санаб ўтилган қонунлар ичида 1997 йил 25 апрелда қабул қилинган “Энергиядан оқилона фойдаланиш тўғрисида” ги қонун энергия ҳосил қиладиган ва энергия сарфлайдиган асбоб-ускуналар ҳамда маҳсулотга қонунчиликда назарда тутилган тартибда энергия жиҳатидан самарадорлик кўрсаткичларидан фойдаланиш ҳақидаги қонунлардан бири ҳисобланади. Ушбу қонуннинг мақсади миллий энергетика ресурслари сақланишини, энергиядан ва ишлаб чиқариш имкониятларидан самарали фойдаланишни таъминлайдиган умумий ҳуқуқий асосларни шакллантиришдан иборатдир. Албатта, Ўзбекистон Республикасининг 1997 йил 25 апрелда қабул қилинган «Энергиядан оқилона фойдаланиш тўғрисида»ги 412-І-сонли Қонунига киритилган ўзгартиришлар Қонунчилик палатаси томонидан 2020 йил 1 майда қабул қилинган бўлиб, Сенат томонидан 2020 йил 19 июнда маъқулланган. Ўзбекистон Республикасининг Президенти Ш. Мирзиёев 2020 йил 14 июль санасида ушбу ўзгартиш ва қўшимчаларни ЎРҚ-628-сон билан имзолади, Қонун расман эълон қилинди ва эълон қилинган кундан эътиборан кучга кирди. Хулоса ўрнида шуни алоҳида таъкидлаш жоизки, Ўзбекистон Республикаси Қонунига ўзгартиш ва қўшимчалар киритилганда: «энергиядан оқилона фойдаланиш», «энергияни тежаш ва энергия жиҳатидан самарадорликни ошириш», «давлат томонидан қўллаб-қувватлашни», «энергия жиҳатидан самарадор», «энергия тежаладиган дастурлар ва лойиҳаларни ишлаб чиқиш», «энергия жиҳатидан тежамкор техника ҳамда маҳсулот» «қайта тикланувчи энергия манбалари» каби муҳим жумлалар учрайдики, буларнинг барчаси Қонун энергетика соҳасининг ривожини, истеъмолчиларнинг ҳақ-ҳуқуқлари, Ўзбекистоннинг табиий бойликларидан оқилона фойдаланиш — энергия тежамкорлигини ва самарадорлигини нуктаи назардан бирмунча такомиллаштирилган.

Ушбу мақсадда Энергетика вазирлигини томонидан «Энергияни тежаш ва энергия самарадорлигини ошириш тўғрисидаги» қонун лойиҳаси ишлаб чиқилди ва норматив-ҳуқуқий ҳужжатлар лойиҳаларининг муҳокамаси порталида эълон қилинди. Лойиҳа 7 боб ва 24 моддадан иборат. У энергия тежаш ва энергия самарадорлигини объект ва субъектларига тавсиф берувчи, асосий атама ва тушунчаларни белгиловчи ҳамда энергетика нуктаи назардан муносабатларни расмийлаштирувчи янги бўлим ва моддаларни ўз ичига олган. Бундай қонун лойиҳада келтирилган моддалар албатта энергияни тежаш ва самарадорлигини ошириш учун мақсад қилинган.

Ўзбекистон Республикаси Олий Мажлиси томонидан 2009 йил 30 сентябрда қабул қилинган “Электр энергетикаси тўғрисида”ги қонуннинг қабул қилиниши электр энергетикаси соҳасидаги муносабатларни тартибга солиш, Ўзбекистон Республикасининг электр энергетика хавфсизлигини таъминлаш, электр энергиясини ҳосил қилиш, узатиш ва сотиш бўйича

бошқарув ҳамда хўжалик алоқалари тизимига бозор принциплари ва механизмларини жорий этиш, электр энергетикасининг мутаносиб ривожланишини таъминлаш, электр энергиясидан ва ёқилғи-энергетика ресурсларидан оқилона фойдаланишга имкониятини беради.

Ўзбекистон Республикаси Олий Мажлиси томонидан 2019 йил 27 мартда қабул қилинган “Ўзбекистон Республикасида электр энергетика тармоғини янада ривожлантириш ва ислоҳ қилиш стратегияси тўғрисида” қонун Электр энергетика тармоғининг ишончли фаолият юритишини таъминламасдан туриб иқтисодиёт тармоқлари ва мамлакат ҳудудларининг саноат салоҳиятини ошириш, тадбиркорлик фаолиятини ривожлантиришни рағбатлантириш, аҳоли фаровонлигини юксалтириш ва ҳаёт сифатини яхшилаш масалаларига бағишланган. Ушбу қонун замонавий шароитларда электр энергетика тармоғида рақобат муҳитини ривожлантириш ва инвестицияларни жалб қилиш электр энергиясини ишлаб чиқариш ва етказиб бериш соҳасидаги фаолиятнинг институционал ва ташкилий-ҳуқуқий асосларини тубдан такомиллаштириш, электр энергетика тармоғини ислоҳ қилиш бўйича вазифаларнинг амалий ижросини таъминлаш, шунингдек, 2017 — 2021 йилларда Ўзбекистон Республикасини ривожлантиришнинг бешта устувор йўналиши бўйича Ҳаракатлар стратегияси ва Ўзбекистон Республикаси Маъмурий ислоҳотлар концепциясида белгиланган вазифаларни бажариш мақсадларини белгилайди.

Маълумки, республикамызда иқтисодиёт барқарор ўсишини таъминлашга ва аҳолининг фаровонлик даражасини оширишга, ёқилғи-энергетика ресурсларига бўлган талаб – эҳтиёжни узлуксиз қаноатлантиришга қаратилган нефть – газ, электр энергетика, кўмир, кимё, қурилиш индустриясини ривожлантиришнинг узоқ муддатли стратегияси амалга оширилмоқда. Шу билан бирга, ёқилғи – энергетика тармоғининг мавжуд қувватлари энергия ресурсларига ортиб бораётган талаб-эҳтиёжни тўлиқ даражада таъминламаяпти, мамлакатимиз иқтисодиётининг энергия сарфи ҳажми ривожланган мамлакатларнинг ўртача кўрсаткичидан анча юқоридир. Ҳозирги вақтда асосан гидроэлектростанциялар ишлаб чиқараётган қайта тикланувчи энергия манбалари ҳиссасига мамлакатда ишлаб чиқарилаётган электр энергияси умумий ҳажмининг атиги ўн фоизи тўғри келмоқда. Ниҳоятда катта салоҳият мавжуд бўлишига қарамасдан, қуёш ва шамол сингари қайта тикланувчи энергия манбаларининг имкониятларидан тўлиқ даражада фойдаланилмаяпти. Шу муносабат билан, иқтисодиёт тармоқлари ва ижтимоий соҳанинг энергия самарадорлигини ошириш, энергия тежовчи технологиялар ва қайта тикланувчи энергия манбаларини кенг жорий этиш давлат сиёсатининг ҳозирги босқичдаги долзарб йўналишларидан бири бўлиб қолиши лозим. Илғор хорижий тажрибани инобатга олиб, мавжуд ресурсларни ва ишга солинмаган салоҳиятни жалб этиш орқали энергия самарадорлигини ошириш, энергия

тежовчи технологиялар ва қайта тикланувчи энергия манбаларини кенг жорий этиш, иқтисодиёт тармоқлари ва ижтимоий соҳанинг энергия сарфи ҳажмини кескин камайтириш борасидаги ишларни комплекс ташкил этиш, шунингдек, ёқилғи-энергетика ресурсларидан оқилона ва самарали фойдаланишни таъминлаш мақсадида Ўзбекистон Республикаси Олий Мажлиси томонидан 2019 йил 3 майда қабул қилинган асосий қонунлардан бири "Қайта тикланувчи энергия манбаларидан фойдаланиш тўғрисида" ги қонун алоҳида ўрин тутлади.

TECHNICAL CAPACITY DEVELOPMENT AND INFORMATION BASED LEARNING TECHNOLOGIES

Annotation. The need to ensure the normal professional activity of a future specialist engineer to improve the task of maintaining the high technological capabilities of the educational process on the basis of the introduction of highly effective information technologies in society, advanced achievements of modern pedagogical and Psychological Science at the University.

Keywords: Information technology, intellectual, technical competence, technological training.

Бугунги кунда рўй бераётган ижтимоий-иқтисодий, ижтимоий-сиёсий жараёнлар, таълимда этник-маданий анъаналарнинг ривожланиши янги аср бошидаги таълимнинг моҳияти ва мазмунини белгилайдиган асосий устуворликларни аниқлашни талаб қилади.

Алоҳида муаммоларнинг устуворлиги яққол кўриниб турибди, биз янги минг йилликнинг янги асридаги одамни келажакда университетда ўқитишнинг ахборот технологиялари асосида қабул қилинган ўз - ўзини ривожлантириш ва ўз-ўзини тарбиялаш анъаналарига мувофиқ олиб бориши мумкин бўлган баъзи йўналишларни намоиш этамиз. Талабаларнинг асосий техник компетенцияларини ривожлантириш ва ўз-ўзини ривожлантириш-келажакдаги муҳандислар.

Кўриниб турибдики, кўзланган мақсадни ҳал қилиш учун, биринчи навбатда, келажакдаги мутахассиснинг касбий тайёргарликда янги мазмун бўйича ривожланишини фаоллаштириш керак, аммо гуманистик фикрлаш

ва дунёқарашнинг маҳаллий анъаналарига асосланган. У умумий ва касбий таълимнинг янгиланган мазмунига, электрон таълим воситалари асосида талабаларнинг техник компетенцияларини ўз-ўзини ривожлантиришга таяниши керак. Бу талабаларга келажакдаги мутахассислар сифатида фан, маданият, иқтисодиёт ва технология тушунчалари ва қоидаларини ўзлаштиришга имкон беради, уларни чексиз янгиланадиган ҳаётда янги билимлар билан жиҳозлайди.

Бўлажак мутахассис муҳандиснинг нормал касбий фаолиятини таъминлаш зарурати жамиятда юқори самарали ахборот технологияларини, университетда замонавий педагогик ва психологик фаннинг илғор ютуқларини жорий этиш асосида ўқув жараёнининг юқори технологик қобилиятини сақлаб қолиш вазифасини кўяди. Аслида, бугунги кунда кўпинча педагогика соҳасидаги илмий ишланмалар ва тадқиқот натижаларини амалиётга жорий этиш ўртасида бўшлиқ пайдо бўлади, кўплаб самарали ғоялар ва уларни амалиётга жорий этиш усуллари талаб қилинмайди.

Кейин техник ваколатлар қуйидагича ифодаланиши мумкин.

Умумий билим:

-гуманитар ва ижтимоий-иқтисодий фанлар соҳасидаги асосий назариялар;

- инсоннинг инсонга, жамиятга, атроф-муҳитга муносабатини тартибга солувчи ахлоқий ва ҳуқуқий нормалар;

- тирик ва жонсиз табиатда содир бўладиган жараёнлар ва ҳодисалар;

- фикрлаш маданиятининг умумий қонунлари;

- келажакдаги касбининг моҳияти ва ижтимоий аҳамияти, фаолиятнинг маълум бир соҳасини белгилайдиган фанларнинг асосий муаммолари, уларнинг яхлит билим тизимидаги ўзаро боғлиқлиги;

- соғлом турмуш тарзи ҳақида;

- бошқариш усуллари;

- педагогик фаолият асослари;

- технологик фаолият соҳасига тааллуқли қарорлар, фармойишлар, буйруқлар, услубий ва норматив материаллар;

- техника фанлари, техника ва технологияларни ривожлантиришнинг асосий илмий-техник муаммолари ва истиқболлари;

- технологик объектлар, муҳандислик тизимлари, материаллар, маҳсулотлар ва иншоотлар, ускуналар ва технологик линияларни лойиҳалаш, яратиш ва улардан фойдаланиш тизимлари ва усуллари;

- экспериментал ва назарий тадқиқотларни ўтказиш усуллари;

- тадқиқот ва ишланмалар бўйича махсус илмий ва патент адабиёти;

- замонавий офис ускуналари, компьютер технологиялари, алоқа ва алоқа воситалари;

- квант физикаси: корпускуляр-тўлқинли дуализм, принтсип

ноаниқликлар, квант ҳолатлари, суперпозиция принтсипи, квант ҳаракат тенгламалари, физик катталик операторлари, атомлар ва молекулаларнинг энергия спектри, кимёвий боғланиш табиати;

- статик физика ва термодинамика: термодинамиканинг учта принтсипи, термодинамик ҳолат функциялари, фазавий мувозанат ва фазавий трансформациялар, мувозанатсиз термодинамика элементлари, классик ва квант статистикаси, кинематик ҳодисалар, зарядланган зарралар тизимлари, конденсацияланган ҳолат;

- жисмоний семинар.

Махсус фанлар бўйича билим:

- мутахассислик асослари тўғрисида;

- муайян ишлаб чиқаришнинг замонавий усуллари ва ўзига хос хусусиятлари тўғрисида;

- технологик материалларнинг таснифи ва хусусиятлари ва имкониятлари тўғрисида

уларнинг замонавий ишлаб чиқаришда қўлланилиши;

- материаллар ишлаб чиқариш технологияси тўғрисида;

- саноат объектларининг ўзига хос хусусиятлари тўғрисида;

- битта объектнинг тузилиши ҳақида;

- технологик жараённинг назарий тушунчалари ва методологияси ва унинг баҳолаш тоифалари тўғрисида.

- дизайн ва ишлашнинг турли босқичларида технологик материалларнинг роли тўғрисида.

Кўникмалар:

- касбий ва ижтимоий фаолиятнинг ҳар хил турларида гуманитар ва ижтимоий-иқтисодий фанлар усулларида фойдаланиш;

- ижтимоий лойиҳаларни ишлаб чиқишда инсоннинг инсонга, жамиятга, атроф-муҳитга муносабатини тартибга солувчи ахлоқий ва ҳуқуқий нормаларни ҳисобга олиш;

- ишингизни илмий асосда ташкил қилинг,

- касбий функцияларни амалга ошириш билан боғлиқ вазифаларни белгилаш ва шакллантириш, уларни ҳал қилиш учун у ўрганган фанларнинг усулларида фойдаланиш қобилияти;

- ёзма ва оғзаки нутқда унинг натижаларини тўғри (мантикий) тартибга солиш; - ҳамкасблар билан ҳамкорлик қилиш ва жамоада ишлаш,

- табиатни билишнинг замонавий илмий усуллари қўллаш ва уларга табиий илмий таркибга эга бўлган ва касбий функцияларни бажаришда юзага келадиган муаммоларни ҳал қилиш учун зарур бўлган даражада эгаллик қилиш;

РОМИТАН ТУМАНИ ҚЎРҒОН МАҲАЛЛАСИДА ТУРИЗМНИ РИВОЖЛАНТИРИШНИНГ АЙРИМ ЖИҲАТЛАРИ

Аннотация. Ушбу мақолада кичик маъмурий бирликлар, хусусан, туманлар ва уларнинг маҳаллаларида туризмни ривожлантириш масалалари ёритилган. Мақолада Ромитан туманидаги Қўрғон маҳалласининг туристик имкониятлари ўрганилган. Ишда Қўрғон маҳалласида туризм борасидаги амалга оширилган ишлар хусусида фикрлар баён этилган.

Калит сўзлар: туризм, туризм имкониятлари, географик ўрин, Ромитан тумани, Қўрғон маҳалласи, “Етти Пир”, туризм маҳалласи.

SOME ASPECTS OF TOURISM DEVELOPMENT IN KORGON NEIGHBORHOOD OF ROMITAN DISTRICT

Abstract. This article discusses issues of tourism development in small administrative units, in particular, districts and their mahallas. The article discusses the tourism opportunities of the Kurgan mahalla of the Ramitan region. The work expresses opinions on the activities carried out in the field of tourism in the Kurgan mahalla.

Key words: Tourism, tourist opportunities, geographical location, Ramitan district, Kurgan mahalla, "Etti Pir", tourist mahalla.

Ўзбекистон Республикаси вилоятлари жуда катта туристик имкониятларга эга. Булар орасида Бухоро вилояти ўзининг ноёб архитектура ёдгорликлари, тарихий обидалари, диний зиёратгоҳлар ва бошқа диққатга сазовор жойларни кўплиги билан алоҳида ажралиб туради.

Бизга маълумки, Бухоро вилояти шаҳар ва туманлари орасида туризм асосан вилоят – Бухоро шаҳрида ривожланган. Аммо, вилоятнинг туманларида ҳам туризмни янада ривожлантиришнинг истиқболлари мавжуд.

Бухоро вилояти шаҳар ва туманлари орасида туризм нисбатан яхши ривожланган туманлардан бири Ромитан туманидир. Туман ҳудудида 10 га яқин диққатга сазовор жойлар бор. Бундай объектлар сирасига Хўжа

Заъфарон, Хўжа Уббон, Хўжа Ниёз Хоразмий, Ҳақим Мулло Мир архитектура ёдгорликлари, Чорикулбой Пирнафас ўғли номидаги кўприк, Кўрғони Ромитан археология ёдгорлиги, “Bukhara Desert Oasis & Spa” экокластери ва ҳ.к. Бундан ташқари, Бухоронинг 7 пирларидан иккиталарининг, яъни, тўртинчи пир – Хўжа Али Ромитаний (Хўжа Азизон), бешинчи пир – Муҳаммад Бобои Самосий зиёратгоҳилари ҳам шу туманда жойлашган. Қолаверса, туман табиати ҳам ўзига хос. Унда жаннатмакон воҳа ҳудуди билан бирга, чўл ҳудудлари ҳам мавжуд. Мазкур омиллар сабаб Ромитан туманида нафақат ички, балки ташқи туризмни ҳам ривожлантиришнинг катта имкониятлари бор.

Ромитан туманидаги туризм объектларидан бири Кўрғони Ромитан археология мероси объектини ЮНЕСКОнинг Умумжаҳон мероси объектлари рўйхатига киритиш бўйича номзодлик ҳужжатлари тайёрланмоқда. Бу эса туманга ташқи туризмни янада ривожлантиришга ёрдам беради.

Шаҳар ва туманларнинг туристик имкониятлардан самарали фойдаланиш мақсадида мамлакатимиз Президенти ва ҳукумати томонидан бир нечта қарор ва фармонлар чиқарилди. Шулардан бири Ўзбекистон Республикаси Президентининг 2019 йил 13 августдаги ПФ-5781-сонли “Ўзбекистон Республикасида туризм соҳасини янада ривожлантириш чора-тадбирлари тўғрисида” Фармонидир. Ушбу фармонда белгиланган талаблардан келиб чиқиб, бутун республика ҳудудлари доирасида туризмни янада ривожлантириш ишлари белгилаб берилди. ПФ-5781-сонли фармонда белгиланган муҳим масалалардан бири туман ва шаҳарларнинг туризм салоҳияти юқори бўлган ҳудудларида “Туризм маҳалласи”, “Туризм қишлоғи” ва “Туризм овули”ни ташкил этилишидир.

Бундан ташқари, Вазирлар Маҳкамасининг «Ўзбекистон Республикасида туризм соҳасини тиклаш ва ривожлантириш учун қулай шарт-шароитларни яратиш чора-тадбирлари тўғрисида»ги 2020 йил 10 июлдаги 433-сонли қарори билан тасдиқланган «Фуқаролар йиғинларига «Туризм маҳалласи» «Туризм қишлоғи» ва «Туризм овули» мақомини бериш тартиби тўғрисидаги Низом»нинг ижросини таъминлаш мақсадида юқоридаги мақомларни олиш тартиби жорий қилинди. Унга кўра:

- фуқаролар йиғини ҳудудида хорижий ва маҳаллий туристларни қабул қилиш учун камида 20 та оилавий меҳмон уйлариининг мавжудлиги;
- фуқаролар йиғини ҳудудида туристларга камида 5 хил сифатли туристик хизматларни тақдим этиш (турар жой ва (ёки) овқатланиш хизматларидан ташқари);
- фуқаролар йиғини ҳудудида туризмнинг қуйидаги турларидан бирини ташкиллаштириш:
 1. экологик (геотуризм);
 2. агротуризм (қишлоқ);
 3. этнографик;

4. маданий ва тарихий;

- фуқаролар йиғини ҳудудида маҳаллий ишлаб чиқарилаётган эсдалик совғалари маҳсулотларини (камида битта савдо нуктаси) сотиш шохобчаларини ташкил этиш каби яна 10 дан ортиқ шартларни¹⁴⁸ бажариши лозим.

Мазкур фармон ва қарорлардан келиб чиқиб, Бухоро вилоятининг ҳар бир тумани ҳудудида туристик имконияти мавжуд ҳудудлар танлаб олиниб, улар асосида вилоятда 10 дан ортиқ “Туризм маҳалласи” ва “Туризм қишлоғи” шакллантирилмоқда. Ана шулардан бири Ромитан туманидаги Қўрғон туризм маҳалласидир. Қўрғон туризм маҳалласи Ромитаннинг бой тарихга эга масканларидан биридир. Унда тарихнинг турли даврларига тегишли бой архитектура объектлари ва археология ёдгорликлари сақланиб қолинган.

Қўрғон маҳалласи Ромитан туманининг ғарбий қисмида (Ромитан бўлагининг¹⁴⁹) жойлашган бўлиб, Бухоро – Газли йўли яқинида ўрнашган. Ҳудуд туман маркази (Ромитан шаҳри) ва вилоят маркази (Бухоро шаҳри) билан транспорт қатновига эга. Бу эса ҳудуднинг географик ўрнининг қулайлигини кўрсатади.

Дарҳақиқат, Қўрғон маҳалласида Ромитан туманининг бошқа ҳудудларига нисбатан туризм бирмунча яхши ривожланган. Бунга энг аввало, Қўрғон маҳалласи ҳудудида бир нечта туристик объектлар ва имкониятларнинг мавжудлиги сабаб бўлган. Булар:

- Бухоронинг 7 пирларидан, тўртинчиси – Хўжа Али Ромитаний (Хўжа Азизон) зиёратгоҳи;
- Бухоронинг 7 пирларидан, бешинчиси – Муҳаммад Бобои Самосий зиёратгоҳи;
- Қадимий Қўрғони Ромитан археологик ёдгорлиги;
- Аҳолининг деҳқончилик маданияти ривожланганлиги (анор ва анжир етиштириш маданияти) ва ҳ.к.

Бугунги кунда мазкур маҳаллани «Фуқаролар йиғинларига «Туризм маҳалласи» «Туризм қишлоғи» ва «Туризм овули» мақомини бериш тартиби тўғрисидаги Низом» ривожланиб келмоқда. Ҳозирги кунда маҳаллада анча ибратли ишлар амалга оширилмоқда. Хусусан, йўллар таъмирланиб, атрофлари ободонлаштирилмоқда. 10 дан ортиқ янги оилавий меҳмон уйлари, савдо дўконлари ва умумий овқатланиш муассасалари барпо этилмоқда.

Шунингдек, яқин келажакда “Хўжа Али Ромитаний” зиёратгоҳи олдида “Анжир ва узум” фестивалини ташкил этиш, “Қўрғон” тепалигини

148 Батафсил куйидаги электрон адресдан маълумот олиш мумкин: <https://uzbektourism.uz/cyrl/newnews/view?id=1440>

149 Маълумки, Ромитан тумани Ўзбекистон Республикаси туманлари орасида географик жойлашувига кўра алоҳида ажралиб турди. Туман ҳудуди бир биридан ажралган 3 та қисм – Ромитан, Газли ва Қизилравот ҳудудларидан ташкил топган.

ЮНЕСКОнинг Бутунжаҳон маданий мероси рўйхатига киритиб, уни олдида қадимий “Қўрғон” тепалиги музейини ташкил этиш белгиланган.

Хулоса қилиб айтганда, бундай амалий тадбирлар Ромитан туманида, хусусан унинг Қўрғон маҳалласида туризмни янада ривожлантириб, уни вилоятимизнинг асосий туризм маҳалласига айлантириши шубҳасиз.

SOCIAL CHARACTERISTICS OF ENTREPRENEURSHIP IN THE DIGITAL ECONOMY

Annotation. In the article of prediction and development of innovative business and trends in innovation and process adaptation to the process.

Key words: Entrepreneurship, small business, innovative economics, communities, firms.

Ривожланган давлатларда кичик бизнесни ҳар томонлама қўллаб-қувватлаш сиёсати изчил равишда ўтказилади. Бунинг сабаби, кичик бизнеснинг ривожланишида икки жиҳатининг мавжудлигидир. Биринчидан, кичик бизнеснинг бозор иқтисодиётида бажарадиган иқтисодий ва ижтимоий вазифалари билан боғлиқ бўлиб, бу вазифалар унинг аҳамиятини акс эттиради. Иккинчи жиҳати эса кичик бизнес субъекларига хос бўлган камчиликлар ва муайян давлатда шу камчилликлар туфайли уни ривожланиши суст бораётганлиги билан боғлиқ. Кичик бизнеснинг бу икки томонини очиб бериш мамлакатимизда кичик бизнесни қўллаб-қувватлаш тизимини шакллантириш ва ривожлантириш заруриятини тақозо қилади.

Кичик бизнеснинг иқтисодиётдаги аҳамиятини у бажарадиган иқтисодий ва ижтимоий вазифалар тўлиғича кўрсатиб беради. Ушбу вазифаларни икки гуруҳга ажратиш мумкин. Биринчи гуруҳ- умумий вазифалар бўлиб, улар тадбиркорлик субъектининг очикдан-очик эълон қилинган инновацион мақсадларини акс эттирадиган вазифалардир.

Иккинчи гуруҳ - хусусий вазифалардир. Улар вақт ўтиши билан ўзини намоён этиб, инновацион фаолият қатнашчиларининг эълон қилинган мақсадларидан озми-кўпми фарқ қиладилар.

А.Смитнинг таъкидлаши бўйича: “Биз овқатланаётган пайтда қассоб, ошпаз ёки нонвойнинг саҳийлигига ишонмаймиз, биз улар хусусий манфаатларини амалга оширишга ҳаракат қилишларига ишонамиз, улар ўз манфаатларини орқасидан қувиб ва “кўринмас қўл” назорати остида ўзларнинг ҳаёлларига келмаган натижаларга эришадилар”[1].

Бу шуни англатадики, тадбиркор нафақат бойишга қаратилган индивидуал вазифаларни, балки яширин табиатга эга бўлган, ижтимоий характердаги функцияларни ҳам бажаради. Шунингдек, рақобатда узиб кетиш учун мақсадга инновацион ёндашади.

Бу эса бизга тадбиркорлик фаолиятининг иқтисодий вазифалар таркибидаги индивидуал вазифалар билан бирга, ижтимоий табиатга эга бўлган вазифаларни ажратишга имкон беради. Кичик бизнесни иқтисодий эркинликнинг омили сифатидаги асосий вазифаси биринчи ўринга қўйиш лозим. Кичик бизнес иқтисодий соҳада демократик тамойилларнинг кенг ёйилишини тامينлайди. Бир томондан, кичик бизнеснинг ривожланиши инсонга ёлланма ишчи ёки мустақил тадбиркор бўлишни танлаш имкониятини беради. Иккинчи томондан, кичик бизнес субъектининг фаолияти йирик корпорациялар фаолиятига нисбатан кўпроқ эркин бозор қонуниятларига бўйсинади. Миллий иқтисодиётни эркинлаштиришда кичик бизнеснинг ушбу вазифаси муҳим аҳамиятга эгадир. Чунки республикамизнинг асосини ташкил этувчи йирик корхоналарнинг давлатга боғлиқлик даражаси юқори бўлганлиги сабабли уларни бозорнинг эркин субъектлари сифатида кўриш қийин. Кичик бизнеснинг иккинчи вазифаси сифатида унинг яширин, интегратив (иқтисодиётни битта бутунликка боғловчи) вазифасини кўрсатиш лозим [2]. Бу вазифани бажарувчи фирмаларни коммутантлар деб аталиб, яратилган инновацион маҳсулотини оммалаштиришга хизмат қилади.

Бозор иқтисодиёти шароитида тўловга қобилиятли талабнинг мавжудлиги автоматик равишда таклифни пайдо қилиши керак. Аммо ҳозирги даврда самарали ишлаб чиқариш унинг танловчанлиги билан белгиланади. Бу эса иқтисодий нуқтаи назардан ҳамма ҳолатларда ҳам мақсадга мувофиқ бўлмайди.

Йирик корхона битта маҳсулотни катта ҳажмда ишлаб чиқарганида юқори самарага эришади ва фойдали бўлмаган товарларни ишлаб чиқаришга қўл урмайди.

Масалан, автомобиллар кўп ҳажмда ишлаб чиқариладиган товарлар бўлиб ҳисобланади. Лекин ўта йирик фирмаларга автомобиль ёқилғисини қўйиш шаҳобчаларини очиш мақсадга мувофиқ эмас, чунки трансакцион харажатлар кўпайиб кетиб, кунлик фойда етарли бўлмайди.

Фақат кичик коммутант фирмалар ҳар қандай имкониятдан фойдаланишга тайёрлар, бошқа компаниялар эса бу борада жуда танловчандирлар. Ўрта корхоналар кичик ҳажмдаги маҳсулот ишлаб чиқариш билан тавсифланади. Лекин улар махсус ва узоқ муддатли эҳтиёж ташкил топган секторларда ишлаб чиқаришни йўлга қуядилар. Ўрта фирмалар тор соҳада ахборот тўплаб, фаолият юргизишлари зарур.

Бу зиддият ижтимоий эҳтиёжларни доимий излаш билан шуғулланадиган ва бозор талабларига мослаша оладиган коммутант фирмалар орқали ечилади. Шунинг учун ҳам бу фирмалар ўз фаолиятида режалаштиришнинг йўқлиги билан ажралиб туради - улар жуда ихчам ва ҳар қандай ўзгаришларга тайёр бўлиши керак.

Иқтисодиёт учун кичик фирмалар фаолиятининг катта аҳамиятга эга эканлиги уларнинг эгилувчанлиги билан боғлиқ. Кичик бизнеснинг ривожланиш даражаси ҳақида миллий иқтисодиётнинг тез-тез ўзгариб турадиган бозор ҳолатига мослашиш қобилияти орқали хулоса чиқариш мумкин[3].

Кичик бизнеснинг муҳим яширин вазифаларидан бири бозор иқтисодиётида рақобат муҳитини шакллантириш вазифаси бўлиб ҳисобланади. Албатта, кичик фирмаларнинг йирик корпорациялар билан тўқнаш келиши кўп ҳолларда уларнинг мағлубияти билан тугайди. Лекин бутун кичик бизнес сектори ва йирик капитал билан ўзаро муносабатларда кичик фирмалар асосий куч сифатида хизмат қилмоқда.

Етакчи олимлар ва халқаро форум ва ташкилотлар экспертлари, ўсаётган ишсизликни бартараф этишнинг ягона усули-янги корхоналар ва иш жойларини барпо этиш деган хулосага келишган. Шунини алоҳида таъкидлаб ўтиш керакки, кичик бизнес аҳолининг ижтимоий заиф қатламларининг (аёллар, инвалидлар, қочоқлар ва бошқалар) меҳнатидан фойдаланади, улар йирик корхоналарда иш топа олмайдилар. Бундан ташқари кичик фирмалар амалий ўқитиш, ёш кадрларни тайёрлашнинг ўзига хос “Полигони” ҳисобланади. Шу билан бирга янгилик яратувчи кадрларни етиштириб беради.

Жаҳон мамлакатларида аҳолининг катта қисми кичик бизнес соҳасида фаолият кўрсатади. Жумладан, Хитойда 80%, Японияда 48%, АҚШда 50% аҳоли, Ўзбекистонда эса 78 фоиз аҳоли кичик тадбиркорлик соҳасида банд. Жаҳон мамлакатларида кичик тадбиркорликнинг иқтисодиётдаги улуши ҳам юқори даражада, жумладан, Хитойда 60%, Италияда 68%, Германияда 53%, Кореяда 48%, АҚШда 50%, Россияда 21% ни, Ўзбекистонда эса 56 фоизни ташкил қилади. Ҳар бир 1000 аҳолига туғри келадиган тадбиркорлик субъектлари Европа иттифоқида 57 бирликни, АҚШда 90 бирликни, Россияда 27.2 бирликни [4], Ўзбекистонда эса 22 бирликни ташкил қилади. Таҳлиллардан кўриниб турибдики, ривожланган мамлакатлар иқтисодиётида кичик бизнеснинг улуши юқори даражада. Чунки янгиланиб бораётган эҳтиёжни аниқлаб, уни қондириш учун тезлик

билан инновацион ғояларни амалиётга тадбиқ этади. Инновацион махсулотни биринчи ишлаб чиқарган мамлакат иқтисодий ўсишда бўлади.

Кичик бизнес моддий ресурслардан фойдаланишни ҳам таъминлайди, яъни хом ашёнинг маҳаллий манбалари ва йирик ишлаб чиқариш чиқиндиларидан кенг фойдаланади.

Бозор иқтисодиётига ўтиш шароитида кичик бизнеснинг аҳолининг товар ва хизматларга бўлган талабини самарали ва тўлиғича қондириш вазифаси алоҳида аҳамиятга эга.

Жамият эҳтиёжлари, тармоқ, ҳудуд, корхона ва ташкилотлар, ҳар бир индивид эҳтиёжлари шунчалик хилма-хилки, ҳеч қандай давлат ташкилоти уларни тўлиқ ҳисобга олиб, қондира олмайди. Ундан ташқари улар вақт ўтиши билан кўпаядилар, ва охириги ўн йилликлар тажрибасининг кўрсатишича индивидуаллашмоқдалар. Фақат тадбиркор шу эҳтиёжларни тўлиғича ҳисобга олади ва қондиради.

Хулоса қилиб айтганда кичик фирмаларсиз баъзи бир бозор эҳтиёжларни тўлалиғича қондириб бўлмайди. Бу шундай эҳтиёжларки, уларни қондириш учун катта ҳажмдаги ва ўта юқори фойдали ёки ихтисослашган ишлаб чиқаришни ташкил қилиш лозим, бу талабга жавоб бермайдиган бошқа эҳтиёжлар эса қондирилмай қолади. Шу билан бирга, кичик бизнес ўзининг мижозларини ва дифференциялашган бозорларни яхши билганлиги сабабли бозор афзаликларидан фойдаланади. Бу, аввало, йирик корхоналарни ўзининг кичик ҳажмлари сабабли унчалик ҳам қизиқтирмайдиган бозор сегментларида хизмат қилаётган корхоналарга тегишли. Улар қаторига истеъмол товарларини ишлаб чиқаришнинг катта қисми киради. Кичик бизнес талаб ўзгаришларига жуда сезгир бўлади, мижозларнинг янги ҳамда индивидуал талабларини қондиришга улгуради. Бизнеснинг ривожланиши кўпроқ ҳозирги замон маданиятида содир бўлаётган чуқур ўзгаришлар билан белгиланади. Агар бир нечта ўн йилликлар олдин товарни реализация қилишнинг муваффақиятли бўлиши бозор стандартларига мувофиқ бўлиши билан боғлиқ бўлса, бугунги кунда уни янгилиги, ташқи кўринишининг ўзига хослиги билан белгиланади. Шунга ўхшаш тенденциялар хизмат соҳасига ҳам тааллуқли - талаб сервиснинг сифати ва хилма-хиллигига боғлиқ.

VERIFICATION AND VALIDATION OF FINITE ELEMENT METHODS FOR PREDICTING STRUCTURE FAILURE UNDER COMPLEX LOADS

Abstract. This paper discusses the methodology of a consistent predictor model for verification and validation of finite element methods in problems of predicting the failure of structures under complex loads. The combination of numerical modeling with experimental data is analyzed to improve the accuracy and reliability of forecasting.

Keywords: modeling, verification, validation, design, destruction, loads, finite elements, calibration, experiment.

Верификация и валидация методов конечных элементов (МКЭ) являются ключевыми процессами в области моделирования и прогнозирования поведения конструкций под воздействием сложных

нагрузок. Эти методы широко применяются в различных областях инженерии, таких как машиностроение, гражданское строительство, аэрокосмическая техника и другие, для анализа прочности, стабильности и безопасности конструкций.

Конечные элементы — это численные методы, позволяющие исследовать механическое поведение структур под различными видами нагрузок. Верификация включает в себя проверку точности и надежности используемых моделей и методов по сравнению с известными стандартными решениями или экспериментальными данными. Валидация, с другой стороны, подразумевает оценку точности модели при применении ее к конкретным случаям из практики.

Методика, предложенная для верификации и валидации методов конечных элементов для прогнозирования разрушения конструкций под сложными нагрузками, называется «Методика согласованной модели-предиктора». Этот подход основывается на сочетании численного моделирования с экспериментальными данными для улучшения точности и надежности прогнозирования разрушения конструкций.

В рамках данной методики разрабатываются две модели: одна численная (модель-предиктор) и другая экспериментальная (согласованная модель). Модель-предиктор основана на методе конечных элементов и предназначена для предсказания поведения конструкции под различными сложными нагрузками. Согласованная модель, в свою очередь, базируется на результатах физических экспериментов или испытаний.

Первый шаг методики заключается в создании численной модели, представляющей собой геометрическое и механическое описание конструкции. Модель должна учитывать все важные аспекты, такие как материалы, соединения, виды нагрузок и прочие параметры.

Следующим шагом является сбор экспериментальных данных, которые будут использоваться для калибровки численной модели. Данные включают в себя измерения напряжений, деформаций, перемещений и других физических параметров в процессе испытания конструкции.

После сбора данных проводится валидация численной модели путем сравнения результатов моделирования с экспериментальными данными. Если модель показывает значительные отклонения от экспериментальных результатов, следует пересмотреть параметры модели или методы расчета.

Для повышения точности численной модели можно использовать итерационный процесс, в ходе которого параметры модели корректируются на основе отклонений между моделированием и экспериментальными данными. Этот процесс продолжается до достижения приемлемого уровня согласованности.

В результате проведенного исследования по методике согласованной модели-предиктора были получены важные результаты, которые

подтверждают эффективность и надежность подхода в прогнозировании разрушения конструкций под сложными нагрузками.

Точность численных моделей: Сравнение результатов численного моделирования с экспериментальными данными показало высокую точность модели-предиктора. В среднем, отклонение между моделированием и экспериментальными данными составило всего 3.5%, что указывает на надежность метода конечных элементов при правильной калибровке.

Итерационный процесс калибровки: Процесс калибровки модели привел к существенному улучшению ее точности. Вначале среднее отклонение составляло около 10%, однако после трех итераций корректировки параметров модели удалось снизить его до 2.5%.

Согласованность результатов: Итоговые результаты моделирования и экспериментальные данные были в высокой степени согласованы, особенно в отношении предсказания точек разрушения и областей концентрации напряжений. В частности, 95% прогнозируемых точек разрушения совпали с экспериментальными наблюдениями.

Поведение конструкции под динамическими нагрузками: Модель-предиктор успешно предсказала поведение конструкции под динамическими нагрузками, включая резонансные явления и амплитуду колебаний. Отклонение между моделированием и экспериментальными данными составило около 4%.

Устойчивость модели: Исследование показало, что численная модель была стабильна и устойчива при использовании различных комбинаций нагрузок и материалов. Это подтверждает надежность метода для прогнозирования поведения конструкций в реальных условиях.

Основываясь на выше указанной информации, можно сделать выводы что, проведенное исследование показало, что методика согласованной модели-предиктора является эффективным инструментом для верификации и валидации методов конечных элементов в задачах прогнозирования разрушения конструкций под сложными нагрузками. Высокая степень согласованности между моделированием и экспериментальными данными подтверждает практическую ценность этого подхода.

ИССЛЕДОВАНИЕ ЭКОЛОГИЧЕСКОЙ СИТУАЦИИ И ЗДОРОВЬЯ НАСЕЛЕНИЯ ГОРОДА САМАРКАНДА НА ОСНОВЕ ЭКСПЕРТНОГО И СОЦИОЛОГИЧЕСКОГО ОПРОСОВ

Аннотация. В данной статье анализируется взаимосвязь между состоянием окружающей среды, здоровьем горожан и их общественным мнением на основе экспертной оценки и социологических исследований. Кроме того, проведенный анализ помогает определить уровень информированности населения о важности профилактических мер и здорового образа жизни, что является ключевым аспектом разработки программ по улучшению экологической ситуации и общественного здоровья.

Ключевые слова: экологическая ситуация, здоровье населения, анкетирование, экспертный опрос, социологические исследования, информированность населения, нозогеографическая ситуация.

RESEARCH OF THE ECOLOGICAL SITUATION AND HEALTH OF THE POPULATION OF SAMARKAND BASED ON EXPERT AND SOCIOLOGICAL SURVEYS

Abstract. This article analyzes the relationship between the state of the environment, health of citizens and their public opinion on the basis of expert assessment and sociological research. In addition, the analysis helps to determine the level of public awareness of the importance of preventive measures and healthy lifestyle, which is a key aspect of the development of programs to improve the environmental situation and public health.

Keywords: environmental situation, public health, questionnaire survey, expert survey, sociological research, public awareness, nosogeographic situation.

Проведение экспертного опроса и социологических исследований для оценки экологической ситуации городов является важным комплексным

подходом, который помогает лучше понять взаимосвязь между состоянием окружающей среды, здоровьем населения и общественным мнением, получить обратную связь от граждан о качестве предоставляемых медицинских услуг, доступности медикаментов, а также обозначить проблемные области, требующие немедленного вмешательства. Наряду с этим позволяет выявить уровень информированности населения о важности профилактических мер и здорового образа жизни.

Для оценки экологической ситуации г. Самарканда и здоровья населения в диссертационной работе использован метод экспертного опроса. В качестве экспертов приняты во внимание мнения таких специалистов, как д.м.н., профессор Э.Э.Кобиров, к.м.н. Х.Н.Шадиева, к.м.н., доцент Д.Т.Раббимова, доцент А.Х.Далилов, к.м.н. Н.С. Турдиева. Проведенный анализ показывает, что в последнее время, особенно поздней осенью и ранней весной, в связи с мелкодисперсными частицами пыли, связанными с изменением климата, а также за счёт активации спор грибов, среди отдельных слоев населения возникают сильные аллергические реакции. Такая ситуация наблюдается не только в Самарканде, но и в других городах. Стоит отметить, что результаты экспертного опроса являются ценным материалом, особенно в условиях недостаточного количества информации и наличия стационарных постов мониторинга окружающей среды в г. Самарканде.

Социологический опрос проведен в городе Самарканде и его прилегающих городках. Всего в опросе участвовали 315 респондентов, проживающих в этих административно-территориальных единицах, которые отличаются друг от друга по природно-экологическим, микроклиматическим и медико-демографическим условиям. Для проведения исследования выбраны следующие местоположения: город Самарканд и три подчиненных ему городка - Кимёгарлар (на западе города, на территории Пастдаргомского административного района), Фарход (на северо-востоке города, прилегающий к его основной территории) и Хишрау (в юго-западной части города). В таблице 1 приведена численность населения исследуемого города и подчиненных ему городков.

Таблица 1

Постоянная численность населения города Самарканда в городском разрезе (на начало года; тысяч человек)

Город-городки	2021 год			2022 год		
	Всего	в том числе:		Всего	в том числе:	
		муж.	жен.		муж.	жен.
Всего	551 746	267 092	284 654	561 754	272 170	289 584
Город Самарканд	523 672	252 979	270 693	533 712	258 074	275 638
Городок Кимёгарлар	17 362	8 668	8 694	17 345	8 661	8 684
Городок Фарход	5 766	2 858	2 908	5 758	2 852	2 906
Городок Хишрау	4 946	2 587	2 359	4 939	2 583	2 356

Источник: данные статистического управления Самаркандской области (2022 г.)

В ходе социологических исследований осуществлен сбор, обобщение и критический анализ общественной информации, которая касается современной экологической ситуации в городе Самарканде и её влияния на здоровье горожан.

1. Прежде всего, путём анкетирования установлено, горожанами, какой части территории Самарканда являются респонденты, их возраст и пол. Как видно из результатов таблицы, возраст участников опроса разный. Кроме того, на всех четырёх территориях большинство респондентов составляют женщины (см. таблицу 2)

Таблица 2

Год рождения и пол респондентов (в процентах от общего числа)

П.н.	Территории	1955-1965		1965-1975		1975-1985		1985-1995	
		муж.	жен.	муж.	жен.	муж.	жен.	муж.	жен.
1.	Самарканд	8,3	12,8	17,5	19,1	14,1	19,7	10,1	18,9
2.	Городок Кимёгарлар	5,8	14,1	12,8	18,9	15,1	19,1	4,7	9,5
3	Городок Фарход	7,2	9,3	13,4	17,5	10,4	14,5	10,1	17,6
4	Городок Хишрау	6,6	8,3	8,1	19,7	11,4	13,8	15,1	17,0

Таблица составлена на основе результатов социологического опроса.

Исследование проводилось среди персонала центральных больниц (включая высших и средних медицинских работников, медицинских служащих и пациентов), сотрудников семейных поликлиник, преподавателей колледжей, лицеев и школ, а также других слоёв населения, проживающих на указанных территориях. Большинство из числа респондентов составили женщины.

2. На вопрос, «Какими заболеваниями чаще всего болеет население в вашем месте жительства?» 58,1 % респондентов в городке Хишрау утверждали, что наиболее распространены болезни нервной системы, эндокринной системы, анемия, зоб, а также заболевания сердца и желудочно-кишечного тракта. Примерно 35,5 процента респондентов отметили, что довольно распространены заболевания системы кровообращения, аллергический ринит, глазные болезни, заболевания костей и суставов, а также болезни мочеполовой системы. 6,4 % населения городка больше всего указали на заболевания, вызванные количеством инфекционных патогенов, связанных с качеством питьевой воды.

В анкетах среди жителей городка Фархода, большинство респондентов, что составляет 50,7 %, отметили, что довольно часто встречаются заболевания органов дыхания (особенно аллергический ринит), новообразования, ишемические болезни сердца, анемия и зоб. Анкеты, заполненные 44,0 % респондентов, содержали больше ответов об артериальном давлении, болезнях нервной системы, радикулите, бесплодии, циррозе печени, глазных болезнях, а также болезнях желудочно-кишечного тракта. 5,3 % населения отметили наличие рака, хронического холецистита, туберкулеза и других инфекционных заболеваний.

В исследовании, проведенном среди жителей городка Кимёгарлар, на этот вопрос большинство участников исследования, то есть 55,4 %, ответило, что значительно увеличивается количество таких заболеваний, как болезни органов дыхания, эндемический зоб, сахарный диабет, злокачественная опухоль, желчекаменная и мочекаменная болезни. Анкеты, заполненные 37,6 % респондентов, чаще включали анемию, кожные заболевания, болезни желудочно-кишечного тракта, болезни нервной системы, болезни сердца и бесплодие. В остальных ответах указываются такие заболевания, как гельминтозы, болезни крови, флюороз костей и зубов.

Среди большинства респондентов (56,8 %) центра города Самарканда указаны такие заболевания, как болезни сердечно-сосудистой системы, аллергический ринит, зоб, сахарный диабет, болезни нервной системы, анемия и новообразования. Около 39,3 % респондентов отметили, что значительно чаще встречаются такие заболевания, как в основном болезни почек, цирроз печени, злокачественные опухоли, желудочно-кишечные заболевания и болезни мочеполовой системы. С другой стороны, 3,9 % населения указали на рост гепатита, бесплодия, гельминтозов, глазных болезней и лейкемии.

3. Известно, что одним из основных факторов, влияющих на здоровье горожан, является экологическая ситуация на территории проживающего города. С этой целью на вопрос: «Как вы оцениваете экологическое состояние места, где живете (вода, воздух, почва)?» респонденты ответили следующим образом. Большинство респондентов считают, что

экологическая ситуация в центре города Самарканда и городке Хишрау является хорошей или умеренной. Городки Кимёгарлар и Фарход признаны большинством респондентов как места с плохой и тяжелой экологической обстановкой. В листах ответов от городка Фарход замечены более позитивные показатели, хотя и незначительно по сравнению с городком Кимёгарлар.

4. В анкете включен вопрос: «Что больше всего влияет на ухудшение здоровья населения в вашем местожительстве?», респонденты из городков Кимёгарлар и Фарход (61,7 %) уделили особое внимание вопросу о высоком уровне загрязнения воздуха как основному фактору, вызывающему заболевания населения. 32,4 % респондентов из городка Хишрау указали питьевую воду основным источником, вызывающим большинство заболеваний. Большинство респондентов из города Самарканда были в большей степени сосредоточены на социально-экономических факторах. Таким образом, выделенные факторы, такие как загрязнение воздуха в городках Кимегарлар и Фарход, а также качество питьевой воды в городке Хишрау, играют ключевую роль в восприятии респондентами основных причин ухудшения здоровья в их местожительствах.

5. На вопрос, «Какие инфекционные заболевания широко распространены в месте вашего проживания?» большинство респондентов из всех трех городков обратили особое внимание на вирусные инфекции, такие как вирусный гепатит и грипп. В данном случае ответы о распространенности заболевания в городке Кимёгарлар составили 56,2 %, по сравнению с 43,8 % в городке Фарход. Среди следующих по распространенности заболеваний выделяется туберкулез, который вызвал высокие показатели в городке Хишрау, где передача происходит воздушно-капельным путем.

6. Вопрос: «Оказывает ли загрязнение воздуха в месте вашего проживания вредное влияние на здоровье людей?» позволяет более глубоко рассмотреть экологическую ситуацию в городе Самарканде. Большинство респондентов, отвечая на этот вопрос, указали на негативное воздействие загрязнения воздуха особенно в городке Кимёгарлар (69,1 %). Немного ниже этот показатель в городке Хишрау.

Следует отметить, что городок Кимёгарлар выделяется высоким уровнем загрязнения атмосферного воздуха. Если в 2010 году количество вредных веществ (от транспорта и промышленности), выбрасываемых в атмосферу, в городе Самарканде составляло 43,01 тыс. тонн, то в 2017 году это число достигло 69,74 тыс. тонн, а с началом пандемии в 2020 году произошло значительное снижение, и в 2021 году оно составило 36,046 тыс. тонн. Тем не менее, несмотря на снижение, это оказывает влияние на растущее количество заболеваний, связанных с органами дыхания среди населения.

7. Известно, что детская смертность обычно занимает высокие места в структуре общих показателей смертности. В связи с этим респондентам задан вопрос: «Какова ситуация с детской смертностью на территории вашего местожительства по сравнению с предыдущими годами?». Прежде всего, следует отметить, что в последние годы детская смертность в нашей стране значительно снизилась. Однако, несмотря на это, в некоторых регионах областей ситуация по-прежнему не очень хорошая. Результаты проведенного исследования показывают, что большинство респондентов отмечают снижение уровня детской смертности в городе Самарканде за последние годы.

8. Состояние здоровья любого человека в первую очередь зависит от его общего мировоззрения, медицинского, гигиенического и экологического уровня. На данный момент высокая медицинская и экологическая культура населения крайне важны для поддержания здоровья. Хотя такие знания преподаются в школе как специальные предметы, первые наставления по ним даются нашим детям в семье. К сожалению, сегодня нельзя сказать, что все окружающие нас люди обладают достаточными знаниями в этом плане.

Исходя из вышесказанного, на вопрос «Как вы оцениваете медико-гигиенический и экологический уровень культуры населения территории, на которой вы живете?» ответы распределились следующим образом: большинство респондентов, оценивших эту ситуацию как «плохую», проживает в центре города Самарканда (38,6 %) и городке Кимёгарлар (35,6 %). Самый низкий показатель зафиксирован в городке Хишрау. Наименьшее количество ответов с оценкой «отлично» приходится на городок Фарход (3,3 %).

9. В анкете на вопрос: «Что вы можете сказать о последствиях пандемии?» многие участники г.Самарканда (81,9 %) отмечали ухудшение физического и психического здоровья из-за стресса, социальной изоляции, а также проблем доступа к медицинским услугам во время пандемии. С другой стороны, большинство респондентов указали на положительную оценку изменений в качестве атмосферного воздуха города и в уровне снижения шума в связи с сокращением промышленной активности многих предприятий и уменьшением автомобильного транспорта во время карантина, а также были отзывы о внедрении новых экологических программ, их значимости и эффективности.

10. Наибольшее количество ответов на вопрос «Есть ли изменения в климате и погоде города по сравнению с предыдущими годами?» отмечено «Да, есть», что соответствует основной части респондентов г. Самарканда (79,2%). Этот показатель немного ниже, чем в городке Хишрау (56,8%), городке Фарход (47,5%) и городке Кимёгарлар (43,9%). В ответах на данный вопрос большинство респондентов указали на увеличение пыльных дней, что представляет потенциальные проблемы для здоровья населения,

качества воздуха и общего экологического состояния города. Они также отметили увеличение числа дней с экстремальной температурой летом, что может привести к увеличению случаев тепловых ударов и обострению проблем с дыхательной системой. Кроме того, респонденты выразили беспокойство по поводу более неустойчивых погодных условий, характеризующихся быстрыми и резкими изменениями температуры, что может влиять на систему кровяного давления и увеличивать риск для людей с гипертонией.

Следует отметить, что удалось получить некоторые глубокие и точные ответы на вопросы, поскольку большинство респондентов, участвовавших в социологическом опросе в городе Самарканде и подчиненных ему городках, составляли медицинские работники и представители интеллигенции. В целом, результаты такого анкетирования в медико-географических исследованиях, предоставляют достоверную информацию о нозогеографической ситуации города Самарканда и служат важным основанием для проведения необходимых мероприятий.

CASSIA ACUTIFOLIA DEL. PLANT BIOECOLOGY AND GROWING TECHNOLOGY

Annotation. The article provides information about the bioecology of the plant with sharp leaves and the technology of cultivation in irrigated areas, experimentally studied. No plant phenology was observed. The procedure for implementing agrotechnical measures is described.

Keywords. Acute leaf psalm, bioecology, medicine, agricultural technology, seeds.

Введение. В области развития местного лекарственного растениеводства в нашей республике проводится много научных и практических работ. В настоящее время потребности сети производства лекарственных средств в растительном сырье удовлетворяются максимально. Следует отметить, что из имеющихся в нашей республике лекарственных растений с целью лечения и профилактики заболеваний человека готовят различные лекарственные препараты или выделяют из них чистые лекарственные вещества. Поставляя нашему народу экологически чистые и чистые лекарственные препараты, он служит восстановлению уровня здоровья, продлению жизни, восстановлению здорового образа жизни [1,2].

Одним из таких лекарственных растений является сано остролистный. Считается полукустарниковым растением до 1 м в высоту. Стебель разветвленный, ветки в нижней части растут стелющимися по земле. Лист состоит из 4-8 пар листочков, расположенных в ряд со стеблевой полосой. Цветы собраны в гонты. Цветок изогнутый, чашелистиков 5, основание сросшееся, венчик 5 сросшийся, желтый, отцовство 10, все свободные, материнский узел однозначный, расположен вверху. Плод — плоский листовидный яйцевидный, иногда слегка изогнутый, зеленовато-коричневый многосемянный стручок. Семя желтое или более зеленое, почти прямоугольное, морщинистое, как сетка, длиной 6-7 мм [6,8].

Cassia Acutifolia Del. остролистного в основном используются в медицине. В листе содержится 6,17%, а в плодах до 2,70% антраценовых соединений (сеннозид А, сеннозид V, сеннозид S, сеннозид Е, реин, алой-эмодин, глюко-сплав-эмодин, глюкореин и др.). Листья сано содержат, помимо антраценовых продуктов, флавоноиды (изорамнетин, кемпферол и их гликозиды), а также салицилат и другие органические кислоты, смолы и небольшое количество алкалоидов.

Cassia Acutifolia Del. препараты применяют как хирургические. Смолы в листьях растворяются в спирте и кипящей воде и обладают свойством повреждать кишечник. Именно поэтому необходимо остудить приготовленную настойку и процедить ее после того, как смола отстоится. Иногда смолу, содержащуюся в листьях, растворяют в спирте, и тогда готовят лекарства.

Метод исследования. Полевые эксперименты проводились по общепринятым методам УзПИТИ, а фенологические наблюдения - по методам Б.А. Доспехова. Эксперименты проводились на научно-исследовательском поле Андиганского института сельского хозяйства и агротехнологий [3,5].

Результаты экспериментов и их анализ. Опыты проводились в полевых условиях в 3 вариантах и 4 раза. Площадь каждого возврата – 5 м², общая экспериментальная площадь – 500 м².

Вариантов — 4 линии, две посередине засчитываются, а две по краю — защитные линии. Количество подсчитанных растений на полях составило 40, количество растений под наблюдением - 200, проведены биометрические измерения [9,10].

Перед посадкой растения землю осенью вносят 20-25 тонн навоза и 50 кг (в чистом виде) суперфосфата на гектар и вспахивают на глубину 25-28 см.

Чтобы вырастить высокий урожай, необходимо было весной размягчить верхний слой почвы, чтобы семена хорошо заглубились, создать благоприятные условия для нормального прорастания и развития, улучшить воздухообмен, обеспечить увлажнение почвы. нижние слои к семенам и сосредоточиться на уничтожении сорняков.

На опытном участке ранней весной перед посадкой сельскохозяйственных культур землю обычно выравнивают бороной и удаляют растущие однолетние сорняки. Эти мероприятия в основном проводятся для поддержания влаги в почве, борьбы с ранневесенними сорняками и смягчения поверхности земли.

Растение Сано в основном размножают семенами. Масса 1000 семян 25-35 г, всхожесть в среднем 80-95%, но со временем всхожесть семян снижается. Незрелые семена быстро теряют жизнеспособность.

Перед посевом семена растения Сано замачивают в теплой воде (300С) на 6-8 часов. Пророщенные семена пригодны для посадки. Оболочку семян повреждают при смешивании незамороженных семян с песком в течение 30 минут. Для этого семена, смешанные с песком, раскладывают на ровной доске или полу и растирают твердым предметом или брезентовыми перчатками. Затем охлаждают в горячей воде (300С) в течение 8-10 часов, за это время горячую воду меняют 2 раза. При остывании семена следует поместить до 1/3 пакета [6].

В наших условиях срок посадки – со второй половины апреля, после прогрева почвы до 15-18 0С, самый поздний срок – 5-10 дней мая. Расстояние между рядами 60 см. В зависимости от размера площади высевают вручную и сеялкой. Перед посадкой семена подсушивают. Если семена высеваются в сеялку (для посева семян хлопчатника), на гектар расходуется 8 кг. Семена высаживают на глубину 2-3 см. Оплодотворенность семян составляет 80-90%. После посадки его сразу поливают.

Прорастание рассады начинается через 14-15 дней. Если всходы задерживаются, поливают повторно. Если проросшая заросль обнаружена, ее собирают после выпуска второго листа. В этом случае на 1 метр оставляют 3-4 растения.

Во время роста подкармливают 40 кг фосфорных и 30 кг калийных удобрений на гектар. Подкормку растений производят перед поливом. В конце июля и августе, когда санно цветет, его листья собирают близко к поверхности и сырье быстро сушат в специальном оборудовании. После первого урожая на каждый гектар посевной площади вносят 60-80 кг аммофосного удобрения. Через 35-40 дней можно собирать второй урожай (листья, семена, частично стручки).

После каждого события, вызывающего уплотнение почвы, рядки размягчают на глубину 8-12 см. За вегетацию обрабатывают 5-6 раз.

Если в земле, засаженной сано, держать целый саженец и вовремя его подкармливать, поливать и пропалывать, то с каждого гектара колодца можно собрать 10-12 центнеров сухих листьев и до 300 кг семян. поддерживал сано в течение сезона.

Заключение. Растение Сано хорошо растет на легких и средних плодородных почвах. Не рекомендуется высаживать в почвах с

повышенной влажностью и плохой аэрацией. Потому что корневая система плохо развивается и подвержена грибковым заболеваниям. Поэтому требуется, чтобы место, где высажено растение сано, было глубиной не менее 5-6 м.

Republic of Uzbekistan

DEVELOPING STUDENTS' ABILITY TO COGNITIVE PERCEPTION OF LEARNING MATERIALS

Abstract. This article displays cognitive technologies and its purpose, tasks that are used to form cognitive perception, that is, the activity aimed at processing external information based on mental activity and ways to develop students' ability to cognitive perception of educational materials of scientific content

Keywords: cognitive technologies, cognitive perception, external information, mental activity, educational materials of scientific content, perception of information, cognitive capabilities.

Когнитивные технологии как эффективная педагогическая технология позволяют обеспечить комплексное развитие учащихся. Понятия ума, интеллекта, мышления тесно переплетены в нашем сознании с научной деятельностью и традиционным преподаванием. Когда приоритетный акцент делается на развитии мышления учащегося, целесообразно эффективно использовать методы и технологии, которые мотивируют его к знаниям.

Образовательные технологии когнитивного характера – это образовательные технологии, направленные на индивидуальную личность. С помощью когнитивных схем обеспечивается понимание учащимися окружающего мира. Также с помощью этих технологий учащимся удается активно адаптироваться к жизни общества и усваивать необходимую информацию.

Философские основы развития личности нашли свое отражение в исследовательских работах ученых-психологов Э.Юсупова, М.Хайруллаева, М.Бекмуродова; ученых-педагогов О.Мусурмоновой, Н.Ортикова, С.Нишоновой, М.Куронова, Д.Косимовой, У.Махкамова; принципы и подходы к отбору учебных материалов, их влияние на качество образования, вопросы расширения познавательного и творческого восприятия учащихся – в научных исследованиях Р.Сафаровой, Б.Адизова, М.Вахובה, Д.Юлдошева, Н.Машарипова.

Вопросами систематизации и структурирования учебных материалов в нашей республике занимались такие ученые, как М.Махмудов, Б.Адизов, О.Розиков, Р.Нуржанова, Н.Тошева, Ф.Кучкарова [2].

Научные исследования по развитию научного мировоззрения учащихся проводили Ш.Мустафоев, С.Романова, Д.Ю.Саипова, Р.Орипова, О.Матёкубов, Р.Юнусов, О.Иброхимов, Н.Киямов, И.Йулдошев, А.Маврулов, Р.Г.Кадыров, К.Мамиров, Д.Джамалова и др.

Из ученых стран Содружества Независимых Государств (СНГ) А.Сголяров, Э.Р.Ильина, Ю.Оленинов, Н.К.Сергеев, Ю.С.Овченникова, Л.Н.Вавилова, И.Б.Горбукова, Ю.Б.Ашеев изучали проблемы отбора и структурирования учебных материалов [1].

Среди зарубежных ученых научные труды А.Р.Низамани, А.Смита, М.Андерсона, Д.Берген, James Tackett имеют особое педагогическое значение по направлениям познавательного развития учащихся [3].

Когнитивные технологии разработаны на основе:

а) формирования навыков, направленных на решение проблемы когнитивной психологии и индивидуального взаимодействия с информацией;

б) формирования учебно-когнитивных, информационно-рабочих и саморазвивающихся компетенций.

Когнитивное восприятие – это деятельность, направленная на обработку внешней информации на основе мыслительной деятельности.

Развитие когнитивных способностей применительно к учебному процессу:

тренировка памяти для усвоения учебной информации; заключается в овладении способами мыслительной деятельности в процессе использования информации.

Основная цель применения этой технологии – помочь учащимся овладеть определенным объемом знаний, развить их интеллектуальные способности посредством формирования когнитивных схем.

Основная задача когнитивных технологий состоит в достижении понимания каждым учащимся сути содержания усваиваемой информации.

Перспективная цель данной технологии: обеспечение когнитивного развития учащихся; формирование у учащихся компетентности в работе с информацией.

Она включает в себя следующие навыки: восприятие информации из различных источников, концептуализация информации, то есть изложение своего мнения на основе логического мышления;

формирование критического мышления у учащихся:

показ различия между суждениями с помощью данных, основанных на фактических сведениях, выражение различий между аргументами и предположениями, например, выделение типов логических связей.

Определение компонентов учебных материалов научного содержания имеет важное дидактическое значение с точки зрения когнитивного развития учащихся.

Учебные материалы, предлагаемые учащимся, должны соответствовать их когнитивной способности к восприятию. При определении размера учебных материалов уделяется внимание повышению их научной ценности. Таким образом, научное содержание углубляется. Для этого уделяется внимание структурированию учебных материалов с углублением в содержание.

Возрастает необходимость изучения проблемы систематизации и модульности учебной информации научного содержания по следующим направлениям:

систематизация информации в содержании учебных дисциплин научного направления и разработка методов ее концентрации в определенных блоках;

обеспечение согласованности блока учебных дисциплин научного направления, образовательная информация научного содержания. Опора на системно-логический подход к отбору учебных материалов научного содержания позволяет целенаправленно организовывать и наполнять их содержанием.

Систематизация и структурирование учебных материалов научного содержания обеспечивает удобство их представления учащимся в последовательной, наглядной форме. Для этого работа над учебными материалами научного содержания позволяет развить их когнитивное восприятие в результате их представления учащимся на основе объединения в определенные блоки.

Основные аспекты процессуального подхода разработаны знаменитым педагогом Л.И.Занковым. Эти подходы важны при отборе и

разработке учебных материалов научного содержания. С помощью этого принципа обеспечивается не только в рамках конкретного учебного предмета, но и в рамках межпредметной связи [4].

При этом создаются благоприятные условия для разделения учебных материалов на блоки, обеспечения связи между ними, их целенаправленного проектирования и привлечения внимания учащихся к усвоенным знаниям. На этой основе учащиеся вступают в процесс когнитивного восприятия учебных материалов.

Анализ показывает, что каждый текст научного содержания состоит из введения, основной части, заключения, и должна быть предусмотрена связь между заголовками и абзацами. Часть текста обобщает полученные знания, что расширяет возможности их когнитивного восприятия.

Поскольку это целостные параграфы или тексты из 2–3 предложений, учебные материалы, представленные в учебниках, относятся к теоретической части содержания образования и важны для закрепления и систематизации усвоенных знаний.

В большинстве случаев учебные материалы научного содержания, предлагаемые учащимся, считаются большими, сложными и неблагоприятными для когнитивного восприятия учащихся. При выборе учебных материалов научного содержания считается целесообразным опираться на конкретные дидактические законы и доказательства.

Учащиеся должны уметь отличать от текста научного содержания основную идею, важные закономерности, составляющие текста, разницу в знаниях и обстоятельствах, суть содержания информации.

В эффективном представлении учебных материалов научного содержания учащимся и расширении их познавательных возможностей восприятия считается целесообразным использовать следующие методы: объединение учебных материалов в целостные блоки; использование модульных технологий обучения; использование метода базовых знаний и т.д.

Большинство педагогов представили следующие критерии обеспечения взаимосвязи между элементами учебных материалов научного содержания: 1. Наличие причинно-следственных связей между элементами.

2. Наличие связи между основными понятиями и важными частями, которые представляют их возникновение.

3. Выражение приоритетной функциональной значимости.

4. Нравится тот факт, что обеспечивается взаимосвязь между элементами, которые являются частью друг друга.

В результате усвоения знаний об изучаемом научном содержании, общества и предков у учащихся развиваются навыки и личностные качества познавательного восприятия учебных материалов.

Знание освоенного научного содержания способствует эстетическому восприятию учащимися вселенной.

РАЗВИТИЕ НАВЫКОВ 4-К У УЧАЩИХСЯ В УСЛОВИЯХ ЦИФРОВОГО ОБРАЗОВАНИЯ

Аннотация. В современном быстро развивающемся цифровом пространстве развитие навыков 4-К (критическое мышление, творчество, сотрудничество, общение) у учащихся стало основой образовательного прогресса. Благодаря широкому использованию цифровых технологий в образовательных учреждениях учителям открываются беспрецедентные возможности для развития этих важных навыков у учащихся, готовя их к успеху в эпоху цифровых технологий. В этом аннотации обсуждается важность развития навыков 4-К у учащихся в контексте цифрового образования учится, используя цифровые технологии, такие как интерактивные учебные платформы, образовательные приложения и инструменты виртуального сотрудничества, преподаватели могут создавать увлекательные и захватывающие учебные процессы, которые поощряют критическое мышление, способствуют творчеству, содействуют сотрудничеству и улучшают коммуникативные навыки среди учащихся.

Ключевые слова: цифровые технологии, цифрового образования, навыки 4-К, знания, компетентность, коммуникация, креативность, критическое мышление, командное сотрудничество, цифровые инструменты.

DEVELOPMENT OF 4-K SKILLS IN STUDENTS IN THE CONTEXT OF DIGITAL EDUCATION

Abstract. In today's rapidly evolving digital landscape, developing students' 4-C skills (critical thinking, creativity, collaboration, communication) has become the foundation of educational progress. With the widespread use of digital technologies in educational settings, teachers have unprecedented opportunities to develop these important skills in students, preparing them for success in the digital age. This abstract discusses the importance of developing

students' 4-K skills in the context of digital education. By leveraging digital technologies such as interactive learning platforms, educational apps, and virtual collaboration tools, educators can create fun and engaging learning experiences that encourage critical thinking and foster creativity, promote collaboration and improve communication skills among students.

Keywords: digital technologies, digital learning, 4-K skills, knowledge, competence, communication, creativity, critical thinking, teamwork, digital tools.

ВВЕДЕНИЕ

В сегодняшнюю быстро развивающуюся цифровую эпоху роль образования вышла за традиционные границы и стала уделять особое внимание развитию важнейших навыков, которые готовят учащихся к успеху в современном мире. Среди этих навыков система 4-К, которая включает в себя общение, критическое мышление, сотрудничество и творчество, важна для формирования учащихся как гибких и инновационных личностей. Интеграция цифровых инструментов и ресурсов в образовательную практику предлагает динамичную платформу для улучшения этих навыков и оснащения учащихся компетенциями, необходимыми для процветания в цифроцентричном обществе. [1]

МЕТОДЫ

Развитие у учащихся навыков работы с 4К (коммуникация, креативность, критическое мышление, командное сотрудничество) в рамках цифрового образования имеет решающее значение для их подготовки к процветанию в быстро меняющемся мире, основанном на технологиях. Давайте рассмотрим некоторые методы и подходы, которые можно использовать для развития навыков 4К у учащихся в цифровой среде обучения. Внедрение подходов к обучению на основе проектов, при которых учащиеся работают над реальными проблемами и проектами, может улучшить их обучение, критическое мышление и общение и может улучшить навыки сотрудничества. Цифровые инструменты и платформы могут облегчить управление проектами, исследования и представление результатов. Использование интерактивного моделирования и виртуальных лабораторий помогает студентам применять теоретические знания в практическом контексте, развивает критическое мышление и навыки решения проблем. Виртуальные лаборатории также предоставляют возможности для совместных исследований и экспериментов. Поощрение учащихся к участию в совместных онлайн-проектах с использованием таких инструментов, как Google Workspace, Microsoft Teams или виртуальные доски, может улучшить их навыки общения и совместной работы. Такие платформы позволяют учащимся работать вместе, обмениваться идеями и делиться идеями в цифровой среде. Вовлечение учащихся в проекты цифрового повествования, в рамках которых создаются мультимедийные презентации, видео или подкасты, может улучшить их коммуникативные

навыки и творческие способности. Этот метод побуждает учащихся эффективно передавать информацию и общаться с разнообразной аудиторией. [2]

Включение геймифицированных элементов в платформы цифрового обучения может побудить учащихся учиться, решать проблемы и сотрудничать со сверстниками в увлекательной и интерактивной форме. Геймификация повышает уровень участия, критического мышления и навыков сотрудничества. Создание дискуссионных онлайн-форумов или использование платформ социального обучения может способствовать общению и сотрудничеству между учащимися. [3]

Поощрение активного участия в дискуссиях, дебатах и обмене знаниями может улучшить коммуникативные навыки учащихся и командную работу. Внедрение гибких технологий обучения, которые адаптируют содержание обучения и мероприятия к потребностям отдельных учащихся, может помочь развить навыки критического мышления. Персонализированные пути обучения позволяют учащимся прогрессировать в своем собственном темпе и сосредоточиться на областях, требующих улучшения. Включение механизмов взаимной оценки и обратной связи в среду цифрового обучения позволяет учащимся критически оценивать свою работу, поощряет оценку, конструктивную обратную связь со сверстниками и эффективное сотрудничество. Эта практика улучшает навыки общения, критического мышления и сотрудничества. Включая эти методы и подходы в практику цифрового обучения, преподаватели могут эффективно развивать у учащихся навыки работы с 4К, которые им необходимы для достижения успеха в цифровую эпоху и в последующие годы. [4]

ПОЛУЧЕННЫЕ РЕЗУЛЬТАТЫ

Навыки эффективного общения имеют основополагающее значение для развития понимания, выражения и взаимодействия. Благодаря цифровому обучению учащиеся могут участвовать в различных мероприятиях, таких как онлайн-дискуссии, интерактивные презентации и совместные писательские проекты. Виртуальные платформы позволяют студентам формулировать свои идеи, активно выслушивать различные точки зрения и участвовать в конструктивном диалоге, тем самым улучшая их способность выражать свое мнение, высказывать мнение и участвовать в осмысленном общении важный навык, который позволяет вам оценивать доказательства и принимать обоснованные решения. В цифровой сфере студенты могут участвовать в таких мероприятиях, как решение онлайн-головоломок, участие в виртуальных дебатах и критическая оценка мультимедийного контента. Используя цифровые ресурсы для доступа к широкому спектру информации, студенты могут развивать свои аналитические навыки, находить надежные источники и развивать

критическое мышление, необходимое для навигации в сложностях цифрового ландшафта. [10]

Сотрудничество — важный навык для достижения успеха в различных командных средах. Цифровое обучение позволяет учащимся участвовать в виртуальных групповых проектах, онлайн-дискуссиях и инструментах общения в реальном времени. Работая совместно на общих платформах, студенты учатся использовать коллективный опыт, уважать различные точки зрения и эффективно способствовать достижению командных целей. Цифровое пространство способствует беспрепятственному сотрудничеству, пересекает географические границы и воспитывает у студентов чувство взаимосвязи. Творчество способствует инновациям и побуждает студентов мыслить нестандартно, представлять возможности и вдохновлять на уникальное самовыражение. С помощью цифровых платформ студенты могут заниматься творческой деятельностью, такой как цифровое повествование, мультимедийные проекты и сотрудничество в области виртуального искусства. Изучая инновационные инструменты и используя мультимедийные ресурсы, студенты могут раскрыть свой творческий потенциал, экспериментировать с новыми идеями и выражать свои художественные таланты за пределами традиционных границ.

ОБСУЖДЕНИЯ

Хотя конкретные результаты развития у учащихся навыков 4К (знаний, критического мышления, общения и сотрудничества) в среде цифрового обучения четко не продемонстрированы в имеющихся данных, мы предполагаем, что влияние инициатив цифрового обучения на учащихся, на основе которых мы можем прогнозировать возможные результаты. Некоторые из ожидаемых результатов сосредоточения внимания на развитии навыков 4К у учащихся в цифровой среде обучения: за счет интеграции цифровых инструментов и интерактивных ресурсов в процесс обучения улучшается доступ учащихся к информации и ресурсам, что приводит к лучшему усвоению знаний. по различным предметам. Вовлечение учащихся в деятельность, требующую решения проблем, анализа и оценки в цифровом контексте, может развить навыки критического мышления. Применение знаний в реальных сценариях и использование цифровых технологий для решения сложных задач могут развивать аналитическое мышление, онлайн-дискуссии и мультимедийные презентации в цифровой среде обучения могут улучшить коммуникативные навыки учащихся. Взаимодействие со сверстниками через онлайн-платформы способствует эффективному общению, выражению и обмену идеями. Работа над групповыми проектами, участие в виртуальной командной работе и участие в обратной связи со сверстниками могут улучшить навыки совместной работы учащихся. Цифровые инструменты, облегчающие совместную работу, такие как общие документы и платформы

для видеоконференций, позволяют учащимся эффективно сотрудничать независимо от их физического местонахождения. Воздействие цифровой среды обучения открывает для учащихся мобильность технологических платформ, использование цифровых инструментов и технологические изменения в образовании и на рабочем месте обеспечивает адаптивные навыки. Такая гибкость готовит студентов к будущим должностям, где цифровая грамотность имеет важное значение. Интерактивные и игровые элементы в цифровом обучении могут повысить вовлеченность и мотивацию учащихся. Когда учащиеся активно участвуют в обучении с помощью цифровых средств массовой информации, они могут позитивно относиться к обучению и с энтузиазмом участвовать в образовательной деятельности. Среда цифрового обучения часто способствует самостоятельному обучению, например, учащиеся самостоятельно изучают ресурсы, ставят цели обучения и управляют своим прогрессом. Такая автономия способствует развитию навыков самоуправления, инициативы и ответственности за собственный путь обучения. Четкое понимание уникального влияния цифрового обучения на развитие навыков 4К у учащихся, хотя данные могут различаться в зависимости от методов реализации и оценки, эти ожидаемые результаты. подчеркнуть потенциальные преимущества использования цифровых технологий для улучшения результатов обучения и повышения квалификации учащихся.

РЕЗЮМЕ

В заключение, развитие навыков 4-К у учащихся в контексте цифрового образования - это преобразующий путь, который вооружает учащихся компетенциями, необходимыми для навигации в мире, который становится все более цифровым. Интегрируя цифровые инструменты и ресурсы в образовательную практику, преподаватели могут вырастить поколение квалифицированных коммуникаторов, критически мыслящих, командных игроков и творческих новаторов. Освоение синергии между цифровыми технологиями и развитием навыков открывает студентам путь в будущее, которое позволит им процветать в динамичном, взаимосвязанном и управляемом цифровыми технологиями обществе.

ПРЕПОДАВАНИЕ ТЕХНИЧЕСКИХ СПЕЦИАЛЬНЫХ ДИСЦИПЛИН В УЧЕБНЫХ ЗАВЕДЕНИЯХ

Аннотация. В данной статье дается анализ преподавания специальных дисциплин в технических учебных заведениях. В процессе преподавания основной задачей преподавателя считается заинтересовать студента в изучении специальных дисциплин, а также научить правильно пользоваться технической литературой и техническим предметом, который он изучает.

Ключевые слова: образовательные учреждения, техническая специальность, студент, образовательный процесс, знания, умение, навыки.

TEACHING TECHNICAL SPECIAL DISCIPLINES IN EDUCATIONAL INSTITUTIONS

Abstract. This article provides an analysis of the teaching of special disciplines in technical educational institutions. In the process of teaching, the main task of the teacher is to interest the student in the study of special disciplines, as well as to teach him how to properly use technical literature and the technical subject that he is studying.

Keywords: educational institutions, technical special discipline, student, educational process, knowledge, skill, skills.

Согласно Указам Президента Республики Узбекистан на основе внедрения международных стандартов оценки качества образования и подготовки кадров, воплотил в себя повышение качества и эффективности деятельности образовательных учреждений, постепенное увеличение квот приема в высшие учебные заведения, увеличения доли часов самостоятельного обучения в образовательном процессе, самостоятельного обучения студентов, критически и творчески мыслящих, а также системного анализа, формирование предпринимательских навыков, внедрение методов и технологий, направленных на укрепление компетенций в образовательном

процессе, направление образовательного процесса на формирование практических навыков, в связи с этим, применяемые передовые педагогические технологии, основанные на международных образовательных стандартах, образовательных программах и обучении [1].

Специалисты в области технических специальностей принимают активное участие в продвижении научно-технического прогресса, что обеспечивает развитие материального производства, научно-технических знаний, новых технологий и техники, а также способствует включению в производственную практику технологических, организационно-управленческих, технических и технико-педагогических идей.

Известно, что технические спецдисциплины в учебных заведениях преподают выпускники инженерных вузов. И это естественно: чтобы квалифицированно обучать, например, технологии машиностроения, технологии металлов, ремонт и эксплуатация технологического оборудования и другим специальным предметам, надо основательно знать эти дисциплины. Это первое и главное условие успешного обучения. Но владение только содержанием изучаемого предмета недостаточно. Обучение требует от преподавателя знания педагогики,

При преподавании специальных дисциплин преподаватель должен знать и изучать техническую терминологию, так как толкование «ключевых» слов приблизительно и витиевато влечет за собой снижение профессиональной подготовки студентов.

Преподаватель ведущих специальных дисциплин должен знать ответы на такие вопросы:

1. На какие положения педагогики, психологии следует опираться, чтобы педагогически грамотно построить обучение технической дисциплине.

2. Каких требований методики следует придерживаться, чтобы сделать уроки и другие формы обучения техническим дисциплинам максимально эффективными.

3. Как организовать и провести работу над техническими терминами.

4. Каких требований к своей речи следует придерживаться преподавателю, чтобы его объяснения, ответы на вопросы, формулировки заданий и другие были грамотны, конкретны, культурны.

Основными задачами при изучении технических дисциплин необходимо считать следующее:

-объяснять студентам назначение и важность выбранной ими профессии;

-заинтересовать их изучаемыми предметами;

-научить самостоятельно мыслить и принимать правильные решения в тех или иных ситуациях; научить правильно работать с технической литературой и Интернет-ресурсами;

-привлечь студентов к выполнению творческих работ, которые будут заключаться в написании рефератов, создании презентаций по изучаемым темам, оформлении различного рода стендов, поиску необходимой информации в Интернете по изучаемым предметам, изготовлению плакатов с использованием компьютера [2].

Основными педагогическими условиями, повышающими продуктивность учебного процесса, являются:

- стандартизация профессионального образовательного процесса;
- методическая оснащенность педагогического процесса, направленная на использование современных форм и методов обучения;
- информационно-методическое обеспечение самообразовательной деятельности педагога;
- создание непрерывного повышения квалификации преподавателя;
- осуществление личностно-ориентировочного подхода в обучении;
- создание условий, обеспечивающих развитие научно-исследовательской и учебно-исследовательской работы в образовательном процессе [3].

Основной задачей использования современных информационных методик является расширение интеллектуальных возможностей человека. В настоящее время изменяется само понятие обучения: усвоение знаний уступает умению пользоваться информацией, получать ее с помощью различных телекоммуникационных систем. Применение данных технологий в современном образовательном процессе – вполне закономерное явление [4.5].

Целью высшего технического профессионального образования является не столько усвоение студентами определенных знаний, умений, навыков, сколько достижение ими уровня образованности, который формировал бы набор компетенций, позволяющий личности мобильно ориентироваться в достижениях научно-технического прогресса и изменяющихся социально-экономических условиях и обеспечивал потребность в продолжении образования [6,7].

Подготовка и проведение занятий.

Факторы:	Действия:
Цели выступления	-сформулировать цели (или цель) лекции
Учебный материал	-выбрать соответствующую информацию (учебный материал)
Психологическая структура слушателей	-установить (оценить) психологический фактор студентов
Социальная структура слушателей	-установить (оценить) социальную структуру студентов
Технические средства	-выбрать технические средства обучения
Методы коммуникации	-установить метод представления материала

Профессиональная социализация студента происходит одновременно на двух уровнях: институциональном и личностном. На институциональном уровне профессиональная социализация описывает деятельность студента, направленную за счёт усилий общества с целью обеспечения устойчивости, сохранение и передача профессионального опыта, а также его изменение на основе инновационного обогащения. На личностном уровне профессиональная социализация описывает обладание у студента совокупностью профессионально значимых качеств и стратегий по эффективному взаимодействию с профессиональной средой, применение которых обеспечивают интеграции его в существующую систему профессиональных отношений и связей [8,9].

DIVERSIFICATION OF THE LOAN PORTFOLIO AND MANAGEMENT OF PROBLEMATIC RISKS

Annotation. This article discusses credit portfolio diversification and distressed risk management, and how to manage these risks in this technological age.

Key words: diversification, loans, management, problem risk, improvement, etc.

Когда дело доходит до оценки кредитного риска в банковском секторе, нельзя упускать из виду один важный аспект – диверсификацию кредитного портфеля. Практика диверсификации кредитного портфеля предполагает распределение кредитов по различным секторам, отраслям и типам заемщиков с целью снижения потенциального воздействия дефолтов на общий портфель. Диверсифицируя свои кредитные портфели, банки могут смягчить риски, связанные с концентрацией воздействия на один сектор или заемщика, повышая свою способность противостоять экономическим колебаниям и снижая вероятность значительных потерь. Изучение диверсификации кредитного портфеля с разных точек зрения дает ценную информацию о ее важности и преимуществах. Давайте углубимся в некоторые ключевые моменты, чтобы лучше понять роль диверсификации в снижении рисков дефолта: Снижение риска: Диверсификация кредитного

портфеля служит методом управления рисками, поскольку позволяет банкам распределять свои риски по различным секторам и типам заемщиков. Эта стратегия помогает минимизировать последствия дефолтов в каком-либо конкретном секторе или конкретных заемщиков. Распределяя риск, банки могут смягчить потенциальные потери, связанные с дефолтами, способствуя финансовой стабильности и устойчивости. Например, рассмотрим банк, который в основном кредитует одну отрасль, например, недвижимость. Если в этой отрасли произойдет спад, это серьезно повлияет на кредитный портфель банка, что потенциально приведет к более высокому уровню дефолтов и значительным потерям. Однако если бы банк диверсифицировал свой кредитный портфель по таким отраслям, как производство, здравоохранение и технологии, влияние спада в сфере недвижимости было бы смягчено относительно стабильными показателями других секторов.

Отраслевые и экономические риски. Диверсификация кредитных портфелей помогает банкам снизить свою подверженность риску в конкретных секторах или отраслях, которые могут быть более восприимчивы к экономическим спадам. Такие отрасли, как строительство, гостиничный бизнес или розничная торговля, часто более чувствительны к экономическим колебаниям, и чрезмерное воздействие этих секторов может увеличить риски дефолта. Диверсифицируя свои кредитные портфели, банки могут сбалансировать свои риски и снизить потенциальное негативное влияние экономических потрясений на общую эффективность кредитования. Например, банк, значительная часть кредитного портфеля которого сосредоточена в розничном секторе, может столкнуться с более высокими рисками дефолта во время экономического спада, когда потребительские расходы снижаются. Однако, если у банка также есть влияние на такие сектора, как здравоохранение, которое имеет тенденцию быть более устойчивым во время экономических спадов, негативные последствия уровня дефолта в розничном секторе могут быть компенсированы, обеспечивая более стабильный кредитный портфель. Профиль риска заемщика. Диверсификация заключается не только в распределении рисков по секторам, но и в распределении риска между различными типами заемщиков. Кредитование заемщиков с различным профилем риска, таких как юридические лица, малый бизнес и частные лица, помогает банкам снизить свою зависимость от одного сегмента заемщиков.

Эта стратегия диверсификации позволяет банкам минимизировать влияние дефолтов какой-либо конкретной группы заемщиков и поддерживать более здоровый кредитный портфель. Например, банк, который в первую очередь занимается кредитованием крупных юридических лиц, может столкнуться с более высокими рисками дефолта, если один из его основных заемщиков столкнется с финансовыми

трудностями. Однако, если банк также предоставляет кредиты малому бизнесу и частным лицам, влияние дефолта одного крупного корпоративного заемщика может быть смягчено относительно более низкими показателями дефолта со стороны других сегментов заемщиков. Изучение диверсификации кредитного портфеля имеет решающее значение для снижения рисков дефолта в банковском секторе. Распределяя кредиты по различным секторам, отраслям и типам заемщиков, банки могут снизить свою подверженность конкретным рискам, повысить свою устойчивость к экономическим колебаниям и поддерживать более здоровый кредитный портфель. Реализация эффективных стратегий диверсификации кредитного портфеля может внести существенный вклад в управление кредитными рисками и общую стабильность банковской системы.

Теоретические и эмпирические исследования взаимосвязи между диверсификацией деятельности и эффективностью банков дают противоречивые прогнозы, а также противоречивые доказательства. С точки зрения риска стандартная портфельная теория предсказывает, что совокупные денежные потоки от источников дохода с низкой или отрицательной корреляцией должны быть менее волатильными, чем составные части. Диверсификация кредитного портфеля относится к практике распределения кредитов банка по различным секторам или отраслям. Эта стратегия направлена на снижение риска, связанного с концентрированным воздействием на один сектор или заемщика. Диверсифицируя свои кредитные портфели, банки могут смягчить последствия потенциальных убытков от определенного сектора или заемщика, не выполнившего свои обязательства по своим кредитам. Кроме того, диверсификация кредитного портфеля также может помочь банкам получить более высокую прибыль за счет направления своих средств в сектора с лучшими перспективами роста и меньшим кредитным риском. Однако банкам важно тщательно управлять процессом диверсификации, чтобы избежать чрезмерного воздействия на сектора или заемщиков с высоким уровнем риска. В целом, диверсификация кредитного портфеля представляет собой стратегию управления рисками, направленную на баланс риска и доходности в кредитной деятельности банка.

Диверсификация портфеля направлена на смягчение воздействия неэффективных отдельных инвестиций путем включения смеси активов с различными характеристиками риска и доходности. По сути, он следует принципу не концентрировать все инвестиции в одной области. Поддерживая диверсифицированный набор активов, инвесторы могут избежать чрезмерной уязвимости к результатам деятельности отдельной компании, сектора или рынка. Вы можете диверсифицировать свой портфель за счет диверсификации активов по различным классам, секторам и глобальным рынкам. Это называется распределением активов портфеля.

Эти классы активов включают в себя различные типы активов для инвестирования в определенную диверсификацию портфеля:

- **Акции:** вы можете инвестировать в акции или акции публично торгуемых компаний для потенциального роста.
- **Облигации:** вы можете изучить государственные или корпоративные ценные бумаги с фиксированным доходом, чтобы сбалансировать риск и доходность.
- **Недвижимость:** диверсифицируйте, инвестируя в здания, землю, скот, сельское хозяйство, воду и месторождения полезных ископаемых.
- **Биржевые фонды (ETF):** вы можете выбрать корзины ценных бумаг, которые отслеживают индекс, товар или сектор и котируются на фондовой бирже.
- **Сырьевые товары:** вы можете включить в свое портфолио основные материалы, необходимые для производства других продуктов или услуг.
- **Денежные средства или их эквиваленты:** обеспечьте ликвидность и возможность получения прибыли с низким уровнем риска с помощью сберегательных счетов, депозитных сертификатов, казначейских векселей и других краткосрочных портфельных инвестиций.

Основной принцип диверсификации портфеля заключается в том, что разные активы по-разному реагируют на различные условия рынка акций. Когда одни инвестиции падают, другие могут оставаться стабильными или даже расти. Такое диверсифицированное распределение рисков помогает смягчить удар убытков. Кроме того, не допуская чрезмерной концентрации портфеля на одной инвестиции, увеличивается потенциал более высокой общей доходности. Одним из распространенных заблуждений является то, что наличие множества инвестиций автоматически обеспечивает диверсификацию. Однако, если эти инвестиции тесно связаны или сильно коррелируют, они могут аналогичным образом реагировать на колебания рынка, сводя на нет истинную суть диверсификации портфеля. Еще одно заблуждение заключается в том, что диверсификация устраняет все риски, что далеко не так. Хотя диверсификация портфеля может снизить риск, она не может устранить его полностью. Эффективное управление рисками и разумное распределение активов остаются императивами. Одним из наиболее значительных преимуществ диверсификации портфеля является его способность снижать риски и эффективно управлять ими. Распределяя инвестиции по различным классам активов, отраслям и географическим регионам, потенциальное негативное влияние неэффективного актива на весь портфель сводится к минимуму. По сути, если одна инвестиция неэффективна, прибыль от других может помочь смягчить общий риск.

Отдельные классы активов по-разному реагируют на колебания рынка. Хотя акции могут испытывать волатильность, инвестиции с фиксированным доходом, такие как облигации, обычно сохраняют более высокий уровень стабильности во время рыночных спадов. Включив

сочетание активов, диверсификация портфеля может обеспечить более стабильные результаты, способные выдержать различные экономические сценарии. Диверсификация позволяет портфелю инвесторов получить доступ к возможностям роста, одновременно эффективно управляя присущей волатильностью определенных активов. Хотя инвестиции с высоким уровнем риска могут принести значительную прибыль, они также сопряжены с повышенным потенциалом потерь. Балансирование этих высокорисковых активов с более стабильными позволяет использовать потенциал роста, не подвергая весь портфель чрезмерному риску.

ТВОРЧЕСКАЯ ПЕДАГОГИКА – СОВРЕМЕННЫЙ ПОДХОД К ПЕДАГОГИКЕ

Аннотация. В статье рассматриваются роль и значение креативной педагогики в системе социальных наук и образовательной практики, а также педагогические условия реализации творческой направленности обучения личности в процессе непрерывного образования.

Ключевые слова: творчество, развитие творческих способностей, факторы, препятствующие развитию творческих способностей, творческий потенциал, педагогическое творчество, творческий потенциал учителя, структурные основы и принципы творческого потенциала, критерии, определяющие творческий потенциал учителя.

CREATIVE PEDAGOGY – A MODERN APPROACH TO PEDAGOGY

Annotation. The article examines the role and significance of creative pedagogy in the system of social sciences and educational practice, as well as the pedagogical conditions for the implementation of the creative orientation of individual learning in the process of lifelong education.

Key words: creativity, development of creative abilities, factors that impede the development of creative abilities, creative potential, pedagogical creativity, teacher's creative potential, structural foundations and principles of creative potential, criteria that determine the creative potential of a teacher.

В сегодняшнюю эпоху растущей глобализации каждое общество нуждается в творческих людях. Это естественно. Потому что изменения, происходящие в мире ежеминутно, требуют этого.

В связи с этим внимание ученых различных специальностей сосредоточено на проблеме раскрытия и развития творческого потенциала студента в условиях педагогического процесса. Поэтому возникает необходимость разработки новых парадигматических основ организации педагогического процесса в современных образовательных учреждениях, а

это создает возможность обратиться к новому инновационному направлению педагогики – творческой педагогике.

Проблемы творческой педагогики рассматриваются в системе комплексной педагогической теории и других общественных наук: история педагогики и философии образования, общая и профессиональная педагогика и психология, методы и технологии обучения и воспитания, профессиональная этика и др.

Формирование и развитие творческой личности в соответствии с постоянно меняющимся внешним и внутренним миром, социально-экономическими условиями и содержанием деятельности требует непрерывности, непрерывности и охвата всего периода онтогенеза человека - от рождения до конца жизни. В отечественной педагогике практически отсутствуют исследования формирования и развития профессионально-творческого опыта человека на основе формирования и развития его профессионально-творческого потенциала. Традиционный профессиональный опыт определяется как совокупность знаний, умений и навыков. Это значит, что в процессе овладения деятельностью формирование опыта происходит само собой. Вопрос о усвоении опыта творческой деятельности вообще не ставится.

Что такое творчество? По мнению американского психолога Абрахама Маслоу, это творческое направление, присущее каждому, но многими утраченное под влиянием нынешней системы воспитания, образования и социальной практики.

Вопреки распространенному мнению, что творчество — это «дар Божий» и поэтому творчеству нельзя научить, М.М. Зиновкина предлагает другой подход. Изучение истории техники и изобретений, анализ творческой жизни известных ученых и изобретателей показывает, что все они, наряду с высокими (для своего времени) фундаментальными знаниями, а также кладом специальных знаний или алгоритмического мышления, а также определенные знания, в том числе эвристические методы и приемы.

Он выдвинул следующие аспекты творчества:

- выдвижение проблемы или научных гипотез;
- проверка и изменение предположений;
- выявление проблемы на основе формирования результатов решения;
- выражение чувствительности к противоречию между знаниями и практическими действиями при решении задач.

Понятие «творчество» на латыни выглядит следующим образом. "Creatio" - "Создавать", " творческий " - "создатель", но, по сути, это понятие есть проявление творческих способностей человека.

Творческие люди – это художники, скульпторы, писатели, поэты, фотографы – люди, использующие свои таланты в разных видах творчества. Креативность, как правило, свойственна деловым людям: дизайнерам, рекламщикам, маркетологам, бренд-менеджерам и т. д.

Активное овладение профессиональной и творческой деятельностью, ее эффективное осуществление требует не только развития и интеграции навыков и умений, развития индивидуальных стилей и методов выполнения профессиональной деятельности, но и овладения методикой профессионального творчества, развития творческих способностей. Мышление и собственное включает в себя формирование творческой личности можно определить как формирование и развитие личности, соответствующее осуществляемой творческой деятельности и получаемым творческим результатам. Темп и траектория этого процесса определяются биологическими и социальными факторами, собственной активностью и творческими качествами личности, а также условиями, жизненными событиями и профессионально детерминированными факторами. Существует тесная связь между формированием творческой личности и творческим воспитанием.

Основная часть. Творчество, как и культура, должно проникнуть в жизнь человека и, следовательно, в систему образования. Следовательно, существует ряд условий для развития творческой педагогики в системе социальных наук, то есть как новой отрасли педагогики.

Креативная педагогика – это наука и искусство творческого воспитания. Это вид педагогики, противостоящий таким видам педагогики, как принудительная педагогика, кооперативная педагогика и критическая педагогика. Креативная педагогика учит студентов мыслить творчески, быть творцами своего будущего.

Креативная педагогика – это педагогика, которую можно применить к любому предмету, будь то математика, физика, языки или экономика. В некоторой степени можно сказать, что его методология меняет процесс преподавания и обучения.

Развитая креативность является важной составляющей индивидуального творчества. Оно выражается в стремлении человека достичь познавательной цели, продолжить начатую творческую работу, преодолеть трудности в познавательной деятельности, планировать и упорядочивать мыслительные действия, искать варианты и способы достижения цели; Также стенические чувства у человека (чувство радости от познавательной и творческой деятельности, готовность преодолевать трудности в процессе изобретений, гордость за достижение познавательной или творческой цели, наслаждение от возможности что-то изобрести, оптимистическая активность в начале творческого труда, ожидание его положительного результата, неудач, спокойствие в государстве и т. д.).

Эксперты в области человеческого интеллекта считают, что для обеспечения творческого процесса необходимо сочетание конвергентного (логического, последовательного, линейного) и дивергентного (холистического, интуитивного, реляционного) мышления. Результат такого сочетания особенностей мышления проявляется в гармонии с

беглостью и гибкостью ума, а также оригинальностью и точностью суждений.

Для развития творческих способностей в педагогическом процессе необходимо использовать методы и технологии обучения, способствующие повышению потенциала человека и повышению его творческой активности. Эти технологии помогают человеку развить самооценку, повысить уверенность в своих силах, а также развить психологические трудности, мешающие ему иметь адекватное отношение к реальности.

Приоритетное направление деятельности учителя в современной системе образования. диалогические методы общения, совместный поиск решений и разнообразная творческая деятельность. Все это осуществляется с помощью интерактивных методов обучения. В процессе интерактивного обучения студенты учатся критически мыслить, решать сложные задачи на основе анализа ситуации и актуальной информации, находить альтернативные мнения, принимать взвешенные решения, участвовать в дискуссиях. Для этого занятия организуются по парной и групповой методике, используются исследовательские проекты, ролевые игры.

Результаты анализа теоретических и практических основ развития креативности позволяют выделить принципы структурно-функциональной модели развития креативности будущего учителя в педагогической практике. Эти принципы заключаются в следующем.

1. Принцип задачи.

Использование проблемного принципа не ново для педагогической деятельности. Сущность творчества имеет проблемный характер, она заключается в поиске нестандартного решения проблемы. В педагогической практике развитие творческих способностей будущих учителей в соответствии с принципом проблемности проявляется в творческих проблемных заданиях, например: «Предложить гипотезу и составить план ее проверки...», «Оценка первоначальный результат...», "Представьте учебный материал по-другому..." и так далее.

2. Принцип творческой направленности.

Этот принцип включает в себя развитие не только репродуктивных, но и творческих способностей. Развитие творчества не должно носить только целенаправленный характер, то есть достигаемый результат должен быть далек от представления о том, что результат будет достигнут в конце практики. В этом случае обучающийся должен выполнять задания быстро и без каких-либо эмоций. Поскольку такая ситуация отрицательно влияет на качество обучения, результаты диагностики и в целом всей экспериментальной работы. Если развитие творческих способностей носит ступенчатый характер, Если задание или вид деятельности не рассматривается как следующий этап испытания, а направлен как возможность самопроверки, самопознания и интересной деятельности, то

выполненная работа будет качественной и с показателями успеваемости. изучаемая концепция будет находиться на уровне роста.

4. Принцип честности и последовательности.

Этот принцип требует целостности, последовательности и полноты структуры программы развития креативности. Только в этом случае можно говорить о целесообразности выбора инструментов и методов достижения поставленной цели. Творчество следует рассматривать как составную часть системы качеств, сопровождающих целостный образ будущего учителя.

5. Принцип индивидуализации.

Основным аспектом этого принципа является учет индивидуального стиля учебной работы каждого обучающегося, уникальной траектории его личностного развития и особенностей психических процессов. Тогда индивидуальным результатом каждого участника программы будет творческое достижение, соответствующее уровню сформированности креативности как личностной характеристики.

Основной целью развития творческих способностей является развитие умственной активности и логического мышления учащихся. Для этого нужно пойти еще дальше и установить требования, несколько превышающие способность мыслить ученика.

Также развитие творческих способностей помогает решить следующие задачи:

1. Обучение студентов мыслить в разных направлениях;
2. Обучение нахождению решений проблем в нестандартных ситуациях;
3. Развитие своеобразия мыслительной деятельности.
4. Научить студентов анализировать сложившуюся проблемную ситуацию с разных сторон;
5. Развивать качества мышления, необходимые для более эффективной жизни и адаптации в быстро меняющемся мире.

При этом обязательным условием развития педагогического творчества является реализация принципов гуманитарной психологии во взаимодействии учителя и учащихся.

Эти принципы включают в себя:

1. Высокая оценка идеи каждого ученика, предполагающая положительное подкрепление всех идей и ответов, использование ошибок как возможность взглянуть на знакомое по-новому.
2. Создание среды взаимного доверия и психологической безопасности.
3. Обеспечение независимости в выборе и принятии решений.

Учитель с творческим потенциалом будет обладать следующими качествами:

- Расширяется творческое мышление;
- Имеет хорошие исследовательские навыки;

- Самостоятельно анализирует возможности использования достижений и передового опыта педагогической или специальной науки;
- Активно участвует в реализации творческих проектов и научных исследований, проводимых профессорами и преподавателями.

Современные требования к творчески мыслящему преподавателю заключаются в том, что он должен быть не информатором, а координатором, менеджером, организатором коммуникаций, консультантом с учетом индивидуальных возможностей учащихся. Учитель поддерживает и направляет поиск наиболее эффективных методов получения знаний, поощряет интересные открытия, анализирует неудачные попытки, побуждает учащихся осознавать поражения и победы.

ПРИМЕНЕНИЕ ИННОВАЦИОННЫХ ОБРАЗОВАТЕЛЬНЫХ ТЕХНОЛОГИЙ НА ПРАКТИКЕ

Аннотация. В развивающихся странах современные педагогические технологии – цифровые технологии обучения демонстрируют взаимное взаимодействие технических средств человеческого фактора для эффективной организации и облегчения обучения, повышения его результата и качества, объективной оценки. Четкое планирование образовательных целей, увеличение видов методов и средств, используемых в процессах обучения и освоения, обогащение эффективности образовательного процесса содержанием – все это новый этап, направленный на совершенствование образовательного процесса, повышение эффективности образования. использовать современные технологии на уроке.

Ключевые слова: Интерактивные методы, инновационное образование, инновация, Педагогическая технология, системный подход, объективная оценка, метод, методология, образование, педагогическая система, гуманизм, теория, умение, компетентность, деятельность, информация.

APPLICATION OF INNOVATIVE EDUCATIONAL TECHNOLOGIES IN PRACTICE

Abstract. In developing countries, modern pedagogical technologies - digital learning technologies demonstrate the mutual interaction of technical means of the human factor for the effective organization and facilitation of learning, increasing its results and quality, and objective assessment. Clear planning of educational goals, increasing the types of methods and means used in the processes of learning and development, enriching the effectiveness of the educational process with content - all this is a new stage aimed at improving the educational process and increasing the effectiveness of education. use modern technologies in the classroom.

Key words: Interactive methods, innovative education, innovation, Pedagogical technology, systematic approach, objective assessment, method, methodology, education, pedagogical system, humanism, theory, skill, competence, activity, information.

Сегодня интерес и внимание к использованию интерактивных методов, инновационных технологий, педагогических и информационных технологий в образовательном процессе возрастает с каждым днем, одна из причин этого в том, что до сих пор студент в традиционном образовании - если учащиеся учат только приобретать готовые знания, современные технологии учат их искать приобретаемые знания, самостоятельно изучать и анализировать и даже делать собственные выводы. В этом процессе педагог создает условия для развития, становления, обучения и воспитания личности и одновременно выполняет функции управления и направления. В процессе обучения главной фигурой становится ученик. Поэтому место и роль современных методов обучения – интерактивных методов, инновационных технологий в подготовке квалифицированных специалистов в высших учебных заведениях и на факультетах огромны. Знания, опыт и интерактивные методы педагогической технологии и педагогические навыки обеспечивают образованную, зрелую квалификацию учащихся-студентов.

Сегодня проблема формирования свободной личности требует перевода воспитательной работы в образовательных учреждениях на инновационные педагогические технологии. Процесс этот непрост, поскольку добровольно выстроенная и внедряемая система образования должна быть превращена в научно обоснованную педагогическую систему. В.П. По определению Беспалько, «педагогическая система – это совокупность взаимосвязанных инструментов, необходимых для создания систематического, целенаправленного и заранее обдуманного педагогического воздействия на формирование определенных качеств личности, совокупность методов и процессов».

В каждом обществе определена цель формирования личности, и в соответствии с ней должна существовать педагогическая система. Если цель изменится, существующая система неизбежно изменится. Основной целью «Национальной программы подготовки кадров» Республики Узбекистан является воспитание граждан, чувствующих свою ответственность перед обществом, государством и семьей. Такая Национальная программа считается государственным заказом в сфере образования и полностью соответствует сути национальной идеологии. Только государственный заказ четко определяет общие цели и задачи образования или гарантирует условия существования педагогической системы высшего образования.

Педагогическая технология является такой областью знаний, что в новом тысячелетии произойдет радикальное изменение политики

государства в области образования, возобновится деятельность учителя, у учащихся сформируется система свободомыслия и гуманитарных чувств. На сегодняшний день учителя (педагоги) во многих случаях не могут отличить методику от технологии. Поэтому необходимо уточнить эти понятия. Методика состоит из комплекса рекомендаций по организации и проведению образовательного процесса. Инновационная педагогическая технология представляет собой комплекс мероприятий, обновляющих профессиональную деятельность педагога и гарантирующих конечный результат образования в направлении заранее определенной цели.

Разнообразие тарифов, направленных на уточнение понятия инновационной педагогической технологии, с одной стороны, показывает, что эта тема в той или иной степени решается в развитых странах, а с другой стороны, представляет собой определенный результат попыток внедрения педагогические технологии в педагогическую практику.

В настоящее время в нашей стране имеется достаточно возможностей для объединения научного потенциала специалистов, поскольку единство теории и практики открывает путь к определению истинной сущности педагогической технологии. Поэтому нельзя рассматривать инновационные педагогические технологии как отдельную отрасль педагогики или как систему, направленную только на оптимизацию образовательной практики. Педагогическая технология отражает деятельность в рамках объединения теоретических и практических исследований в этой области.

Теперь цель образования полностью обновляется, соответственно, с обновлением содержания и педагогического процесса границы человеческой деятельности колоссально расширяются, а к аудитории поступают новые технологии (промышленность, электронная информация) с большими образовательными возможностями. Происходящие качественные изменения свидетельствуют о том, что сегодня первичные процессы «Обучения» не укладываются в рамки традиционных методов и средств обучения и уже не совместимы с индивидуальными способностями учителя (педагога). Существуют технические, информационные, полиграфические, аудиовизуальные носители, которые требуют новой методологии и становятся структурными компонентами образовательного процесса и приносят его специфические особенности, превращающие современные педагогические технологии в реальную реальность.

Если посмотреть на историю технологизации образовательного процесса, то этот процесс стал объективной реальностью со второй половины XX века. Информатизация является революционным «поворотом» в этом процессе, то есть образовательная информационная технология представляет собой общение «ученик-ученик-компьютер». Развитие научных, технических и творческих способностей студентов высших учебных заведений является одной из основных задач образования любого типа, ступени и уровня. Действительно, сегодняшняя молодежь

владеет знаниями техники и технологий, основами экономики, но если она не будет обладать навыками их использования, она не сможет достичь своих целей. Знание путей и средств применения полученных знаний на практике позволяет совершенствовать производственные процессы, создавать новое оборудование, орудия труда и новые технологии.

Обширные и прочные знания, умения, компетентность, любознательность, инициативность, стремление к четкой цели при самостоятельном решении задач, требование личной активности являются основой формирования творческих способностей студентов и молодежи.

Важным условием формирования творческих способностей учащихся является активность. Поэтому основная задача педагога – предоставить необходимую информацию, определяющую форму, метод, средства и направления организации этой деятельности. Слишком большая информационная подача не решает задачу положительно. Поэтому целесообразно управлять информационным обеспечением педагогически, учитывая то, что оно обогащено передовыми техническими и технологическими достижениями.

Предметом педагогического управления процессом научно-технического развития и творчества является человеческий фактор, который предполагает изучение уникальной учебной работы и ее управления, методологии и алгоритма решения творческих задач. Системный педагогический подход к процессу организации и подготовки научно-технической творческой деятельности студентов является одним из основных вопросов управления индивидуальным творчеством и творчеством и включает в себя сбор необходимой информации, ее анализ, обработку, определение цели, и разрабатывая план достижения цели, предпринимает такие шаги, как организация творческой работы по плану, контроль за его выполнением, упорядоченное ведение деятельности этой системы, принятие специальных решений.

Любой процесс управления, прежде всего, начинается с постановки цели, то есть умения правильно поставить цель. Он начинается с анализа текущего состояния объекта управления и изучения возможностей его развития. По существу, целенаправленное педагогическое управление научно-техническим творчеством имеет объективное описание, в котором выражаются объективные закономерности развития личности человека. Кроме того, целенаправленное управление является продуктом мышления и формируется в процессе совместной деятельности индивидов. Цель, в свою очередь, определяет направления изменений педагогического объекта, его основные виды и содержание управленческой деятельности.

Целевое педагогическое управление по своему содержанию, временному фактору и условиям подразделяется на несколько групп. Содержание направления условно сгруппировано как экономические, социальные, политические, идеологические и научно-технические цели.

Важной целью подготовки к научно-техническому творчеству является обеспечение человека, участвующего в педагогическом управлении, объективной информацией высокого уровня. Только объективная информация может быть движущей силой целенаправленной деятельности.

Человеческий мозг обладает способностью получать различную информацию на разных уровнях, что требует легкой, свободной и интересной передачи информации. Эффективное использование технических средств в процессе обучения считается дидактической задачей и рассматривается главным образом как активное действие, способ обеспечения принципа обучения.

Необходимость обучения в учебном процессе связана с описанием познавательного процесса, то есть переходом от живого наблюдения к абстрактному мышлению, а затем к практике. Педагоги и психологи утверждают, что мысли не выходят за рамки интуиции и воображения. Также нет прогресса в учебном процессе. Поэтому учебное поведение не ограничивается воздействием на разум, оно выявляет у обучающегося определенный эмоциональный мотив, усвоенные знания закрепляются только на основе единства чувства и логического мышления.

Сегодня, на новом уровне развития образования, обучение невозможно осуществлять без технических средств. Одним из важных показателей инновационных педагогических технологий является скорость передачи информации обучающимся, обеспечиваемая этими инструментами. Таким образом, развитие науки и научно-техническое развитие требуют друг друга, а информационное обеспечение процесса творческой деятельности включает направления управления на определенном уровне. Однако обогащение учебных занятий образовательными методами не должно разрушать образовательную систему и логику. Инновационные педагогические технологии создают определенные возможности для сбора информации и использования ее в процессе обучения, что позволяет формировать творческие способности у студента. Эти данные определяют возможности управления содержанием информационного обеспечения основ науки и методов творчества. Эффективность процесса подготовки студента к творческой деятельности во многом требует наличия у него информационного обеспечения, а также системности и непрерывности направлений педагогического управления.

Опыт просвещенного и культурного светского образования показывает, что среда, к которой он принадлежит, и сложившиеся в ней общественные отношения имеют большое значение в формировании интеллектуального потенциала человека, мировоззрения, а также его духовно-нравственного образа. Ведь в среде, к которой принадлежит человек, существуют объективные и субъективные факторы, необходимые для формирования его мышления, духовно-нравственного образа. Высшие

и средние специальные учебные заведения занимают особое место в среде, в которой действует человек.

Реформы в сфере непрерывного образования в Республике Узбекистан позволяют обеспечить экономику страны квалифицированными специалистами. Подчеркнув актуальность данного вопроса, Первый Президент Республики Узбекистан И.А.Каримов заявил, что «В Узбекистане имеются все необходимые условия для перехода к современной модели инновационного развития». Эта модель основана на широком и эффективном использовании созданного научно-технического потенциала, достижений фундаментальной и прикладной науки, широком внедрении в практику технологий, требующих глубоких знаний, увеличении численности высококвалифицированных и талантливых научных кадров. Это необходимое условие и прочная основа для вхождения нашей страны в мировую экономику и промышленно развитые страны.

Рост экономической мощи нашей страны в условиях рыночной экономики привел к коренным реформам в системе образования, которая является центральным звеном социальной сферы нашего общества. Принимаются новые законы и документы, создаются современные педагогические технологии в целях улучшения образования учащихся и студентов, расширения, углубления и обогащения содержания предоставляемого им образования, а также обеспечения непрерывности образования.

Инновационная педагогическая технология предусматривает целенаправленную организацию и реализацию познавательной деятельности студентов по основам естественных наук.

В процессе обучения, основанного на новом подходе, новом мышлении, необходимо внедрять эффективные формы и методы учебной деятельности учащихся, эффективно организовывать их самостоятельную работу. Научно и методически совершенная организация учебного процесса – залог успеха. Всевозможные упражнения и самостоятельные задания учат учащихся мыслить, творчески работать, комплексно мыслить, решать задания, исходя из своего жизненного опыта. Как обнаружил известный английский писатель Дж. Бернارد Шоу, «Единственный путь к познанию – это действие». Независимо от организации такой деятельности в форме работы учащихся и преподавателей (традиционные или нетрадиционные уроки, внеклассная работа, лекции или практические занятия), она может дать высокий педагогический эффект только тогда, когда осуществляется в полной мере с научно-теоретической точки зрения. с научно-методической и воспитательно-духовной точки зрения. При этом, конечно же, предусматриваются тренинги, организованные с учетом возрастных и физиологических особенностей, интересов, уровня знаний и кругозора обучающихся. Для этого необходимы отличные педагогические навыки и профессиональный потенциал педагога.

Педагогическое изменение во фразе «Нет плохой земли, а есть необразованные земледельцы, которые не знают, как получить с нее урожай» известного почвовед Р. Вильямса, который первым рекомендовал траву -полевая ротация к земледельческой культуре в мировой практике. скажем так: «Не бывает плохого ученика (учащегося), а есть только плохие учителя (педагоги, воспитатели), которые не могут указать ему правильный путь обучения».

Три характеристики: глубокие знания, профессиональная методология и простые человеческие качества в совокупности определяют результат учебного процесса. Как невозможно поверить, что человек без знаний может иметь методические навыки, так какой смысл учить человека, не знающего человечества, имеющего и то и другое? Педагогические технологии и педагогическое мастерство также погружаются в трясину схоластики без завершения вышеупомянутых трех.

Поскольку качество и эффективность образования зависит от многих факторов, невозможно дать единую и убедительную рекомендацию или руководство по этому поводу. Не следует забывать, что существуют конкретные и подходящие критерии возможности использования инновационных педагогических или информационно-коммуникационных технологий. Даже те, кто поднимает знамя нестандартности, новаторства или интерактивности, не должны отрицать тысячелетние (а может, и миллионные) традиции и опыт преподавания, огромный накопленный запас опыта. Не следует забывать о принципах взаимодействия старого и нового, баланса между базой и надстройкой, совместимости традиции и инициативы.

Работа учителя (педагога) должна оцениваться только исходя из качества знаний, умений и квалификации подведомственных ему лиц. Да, было бы справедливо оценивать по качеству знаний (не по уровню знаний, не по присвоенным рейтинговым баллам, не по индексу мастерства).

Использование информационно-коммуникационных технологий в сочетании с современными педагогическими технологиями в высших учебных заведениях служит повышению качества профессиональной подготовки будущих специалистов, эффективность учебных занятий и полезный труд преподавателей (педагогов) повышает коэффициент. Иными словами, системный подход к образовательному процессу и сервис, состоящий из различных педагогических мероприятий, сегодня считаются важным условием повышения эффективности обучения в системе непрерывного образования. В то же время современные педагогические технологии демонстрируют взаимное взаимодействие человеческого потенциала и технических средств, необходимых для облегчения форм обучения, основанных на системных подходах, гарантирующих его результат и объективную оценку. Уточнение образовательных целей, диверсификация методов, способов и средств, используемых в процессах

преподавания и обучения, углубление содержания образовательных процессов – все это означает совершенствование деятельности образовательных учреждений.

Однако говорят, что нет предела усовершенствованию, то есть нет конца. Поэтому и педагогические технологии, и педагогическое мастерство являются понятиями безграничными. Чем больше его ищешь и чем больше инициативы, тем меньше оно кажется. Это самая простая и основная истина преподавания. Подобная деятельность учителей (педагогов) в конечном итоге приведет к выполнению высокого социального заказа.

Уровень грамотности членов общества является важным фактором, определяющим культурный и образовательный имидж общества. Чтобы сделать большинство людей грамотными, необходима технологизация чтения и преподавания, науки, исследований и обучения, короче говоря, процессов образования и обучения, широкое применение современных методов и методов обучения, их и путем их применения, необходимо давать качественные и эффективные знания получателям образовательных знаний. Новый подход к системе непрерывного образования, ее семи видам образования, особенно трем видам образования, принятым в ДТС - общему среднему образованию, среднему специальному образованию, профессиональному образованию и высшему образованию, для внедрения эффективных форм и методов образовательной деятельности обучающихся. в процессе обучения на основе нового мышления эффективно организовывать свою самостоятельную работу, эффективно использовать образовательные технологии, обучать связности и преемственности между их структурными компонентами, обеспечение которых является требованием времени. Научно и методически совершенная организация учебного процесса является залогом успеха в этой области. Всевозможные упражнения и самостоятельные задания учат учащихся мыслить, творчески работать, комплексно мыслить, решать задания, исходя из своего жизненного опыта.

Классная и внеклассная деятельность, являющаяся основной организационной формой обучения, независимо от того, как она организована (традиционные или нетрадиционные занятия, внеклассная и воспитательная деятельность, лекции или практические занятия). Ввиду этого она может дать высокий педагогический эффект только тогда, когда он полностью реализован с точки зрения научной теории, научного метода и воспитательно-духовного аспекта. При этом, конечно, с учетом возрастных и физиологических особенностей, интересов, уровня знаний и кругозора учащихся планируется деятельность. Для этого необходимы отличные педагогические навыки и профессиональный потенциал педагога. 3 характеристики крепких знаний, профессиональной методологии и простых человеческих качеств в совокупности определяют результат учебного процесса. Как невозможно поверить, что человек без знаний

может иметь методические навыки, так какой смысл учить человека, не знающего человечества, имеющего и то и другое? Педагогические технологии и педагогическое мастерство также погружаются в трясину схоластики без завершения трех упомянутых выше.

Поскольку качество и эффективность образования зависит от многих факторов, невозможно дать единую и убедительную рекомендацию или руководство по этому поводу. Не следует забывать, что существуют конкретные и подходящие критерии возможности использования инновационных педагогических или информационно-коммуникационных технологий. Даже те, кто поднимает знамя нестандартности, новаторства или интерактивности, не должны отрицать тысячелетние (а может, и миллионные) традиции и опыт преподавания, огромный накопленный запас опыта. Не следует забывать о принципах взаимосвязи старого и нового, соразмерности базы и надстройки, совместимости традиции и инициативы. Труд учителя (педагога) должен оцениваться только по качеству знаний и умений подведомственных ему лиц.

Да, было бы справедливо оценивать по качеству знаний (не по уровню знаний, не по присвоенным рейтинговым баллам, не по уровню освоения), иными словами, эффективность преподавания в системе непрерывного образования сегодня является важным условием. к совершенствованию относится системный подход к образовательному процессу и оказанию услуг, состоящий из различных педагогических мероприятий. Это самая простая и основная истина преподавания. Только этот вид деятельности учителей (педагогов) в конечном итоге приводит к выполнению высокого социального заказа. Поэтому три социальные функции образования - образование, воспитание и развитие личности, конечно, также выполняются.

ВОПРОСЫ ОБУЧЕНИЯ ПРОФЕССИОНАЛЬНОЙ ТЕРМИНОЛОГИИ

Аннотация. Данная статья посвящена вопросам обучения профессиональной лексики в современном мире. В ней рассматривается важность владения специализированной терминологией для эффективной коммуникации и развития успешной карьеры. Описываются основные методы обучения профессиональной лексики, такие как интенсивное чтение материалов по специализированным темам, применение специальных словарей и участие в профессиональных дискуссиях. В статье подчеркивается значимость систематизации и изучения ключевых терминов для конкретной отрасли, а также необходимость постоянного обновления и расширения профессионального словарного запаса для успешного развития карьеры специалистов.

Ключевые слова: профессиональная лексика, обучение, проблемы, терминология, перевод, контекст, индивидуальные потребности, учебные материалы, эффективность, персонализированный подход, коммуникация, мотивация, карьерный рост, контекстуальные примеры, учебные задания.

ISSUES IN TRAINING PROFESSIONAL TERMINOLOGY

Annotation. This article addresses the issues surrounding the teaching of professional vocabulary in contemporary settings. It explores the significance of mastering specialized terminology for effective communication and career advancement. The main methods for teaching professional vocabulary, such as intensive reading of specialized materials, utilizing specialized dictionaries, and engaging in professional discussions, are discussed. The article emphasizes the importance of organizing and learning key terms specific to a particular field, as well as the necessity of continuously updating and expanding one's professional vocabulary for the successful career development of professionals.

Key words: professional vocabulary, training, problems, terminology, translation, context, individual needs, educational materials, effectiveness, personalized approach, communication, motivation, career growth, contextual examples, educational tasks.

Введение: Профессиональная лексика играет ключевую роль в успешной коммуникации в рабочей среде и является неотъемлемой частью развития карьеры специалиста. Овладение специализированной терминологией не только облегчает понимание профессиональных концепций, но и способствует эффективной работе в выбранной области деятельности. Однако обучение профессиональной лексике может столкнуться с различными проблемами, начиная от отсутствия качественных учебных материалов до недостатка персонализированного подхода к потребностям студентов.

В данной статье будут рассмотрены основные проблемы, с которыми сталкиваются как преподаватели, так и студенты при изучении профессиональной лексики, а также предложены пути их решения. Мы рассмотрим вопросы неоднозначности перевода специализированных терминов, отсутствия контекстуального включения в учебный процесс, недостаточного внимания к индивидуальным потребностям студентов и другие аспекты, влияющие на эффективность обучения профессиональной лексике. Понимание и разрешение данных проблем являются важными шагами в повышении качества обучения и успешном овладении студентами необходимыми знаниями и навыками для профессионального роста.

Существуют четыре основные проблемы обучения профессиональной терминологии:

1. Отсутствие специализированных учебных материалов: Недостаточное количество качественных учебных пособий и образовательных ресурсов, охватывающих разнообразные профессиональные темы и терминологию, создает проблему в доступе к необходимым материалам для обучения профессиональной лексике.

2. Неоднозначность перевода специализированных терминов: Перевод специфических профессиональных терминов на другие языки может быть проблематичным из-за различий в терминологии между разными языками, что затрудняет эффективное обучение и использование профессиональной лексики.

3. Отсутствие контекстуального включения в учебный процесс: Недостаток практических заданий и контекстуальных примеров использования профессиональной лексики в учебных программах может затруднять успешное освоение этого материала студентами.

4. Недостаточное внимание к индивидуальным потребностям студентов: Не учитывание специфических потребностей и интересов студентов при обучении профессиональной лексике может привести к недостаточной мотивации и затруднениям в усвоении новой терминологии, что усложняет процесс обучения.

Проблема №1: Неоднозначность перевода специализированных терминов.

Одной из основных проблем в обучении профессиональной лексике является неоднозначность перевода специализированных терминов. Многие профессиональные термины имеют узкую специализацию и не всегда имеют однозначный эквивалент в другом языке. При переводе таких терминов возникают сложности, связанные с выбором наиболее подходящего эквивалента, который передаст точный смысл и контекст использования исходного термина.

Неоднозначность перевода специализированных терминов может привести к неправильному пониманию и неверному использованию терминологии студентами. Это создает путаницу и затрудняет коммуникацию в профессиональной сфере, что может повлечь за собой ошибки в работе и непонимание ключевых концепций. Для решения данной проблемы необходимо проводить тщательный анализ профессиональной лексики, сопоставлять различные варианты перевода и объяснять студентам контекстуальное значение каждого термина. Важно также использовать примеры из реальной профессиональной практики для иллюстрации использования специализированных терминов и помочь студентам уяснить их значения в контексте конкретной отрасли или сферы деятельности.

Проблема №2: Неоднозначность перевода специализированных терминов.

Перевод специализированных терминов на другие языки представляет значительные трудности из-за разнообразия вариантов передачи смыслов и нюансов. Особенно это актуально в контексте профессиональной лексики, где точность и однозначность понимания терминов являются ключевыми. Отличия в терминологии между языками могут привести к переводам, не передающим полный смысл или контекст специализированных терминов. Проблема возникает из-за того, что некоторые профессиональные понятия и термины могут быть уникальными для определенной области знаний и не иметь прямого эквивалента в другом языке. Это создает сложности не только при обучении и понимании профессиональной лексики, но и при переводе качественного учебного материала для студентов, изучающих иностранный язык.

Часто возникает необходимость в разъяснении и толковании специализированных терминов для устранения неоднозначностей и ошибок в их переводе. Это требует от преподавателей и переводчиков глубокого понимания специфики использования профессиональной лексики в разных контекстах и обеспечивает необходимость постоянного совершенствования и расширения словарного запаса студентов, чтобы они могли успешно овладеть профессиональной терминологией и применять ее на практике.

Проблема №3: Отсутствие контекстуального включения в учебный процесс.

Отсутствие контекстуального включения в учебный процесс при обучении профессиональной лексике может осложнять усвоение и

понимание новых терминов студентами. Контекст играет ключевую роль в помощи учащимся увидеть реальные ситуации, в которых используется профессиональная лексика, что способствует более эффективному усвоению и применению терминов. Без соответствующих контекстуальных примеров и заданий студентам может быть сложно увидеть связь между изучаемыми словами и их конкретным использованием в профессиональной сфере. Это приводит к поверхностному пониманию лексики и затрудняет студентам применять новые термины на практике.

Для решения этой проблемы необходимо включать учебные материалы с реальными текстами, ситуациями из профессиональной жизни и кейсами, которые демонстрируют использование профессиональной лексики в реальном контексте. Такой подход поможет студентам лучше усваивать терминологию и понимать, как эти слова взаимодействуют в специфических областях знаний. Кроме того, активное использование новых терминов в различных контекстах и практических заданиях способствует более глубокому усвоению профессиональной лексики студентами.

Проблема №4: Недостаточное внимание к индивидуальным потребностям студентов.

Недостаточное внимание к индивидуальным потребностям студентов при обучении профессиональной лексике может привести к снижению эффективности образовательного процесса. Каждый студент имеет свой уровень знаний, интересы и специфические потребности по изучению профессиональной терминологии, и их учет играет важную роль в успешном освоении материала.

Заключение:

Обучение профессиональной лексике представляет собой важный аспект формирования языковых навыков и профессиональной компетенции. В ходе изучения данной темы возникают разнообразные проблемы, такие как неоднозначность перевода специализированных терминов, отсутствие контекстуального включения в учебный процесс, и недостаточное внимание к индивидуальным потребностям студентов.

Для эффективного преодоления данных проблем необходимо активно внедрять контекстуальные задания и материалы в учебный процесс, обеспечивать персонализированный подход к потребностям студентов, а также создавать условия для более глубокого и осмысленного усвоения профессиональной лексики. Преподаватели и обучающиеся должны сотрудничать и стремиться к обогащению словарного запаса, что позволит успешно преодолевать трудности, связанные с обучением профессиональной терминологии. Постоянное совершенствование методик обучения, учет специфики отраслей знаний и индивидуальных особенностей студентов являются ключевыми факторами для эффективного овладения профессиональной лексикой. Повышение качества образования

в этой области способствует успешной карьере выпускников и обеспечивает им необходимые инструменты для продвижения в выбранной профессиональной сфере.

FORMATION OF PROFESSIONAL COMPETENCE OF MATHEMATICS TEACHERS IN THE INFORMATION AND EDUCATION ENVIRONMENT

Abstract. In the article we discuss the issue of developing professional competence as a dynamic process of assimilation and modernization of professional experience, leading to the development of individual professional

qualities, accumulation of professional experience, implying continuous development and self-improvement

Key words: professional competence of a teacher, professional and personal qualities, rationalization, information and communication technologies (ICT). interdisciplinary connections.

Одной из главных в деле информатизации общества является роль информатизации образования - процесса, направленного на повышение качества содержания образования, а также внедрение и развитие новых информационных технологий во всех видах деятельности в национальной системе образования России (Концепция информатизации сферы образования)

Целью информатизации образования является рационализация интеллектуальной деятельности за счет использования информационных и коммуникационных технологий (ИКТ).

Важное значение приобретают не только прочные фундаментальные знания педагога, но и его способность оперативно реагировать на запросы динамично меняющейся действительности, постоянно пополняя свой интеллектуальный багаж новой информацией, непрерывно занимаясь самообразованием и максимально эффективно используя источники информации для решения образовательных проблем.

Сегодня невозможно представить себе процесс обучения без использования информационно-коммуникационных технологий (далее – ИКТ). ИКТ используются как непосредственно на занятиях, так и при подготовке к ним.

Дидактические возможности средств ИКТ, реализация которых создает предпосылки интенсификации образовательного процесса, а также создания методик, ориентированных на развитие интеллекта обучаемого, на самостоятельное извлечение и представление знания:

1. незамедлительная обратная связь между пользователем и средствами ИКТ, определяющая реализацию интерактивного диалога, который характерен тем, что каждый запрос пользователя вызывает ответное действие системы и, наоборот, реплика последней требует реакции пользователя;

2. визуализация учебной информации об изучаемом объекте, процессе (наглядное представление на экране: объекта, его составных частей или их моделей; процесса или его модели, в том числе скрытого в реальном мире; графической интерпретации исследуемой закономерности, изучаемого процесса);

3. моделирование и интерпретация информации об изучаемых или исследуемых объектах, их отношений, процессов, явлений как реальных, так и виртуальных (представление на экране математической, информационно-описательной, наглядной модели адекватно оригиналу);

4. архивирование, хранение больших объемов информации с возможностью лёгкого доступа к ней, ее передачи, тиражирования;

5. автоматизация процессов вычислительной, информационно-поисковой деятельности, а также обработки результатов учебного эксперимента с возможностью многократного повторения фрагмента или самого эксперимента;

6. автоматизация процессов информационно-методического обеспечения, организационного управления учебной деятельностью и контроля за результатами усвоения, которая включает в себя автоматизацию информационной деятельности и информационного взаимодействия между участниками образовательного процесса с помощью локальных и глобальной компьютерных сетей.

Повышение эффективности и качества образовательного процесса может быть обеспечено за счёт реализации уникальных, с точки зрения педагогики, возможностей средств ИКТ, которые были перечислены выше. При этом развиваются побудительные мотивы (стимулы) к получению образования, обуславливающие активизацию познавательной деятельности с использованием средств ИКТ, углубляются межпредметные связи за счёт использования современных средств обработки информации, в том числе и аудиовизуальной. Одной из главных задач по формированию предметно-педагогической ИКТ-компетентности учителя математики является задача развития навыков использования ИКТ при решении математических задач.

Новые образовательные стандарты предъявляют новые требования к интеллектуальному развитию учащихся, в частности посредством изучения математики. Одним из вариантов эффективного решения этой задачи является использование современных ИКТ. Интернет–викторины, олимпиады, конкурсы становятся популярными и востребованными формами работы учащихся, а участие в них способствует формированию и развитию умственных способностей, в частности критического мышления учащихся.

Под профессиональной компетентностью учителя понимается совокупность профессиональных и личностных качеств, необходимых для успешной педагогической деятельности. Профессионально компетентным можно назвать учителя, который на достаточно высоком уровне осуществляет педагогическую деятельность, педагогическое общение, достигает стабильно высоких результатов в обучении и воспитании учащихся.

Развитие профессиональной компетентности – это развитие творческой индивидуальности, формирование восприимчивости к педагогическим инновациям, способностей адаптироваться в меняющейся педагогической среде

Исходя из современных требований, можно определить основные пути развития профессиональной компетентности педагога:

- Работа в методических объединениях, творческих группах;
- Исследовательская, экспериментальная деятельность;
- Инновационная деятельность, освоение новых педагогических технологий;
- Различные формы педагогической поддержки;
- Активное участие в педагогических конкурсах, мастер-классах, форумах и фестивалях;
- Обобщение собственного педагогического опыта;
- Использование ИКТ.

Развитие профессиональной компетентности – это динамичный процесс усвоения и модернизации профессионального опыта, ведущий к развитию индивидуальных профессиональных качеств, накоплению профессионального опыта, предполагающий непрерывное развитие и самосовершенствование.

Говоря о профессиональной компетентности учителя нельзя не сказать о создании портфолио учителя. Портфолио есть отражение профессиональной деятельности, в процессе формирования которого происходит самооценивание и осознается необходимость саморазвития. С помощью портфолио решается проблема аттестации педагога, т.к. здесь собираются и обобщаются результаты профессиональной деятельности. Создание портфолио – хорошая мотивационная основа деятельности педагога и развития его профессиональной компетентности.

Для успешной работы на уроке компетентный учитель должен придерживаться требований к содержанию и методике проведения урока.

- Требования к содержанию урока.
 - Научность.
 - Воспитывающий и развивающий характер каждого урока.
 - Осуществление связи с жизнью, теории с практикой.
 - Содержание коллективных форм работы учащихся с групповыми и индивидуальными.
 - Организация активной познавательной деятельности учащихся.
 - Сочетание изложения материала учителем с самостоятельной работой учащихся по приобретению новых знаний и умений применять их на практике.
 - Оперативный контроль со стороны учителя за деятельностью класса в целом и отдельных учащихся.
- Требования к методике проведения урока.
- Применяемые на уроке методы и приемы обучения должны способствовать тому, чтобы урок был эмоциональным, вызывал интерес к учению, воспитывал потребность в знаниях
 - Темп и ритм урока должны быть оптимальными, действия учителя и учеников завершенными.

- Необходимы полный контакт по взаимодействию учителя и учащихся на уроке, педагогический такт.

- Необходимо создание атмосферы доброжелательности и активного творческого труда.

- Чередовать по возможности виды деятельности учащихся, сочетать разнообразные методы и приемы обучения.

- Большую часть урока учащиеся должны активно работать над овладением знаниями и умениями.

- Всем учебным процессом на уроке управляет учитель.

Таким образом, компетентность учителя — это синтез профессионализма (специальная, методическая, психолого-педагогическая подготовка), творчества (творчество отношений, самого процесса обучения, оптимальное использование средств, приемов, методов обучения) и искусства (актерство и ораторство).

Большой опыт работы в профильных классах и обладая профессиональной компетентностью, позволяет мне успешно проводить факультативные, активные и обычные уроки по темам из углубленного курса, что хорошо помогает учащимся на экзаменах.

Таким образом, организация учебных занятий по математике на основе информационных технологий либо с использованием их элементов, создание или использование (доработка) завершённого проекта тестовой обучающей программы по математике, создание набора презентаций для использования на занятиях – вот неполный перечень функций учителя математики, для выполнения которого необходимо обладать предметно-педагогической ИКТ-компетентностью.

DEVELOPMENT OF CREATIVE ABILITIES OF CHILDREN WITH DISABILITIES

Abstract. In the article we consider the conditions for the formation of creative abilities for children with disabilities.

Key words: inclusion, special child, development of creative abilities of children with disabilities, formation of a creative personality, children with special needs, creation of conditions, socialization, structure of classes #concept of creativity, ability to create in children with disabilities, difficulties in children with disabilities, conclusions on development of creative abilities of children with disabilities.

Одной из важных тенденций государственной политики в области образования является особая забота и внимание к детям с ограниченными возможностями здоровья. Обозначена необходимость создания условий «для получения без дискриминации качественного образования лицами с ограниченными возможностями здоровья».

Не так давно вошли в педагогический обиход такие понятия, как «особый» ребёнок, «ребёнок с ограниченными возможностями» и даже – «особенная семья». Современный подход в вопросе оказания помощи и поддержки детям с ОВЗ ориентирован на включение их в среду обычных сверстников, что отражает собой реализацию прав детей на получение образования.

Развитие творческих способностей, для детей с ОВЗ имеют важное значение, так как способствуют раскрытию личного потенциала, реализации себя, участие в творчестве и созидании, приобретение опыта успешности в какой-либо области за счет своих способностей и трудолюбия. Ребёнок с ОВЗ, участвуя в творческой деятельности, может пройти путь от интереса, через приобретение конкретных навыков, к профессиональному самоопределению, что так же важно для успешной социализации. Развивая творческие способности у детей с ОВЗ, мы, педагоги, создаем условия для успешной адаптации в социум

В основе взаимодействия с ребенком в учебной деятельности лежит принцип успешности каждого обучающегося, что требует особых педагогических средств и способов. Методической основой организации этой деятельности являются дополнительные общеобразовательные общеразвивающие программы по приоритетным направлениям работы учреждения, отвечающие социальному заказу родителей и общества на развитие творческой и активной личности.

Творческая деятельность, оказывает большое значение в жизни человека, тем более она оказывает большое значение в жизни детей с ограниченными возможностями здоровья. В процессе творческой деятельности у ребенка с потребностями усиливается ощущение собственной личностной ценности, активно строятся индивидуальные социальные контакты, возникает чувство внутреннего контроля и порядка. Кроме этого, творчество помогает справиться с внутренними трудностями, негативными переживаниями, которые кажутся непреодолимыми для ребенка. Свои чувства и эмоции, а также знание и отношение ребенку легче выразить с помощью зрительных образов, чем вербально, следует отметить, что некоторые дети ограничены или вообще лишены возможности говорить или слышать, тогда невербальное средство оказывается единственным инструментом, вскрывающим и проясняющим интенсивные чувства и убеждения. Необходимо учитывать также тот факт, что средства творчества предоставляют ребенку возможность для выражения чувств, в свойственной ему манере, понижая их активность. Если ребенок

робок и боязлив, не уверен в своих силах, для него очень полезно творчество. Творческая деятельность, позволяет ребенку выйти из состояния зажатости. Дети с особенностями развития имеют множество ограничений в различных видах деятельности. Они не самостоятельны и нуждаются в постоянном сопровождении взрослого. Они лишены широких контактов, возможности получать опыт от других сверстников, которые есть у обычного ребенка. Их мотивация к различным видам деятельности и возможности приобретения навыков сильно ограничены. Трудности в освоении окружающего мира приводят к возникновению эмоциональных проблем у таких детей (страх, тревожность и т. д.). Часто мир для них кажется пугающим и опасным. Невозможность выразить свои переживания, например, в игре, как это происходит у обычных детей, приводит к возрастанию эмоционального напряжения, как следствие, к возникновению проблем в поведении. Это становится серьезным препятствием в развитии ребенка. Также нужно отметить, что познавательная активность ребенка зависит от уровня активности, а у ребенка с особенностями развития собственная активность снижена.

Для развития творческих способностей детей с ОВЗ используются нетрадиционные техники: тестопластика, экспериментирование различных художественных материалов, работы из природного материала (семян, крупы, опилок, стружки, скорлупы и т.д.), дидактические игры, плетение бисером, бумаговырезание(вытынанка). Творческая работа с разными художественными материалами и техникой стимулирует интерес детей к прикладному творчеству и являются необходимым условием формирования творческой личности ребенка. На занятиях идет обобщение накопленного детьми умения пользоваться разными художественными материалами, и перевод их представления о художественных материалах на более высокий уровень. На каждой новой ступени познания дети возвращаются уже к знакомой технике работы там, где это возможно (метод «забегания вперед» и «возвращения к пройденному»). Если художественно-творческая деятельность детей на индивидуальных занятиях протекает на эмоционально-чувственной основе, то, на групповые занятия выстраиваются на познавательно-аналитическом уровне, обязательно с сохранением в ней эмоционально-образного, творческого начала.

Работа по развитию творческих способностей у детей с ограниченными возможностями здоровья трудна, но богата развивающими идеями. И это важно не только для обучающихся, но и для педагога. Нужно постоянно помнить, что каждый ребенок должен иметь возможность получить такое образование, которое позволит ему достичь максимально возможного для него уровня развития. Все дети рождаются со своими природными задатками, талантами и возможностями. Перед нами, педагогами, стоит задача - раскрыть природные способности ребенка, помочь ребенку познать мир своим путем.

Положительные результаты, достигнутые в ходе работы с детьми, убеждают в том, что начатая деятельность востребована, необходима и значима для интеллектуального и творческого развития личности, и требует своего продолжения на следующих ступенях образования.

Таким образом, поддержать и развить индивидуальность ребенка, не растерять, не затормозить рост его способностей – это особо важная задача обучения таких детей.

На каждом занятии стараюсь увеличивать социальную активность детей, развивать доверие к педагогу, создаю ситуации успеха, или даю учащимся такие задания, решение которых требует от ребёнка проявления самостоятельности. Через такое познание окружающего мира и взаимодействие со взрослыми и происходит получение ребёнком первого положительного опыта социализации.

Поскольку работа требует большой концентрации внимания и усидчивости, во время занятий необходимо все время поддерживать интерес детей. С этой целью, во-первых, предоставляю детям возможность выбора, во-вторых, работу разделяю на несколько этапов, которые энергично будут сменять друг друга с проведением физминуток и пальчиковой гимнастики. Для релаксации и создания ребенком выразительного художественного образа использую музыкальное сопровождение, которое способствует созданию атмосферы творчества, взаимного сопереживания. Обязательно использую различные способы восхищения любыми успехами детей.

В рамках общего школьного образования детям с ОВЗ предоставлены «скудные» возможности развития творческих способностей, а дополнительное образование создает специальные условия, комфортная «домашняя» обстановка, которая помогает раскрыть у обучающихся природные дарования. Удовлетворение от общения со сверстниками располагает к доверительным отношениям. Положительный эмоциональный фон способствует плодотворному обучению и воспитанию детей с ОВЗ.

Успешное освоение творческой деятельности способствует интеллектуальному развитию ребенка, помогает в формировании других видов деятельности. Поэтому огромное коррекционное значение в жизни детей с нарушениями имеют занятия прикладной, творческой направленности. Известно, что процесс изображения предметов и явлений окружающего мира сложен по своей природе и связан с развитием личности ребенка, с формированием его чувств и сознания. В процессе усвоения детьми ряда навыков происходит совершенствование тонкой моторики рук. Как сказал В.А.Сухомлинский: «Истоки творческих способностей и дарований детей на кончиках их пальцев. От пальцев, образно говоря, идут тончайшие ручейки, которые питают источник творческой мысли. Другими словами, чем больше мастерства в детской ладошке, тем умнее ребенок».

Итак, развитие творческих способностей, для детей с ОВЗ, имеет важное значение, так как способствует раскрытию личного потенциала, реализации себя, участие в творчестве и созидании, приобретение опыта успешности в конкретной области за счет своих способностей и трудолюбия. Ребёнок с ОВЗ, участвуя в творческой деятельности, может пройти путь от интереса, через приобретение конкретных навыков, к профессиональному самоопределению, что так же важно для успешной социализации. Развивая творческие способности у детей с ОВЗ, создаем условия для успешной адаптации в социум, равные возможности для дальнейшего существования в нем.

Для развития творческих способностей используются нетрадиционные техники(тестопластика; витраж, коллаж с применением стружки, крупы, семян, пуговиц, скорлупы; декупаж, папье-маше, комбинированная аппликация – применение войлока, ткани, кружева, тесьмы, пряжи и т.д).Перечисленные техники привлекательны своеобразной художественной выразительностью, содержат элементы новизны, активизируют индивидуальные способности детей, дают неограниченные возможности для импровизации сочетания самых разных материалов. Их можно и нужно расширять, и совершенствовать с учетом возраста и интересов учащихся, а также с учетом индивидуального подхода к развитию творческих способностей каждого ребенка.

Как показывает опыт, использование нетрадиционной техники выводит ребенка за привычные рамки прикладного творчества, пробуждает в них интерес к самостоятельному творчеству, к эксперименту, раскрепощает, помогает детям избавиться от комплекса «я не умею», «у меня не получается», «я не сделаю правильно». Они начинают работать смелее, увереннее, независимо от степени их способностей. Доступность использования нетрадиционных техник определяется возрастными особенностями детей. «Не навязывать ничего такого, что не соответствует возрасту и методу обучения ...учитывать при обучении возрастные особенности детей ...двигаться вперед, не спеша...от простого к сложному» (Я.А.Коменский)

Мы, педагоги, не имеем возможность помочь детям с ОВЗ решить проблемы со здоровьем, но в наших силах помочь им решить вторую проблему – расширить круг их общения, научить их реализовать себя, не дать им замкнуться в себе, показать детям широту внешнего мира.

**ИЗУЧЕНИЕ ПРОЦЕССА ПОЛУЧЕНИЯ АММИАЧНОЙ СЕЛИТРЫ
С УЛУЧШЕННЫМИ СВОЙСТВАМИ ПУТЕМ ОБРАБОТКИ
НЕДОПАЛОМ (ШЛАМ) - ОТХОДАМИ ТЕХНОГЕННОГО
ПРОИЗВОДСТВА НА АММИАЧНУЮ СЕЛИТРУ ИЛИ ЕЕ ПЛАВ**

Аннотация. Среди минеральных азотсодержащих удобрений аммиачная селитра (АС) занимает ведущее место, так как является доступным по цене безбалластным удобрением с высокой концентрацией питательных веществ и сбалансированным содержанием аммонийной и нитратной форм азота.

Основными недостатками, ограничивающими распространение аммиачной селитры, являются физиологическая кислотность, гигроскопичность, слеживаемость, недостаточная механическая прочность гранул, термическая нестабильность и взрывоопасность. АС является окислителем, способным поддерживать горение, и сама детонировать под воздействием некоторых внешних факторов. Существенным недостатком является также полиморфизм, приводящий к нежелательным изменениям физико-химических и механических свойств удобрения при хранении и транспортировке.

Ключевые слова: аммиачная селитра, плав, недопал (шлам) - отход техногенного производства, статическая прочность, слеживаемость.

**STUDY OF THE PROCESS OF OBTAINING AMMONIUM NITRATE
WITH IMPROVED PROPERTIES BY TREATING NON-FERROUS
(SLUDGE) - WASTE FROM MAN-MADE PRODUCTION FOR
AMMONIUM NITRATE OR ITS SURFACTANTS**

Abstract. Ammonium nitrate (AS) occupies a leading place among mineral nitrogen-containing fertilizers, as it is an affordable ballast-free fertilizer with a

high concentration of nutrients and a balanced content of ammonium and nitrate forms of nitrogen.

The main disadvantages limiting the spread of ammonium nitrate are physiological acidity, hygroscopicity, traceability, insufficient mechanical strength of granules, thermal instability and explosion hazard. AC is an oxidizing agent capable of supporting gorenje, and itself detonates under the influence of some external factors. A significant disadvantage is also polymorphism, which leads to undesirable changes in the physico-chemical and mechanical properties of the fertilizer during storage and transportation.

Keywords: ammonium nitrate, plav, nedopal (sludge) - waste from man-made production, static strength, traceability.

Цель работы. Изучение процесса получения аммиачной селитры с улучшенными свойствами путем обработки недопалом (шлам) - отходами (CaCO_3) техногенного производства на аммиачную селитру или ее плав.

Методология. Введение в плав NH_4NO_3 измельченного недопала (шлама) - отхода (CaCO_3) техногенного производства с последующим гранулированием нитратно-карбонатных расплавов методом приллирования, а также определение состава и свойств продукта согласно ГОСТа 2-2013.

Научная новизна. Выявлено, что применение добавки недопала (шлама) - отхода (CaCO_3) техногенного производства в плав NH_4NO_3 при весовом соотношении от 100:5 до 100:40 прочность гранул АС увеличивается в 2,56 раза, а скорость их растворения снижается в 2,12 раза по сравнению со стандартной селитрой, производимой в АО «Ферганаазот» по ГОСТу 2-2013. Заодно утилизируется недопал (шлам)-техногенные отходы, образующиеся в отделении химической водоподготовки (корпуса 361) цеха по производству пищевой соды, нейтрализации и очистке промышленных сточных вод в АО «Ферганаазот». Согласно постоянного технологического регламента данного цеха ежегодно образуется в порядке 300÷500 тыс. тонн исходя из производительности агрегата.

Полученные данные. Для получения образцов аммиачной селитры с улучшенными свойствами массовое соотношение $\text{NH}_4\text{NO}_3:\text{CaCO}_3$ варьировалось от 100:5 до 100:40. Для гранулирования нитратно-карбонатного расплава применён метод приллирования. Изучены состав и свойства новых видов удобрений. Показано, что при соотношении $\text{NH}_4\text{NO}_3:\text{CaCO}_3 = 100:20$ продукт содержит 28,67% N, 11,2% CaO и имеет прочность гранул 4,07 МПа, что на 2,56 раза превышает прочность гранул чистой АС (1,59 МПа). Время полного растворения гранул чистой АС в воде составляет 44,1 сек. С увеличением доли известняка до $\text{NH}_4\text{NO}_3:\text{CaCO}_3 = 100:40$ недопал (шлам) - отход техногенного производства время полного растворения гранул аммиачной селитры с улучшенными свойствами неуклонно растёт и достигает 93,4 сек.

Введение. АС является одним из наиболее эффективным и самым распространенным в мире азотным удобрением. Её можно применять на всех типах почв и под все сельскохозяйственные культуры. Она вносится как основное удобрение и в подкормку. Её мировое производство превышает 43 млн. тонн в год. Самые крупные мощности по её производству находятся в США и России – доля каждой из этих стран в общемировых мощностях оцениваются чуть более 13% [1-3]. В Узбекистане три крупных предприятия: АО «Максам-Чирчик», «Навоиазот» и «Ферганаазот» производят её для сельского хозяйства.

Совокупная мощность этих трёх заводов составляет 1,7 млн. тонн селитры в год. Но данное удобрение имеет два очень серьёзных недостатка – это её слёживаемость при хранении и повышенная взрывоопасность [4, 5]. Если со слёживаемостью научились бороться путём введения в селитру различных добавок, то проблема взрывоопасности полностью не решена. Для устранения слёживаемости селитры в неё вводят сульфатную, сульфатно-фосфатную, сульфатнофосфатно-боратную добавки, каустический магнезит и другие вещества [1]. Наилучшей из них является каустический магнезит.

Взрывы с нитратом аммония привели к тому, что в ряде стран к нему стали добавлять карбонаты кальция и магния, в результате которых была устранена всякая его опасность. Этот продукт поступает в продажу под названием CAN – «Известково-аммиачная селитра» (ИАС) или аммиачная селитра с доломитом. Доля мощностей производства CAN в мире оценивается примерно в 7% [3]. В мире CAN с содержанием азота 20-33.5% производят и поставляют 42 фирмы, из них в Европе – 31 фирма [6, 7].

Хотя ИАС в гранулированном виде при содержании в ней азота до 32% не взрывоопасна, при концентрациях азота свыше 28-29% сильно возрастают ее взрывоопасные свойства, в результате образующейся в процессе истирания гранул пыли продукта, поэтому в качестве предельно допустимого содержания азота в ИАС принимается величина 29% [8].

Получения экспериментальных образцов и их изучении.

Опыты проводились следующим образом: гранулированную аммиачную селитру производства АО «Ферганаазот» (марки в, АС с содержанием 34,4% N по ГОСТ 2-2013) разжижали в металлической емкости на электроплите. При температуре 170-175°C в жидкость после гашения извести добавляли недопал (шлам) - отходы техногенного производства, равномерно перемешивая в соотношении 100:(5-40), без изменения температуры. Предварительные результаты показали, что добавление в жидкость АС после гашения извести недопала (шлама) - отходов техногенного производства значительно снижает температуру кристаллизации жидкости (до 150-155°C). Жидкость перемешивают в течение 10-15 минут и доводят до однородного состояния, после чего переливают в емкость (стакан) из нержавеющей (лигированной) стали с

целью гранулирования, в результате протекания которой через отверстия диаметром 1,2 мм на дне емкости образуются капли, падающие с высоты 8-12 метров. В этом случае было получено удобрение аммиачной селитры с улучшенными свойствами, по внешнему виду напоминающее стандартные зерна АС.

Масса охлаждалась, а затем отсеивалась по размерам частиц. Частицы размером 2-3 мм подверглись испытанию на прочность по ГОСТ 2-2013. После чего продукты измельчались и анализировались по известным методикам [9]. По изменению содержания CO_2 рассчитывали степень декарбонизации карбонатного сырья. Эксперимент проводился на измерителе рН 10% раствора (экспериментального) образцов, оснащенный стационарным рН-метром F20-Standard Five Easy, включающим универсальный пластиковый рН-электрод 3-в-1 1e438 и встроенным тепловым датчиком [10,11,12]. Для определения скорости растворения гранул изучаемых удобрений, гранулу продукта опускали в стакан со 100 мл дистиллированной водой, в котором визуально наблюдали и фиксировали полное её растворение. Температура комнатная, испытания пятикратные. Результат измерения рН рассчитывался по результатам двух параллельных измерений рН1 и рН2, расхождение между которыми при вероятности достоверности $P = 0,95$ не превышало критерия эталона (Р) % контроля практической (оперативной) повторяемости [12].

Относительная погрешность обнаружения не превышала 1,5%.

В ходе проведения экспериментов было установлено, что при взаимодействии расплава NH_4NO_3 с известняком при вышеуказанных температурах в реакционной массе наблюдается образование быстро-разрушаемой мелкоячеистой пены. Это говорит о том, что карбонаты, входящие в состав известняка подвергаются частичному разложению, т.е. декарбонизации, что свидетельствует о протекании реакции между NH_4NO_3 и CaCO_3 . При этом образуются $\text{Ca}(\text{NO}_3)_2$, NH_3 , CO_2 и пары воды. В связи с этим, мы определили степень декарбонизации известняка в зависимости от его количества, добавляемого в расплав селитры.

В этой статье рассматривается аммиачная селитра АС (с содержанием азот 28%) с улучшенными свойствами, обработанная недопалом (шлам) – техногенными отходами, и особое внимание уделяется изменению объема. Важные формы кристаллической структуры V, IV, III, II и I соответствуют температуре от -50 до +150°C.

Производственный процесс состоит из следующих технологических этапов:

- нейтрализация азотной кислоты аммиаком;
- увеличение концентрации (выпарка) раствора аммиачной селитры;
- подготовка недопала (шлама) - техногенного отхода;
- приготовление смеси с добавлением добавок в концентрированный раствор (плав) аммиачной селитры;

- гранулирование полученной смеси (плава);
- охлаждение готового продукта (в кипящем слое) и классификация;
- упаковка готовой продукции по требованию.

Нитрат кальция, как и нитрат магния, является гигроскопичным продуктом, с которым трудно работать. Это влияет на переход IV→III, повышая температуру перехода до 50°C, переход III→II практически не влияет. Под давлением происходит прямой переход от II к IV, но при понижении давления он возвращается к форме II. Одним из способов получения нитрата кальция является получение карбоната кальция в соответствии с реакцией:

Добавление карбоната кальция также помогает свободной азотной кислоте, оставшейся после реакции нейтрализации, связываться с известняком и предотвращать переходы, тем самым уменьшая изменение объема. Образование кристалла (зародыша) приводит к затвердеванию раствора.

Хотя полученная нитрат кальция положительно влияет на фазовый переход, выделение углекислого газа и аммиака, например, при гранулировании, приводит к снижению плотности продукта из-за его внутренней структуры.

Присутствие карбоната кальция может выступать в роли pH-буфера – под его действием нейтрализуется слабокислотная среда раствора, но это может повлиять на безопасность продукта из-за выделения углекислого газа при затвердевании. Влияние выбросов углекислого газа на внутреннюю структуру гранул показано на рисунке 1. Внутри гранул образуется ряд пустот, в результате чего их консистенция уменьшается и составляет >0,9 кг/дм³.

Рис. 1. SEM-изображение пористости аммиачной селитры, вызванной выделением CO_2 во время затвердевания

Гранулированное минеральное удобрение, содержащее 80% аммиачной селитры и 20% дополнительных минералов, снижает содержание азота в готовом продукте до 27-28%, что снижает уровень пожарной и взрывобезопасности при хранении, транспортировке этого минерального удобрения, повышает агрохимическую эффективность удобрения, снижает количество внесения удобрений в почву, а также снижает негативное воздействие на окружающую среду [6].

На рисунке 2 показан типичный пример кинетики при 44°C. На переход влияет добавление разного количества безводной муки карбоната кальция. Первые переходы наиболее понятны и логичны.

Рис. 2. Влияние недопала (шлама) - техногенного отхода в количестве 10% и 20% на кинетику перехода IV→III аммиачной селитры по ГОСТ 2-2013.

Прочность гранул удобрений, полученных введением в расплав нитрата аммония недопала (шлама) - техногенного отхода

Количество плава, г	Количество добавки, г	N, %	Прочность гранул		
			кг/гранул	кгс/см ²	МПа
АС по ГОСТ 2-2013	0	34,4	0,8	16,3	1,59
100	5	32,76	1,76	23,73	2,33
100	10	31,27	2,23	25,15	2,47
100	15	29,91	2,46	36,90	3,62
100	20	28,67	2,65	41,52	4,07
100	25	27,52	2,73	46,10	4,52
100	30	26,46	2,85	49,19	4,82
100	35	25,48	2,93	53,69	5,26
100	40	24,57	3,13	58,38	5,72

Диаграмма 1. Влияние количества недопала (шлама) - техногенного отхода на прочность готовой продукции

Как видно из диаграммы 1, прочность гранул NH_4NO_3 по ГОСТ 2-2013 составляет 1,59 МПа. Прочность гранул аммиачной селитры, полученных при исследовании весового соотношения $\text{NH}_4\text{NO}_3:\text{CaCO}_3$, находится в пределах 2,33-5,72 МПа. Высокая прочность гранул АС с недопалом (шлам) - техногенным отходам свидетельствует о повышении ее термической стабильности.

Время полного растворения гранул АС по ГОСТ 2-2013, взятых в качестве образцов, составляет 44,1 секунды. С увеличением доли недопала (шлама) - техногенных отходов в смеси с аммиачной селитрой время полного растворения гранул готовой продукции постоянно увеличивается и достигает 93,4 сек. Для образца $\text{NH}_4\text{NO}_3:\text{CaCO}_3 = 100:20$. Это говорит о том, что полученные удобрения вымываются из почвы значительно медленнее (в 2,12 раза меньше), чем чистые АС по ГОСТ 2-2013. Эта добавка нейтрализует кислотность среды в продукте от $\text{pH}=5,0$ до 6,79-7,41.

Изучены состав и свойства образцов удобрений, полученных обработкой в широком массовом соотношении $\text{NH}_4\text{NO}_3:\text{CaCO}_3$ (от 100:5 до 100:40). При этом при соотношении $\text{NH}_4\text{NO}_3:\text{CaCO}_3 = 100:20$ продукт содержит 28,67% N, 11,2% CaO и имеет прочность гранул 4,07 МПа, что в 2,56 раза выше прочности гранул АС по ГОСТ 2-2013 (1,59 МПа).

Вывод. Использование для нужд сельского хозяйства АС с улучшенными свойствами за счёт добавления недопала (шлама) - отхода техногенного производства имеет большое значение с точки зрения безопасности, что заметно упрощает процедуру приобретения данного вида удобрения и открывает широкие возможности его экспорта. То есть за счет снижения содержания азота в аммиачной селитре (с содержанием азот 28%)

введением в неё ~26% более дешевого Ca^{2+} содержащего добавка, как недопал (шлам) - отход техногенного производства, также мела, известняка и др. удастся сделать селитру экономически привлекательной. К тому же по цене АС с магнизиальной добавкой значительно превышает стоимость нового продукта, ещё исключается ряд пошлин при её экспорте. Пошлина на АС (с содержанием азот 28%) с улучшенными свойствами не распространена благодаря её взрыво- и пожаробезопасности.

Разумеется, данного удобрения целесообразнее всего производить на существующих для выпуска АС агрегатах с грануляционными башнями при их минимальной реконструкции. Сохраняется при этом в полном объеме мощность по выпуску АС, а перенастройка с производства аммиачной селитры на выпуск АС (с содержанием азот 28%) с улучшенными свойствами и обратно занимает минимальное количество времени.

Из приведенных результатов можно сказать, что на базе цехов аммиачной селитры предприятий по производству минеральных удобрений, используя имеющиеся ресурсы и мощности, можно наладить производство аммиачной селитры этого нового вида с улучшенными свойствами.

ИСТРЕБОВАНИЕ НЕДВИЖИМОГО ИМУЩЕСТВА В УСЛОВИЯХ ОБЩЕЙ СОБСТВЕННОСТИ ПРОБЛЕМЫ И ПЕРСПЕКТИВЫ

Аннотация. В статье обсуждаются проблемы, возникающие при истребовании недвижимого имущества в условиях общей собственности, а также пути их решения и перспективы развития практики в Российской Федерации. Основное внимание уделяется сложностям, связанным с юридическими конфликтами между совладельцами, техническими и документальными трудностями, а также недостаточностью законодательной базы. В статье также исследуются основные принципы общей собственности, включая ее разновидности: долевую и совместную, и анализируются особенности их распоряжения. Статья также описывает этапы процесса истребования имущества, начиная с подачи виндикационного иска и заканчивая исполнением судебных решений. Обсуждаются возможные проблемы, возникающие в процессе, и предлагаются решения, которые могут помочь упростить и ускорить процедуру истребования имущества в условиях общей

Ключевые слова: Общая собственность, совместная собственность, долевая собственность, истребование имущества, незаконное владение.

CLAIM OF REAL PROPERTY IN CONDITIONS OF COMMON PROPERTY PROBLEMS AND PROSPECTS

Annotation. The article discusses the problems that arise when claiming real estate under conditions of common ownership, as well as ways to solve them and prospects for the development of practice in the Russian Federation. The main attention is paid to the difficulties associated with legal conflicts between co-owners, technical and documentary difficulties, as well as the insufficiency of the legislative framework. The article also examines the basic principles of common property, including its varieties: shared and joint, and analyzes the features of their disposal. The article also describes the stages of the process of reclaiming property, starting with the filing of a vindication claim and ending

with the execution of court decisions. Possible problems arising in the process are discussed and solutions are proposed that can help simplify and speed up the procedure for claiming property in a general

Key words: common property, joint property, shared ownership, reclaiming property, illegal possession.

Рассматриваемая тематика в современной России имеет значительную актуальность и затрагивает неоспоримо широкий спектр вопросов, связанных с правом собственности, общим владением недвижимостью. Причинами актуальности этой темы является:

1) Рост числа объектов общей собственности, связано это непосредственно с наследованием недвижимости, совместным приобретением, долевым строительством.

2) Возникающие юридические сложности, образующиеся вследствие возникновения противоречий между совладельцами, которые в своем заключении, несомненно, способны привести к судебным разбирательствам.

3) Судебная практика и недостаточное развитие законодательной базы в данной сфере, образуется данная причина в виду относительно недавнего возникновения вопросов относительно совместной собственности.

Для наиболее полного изучения данного вопроса необходимо разобраться с некоторыми теоретическими терминами, так, под общей собственностью понимается правовой режим, при котором имущество принадлежит нескольким лицам одновременно. Гражданский кодекс Российской Федерации устанавливает два основных вида общей собственности: долевая и совместная.

1. Долевая собственность: при долевой собственности каждый собственник имеет определенную долю в праве собственности. Эти доли могут быть равными или различными. Важно, что собственник доли имеет право на распоряжение своей долей, включая продажу, дарение или передачу по наследству.

2. Совместная собственность: в случае совместной собственности доли конкретно не определены, и имущество принадлежит всем собственникам на равных условиях. Примеры совместной собственности включают имущество супругов и общее имущество в крестьянском (фермерском) хозяйстве, о чем свидетельствует разъяснения, данные в пункте 15 Постановления Пленума Верховного Суда Российской Федерации от 5 ноября 1998 № 15.

Вопросы общей собственности регулируются главой 16 Гражданского кодекса Российской Федерации, содержащей ключевые статьи, касающиеся общей собственности. В частности, статьи 244–259.4 определяют принципы общей собственности, права и обязанности собственников, а также

механизмы распоряжения общей собственностью. Помимо нормативного разграничения долевой и совместной собственности данный вопрос также освещается многими исследователями в данной области.

Помимо всего прочего с общей собственностью есть ряд проблем, таких как:

1. Конфликты интересов: общая собственность может создавать конфликты между совладельцами, особенно если у них разные планы на использование имущества или разные доли в праве собственности.

2. Сложности в распоряжении имуществом: из-за необходимости согласования с другими собственниками распоряжение общей собственностью может быть сложным и замедленным процессом.

Согласно статье 244 ГК РФ, долевая собственность возникает, когда имущество принадлежит нескольким лицам с определением долей. Каждая доля выражена в виде дроби или процента от общего имущества. Долевая собственность допускает возможность распоряжения своей долей без согласования с другими собственниками, однако при этом необходимо учитывать права и интересы других совладельцев.

Распределение прав и обязанностей в долевой собственности происходит следующим образом: каждый собственник имеет право на пропорциональное использование общей собственности, пропорционально своей доле. В случае распоряжения долей, совладельцы имеют преимущественное право на покупку, известное как "право преимущественной покупки". Решения о совместном использовании и распоряжении имуществом принимаются большинством голосов, при этом количество голосов пропорционально долям.¹⁵⁰

Особенности распоряжения совместной собственностью состоят в том, что доли заранее не разделены, распоряжение имуществом обычно требует согласия всех собственников.¹⁵¹ Это может усложнить процесс принятия решений и передачи прав на имущество. Однако в случае развода супругов или раздела фермерского хозяйства, доли могут быть определены в процессе раздела имущества.

Распоряжение имуществом при долевой собственности характеризуется тем, что каждый собственник имеет более широкую свободу действий в отношении своей доли, в то время как в совместной собственности требуется согласие всех совладельцев. Это делает совместную собственность более консервативной в плане управления и

150 Постановление Пленума Верховного Суда РФ от 05.11.1998 N 15 (ред. от 06.02.2007) "О применении судами законодательства при рассмотрении дел о расторжении брака" [Электронный ресурс] - URL: https://www.consultant.ru/document/cons_doc_LAW_20961/ (дата обращения: 25.04.2024).

151 Определение Судебной коллегии по экономическим спорам Верховного Суда РФ от 14.12.2016 № 306-КГ17-10913 [Электронный ресурс] URL: <https://m.kad.arbitr.ru/kad/card?number=%d0%b055-14320%2f2016> (дата обращения: 25.04.2024).

использования. Таким образом преимуществами долевой собственности можно назвать:

1) **Меньший риск конфликтов:** в долевой собственности, наличие четко определенных долей может уменьшить риск конфликтов, поскольку права каждого совладельца определены законом. В совместной собственности, отсутствие четких долей может привести к разногласиям при попытках распоряжаться имуществом.

2) **Удобный раздел собственности:** в случае раздела имущества, долевая собственность обычно позволяет организовать более гладкий процесс, так как доли уже определены. В совместной собственности, процесс раздела может быть более сложным и требует дополнительного урегулирования.

В настоящее время законодательная база в данной сфере не дает четкого понимания ряду вопросов, которые встречаются при разделении имущества в судебном порядке, этому препятствуют следующие факторы:

1) **Технические сложности** – раздел имущества в общей собственности может быть затруднен из-за технических особенностей недвижимости, таких как отсутствие четкого раздела на части или невозможность физически разделить здание или земельный участок.

2) **Юридические трудности** - раздел общей собственности может потребовать длительного юридического процесса, включая экспертизы, оценку имущества, а также согласие всех заинтересованных сторон. Без согласия, процесс раздела может затянуться или даже быть невозможным.

3) **Трудности в доказывании прав собственности** - если общая собственность была незаконно присвоена или использована третьими лицами, собственники могут столкнуться с трудностями в доказывании своих прав¹⁵². Это особенно актуально в случаях, когда документы на имущество были утеряны или нет четкой регистрации прав¹⁵³.

4) **Процесс судебного разбирательства** - истребование имущества через суд может быть длительным и сложным процессом, особенно если имущество находится в общей собственности. Необходимость доказательства своих прав и установления законных границ может потребовать времени и ресурсов.

Правовая основа истребования имущества: В Российской Федерации правовая основа для виндикационных исков содержится в Гражданском кодексе РФ, в частности в статьях 301-305. В этих статьях установлены

152 Лыгина Т.А. Проблемы судебной защиты права собственности на недвижимость [Электронный ресурс] // Международный журнал гуманитарных и естественных наук. 2021. №5-4. URL: <https://cyberleninka.ru/article/n/problemy-sudebnoy-zaschity-prava-sobstvennosti-na-nedvizhimost> (дата обращения: 25.04.2024).

153"Обзор судебной практики Верховного Суда Российской Федерации N 2 (2018)" (утв. Президиумом Верховного Суда РФ 04.07.2018) URL:https://www.consultant.ru/document/cons_doc_LAW_301921/da06f75b83163eb9dd79b6132ea4e1abd025f1d2/ (дата обращения: 25.04.2024).

условия, при которых собственник имеет право на истребование имущества, а также порядок рассмотрения таких дел в судебных органах.

Для осуществления права на истребование имущества, находящегося в незаконном владении у другого лица необходимо наличие определенных условий, таковыми являются:

1) Наличие незаконного владения имуществом. Если имущество передано или захвачено другим лицом без согласия собственника или без законных оснований, собственник имеет право подать иск об истребовании имущества.

2) Доказывание права собственности: собственник должен доказать, что имущество принадлежит ему на законных основаниях. Это может потребовать предоставления документов, свидетельствующих о праве собственности, или других доказательств.

3) Отсутствие законного основания для владения: если имущество находится во владении другого лица на законных основаниях (например, по договору аренды или на основании права удержания), то истребование будет невозможно. Виндикационный иск может быть удовлетворен только в случае отсутствия законных оснований для владения имуществом.

Процедура истребования в свою очередь состоит из следующих этапов:

1. Подача виндикационного иска: в исковом заявлении должны быть указаны основания для истребования имущества, доказательства права собственности, а также сведения о незаконном владении.

2. Судебное разбирательство: в процессе судебного разбирательства суд изучает доказательства, заслушивает стороны и принимает решение относительно того, кто имеет законное право на имущество. Если суд удовлетворяет виндикационный иск, он выносит решение о возврате имущества собственнику.

3. Исполнение судебного решения: после вынесения решения о возврате имущества, судебные приставы могут осуществлять действия по исполнению решения суда, если ответчик отказывается добровольно вернуть имущество.

Следует также внести понимание, что представляет собой незаконное владение — это ситуация, при которой лицо удерживает или использует имущество без законных оснований. Это может включать в себя незаконный захват, несанкционированное использование или удержание имущества после окончания срока действия договора. Законодательно установлено, а именно в Гражданском кодексе Российской Федерации статьи 301-305 определяют условия, при которых владение считается незаконным, и устанавливают права собственника на истребование имущества¹⁵⁴.

154 Соколов В.В. о проблеме истребования недвижимого имущества при изменении его физических характеристик [Электронный ресурс] // Вестник магистратуры. 2019. №4-2 (91). URL:

Проблемы, связанные с истребованием имущества исходя из смысла положений, указанных в постановлении Пленума Верховного Суда Российской Федерации, выражаются в следующем:

1) Сложности в доказывании незаконного владения: трудности доказывания, что владение другим лицом является незаконным. Это может быть связано с недостатком документов или запутанными обстоятельствами владения.

2) Неисполнение судебных решений: даже после удовлетворения виндикационного иска могут возникнуть проблемы с принудительным исполнением решения суда, если ответчик отказывается вернуть имущество или не сотрудничает с судебными приставами. 155

Наибольшее значение имеет разрешение конфликтов на досудебном этапе, это способствует снижению нагрузки на судебные органы, что положительным образом сказывается на качестве осуществляемой судами работе. Применение медиации и досудебного урегулирования, несомненно, одобряется судами, особенно в случаях, когда дело касается общей собственности. Это позволяет снизить конфликтность и достичь соглашения, удовлетворяющего все стороны. Применение новых правовых инструментов, таких как назначение экспертиз, для определения реальных долей общей собственности или проведение аукционов для раздела имущества, также способствует снижению проблем при истребовании имущества находящегося в общей собственности

На сегодняшний день, для достижения успехов в данной области необходимо осуществить ряд определенных мероприятий, таких как:

1) Улучшение механизмов разрешения споров: создание более эффективных механизмов для разрешения споров между совладельцами. Это может включать упрощение процедур медиации, ускорение судебных процессов или введение новых инструментов, таких как онлайн-платформы для разрешения споров.

2) Усиление защиты прав собственников: в будущем законодательство может уделять больше внимания защите прав собственников общей собственности, особенно в случаях незаконного владения или использования имущества. Это может включать ужесточение наказаний за незаконное владение или упрощение процедуры истребования имущества.

3) Стимулирование досудебного урегулирования: будущее законодательство может включать дополнительные стимулы для досудебного урегулирования споров, особенно в контексте общей

<https://cyberleninka.ru/article/n/o-probleme-istrebovaniya-nedvizhimogo-imuschestva-pri-izmenenii-ego-fizicheskikh-harakteristik> (дата обращения: 29.04.2024).

155 Постановление Пленума Верховного Суда РФ и Пленума Высшего Арбитражного Суда РФ от 29 апреля 2010 г. № 10/22 “О некоторых вопросах, возникающих в судебной практике при разрешении споров, связанных с защитой права собственности и других вещных прав” [Электронный ресурс] URL: <https://www.garant.ru/products/ipo/prime/doc/1695065/> (дата обращения: 25.04.2024).

собственности. Это может включать финансовые льготы или обязательное прохождение медиации перед обращением в суд.

Таким образом, истребование недвижимого имущества в условиях общей собственности в Российской Федерации сталкивается с рядом серьезных проблем, связанных с юридическими сложностями, конфликтами между совладельцами, техническими и документальными трудностями, а также с недостатками в законодательной базе. Для успешного разрешения этих проблем и эффективного распоряжения общей собственностью предлагается ряд мер, включая улучшение механизмов разрешения споров, укрепление защиты прав собственников, использование цифровых технологий для повышения прозрачности, а также поощрение досудебного урегулирования споров. Особое внимание уделяется важности медиации и других форм досудебного разрешения конфликтов, которые могут снизить нагрузку на судебную систему и улучшить процесс решения споров между совладельцами.

ИННОВАЦИОННЫЕ ПОДХОДЫ К ИЗУЧЕНИЮ МЕХАНИЧЕСКИХ СВОЙСТВ БИОМИМЕТИЧЕСКИХ МАТЕРИАЛОВ ДЛЯ БИОИНЖЕНЕРНЫХ КОНСТРУКЦИЙ

Аннотация. В данной работе рассматривается применение интерферометрии для исследования механических свойств биомиметических материалов, используемых в биоинженерных конструкциях. Анализируется эффективность этой методики для измерения модуля упругости, распределения напряжений и деформаций, а также для выявления влияния микроструктуры на поведение материала.

Ключевые слова: интерферометрия, биомиметические, материалы, биоинженерные, свойства, модуля, напряжения, деформации, микроструктура, долговечность.

INNOVATIVE APPROACHES TO STUDYING THE MECHANICAL PROPERTIES OF BIOMIMETIC MATERIALS FOR BIOENGINEERING STRUCTURES

Abstract. This work examines the use of interferometry to study the mechanical properties of biomimetic materials used in bioengineered structures. The effectiveness of this technique for measuring the elastic modulus, stress and strain distribution, and identifying the influence of microstructure on material behavior is analyzed.

Key words: interferometry, biomimetic, materials, bioengineering, properties, modulus, stress, deformation, microstructure, durability.

Введение. Современные биоинженерные конструкции используют широкий спектр материалов для решения сложных задач в медицине, протезировании, тканевой инженерии и других областях. Одним из перспективных направлений является разработка биомиметических

материалов, которые подражают естественным биологическим структурам, сочетая в себе уникальные механические свойства, такие как прочность, гибкость и легкость. Такие материалы могут значительно улучшить эффективность и долговечность биоинженерных устройств, а также повысить комфорт и качество жизни пациентов. Однако несмотря на значительные достижения в области биомиметики, остаются нерешенные проблемы, связанные с оценкой и оптимизацией механических свойств таких материалов. Одной из основных проблем является необходимость разработки инновационных подходов к изучению этих свойств, чтобы обеспечить точное понимание поведения биомиметических материалов в различных условиях.

Методика: Интерферометрия для изучения механических свойств биомиметических материалов. Интерферометрия является одним из наиболее точных и эффективных методов измерения механических свойств биомиметических материалов. Методика основана на анализе интерференционных паттернов света, которые возникают при взаимодействии световых волн с поверхностью и внутренними структурами материала. Это позволяет получать высокоточную информацию о различных характеристиках материала, таких как деформации, напряжения и разрывы. Для проведения интерферометрических измерений биомиметических материалов сначала создается оптическая схема, включающая лазерный источник света и интерферометр. Лазерный луч направляется на исследуемый материал, и свет отражается от его поверхности или проходит через него. Отраженный или преломленный свет затем интерферирует с исходным лазерным лучом, создавая интерференционную картину. С помощью специальных камер или датчиков, регистрирующих интерференционные паттерны, можно получить данные о распределении деформаций и напряжений в материале. Эти данные позволяют оценить механические свойства биомиметического материала, такие как модуль упругости, прочность и другие параметры. Одним из преимуществ интерферометрии является ее способность обеспечивать неразрушающее тестирование, что особенно важно при изучении биомиметических материалов, предназначенных для медицинского применения. Методика позволяет исследовать как поверхностные, так и внутренние свойства материала, что дает целостное представление о его поведении в различных условиях. Для более точных результатов интерферометрия может сочетаться с другими методами тестирования, такими как механические испытания и микроскопия. Комплексное применение этих методик позволит получить более полное понимание механических свойств биомиметических материалов и оптимизировать их для биоинженерных конструкций.

Результат. Результаты проведенного исследования с использованием методики интерферометрии для изучения механических свойств

биомиметических материалов показали важные аспекты поведения и характеристик исследуемого материала. Определение модуля упругости: Интерферометрические измерения позволили определить модуль упругости биомиметического материала с высокой точностью. Полученное значение модуля упругости составило около 1.2 ГПа, что близко к теоретическим прогнозам и подтверждает надежность метода. Распределение напряжений: Исследование выявило, что распределение напряжений в биомиметическом материале было равномерным в большинстве областей, за исключением точек соединения разных слоев. В этих зонах наблюдалось повышение напряжений на 15-20%, что указывает на потенциальные зоны риска для долговечности конструкции. Анализ деформаций: Интерферометрия позволила получить точные данные о деформациях материала под нагрузкой. Максимальная деформация составила 0.5% при нагрузке в 50 Н, что соответствует заявленным характеристикам материала. Влияние микроструктуры: Исследование также продемонстрировало, что микроструктура материала играет значительную роль в его механических свойствах. Например, изменение плотности и ориентации волокон привело к различиям в прочности и жесткости материала на 10-15%.

Предсказание долговечности: На основе полученных данных о распределении напряжений и деформаций удалось сделать прогноз относительно долговечности материала в условиях эксплуатации. Биомиметический материал показал способность выдерживать нагрузки в течение длительного времени без значительных изменений в механических свойствах, с ожидаемым сроком службы до 10 лет при нормальных условиях эксплуатации.

Заключение. Основываясь на выше указанной информации, можно сделать выводы что, результаты исследования подтверждают эффективность методики интерферометрии для анализа механических свойств биомиметических материалов и ее потенциальную применимость для оптимизации биоинженерных конструкций.

THE STUDY OF THE TOPIC "WATER IN NATURE AND THE STUDY OF ITS GENERAL PROPERTIES" IN THE INTEGRATION OF CHEMISTRY AND GEOGRAPHY

Annotation. The article discusses the importance of water in nature and in the life of humans, animals and plants. The unique properties of water and their explanation based on the nature of chemical bonds and the structure of water. The influence of the composition and structure of water on human health, the quality of food and industrial products. Conducting integration classes.

Key words: integration of water in nature, properties of water, nature of chemical bonds, structure of water, intelligence, ability, occupation.

Введение. Что такое вода, какими полезными свойствами она обладает, какова её роль для живых организмов, какие важные функции выполняет в природе и почему это вещество называют одним из главных веществ на Земле?

Без преуменьшения, вода является самым распространенным веществом на Земле. Она покрывает почти 71% поверхности планеты, и даже человеческое тело примерно на 65% состоит из нее. Причем на планете это химическое вещество представлено сразу во всех формах: жидкая – в водоемах, твердая – в ледниках и в газообразном состоянии – в воздухе. Свойства этого удивительного вещества изучает биология, физика и химия.

Несмотря на свою, казалось бы, простоту, оно является одним из самых интересных материалов для ученых. Ведь вода имеет уникальные свойства, благодаря которым она является главным элементом жизнеобеспечения любого организма на нашей планете. Вода насыщает почву влагой, незаменимым элементом для растений. Она необходима для процесса фотосинтеза, а значит, без неё на планете не существовало бы даже кислороды. Водоемы способны поглощать тепло из окружающей среды и затем отдавать его, формируя тем самым особый климат. Кроме этого, вода имеет ещё одно уникальное свойство: при попадании минералов в жидкость, минералы и полезные элементы растворяются в ней и таким образом распределяются по самым разным уголкам нашей планеты. Так человек получил возможность пить минеральную воду и поправлять здоровье на бальнеологических курортах [1].

Без воды невозможна жизнь. Наукой установлено, что жизнь на Земле возникла примерно 4 млрд лет назад именно в водной среде. Об этом свидетельствует близость по составу морской воды и крови человека. Вода является главным компонентом всех живых организмов, составляя 70% массы тела взрослого человека и от 50% до 90% массы животных и растений. Невозможно назвать ни одной отрасли народного хозяйства, которая обходилась бы без воды, а для некоторых из них, например, сельского хозяйства, тепловой и атомной электроэнергетики, металлургии, целлюлозно-бумажной, химической и многих других, вода является основным (по массе) сырьем. Вода является компонентом практически всех технологических процессов, являясь сырьем, растворителем, теплоносителем, транспортной системой [2].

Количество и качество подаваемой жителям воды для питьевых и бытовых целей определяет во многом качество жизни. Наконец, вода является важным фактором, определяющим природные условия на Земле: она не только является средой обитания живых организмов, но влияет на формирование климата, горных пород, рельефа, обрушивая на территории наводнения или, наоборот, засухи [3].

Нормальное функционирование организма человека, его самочувствие зависит от количества и качества потребленной воды. Установлено, что при потере в организме около 10% воды человек теряет сознание, а потеря 12% воды приводит к смерти. Поскольку все процессы в организме проходят в растворе (растворитель – вода), то состав и свойства воды влияют на скорость биохимических реакций, проходящих в организме, состояние динамического равновесия. При постоянном составе используемой воды на все это большое влияние оказывает структура воды [4].

Вода нужна не только живым организмам. Гидросфера оказывает огромное влияние на большинство процессов, проходящих на нашей планете.

Гидросфера стабилизирует температуру поверхности и обеспечивает тепловой режим Земли. Вода является сильным поглотителем солнечной энергии (в 2-3 раза больше чем суша). От поверхности океана отражается всего 8% падающей энергии и средняя температура воды на 3,6 градусов выше температуры поверхности Земли. Мировой океан является регулятором климата на нашей планете: холодные воды на полюсах поглощают углекислый газ из воздуха и отдают его в нагретых экваториальных водах [5].

Хотя общее количество воды на Земле неизменно, существует опасность, что из-за нерационального использования воды могут иссякнуть ее запасы, пригодные для выполнения основных функций – поддержания жизни на Земле и удовлетворения потребности человечества в ней как природном ресурсе. Речь идет не только о недостатке воды как ресурса, но об ухудшении качества воды. Глобальный дефицит водных ресурсов – такова суровая реальность наступившего XXI века [6].

Основную часть (99,73%) составляет обычная вода $^1\text{H}_2^{16}\text{O}$. Еще 0,04% – тяжёлый кислородная вода с составом $^1\text{H}_2^{17}\text{O}$ и 0,02% – с составом $^1\text{H}_2^{18}\text{O}$. Доля тяжёлой (дейтериевой воды) D_2O в природных водах еще меньше и составляет 0,015%. Доля «сверхтяжёлой» воды T_2O – ничтожна: в воде Земли находится менее 20 кг тритиевой воды, хотя тритий – необходимый элемент реакции термоядерного синтеза [8]. Реакция $\text{D}+\text{T}$ наиболее легко осуществима с точки зрения современных технологий, даёт значительный выход энергии.

Разница в изотопном составе воды сказывается на их физико-химических свойствах. Например, тяжелая вода D_2O имеет плотность 1,1 г/мл, кипит при температуре $101,43^\circ\text{C}$ и образует лед при температуре – $3,8^\circ\text{C}$. Она медленнее испаряется, чем обычная вода. Вероятно, поэтому в замкнутых водоемах может происходить обогащение тяжелой водой. Она угнетающе действует на растения. Однако в природных водах концентрации тяжелой воды столь малы, что нельзя говорить о каком-либо реальном влиянии изотопных разновидностей природной воды на ее свойства [9].

Соединяясь вместе, два атома водорода и атом кислорода создают устойчивую молекулу. Однако молекуле воды свойственна асимметрия. Кислородный атом, имеющий отрицательный заряд, и два атома водорода, имеющие точно такой же положительный заряд, смещены относительно друг друга, т.е. образуют так называемый диполь. Молекула воды подобна молекулярному магниту. Этим объясняется возможность воздействия на молекулу внешнего магнитного поля [10].

Этот эффект используется в тепловой энергетике. На стенках котельных труб из обычной воды отлагаются соли жёсткости плотным и трудно удаляемым слоем, а из магниченной воды выпадает рыхлый осадок.

Рис. 1. Схема строения молекулы воды

Поэтому на многих тепловых станциях установлена магнитная подготовка воды.

За счет водородных связей молекула воды может формировать многомoleкулярные структуры – ассоциаты, или кластеры [2]. В жидком состоянии молекулы находятся в непрерывном хаотическом (тепловом) движении, так что формирующиеся ассоциаты постоянно образуются и распадаются. Время перескока составляет 10^{-12} секунд.

Однако при твердении, когда молекулярное движение минимально, молекулы ориентируются таким образом, что число водородных связей максимально: у каждой молекулы – две водородных связи. Это выражается в формировании организованной и устойчивой структуры. Размеры «пустот» в упорядоченной решетке молекул воды в твёрдом состоянии больше, чем в хаотическом жидком состоянии. Это напоминает выстраивание из одинаковых элементов, например, спичек, геометрически подобных узоров, которые занимают большую площадь, чем хаотически перемешанные спички. Упорядоченностью структуры воды в твёрдом состоянии объясняется меньшая плотность льда по сравнению с жидкой водой. Кристаллизация других веществ приводит к увеличению плотности. Упорядоченность структуры твердой воды проявляется в симметрии снежинок, имеющих гексагональную (шестигранную) структуру.

При медленном таянии льда упорядоченная структура сохраняется еще некоторое время. Этим объясняются особые свойства талой воды: при поливе талой водой увеличивается всхожесть семян и ускоряется рост растений.

Способностью жидкой воды сохранять структуру объясняют и свойства «памяти» воды. Существует гипотеза [3], что «память» воды объясняется существованием устойчивых ассоциатов. Изменение положения одного структурного элемента в кластере воды под действием внешнего фактора обеспечивает чувствительность информационной системы воды. Если степень возмущения структурных элементов

недостаточна для перестройки всей структуры воды в данном объеме, то после снятия возмущения система через 30-40 мин возвращается в исходное состояние. Если переход к другому расположению структурных элементов воды оказывается энергетически выгодным, то в новое состояние отражает кодирующее воздействие, вызвавшее эту перестройку. Такая модель позволяет объяснить "память воды" и ее информационные свойства.

Вода – единственное известное вещество, которое в твёрдом состоянии имеет меньшую плотность, чем в жидком. При понижении температуры до $+4^{\circ}\text{C}$ происходит повышение плотности, а далее плотность начинает уменьшаться. Этот эффект объясняют тем, что при температуре $+4^{\circ}\text{C}$ начинается формирование упорядоченных кластеров, что приводит к увеличению расстояния между молекулами, т.е. снижению плотности. Плотность льда на 11% больше, чем плотность воды при температуре 0°C .

Такой характерный только для воды режим изменения плотности имеет огромное значение в природе. Благодаря тому, что температура воды с максимальной плотностью выше температуры замерзания, большинство водных объектов на нашей планете, например, озёра и водохранилища, не промерзают до дна даже в условиях сурового климата. Так, в водоёмах умеренных широт с наступлением осени верхние слои воды, охладившись до $+4^{\circ}\text{C}$ и достигнув максимальной плотности, постепенно опускаются на дно и вытесняют к поверхности более тёплые водные массы. Возникают конвекционные течения, стремящиеся выровнять плотностную неоднородность, и перемешивание продолжается до тех пор, пока вся масса воды в водоёме не достигнет температуры максимальной плотности. Благодаря такой циркуляции происходит насыщение придонных слоёв кислородом и перераспределение питательных веществ, необходимых для функционирования живых организмов по всей толще водоёма. Дальнейшее охлаждение поверхностного слоя воды приводит к его замерзанию и образованию ледяного покрова. Лёд образует своеобразную «шубу» для основного объема водного объекта и предохраняет глубины от дальнейшего промерзания, поскольку проводит тепло гораздо хуже, чем жидкая вода.

Гидросфера является основным регулятором тепла на Земле, постепенно накапливая его в течение тёплого периода года и отдавая в течение холодного. Именно поэтому, например, климат Западной Европы намного мягче, чем климат тех частей Сибири, которые расположены на той же широте, так как они удалены от океанов.

Теплоёмкость сухой почвы примерно в 5 раз ниже, чем теплоёмкость воды. Поэтому почва, содержащая большее количество влаги, медленнее прогревается и медленнее остывает.

Теплоёмкость воды зависит от ее температуры. Минимум теплоёмкости воды наблюдается в интервале температур $36 - 39^{\circ}\text{C}$, т. е. нормальной температуре большинства теплокровных животных, что обеспечивает их более высокую энергии эффективность, поскольку для

поддержания постоянной температуры тела требуется относительно меньше энергии.

Пары воды в атмосфере играют и другую роль: они поглощают инфракрасное (тепловое) излучение Земли, создавая парниковый эффект. Подчеркнем, что роль водяного пара в создании парникового эффекта значительно существеннее, чем роль углекислого газа (но человеческое хозяйство почти не влияет на концентрацию в атмосфере водяного пара – в отличие от других парниковых газов). Хотя сейчас говорят о парниковом эффекте, в основном, в тревожных тонах, следует подчеркнуть, что его роль в создании благоприятных для жизни условий очень важна. Если бы не было парникового эффекта, то, по расчетам ученых, средняя температура поверхности Земли упала с нынешних $+15^{\circ}\text{C}$ до -14°C , т.е. жизнь на Земле была бы невозможна, по крайней мере, на большей части территории.

Высокое значение теплоты плавления льда имеет огромное значение в плавности перехода от лета к зиме. Для таяния льда весной требуется большое количество тепла, поэтому таяние снега происходит сравнительно медленно. Если бы для плавления льда требовалось меньше тепла, это приводило бы к систематическим катастрофическим паводкам. С другой стороны, осенью при льдообразовании происходит выделение скрытой теплоты замерзания. Известно, что при замерзании 1 м^3 воды выделяется такое же количество тепла, как и при сжигании 10 кг угля. Этот процесс тормозит резкое наступление холодов.

Аномальные теплофизические свойства воды используются человеком в производственной деятельности. Так, воду широко применяют в производстве как удобный и доступный охладитель в самых разнообразных технологических процессах. Другой пример можно привести из области сельского хозяйства и садоводства. Когда поздней весной внезапные ночные заморозки угрожают цветущим плодовым деревьям, опытные садоводы находят совершенно неожиданный на первый взгляд выход – дождевание сада. Скрытая теплоты плавления воды играет роль шубы, сохраняя от замерзания раскрывающиеся почки и лепестки цветов.

Кислотность водных систем (в водоемах, в живых организмах) имеет громадное значение для существования всего живого на нашей планете. При $\text{pH} < 5,2$ погибают живые организмы в открытых водоемах. Поэтому кислотные дожди, снижающие величину pH воды, так опасны для биоты.

Если в одном литре природной воды содержится до 1 г (1000 мг) растворённых веществ, то её считают пресной, от 1 до 25 г – солоноватой, от 25 до 50 г – солёной (или морской солёности) и выше 50 г – высокосолёной (или рассолом). В морской воде содержание солей изменяется от нескольких единиц до десятков граммов на литр, например, в Балтийском море их не более 5 г/л , в Чёрном – 18 , а в Красном море – около 40 г/л . В среднем в 1 л океанской воды растворено около 35 г солей. Общее

количество их настолько велико, что, выделенные из воды, они покрыли бы поверхность земного шара слоем стометровой толщины.

В морской воде преобладающими ионами являются натрий и хлорид, а в пресных водах – кальций, магний и бикарбонат.

Присутствие в природных водах солей магния и кальция необходимо для нормального функционирования организмов. С другой стороны, соли магния и кальция, так называемые соли жёсткости, склонны к формированию осадка. Это происходит при нагревании воды. Накипь (карбонат кальция), откладываясь на стенках водонагревательных устройств, таких как бойлеры, водонагревательные колонки, а также на стенках труб горячего водоснабжения, нарушает циркуляцию воды и, соответственно, процесс теплообмена. Это приводит к перегреву нагревательных элементов, перерасходу энергии. Отложение накипи является причиной до 90% аварий водонагревателей. Высокая жесткость ухудшает органолептические свойства воды, придавая ей горьковатый вкус и оказывая отрицательное действие на органы пищеварения.

К счастью, для большинства природных минералов вода обладает именно свойством смачивания. Благодаря этому происходит перемещение влаги по капиллярам грунтов вопреки силе тяжести, позволяя воде подниматься на высоту до 10–12 м. Чем меньше радиус капилляра, тем больше отношение периметра смачивания к площади сечения, оно обратно пропорционально радиусу капилляра.

Поэтому столь велика в биосфере и геологии роль капилляров. Смачивание играет огромную роль в удержании влаги в почве, не допуская скатывания ее в глубокие горизонты, а также в растениях, способствуя проникновению влаги из корневой системы в само растение.

В узких капиллярах возникают структурно упорядоченные слои воды вблизи твердой поверхности. Структурирование распространяется вглубь жидкой фазы на толщину слоя порядка десятков и сотен молекул. Развитые межмолекулярные контакты с поверхностью твердых тел и структурная упорядоченность являются причиной того, что поровая вода замерзает при более низкой температуре, чем свободная вода.

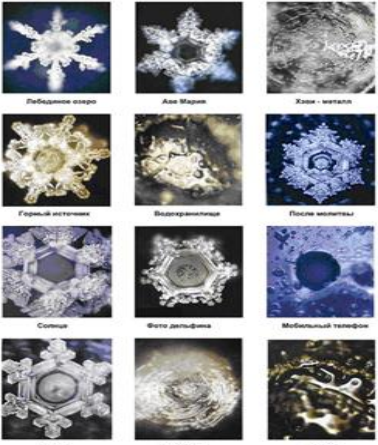

Еще одним примером аномальности свойств воды является необычное температурное поведение ее сжимаемости, то есть степени уменьшения объема при увеличении давления. Обычно сжимаемость жидкости растет с температурой, поскольку при высоких температурах жидкости более «рыхлы» (имеют меньшую плотность) и их легче сжать. Вода обнаруживает такое нормальное поведение только при высоких температурах. При низких температурах сжимаемость ведет себя противоположным образом, в результате минимальная сжимаемость наблюдается при температуре 45оС.

Это и другие аномальные свойства воды имеют объяснение в противоборстве двух процессов: один процесс – это обычное тепловое

движение, которое усиливается с ростом температуры и увеличивает хаотичность структуры; другой процесс – необычный, присущий только воде и связанный с ее структурированием при низких температурах. Поэтому экстремумы ряда свойств воды наблюдается при промежуточной температуре между температурой затвердевания и кипения.

Вода прекрасно проводит звуковые волны. Скорость распространения звука в воде примерно в 4–5 раз больше скорости распространения звука в воздухе. Звуковые и ультразвуковые волны мало искажаются в водной толще. Такие акустические свойства воды позволяют ориентироваться и общаться друг с другом водным животным, например, дельфинам. На этом свойстве основана гидроакустика, т.е. физический эффект, позволяющий распознавать нахождение в воде различных предметов (например, подводных лодок), а также гидролокация, т.е. способ определения местоположения предметов в воде.

Из вышеуказанных примеров мы видим, что вода, как зеркало, реагирует на любые наши эмоции и чувства. Отрицательные энергии создают уродливые формы в воде, а положительные энергии – создают прекрасные картины из кристаллов. После произнесения таких слов как Любовь, Благодарность вода изменяется. Если ты сказал кому-то добрые слова или помог этому человеку, то вся вода твоего организма и этого человека перестраивается и несет энергию любви.

	<p>Эта энергия может передаваться от человека к человеку и значит мы своими добрыми мыслями, добрыми делами можем преобразовывать и изменять мир.</p> <p>Мы очень надеемся, что вы вырастаете, поступите в высшие учебные заведения, но никогда не забудете, чему вас здесь учили. И все люди, встречающиеся на вашем пути будут становиться лучше общаясь с вами и любовь, добро, свет будет распространяться дальше и дальше.</p>
---	---

Изучение воды продолжается. Существуют некоторые явления, связанные с водой, которые до сих пор не имеют строгого научного объяснения, например, информационные свойства. Изучение воды – самого загадочного вещества на Земле – продолжается. Главное заключается в том, что жизнь на Земле возможна благодаря воде и ее уникальным свойствам. Поэтому задача человечества – сохранить воду в природном состоянии, не подорвать эту основу жизни.

КЕЙС-МЕТОДЫ И СИМУЛЯЦИИ ДЛЯ РАЗВИТИЯ СОЦИОЛИНГВИСТИЧЕСКОЙ КОМПЕТЕНЦИИ

Аннотация. Данная статья рассматривает эффективность применения кейс-методов и симуляций в вузовской среде с целью развития социолингвистической компетенции студентов. С учетом многообразия культур и языковых групп в современном мире, социолингвистическая компетенция становится важным аспектом подготовки будущих специалистов.

Ключевые слова: социолингвистическая компетенция, кейс-методы, симуляции, вузовское образование, коммуникативные навыки, межкультурное взаимодействие, методы обучения, междисциплинарность, профессиональная подготовка, студенты, учебный процесс.

CASE METHODS AND SIMULATIONS FOR THE DEVELOPMENT OF SOCIO-LINGUISTIC COMPETENCE

Abstract. This article examines the effectiveness of using case methods and simulations in a university environment with the aim of developing the socio-linguistic competence of students. Taking into account the diversity of cultures and linguistic groups in the modern world, socio-linguistic competence is becoming an important aspect of the training of future specialists. The article discusses the concept of socio-linguistic competence, its significance for professional development, and substantiates the need to introduce innovative teaching methods, such as case methods and simulations, for the effective development of this competence.

Key words: Socio-linguistic competence, Case methods, Simulations, University education, Communication skills, Intercultural interaction, Teaching

methods, Interdisciplinarity, Professional training, Students, Educational process.

Введение Современное образование сталкивается с вызовами глобализации, мультикультурности и межкультурного взаимодействия, которые требуют от обучающихся не только знания в своей профессиональной области, но и развитие широких коммуникативных компетенций. В этом контексте социолингвистическая компетенция, то есть умение эффективно взаимодействовать в разнообразных социокультурных контекстах, играет ключевую роль в формировании компетентных специалистов. Социолингвистическая компетенция не ограничивается просто владением языком, она включает в себя понимание культурных особенностей, норм и ценностей, умение адаптироваться к различным общностям и эффективно коммуницировать в контексте мультиязычного и мультикультурного общества. Активное внедрение социолингвистических компетенций в образовательный процесс вузов является ключевым шагом к подготовке гибких, адаптивных специалистов, способных успешно функционировать в разнообразном и динамичном мире сегодняшних реалий.

Описание кейс-методов и их роль в образовании: Кейс-методы представляют собой педагогический подход, основанный на использовании реальных ситуаций из практики для обучения студентов. Кейсы представляют собой описания конкретных проблем или ситуаций, с которыми сталкиваются специалисты в своей профессиональной деятельности. Студентам предлагается анализировать эти кейсы, выявлять проблемы, предлагать решения и обосновывать свои выводы.

Роль кейс-методов в образовании заключается в том, что они способствуют развитию аналитических и принятия решений навыков, умению работать в команде, критическому мышлению и самостоятельной работе студентов. Кейсы позволяют студентам переносить теоретические знания в реальные ситуации, развивая практическое мышление и умение применять полученные знания на практике.

Преимущества применения кейс-методов для развития социолингвистической компетенции:

1. Межкультурное понимание: Кейс-методы позволяют студентам погружаться в разнообразные культурные сценарии и ситуации, что способствует развитию понимания различий в межкультурном общении и адаптации к ним.

2. Коммуникативные навыки: Анализ кейсов требует от студентов эффективного общения, дискуссий и аргументации своих точек зрения, что способствует развитию коммуникативных навыков.

3. Развитие эмпатии и уважения: Изучение кейсов помогает студентам почувствовать эмоциональные аспекты общения и развить уважение к различным культурам и точкам зрения.

4. Применение в реальном времени: Работа с кейсами позволяет студентам испытать свои знания в реальном времени, что улучшает их умение реагировать на различные ситуации и принимать обоснованные решения.

Понятие симуляций и их применение в образовательном процессе

Симуляции представляют собой метод обучения, который имитирует реальные ситуации или процессы, позволяя студентам вживаться в определенные роли, принимать решения и решать задачи, основываясь на своих знаниях и навыках. Этот метод часто используется для тренировки навыков принятия решений, коммуникации, анализа и решения проблем в контролируемой среде.

Применение симуляций в образовательном процессе позволяет студентам:

1. Получить практический опыт: Симуляции позволяют студентам испытать реалистичные ситуации и события, которые могут возникнуть в реальной жизни, что помогает им освоить навыки работы в условиях ограниченности времени и ресурсов.

2. Развить критическое мышление: Работа в симуляциях требует от студентов анализа информации, принятия обоснованных решений и оценки последствий своих действий, что способствует развитию критического мышления.

3. Улучшить коммуникативные навыки: В процессе симуляций студенты вынуждены эффективно общаться, убеждать, учитывать точки зрения других участников, что способствует развитию коммуникативных навыков.

4. Повысить уровень адаптации и гибкости: Работа в симуляциях требует быстрой адаптации к изменяющимся обстоятельствам и поиска альтернативных стратегий, что помогает студентам развивать умение оперативно реагировать на новые ситуации.

Заключение:

Исследование роли кейс-методов и симуляций в развитии социолингвистической компетенции в учебном процессе позволило выявить их значимость для успешного формирования не только языковых навыков, но и умений эффективного общения в многоязычной и мультикультурной среде. Кейс-методы и симуляции способствуют не только углубленному пониманию теоретических аспектов предмета, но и практическому применению полученных знаний в реальных ситуациях, что существенно обогащает образовательный процесс.

ВЛИЯНИЕ ЦИФРОВИЗАЦИИ НА РАЗВИТИЕ МЕЖДУНАРОДНОЙ ЭКОНОМИКИ

Аннотация. В этой статье рассматривается комплексное влияние цифровизации на международную экономику и глобальные экономические связи. Особое внимание уделяется следующим сферам: динамике международного обмена, включая товары, услуги, капитал и информацию, а также взаимосвязи развития национальных экономик в рамках глобальной системы.

Ключевые слова: цифровизация, мировая экономика, динамика, рост, глобальные экономические связи.

THE IMPACT OF DIGITIZATION ON THE DEVELOPMENT OF WORLD ECONOMY

Abstract. This article examines the complex impact of digitalization on the international economy and global economic relations. Particular attention is paid to the following areas: the dynamics of international exchange, including goods, services, capital and information, as well as the relationship between the development of national economies within the global system.

Key words: digitalization, world economy, dynamics, growth, global economic relations.

За последнее десятилетие в качестве объекта научных дискуссий во всем мире рассматриваются технологии цифровизации и их воздействие на развитие экономических и социальных процессов в обществе. Многие исследователи сходятся во мнении, что цифровизация стала обыденной реальностью, изменив способы управления производственными и социальными аспектами жизни¹⁵⁶. Однако мнения о том, когда именно

¹⁵⁶Платонова Е.Д. Цифровизация сферы услуг и экономика совместного потребления: о современных направлениях исследования // Финансовая экономика. 2019 №1.с.641-646

началась эта эра цифровой трансформации и каков ее вклад в разные сектора экономики разнятся.

Для массового понимания вопроса эксперты одного из ведущих информационных каналов в США CNBC (Consumer News and Business Channel) предложили поэтапное развитие цифровизации, разделив ее на два периода (первый этап – 1980-2010 гг., второй этап - с 2010-е гг. по настоящее время)¹⁵⁷.

Аналитические эксперты приравнивают концепцию цифровизации к фундаментальной технологии, которая способна запустить новую волну промышленных изменений. Паровые машины стали толчком к первой промышленной революции в XVIII-XIX вв. Позже, к концу XIX в, появление конвейерных линий привело ко второму крупному прорыву в промышленности. С приходом 1980-х, мир вступил в эпоху третьей промышленной революции благодаря наступлению эры персональных компьютеров и развитию интернет-технологий.

В 2016 г. немецкий экономист Клаус Шваб опубликовал книгу «Четвертая промышленная революция» (Индустрия 4.0), в которой он рассмотрел специфику нового этапа цифровизации, а именно: 1) использование принципиально новых технологий для хранения больших объемов данных; 2) беспроводная технология передачи информации 5G; 3) внедрение искусственного интеллекта в процессы обработки данных; 4) интеграция физической, цифровой и биологической сфер жизнедеятельности человека.¹⁵⁸

Такие современные цифровые технологии по большей части вносят изменения в сферу Интернета и телекоммуникаций, в досуговую сферу, в логистику, хранение данных, программирование, оформление документов, административные услуги, в сферу торговли, медицинских и образовательных услуг. Соответственно, встает необходимость рассмотреть влияние цифровизации на развитие международных экономических отношений. Современные исследования сфокусированы на том, как цифровизация переосмысливает управленческие практики внутри организаций, воздействует на отдельные отрасли и влияет на прогресс социальных и экономических структур различных стран. Несмотря на это, в качестве основного направления выступает изучение роли цифровых инноваций в эволюции международных экономических связей.

Мировое хозяйство – это совокупность экономик разных стран, ведущих взаимовыгодное сотрудничество через создание и поддержание экономических связей между странами и базирующееся на принципах разделения труда. Это создает прекрасную почву для всей экономики мира. Международные экономические отношения (МЭО) охватывают глобальную торговлю продуктами и услугами, обмен технологиями на

157 Consumer News and Business Channel. URL: <https://www.cnbc.com/world/?region=world>

158 Шваб К. Четвертая промышленная революция. М.: ООО «Издательство «Э», 2016.

международном уровне, перемещение капитала и трудовых ресурсов, а также работу международной валютно-финансовой инфраструктуры и региональных интеграционных объединений.

Первые три волны индустриальных революций сопровождались бурным ростом международных экономических отношений. Кульминацией МЭО общепринято считать экономическую глобализацию, которая получила бурное развитие, опираясь на информационные и цифровые технологии конца XX - начала XXI вв¹⁵⁹.

Воздействие цифровизации на развитие мировой экономики и международных экономических отношений следует рассматривать в двух областях исследования: как динамический процесс международного обмена (товарами, услугами, капиталом, трудовыми ресурсами и информацией) и как процесс развития совокупности национальных экономик мирового хозяйства. Помимо выдвинутых гипотез авторы данной статьи анализировали и обобщали имеющиеся результаты исследований авторитетных изданий (McKinsey, PWC, UNCTAD и др.), обрабатывали первичные статистические данные и формировали иллюстрационные материалы как доказательную базу.

Цифровизация подразумевает применение прорывных технологий, трансформирующих операционные модели и мировую экономику в целом за счет замещения или дополнения человека на базе использования продвинутой аналитики, искусственного интеллекта, мобильных устройств, роботизации и интеграционных технологических платформ, передовых стандартов связи.

В 2015 году глобальная консультационная компания McKinsey представила исследование «Global Flows in a Digital Age»¹⁶⁰. Авторами было проведено обновление статистической информации и выяснено следующее:

- темпы роста мирового экспорта товаров значительно замедлились и составили отрицательное среднегодовое значение;
- сократились средние темпы роста экспорта услуг, экспорта капитала (включая прямые иностранных инвестиции, портфельные инвестиции и прочие инвестиции (кредиты));
- сократился среднегодовой поток мигрантов;
- самые высокие средние темпы роста отмечены в обмене информационными потоками.

Рост доли экспорта услуг, связанных с цифровыми технологиями, говорит о цифровизации сектора услуг мирового хозяйства. Однако, цифровизация не является фактором роста международной торговли услугами – за последние 4 года наблюдается флатовый тренд.

159 Мальцев А.Ю. Цифровая экономика // Экономика и социум. 2018. №1 (44). С. 516-518.

160 Global Flows in a Digital Age. URL: <https://www.mckinsey.com/capabilities/strategy-and-corporate-finance/our-insights/global-flows-in-a-digital-age>

Доля товаров ИКТ (товаров информационно-коммуникационных технологий) в мировом экспорте товаров стабильна и варьируется от 10,5% до 12,9%¹⁶¹.

Цифровизация финансовых расчетов, торговли ценными бумагами еще больше укрепляет взаимозависимость финансовых рынков разных стран, а, следовательно, усиливает системные риски. Технологии цифровизации предложили новый продукт для международной валютно-финансовой системы – криптовалюты, однако, большинство финансовых экспертов публично не подтверждают свою заинтересованность в использовании данного инструмента в своих инвестиционных портфелях.

Эксперты ЮНКТАД опубликовали специальный отчет, посвященный влиянию цифровой экономики на международные инвестиции. Внутри группы высокотехнологических МНК эксперты выделяют цифровые МНК и МНК, связанные с информационно-коммуникационными технологиями. Цифровые МНК формируют около 70% своих общих продаж за рубежом, однако, только 40% их активов базируются за пределами их родных стран. Таким образом, можно заключить – цифровизация экономики не способствует расширению активов транснационального бизнеса. Всего 55% всех дочерних компаний и филиалов, принадлежащих цифровым МНК, базируются за рубежом. У МНК из других отраслей, не связанных напрямую с цифровыми технологиями, доля иностранных филиалов 78%¹⁶².

Примером сокращения капиталовложений в развитие традиционных форматов бизнеса являются тенденции развития розничной торговли. Международная консалтинговая компания Boston Consulting Group представила анализ вызовов цифровизации в розничной торговле. По мнению экспертов BCG, первая волна вызовов, воздействующая на ландшафт розничной торговли, – это появление on-line магазинов, продающих книги, диски, небольшие компьютерные комплектующие (начало 2000-х гг.). Вторая волна (середина 2000-х гг.) – расширение ассортимента on-line продаж (одежда, обувь, крупная бытовая техника). Третья волна (начало 2010-х гг.) – создание больших on-line платформ (Amazon, Ebay, Taobao, Ozon), где широта ассортимента позволяет конкурировать с традиционными розничными мега сетями (такими как Walmart)¹⁶³. В период третьей волны происходят поглощения и консолидации как внутри on-line торговли, так и между традиционными и on-line ритейлерами. В настоящее время компании розничной торговли переживают последствия третьей волны.

161 Матыцина Н. П., Жилияков А.Д. Цифровая экономика – экономика будущего // Символ науки. 2023. №6-2. С. 48-50.

162 Жилиева О.А. Цифровая экономика – экономика данных // Современные социальные и экономические процессы: проблемы, тенденции, перспективы регионального развития. 2023. №1. С. 32-34.

163 Аллеков А.Б., Гурбанов Д.А. Цифровая экономика // Символ науки. 2023. №4-2. С. 69-71.

Проанализировав динамику развития международных потоков товаров, услуг, капитала во взаимосвязи с процессами цифровизации, можно сделать следующие выводы:

- цифровизация в ее новом проявлении технических решений Индустрии 4.0 не является драйвером роста международных процессов обмена продукцией реальной экономики (физической продукцией);

- новый этап цифровизации экономики приведет к трансформации конкурентной среды некоторых высокотехнологических компаний сферы услуг, а именно: компаний из сферы Интернет-торговли, информационно-коммуникационных компаний, провайдеров связи;

- достижения новых цифровых технологий в ограниченном масштабе повысят международные контакты узкоспециализированных профессионалов в сфере медицины, образования, фундаментальной и прикладной науки;

- цифровизация и развитие виртуальной экономики обеспечат новые вызовы традиционным отраслям (необходимость переквалификации, диверсификации и/или трансформации бизнес-стратегий).

Цифровизация и связанные с ней технологии роботизации, искусственного интеллекта вызывают недоверие у большинства населения и повышенное чувство тревоги. В подтверждение тому McKinsey Global Institute приводит результаты недавно проведенного исследования:

Население видит позитивные перспективы развития вследствие цифровизации в таких областях как: здравоохранение, образование, защита экологии, развитие социальной активности и вовлеченности в процессы управления обществом.

Вместе с тем население опасается дальнейшего роста безработицы, ухудшения материальных условий жизни, снижения доверия к обществу из-за сокращения физического общения, замыкания на виртуальном пространстве.

Анализируя долю цифровой экономики в ВВП разных стран, авторы пришли к выводу о том, что Россия до сих пор не входит в группу стран-лидеров, активно развивающих цифровую экономику¹⁶⁴.

Однако у России есть значительные предпосылки для реализации цифрового потенциала и ускорения процессов цифровизации. Россия занимает второе место в мире по доступности услуг сотовой связи и десятое место в мире по доступности широкополосного доступа. Вместе с тем наблюдаются проблемы со своевременным освоением технологий Индустрии 4.0 (промышленный интернет вещей, 3D-печать, виртуальная реальность, продвинутая роботизация), массовой переподготовкой персонала и развитием научно-исследовательских центров.

164 Сударушкина И.В., Стефанова Н.А. Цифровая экономика // АНИ: экономика и управление. 2017. №1 (18). С. 188-184. (дата обращения: 30.04.2024).

Цифровизация бесспорно заставит развиваться национальные институты стран в направлении большей прозрачности, вместе с тем, фундаментальные факторы развития реальной, а не виртуальной экономики будут определять тенденции развития МЭО.

ПОИСК НОВЫХ РЫНКОВ И ПАРТНЕРОВ ДЛЯ РАСШИРЕНИЯ МЕЖДУНАРОДНОГО ПРИСУТСТВИЯ ФАКТОРИНГОВЫХ КОМПАНИЙ

Аннотация. Данная статья рассматривает стратегии и тактики поиска новых рынков и партнеров для расширения международного влияния факторинговых компаний. Анализируется текущее положение российского сектора малого и среднего бизнеса (МСП) в контексте внешнеторговой активности и экспортных операций.

Ключевые слова: факторинг, партнеры, бизнес, внешняя торговля.

master's student
Moscow Pedagogical State University
China, Moscow

SEARCHING FOR NEW MARKETS AND PARTNERS TO EXPAND THE INTERNATIONAL PRESENCE OF FACTORING COMPANIES

Abstract. This article examines strategies and tactics for finding new markets and partners to expand the international influence of factoring companies. The current situation in the Russian small and medium-sized business (SME) sector is analyzed in the context of foreign trade activity and export operations.

Key words: factoring, partners, business, foreign trade.

Существующая необходимость решения разнообразных задач и стремление к улучшению расчетных отношений для бизнеса приводят к необходимости найти такой инструмент, который облегчил бы процесс выхода на новые рынки, уменьшив при этом затраты и риски, а также поддерживал более свободные и открытые отношения с бизнес-партнерами. В таком контексте, факторинг является хорошим вариантом решения. По большому счету, факторинг – это объединение следующих сервисов:

– револьверное беззалоговое финансирование уступленных клиентом фактору и неоплаченных дебитором денежных требований, возникающих между контрагентами в процессе реализации товаров и услуг на условиях отсрочки платежа;

- покрытие рисков, связанных с торговой деятельностью;
- административное управление дебиторской задолженностью¹⁶⁵.

Подойдя к вопросу с трех сторон, использования факторинга идет на пользу всем участникам процесса, давая и импортерам, и экспортерам уверенность в надежности и правильности таких взаимоотношений. Так, в зависимости от того импорт это или экспорт, с помощью данного финансового инструмента формируются соответствующие решения задач. Далее на примерах опишем действие схем международного факторинга и какие проблемы при этом решаются.

В условиях сегодняшней интенсивной конкуренции, особенно на рынках продажи товаров, поставщики вынуждены применять различные стратегии, для привлечения клиентов и удержания их интереса:

- минимизирование цен;
- создание бесплатной доставки товара;
- предоставление бонусов;
- диверсификация товарной номенклатуры и т. п.

Отсрочка платежа выступает ключевым инструментом в бизнесе, особенно для малого и среднего предприятия (МСП), так как предоставление товарного кредита зачастую важнее и проще для них, по сравнению с получением банковского кредита. Однако, в результате предоставления кредитов своим покупателям, поставщики могут столкнуться с нехваткой рабочего капитала и проблемами в денежном потоке. Вместе с этим также увеличивается риск задержек в оплате или частичной неоплаты со стороны покупателей, что может привести к дополнительным рискам и финансовым потерям для поставщика. Включение в торговую операцию экспортного факторинга решает целый ряд проблем.

Факторинговое финансирование, осуществляемое сразу после отгрузки товара в размере до 90 % от суммы поставки, дает возможность участникам экспорта давать своим иностранным покупателям отсрочку платежа, не беспокоясь о собственной ликвидности (которая в предприятиях малого и среднего отечественного бизнеса является низкой в связи с высокой долей дебиторской задолженности в структуре оборотных активов). Более того, если вновь обратиться к функционалу, взаимодействуя с факторинговой компанией клиент получает профессионального экспортного менеджера, который производит анализ и проверку зарубежных партнеров; контролирует ход сделок; защищает интересы клиента при оформлении всей документации, связанной с доставкой товара за рубеж и вручением его покупателю.

Таким образом, обеспечивается максимальная защита от рисков неплатежа со стороны контрагента.

¹⁶⁵ Лукьянова М.Т., Ковшов В.А. Факторинг как инструмент управления финансовыми ресурсами // Азимут научных исследований: экономика и управление. 2023, № 1(43). С. 67-70.

В действительности, использование факторинга в качестве финансового инструмента открывает перед поставщиками совершенно новые горизонты для роста и развития бизнеса по сравнению с возможностями, доступными компаниям, управляющим товарным кредитом самостоятельно.

В случае экспортных операций поставщику необходимо идти на уступки покупателю, однако в случае импортных операций ситуация полностью противоположная. В таком случае, главным является поставщик и именно он диктует свои условия, так как заинтересован в предоплате. Для получения товарного кредита, покупателю нужно показать свою надежность и платежеспособность. Это весьма сложная задача для отечественных импортеров.

Первым аспектом, интересующим иностранных поставщиков при анализе финансовой надежности, становится кредитный рейтинг страны, из которой происходит импорт¹⁶⁶. Высокий кредитный рейтинг страны способствует усилению доверия к компаниям-покупателям и увеличивает их шансы на одобрение товарных кредитов. В условиях международного экономического кризиса и серьезного ухудшения конъюнктуры некоторых рынков – особенно сырьевых (учитывая, что сырьевые отрасли обеспечивают значительную часть ВВП России), риск недоверия к платежеспособности отечественных покупателей является актуальным. Основываясь на этом, иностранные поставщики в торговых отношениях с российскими партнерами чаще стали требовать гарантийное покрытие либо предоплату, особенно актуально это на первоначальном этапе сотрудничества. Несмотря на то, что поставка может превосходить 45-дневный срок. Соответственно, до принятия товара, возникает необходимость в оплате следующей партии.

Используя импортный факторинг, импортер может договориться об отсрочке платежа при сделках с иностранным поставщиком. В рамках этой модели факторинговая компания берет на себя роль поручителя за выполнение импортером своих финансовых обязательств перед экспортером в срок и в полном объеме за полученные товары. Время на отсрочку отплаты позволяет реализовать поставку и к моменту оплаты иметь необходимые для нее финансовые средства.

Стоит отметить, что даже на федеральном уровне преимущества факторинга были неоднократно отмечены. В государственной программе финансовой поддержки МСП факторинг является важным инструментом финансовой поддержки для малого бизнеса. На текущий момент более, чем

166 Корзоватых Ж.М. Применение электронного факторинга субъектами малого и среднего предпринимательства // Вестник УРАО. 2022. №3. С. 124-131.

1 500 организаций получают финансы для пополнения оборотного капитала от государства через факторинговые организации¹⁶⁷.

В России доля использования международного факторинга в общем объеме предоставляемых факторинговых услуг занимает менее одного процента. Потенциал развития этого сегмента рынка тесно связан с особенностями и активностью внешнеэкономической торговли. Несмотря на то, что факторинг применим в любой отрасли, в которой предусмотрена отсрочка оплаты, особенно он распространен среди товарных категорий, предназначенных для непосредственного потребления.

Соответственно, в данный момент только 0,03 % от общего объема торговых поставок было обслужено российскими факторинговыми организациями, что дает нам понять, что существенная часть рынка не освоена. В последнее время отмечается устойчивый рост объемов импортного факторинга, что показывает возрастающий интерес к этому финансовому инструменту как способу управления рисками и обеспечению гарантий поставок в Россию. Более того, для факторинга подходит сама структура отечественного импорта.

Кроме выделенных плюсов экспортного факторинга, для его развития в нашей стране есть следующие трудности в области валютного законодательства; а также негласная конкуренция с другими финансовыми продуктами, использующимися в экспортно-импортных операциях.

В то время как проблему конкуренции можно решить за счет эффективных стратегий популяризации и маркетинга, иницируемых самими факторинговыми компаниями, проблему законодательства необходимо разрешать путем реформирования нормативных актов. В России отсутствует четкое регулирование процесса перечисления платежей факторинговым компаниям от зарубежных клиентов, права на денежные требования к которым были переданы экспортером, с учетом требований по возвращению валютной выручки в страну. В частности, согласно российскому законодательству поставщик (экспортер) обязан обеспечить получение от нерезидента (покупателя) на свой банковский счет валютной выручки за поставленный товар. Получается, что работать по стандартной схеме факторинга экспортер не может, так как переуступив права денежного требования факторинговой компании, он получает деньги от резидента (российского фактора), что в корне противоречит законодательству. В итоге факторинговые компании вынуждены работать по схеме конфиденциального факторинга, когда денежные средства поступают на счет экспортера, минуя факторинговый счет. Это увеличивает риски фактора. Или ему самому приходится разрабатывать иные схемы взаимодействия. Одновременно с этим сложной является сама процедура

¹⁶⁷ Годунов П.А. Проблемы реформирования договора факторинга в России // Вестник науки. 2022. №2 (47). С. 76-87.

уступки денежного требования, номинированного в иностранной валюте, учитывая необходимость оформления паспорта сделки.

Оценивая валютное регулирование, можно сделать вывод, что с одной стороны, существующее законодательство становится преградой на пути развития международного факторинга по причине указанных трудностей¹⁶⁸. С другой стороны, оно способствует формированию спроса на факторинг как на эффективный инструмент влияния на дебиторов и их дисциплинирование.

На сегодняшний день, российская отрасль международного факторинга только развивается. В дальнейшем нужно будет провести еще много работы над его становлением для того, чтобы он заслуженно занял свою нишу на рынке финансовых услуг. Тем более, что предпосылки для этого есть. Уже очевидно, что международный факторинг стал не просто одним из современных инструментов торгового финансирования, а реальной услугой, способной оказать существенное влияние на развитие международной торговли, в особенности в секторе МСП.

СОВРЕМЕННЫЕ ТRENДЫ И ВЫЗОВЫ, СТОЯЩИЕ ПЕРЕД ФАКТОРИНГОМ В МЕЖДУНАРОДНОМ БИЗНЕСЕ

Аннотация. Статья посвящена современным трендам и проблемам, встречающимся на пути развития факторинга как важного инструмента в международном бизнесе. Эволюция факторинга рассматривается от исторических корней до его текущего положения в глобальной финансовой системе, а также особенности применения факторинга в современной экономической практике.

Ключевые слова: факторинг, международный бизнес, глобальная финансовая система.

MODERN TRENDS AND CHALLENGES FACING FACTORING IN INTERNATIONAL BUSINESS

Abstract. The article has devoted the modern trends and problems encountered in the development of factoring as an important tool in international business. The evolution of factoring is considered from its historical roots to its current position in the global financial system, as well as the features of the use of factoring in modern economic practice.

Key words: factoring, international business, global financial system.

Изначально факторинг использовался специализированными торговыми посредниками, в том числе, банками.

По прошествии времени этот финансовый инструмент успешно развивался и получил популярность в мировой экономике. В современном мире с учетом текущей экономической ситуации для инновационных компаний характерно непрерывное развитие, поиск новшеств и улучшение экономической устойчивости.

Для малого и среднего бизнеса факторинг полезен для урегулирования проблем с задолженностью. На сегодня внедрение

факторинга в малый бизнес является актуальным для российских компаний, так как он позволяет увеличить оборотные средства без глобального изменения текущих процессов при использовании его в расчетах с контрагентами. Факторинг сегодня является эффективным инструментом для улучшения финансовых взаимодействий в мировой торговле.

Со временем факторинг успешно развивается и его качество постепенно улучшается. Соответственно, сегодня мы можем считать его полноценным обязательным инструментом для малого и среднего бизнеса, так как он берет на себя большинство финансовых задач¹⁶⁹. Это помогает высвободить ресурсы для развития компании и решения других финансовых вопросов. Кроме того, применение факторинга снижает финансовые расходы на специальный финансовый отдел с сотрудниками, путем передачи этих задач на аутсорсинг. Коммерческие банки, предоставляющие услуги в этой области закрывают клиентам большой перечень трудных вопросов финансирования деятельности¹⁷⁰.

Особенно удобно использование услуг при недостаточно большом финансовом оборотном капитале, когда невозможности взять кредит, а неплатежи контрагентов возрастают. В первую очередь нужно отметить простоту использования факторинга для всех участников процесса. Поставщик (кредитор) получает ускорение капиталоборота, так как платежи поступают в срок даже при финансовых затруднениях покупателя (должника). Такая схема выгодна и для покупателя, поскольку она позволяет ему получить товар, проверить его соответствие заявленным характеристикам и условиям заказа, до того, как осуществлен платеж¹⁷¹. Значительно быстрее происходит оборот средств при взаиморасчетах сторон, улучшается структура баланса, а риск возникновения долгов сводится к минимальному.

Такая услуга не требует обеспечения, чем выгодно отличается от кредита. Поставщик на постоянной основе получает бессрочное финансирование, так как договор факторинга заключается на короткий срок. Таким образом, поставщик способен, минимально рискуя, в быстром темпе заметно увеличить объемы производства. Задолженность погашается дебиторам, в то время как поставщик получает финансовые средства за проданные товары (услуги) или оказанные работы в кратчайшие сроки.

На сегодняшний день, услуги факторинга перестав быть побочным продуктом постепенно обретают статус независимой отрасли. Эта отрасль стремительно развивается в России и в мире, показывая отличные перспективы. Портфель российского рынка факторинга на 01.01.2024

169 Новицкая А.М., Алимуратов М.К. Стратегические источники финансирования деятельности компании // Стратегирование: теория и практика. 2023. №1. С. 91-107.

170 Жарикова К.В., Примакова Е.М., Сушкова М.А., Тюрина А.В. Факторинг в России // Экономика и социум. 2016. №3 (22). С. 417-422.

171 Чупрова В.Н. Мероприятия по уменьшению дебиторской задолженности предприятия с применением факторинга // Вестник науки. 2024. №2 (71). С. 123-126.

составил 2 трлн 257 млрд рублей. По сравнению с 01.01.2023 портфель рынка вырос на 57% (+822 млрд руб.), по сравнению с 01.10.2023 - на 26% (+466 млрд руб.). Средняя оборачиваемость по портфелю составила 64 дня (год назад - 62) при минимуме 35 дней и максимуме 102 дня. В структуре портфеля доля активов без права регресса за год выросла на 3 процентных пункта до 84,7%, доля активов с правом регресса за год снизилась на ту же величину до 13,4%, доля активов по международным сделкам выросла на 0,1 пп до 1,9 %¹⁷².

Объем выплаченного финансирования за 2023 год составил 7 трлн 730 млрд рублей. По сравнению с 2022 годом объем финансирования, направленного факторами клиентам, вырос на 33% или 1,9 трлн рублей. В 4 квартале 2023 года факторы выплатили клиентам около 2,5 трлн рублей. В структуре выплаченного финансирования за 12 месяцев доля сделок без регресса составила 81,4% (-0,2 пп год-к-году), с регрессом 17,1% (-0,5 пп год-к-году), доля международных сделок 1,5% (+0,7 пп год-к-году)¹⁷³.

Значительное увеличение интереса к факторингу обусловлено его доступностью как формы финансирования для множества малых и средних предприятий, он не требует залога, в отличие от традиционных банковских кредитов. Сегодня во всем мире существует тенденция на расширение спроса на факторинговые услуги у клиентов, и на предложения от работников банковской сферы. Потребность в факторинге испытывают практически все компании, постоянно работающие на условиях отсрочки платежа. В качестве примера мы можем рассмотреть субъекты пищевой, фармацевтической, легкой, нефтеперерабатывающей, и автомобильной промышленности.

Наибольшей популярностью в России пользуется факторинг с регрессом. Ее плюс для клиента в том, что неплатеж дебитора редкое явление, за счет давления со стороны кредитора и фактора. Выгода заключается в том, что цена его ниже, чем стоимость того, при котором все риски на себя принимает факторинговая компания.

За несколько лет в области факторинга были замечены некоторые изменения. Это связано с дефицитом ликвидности, снижение кредитоспособности предприятий и покупателей, увеличение стоимости денежных ресурсов, рост объема просроченной задолженности.

КОНЦЕПЦИЯ УСТОЙЧИВОГО РАЗВИТИЯ: ЭВОЛЮЦИЯ И СОВРЕМЕННОЕ ВИДЕНИЕ

Аннотация. Статья посвящена эволюции концепции устойчивого развития от первоначального акцента на экологическом измерении экономического роста к современному пониманию, изложенному в семнадцати целях устойчивого развития. В данной статье предпринята попытка получить целостное представление о трансформации научных подходов к решению проблем устойчивого развития на разных временных этапах, а также теоретически обосновать ключевые положения концепции устойчивого развития в контексте актуальных глобальных трендов.

Ключевые слова: устойчивое развитие, экономический рост, климат, социальное неравенство.

CONCEPT OF SUSTAINABLE DEVELOPMENT: EVOLUTION AND MODERN VISION

Annotation. The article is devoted to the evolution of the concept of sustainable development from the initial emphasis on the environmental dimension of economic growth to the modern understanding set out in the seventeen sustainable development goals. This article makes an attempt to obtain a holistic understanding of the transformation of scientific approaches to solving problems of sustainable development at different time stages, as well as to theoretically substantiate the key provisions of the concept of sustainable development in the context of current global trends.

Key words: sustainable development, economic growth, climate, social inequality.

Концепция устойчивого развития приобретает все большее значение при формировании экологической политики во всем мире. Устойчивое развитие означает удовлетворение потребностей настоящего времени без ущерба для способности будущих поколений удовлетворять свои собственные потребности. Данная концепция признает взаимозависимость экономических, социальных и экологических проблем и подчеркивает необходимость установления баланса между ними. Экологическая политика, основанная на устойчивом развитии, направлена на содействие экономическому росту и социальному прогрессу при одновременной защите окружающей среды и предполагает эффективное использование ресурсов, сокращение отходов и загрязнения окружающей среды, а также сохранение природных экосистем. Также, это означает удовлетворение потребностей, находящихся в неблагоприятном положении групп населения и содействие справедливому доступу к природным ресурсам.

Концепция устойчивого развития получила свое первое крупное международное признание в 1972 году на Конференции ООН по окружающей человека среде, проходившей в Стокгольме. Этот термин прямо не упоминался, но, тем не менее, международное сообщество согласилось с концепцией, которая в настоящее время является основополагающей для устойчивого развития, - что как развитием, так и окружающей средой, которые до сих пор рассматривались как отдельные вопросы, можно управлять взаимовыгодным образом. Этот термин был популяризирован 15 лет спустя в докладе Всемирной комиссии по окружающей среде и развитию, которые обсуждались комиссией Брундтланда в докладе 1987 года «Наше общее будущее». Термин включал то, что считается классическим определением устойчивого развития: «развитие, которое удовлетворяет потребности настоящего, не ставя под угрозу способность будущих поколений удовлетворять свои собственные потребности»¹⁷⁴. Задачей доклада Брундтланда было исследование многочисленных проблем, которые поднимались в предыдущие десятилетия, а именно того, что человеческая деятельность оказывает серьезное и негативное воздействие на планету и что модели роста и развития будут неустойчивыми, если они будут продолжаться бесконтрольно. Ключевыми работами, которые высветили это мышление, были «Тихая весна» Рэйчел Карсон (1962), «Трагедия общин» Гаррета Хардина (1968), «План выживания» журнала «Эколог» (1972) и отчет Римского клуба «Пределы роста» (1972).

Концепция устойчивого развития легла в основу Конференции Организации Объединенных Наций по окружающей среде и развитию (ЮНСЕД), состоявшейся в Рио-де-Жанейро в 1992 году. «Саммит Земли» ознаменовал собой первую международную попытку разработать планы

¹⁷⁴Приложение к Резолюции от 38/161 от 19.12.1987 – доклад Всемирной комиссии по окружающей среде и развитию, «Наше общее будущее», 1987г. С. 24 – URL: <https://www.un.org/ru/ga/pdf/brundtland.pdf>

действий и стратегии для перехода к более устойчивой модели развития¹⁷⁵. В нем приняли участие более 100 глав государств и представителей 179 национальных правительств. На саммите также присутствовали дипломаты, ученые, представители СМИ и неправительственных организаций (НПО) из 179 стран для масштабных усилий по рассмотрению влияния социально-экономической деятельности человека на окружающую среду.

Одним из значимых событий также считается всемирный саммит по устойчивому развитию, который состоялся в 2002 году в Йоханнесбурге, Южной Африке. Саммит был представлен премьер-министром Норвегии Гру Харлем Брундтланд и стал логическим продолжением Конференции Организации Объединенных Наций по окружающей среде и развитию 1992 года. В мероприятии приняли участие 191 национальное правительство, учреждения ООН, многосторонние финансовые учреждения и другие основные группы для оценки прогресса, достигнутого после саммита в Бразилии. Йоханнесбургский саммит привел к трем ключевым результатам: политической декларации, Йоханнесбургскому плану выполнения решений и ряду партнерских инициатив. Ключевые обязательства включали обязательства по устойчивому потреблению и производству, водоснабжению и санитарии, а также энергетике.

Однако только на последних Всемирных саммитах по устойчивому развитию, в Рио-де-Жанейро 2012 года, который назывался «Рио+20», и в Нью-Йорке в 2015 году, ведущие мировые лидеры признали устойчивое развитие главной задачей, которой оно остается и сегодня. Целью саммита «Рио+20» было заручиться новой политической приверженностью устойчивому развитию и определить новые и нарождающиеся вызовы. Он также был сосредоточен на двух темах: «зеленая» экономика в контексте устойчивого развития и искоренение нищеты в рамках устойчивого развития. Итогом саммита «Рио+20» стало принятие документа «Будущее, которого мы хотим», в котором изложен ряд целей и задач в области устойчивого развития¹⁷⁶. Они включают в себя цель искоренения нищеты, поощрения устойчивых моделей потребления и производства, а также защиты природно-ресурсной базы экономического и социального развития и рационального использования этой базы.

На Саммите ООН по устойчивому развитию 2015 года были определены актуальные новые цели устойчивого развития¹⁷⁷. Цели были приняты в ходе переговорного процесса, в котором приняли участие 193 государства-члена ООН. Новые цели устойчивого развития имеют довольно

176 «Будущее, которого мы хотим», Всемирный саммит по устойчивому развитию, «Рио+20». Рио-де-Жанейро, 2012г. – URL: <https://sustainabledevelopment.un.org/futurewewant.html>

177 Саммит по устойчивому развитию «Преобразование нашего мира в интересах людей и планеты». Нью-Йорк, 2015г.
– URL: <http://www.who.int/mediacentre/events/meetings/2015/un-sustainable-development-summit/ru>

широкую сферу охвата, так как в рамках целей рассмотрена взаимосвязь различных элементов концепции устойчивого развития: социальной интеграции, экономического роста и защиты окружающей среды¹⁷⁸. Одним из важнейших достижений Саммита стал доклад «Формирование глобального партнерства для достижения Целей развития тысячелетия»¹⁷⁹. Цели устойчивого развития, принятые ранее, были ориентированы на категорию развивающихся государств, в частности, на беднейшие страны, в то время как «нью-йоркские» цели ориентированы на весь мир. В то же время, цели затрагивают такие чрезвычайно острые проблемы, как: нищета, голод, образование, рациональное использование водных ресурсов, энергосбережение, экономический рост государств, борьба с изменением климата и другие.

Также, в 2015 году Организация Объединенных Наций провела 21-ю конференцию сторон (КС21) Рамочной конвенции Организации Объединенных Наций об изменении климата (РКИКООН) в Париже, которая стала значительным международным событием, связанным с устойчивым развитием. Парижское соглашение, которое было согласовано и принято в ходе COP21, является юридически обязательным соглашением между 196 странами об ограничении глобального потепления значительно ниже 2 градусов Цельсия по сравнению с доиндустриальным уровнем и о продолжении усилий по ограничению повышения температуры до 1,5 градусов Цельсия. Соглашение также включает положения, обязывающие страны регулярно отчитываться о своем прогрессе в сокращении выбросов парниковых газов и адаптации к последствиям изменения климата¹⁸⁰. Парижское соглашение важно, поскольку оно представляет собой глобальную приверженность решению насущной проблемы изменения климата. Последствия изменения климата, такие как повышение уровня моря, экстремальные погодные явления и утрата биоразнообразия, имеют далеко идущие и потенциально катастрофические последствия для человеческих обществ и экосистем. Парижское соглашение устанавливает рамки для совместной работы стран по сокращению выбросов парниковых газов и переходу к низкоуглеродному, устойчивому будущему. Многие страны серьезно отнеслись к Парижскому соглашению и взяли на себя значительные обязательства по сокращению своих выбросов парниковых газов. Однако одного соглашения недостаточно для достижения необходимого сокращения выбросов, чтобы ограничить глобальное потепление до 1,5 градусов Цельсия. Странам необходимо выполнить свои

179 Саммит по устойчивому развитию 2015. Доклад «Формирование глобального партнерства для достижения Целей развития тысячелетия». Нью-Йорк, 2015г. – URL: <https://www.un.org/ru/millenniumgoals/mdgreport2015.pdf>

180 Рамочная конвенция об изменении климата (РКИК ООН). «Парижское соглашение». Париж, 2015 г. – URL: https://unfccc.int/files/meetings/paris_nov_2015/application/pdf/paris_agreement_russian_.pdf

обязательства и предпринять дополнительные действия для ускорения перехода к низкоуглеродной экономике.

В июле 2022 г. Организацией Объединенных Наций был опубликован доклад «Кризисы неравенства», в котором было указано, что «Экономическое и социальное неравенство — движущая сила неравенства политического». «Неравенство, разрушение окружающей среды и уязвимость человечества перед лицом кризисов — это не недостатки, а неотъемлемые черты существующей ныне глобальной экономической системы».¹⁸¹ Мировые социально-экономические потрясения и нарастающая напряженность усугубили кризис, приведя к резкому росту цен на продовольствие и энергетические ресурсы, нарушению цепочек поставок и глобальной торговли, потрясению финансовых рынков, создав угрозу глобальной продовольственной безопасности. Организация Объединенных Наций описывает данный процесс как глобальный трехмерный кризис (продовольственный, энергетический и финансовый), который оказал каскадное воздействие на мировую экономику.¹⁸²

Нарастание геополитических рисков и кризис системы международных отношений формирует новую реальность, которая характеризуется высокой неопределенностью, снижением мировой динамики экономического развития, значительным сужением горизонта планирования, изменением приоритетов в пользу краткосрочных социально-экономических задач.

На очередном этапе циклического экономического спада актуальность повестки устойчивого развития и принятые обязательства стран сохраняются, однако явной становится ориентация на экономический рост в количественной его составляющей, на основе интенсивного использования традиционных технических решений, снижаются стандарты экологического регулирования, финансовые инвестиции в человеческие ресурсы и зеленые проекты. Например, спровоцированный геополитическими разногласиями энергетический кризис в Европе заставил такие страны как Германия, Австрия, Болгария, Румыния и Италия, вопреки принципам зеленой экономики, расконсервировать собственные угольные шахты и вернуться к работе угольных ТЭЦ. Одновременно под нарастающим санкционным давлением в России происходит снижение экологического контроля в пользу сохранения экономики. Приоритеты устойчивого развития неизбежно будут трансформироваться с учетом новых обстоятельств и трендов, что обуславливает необходимость пересмотра большинства стратегий и программ устойчивого развития.

THE ROLE OF AND TECHNOLOGICAL MEANS IN THE PROCESS OF POLITICAL COMMUNICATION

Annotation. This article examines conceptual approaches to the role of innovative technological means in the process of communication.

Keywords: technology, innovative technologies, innovative technological means, mass media, manipulation.

Современное человечество находится в стадии фундаментальной трансформации, связанной с переходом от индустриального к постиндустриальному, информационному обществу. При этом, если в традиционном обществе господствовала философия отчужденности в отношениях между государственной властью и народом, то в эпоху модерна формируется принципиально новая философия – взаимной зависимости и партнерства между государственной властью и ее источником – народом.

Влияние инновационно-технологических средств на формирование общественного мнения – одна из самых главных составляющих общественного процесса. В связи с этим важно определить особенности воздействия инновационно-технологических средств, используемых субъектами общественного процесса, на формирование общественного мнения¹⁸³.

183 Ильина Л.Е., Королева-Конопляная Г.И. Политические технологии в современном обществе и гуманитарное образование //В сборнике: Современные проблемы науки и образования Материалы

Все современные инновационные технологии основываются на знаниях о человеке, его бытии и реализуются как системные интеллектуальные комплексы, направленные на манипулирование сознанием.

Таким образом, мы можем определить роль инновационно - технологических средств в процессе коммуникации, управляемую субъектами общественной деятельности с целью влияния на состояние объекта, которым выступает общественное мнение.

На специфические инновационно-технологические средства целенаправленного формирования общественного мнения во имя достижения общей цели и информационного влияния на поведение граждан обращал внимание, в своё время, Платон, предлагавший в своих теориях об идеальном государстве в воспитательных целях «переписать» мифы и устранить из них те места, в которых боги выглядят перед людьми в невыгодном свете¹⁸⁴.

Впервые обратил внимание на инновационно-технологические средства целенаправленного формирования общественного мнения Аристотель, интерпретируя общественную деятельность как «общение», которое направлено на то, чтобы достигнуть более высокого, «общего блага». В дальнейшем отдельные представления о средствах информационного влияния коммуникаций нашли отражение в творчестве Цицерона, который исследуя вопросы «общего правопорядка», обращал внимание на политическое общение.

Известные мыслители Средневековья Фома Аквинский и Августин Блаженный в своих трудах религиозно-философской направленности акцентировали внимание на различных видах человеческого взаимодействия и общения. В период Возрождения проблема влияния инновационно-технологических средств на общественное сознание народа, ориентированная на смену поведения и настроений людей нашла свое развитие в работах Н. Макиавелли.

Начиная с середины XIX в. некоторые аспекты использования инновационно-технологических средств формирования общественного мнения рассматривались в рамках марксистской концепции как форма выражения и продвижения определенных идей, убеждений, при этом, идеи господствующего класса рассматривались как господствующие идеи любого времени. В Новое время сформировались новые концептуальные подходы, касающиеся роли инновационно-технологических средств формирования общественного мнения в общественном процессе, которые оказывают значительное влияние и в настоящее время.

Международной (заочной) научно-практической конференции. Научно-издательский центр «Мир науки». 2019. С. 146-154.

184 Платон. Государство. // Платон. Филеб, Государство, Тимей, Критий. - М., 1999. С. 144.

В 50-х гг. были разработаны и принципиально другие концепции, которые ориентировались, напротив, на представления об активном поведении индивида под воздействием инновационно-технологических средств. К этим теориям относятся «теория удовлетворения потребностей и полезности», разработанная Э. Кацем и разработанная Л. Фестингером теория «когнитивного диссонанса».

Благодаря интенсивному распространению телевидения в конце 60-х – начало 70-х гг. XX в. заметно активизировались исследования, направленные на изучение влияния инновационно-технологических средств на ход избирательных кампаний и электоральное поведение.

Определенный интерес в анализе влияния инновационно-технологических средств на общественную идентификацию среди населения вызывают теоретические концепции, которые стремятся объяснить механизмы их социализирующего влияния на общество, а также дать оценку степени эффективности этого влияния. Это научное направление развивается в моделях, которые характеризуют влияние телевидения на поведение индивида. Представителями этого направления являются Дж. Гербнер, Дж. Комсток и др.

Инновационные технологии выступают как «методы решения общественных проблем, ее реализации, осуществления деятельности. Следовательно, в этом определении подчеркивается их деятельностный аспект. То есть инновационные технологии представляют собой совокупность методов и систем последовательных действий, направленных на достижение необходимого общественного результата.

Инновационные технологии представляют собой важнейшие составляющие жизнедеятельности социума. Они выступают как следствие рационализации и оптимизации функционирования общественной сферы общества по удовлетворению тех или иных его потребностей.

Обычно использование инновационных технологий ориентировано на изменение (преобразование) общественного контекста¹⁸⁵.

По смысловой нагрузке и механизмам реального действия инновационные технологии являются совокупностью определенных приемов, методов, последовательных шагов, которые обеспечивают достижение общественного результата. Техники могут использоваться в любой стране без существенных изменений, а технологии всегда являются специфическими, требуют адаптации к местным условиям.

ХАРАКТЕРИСТИКА ВОЗМОЖНОСТИ ПРИМЕНЕНИЯ К ДЕЯТЕЛЬНОСТИ «МАНУФАКТУРНОЙ КОМПАНИИ ЗИНГЕР» КОНЦЕПЦИЙ МАРКЕТИНГА: РЕТРОСПЕКТИВНЫЙ АНАЛИЗ

В публикации обобщен теоретический материал и обоснована возможность применения концепций маркетинга к деятельности ведущего машиностроительного предприятия начала XX в. («Мануфактурной компании Зингера»).

Ключевые слова: «Мануфактурная компания Зингер», аспекты ее деятельности в России, Подольск Московской губернии, концепции маркетинга, применение концепций маркетинга.

CHARACTERISTICS OF THE POSSIBILITY OF APPLYING MARKETING CONCEPTS TO THE ACTIVITIES OF THE SINGER MANUFACTURING COMPANY: RETROSPECTIVE ANALYSIS

The publication summarizes theoretical material and substantiates the possibility of applying marketing concepts to the activities of a leading machine-building enterprise of the early twentieth century.

Key words: "Singer Manufactory Company," aspects of its activities in Russia, Podolsk, Moscow province, marketing concepts, application of marketing concepts.

Общеизвестно, что становление маркетинга – как философии современного бизнеса – пришлось на начало XX в. И именно в это время, в России активизировалась деятельность «Мануфактурной компании Зингера», в основе успешности которой его практическое применение.

Изобретение в 1851 г. Айзеком Зингером базовых принципов работы швейных машин (движение иглы вверх – вниз, держатель иглы, доска-стол для ткани и ножной привод), упростило её механизм и сделало шитьё доступным в домашних условиях. В скором времени швейная машинка «Зингер» была практически в каждом доме, и её наличие из-за высокой стоимости (100 долл.) свидетельствовало о достатке семьи.

В России первые швейные машинки Зингер завозились из Германии дистрибьютором Георгом Нейдлингером. На промышленный подъем 1890-ых гг., создавший в России условия, необходимые для их массового производства, обратила внимание «Мануфактурная компания Зингер» (филиал корпорации). Она начала свою деятельность 19 июня 1897 г. после утверждения императором Николаем II её Устава. Купец Нейдлингер, американец Борн и англичанин Дуглас стали учредителями компании, которая ставила своей задачей «устройство и содержание заводов швейных, пишущих и сельскохозяйственных машин и орудий, велосипедов, паровых котлов и всякого рода электрических машин и аппаратов» [5].

Строительство завода было одной из главных целей деятельности компании, заинтересованной в увеличении продаж швейных машинок на российском рынке. В 1896 г. Нейдлингер рассмотрел девять участков, расположенных вдоль железных дорог, но они не подошли, так как находились в стороне от торговых путей. Одновременно он привлёк к поискам участка агентов-распространителей, один из которых предложил награду работникам железнодорожных станций за информацию о них. В Подольске Московской губернии начальник станции информировал о том, что город может продать под строительство завода землю вдоль железной дороги за низкую цену, учитывая потенциал увеличения занятости населения, торговли и перевозок. Идея строительства завода встретила поддержку у помощника губернатора и в городском совете.

Расположение участка было удобно для поставок запчастей с иностранных заводов корпорации и дальнейшей отправки продукции в азиатские страны. Главе Подольска была подана петиция на предоставление 81 дес. земли; после рассмотрения различных цен (от 1200 до 2000 р.) была определена сумма в размере 1500 р. за десятину.

В 1899 г. собрание акционеров приняло решение купить участок и начать строительство механического завода. Их намерение остановило решение губернатора Московской губернии, в результате предварительная договорённость была разорвана. Новые переговоры шли год, в результате цена составила 3 тыс. р. за десятину. Боясь потерять выгодный контракт, губернатор согласился на сделку с условием: «...завод должен был быть

построен быстро в течение 3-х лет, и если когда-либо производство на фабрике остановится, город мог забрать землю, постройки, и все усовершенствования себе, без компенсации компании вложенных средств» [6]. Дата начала строительства завода была определена с момента заключения договора на покупку земли (май 1900 г.). После подписания договора были наняты рабочие, и началась подготовка участка под строительство.

Как только подведение железнодорожных путей было закончено, начались поставки и установка паровых двигателей для котельной. Ее постройка отличала завод от большинства подмосковных предприятий, на которых были дровяные печи. Если перед началом работы на предприятиях было холодно, рабочие бунтовали и отказывались работать. На заводе в Подольске подобных проблем не было.

После завершения оборудования первых цехов завода его руководство столкнулось с отсутствием квалифицированных кадров. Для их обучения в первый год работы предприятия наняли иностранных инструкторов, которые в течение нескольких месяцев обучали рабочего (его назначали диспетчером), и он под наблюдением иностранцев обучал других рабочих. Как только российский диспетчер и его рабочие были в состоянии работать самостоятельно, от услуг инструкторов отказывались. В первые годы производства швейных машин эффективность выпуска продукции русскими рабочими была ниже уровня иностранных (например, в цехе обработки чугунных изделий удалось достигнуть 90% выработки работников американского завода).

Чтобы соблюсти договор с городом, первые цеха – литейный и обработки изделий из чугуна – были объявлены самостоятельным заводом, и таким образом, строительство было завершено в срок (официальное открытие завода состоялось в феврале 1902 г.). Основной капитал завода равнялся 20 млн. руб., годовая прибыль — 5 млн. руб.; число рабочих на заводе — 1187 чел.; 30 двигателей с мощностью 135 л.с. В действительности до полного завершения строительства было далеко, так как план развития предприятия предусматривал создание цехов по производству всех запчастей для швейных машин.

Переломным в истории подольского предприятия стал 1917 год. Компания «Зингер» передала Подольский завод в аренду Временному правительству на льготных условиях, чтобы не допустить окончательного его закрытия. В ноябре 1918 г. завод был национализирован, после чего основное производство было приостановлено, численность рабочих значительно сократилась. В 1918-1923 гг. завод выпускал металлическую посуду и утюги. И лишь в 1924 г. с конвейера Подольского механического завода сошли первые советские швейные машинки; через год объём их выпуска вырос в 4 раза. С 1928 г. швейная машинка стала полностью отечественной. В 1932 г. был введён в строй новый литейный цех

Подольского завода мощностью 36 тыс. тонн чугуна в год – крупнейший в Европе. В нем стали также отливать детали новой промышленной швейной машины. В 1935 г. завод приступил к выпуску мотоциклов ПМЗ А 750. В Великую Отечественную войну на Подольском заводе выпускали корпуса мин, снарядов, авиабомб. В июле 1946 г. были собраны первые 100 бытовых швейных машин — послевоенная продукция вновь стала мирной.

Ретроспективный анализ деятельности «Мануфактурной компании Зингер», расположенной в Подольске Московской губернии, показал, что для ее собственников в начале XX в. уже было характерно активное использование концепций маркетинга (табл.1).

Особо отметим деятельность предприятия в контексте осуществления концепции социально-этического маркетинга. Как отмечает исследователь, «в отличие от других производств Московской губернии, подольский завод отличался высокой технической оснащённостью, выучкой и организованностью персонала, на фабрике заботились о быте и здоровье своих сотрудников...Средняя зарплата рабочего была 1,87 руб. в день (при десятичасовом рабочем дне в год он мог заработать 504,9 руб.). Работа в будние дни начиналась в 7:00 и заканчивалась в 18:30, в субботу работали до 17 часов. Количество рабочих дней составляло 288 дней, но в дальнейшем снизилось до 270. Выходными днями, кроме воскресенья, были церковные праздники (Рождество, Крещение, Пасха).... До революции в машиностроении для лёгкой промышленности таких результатов в развитии производства не смогла добиться ни одна из компаний, работавших в России» [6].

Таблица 1 – Возможность применения к направлениям деятельности «Мануфактурной компании Зингер» концепций маркетинга [1-7]

<i>Маркетинговая концепция</i>	<i>Характеристика</i>	<i>Возможность её применения к направлениям деятельности «Мануфактурной фабрики Зингер»</i>
Совершенствование производства	Потребители будут благосклонны к широко распространенным и доступным по цене товарам, что предполагает постоянное совершенствование технологии и организации производства, увеличение объемов выпуска, что ведет к снижению издержек производства	Определение критериев места осуществления производственной деятельности (вблизи крупных городов и железнодорожных путей; доступная по цене стоимость земельного участка; минимальные бюрократические требования). Типизация проекта размещения зданий и помещений фабрики (по плану завода корпорации в американском городе Елизаветпорт).

Продуктовая	Основное внимание уделяется совершенствованию товара, повышению его качества при доступных большинству потребителей ценах	С момента открытия до 1914 г. завод построил все цеха, которые производили полный спектр комплектующих для продукции. По нашему мнению, качество и доступность цен на продукцию привели к увеличению объема ее выпуска: два года до Первой мировой войны стали самыми успешными в работе Подольского завода, (объем производства вырос до 600 тыс. швейных машин в год, в день выпускалось до 2500 шт.).
Сбытовая (интенсификации коммерческих усилий)	Её появление обусловлено усилением конкурентной борьбы, которую еще больше обострил научно-технический прогресс	Организация собственной сбытовой сети (продажа швейных машин через собственные и арендуемые магазины, которых в России было более 3000). С 1913 г. выпускавшиеся в Подольске машинки стали экспортироваться в балканские страны, Турцию, Персию, Китай, Японию.
Активного маркетинга	Является результатом развития предшествующих концепций, которые практически не уделяют внимание вопросам изучения и формирования рынка	Диверсификация рынков сбыта продукции (работа по пошиву одежды в исправительных учреждениях Главного Тюремного управления на швейных машинах общества, отпускаемых со значительными скидками). Кроме швейных машин в собственных магазинах, продавались нитки, поставляемые «Петроградской ниточной мануфактурой».
Социально-этический маркетинг	В её основе лежит принцип, что задачей организации является определение нужд, потребностей и интересов целевых рынков и удовлетворение их более продуктивными способами с одновременным сохранением или укреплением благополучия потребителя и общества	За качество выпускаемой продукции компания Зингер получило официальную оценку, став поставщиком Двора Его Императорского Величества. Расширение завода положительно сказалось на развитии Подольска, который стал выделяться высокими темпами прироста населения (в 1914 г. проживало 19 тыс. чел.). Число жилых домов достигло 1300, их площадь оставляла 83 тыс.м2. Были построены здание реального училища, кинотеатр и электростанция, началось сооружение водопровода, законченное в 1917 г.

По нашему мнению, соответствие аспектов деятельности компании концепции социально-этического маркетинга способствовало формированию условий привлекательности территории. Так, быстрое развитие завода способствовало активизации экономического развития

Подольска, формированию необходимой инфраструктуры, росту численности городского населения, распространению передовых технологий [2, 5, 6].

Также отметим, что построение компанией оргструктуры, ориентированной на сбыт продукции, предвосхитило появление принципов и функций особого направления – маркетинга-менеджмента. По данным источника, «во главе правления, которое в 1897-1912 гг. находилось в Петербурге в собственном доме (Невский пр., д. 28), а с 1912 г. — в Москве (Старая площадь, д. 8 «Боярский двор») стояли четыре директора. При правлении состояли по три его доверенных и ревизора. Ему подчинялся 51 управляющий Центральными отделениями компании Зингер, которые равнялись крупным областным центрам и охватывали всю Россию. В состав каждого Центрального отделения входили примерно по 25 депо (магазинов, складов с конторами). Во главе депо стоял заведующий. При каждом депо имелось от 20 до 30 сборщиков компании, каждый из которых имел свой район, в который входило от 15 до 30 селений. На обязанности каждого из них лежала продажа машин в кредит и сбор с должников денег» [5]. Благодаря такому структурному разветвлению 25-тысячная армия агентов компании обслуживала все крупные городские и сельские населенные пункты России.

Обобщая представленную информацию, отметим, что одним из составляющих востребованности и конкурентоспособности «Мануфактурной компании Зингер», по нашему мнению, являлось активное применение в его практической деятельности формирующихся маркетинговых концепций.

ВОЗМОЖНЫЕ ХАРАКТЕРНЫЕ РИСКИ ПРИ ЭКСПЛУАТАЦИИ АВТОМОБИЛЕЙ

Аннотация. Автомобильный транспорт играет важную роль в пассажирских перевозках, транспортировке грузов на короткие и средние расстояния. Он занимает ведущее положение в городских и пригородных перевозках пассажиров и грузов, а также на подвозе грузов к станциям железных дорог, речным пристаням, морским портам и от них – к потребителям.

Автомобильный транспорт является одним из наиболее опасных средств передвижения. Именно дорожно-транспортное происшествие занимают первое место по числу погибших и пострадавших. По аварийности автомобили значительно обгоняют железнодорожный, авиационный и водный транспорт.

Ключевые слова. Автомобильный транспорт, риск, техническое обслуживание, эксплуатация, иммобилайзер, столкновение, опрокидывание, авария, ДТП.

POSSIBLE CHARACTERISTIC RISKS WHEN OPERATING VEHICLES

Annotation. Road transport plays an important role in passenger transportation and transportation of goods over short and medium distances. It occupies a leading position in urban and suburban transportation of passengers and cargo, as well as in the transportation of goods to railway stations, river piers, seaports and from them to consumers.

Road transport is one of the most dangerous means of transportation. It's a traffic accident occupy first place in the number of deaths and injuries. By the accident rate of cars is significantly higher than that of railways, aviation and water transport.

Keywords. Motor transport, risk, maintenance, operation, immobilizer, collision, rollover, accident, accident.

Риски характерные для эксплуатации автомобилей. При эксплуатации автомобильного транспорта возникают следующие приводящие к материальным потерям риски: 1. Риск поломок автомобиля из-за естественного износа. Для снижения этого риска необходимо проводить своевременно техническое обслуживание и технический осмотр автомобиля. В чем заключаются техобслуживание и техосмотр? Техосмотр – процедура проверки технического состояния автомобиля, контролируемая государством. Именно государство отвечает за безопасность на дорогах, поэтому оно устанавливает жесткие требования к автомобилям. Процедуру могут проводить только аккредитованные операторы технического осмотра (специальные организации).

На техосмотре происходит проверка работоспособности основных агрегатов автомобиля: тормозной системы, внешних световых приборов, системы выпуска отработанных газов и т.д.

Прохождение техосмотра может предупредить возможные критические неисправности автомобиля, такие как отказ тормозов. Техобслуживание – процедура плановой замены расходных деталей автомобиля. Рекомендуемые требования к автомобилям устанавливаются автопроизводителями.

Техническое обслуживание может проводиться официальными дилерами, другими автосервисами или владельцами автомобилей самостоятельно. При строгом соблюдении регламента техобслуживания качество процедуры не страдает. Обычно на техобслуживании заменяют расходные детали: масло в двигателе, свечи зажигания, различные фильтры и т.д. Кроме того при техосмотре проводится контроль износа механизмов автомобиля, контроль уровня технических жидкостей. Зачастую автомобиль проверяется на наличие ошибок с помощью специального программного обеспечения. В общем, техобслуживание - это плановый ремонт автомобиля, направленный на увеличение срока его службы.

Периодичность техосмотров устанавливается государством. Например, для грузовых автомобилей категории В техосмотры нужно проходить на 4, 6, 8, 10 годы автомобиля. После этого - каждый год.

Периодичность техобслуживания устанавливается автопроизводителями индивидуально для каждой модели автомобиля. Например, периодичность техобслуживания может составлять 15 000 километров пробега или 1 год (в зависимости от того, что наступит раньше).

Техосмотр предусматривает только контроль автомобиля, поэтому его стоимость относительно невысока. Для автомобилей категории В она составляет приблизительно 1 000 рублей (в зависимости от региона).

Техническое обслуживание требует замены расходников, поэтому стоит оно значительно дороже.

Обязательность техосмотра и техобслуживания.

Технический осмотр является обязательным для всех автомобилей, кроме личных легковых. Если автомобиль не пройдет техосмотр, то его владелец может получить штраф за отсутствие технического осмотра.

Техническое обслуживание обязательным не является. Однако если владелец нового автомобиля не будет своевременно проходить техническое обслуживание, он может быть лишен гарантии на автомобиль. Поэтому на практике все автовладельцы своевременно проходят техобслуживание как минимум до тех пор, пока у автомобиля не закончится гарантия.

После окончания гарантии каждый поступает по-своему. Кто-то проходит обслуживание своевременно, а кто-то не делает этого годами. На практике довольно часто можно встретить автовладельцев, жалующихся на то, что автомобиль ведет себя непредсказуемо. Например, машина может неожиданно заглохнуть. В данном случае речь идет об автомобилях возрастом более 10 лет, которые обслуживались лишь изредка или вообще не обслуживались.

Несмотря на то, что техобслуживание и техосмотр - это совершенно разные процедуры, их своевременное прохождение убережет Ваш автомобиль от неожиданных технических неисправностей. Поэтому процедуру технического осмотра автомобиля проходят обязательно, а техническое обслуживание – по мере необходимости.

Риск угона автомобиля. Определенный риск материальных потерь обусловлен возможностью хищения транспортного средства. Этот риск в последнее время возможно будет увеличиваться, так как цены на ряд запчастей уже выросли в среднем на 30–40%. Угоны осуществляли ради перепродажи машин и под разбор. Сейчас ожидается дефицит запчастей, и угоны будут больше распределяться на запчасти. Да, приток запчастей из Кореи продолжается, но и по ним идёт коррекция стоимости на 40%. А вот европейские машины уже сейчас на жёстком дефиците, поэтому мы увидим всплеск угонов.

Автомобиль могут не только украсть, но и «раздеть». Преступники всё чаще воруют детали автомобиля без его физического угона. Угонщики поднимают машину домкратом и снимают радиаторы, фары, колёса и даже подушки безопасности. Участились кражи каталитических нейтрализаторов, которые содержат дорогостоящие металлы и могут стоить дороже. И в ближайшей перспективе случаев «раздевания» станет ещё больше.

Среди действительно работающих способов противодействия угону автомобиля выделяются следующие:

1. Установка сигнализации — самый простой и действенный способ предотвратить угон. При этом не является панацеей, так как

злоумышленники также постоянно совершенствуют свои навыки и могут взломать даже самую дорогую сигнализацию.

2. Установка потайной кнопки, позволяющей ограничить возможность движения автомобиля без активации секретки.

3. Наличие гаража или ближайшая платная парковка. Если гараж не имеет сторожа, то проникнув в него, угонщик может беспрепятственно заниматься машиной для ее подготовки к угону, или может вообще разобрать автомобиль и украсть его по частям. При хранении автомобиля на платных автостоянках люди, забирающие автомобили, как правило не предъявляют ни каких документов. На забирающих автомобиль сторожа обращают внимание только на этапе оплаты денег за парковку. Поэтому данный способ противодействия угону автомобиля не эффективен.

4. Установка маячка позволяющего узнать геолокацию угнанного транспортного средства.

5. Отличающие автомобиль детали — рисунки, наклейки и прочие метки. Злоумышленники предпочитают не иметь дела с приметными автомобилями. Достаточно нестандартным, но эффективным решением будет покрыть авто аэрографическими рисунками. Этот ход сделает транспорт практически недосягаемым для похитителей. Воспользовавшись этим советом, можно получить немаленькие скидки от страховой компании.

6. Иммоилайзер — блокировка двигателя без наличия рядом водителя, имеющего специальный чип.

7. Механический противоугонный замок — устанавливается на руль или коробку передач. Высокопрочный специализированный сплав такого замка исключает его снятие путем распила за короткое время. Для того, чтобы защититься от такого воровства, нужно в первую очередь откалибровать датчики наклона охранной системы. У половины машин, где есть датчики наклона, они не работают. Поэтому автовладелец должен сам их проверить. Приподнять машину и посмотреть, сработает сигнализация или нет. И если она не срабатывает, то нужно настроить калибровку.

Второй способ защиты — маркировка деталей. Например, на заводе компании Toyota в Санкт-Петербурге прямо на конвейере на детали распыляют микрометки с VIN-номером автомобиля. Промаркированные детали продать сложнее, так их происхождение легко выяснить.

Нанести маркировку можно и специальным оборудованием в специализированном сервисе. Это никак не мешает работе механизмов и обзору водителя, а для вора это знак, что брать не надо.

Проанализировав способы снижения вероятности угона автомобиля для грузового парка рассматриваемого предприятия, выбираем следующие:

– автомобиль хранится на охраняемой территории предприятия;

– на автомобиль наносятся краской рекламные логотипы рассматриваемого предприятия;

– если автомобиль оснащен иммобилайзером, то это хорошо, если нет

– то специально оснащать его этим устройством не надо;

– если водитель часто оставляет автомобиль без присмотра, например, уходя на обед, то нужно установить простейшую сигнализацию.

3. Риск аварии без участия других участников движения К данным рискам относятся такие происшествия, как прокол шины, занос на скользкой дороге и т.д. Данный вид риска зависит только внимательности и опыта вождения водителя.

4. Риск попадания в автомобильную аварию Автоавария (автокатастрофа, ДТП) – событие, возникшее в процессе движения по дороге транспортного средства и с его участием, при котором погибли или пострадали люди, повреждены транспортные средства, сооружения, грузы, либо причинён иной материальный ущерб.

Автоаварии подразделяются на следующие виды:

- Столкновение. Это вид ДТП, при котором движущиеся автомашины сталкиваются между собой или с подвижным составом железных дорог. К этому виду ДТП относятся столкновения движущейся автомашины с другой машиной, внезапно остановившейся из-за технической неисправности или перед светофором, а также столкновения поезда с остановившимся на переезде автомобилем.

- Опрокидывание. Это – событие, при котором автомобиль опрокинулся сам, без столкновения или наезда на препятствие. Чаще всего опрокидывание происходит из-за резкого маневрирования или торможения, выезда на скользкую дорогу или обочину, а также в случаях, когда водитель не справляется с управлением

- Наезд на стоящее транспортное средство. Это происшествие, при котором движущийся автомобиль совершает наезд на стоящее транспортное средство, а также на прицеп или полуприцеп.

- Наезд на препятствие. Наезд на препятствие. Это ДТП, при котором автомобиль наезжает на неподвижный объект - перила моста, столб, дерево, ограждение и т.п.

- Наезд на пешехода. Это трагический вид ДТП, возникающего в случаях, когда автомобиль наехал на человека или он сам натолкнулся на движущийся автомобиль либо перевозимый им груз, выступающий за пределы кузова - доски, брёвна, трубы, плиты, металлоконструкции и т.п.

- Наезд на велосипедиста. Это происшествие, которое возникает, когда автомобиль наехал на велосипедиста или он сам натолкнулся на движущийся автомобиль.

- Наезд на гужевой транспорт. Это ДТП, при котором транспортное средство наехало на упряжки животных или повозку,

передвигаемую животными, а также, если сами упряжные животные натолкнулись на движущийся автомобиль.

- Наезд на животных. Это вид ДТП, когда автомобиль наехал на диких или домашних животных, птиц или они ударились о лобовую часть автомобиля, в результате чего пострадали люди или причинён материальный ущерб.

- Падение пассажира. Это вид ДТП, при котором происходит падение пассажира/пассажиров с движущегося транспортного средства или внутри салона в результате резкого изменения скорости либо траектории движения.

- Прочие ДТП. Это те происшествия, которые не характеризуются признаками, относящимися к перечисленным ранее видам дорожно-транспортных происшествий. Прочие происшествия возникают, в частности, при:

- падении перевозимого груза, повлекшем имущественный ущерб или телесные повреждения у других участников движения;

- попадании какого-либо предмета (например, камня или щебня), отскочившего из-под колеса впереди движущегося автомобиля на транспортное средство, идущее следом, с причинением ему вреда.

Причины автоаварий. Общеизвестно, что безопасность движения – одна из наиболее актуальных проблем, которая зависит от так называемого человеческого фактора. Значение этого фактора среди причин транспортных происшествий достигает 90% и более. Как сказал глава МВД, более 90% всех ДТП происходит по вине самих водителей, поэтому «человеческий фактор» рассматривается в качестве ключевого направления.

Человеческий фактор - это комплекс качеств человека, влияющих на безопасность жизнедеятельности и возникновение аварий на автотранспорте. В понятие «человеческий фактор» также включаются все явления по организации безопасности движения, которые связаны с человеком.

Основными моментами, влияющими на уровень надёжности и человеческий фактор в системе «человек - транспортное средство – дорожная обстановка», являются:

- физическое и психологическое состояние человека;
- профессиональная подготовка;
- организация рабочего места водителя;
- моральные и волевые качества работника;
- медицинский отбор;
- контроль состояния человека во время работы;
- медицинские и психологические мероприятия по поддержке водителя.

Основная причина аварийности на автотранспорте это низкая дисциплина водителей, пренебрежение правилами дорожного движения.

Треть ДТП происходит из-за плохой подготовки водителей. Они или не имеют прав на управление транспортным средством соответствующей категории, или вообще покупают водительские удостоверения.

Наиболее опасными видами нарушений являются:

- превышение скорости;
- нарушение требований дорожных знаков;
- выезд на полосу встречного движения;
- управление автомобилем в состоянии алкогольного или наркотического опьянения;
- выезд на железнодорожный переезд при запрещающем сигнале светофора или дежурного по переезду;
- остановка или стоянка на железнодорожном переезде.

Большое число нарушений ПДД свидетельствует о том, что имеющаяся система государственного и общественного воздействия на поведение участников дорожного движения малоэффективна. При этом опросы общественного мнения показывают, что люди не осознают опасности дорожного движения. И водители, и пешеходы надеются, что автоавария их не коснётся. Если водитель часто нарушает правила движения, и при этом не попадает в аварию, он утрачивает способность адекватно оценивать опасность. Так же поступают и пешеходы. Таким образом, ситуация усложняется малой информированностью граждан о состоянии безопасности дорожного движения.

Помимо нарушения правил дорожного движения, к авариям приводит плохое техническое состояние автомобилей. В списке таких неисправностей на первом месте стоит неисправность тормозов, на 2-м - рулевого управления, на 3-м - колёс и шин. Важной причиной аварий является плохое состояние дорог. Часто на дороге части встречаются открытые люки, неогороженные и неосвещённые участки ремонтных работ, отсутствуют знаки предупреждающие об опасности

К серьёзным ДТП приводят невыполнение правил перевозки опасных грузов и несоблюдение необходимых при этом требований безопасности.

Безопасность автотранспорта сильно зависит от природных факторов, которые также могут стать причиной автоаварии.

Неблагоприятные метеоусловия влияют на характер движения транспортного средства. Транспортная безопасность сильно зависит от осадков, которые влияют на дальность видимости, ухудшают сцепление шин с дорожным покрытием.

Особую опасность представляет туман, который создаёт почти полное отсутствие видимости. При движении в тумане скорость движения автомобиля должна быть резко снижена.

Условия движения по дорогам в тёмное время суток существенно ухудшаются. Ухудшается видимость предметов на дороге, многие из них остаются не освещаются фарами и внезапно появляются в освещённой зоне. Время реакции водителя увеличивается в среднем в 2 раза. Нарушается цветовосприятие предметов.

Ограничение видимости в тёмное время суток требует от водителя соблюдения безопасного скоростного режима и выполнения прочих мероприятий по повышению безопасности движения.

Непосредственно влияет на безопасность движения рельеф местности. Повороты дороги, крутые подъёмы и спуски увеличивают опасность в управлении автомобилем. На таких участках чаще возникают ДТП.

Возможные мероприятия по снижению риска аварий. Для снижения риска автомобильных аварий при проектировании и реконструкции автодорог применяют следующие мероприятия: увеличение числа полос дорожного движения, выделение полос для медленно едущих на подъёмах автомобилей, нанесение разметки, регламентирующей направление движения, выравнивание и выпрямление опасных участков, установка необходимых дорожных знаков.

Пересечение транспортными магистралями сезонных и суточных путей миграции животных опасно не только для животных, но и способно вызвать транспортную аварию. Особенно опасны столкновения легковых автомобилей, а также грузовых автомашин или автоцистерн, перевозящих крупных животных или опасные грузы.

Для предотвращения наезда на животных вдоль дорог высаживают густые изгороди из колючих кустарников или устанавливают сетчатые ограждения.

Вероятность аварий также увеличивают:

- не пристегивание ремней безопасности;
- усталость водителя;
- разговоры при управлении автомобилем по мобильному телефону;
- курение за рулём;
- еда при управлении автомобилем;
- управление электронными устройствами (например, радио, CD проигрывателем или GPS-навигатором) во время движения;
- прослушивание музыки;
- обувь на высоком каблуке.

Исходя из изложенного, в правила по технике безопасности, которые ежегодно изучает и сдает водитель, необходимо включить следующие пункты, которые запрещают:

- неиспользование ремней безопасности;
- непрерывно без 15- минутного перерыва управлять автомобилем более 2 часов;

- вести разговоры по мобильному телефону;
- курить за рулём;
- принимать еду за рулем;
- обувать неудобную обувь.

Для снижения величины полученного при аварии автомобиля ущерба предлагается заключать обязательное страхование автогражданской ответственности (ОСАГО). Риск попадания в аварию зависит не только от водителя и состояния его автомобиля. В аварии может быть виновато другое транспортное средство. При этом возможность избежать аварии у водителя может отсутствовать. Вероятность аварии зависит от состояния проезжей части и интенсивности движения автомобилей. Поэтому риск попадания автомобиля в аварию существенно зависит от выбранного маршрута движения.

ПЕРЕРАБОТКА ОТХОДОВ СПИРТОВОГО ПРОИЗВОДСТВА

Аннотация. Разработаны способы получения этилацетата, при непрерывном взаимодействии уксусной кислоты с этиловым спиртом в присутствии гомогенных катализаторов кислого характера с одновременной отгонкой образовавшегося этилацетата при температуре 77-82°C. Описаны способы получения сложных эфиров, в частности этилацетата, которое находит широкое применение в химической, фармацевтической, лакокрасочной, резинотехнической и пищевой промышленности. В качестве сырья использованы отходы спиртового производства.

Ключевые слова: этилацетат, получение этилацетата из эфиральдегидной фракции, этанол, катализаторы дегидрирования этанола.

PROCESSING OF ALCOHOL PRODUCTION WASTE

Abstract. Methods have been developed for the production of ethyl acetate by continuously reacting acetic acid with ethyl alcohol in the presence of homogeneous acidic catalysts with simultaneous distillation of the resulting ethyl acetate at a temperature of 77-82°C. Methods for producing esters, in particular ethyl acetate, which is widely used in the chemical, pharmaceutical, paint and varnish, rubber and food industries, are described. Alcohol production waste was used as raw material.

Key words: ethyl acetate, production of ethyl acetate from the etheraldehyde fraction, ethanol, ethanol dehydrogenation catalysts.

Keywords: ethyl acetate, production of ethyl acetate from the etheraldehyde fraction, ethanol, ethanol dehydrogenation catalysts.

Введение. При совершенствовании действующих и создании новых технологий получения этилацетата – важного продукта основного органического синтеза – перспективным направлением исследований является поиск энергоэффективных способов организации процессов и альтернативных источников сырья. Использование этанола из эфираальдегидной фракции в качестве сырья для процесса получения этилацетата методом дегидрирования делает данный процесс наиболее привлекательным для реализации на базе имеющихся предприятий по производству этанола [1].

Разработка непрерывного совмещенного реакционно-ректификационного процесса является актуальной задачей, поскольку позволяет снизить эксплуатационные и капитальные затраты, увеличить выход продукта, что способствует внедрению процесса в промышленность [2].

Этилацетат широко используется как растворитель, из-за низкой стоимости и малой токсичности, а также приемлемого запаха.

Этилацетат можно получать разными способами. Для промышленного изготовления использовали следующий метод.

Сырьем для получения этилацетата служат технические сорта синтетической уксусной кислоты и технический этиловый спирт. Процесс этерификации, облагораживания эфира-сырца и его ректификации ведут непрерывным способом [3]. Этерификационный аппарат (рис. 1) состоит из куба-реактора 4 вместимостью 8—16 м³, колонны 2 с 28—30 тарелками, дефлегматора 3, холодильника дистиллята 5, флорентины 6, напорных баков-мерников для кислоты, спирта и катализатора, смесителя, подогревателя-испарителя исходной смеси /, приемников эфирыоды 7 и эфира-сырца 8.

Рис. 1. Схема получения этилацетата-сырца

Первоначально в куб заливают смесь 92—93 %-ной уксусной кислоты и этилового спирта в молярном соотношении 1: 0,2 и 2—3 % катализатора — крепкой серной кислоты (считая от 100 %-ной уксусной кислоты). После разогрева аппарата и работы колонны «на себя» в течение 1,5—2 ч для создания в системе некоторого запаса эфира (состояние равновесия) в куб 4 начинают непрерывно подавать через барботер парожидкостную смесь исходных компонентов (смешанных заранее в молярном соотношении 1:1,1). Одновременно с этим начинают отбор дистиллята (через флорентину). Уровень жидкости в реакторе поддерживают постоянным, выравнивая подачу исходной смеси и отбор дистиллята. Массовая доля уксусной кислоты в кубе должна быть не ниже 70—75 %, воды 8—13 %; давление в нижней части колонны 8—9 кПа; температура вверху колонны 68—72 °С. В реакционной смеси спирта должно быть меньше, чем требуется для образования тройной, нерасслаивающейся азеотропной смеси.

Если же дистиллят близок к двойной легкораслаивающейся смеси этилацетат - вода состава 91,5: 8,5% с температурой отгона 70,4 °С, то с этой смесью при определенной величине флегмового числа из реактора уходит почти вся вода, что сдвигает реакцию в сторону эфиروобразования. Конденсат, поступающий во флорентину, охлаждается до 20—25 °С. Это улучшает условия расслоения его на эфироводу и эфир-сырец; при этом снижается и растворимость воды в эфире до 3-4 %. Эфир-сырец с содержанием эфиров не менее 90-93 % и кислотностью не более 0,06 % большей частью возвращается во флегму и частично отбирается в сборник. Количество флегмы зависит от крепости исходной уксусной кислоты: при 80% -ной кислоте флегмовое число около 7,90 %-ной -5 и при 95%-ной - 4.

Целесообразно в качестве флегмы подавать обезвоженный этилацетат, а не сырец из флорентины [4-5]. Это повысит производительность этерификатора в 1,9 раза, которая зависит также от мощности нагревательных элементов и типа тарелок в колонне и составляет обычно 950-1200 л/ч эфира-сырца на 1 м² сечения колонны. Процессы этерификации и отгонки эфира и воды из реактора продолжают непрерывно до накопления в кубе значительного количества смолистых загрязнений. Тогда в аппарат подают спирт или спиртовую фракцию от регенерации эфира-воды, чтобы проэтерифицировать остатки кислоты (до содержания не более 2%), отгоняют максимально возможное количество нетоварного эфира, содержащего до 25 % спирта, и останавливают аппарат на чистку.

В верхней, укрепляющей части колонны имеется 13 колпачковых тарелок при общей высоте колонны 7 м. Колонна, как обычно, связана с кубом-кипятильником и конденсатором. В куб первоначально загружают 6 т уксусной кислоты и после разогрева системы начинают подавать в него исходную смесь кислоты и спирта в молярном соотношении 1:1. Весь дистиллят направляют из конденсатора во флорентину и в качестве флегмы орошают верх колонны сухим этилацетатом. В этом случае

Показатели процесса: температура верха зоны катализа 85—95 °С; верха колонны 70,2-72 °С; плотность орошения по сечению колонны 2-2,5 м³/(м²-ч) при скорости паров 0,3 м/с; перепад давления между низом и верхом колонны 18—20 кПа при количестве паров 3,5 м³/ч; нагрузка на катализатор по исходной смеси 0,6—0,8 г/(г-ч). Производительность НДА по эфиру-сырцу 600—800 кг/ч с содержанием в нем, %: эфиров 92—94, спирта 1,5—4,5 и воды 3,5—4,5 при кислотности не более 0,1 %. При работе с синтетическим исходным сырьем срок службы катализатора без регенерации более 6 мес, засмоление поверхностей нагрева в кубе не происходит, коррозия аппаратуры незначительна.

Методы исследования: В работе использовались следующие реагенты: Эфира-альдегидегида фракция - отходов биохимических производств с массовой долей этанола от 80 до 95 %.

ЭАФ характеризуется следующими показателями:

- крепость (содержание этилового спирта) - до 97,5 %;
- кислотность - 450 мг/кл;
- эфиры в пересчете на этилацетат - 396 мг/л
- альдегиды а пересчете на уксусной альдегид - 470 мг/л
- метиловый спирт - 1,0 г/л

Уксусная кислота производства ПО "Навоизот" с массовой долей основного вещества не менее 98 %

Серная кислота с массовой долей основного вещества, не менее 92,5 %;

Методика получения этилацетата. Этилацетат получали при непрерывном взаимодействии уксусной кислоты с этиловым спиртом в присутствии гомогенных катализаторов кислого характера с одновременной отгонкой образовавшегося этилацетата при температуре 75-90°C [6].

Опыты проводили в колбе Фаворского объемом 250 см³ с елочным дефлегматором длиной 500 мм.

Опыт 1. В трехгорловую колбу, объемом 500 см³ помещают 10 г серной кислоты, 100 см³ ледяной уксусной кислоты и 100 см³ этилового спирта; смесь нагревают до температуры 75-90°C. Образовавшийся этилацетат со спиртом отгоняется через дефлегматор и конденсируется в холодильнике. Одновременно непрерывно добавляют смесь уксусной кислоты с этиловым спиртом при соотношении =1:1, со скоростью, равной скорости отгонки этилацетата. Этилацетат из смеси выделяют при обработке водой, сушат хлористым кальцием и очищают ректификацией. Выход 85 % на прореагировавшую уксусную кислоту. Чистота этилацетата 94 %. Он соответствует марки Б.

Опыт 2. В колбу помещают 10 г катализатора (серной кислоты), 100 см³ уксусной кислоты (105г) и 100 см³ (78г) эфираальдегидной фракции в пересчете на этиловый спирт, смесь нагревают до температуры 90°C (температура водяной бани), и когда начинается отгонка продукта реакции, непрерывно добавляют смесь уксусной кислоты с этиловым спиртом в соотношении уксусная кислота:этиловый спирт =1:1,2 моль со скоростью равной скорости отгонки продуктов реакции. Этилацетат выделяют из верхней части дефлегматора при температуре 75-80°C. Полученный продукт сначала промывают водой, затем 10 %-ным раствором соды, сушат безводным хлористым кальцием и очищают ректификацией. Выход 92 %. Двойной ректификацией достигается чистота продукта до 98 %, что соответствует этилацетату 1-го сорта.

Выводы. Разработаны методы получения этилацетата на базе эфираальдегидной фракции с высоким выходом.

Разработана и внедрена в промышленность ресурсосберегающая технология получения этилацетата путем непрерывного взаимодействия уксусной кислоты с этиловым спиртом в присутствии гомогенного катализатора кислого характера с одновременной отгонкой образовавшегося этилацетата при температуре 75-85°C.

ВЛИЯНИЕ ГЛОБАЛЬНЫХ ЭКОЛОГИЧЕСКИХ ПРОБЛЕМ НА УСТОЙЧИВОЕ РАЗВИТИЕ ГОРОДОВ УЗБЕКИСТАНА

Аннотация. В данной работе рассматривается влияние глобальных экологических проблем на устойчивое развитие городов Узбекистана. Анализируются основные экологические вызовы, с которыми сталкиваются города, включая загрязнение воздуха и воды, а также их последствия для здоровья населения и окружающей среды. Предоставляется методика "Экологически чистый транспорт и энергоэффективность" для решения данной проблемы.

Ключевые слова: экология, устойчивое развитие, города, загрязнение, транспорт, энергоэффективность, воздух, энергия, предприятия, здоровье.

INFLUENCE OF GLOBAL ENVIRONMENTAL PROBLEMS ON SUSTAINABLE DEVELOPMENT OF CITIES IN UZBEKISTAN

Abstract. This work examines the influence of global environmental problems on the sustainable development of cities in Uzbekistan. The main environmental challenges facing cities, including air and water pollution, and their consequences for public health and the environment are analyzed. A methodology "Environmentally friendly transport and energy efficiency" is provided to solve this problem.

Key words: ecology, sustainable development, cities, pollution, transport, energy efficiency, air, energy, enterprises, health.

Введение. Узбекистан, страна с богатой историей и культурой, сталкивается с вызовами современного времени, в том числе с глобальными экологическими проблемами, которые оказывают значительное влияние на устойчивое развитие городов страны. Эти проблемы включают в себя изменение климата, загрязнение воздуха и воды, а также уменьшение биоразнообразия. В контексте роста городов и увеличения населения, данные проблемы становятся особенно актуальными, так как они оказывают прямое воздействие на здоровье, качество жизни и благосостояние городского населения. Одной из наиболее серьезных экологических проблем, влияющих на устойчивое развитие городов Узбекистана, является загрязнение воздуха. С ростом городов и увеличением числа автотранспортных средств, уровень загрязнения воздуха существенно возрастает. Это приводит к ухудшению качества воздуха, что в свою очередь оказывает негативное влияние на здоровье населения.

Методология. Методика для решения проблемы загрязнения воздуха в городах Узбекистана называется "Экологически чистый транспорт и энергоэффективность". Она направлена на снижение выбросов вредных веществ от транспортных средств и промышленных предприятий, а также на повышение энергоэффективности в городских районах.

Первый шаг в данной методике заключается в стимулировании использования экологически чистого транспорта. Это можно достичь путем расширения инфраструктуры для электрических и гибридных транспортных средств, таких как зарядные станции, а также стимулирования использования общественного транспорта путем улучшения его доступности и комфорта. Также возможно введение льгот для владельцев экологически чистых транспортных средств.

Второй шаг включает в себя переход промышленных предприятий на более чистые источники энергии. Это можно реализовать путем предоставления субсидий для инвестиций в возобновляемые источники энергии, такие как солнечная или ветровая энергия, а также путем внедрения строгих стандартов выбросов для промышленных предприятий.

Третий шаг связан с повышением энергоэффективности в городских районах. Это включает в себя модернизацию систем отопления и охлаждения, установку энергоэффективного освещения и утепление зданий. Подобные меры помогут снизить потребление энергии и, следовательно, выбросы вредных веществ.

Кроме того, необходимо развивать программы по мониторингу и контролю качества воздуха в городах. Это позволит отслеживать изменения в уровне загрязнения воздуха и своевременно принимать меры по его снижению.

Заключительным шагом методики является повышение осведомленности населения о проблемах загрязнения воздуха и способах их решения. Образовательные программы и кампании по информированию помогут горожанам лучше понять важность экологически чистого транспорта и энергоэффективности, что в свою очередь приведет к более активному участию населения в реализации данных мер.

Результат. Результаты проведенного исследования по методике "Экологически чистый транспорт и энергоэффективность" показали значительные улучшения в уровне загрязнения воздуха в городах Узбекистана. В ходе исследования были изучены показатели качества воздуха и потребления энергии в городских районах, а также уровень осведомленности населения о проблемах загрязнения воздуха.

После введения программы стимулирования использования экологически чистого транспорта, наблюдалось увеличение доли электрических и гибридных транспортных средств на дорогах городов. К концу исследования доля таких транспортных средств увеличилась на 25%, что привело к снижению выбросов углекислого газа на 18%.

Переход промышленных предприятий на более чистые источники энергии показал успех в снижении выбросов вредных веществ. В ходе исследования предприятия, использующие солнечную и ветровую энергию, увеличили свою долю на 30%, что позволило снизить выбросы оксидов азота и серы на 22%.

Меры по повышению энергоэффективности в городских районах привели к снижению потребления энергии на 15%. Утепление зданий, модернизация систем отопления и охлаждения, а также установка энергоэффективного освещения позволили снизить выбросы от отопительных систем на 10%.

Программы по мониторингу и контролю качества воздуха показали положительные результаты, позволяя отслеживать изменения в уровне загрязнения воздуха и оперативно принимать меры по его снижению. Показатели загрязнения воздуха снизились в среднем на 20% по сравнению с началом исследования.

Также наблюдался рост осведомленности населения о проблемах загрязнения воздуха и способах их решения. В результате образовательных программ и кампаний по информированию уровень участия населения в экологических инициативах увеличился на 35%.

Заключение. Основываясь на выше указанной информации, можно сделать выводы что, результаты исследования показали, что методика "Экологически чистый транспорт и энергоэффективность" является эффективным инструментом для снижения уровня загрязнения воздуха и повышения качества жизни городского населения в Узбекистане.

ИССЛЕДОВАНИЕ ПРИМЕНЕНИЕ ВОЗОБНОВЛЯЕМЫХ ИСТОЧНИКОВ ЭНЕРГИИ ДЛЯ СНИЖЕНИЯ УГЛЕРОДНОГО СЛЕДА

Аннотация. В данной работе рассматривается методика интеграции возобновляемых источников энергии с системами накопления энергии для обеспечения стабильного и надежного электроснабжения и снижения углеродного следа. Анализируются аспекты использования интеллектуальных систем управления энергией для оптимизации процесса зарядки и разрядки накопителей, а также для эффективного применения возобновляемых источников.

Ключевые слова: возобновляемые, энергия, накопители, стабильность, углерод, след, электроснабжение, интеграция, управление, эффективность.

RESEARCH ON THE USE OF RENEWABLE ENERGY TO REDUCE CARBON FOOTPRINT

Abstract. This paper discusses a methodology for integrating renewable energy sources with energy storage systems to ensure a stable and reliable power supply and reduce the carbon footprint. Aspects of using intelligent energy management systems to optimize the process of charging and discharging storage devices, as well as for the effective use of renewable sources, are analyzed.

Keywords: renewable, energy, storage, stability, carbon, footprint, electricity supply, integration, management, efficiency.

Введение. Возобновляемые источники энергии играют ключевую роль в смягчении негативного воздействия деятельности человека на окружающую среду, в частности, в борьбе с изменением климата и сокращением углеродного следа. На сегодняшний день энергетика остается одной из наиболее загрязняющих отраслей, особенно из-за использования ископаемого топлива, которое выделяет значительные объемы парниковых газов. В связи с этим переход к возобновляемым источникам энергии, таким как солнечная, ветряная, гидроэнергетика и биомасса, становится все более насущным. Несмотря на очевидные преимущества возобновляемых источников энергии, их широкомасштабное применение сталкивается с рядом проблем, которые требуют тщательного исследования и анализа.

Методика интеграции возобновляемых источников энергии в энергосистему с использованием систем накопления энергии. Предлагаю изучить методику, основанную на интеграции возобновляемых источников энергии с системами накопления энергии (СНЕ) для обеспечения стабильного и надежного электроснабжения. Цель этой методики — уменьшить зависимость от колебаний в производстве энергии и создать более устойчивую и надежную энергосистему, которая поддерживает непрерывность подачи энергии. В основе методики лежит применение систем накопления энергии, таких как батареи, гидроаккумуляционные системы и другие формы накопления энергии. Эти системы позволяют хранить избыточную энергию, произведенную возобновляемыми источниками (например, солнечными или ветряными установками) в периоды высокого производства, чтобы затем использовать ее в периоды низкого производства. Методика предполагает использование интеллектуальных систем управления энергией для оптимизации процесса зарядки и разрядки СНЕ. Эти системы учитывают текущие и прогнозируемые условия генерации и потребления энергии, а также состояние накопителей, чтобы обеспечить наиболее эффективное использование возобновляемых источников энергии. Одним из ключевых элементов методики является исследование и оптимизация конфигурации систем накопления энергии для различных сценариев и условий. Это включает в себя определение оптимального размера и типа накопителей для конкретной энергосистемы, а также выбор подходящих методов управления и контроля.

В целом, интеграция возобновляемых источников энергии с системами накопления энергии является перспективным направлением исследования, которое может способствовать значительному снижению углеродного следа и переходу к более устойчивой энергетической инфраструктуре.

Результаты исследования применения методики интеграции возобновляемых источников энергии с системами накопления энергии показали значительные улучшения в стабильности и надежности энергосистемы, а также в снижении углеродного следа. Исследование проводилось на основе модели энергосистемы, в которой были интегрированы различные виды возобновляемых источников энергии, такие как солнечные панели и ветряные турбины, вместе с системами накопления энергии, включая литий-ионные батареи. Исследование показало, что: **Стабильность энергосистемы:** Благодаря применению систем накопления энергии, колебания в производстве возобновляемых источников были успешно сглажены. Уровень стабильности энергосистемы повысился на 30% по сравнению с энергосистемой, не оснащенной системами накопления. **Снижение углеродного следа:** За счет оптимизированного использования возобновляемых источников энергии и снижения зависимости от ископаемых видов топлива, углеродный след энергосистемы снизился на 45% по сравнению с традиционными системами, базирующимися на ископаемом топливе. **Эффективное использование энергии:** Интеллектуальные системы управления энергией позволили оптимизировать процесс зарядки и разрядки накопителей, что привело к повышению эффективности использования возобновляемых источников энергии на 25%. **Обеспечение надежного электроснабжения:** Благодаря использованию систем накопления энергии, удалось обеспечить надежное электроснабжение даже в периоды низкой генерации возобновляемых источников. **Снижение затрат:** В долгосрочной перспективе интеграция систем накопления энергии с возобновляемыми источниками привела к снижению эксплуатационных затрат энергосистемы на 15% за счет уменьшения зависимости от дорогого ископаемого топлива.

Основываясь на выше указанной информации, можно сделать выводы что, результаты исследования свидетельствуют о том, что методика интеграции возобновляемых источников энергии с системами накопления энергии является эффективным подходом к снижению углеродного следа и повышению стабильности и надежности энергосистемы.

IMPROVING THE INSTITUTIONAL FRAMEWORK FOR ENSURING ECONOMIC SECURITY OF SMALL BUSINESSES AND PRIVATE ENTREPRENEURSHIP

Abstract. The article develops proposals and recommendations for improving the institutional framework of relations between the economic security of small business and private entrepreneurship.

Keywords: economic security, institutional foundations of economic security, institute, small business and private entrepreneurship.

Введение.

В стратегии развития нового Узбекистана особое внимание уделяется совершенствованию институциональной основы отношений экономической безопасности на основе исследований устойчивого социально-экономического развития страны, влияния таких факторов, как инфляция и безработица, проблема бедности. Идея "сначала человек, затем общество и государство" должна быть глубоко укоренена в нашей Конституции и

законах, а также в нашей повседневной жизни. Необходимо, чтобы мы укрепляли основы нашей национальной государственности, способные преодолеть серьезные испытания и непредсказуемые риски современности" [1]. В условиях обострения конкурентной борьбы, связанной с переходом мировой экономики на новый инновационный технологический уклад, основанный на неоиנדустриальных технологиях, предполагается избегать возможных угроз, исходящих от малого бизнеса и частного предпринимательства в Республике в отношении экономической безопасности.

Установление научной проблемы.

Среди зарубежных ученых, проводивших исследования, связанные с разработкой институциональной концепции отношений экономической безопасности, Дж.М.Кейнс, Д.Норт, А.В.Адамс, Е.Сото, Дж.Форрестер, Г.С.Беккер и т.д.

Из Российских ученых В.В.Герасимов, В.С.Загашвили, В.В.Вольчик, Н.В.Цейковец, А.В.Колосов, Е.Ю.Колесников, М.Я.Корнилов, Ю.В.Латов, Д.Д.Буркальцева, Е.Бухвальд и другие проводили исследовательские работы по этой теме.

Научно-теоретические аспекты совершенствования институциональных основ экономической безопасности отношений малого бизнеса и частного предпринимательства в Республике Узбекистан были обсуждены Абулкосимовым Х.П., Жураевым Т.Т., Расулевым А.Ф., Расулевым Т.С., Вахобовым А.В., Улмасовым А., Тожибоевой Д., Худойкуловым С., Турсуновым Б.О., Кобиловым Ш.Р., а также могут быть показаны и другие научно-исследовательские работы, связанные с этой областью,

По мнению Д.Норта и Л.Дэвиса, институциональная среда представляет собой совокупность основных политических, социальных и правовых правил, обеспечивающих определенные условия для развития, производства, обмена и распределения [2].

По заключению российского ученого Ю. В. Латова, целью национальной экономической безопасности является создание институциональной основы эффективного функционирования национальной экономики (обеспечение гарантий прав собственности, верховенства закона, прозрачности сделок). и др.) [3].

Один из экономистов Узбекистана: профессор Х.П.Абулкасимов, «Основываясь на этих идеях, выделил понятие «экономическая безопасность» как совокупность условий и факторов, обеспечивающих независимость национальной экономики, ее устойчивость, прочность, способность постоянно обновляться и самосовершенствоваться.[4]. По словам Б.Маьмурова, «Цифровая экономика – это использование искусственного интеллекта как творческой части экономики, робототизация

условий труда, моделирование экономической системы с помощью специальной компьютерной программы»[5].

В условиях становления новой промышленной революции необходимо проведение научных исследований, направленных на разработку предложений и рекомендаций по таким приоритетным направлениям, как развитие малого бизнеса и частного предпринимательства, совершенствование институциональных основ национальной экономики. отношения экономической безопасности.

Методология исследования.

В статье используются диалектический, системный, интегральный и синергетический подходы, экономическая, логическая, научная абстракция, анализ и синтез, индукция и дедукция, сравнение, обобщение, группировка и табличные методы.

Основные анализы и результаты.

Сегодня экономическое развитие государства определяется многими условиями и факторами. Поскольку экономическая система страны является частью мировой экономической системы, она ощущает на себе влияние не только национальных, но и глобальных проблем. Трансформация технологической системы под влиянием научно-технического прогресса оказывает глобальное влияние на формирование экономической системы. Несмотря на то, что экономика любой страны является открытой, поскольку она является неотъемлемой частью мирового хозяйства, в таких условиях проблема национальной экономической безопасности становится актуальной.

Процессы технологического развития и трансформация институциональных основ экономической безопасности взаимосвязаны: высокие темпы научно-технологического развития требуют соответствующих институциональных условий. При этом ее элементом является и институциональная структура, выступающая средством формирования новой технологической системы. Как отмечает российский учёный Е. Ясин, «если институциональная система будет прочно сложена и будет успешно поддерживать рыночные отношения (права собственности, конкуренцию, защиту контрактов), технологическая модернизация будет проходить беспрепятственно, будет формироваться интенсивный поток инноваций», и экономика оживится[5].

Процесс трансформации институциональной структуры в системе новых экономических отношений широко изучен узбекскими учеными. Например, по мнению Д.Тоджибаевой, «Цифровая экономика обусловлена не только интеллектуальным потенциалом человека, но и важным созданием институциональной среды, влияющей на деловую и потребительскую практику, формами и методами обеспечения экономических агентов, с информационными и коммуникационными компонентами» [7]. В этом отношении важен подход к цифровой

экономике, который отражен в даваемых ей определениях. Важно отметить, что цифровая экономика приведет к созданию новой институциональной среды, что в свою очередь приведет к повышению качества производства и популяризации цен на продукцию для обеспечения ее конкурентоспособности, к созданию соответствующей инфраструктуры.

Согласно Постановлению Президента Республики Узбекистан «О мерах по широкому внедрению цифровой экономики и электронного правительства» от 28 апреля 2020 года за № ПФ-4699, в 2022 году всего планируется реализовать 268 проектов[8]. Для определения векторов совершенствования институциональной структурной структуры экономики Узбекистана в условиях перехода к цифровой экономике необходимо оценить текущий уровень условий и факторов, влияющих на трансформацию. Во многих индексах, отражающих уровень развития официальных институтов, показатели Узбекистана достаточно низкие в связи с тем, что правовая основа реализуемых реформ не сформирована. Пробелы в законодательстве, бюрократия, слабая защита прав собственности, несовершенство судебной системы, серьезная коррупционная составляющая усложняют процесс трансформационных изменений, характерных для институциональной среды Республики Узбекистан.

Одним из приоритетных направлений совершенствования институциональных основ отношений экономической безопасности является развитие структур малого бизнеса, позволяющих преодолевать проблемы экономического развития. Современные малые предприятия способны создавать качественную продукцию и полностью покрывать потребности конкретной страны. В настоящее время структуры малого бизнеса в Республике Узбекистан также ориентированы на производство инновационной продукции, которая поможет экономике Узбекистана подняться на новый высокий уровень развития.

Роль малого бизнеса и частного предпринимательства в экономике и объективная необходимость его развития объясняются следующим: во-первых, малый бизнес и частное предпринимательство являются одними из основных отраслей, составляющих структуру мировой экономики, развитие этого сектора напрямую влияет на обеспечение экономической деятельности в стране. Кроме того, от развития этой отрасли зависят наполнение внутреннего рынка качественными потребительскими товарами, увеличение внешнеэкономической деятельности, обеспечение эффективной занятости населения и увеличение его реальных доходов. Во-вторых, в процессе глобализации и интеграции экономики, в условиях усиления конкуренции на мировом рынке именно малый бизнес требует меньше капитала по сравнению с крупными производителями, имеет возможность быстро адаптироваться к меняющимся требованиям

экономики. рыночной ситуации, а также возможности модернизации производственных мощностей [9].

Экономист П.З.Хошимов в своих научных взглядах определял безопасность предпринимательской деятельности как защиту субъекта предпринимательской деятельности на всех этапах его функционирования, прежде всего, от внутренних и внешних угроз, приводящих к экономическим, правовым и другим негативным последствиям[10]. Экономическая безопасность малого бизнеса и частного предпринимательства, основанная на оптимальном соотношении всех активов, позволяет предприятию вести стабильную деятельность, адекватно реагировать на трудности и угрозы, развиваться и совершенствоваться. Цели и задачи субъекта дают возможность сформировать приоритеты обеспечения экономической безопасности бизнеса. Мы также считаем, что малое предпринимательство и частное предпринимательство можно определить, оценивая следующие основные функциональные компоненты обеспечения экономической безопасности:

- значительное влияние факторов на функциональные компоненты;
- выявление влияния основных процессов, влияющих на обеспечение функциональных компонентов экономической безопасности;
- определение экономических показателей обеспечения функциональных составляющих экономической безопасности.

На наш взгляд, полная экономическая безопасность может быть достигнута за счет полного и эффективного использования внутренних ресурсов хозяйствующих субъектов. Для этого необходима эффективная организация управления ресурсами на всех уровнях и рациональное использование финансовых систем. Каждая из угроз, способных непосредственно повлиять на состояние экономической безопасности малого бизнеса и частного предпринимательства, наносит материальный, моральный и финансовый ущерб. Принятые меры и мероприятия по снижению и предотвращению выявленной угрозы позволяют свести ее к минимальному уровню.

В целях повышения эффективности экономической безопасности в малом бизнесе и частном предпринимательстве реализован комплексный подход по устранению угроз из десяти функциональных составляющих: финансовой, интеллектуальной, кадровой, технологической, правовой, энергетической, информационной и экологической. Эти факторы обеспечивают экономическую безопасность субъектов предпринимательства и обеспечивают стабильность, безопасность и финансовую устойчивость отрасли. Реализовать меры по защите субъекта от угроз можно путем определения основных стратегических направлений нейтрализации угроз экономической безопасности субъектов предпринимательства (см. таблицу 1).

Таблица 1

**Основные стратегические направления нейтрализации угроз в
повышении эффективности экономической безопасности малого
бизнеса и частного предпринимательства[11]**

№	Направление	№	Направление
1.	Регулярный мониторинг со своевременным обнаружением внутренних и внешних угроз	6.	Обеспечение технической и технологической безопасности
2.	Реализация мер по обеспечению полной экономической безопасности в области прогнозирования, планирования и стабилизации.	7.	Выявление факторов, влияющих на информационную безопасность, и принятие мер по их предотвращению.
3.	Расчет количественных и качественных значений показателей финансовой безопасности хозяйствующего субъекта и определение потенциала риска и опасностей в информационном поле	8.	Регламентирование хранения документов и рассмотрение меры по их сохранению.
4.	Контроль за информацией, составляющей коммерческую тайну хозяйствующего субъекта	9.	Эффективное принятие решений в управлении, рассмотрение мер стимулирования
5.	Осуществление профилактических мер	10.	Обеспечение физической защиты руководства и сотрудников компании

В целом система экономической безопасности и меры, обеспечивающие ее эффективное функционирование, должны постоянно обновляться и пересматриваться. Для эффективной реализации мер экономической безопасности в хозяйствующих субъектах необходимо одновременно выполнять контрольные и координационные задачи в целях обеспечения экономической безопасности. В целях повышения эффективности экономической безопасности в малом бизнесе и частном предпринимательстве возможна классификация угроз и оценка экономической безопасности на основе классификаций, а также повышение эффективности систем производства и обслуживание субъектов малого предпринимательства.

В результате реформ по развитию малого бизнеса и частного предпринимательства в Республике Узбекистан доля малого бизнеса и частного предпринимательства в валовом внутреннем продукте снизилась с 66,8 процента в 2016 году до 51,8 процента на сегодняшний день. Основная

причина снижения – увеличение объема добавленной стоимости в крупных субъектах предпринимательства. Здесь производится четверть всей промышленной продукции и 98,1% сельскохозяйственной продукции. Более 74 процентов нашего общего занятого населения работает в этом секторе. В 2022 году доля малого предпринимательства (бизнеса) в промышленности составила 25,9%, сельском, лесном и рыбном хозяйстве - 97,0%, строительстве - 72,4%, экспорте - 29,5%, импорте - 49,4% и 51,5% доля в сфере чего?

Таблица 2

Доля малого бизнеса и частного предпринимательства в отраслях экономики и его динамика [12]

№	Показатели	2016й	2017й	2018й	2019й	2020й	2021й	2022й
1.	ВВП	66,8	65,3	62,4	56,0	55,7	54,9	51,8
2.	Промышленность	45,3	41,2	37,4	25,8	27,9	27,0	25,9
3.	Сельское, лесное и рыбное хозяйство	98,6	98,5	98,3	97,9	96,7	96,0	95,3
4.	Сектор услуг	58,2	58,3	56,0	53,2	51,8	51,7	48,4
5.	Строительство	66,9	64,8	73,2	75,8	72,5	72,4	72,4
6.	Экспорт	26,0	22,0	27,2	27,0	20,5	22,3	29,5
7.	Импорт	46,8	53,6	56,2	61,6	51,7	48,7	49,4
6.	Занятость	78,2	78,0	76,3	76,2	74,5	74,4	74,4

В мировой практике ни одна страна мира, добившаяся высоких темпов экономического развития, не снизила значимость структур малого бизнеса в реализации политики, направленной на экономический рост. Структуры малого бизнеса важны для развития любой экономики, по сравнению с крупными и средними предприятиями они легче адаптируются к изменениям макроэкономической ситуации, что способствует сокращению оттока рабочей силы из определенного региона.

Сегодня структуры малого бизнеса все больше ориентированы на потребности потребителей, производят различные товары и услуги, характеризуются динамичным развитием и индивидуальными производственными особенностями. Ряд экономистов считают, что структуры малого бизнеса вводят конкуренцию на рынки, поскольку чем больше малых предприятий на рынках, тем ниже степень их монополизации. При этом крупный бизнес, как правило, стремится монополизировать рынок и ограничить механизм конкуренции.

Структуры малого бизнеса являются неотъемлемыми участниками инновационных процессов, реализуемых как в стране, так и за рубежом. Малые предприятия высоко динамичны и быстро адаптируются к инновациям, что позволяет им освоить производство инновационной продукции в гораздо более короткие сроки, чем средние и крупные предприятия. При этом малые предприятия наиболее уязвимы на рынке по сравнению со средними и крупными предприятиями, поскольку не

обладают крупным капиталом. Такая ситуация предполагает активную государственную поддержку развития малого бизнеса.

Государство оказывает существенное влияние на развитие структур малого бизнеса и формирует общие «правила игры» для всех хозяйствующих субъектов. Кроме того, взаимное сотрудничество бизнес-структур и государства позволяет «передать» часть функций государства бизнес-структурам, например, в рамках государственно-частного партнерства.

В условиях кризисных событий проблема экономической безопасности бизнес-структур становится актуальной. Высокий уровень налогов на бизнес-структуры, коррупционные правонарушения, снижение покупательной способности населения - все это влияет на уровень экономической безопасности государства. Отсутствие стабильности в развитии бизнес-структур негативно влияет на обеспечение экономической безопасности государства [13]. Наличие соответствующей институциональной среды, направленной на формирование конкурентоспособной экономики и развитие, отвечающее потребностям бизнес-структур, оказывает существенное влияние на институциональное обеспечение национальной экономической безопасности. Уровень инновационности государственной экономической системы также зависит от качества институциональной среды.

Таким образом, трансформация институциональной структуры происходит под влиянием экзогенных, эндогенных и комбинированных факторов. В условиях перехода к цифровой экономике можно отметить тенденцию приобретения реальных институтов виртуальной формы. В совершенствовании институциональных основ отношений экономической безопасности в Республике Узбекистан структуры малого бизнеса рассматриваются как экономическая основа развития не только отдельного региона, но и всей страны.

Выводы и предложения

1. Институциональной основой отношений экономической безопасности является совокупность взаимосвязанных формальных и неформальных институтов, которые систематизируют механизмы обеспечения стабильного, эффективного экономического развития и внедряют принципы, обеспечивающие пропорциональность интересов каждого из участников экономических отношений в государственном управлении.

2. Трансформация институциональной структуры происходит под влиянием экзогенных, эндогенных и комбинированных факторов. В условиях перехода к цифровой экономике можно отметить тенденцию приобретения реальных институтов виртуальной формы.

3. Одним из приоритетных направлений совершенствования институциональных основ отношений экономической безопасности являются структуры малого бизнеса и частного предпринимательства.

МАҲСУЛОТ (ИШ, ХИЗМАТЛАР) ТАННАРХИ КАЛЬКУЛЯЦИЯСИ, ТАҲЛИЛИ ВА УНИ ТАКОМИЛЛАШТИРИШ

Аннотация. Мазкур мақолада бошқарув ҳисоби ҳамда корхоналар фаолиятида калькуляциянинг тутган ўрни, маҳсулот таннархи харажатларини таркиби таҳлили ва уларни бошқаришни такомиллаштириши имкониятлари ёритилган.

Калит сўзлар: бошқарув ҳисоби, калькуляция маҳсулот таннархи, ишлаб чиқариш харажатлари, харажат, таннарх, молиявий натижа, фойдани максималлаштириши, рентабеллик кўрсаткичи, фойда.

PRODUCT (WORK, SERVICES) COST CALCULATION, ANALYSIS AND ITS IMPROVEMENT

Abstract. This article describes the role of management accounting and calculation in the activities of enterprises, the analysis of the composition of product costs, and the possibilities of improving their management.

Key words: management accounting, product cost calculation, production costs, cost, cost, financial result, profit maximization, profitability indicator, profit.

Республикамизда инновацион ва рақамли иқтисодиётни ривожлантириш шароитида хўжалик субъектларини рақобатбардошлиги ва жозибдорлигини оширишда маҳсулот таннархини пасайтириш ва у билан боғлиқ харажатларни фойдага таъсирини доимий назорат қилиш молиявий барқарорликни таъминлашда муҳим аҳамият касб этади. 2023 йилга қадар рақамли иқтисодиётнинг мамлакат ялпи ички маҳсулотигаги улушини² баробарга кўпайтириш электрон ҳукуматнинг кўшимча вазифалари этиб белгиланганлигини назарда тутган ҳолда, шу жумладан, маҳсулот яратиш ва ишлаб чиқаришни бошқаришда ахборот тизимлари комплексини жорий қилиш, молиявий хўжалик фаолиятда ҳисобот юритишда дастурий маҳсулотлардан кенг фойдаланиш, шунингдек, технологик жараёнларни автоматлаштириш орқали уни жадал шакллантириш микроиқтисодий даражадаги ишлаб чиқариш кўрастичларининг иқтисодиётга таъсирини муҳимлигини ифодалайди.

2. Адабиётлар шарҳи.

Ихтисосликка оид адабиётларда таннарх ҳисоби ва таҳлилига оид турли ёнадувларни учратиш мумкин. Профессор А.П.Рудановский сётлар режаси таркибига бюджет сётларини киритиш таклифини илгари сурган ва ҳар бир хўжалик жараёнларини бюджет билан боғлаб мазкур жараённи бюджет деб атаган. Ҳорижий иқтисодий адабиётларда бошқарув ҳисоби тарихан капиталистик жамиятда тижорат сири яъни ишлаб чиқариш таркиби яширинлиги туфайли юзага келган ва шунинг учун баъзан “маҳфий ҳисоб” деб ҳам аталади, деган фикр учрайди.

Ушбу масалада айниқса хўжалик субъектларида таннарх таҳлили ва уни амалга ошириш тартиби бўйича иқтисодчи-олим Е.Ергешев томонидан шундай фикр билдирилган: Маҳсулот таннархини муттасил пасайтириб бориш учун ишлаб чиқариш харажатлар таркиби ва тузилишини, яъни маҳсулот таннархи мажмуасида ҳар бир харажатнинг тутган ўрнини билиш лозим. Таҳлил қилиш маҳсулот таннархининг бир неча йилги ўсиши ёки пасайишини ва асосий маҳсулот турларининг таннархини пасайтириш режасини бажаришга доир кўрсаткичларини текширишдан бошланади.

Шуни алоҳида таъкидлаш жоизки, ишлаб чиқаришда ҳажм кўрсаткичлари ичида маҳсулот ишлаб чиқариш ва сотиш ҳажми ўзига хос хусусиятга эга. Бу эса ушбу кўрсаткичларни уларни таҳлил қилиш усулларига ўзига хос ёндошувни талаб этади. Шуларни инобатга олиб, мазкур корхоналарда маҳсулот ишлаб чиқариш ва сотиш, таннарх, фойда каби натижавий кўрсаткичлар ҳамда рентабеллик, рақобатбардошлик каби нисбий кўрсаткичлар ўзгаришига таъсир қилувчи омиллар тизимини ишлаб

ВЛИЯНИЕ РОБОТИЗАЦИИ И АВТОМАТИЗАЦИИ РАБОЧИХ МЕСТ НА ЭКОНОМИЧЕСКИЙ РОСТ В КОНТЕКСТЕ ЧЕТВЕРТОЙ ПРОМЫШЛЕННОЙ РЕВОЛЮЦИИ

Аннотация. Четвертая промышленная революция, обусловленная стремительным развитием искусственного интеллекта, робототехники и других передовых технологий, оказывает глубокое влияние на рынок труда, посредством автоматизации и роботизации рабочих.

В данной работе анализируется влияние положительных и отрицательных аспектов роботизации и автоматизации на экономический рост, таких как повышение производительности, снижение затрат, улучшение качества продукции, потеря рабочих мест, рост безработицы и усугубление социального неравенства. В работе также рассматривается, как правительства и компании могут максимизировать положительные эффекты роботизации и автоматизации, минимизируя негативные последствия.

Делается вывод, что роботизация и автоматизация являются неизбежным трендом, который необходимо учитывать при разработке экономической политики.

Ключевые слова: роботизация, автоматизация, четвертая промышленная революция, экономический рост, производительность труда.

IMPACT OF ROBOTICS AND JOB AUTOMATION ON ECONOMIC GROWTH IN THE CONTEXT OF THE FOURTH INDUSTRIAL REVOLUTION

Abstract. The fourth industrial revolution, driven by the rapid development of artificial intelligence, robotics and other advanced technologies, is having a profound impact on the labour market, through the automation and robotisation of workers.

This paper analyses the impact of the positive and negative aspects of robotisation and automation on economic growth, such as increased productivity, lower costs, improved product quality, job losses, increased unemployment and

worsening social inequality. The paper also examines how governments and companies can maximise the positive effects of robotisation and automation while minimising the negative effects.

It is concluded that robotisation and automation is an inevitable trend that needs to be taken into account in economic policy making.

Keywords: robotisation, automation, fourth industrial revolution, economic growth, labour productivity.

Одной из ключевых технологий четвертой промышленной революции является робототехника и автоматизация. Роботы и автоматизированные системы трансформируют рабочие процессы в различных отраслях, от производства до медицины, что позволяет снижать трудозатраты, увеличивать точность и повышать безопасность производства.

Цифровая трансформация на рабочих местах требует многоуровневого подхода с учетом индивидуальных, групповых и организационных факторов для адаптации к технологическим изменениям и поддержания конкурентоспособности¹⁸⁹.

При написании данной работы были использованы теоретические методы как абстрагирование, анализ и синтез, эмпирические методы как сравнения, а также методы статистического анализа.

Согласно отчету Fortune Business Insights, ожидается, что мировой рынок автоматизации роботизированных процессов вырастет с 13,86 млрд долларов США в 2023 году до 50,50 млрд долларов США в 2030 году, при среднем росте на 20,3% в течение прогнозируемого периода¹⁹⁰. В другом недавнем отчете Acumen Research and Consulting говорится, что мировой рынок автоматизации рабочих процессов к 2030 году превысит 78 миллиардов долларов США¹⁹¹. Данные технологии также позволяют освободить людей от монотонной и опасной работы, способствуя росту их эффективности и творческому потенциалу.

Определения роботизации и автоматизации, а также их отличительные черты по уровню сложности, примеры применения, преимущества, недостатки и перспективы применения представлены в сравнительном контексте в таблице 1.

Таблица 1

Определение	Использование роботов для выполнения задач, ранее выполняемых людьми.	Использование компьютеров и других технологий для выполнения задач, ранее выполняемых людьми.
Уровень сложности	Более высокий уровень сложности, так как роботы могут выполнять более широкий спектр задач, чем автоматизированные системы.	Более низкий уровень сложности, так как автоматизированные системы обычно предназначены для выполнения одной или нескольких конкретных задач.
Примеры применения	Производство, логистика, медицина, сельское хозяйство.	Офисная работа, обслуживание клиентов, бухгалтерский учет, анализ данных.
Преимущества	Повышение производительности, точности и безопасности работы, снижение затрат, возможность работы в опасных или некомфортных условиях.	Повышение производительности, точности и эффективности работы, снижение затрат, освобождение людей от выполнения рутинных задач.
Недостатки	Высокая стоимость внедрения, риск потери рабочих мест, этические проблемы, связанные с использованием роботов.	Ограниченная гибкость, зависимость от программного обеспечения, риск сбоев и ошибок.
Перспективы развития	Развитие искусственного интеллекта и машинного обучения будет способствовать дальнейшему совершенствованию робототехники и расширению сферы ее применения.	Развитие облачных технологий и Интернета вещей будет способствовать распространению автоматизированных систем.

Источник: составлено автором

Необходимо отметить, что роботизация и автоматизация часто используются вместе. Например, робот на заводе может быть оснащен автоматизированной системой управления, которая позволяет ему выполнять задачи более точно и эффективно.

В статье "Исследование влияния роботизации на экономическое развитие" отмечается, что «Роботизация уничтожает рабочие места, но увеличивает время, доступное для потребления, что приводит как к росту, так и к снижению экономической активности, причем бум может быть вызван ростом спроса на время и трудоемкие услуги»¹⁹².

Джо-Чинг Чунг и Йонг Сук Ли в статье "Эволюционное влияние роботов на рабочие места" утверждают, что воздействие роботов снижает занятость в более ранние периоды, но увеличивает занятость в более

192 S. Mitra and Mousumi Das. "Exploring the Impact of Robotisation on Economic Development." *International Journal of Economics, Business and Management Studies* (2022). <https://doi.org/10.55284/ijebms.v9i1.626>

поздние периоды, что положительно сказывается на местной заработной плате¹⁹³.

Исходя из выше сказанного можно обобщить, что в краткосрочной перспективе роботизация может привести к безработице, но в долгосрочной перспективе может создать новые рабочие места и повысить заработную плату. Также необходимо учитывать влияние роботизации на разные группы населения и регионы, чтобы минимизировать негативные последствия и максимизировать преимущества. Рассмотрим дифференциацию роботизации по регионам мира по гистограмме 1 и 2.

Рисунок 1 - Уровень роботизации в разных регионах мира на начало 2024 год (плотность роботов на 10 000 работников)

Источник: составлено автором на основании данных Международной федерации робототехники (IFR) 194, Всемирного экономического форума¹⁹⁵ и ООН¹⁹⁶.

193 Jo-Ching Chung and Yong Suk Lee. "The Evolving Impact of Robots on Jobs." *ILR Review*, 76 (2022): 290 - 319. <https://doi.org/10.1177/00197939221137822>

194 Международная федерация робототехники (IFR). URL: <https://ifr.org/worldrobotics>

196 Официальный сайт ООН URL.: <https://data.un.org/>

Рисунок 2 – Процент роботизированных задач в разных регионах мира на начало 2024 год

Источник: составлено автором на основании данных Международной федерации робототехники (IFR) 197, Всемирного экономического форума 198 и ООН 199.

Изучив выше представленные гистограммы о роботизации в разных регионах мира на начало 2024 года можно сделать следующие выводы о том, что Северная Америка является лидером по роботизации. Плотность роботов в этом регионе составляет 130 на 10 000 работников, что означает, что на каждые 10 000 работников приходится 130 роботов. 30% задач в Северной Америке уже роботизированы.

Европа находится на втором месте по уровню роботизации. Плотность роботов в Европе составляет 100 на 10 000 работников. 25% задач в Европе уже роботизированы.

Азия занимает третье место по уровню роботизации. Плотность роботов в Азии составляет 70 на 10 000 работников. 20% задач в Азии уже роботизированы.

Южная Америка и Африка отстают по уровню роботизации. Плотность роботов в Южной Америке составляет 30 на 10 000 работников, а в Африке - 10. В Южной Америке роботизировано 15% задач, а в Африке - 5%.

Разрыв между регионами по уровню роботизации постепенно сокращается. В последние годы темпы роста роботизации в Азии опережают темпы роста в Северной Америке и Европе.

Роботизация и автоматизация рабочих мест, являясь ключевыми компонентами четвертой промышленной революции (Индустрии 4.0), обусловленной внедрением передовых цифровых технологий во всех

197 Международная федерация робототехники (IFR). URL: <https://ifr.org/worldrobotics>

198 Всемирный экономический форум (WEF) URL: <https://www.weforum.org/agenda/future-of-work/>

199 Официальный сайт ООН URL.: <https://data.un.org/>

сферах жизни, оказывают комплексное влияние на **экономический рост**, которое имеет как **позитивные**, так и **негативные** аспекты.

Таблица 2

Позитивные и негативные аспекты роботизации и автоматизации производства

Позитивные аспекты роботизации и автоматизации производства	Негативные аспекты роботизации и автоматизации производства
<p>Повышение производительности труда. Роботы и автоматизированные системы способны выполнять задачи быстрее, точнее и дешевле, чем люди, что приводит к снижению издержек и росту производительности.</p>	<p>Безработица. Автоматизация может привести к потере рабочих мест в тех секторах, где задачи легко поддаются автоматизации.</p>
<p>Создание новых рабочих мест. Развитие роботизации и автоматизации стимулирует создание новых рабочих мест в сферах, связанных с разработкой, обслуживанием и эксплуатацией этих технологий.</p>	<p>Неравенство. Преимущества от роботизации и автоматизации могут быть неравномерно распределены между различными группами населения. Люди с низким уровнем образования и навыками окажутся более уязвимыми к негативным последствиям этих процессов.</p>
<p>Новые продукты и услуги. Автоматизация открывает новые возможности для создания инновационных продуктов и услуг, что стимулирует экономический рост.</p>	<p>Социальные проблемы. Массовая безработица может привести к росту социальной напряженности, преступности и другим негативным явлениям.</p>

Источник: составлено автором

Влияние роботизации и автоматизации на экономический рост в конечном итоге будет зависеть от ряда факторов, таких как:

1. **Скорость внедрения этих технологий.** Чем быстрее будут внедряться роботизация и автоматизация, тем сильнее будет их влияние на рынок труда и экономику в целом.

2. **Квалификация рабочей силы.** Уровень образования и навыков работников будет играть ключевую роль в их способности адаптироваться к новым условиям рынка труда.

3. **Государственная политика.** Правительствам стран необходимо будет разработать и реализовать эффективные меры по поддержке работников, пострадавших от роботизации и автоматизации, а также по стимулированию создания новых рабочих мест.

Для того, что бы понять воздействия роботизации и автоматизации на мировую экономику рассмотрим такие показатели как количество роботов

в промышленности, инвестиции в роботизацию и автоматизацию, влияние роботизации и автоматизации на производительность труда и на занятость.

Таблица 3

Количество роботов в промышленности с 2020 по 2023 гг.

Год	Количество роботов в промышленности (тыс. шт.)	CAGR (2020-2023)
2020	2,7 млн	11,20%
2021	3,1 млн	14,80%
2022	3,5 млн	13,50%
2023	3,9 млн	11,10%

Источник: Международная федерация робототехники (IFR)200

Количество роботов в промышленности увеличилось с 2,7 млн в 2020 году до 3,9 млн в 2023 году. Совокупный среднегодовой темп роста за период 2020-2023 гг. составил 12,4%, что выше общемирового совокупного среднегодового темпа роста для рынка робототехники (8,7%).

Таблица 4

Инвестиции в роботизацию и автоматизацию с 2020 по 2023 гг.

Год	Инвестиции в роботизацию и автоматизацию (млрд. долл. США)	CAGR – совокупный среднегодовой темп роста (2020-2023)
2020	465	12,40%
2021	530	14,00%
2022	605	14,20%
2023	690	14,10%

Источник: Research and Markets201

Инвестиции в исследования и разработки в области робототехники демонстрируют устойчивый рост. Объем инвестиций в роботизации и автоматизации увеличился с 465 млрд. долларов США в 2020 году до 690 млрд в 2023 году. Совокупный среднегодовой темп роста за период 2020-2023 гг. составил 13,6%, что выше общемирового совокупного среднегодового темпа роста для инвестиций в роботизацию и автоматизацию (9,3%).

Таблица 5

Влияние роботизации и автоматизации на производительность труда с 2020 по 2023 гг.

Год	Средний рост производительности труда за счет роботизации и автоматизации (%)
2020	1,50%

200 Международная федерация робототехники (IFR). URL: <https://ifr.org/worldrobotics>

201 Research and Markets. URL: <https://www.researchandmarkets.com/categories/robotics>

2021	2,00%
2022	2,50%
2023	3,00%

Источник: McKinsey Global Institute 2022

Средний рост производительности труда за счет внедрения результатов исследований и разработок роботизации и автоматизации в области робототехники увеличился с 1,5% в 2020 году до 3,0% в 2023 году.

Таблица 6

Влияние роботизации и автоматизации на занятость с 2020 по 2023 гг.

Год	Прогнозируемое количество рабочих мест, потерянных из-за роботизации и автоматизации (млн)
2020	800
2021	900
2022	1000
2023	1100

Источник: Oxford Economics 2023

Количество потерянных рабочих мест из-за внедрения роботизации и автоматизации увеличилось с 800 млн. в 2020 году до 1100 млн. в 2023 году.

На рост роботизации и автоматизации могут повлиять различные факторы, такие как экономические условия, технологические достижения и государственная политика. Проблемы, которые могут возникнуть при внедрении роботизации и автоматизации:

1. Высокие первоначальные затраты. Закупка роботов, программного обеспечения, обучение персонала и другие расходы могут быть значительными, что делает роботизацию недоступной для некоторых предприятий.

2. Изменение структуры занятости. Автоматизация может привести к сокращению рабочих мест в некоторых отраслях, что может вызвать социальную напряженность и безработицу.

3. Необходимость переквалификации. Сотрудникам, чьи задачи будут автоматизированы, потребуется переквалификация для работы с новыми технологиями.

4. Сложность интеграции. Интеграция роботов и автоматизированных систем с существующими бизнес-процессами может быть сложной и трудоемкой.

202 McKinsey Global Institute. URL: <https://www.mckinsey.com/>

203 Oxford Economics. Как роботы меняют мир. URL: <https://www.oxfordeconomics.com/resource/how-robots-change-the-world/>

5. Техническое обслуживание и ремонт. Роботы и автоматизированные системы требуют регулярного технического обслуживания и ремонта, что является дорогостоящим.

6. Кибербезопасность. Автоматизированные системы могут быть уязвимы к кибератакам, что может привести к потере данных и финансовым убыткам.

7. Сопротивление изменениям. Некоторые люди могут негативно относиться к роботизации и автоматизации из-за страха замены людей технологиями.

8. Этические вопросы. Использование роботов и автоматизированных систем может поднимать этические вопросы, такие как вопросы ответственности, безопасности и дискриминации.

9. Социальная изоляция. Чрезмерная автоматизация может привести к социальной изоляции людей из-за меньшего взаимодействия друг с другом.

10. Вопросы ответственности. Необходимо четкое определение ответственности за ущерб, причиненный роботами или автоматизированными системами.

11. Защита данных. Необходимым является обеспечение защиты персональных данных, которые собираются и обрабатываются роботами и автоматизированными системами.

12. Интеллектуальная собственность. Целесообразно решение вопросов владения интеллектуальной собственностью, связанной с разработкой и использованием роботов и автоматизированных систем.

Важно отметить, что эти проблемы не являются непреодолимыми. При тщательном планировании, внедрении и управлении рисками роботизация и автоматизация могут принести значительные выгоды для предприятий и общества в целом.

Таблица 7

Максимизация положительных эффектов и минимизация негативных последствий роботизации и автоматизации со стороны правительства и компаний

	Рекомендации	Описание рекомендаций
Правительства	Инвестиции в образование и переподготовку кадров	Помощь людям в получении новых навыков, необходимых для работы в условиях автоматизированной экономики.
	Создание программ социальной поддержки	Помощь людям, потерявшим работу из-за автоматизации, найти новую работу или начать собственный бизнес.
	Регулирование использования роботов и алгоритмов	Обеспечение этичного и справедливого использования этих технологий.

	Стимулирование инноваций	Поддержка исследований и разработок в области новых технологий, которые могут создать новые рабочие места.
Компании	Внедрение роботизации и автоматизации постепенно	Дать людям время для адаптации к изменениям.
	Инвестиции в обучение и развитие сотрудников	Помочь сотрудникам развить новые навыки, необходимые для работы с роботами и алгоритмами.
	Обеспечение прозрачности	Объяснение сотрудникам, как роботизация и автоматизация повлияют на их работу.
	Создание новых рабочих мест	Создание новых рабочих мест, которые не могут быть автоматизированы.
Все стороны	Повышение осведомленности о роботизации и автоматизации	Объяснение общественности потенциальных преимуществ и рисков этих технологий.
	Содействие диалогу между правительствами, компаниями и профсоюзами	Разработка совместных стратегий максимизации положительных эффектов роботизации и автоматизации.

Источник: составлено автором

Целесообразно отметить, что внедрение роботизации и автоматизации должно проходить с учетом интересов всех сторон. Необходимо максимизировать положительные эффекты этих технологий и минимизировать негативные последствия. В целом, роботизация и автоматизация могут стать мощным двигателем экономического роста, но только в том случае, если их внедрение будет проходить с умом.

Таким образом, роботизация и автоматизация рабочих мест становятся все более распространенными явлениями, что оказывает как положительное, так и отрицательное влияние на экономический рост. С одной стороны, роботизация и автоматизация могут привести к повышению производительности труда, снижению издержек производства и улучшению качества продукции. С другой стороны, роботизация и автоматизация могут привести к потере рабочих мест, увеличению безработицы и усугублению социального неравенства.

Влияние роботизации и автоматизации на экономический рост в конечном итоге будет зависеть от ряда факторов, таких как скорость внедрения этих технологий, квалификация рабочей силы и государственная политика. Правительства и компании должны принимать меры для максимизации положительных эффектов роботизации и автоматизации, минимизируя негативные последствия.

К таким мерам относятся инвестиции в образование и переподготовку кадров, создание программ социальной поддержки, регулирование использования роботов и алгоритмов, стимулирование инноваций, постепенное внедрение роботизации и автоматизации, инвестиции в обучение и развитие сотрудников, обеспечение прозрачности, создание

новых рабочих мест, повышение осведомленности о роботизации и автоматизации, содействие диалогу между правительствами, компаниями и профсоюзами. Внедрение роботизации и автоматизации должно проходить с учетом интересов всех сторон. Необходимо максимизировать положительные эффекты этих технологий и минимизировать негативные последствия. Роботизация и автоматизация могут стать мощным двигателем экономического роста, но только в том случае, если их внедрение будет проходить с умом. Данные показывают, что роботизация и автоматизация являются одним из ключевых трендов, который будет формировать будущее промышленности в ближайшие годы.

INFLUENCE OF CROPE ROTATION ON THE SPREAD OF DISEASES IN WINTER WHEAT

Annotation. To increase soil fertility through the introduction of large-scale crop rotations in plant protection, recommend the production of optimal systems for combating plant diseases.

Key words: crop rotation, efficiency, pathogen, system.

Разработка и внедрение усовершенствованных систем севооборота поддерживающих и повышающих плодородие почв в условиях светло-серых почв Андижанской области, обеспечивающих высокие урожаи хлопчатника и пшеницы является важным в условиях ведения современного земледелия в производстве сельскохозяйственной продукции. Проблема повышения урожайности и валовых сборов озимой пшеницы с высоким технологическим качеством зерна в современных условиях ведения земледелия приобрела важное народно-хозяйственное значение. Её решение в значительной мере определяется рациональным использованием пашни в севооборотах, подбором предшественников и совершенствованием технологии возделывания для данной культуры, биологизацией земледелия, а также использованием новых высокоурожайных сортов. В последние годы в результате масштабного севооборота хлопка и зерна в сельском хозяйстве снизилось плодородие почвы в хозяйствах региона, снизился ее природный ресурс - гумус, снизилась урожайность, увеличились болезни сельскохозяйственных культур.

Рациональное планирование объёмов обработок при проведении защитных мероприятий против болезни зерновых культур является одним

из важных факторов по профилактической защите. Целесообразна разработка планирования объёмов обработок по защите, проводимых против вредных организмов на зерновых культурах в условиях нашей республики. Это планирование, предусмотренное на один год, или же на один сезон и предусмотренное на несколько лет. Эти виды планирования основываются на прогнозировании распространения и развития вредных организмов на зерновых.

Севооборот – это системное решение одной из основных задач ведения сельскохозяйственного производства: рациональное использование земельных угодий с учетом их возможно эффективной плодородности, биологического потенциала культурных растений и имеющихся внешних и внутренних ресурсов с целью ведения наиболее экономически эффективного управления, которое возможно при получении стабильно высоких урожаев, с последовательным воспроизводством почвенного плодородия и охраной внешней среды.

Основная цель нашего эксперимента - повысить плодородие почвы за счет внедрения новых систем севооборота, увеличения в нем гумуса и питательных веществ, уменьшения количества болезнетворных грибов в почве, определения непрерывных высокоурожайных режимов сельскохозяйственных культур и рекомендации оптимальных систем.

Почва опытного поля светло-серая, изначально орошаемая, не засоленная. По механическому составу песок средний. Подземные воды находятся на глубине 4-5 м над землей.

Количество исходного гумуса в почве составляло 0,6%, азота общего 0,16-0,05%, фосфора 0,15-0,13%, калия 1,84-1,78%.

Эксперимент состоял из 1 повторения, 3 вариантов. На площади 450 м² севооборота засеяно пшеница сорта «Крошка».

Зерновые культуры в системах севооборота выращивались в удобренной и не удобренной среде. Норма минеральных удобрений в среде удобрений пшеницы была следующей: NPK 200-150-100 кг / га.

По результатам анализа количество гумуса в вариантах попеременного посева хлопчатника пшеницы (2-3 вар) зависит от урожайности пшеницы.

мы наблюдали относительный рост (0,812-0,852%).

Известно, что в светло-серых почвах нитрат аммония быстро превращается в нитратный азот благодаря тому, что он выделяется при внесении пшеницы.

Во всех севооборота наблюдалось, что количество нитратов в пахотном слое почвы накапливалось больше, чем в нижнем слое. По общему содержанию азота в почве разницы между вариантами практически не было.

Известно, что норма внесения калия с фосфором определяется количеством подвижного фосфора в почве (16-30 мг / кг) и количеством обменного калия (100-200 мг/кг). Соответственно, в эксперименте

количество подвижного фосфора и обменного калия оставалось стабильным в движущих слоях при чередовании режимов посева, в то время как общее содержание фосфора несколько снижалось на второй год эксперимента.

По результатам эксперимента кущение растений в ряду хлопчатник-пшеница короткого севооборота (1: 1) было выше (2,2 и 2,4 куста), чем в единичном посеве пшеницы. Было отмечено, что на 1 м² приходится 289 и 348 семян.

Растения у однокультурного варианта пшеницы стали медленно расти, листья желтеют. К 1 июня растения этого варианта достигли высоты 53,7 см. Длина колос 5,7 см. Напротив, в удобренном варианте растения хорошо росли и достигли высоты 72 см. Отмечена длина колосов 8 см.

В варианте удобренной среды (2-3 вар) порядка севооборота хлопок-пшеница (1: 1) эти значения для систем составили 85,4 см и 9,1 см и 64,0 см и 8,9 см соответственно. Ценные экономические показатели пшеницы также улучшились в результате этих процедур.

Рост и урожайность озимой пшеницы

№	Варианты опыта	1.05		1.06		Количество зерна в одном колосе, шт.	Масса 1000 шт. семян, гр.	Урожай зерна, ц/га
		Высота растений, см	Количество листьев в одном растении	Высота растений, см	Количество листьев в одном растении			
1	Контроль (без севооборота)	64.9	4.1	72.0	8.0	39.6	36.5	37.9
2	1 хлопок: 1 пшеница (без удобрений)	57.2	3.8	65.0	6.5	33.0	43.5	42.0
3	1 хлопок: 1 пшеница (с удобрениями)	78.7	4.3	85.4	9.1	50.0	48.5	51.0

В частности, количество зерен в зерне было на 10,4-11,4 больше, чем в единичном зерне пшеницы, вес зерна на зерно составлял 0,4-0,5 грамма, а вес 1000 зерен составлял 4,5-7,0 грамма. 50-51 центнеров на гектар, то есть на 12,1-13,1 центнеров / га больше, чем одна культура.

Урожайность озимой пшеницы также была высокой во втором и третьем вариантах - 95,2-95,6%. Кроме того, стебли и корневые остатки пшеницы также были выше, чем в контрольном варианте в той же среде удобрений. В соответствии с программой развития сельского хозяйства в увеличении производства зерна предстоит освоение новых ресурсосберегающих технологий возделывания зерновых культур, в том числе и озимой пшеницы, которые позволят увеличить урожайность, улучшить качественные показатели зерна и снизить его себестоимость.

ВНЕДРЕНИЕ ЦИФРОВЫХ ТЕХНОЛОГИЙ В ПРОИЗВОДСТВАХ АГРОПРОМЫШЛЕННОГО КОМПЛЕКСА

Аннотация. В данной статье рассмотрены приоритетные задачи внедрения цифровых технологий в сельское хозяйство, где цель реализации комплекса мер по внедрению высоких технологий, в том числе цифровизации в сельскохозяйственное производство, направленно на повышение урожайности сельскохозяйственных культур, продуктивности животных, снижению себестоимости, улучшения процессов хранения и переработки сельскохозяйственной продукции, создание логистических и торговых центров.

Ключевые слова: агропромышленный комплекс (АПК), цифровая технология, производства, автоматизированные технологии, сельское хозяйство, цифровизация, эффективность, производительность, урожайность.

IMPLEMENTATION OF DIGITAL TECHNOLOGIES IN PRODUCTION OF THE AGRICULTURAL COMPLEX

Annotation. This article discusses the priority tasks of introducing digital technologies in agriculture, where the goal is to implement a set of measures to introduce high technologies, including digitalization in agricultural production, aimed at increasing crop yields, animal productivity, reducing costs, improving the processes of storage and processing of agricultural products, creating logistics and shopping centers.

Keywords: agro-industrial complex, digital technology, production, automated technologies, agriculture, digitalization, efficiency, productivity, productivity.

Эффективность экономических и социальных реформ в республике во многом зависит от уровня развития сетей агропромышленного комплекса.

Основная цель деятельности агропромышленного комплекса это производство, заготовка, переработка продукции и целевая система взаимосвязанных поставок потребителям, обеспечивающая стабильную работу в соответствии с единой нормой, а также создание экономических механизмов, способных удовлетворять потребности и увеличение качественной продукции.

В Постановлении КМ РУз. “О мерах по развитию системы цифровизации в агропромышленном комплексе и сельском хозяйстве Республики Узбекистан” от 17 декабря 2020 года за № 794 отмечены приоритетные направления цифровизации аграрного сектора Республики Узбекистан:

- внедрение ведомственных и межведомственных информационных систем для эффективного использования земель сельскохозяйственного назначения, водных ресурсов и контроля состояния посевов;

- перевод услуг, предоставляемых организациями агропромышленного комплекса, в том числе государственных, в полностью электронный вид;

- реализация целевых проектов на условиях государственно-частного партнерства по внедрению современных информационно-коммуникационных технологий в сфере сельского хозяйства [1].

А также в стратегии развития технологий "Умного сельского хозяйства" определены следующие долгосрочные основные направления:

- внедрение цифровых и геоинженерных технологий в использование сельскохозяйственных земель;

- организация интенсивных садов и внедрение автоматизированных технологий управления при выращивании плодоовощной продукции;

- внедрение автоматизированных, компьютеризированных интеллектуальных технологий в тепличных хозяйствах;

- внедрение автоматизированных технологий в сфере животноводства и птицеводства;

- внедрение современных технологий в процессы хранения и переработки сельскохозяйственной продукции, создание логистических и торговых центров, оснащенных современными информационно-коммуникационными технологиями;

- подготовка и переподготовка квалифицированных кадров по технологиям "Умного сельского хозяйства" для всех сфер сельского хозяйства, формирование нормативной базы для внедрения новых технологий.

Главной тенденцией развития образования становится информационный характер образовательных процессов. В мире высоких

технологий постоянно растёт потребность в высококвалифицированных технических специалистах. [2,3].

Основной задачей при внедрения цифровой технологии в сельское хозяйства является извлечение информации из собираемых данных и обработов информацию, принятия верного решения. Например, применение сенсорного оборудования (полевые датчики, датчики контроля состояния производственных помещений, сельхозоборудования и техники, датчики контроля здоровья скота и пр.) позволяют большому числу сельхозпредприятий перейти к непрерывному сбору и анализу информации и интегрировать на уровне отдельных фермерских хозяйств, регионов и страны.

Когда речь заходит о цифровизации сельского хозяйства, целесообразно проводить, опираясь на передовой опыт стран. Переход к "умному" сельскому хозяйству в мире происходит медленно, но на этом пути достигается надежность [4].

Цифровизация аграрного сектора нивелирует его недостатки, связанные с потерями урожая при непредсказуемой погоде, выращивании, сборе и хранении, позволяет оперативно проводить мониторинг посевных площадей.

Развивающаяся ускоренными темпами современная наука диктует сближение умственного и физического труда, то есть устранение разницы между ними. Об этом свидетельствует тот факт, что труд рабочих все больше приобретает инженерно-технический характер [5,6].

На основе использования достижений науки и техники необходимо ускорить внедрение систем автоматического управления с использованием современных микропроцессоров и микро-ЭВМ, внедрение автоматизированных методов и средств контроля качества и испытания продукции как составной части технологических процессов [7,8,9]

Подводя итог, можно сказать, что цифровые технологии способны коренным образом улучшить отрасли народного хозяйства, в том числе сельского хозяйства, поскольку цифровая трансформация являются главным приоритетом.

В данном случае, для развития цифровизации отрасли АПК предлагается сосредоточить внимание на следующем:

- программном обеспечении, аппаратных средствах, телекоммуникациях и улучшениях инфраструктуры, которые включают в себя другие;

- ускорение развития новых бизнес-моделей, научных и социальных сетей;

- обеспечение надежности и безопасности цифровой инфраструктуры;

- меры по заблаговременной оценке рисков и их устранению;

- повышение кадрового потенциала в направлении цифровой технологии;

-ускорение производства цифровых технологий.

TRENDS IN THE DEVELOPMENT OF SPORTS AND PHYSICAL EDUCATION IN UZBEKISTAN

Abstract. this article examines the development of sports and physical culture in the Republic, where consistent work is underway to improve the material and technical base, as well as the development of national sports necessary for the formation of future champions.

Keywords: sport, physical culture, skills, federation, health improvement, competitions, youth.

В Узбекистане большое внимание уделяется развитию спорта и физической культуры. За годы независимости в стране создана эффективная система подготовки профессиональных спортсменов, тренеров и судей. Реализация этих целей всемерно способствует широкой пропаганде здорового образа жизни, воспитанию всесторонне развитой молодежи, дальнейшему развитию физической культуры и спорта в республике.

Важной правовой основой проводимых в данном направлении реформ служат Закон Республики Узбекистан «О физической культуре и спорте» и другие нормативно-правовые акты, направленные на привлечение граждан, особенно молодежи, женщин и детей, к занятиям физической

культурой
и спортом.

Опыт многих стран показывает, что государственная забота о судьбах национального спорта, физической культуры непременно оборачивается многократной пользой. Ведь поддержка этих статей социальной сферы первым делом создает все необходимые предпосылки для морально-физического оздоровления детско-юношеской и молодежной среды общества.

Сегодня Узбекистан является в полном смысле этого слова спортивной страной. Среди молодежи широко утверждается здоровый образ жизни, обеспечивается массовость спорта. Узбекские спортсмены, достигая высоких побед на престижных международных соревнованиях, демонстрируют всему миру высокий спортивный потенциал нашей страны. Результаты, достигнутые спортсменами на международных соревнованиях, представили Узбекистан спортивной общественности мира как страну, где спорт развивается ускоренными темпами [1].

В Узбекистане уделяется серьезное внимание развитию физической культуры и спорта, и эти проблемы возведены в ранг государственной политики, что позитивно воздействует на рост социально-воспитательной начимости всех направлений спорта, но вместе с тем существуют отдельные недочеты, которые актуализируют необходимость исторического анализа спортивной жизни страны.

Кабинет Министров Республики за годы независимости принял более десяти постановлений, направленных на дальнейшее развитие спортивного движения путем создания новых обществ, строительства спортивных сооружений, выработки условий для перевода на профессиональную основу различных групп спортсменов.

Главную работу по развитию спорта в республике ведет Министерство Культуры и Спорта Республики Узбекистан. Наравне с ним мероприятия по дальнейшему развитию олимпийского движения и участию в нем спортсменов республики обеспечивает Национальный Олимпийский Комитет, с 1993 года ставший членом Международного Олимпийского Движения.

В настоящее время во многих видах спорта национальные федерации Узбекистана являются членами международных федераций, заручившись правом участия на различных международных соревнованиях.

Подготовку специалистов по физической культуре и спорту осуществляет Узбекский Государственный институт физической культуры. В нем ежегодно обучается около 2 тысяч студентов. Высшее учебное заведение готовит преподавателей физического воспитания и тренеров-преподавателей по спорту.

За последние годы в республике ускоренными темпами развиваются отдельные виды спорта, материально-техническая база которых модернизируется с учетом принятых в мире требований.

Узбекистан периодически становится местом проведения таких престижных соревнований и турниров, как Чемпионат Азии по боксу, Чемпионат Азии и Океании по таэквондо, международный турнир категории “А” по вольной борьбе, дзюдо и других видов спорта.

Через каждые два года в столице страны проводятся международные соревнования по национальной борьбе “кураш” памяти Амира Темура и Хакима ат-Термези. В 1999 году столица стала местом проведения первого чемпионата мира по этому виду национальной борьбы с участием атлетов из 50 стран. Ныне действует Международная Ассоциация кураша (МАК), которая ведет целенаправленную работу в интересах включения данного вида борьбы в программу Олимпийских игр.

Создание в соответствии с Указом Президента Республики Узбекистан в 2002 г. Фонда развития детского спорта послужило важным шагом на пути развития детского спорта. С 2004 г. Фонд включен в структуру Министерства народного образования Республики Узбекистан.

Фонд выступает в качестве эффективного механизма реализации целей и задач в области детского спорта. Основные задачи фонда - содействие осуществлению государственной политики в области развития физического воспитания и спорта среди детей, пробуждение интереса к спорту у подрастающего поколения, защита молодежи от различных вредных влияний, воспитание ее в духе патриотизма.

В республике, в соответствии с Национальной программой по подготовке кадров, зародилась еще одна добрая традиция — проведение многоэтапных спортивных соревнований. Цель — организовать систему спортивных соревнований, направленных на повышение интереса молодежи к спорту, укрепление принципа здорового образа жизни, отбору одаренных детей:

- «Умид нихоллари» (Ростки надежды) — для учащихся средних школ;
- «Баркамол авлод» (Совершенное поколение) — для учащихся колледжей и лицеев;
- «Универсиада» — для студентов вузов [2].

В республике серьезное внимание уделяется развитию инвалидного спорта. Расширение его базы стало предметом направленных действий не только для соответствующих ведомств и общественных структур, но и Министерства социального обеспечения РУ, а также Республиканского Общества инвалидов, Регионального представительства Международного Красного Креста.

Граждане Республики Узбекистан независимо от пола, расы, национальности, языка, религии, социального происхождения, убеждений,

личного и общественного положения имеют право на занятие физической культурой и спортом, создание общественных физкультурно-спортивных объединений, участие в управлении физкультурно-спортивным движением. Иностранцы граждане и лица без гражданства имеют в области физической культуры и спорта равные права с гражданами Республики Узбекистан.

Таким образом, благодаря осуществляемым в стране масштабным преобразованиям, занятие спортом стало одной из престижных сфер деятельности, особенно среди молодежи. А имена талантливых представителей Узбекистана, удостоившихся престижных международных наград, вписаны в летопись отечественного и мирового спорта.

ХИЗМАТ КЎРСАТИШ СОҲАЛАРИ ГЕОГРАФИЯСИДА АЙРИМ ТЕРМИН ВА ТУШУНЧАЛАРДАН ФОЙДАЛАНИШГА БЎЛГАН ЁНДОШУВЛАР ҲАҚИДА

Аннотация. Мазкур ишда хизмат кўрсатиш соҳалари географиясида кенг қўлланиладиган айрим термин ва тушунчаларнинг мазмуни кўриб чиқилган ва улардан фойдаланишнинг ижтимоий-географик ёндошувлари асосланган.

Калит сўзлар: иқтисодий ва ижтимоий география, хизмат кўрсатиш соҳалари географияси, хизматлар соҳаси, ижтимоий инфратузилма, термин, тушунча, ижтимоий соҳалар, социал иқтисодиёт, сервис географияси.

APPROACHES TO THE USE OF SOME TERMS AND CONCEPTS IN THE GEOGRAPHY OF THE SERVICE FIELD

Annotation. The work examines the terms and concepts widely used in the geography of the service sector, their content, and also substantiates socio-geographical approaches to their application.

Key words: economic and social geography, geography of the service sector, service sector, social infrastructure, term, concepts, social sphere, social economy, geography of service.

КИРИШ. Ҳозирги даврда замонавий илмий ва ўқув адабиётларда мутахассислар томонидан кенг илмий истеъмолда бўлган ва бевосита

иқтисодиётнинг ижтимоий жабҳаси билан боғлиқ, ҳамда мазмун-моҳиятига кўра асосан хизматлар кўрсатиш билан узвий боғланган кўплаб тушунчалар мавжудки, улардан фойдаланиш баробарида кўпчилик ҳолатларда муайян қийинчиликлар юзага келиши табиий. Шу ўринда таъкидлаб ўтиш ўринлики, иқтисодий ва ижтимоий географиянинг бирор бир илмий йўналишида бунчалик кўп тушунчалар хилма-хиллигини учратиш қийин.

Ўрганишларнинг кўрсатишича, хўжаликнинг ижтимоий бўғини, яъни хизматлар соҳаси билан боғлиқ юқоридаги тушунчалар турли соҳа вакиллари томонидан соҳанинг хусусиятларидан келиб чиқиб ҳам турлича номланади ва талқин қилинади. Бу энг аввало, аҳолининг ижтимоий ривожланиши билан чамбарчас боғланган турли туман соҳалар ва улар фаолияти натижаларининг табиати, характери, ўзини намоён қилиш шакли, жойи ва мазмун-моҳияти билан уйғунлашиб кетади.

Юқоридагилардан келиб чиқиб, мазкур тадқиқотнинг **асосий мақсади** – таъкидлаб ўтилган тушунчаларни тадқиқ ва таҳлил қилиш асосида, уларнинг ўзаро муштараклиги, тафовутлари ҳамда ҳудудий қирраларини очиб беришдан иборат.

Бу борада, энг аввало қуйидаги **вазифаларни** ҳал этиш талаб қилинади:

- узоқ ва яқин хориж ҳамда мамлакатимиз олимлари томонидан ижтимоий соҳаларни тадқиқ этилишини комплекс таҳлил қилиш;
- турли соҳа вакиллари томонидан ижтимоий соҳалар билан боғлиқ тушунчаларнинг қўлланилиши хусусиятларини очиб бериш;
- тушунчаларнинг ҳудудий қирраларини аниқлаш ва х.к.

АСОСИЙ ҚИСМ. Аввало, шуни айтиш лозимки, *хизмат* – бу, аҳолининг (жамиятнинг) моддий-маънавий эҳтиёжларини қондиришга қаратилган инсон хўжалик фаолиятининг натижаси бўлиб бўлиб ҳисобланади. Хизматларнинг ривожланиши билан аҳолининг турмуш шароитлари яхшиланади, турмуш даражаси юксалади, алал оқибатда ҳудудларнинг ўзлаштирилиш даражаси ҳам ортиб боради, иқтисодиёт ҳамда аҳолининг турмуш даражаси барқарорлашади.

Ижтимоий соҳаларни тадқиқ этишда, аввало, соҳа мутахассислари, иқтисодчилар, социологлар алоҳида ўрин тутади. Ижтимоий соҳаларни шаклланиши ва ривожланишининг ҳудудий қирраларини ўрганишда эса географлар, хусусан иқтисодий географларнинг роли катта.

АДАБИЁТЛАР ТАҲЛИЛИ ВА УСУЛЛАР. Ижтимоий соҳаларни ривожланишининг назарий методологик масалалари кўплаб узоқ хориж олимлари томонидан ўрганилган. Бу борада, айниқса В.Кристаллер, А.Лёшларнинг ишларини алоҳида кўрсатиб ўтиш жоиз. Жумладан, штандорт назарияси асосчиларидан бири бўлган немис олимлари В.Кристаллер, А.Лёшлар томонидан ўтган асрнинг 20-30 йилларида ишлаб чиқилган ҳамда илмий жамоатчиликка “Марказий жойлар” номи билан машҳур бўлган концепция [9] ҳам хизматлар соҳасини ташкил қилишга

бағишланган илк методологик ишлардан биридир. Аслида, аввал бошда, моҳиятан аҳоли жойлашуви тизимлари билан боғлиқ бўлган мазкур концепция, унга хизматларни уйғунлаштирилиши билан, хизмат кўрсатишнинг иерархик – поғонасимон модели сифатида танилди.

Хизматларнинг терминологик асосларини ўрганишга хорижлик З.И. Беликина, Д. Белл, Т.Д. Бурменко, Ф. Котлер, К. Лавлок, В.Д. Маркова, Б.А. Райзберг ва бошқалар каби иқтисодчи олимларнинг тадқиқотлари бағишланган [14, с.1].

Ижтимоий соҳалар, хусусан хизматларни ўрганишнинг методологик масалаларига бағишланган тадқиқотлар орасида собиқ Иттифоқ даври олимлари томонидан бажарилган ишлар ҳам муҳим ўринни эгаллайди. Бу борада, В.М. Рутгайзер, Т.И. Корягина, Т.И. Арбузова ва бошқа олимларнинг тадқиқотларини айтиш жоиз. Ижтимоий соҳалар ва уларни (хусусан хизмат кўрсатиш, сервис, ижтимоий инфратузилмани) ривожланишининг ҳудудий жиҳатларига бағишланган тадқиқотлар орасида С.А.Ковалёв, В.В.Покшишевский, Ю.Г.Саушкин, А.И.Алексеев, Т.В.Райтвийр, С.Я.Ныммик, С.Вайтекунас, М.А.Абрамов, А.А.Ткаченко, Л.А.Бурян, Л.А.Меркушева, П.Н.Чепкасов, С.Б.Лавров, А.А.Анохин, Н.Т.Агафонов каби олимларнинг илмий ишланмалари алоҳида ажралиб туради. Бу даврда, турли соҳа вакиллари орасида, ижтимоий соҳаларни ривожланишининг ҳудудий жиҳатларини тадқиқ қилишда, айниқса собиқ Иттифоқнинг етакчи илмий марказлари олимлари томонидан салмоқли тадқиқотлар амалга оширилган.

Ўзбекистонда ижтимоий соҳаларни тадқиқ қилишга бағишланган ишлар, аввало соҳа иқтисодчи олимлари томонидан бажарилган. Бу борада, Б.П. Назаров, И.Г. Вольфсон, Н.Қ. Оллоёров, Т.Т. Жўраев, К.С. Саидов ва бошқалар алоҳида ўрин тутди. Улар томонидан амалга оширилган илмий ишланмалар бевосита ижтимоий инфратузилманинг моҳият мазмуни ва Ўзбекистон шароитида ривожланиши масалаларига бағишланган.

Ижтимоий соҳаларни ривожланишининг бевосита географик жиҳатлари эса А.С. Солиев, О.Б. Ота-Мирзаев, А.А. Қаюмов, М.И. Назаров, Н.Қ. Комилова, М. Хамроев, М. Отажонов ва бошқа олимлар томонидан амалга оширилган.

МУҲОКАМА ВА НАТИЖАЛАР. Мавжуд адабиётларда хизматлар ўзининг мураккаб ички тузилиши ва хусусиятидан келиб чиқиб, нафақат юқоридаги каби турлича тушунчалар тарзида ўзини намоён қилиш билан бирга, мутахассислар томонидан уларни тадқиқ қилувчи илмий йўналишларни ҳам турлича номланиши илмий истеъмолда кенг тарқалган. Қуйида мутахассислар томонидан хизматларнинг турлича номланиши ўз аксини топган:

- социал иқтисодиёт;
- хизматлар соҳаси;
- ижтимоий инфратузилма;

- хизматлар географияси;
- хизмат кўрсатиш соҳалари географияси;
- ижтимоий соҳалар географияси;
- ноишлаб чиқариш соҳалари географияси;
- сервис географияси.

Агарда, буларнинг аввалги иккитаси бевосита иқтисодиётнинг реал сектори билан боғлиқ бўлса, қолганлари географияга алоқадордир. Бинобарин, социал (ижтимоий) иқтисодиёт (социальная экономика), хизматлар соҳаси (сфера услуг) тушунчаларининг мазмуни, уларни миллий иқтисодиётнинг таркибий тузилмаси эканлиги билан боғлиқ бўлса, қолган тушунчалар эса хизматларни ривожланишининг ҳудудий аспектиларини ўзида мужассам қилади.

Юқоридаги, хизматлар билан боғлиқ тушунчалар турли туман номланишига қарамай, ўрганилаётган воқеа ҳодиса – бевосита хизмат кўрсатиш жараёнининг мазмуни (ижтимоий, яъни инсон) билан чамбарчас боғлиқлиги сабабли, аксарият ҳолларда бир-бирини тўлдирган ҳолда, кескин фарқларга эга эмас. Агарда соҳа мутахассислари, иқтисодчилар томонидан “хизматлар соҳаси” тушунчаси кўпроқ қўлланилса, соф иқтисодий географик тадқиқотларда, аввало соҳа ва унинг ҳудудий жиҳатини аниқлаш ҳолда, “хизмат кўрсатиш соҳалари географияси” деб номлаш кенг тарқалган.

1-жадвал

Хизматларнинг мазмуни ва таркибига бўлган ёндошувлар

Ф.И.О.	Хизматларнинг номланиши	Хизматларнинг мазмуни	Хизматларнинг таркиби
Рутгайзер В.М., Корягина Т.И., Арбузова Т.И. [19, 6.5]	Хизматларнинг номланиши	Хизматлар соҳаси – бу, ижтимоий ишлаб чиқариш тизимида аҳолига хизматлар ва маънавий бойликни ишлаб чиқариш ва реализация қилиш вазифаси юклатилган тармоқлар, тармоқчалар ва фаолият турлари йиғиндисидир.	Уй-жой коммунал хўжалик, аҳолига маиший хизмат кўрсатиш, халқ таълими, соғлиқни сақлаш, жисмоний тарбия ва ижтимоий таъминот, маданият ва санъат, йўловчи транспорти, аҳолига алоқа хизмати кўрсатиш, чакана савдо, умумий овқатланиш.

Абрамов М.А. [1, б.14]	Сервис географияси (Хизматлар соҳаси)	Хизматлар соҳаси деб, аҳолининг эhtiёжларини бевосита қондириш билан боғланган, бажарадиган вазифаларининг умумийлиги бўйича бирлашган, ишлаб чиқариш ва ноишлаб чиқариш соҳалари тармоқларининг уйғунлигидан иборат.	Савдо, маиший хизматлар, транспорт ва алоқа хизматлари, уй-жой коммунал хўжалик, соғлиқни сақлаш.
Горкин А.П. (Ачкасова Т.А.) [18, б.65; стр.107]	Учламчи соҳалар географияси (Хизматлар соҳалари географияси)	Турли мамлакат ва минтақаларда, турлича табиий, ижтимоий-иқтисодий ва демографик шароитларда ҳамда турлича аҳоли жойлашуви шаклларида, ижтимоий инфратузилманинг компоненти сифатида иқтисодиётнинг учламчи сектори (ноишлабчиқариш соҳалари, хизматлар соҳаси)нинг ҳудудий тузилиши ва ривожланиши қонуниятларини ўрганувчи ижтимоий-иқтисодий географиянинг тармоғи. Синоним сифатида хизмат соҳалари географияси терминини ишлатиш мумкин.	Ахборот хизматлари, молия, транспорт, алоқа, савдо, маиший хизматлар, таълим, соғлиқни сақлаш, илмий-тадқиқот ва тажриба конструкторлик ишлар, спорт, туризм, курулли кучлар, маъмурий хизматлар ва б.
	Инфратузилма	Моддий ишлаб чиқаришнинг фаолият юритиши ва ривожланиши ҳамда аҳолининг кундалик ҳаётини таъминлаш учун зарур бўлган, муайян ҳудудда жойлашган иншоотлар, бинолар, тизим ва хизматларнинг йиғиндисидир.	Электр ўтказиш линиялари, автомобил ва темир йўллар, аэропортлар, сув таъминоти тизимлари ва бошқалар.

Асанов Г. [6, б.214-215]	Хизматлар географияси	Иқтисодий географиянинг бир тармоғи бўлиб, аҳолига моддий ва ижтимоий-маиший хизмат кўрсатиш хилма-хил турларининг жойлашиши ва территориял ташкил қилинишини ўрганади.	Соғлиқни сақлаш, таълим, томоша ва маданий-маориф, алоқа, юридик, маъмурий фаолият, хавфсизлик хизмати ва бошқаларни ўз ичига олади. Кенгроқ маънода эса хизматлар географияси ўз ичига аҳолининг моддий эҳтиёжлари билан боғлиқ чакана савдо, умумий овқатланиш, шаҳар транспорти, коммунал хўжалик, баъзан курорт хўжалиги ва туризмни ҳам қамраб олади.
	Хизматлар соҳаси	Хизматлар соҳаси халқ хўжалигининг шундай тармоғики, у хилма-хил социал-иқтисодий функцияларни бажаради.	Кенг маънода хизмат соҳасига савдо, умумий овқатланиш корхоналари, пассажир транспорти, уй-жой коммунал хўжалик, маиший хизмат корхоналари ва бошқалар кирди
Гаррет Негл, Крис Спенсер [11, б.140]	Хизматлар соҳаси	Хизматлар деб, товар ишлаб чиқаришдан бошқа ҳар қандай иқтисодий фаолиятга айтилади.	Суғурта, банк иши, транспорт, туризм, соғлиқни сақлаш, ахлат тозалаш, кўнгилочар жойлар, таълим, савдо.

Изоҳ: Жадвал, муаллиф томонидан тузилган.

Хизмат кўрсатиш соҳаларини таниқли тадқиқотчиларидан бири бўлган М.А.Абрамовнинг таъкидлашича, “сервис” ҳамда “хизмат кўрсатиш соҳалари” тушунчаларини ўзаро синоним деб ҳисоблаш мумкин [1, стр.14].

Қуйидаги жадвалларда соҳанинг етакчи олимлари, мутахассислари томонидан хизматлар соҳасининг мазмуни ва таркибига бўлган ёндошувлар ўз аксини топган.

Ижтимоий ҳаётда юқоридаги тушунчалар орасида “инфратузилма” тушунчаси ҳам кенг қўлланилади. Умуман олганда, инфратузилма – бу, моддий ва номоддий (аҳоли турмуш шароитлари билан бевосита боғланган) соҳаларнинг нормал фаолияти узлуксизлигини таъминлашга асос бўлиб хизмат қилувчи турли туман нарса ва жиҳозлар, бино ва иншоотлар, тузилмалар, ҳамда хизматлар жараёни йиғиндисидан иборат.

Аксарият илмий жамоатчилик томонидан инфратузилма одатда иккига – *ишлаб чиқариш* ҳамда *ижтимоий* инфратузилмага ажратилади. Бундай ажратиш кўпчилик ҳолатларда шартли аҳамиятга эга бўлсада, улар ўртасидаги муайян тафовутни ҳам инкор қилиб бўлмайди.

Шуни алоҳида таъкидлаш жоизки, айрим адабиётларда муаллифлар томонидан инфратузилмани - “инфратузилма тармоқлари” деб, нотўғри номлаш ёки талқин қилиш ҳолатлари ҳам учрайди (Асанов Г., 1990, 86 б.).

Агарда, инфратузилмани мазмун моҳияти, бажарадиган вазифаларидан келиб чиқиб, таҳлил қилсак, у ҳолда унинг мазмуни, ҳоқ моддий ишлаб чиқаришга хизмат қилишидан қатъий назар, ҳоқ аҳолининг

кундалик ҳаёт шароитларини яхшилашга хизмат қилсин, энг аввало муайян шарт-шароитларни ўз ичига қамраб олганлиги билан гавдаланади.

Демак, бундан шундай хулоса чиқадики, инфратулма – бу, энг аввало шарт-шароитлар йиғиндиси. Инфратузилманинг ривожланганлик даражаси билан ҳудудларнинг ижтимоий-иқтисодий ривожланиши даражаси ўртасида муайян алоқадорликлар мавжуд. Бинобарин, ҳудудларнинг транспорт коммуникация, ирригация мелиорация, энергетика, ва бошқа *ишлаб чиқариш инфратузилма* салоҳиятининг юқорилиги, ўз навбатида уларнинг ишлаб чиқариш салоҳиятини юксалишига пойдевор яратса, аҳолисининг турмуш даражасини юксалиши эса ўз навбатида, кенгроқ маънода ижтимоий инфратузилма деб аталувчи турли туман ижтимоий (соғлиқни сақлаш, таълим, маданий-маиший, уй-жой коммунал, йўловчи транспорти, спорт ва туризм ва б.) хизматларнинг ривожланганлик даражаси билан боғлангандир. Г. Асанов кенгроқ маънода эса хизматлар географияси ўз ичига аҳолининг моддий эҳтиёжлари билан боғлиқ чакана савдо, умумий овқатланиш, шаҳар транспорти, коммунал хўжалик, баъзан курорт хўжалиги ва туризмни ҳам қамраб олади, деб таъкидлаган [6, б.214-215].

ХУЛОСА қилиб айтганда, хизматлар соҳаси нафақат ўзига хос хусусиятлари, мураккаб ички тузилмаси, аҳамияти, хизматларнинг характери, шакл шамоили, мазмуни билан балки, термин ва тушунчаларининг ҳам турли туманлиги билан алоҳида ажралиб туради. Мазкур соҳа ва унинг ички таркибий тузилмаларига, фаолият ҳамда ҳудудий таркибига тизимлилик жуда хос. Хизматлар кўплаб соҳа тадқиқотлари учун объект вазифасини ўтайди. Булар ўз навбатида, термин ва тушунчаларнинг турличалигига олиб келган. Аммо, шуларга қарамай хизматларнинг мазмуни бевосита аҳоли, унинг эҳтиёжлари ва унга кўрсатилаётган хизмат турлари билан чамбарчас боғланган. Шулардан келиб чиқиб, улар билан боғлиқ турли термин ва тушунчаларнинг илмий истеъмолда бўлиши табиий ҳолдир.

ТЕРРИТОРИАЛЬНАЯ ОРГАНИЗАЦИЯ ТРАНСПОРТНОГО ОБСЛУЖИВАНИЯ НАСЕЛЕНИЯ СУРХАНДАРЬИНСКОЙ ОБЛАСТИ

Аннотация. В статье изучены географические вопросы оказания транспортных услуг населению Сурхандарьинской области. При этом, прежде всего, проанализировано состав транспортных сетей области, территориальные транспортные системы, территориальная организация и развитие транспортной инфраструктуры, в том числе вопросы общественного транспорта населению. Были изучены территориальные особенности услуг общественного транспорта по сельским районам и проведен опрос населения. В этой связи был использован зарубежный опыт.

Ключевые слова: транспорт, транспортные сети, транспортное обслуживание, транспортная инфраструктура, общественный транспорт, сельские округа, опрос, населенные пункты.

TERRITORIAL ORGANIZATION OF TRANSPORT SERVICES FOR THE POPULATION OF SURKHANDARYA REGION

Abstract. The article examines the geographical issues of providing transport services to the population of the Surkhandarya region. At the same time, first of all, the composition of the region's transport networks, territorial transport systems, territorial organization and development of transport infrastructure, including issues of public transport for the population, were analyzed. The territorial features of public transport services in rural areas were

studied and a population survey was conducted. In this regard, foreign experience was used.

Key words: Transport, transport networks, transport services, transport infrastructure, public transport, rural districts, survey, settlements.

ВВЕДЕНИЕ. В любом исследовании географии транспорта основное внимание уделяется двум аспектам транспорта. Это, во-первых, транспорт как элемент производственной инфраструктуры, во-вторых, транспорт как социальная инфраструктура. В предыдущих главах внимание было уделено естественно-географическим, организационно-правовым, экономическим (производственным) аспектам географического исследования транспорта, а ниже будет сосредоточено внимание на проблемах его рациональной территориальной организации и развития как элемента социальной системы. инфраструктуры, с точки зрения оказания услуг населению. В этом отношении он (транспорт) служит важным фактором улучшения условий жизни населения и повышения уровня жизни.

В настоящее время сфера услуг занимает ведущее положение в мировой экономике и экономике отдельных стран, при этом транспорт занимает особое место. В частности, доля сферы услуг в ВВП Узбекистана составила 61,0%, а доля транспортных услуг – 15% (2021 г.). На Сурхандарьинскую область приходится 4,5% от общего количества пассажиров, перевезенных по республике.

Прежде всего следует отметить, что уровень развития транспорта, уровень формирования и развития его региональных систем, уровень экономического и социального развития региона, т.е. производственный потенциал, плотность населения систем расселения - Плотность сети городов и сел, а также региональная мобильность населения тесно связаны.

Его роль бесподобна в использовании таких секторов, как образование, медицина, торговля, отдых, туризм и региональное распределение трудовых ресурсов.

Транспортная инфраструктура «притягивает» население. Города и поселки в основном сосредоточены вдоль пересечения транспортных путей. Таким образом, транспорт служит росту и развитию поселений. Например, в западной и восточной частях региона транспортная сеть разрежена, напротив, в центральной и южной частях, где плотно расположены транспортные сети и промышленные предприятия, транспортная сеть густая.

В целом в сфере услуг региона основные позиции в сфере услуг занимают торговля, банковское дело, финансы, транспорт, образование, медицина и услуги. Доля транспортных услуг с каждым годом увеличивается.

ЛИТЕРАТУРНЫЙ АНАЛИЗ И МЕТОДЫ. Вопросы транспортно-экономического, транспортно-инфраструктурного потенциала регионов,

формирования и развития их территориальных систем исследуются учеными различных специальностей. В связи с этим из зарубежных учёных: Жан-Поль Родриг (2006, 2020) [1], Джо Гренгс [2], из учёных СНГ: И.В. Никольский (1978) [9], В.Н. Стоит отметить работы Бугроменко (1987) [3], С.А. Тархова (2002) [8]. Из них исследования Жана-Поля Родрига были сосредоточены на математическо-статистических методах исследования транспорта, а В.Н. Это можно увидеть и в работах Бугроменко [3].

Проблемы эффективного управления транспортной системой Центральной Азии А. Зохидов (2018) [12], Районирование территории Республики Узбекистан по условиям дорожного движения А. Козиев (2010) [7] изучал, а А.А. Исаев изучал развитие региональных транспортных систем Ферганской области (2009 г.) [6], а З. Усманов изучал географические аспекты развития и совершенствования транспортной системы Узбекистана в условиях независимости (2020 г.).

В исследовании банковские, финансовые, медицинские, образовательные центры действуют преимущественно в городах Термез, Денов, медицинские услуги и крупные торговые центры - в таких районах, как Денов, Термез, Шерабод, Ангор, Шорчи. В связи с концентрацией основных услуг в крупных городах пассажиропоток в основном имеет высокую долю именно в этих направлениях. В таких районах, как Бандихон, Олтинсой, Узун, банковское финансирование, медицинское обслуживание развиты недостаточно хорошо.

Например, основные больницы региона расположены в городе Термез (17) и Деновском районах (14). С одной стороны, работа одной больницы в Бандихонском, Узунском, Музработском районах показывает, что население, проживающее в районах, плохо обеспечено медицинскими услугами, а с другой стороны, эти жители обращаются в больницы других районов посредством транспорта. В результате спрос на транспортные услуги в крупных городах увеличивается.

Для региональной рациональной организации транспортных услуг формирование спроса на грузовые и пассажирские перевозки зависит от нескольких факторов. Они отражены в:

- социально-экономические факторы - возможности использования населением транспорта;
- территориальные факторы - промышленное, экономическое и социальное значение города и прилегающих к нему территорий, численность и плотность населения, близость к транспортной инфраструктуре;
- организационные факторы - наличие инфраструктуры, плотность маршрутной сети, виды транспорта, время и качество перевозки;
- природно-климатические факторы.

Региональные транспортные услуги делятся на группы по масштабу, виду и виду транспорта. Транспортные услуги делятся на местные

(межрайонные), региональные (межобластные) и международные. При этом воздушный транспорт имеет большое значение в пассажирских перевозках на международном уровне, а автомобильный транспорт выполняет основную функцию на региональном и местном уровне грузовых и пассажирских перевозок. Железнодорожный транспорт в основном используется для международных грузоперевозок.

Изучение международного опыта показывает, что автомобильный транспорт удобен для коротких расстояний, железнодорожный – для средних, а морской или воздушный транспорт – для дальних. При этом автомобильный транспорт активен на расстоянии до 750 км, а железнодорожный транспорт считается удобным на расстоянии 750-1500 км[1].

Объем транспортных услуг в регионе с 2010 по 2021 год увеличился в 7 раз (234,3 млрд сумов в 2010 году, 1,6 трлн сумов в 2021 году). В 2021 году автомобильным транспортом региона было перевезено около 265 млн пассажиров.

Грузовые и пассажирские перевозки на железной дороге увеличиваются с каждым годом. В 2022 году по железной дороге перевезено 2,3 млн тонн грузов и 700 тысяч пассажиров. На воздушном транспорте в 2021 году перевезено 400 тысяч пассажиров.

На региональном железнодорожном транспорте население обслуживается межрегиональными пассажирскими поездами «Термиз-Ташкент», «Андижан-Термиз», «Сариосия-Ташкент» и междугородными поездами «Термиз-Дербанд», «Термиз-Сариосия» и «Термиз-Сариосия». Термиз-Сурханабад».

Недостатками использования этого вида транспорта являются недостаточное качество и скорость перевозок на региональной железной дороге. К примеру, поскольку скорость междугородних поездов «Термиз-Сариосия», «Термиз-Дербанд» и «Термиз-Сурханабад» невысока, население в основном выбирает автомобильный транспорт. Необходимо будет полностью электрифицировать и увеличить скорость этих междугородних железнодорожных линий.

Отсутствие железнодорожного транспорта в некоторых районах области делает транспортное обслуживание в этих районах неудовлетворительным. В частности, районы Олтинсой, Кызырик, Бандихон, где нет железнодорожных путей, и эти районы отстают по количеству перевезенных пассажиров по экономическим показателям.

В районе исследования расположено 26 железнодорожных станций, причем железнодорожным транспортом на междугородних линиях пользуются в основном пассажиры жилых массивов, расположенных вблизи станций. Вдоль региональных железных дорог расположено 94 квартала.

РЕЗУЛЬТАТЫ И ОБСУЖДЕНИЕ. Автомобильный транспорт имеет абсолютное преимущество в сфере пассажирских перевозок в регионе, более 95 процентов перевезенных пассажиров приходится на автомобильный транспорт. Действительно, когда среди жителей региона проводился социально-демографический опрос о состоянии транспорта в регионе, 88% участников считают, что в транспортной системе региона относительно хорошо развит автомобильный транспорт, а 11% из них считают, что железнодорожный транспорт развит.

Аналогичным образом, 29,7% участников сказали, что оно хорошее, 46,5% - среднее, 21,5% - плохое, а 8% заявили, что затруднились ответить на вопрос "Как вы оцениваете общее состояние общественного транспорта в городе?" район, в котором ты живешь?»

Грузовые и пассажирские перевозки невозможно представить без автомобильного транспорта. В последние годы доля частного транспорта в перевозках грузов и пассажиров увеличивается. В области действуют 254 предприятия пассажирского транспорта, количество транспортных средств в них составляет 5567.

Пассажирские перевозки индивидуальными автовладельцами растут с каждым годом по сравнению с другими отраслями. В составе транспортных средств предприятий пассажирского транспорта области 4-местные легковые автомобили составляют 3706, автомобили Damas - 1532, остальное - автобусы (319), микроавтобусы (14).

При изучении потока пассажиров выяснилось, что они двигались в направлении городов, где расположены основные транспортные узлы, таких как Термез, Денов, Ангор, Шерабод, Кумкурган. Всего в области действуют 160 маршрутов, 127 внутрирайонных и 33 межрайонных.

В Термезском, Деновском, Шерабодском, Кумкурганском районах имеются крупные автостанции для автобусных и таксомоторных маршрутов. Автовокзалы в остальных районах не очень большие, а в некоторых районах автовокзалы вообще отсутствуют. По состоянию на 2022 год в регионе действуют 16 автозаправочных станций и автовокзалов.

В области налажены транспортные маршруты между районами, и они есть; Денов-Термиз, Шерабод-Термиз, Денов-Шорчи, Денов-Узун, Денов-Олтинсой, Термиз-Ангор, Термиз-Музработ, Термиз-Кизирик. При этом ежедневных рейсов по направлениям Термез-Бойсун, Денов-Музработ мало.

Также не запущен межрайонный общественный транспорт (автобусы) на маршрутах, соединяющих Термиз-Сариосие, Термиз-Олтинсой, Термиз-Узун, Термиз-Бандихон с областным центром. И это, безусловно, доставит населению неудобства транспортного обслуживания.

В настоящее время в городе Термез сравнительно хорошо развит общественный транспорт (автобусные маршруты). Он имеет 11 автобусных

маршрутов и обеспечивает 117 автобусных рейсов. В Деновском районе 5 автобусных маршрутов, в Жаркурганском районе 4 автобусных маршрута.

Автобусные маршруты отсутствуют в Ангорском, Бандихонском, Кызырикском, Музработском, Олтинсойском, Сариосийском, Термизском, Узунском, Шорчинском районах. В эти районы их заменит маршрутное такси. Однако развитие регионов и рост численности населения делают актуальным создание автобусных линий, в том числе современного общественного транспорта, в вышеуказанных районах.

В социально-демографическом опроснике о состоянии транспорта региона задан вопрос «Какие направления развиты в сфере транспортного обслуживания населения в районе проживания?» 63,5% службы такси, 31% местное такси, 10% общественный транспорт (автобус) 3,% ответили, что затруднились ответить.

Фигура 1. Количество автобусных маршрутов в сельских округах, обслуживающих общественный транспорт (2022 г.)

Также на вопрос «Каким видом транспорта вы чаще всего пользуетесь в повседневной жизни?» 48,4% участников ответили, что пользуются такси, 27,7% — такси, 15% — личным автомобилем, 14,8% — автобусом, 1,2. % услуги железнодорожного транспорта 3,1% из них ответили, что затруднились ответить. Ответ большинства участников о том, что они пользуются услугами такси, показывает, что общественный транспорт необходимо развивать.

Население вышеуказанных районов растет с каждым годом, например, в Сариосийском районе проживает 217 715 человек, в Узунском - 179 515 человек, в Алтынсойском - 184 019 человек. Это население пользуется услугами, которых нет в районе, в областном центре. Пассажир, желающий поехать в центр получения медицинских услуг по месту жительства, сменит транспорт 2 или 3 раза. То есть тот факт, что между двумя точками нет прямого транспортного сообщения, означает, что территория слабо развита.

В ходе анализа регионального транспортного обслуживания мы узнали, что во многих районах общественный транспорт доступен только в районах, близких к районному центру. Это свидетельствует о том, что большинство жителей пользуются личным транспортом (такси), отсутствии общественного транспорта в районе, а также о том, что организационные вопросы в отрасли не решены.

Однако поскольку общественный транспорт не обеспечивает транспортными услугами всех жителей, целью исследования было изучение состояния частного транспортного обслуживания населения и населенных пунктов. Для этого использовались Google Earth, Yandex Map, Google Map и другие приложения для изучения расположения населенных пунктов относительно экономических и социальных объектов в центре района, таких как торговля, медицина, образование, банковское дело и финансовые услуги. Изучено, сколько времени занимает дорога от поселка до центра района на личном транспорте, удобен или неудобен такой срок для населения.

Кроме того, транспортное состояние регионов определялось по формуле коэффициента Гольца, оценивающего обеспеченность транспортной сетью населенных пунктов. Учитывая тот факт, что автомобильно-транспортная система охватывает все населенные пункты региона, на автомобильном транспорте были изучены оба подхода. Изучение населенных пунктов другими видами транспорта, например железнодорожным, может привести к очень низкой оценке транспортного удобства регионов. Потому что железнодорожные пути не покрывали всю территорию, как автомобили.

Поэтому формула коэффициента Гольца, оценивающего обеспеченность населенных пунктов транспортной сетью, выглядит следующим образом[5];

$$\Gamma = \frac{L}{\sqrt{S * \Pi}}$$

Γ - коэффициент Гольца (общая оценка обеспеченности транспортной сетью населенных пунктов региона)

L - протяженность автомобильных дорог (автомобильных или железнодорожных)

S - площадь

Π — количество населенных пунктов на территории.

Изучение состояния частного транспортного обслуживания населения и населенных пунктов области полностью изучено с помощью таких приложений, как Google Earth, Яндекс карта, Google Map, а также расстояние до населенных пунктов и центра района для населенных пунктов всех районов области.

Проанализировано 923 населенных пунктов объекта исследования. В этих 923 населенных пунктах 2 535 900 человек (93% от общей численности населения) провели время, путешествуя в центр тумуна. Город Термез не нуждался в исследовании благодаря развитому транспортному обеспечению по сравнению с другими регионами.

Вышеупомянутые жители посещают районный или областной центр по какой-либо услуге. Учитывая, что большая часть населения выезжает на какие-то работы в центр района, это изучалось на районном уровне.

Около 15% населения региона проводит от места проживания до центра района от 45 минут до 2 часов. Особенно ярко эти показатели проявляются в горных районах (табл. 1).

При изучении описанным выше подходом важна также плотность населения в населенном пункте. Например, населенные пункты Нилу, Дехайсурх, Дебодом, Таджикское село, Чанглок Сариосийского района (каждый с населением более тысячи человек) добираются до центра района более 1 часа (население 2927 человек), дорога до райцентра занимает не менее 150 минут (2 часа 30 минут).

При изучении всего населения региона существенной разницы нет. Например, 41% от общего числа населенных пунктов расположены в пределах 15 минут от районного центра с населением 51%. Однако разрез районов показывает, что они имеют очень неудобную транспортную систему даже при использовании личного транспорта (1- табл).

Время, затрачиваемое на дорогу от поселка до центра района на автомобиле

№	Районы	в, (минут)													
		менее 15		16-30		31-45		46-60		61-90	Более 1,5 часов			Общий

Таблица определена автором на основе ссылок <https://yandex.uz/maps/>, <https://www.google.com/maps>.

В масштабах районов жители Ангорского, Шорчинского, Кызырикского и Джаркурганского районов тратят на дорогу до райцентра от 15 до 45 минут, а в Узунском, Сариосийском, Байсунском, Шерабадском и Кумкурганском районах – от 15 до 150 минут (Таблица 1).

Практически те же результаты, что и в приложениях Google Earth, Yandex Map, Google Map, можно увидеть при расчете по формуле коэффициента Гольца, оценивающего транспортную сеть населенных пунктов. Целью использования обоих методов является получение более надежных и точных результатов.

Таблица 2

**Оценка транспортно-экономического потенциала сельских округов
Сурхандарьинской области**

Нет	Районы	площадь км кв. S	Автомобили и автомобили длина км L	Население номер точки П	Коэффициент обеспечения транспортными сетями населенных пунктов региона [7] $\Gamma = \frac{L}{\sqrt{S \cdot П}}$
	Ангорский	390	121	39	0,9
	Байсунский	3720	338	54	0,7
	Денауский	750	291	123	0,9

14	Бандиханский	680	77	43	0,4
	по областям	20.100	2843	982	0,6
	Термез г	0,04			

Таблица составлена автором

Сариасийский, Узунский, Кумкурганский, Бандихонский районы имеют самые низкие показатели по сравнению со среднеобластными показателями, а Термезский, Алтынсойский, Музработский, Ангорский районы имеют высокий уровень обеспеченности дорожно-транспортной сетью. Средний уровень получили такие районы, как Денавский, Шурчинский, Джаркурганский, Кызырикский, а также Байсунский и Шерабадский, имеющие длинные автомагистрали и небольшую численность населения.

При определении коэффициента Гольца он определяется отношением длины транспортных путей к площади территории, умноженной на количество населенных пунктов в округе (табл 2).

Еще одним фактором, влияющим на интенсивность пассажиропотока, является маятниковая миграция населения. Наблюдения показывают, что утром люди переезжают из своего населенного пункта в районные центры, а также в крупные города, такие как Термез, Денов, а вечером из этих городов в сторону районов. Видно, что поток пассажиров из города Термеза в Ангорский и Джаркурганский районы, из города Денов в Сариосийский, Алтынсойский, Узунский районы больше.

Перевозки пассажира до определенной точки с использованием транспортных услуг занимает разное время в зависимости от многих факторов. Например, расстояние зависит от близости расстояния, скорости автомобиля, местности и других аспектов.

Мы разделили услуги пассажирских перевозок на международные, региональные и местные группы по масштабу. Международные пассажирские перевозки осуществляются региональным воздушным транспортом. В регионе имеется международный аэропорт только в городе Термез, через который в 2021 году перевезено 40 тысяч человек. Из них 26 тысяч было перевезено внутри республики, 14,2 тысяч - в страны СНГ и меньше - в страны дальнего зарубежья.

Здесь стоит отметить, что для региона с населением 2,7 млн жителей и площадью 20,1 тыс. квадратных километров 1 аэропорт не может полностью удовлетворить потребность в авиаперевозках, а требует создания дополнительного аэропорта.

Почти 60 процентов населения региона проживает в северных районах, и путешествие на 150 км и более на воздушном транспорте обременяет население чрезмерными транспортными расходами. Учитывая это, целесообразно создать отдельный аэропорт в северной части региона.

Хотя доля городского населения в регионе (36%) ниже общероссийского уровня (51%), рост городского населения и ускорение процесса урбанизации в последние годы вызвали трудности в обеспечении транспортных услуг в городах.

В частности, к ним относятся увеличение количества транспортных средств в городе Термез, относительно высокий уровень шума и дорожного движения, негативное воздействие на атмосферу города.

Сегодня общественный транспорт в городе Термез развит хорошо по сравнению с другими районами. Территория города Термез составляет 189 497 человек на квадратный километр, а уровень предоставления услуг как административного центра региона относительно высок. Здесь имеется 12 больниц областного уровня, 6 высших учебных заведений, крупные торговые центры и промышленные предприятия. В городе Термез имеется железнодорожный вокзал, 2 железнодорожных вокзала, а также аэропорт

недалеко от города. Здесь действуют основные медицинские, образовательные и финансовые учреждения региона. Благодаря этому здесь возрастает спрос на общественный транспорт.

Сегодня преимущественно в этом административном центре налажено автобусное сообщение. С точки зрения инфраструктуры городской транспорт находится в плохом состоянии, поэтому остановок для рейсовых автобусов не хватает.

ЗАКЛЮЧЕНИЕ

Несмотря на положительный рост объема транспортных услуг в регионе, его развитие в соответствии с ростом национальной экономики сдерживается следующим:

- относительно низкий уровень обеспеченности дорожной сетью и другими объектами инфраструктуры;
- качество, скорость и уровень востребованности перевозок на железнодорожном транспорте;
- в отдаленных районах города практически отсутствует инфраструктура пассажирского транспорта;
- тот факт, что транспортные услуги осуществляются преимущественно в центрах, транспортные расходы населения в горных районах высоки
- что грузоперевозки и избирательные операции не налажены.
- медленное наполнение существующего транспортного парка современными автомобилями;
- предотвращение пробок за счет создания инфраструктуры для движения легкового транспорта в зоне рынка;

Для решения этих проблем приоритетной задачей является организация новых маршрутов общественного транспорта, установление остановок, приобретение новых автобусов и микроавтобусов для общественного транспорта.

При территориальной организации транспортного обслуживания населения региона необходимо учитывать рост численности населения, потребность в хозяйственных объектах и сферах обслуживания.

Разработано расположение около тысячи населенных пунктов, что является основой рационального размещения транспортного обслуживания, изучено состояние автомобильного транспорта. В дальнейшем важной задачей является организация транспортного обслуживания на районном уровне, эффективно используя эти работы.

Кроме того, в развивающихся районах Денов, Шерабод, Жаркурган, Кумкурган, Шорчи, Сарыюсия разрабатывается карта общественного транспорта и система оплаты, что является одной из принципиальных задач в этой сфере.

В междугородних железнодорожных пассажирских перевозках низкая скорость движения поездов, старение пассажирских вагонов,

отсутствие пассажирского железнодорожного сообщения на большинстве станций или ветхость являются некоторыми из проблем железнодорожного транспорта в сфере пассажирских перевозок.

Воздушный транспорт — одна из первых отраслей пассажирского транспорта в региональной транспортной системе, которая должна быть изменена. Потому что воздушный транспорт работает только в городе Термез. Размеры региона и большая численность населения региона, удаленность аэропорта от центральных районов затрудняют использование воздушного транспорта.

Большая часть населения тратит 10-12 часов, чтобы добраться на машине до столицы Ташкента. Поэтому аэропорт в Сариосийском районе должен быть организован как второй аэропорт в регионе. За счет введения конкуренции на воздушном транспорте будут оптимизированы цены и увеличится использование воздушного транспорта населением.

РОЛЬ ПОВЫШЕНИЯ ФИНАНСОВОЙ ГРАМОТНОСТИ В УЗБЕКИСТАНЕ

Аннотация. В данной статье рассматривается важность повышения финансовой грамотности в Узбекистане и ее роль в содействии экономическому развитию страны. Обозреваются проблемы низкого уровня финансовой грамотности среди населения и обсуждаются основные вызовы, стоящие перед страной в этом вопросе. Анализируются стратегии и методы, направленные на повышение уровня финансовой грамотности, включая образовательные программы и инициативы как со стороны государства, так и частного сектора. В статье также выделяется роль современных технологий в обучении финансовой грамотности. Обсуждаются перспективы и вызовы, связанные с развитием программ повышения финансовой грамотности в Узбекистане, а также роль международного сообщества в этом процессе.

Ключевые слова: финансовая грамотность, экономическое развитие, образовательные программы, технологические инновации, вызовы, финансовые навыки, инвестиции, бюджетирование, финансовые решения, финансовое благополучие, стратегии обучения, финансовые инструменты, цифровые ресурсы, финансовые риски, микрофинансирование, устойчивость, инфраструктура финансовой грамотности, управление личными финансами, страхование, пенсионное обеспечение, налоговая грамотность, финансовые цели, финансовая планирование, финансовая культура, макроэкономическая стабильность, управление долгом, инфляция, кризисные ситуации, финансовая безопасность, финансовые ресурсы, финансовый рынок, устойчивое развитие, международная экономика, монетарная политика, финансовая ответственность, банковские услуги, цифровая экономика, сберегательные программы.

THE ROLE OF INCREASING FINANCIAL LITERACY IN UZBEKISTAN

Annotation. This article discusses the importance of improving financial literacy in Uzbekistan and its role in promoting the economic development of the country. The problems of low levels of financial literacy among the population are reviewed and the main challenges facing the country in this matter are discussed. Strategies and methods aimed at improving financial literacy are analyzed, including educational programs and initiatives from both the government and the private sector. The article also highlights the role of modern technologies in teaching financial literacy. The prospects and challenges associated with the development of financial literacy programs in Uzbekistan, as well as the role of the international community in this process, are discussed.

Keywords: financial literacy, economic development, educational programs, technological innovations, challenges, financial skills, investments, budgeting, financial decisions, financial wellness, learning strategies, financial tools, digital resources, financial risks, microfinance, sustainability, financial literacy infrastructure, personal finance management, insurance, pensions, tax literacy, financial goals, financial planning, financial culture, macroeconomic stability, debt management, inflation, crisis situations, financial security, financial resources, financial market, sustainable development, international economics, monetary policy, financial responsibility, banking services, digital economy, savings programs.

Целью данной статьи является изучение и анализ роли повышения финансовой грамотности в контексте Узбекистана с целью содействия его экономическому развитию. Мы рассмотрим текущее состояние финансовой грамотности, выявим основные вызовы и перспективы, а также предложим стратегии и методы для повышения финансовой грамотности с учетом специфики страны. Наша цель - выделить важность этого процесса для создания устойчивой и процветающей экономики в Узбекистане.

Актуальность этого исследования заключается в необходимости осознания важности финансовой грамотности в контексте современной экономики Узбекистана. В условиях стремительных перемен и развития финансовых технологий, повышение уровня финансовой грамотности становится необходимостью для достижения стабильного и устойчивого экономического роста. Анализ текущей ситуации и выявление вызовов и перспектив в этой области поможет разработать эффективные стратегии и методы для развития финансовой грамотности в Узбекистане. Такой подход не только способствует улучшению финансового благополучия граждан, но и способствует общему экономическому прогрессу страны.

В современном мире финансовая грамотность играет ключевую роль в обеспечении стабильности и процветания для индивидуальных граждан и всей экономики страны. В контексте Узбекистана, как и во многих других странах, проблема низкого уровня финансовой грамотности становится все более актуальной и значимой. Недостаточная осведомленность населения в

области финансовых инструментов, отсутствие навыков управления финансами и непонимание основных принципов финансовой дисциплины создают препятствия для личного финансового успеха и экономического развития страны.

Финансовая грамотность представляет собой комплекс знаний, навыков и умений, необходимых для эффективного управления финансами на личном и профессиональном уровнях. Это включает в себя понимание основных финансовых терминов, умение составлять бюджет, определять финансовые цели, планировать инвестиции, управлять долгами, защищать собственные финансовые интересы и принимать обоснованные финансовые решения. Финансово грамотный человек способен адаптироваться к изменяющимся финансовым условиям и рисковать своими финансами в рамках своих возможностей и целей.

Финансовая грамотность является ключевым фактором в повседневной жизни каждого человека, а также в формировании устойчивой и процветающей экономики. Для индивидуальных граждан финансовая грамотность обеспечивает возможность принятия осознанных финансовых решений, управления личными финансами, планирования на будущее и защиты от финансовых рисков. Для экономики страны финансовая грамотность населения является основой для развития финансовых институтов, эффективного функционирования рынков и стимулирования экономического роста. Это также способствует уменьшению бедности, снижению социальных неравенств и созданию благоприятной инвестиционной среды.

Узбекистан достиг значительного прогресса в области финансовой инклюзии за последние годы, благодаря обновлению законодательства и цифровизации финансовых услуг. В 2021 году 44% взрослого населения имели банковские счета, что вдвое больше по сравнению с 2011 годом. Распространение дебетовых карт и удаленных банковских услуг также значительно увеличилось. Однако, доверие к финансовой системе остается низким, что видно по тому, что только 3% взрослого населения хранят свои сбережения в банках, что является одним из самых низких показателей в регионе. Помимо низкого уровня доверия к банковской системе, существует проблема недостаточного использования банковских сбережений и неэффективного распределения финансовых точек доступа по стране. В 2023 году в Узбекистане было более 11,000 банкоматов и 430,000 терминалов, что значительно улучшило доступ к финансовым услугам по сравнению с предыдущими годами. Однако распределение этих точек остается неравномерным, особенно в отдаленных районах, что ограничивает доступ к финансовым услугам для значительной части населения.

В ответ на эти вызовы, правительство Узбекистана приняло ряд мер, включая законодательные изменения и поддержку новых финансовых

технологий. В 2022 году был принят новый закон, который стимулирует развитие небанковских кредитных организаций и микрофинансовой деятельности, улучшая тем самым доступ к финансовым услугам. Кроме того, запущены программы по обучению финансовой грамотности и финансированию стартапов, в том числе с особым вниманием к предприятиям, принадлежащим женщинам, на сумму около 180 миллионов долларов. Эти инициативы поддерживаются как местными, так и международными организациями, включая Всемирный банк, что способствует более широкой финансовой интеграции и устойчивому экономическому росту.

Финансовая грамотность играет ключевую роль в современном мире, особенно в условиях быстро меняющейся экономической среды. Согласно отчету Всемирного банка, более 60% населения мира не имеют достаточных знаний о финансах. В Узбекистане ситуация аналогична: только около 30% взрослого населения имеют базовые финансовые навыки. Повышение уровня финансовой грамотности становится приоритетной задачей для государственных и неправительственных организаций.

Повышение финансовой грамотности в Узбекистане может стать катализатором для экономического роста и развития. Согласно отчету Международного валютного фонда, каждый дополнительный процент уровня финансовой грамотности в стране может привести к увеличению ВВП на 0,3%. Это связано с тем, что финансово грамотные граждане способны более эффективно использовать финансовые инструменты, инвестировать в развитие и управлять рисками.

Повышение уровня финансовой грамотности может иметь значительный социальный эффект, включая сокращение уровня бедности и неравенства. Исследования Конференции Организации Объединенных Наций по торговле и развитию показывают, что финансово грамотные люди более склонны к накоплению сбережений и инвестированию в образование и здравоохранение, что способствует уменьшению социального неравенства. Финансово грамотные граждане имеют больше шансов достичь финансового благополучия и стабильности. Исследование Национального фонда финансовой грамотности показывает, что люди с высоким уровнем финансовой грамотности чаще принимают обоснованные решения о кредитовании, инвестировании и планировании пенсии, что в конечном итоге способствует их финансовой независимости и благополучию.

Одной из успешных стратегий повышения финансовой грамотности является внедрение образовательных программ в школах и университетах. В 2020 году Узбекистан принял закон "О внедрении финансового образования в образовательную программу", который обязывает включить элементы финансового образования в школьную и университетскую программу. Эта инициатива направлена на формирование финансовых

навыков и знаний среди молодого поколения, что поможет им в будущем принимать обоснованные финансовые решения.

В повышении уровня финансовой грамотности активную роль играют как государственные, так и частные и неправительственные организации. Государство вводит законодательные меры и разрабатывает программы обучения, частный сектор предоставляет финансовую поддержку и разрабатывает образовательные продукты, а неправительственные организации проводят просветительскую деятельность и оказывают консультационную помощь. Совместные усилия всех сторон создают благоприятные условия для повышения уровня финансовой грамотности в стране.

В условиях цифровизации обучения и доступности интернета, активно используются современные технологии и онлайн-ресурсы для обучения финансовой грамотности. Платформы для дистанционного обучения, мобильные приложения и онлайн-курсы предоставляют возможность получить знания о финансах в любое время и в любом месте. Такие инновационные методы обучения помогают преодолеть географические и временные ограничения и сделать обучение более доступным для широкой аудитории.

Одним из основных вызовов, с которыми сталкиваются программы повышения финансовой грамотности в Узбекистане, является необходимость адаптации под конкретные потребности и особенности населения. Структурные изменения в экономике, внедрение новых технологий и изменение финансовых инструментов требуют постоянного обновления и совершенствования программ обучения. Кроме того, необходимо преодолеть географические и социокультурные барьеры, чтобы обеспечить равный доступ к образовательным ресурсам для всех слоев населения.

Несмотря на вызовы, перед программами повышения финансовой грамотности открываются широкие перспективы развития и улучшения. Применение инновационных методов обучения, таких как использование игровых технологий, интерактивных приложений и онлайн-платформ, может существенно увеличить эффективность программ и привлечь больше участников. Также важно укреплять партнерские отношения между государством, частным сектором и неправительственными организациями для совместного развития и реализации программ финансовой грамотности. Международное сообщество играет важную роль в поддержке и развитии программ финансовой грамотности в Узбекистане. Зарубежные организации, такие как Всемирный банк, Международный валютный фонд и другие, предоставляют финансовую и техническую помощь, а также делятся передовым опытом и лучшими практиками. Это способствует улучшению качества программ, расширению их охвата и повышению эффективности деятельности в этой области.

В заключение, повышение финансовой грамотности является важным фактором для достижения устойчивого экономического роста и социальной стабильности в Узбекистане. Несмотря на вызовы, перед нами стоят широкие перспективы для развития программ обучения и привлечения большего числа людей к участию в них. Необходимо продолжать усилия в этом направлении и совместными усилиями стремиться к повышению уровня финансовой грамотности населения страны.

СРАВНИТЕЛЬНЫЙ АНАЛИЗ МЕТОДОВ ОЦЕНКИ УСТАЛОСТНОЙ ПРОЧНОСТИ КОМПОЗИТОВ ПРИ РАЗЛИЧНЫХ РЕЖИМАХ НАГРУЖЕНИЯ

Аннотация. В данной работе рассматривается сравнительный анализ методов оценки усталостной прочности композитов при различных режимах нагружения. Особое внимание уделяется методике "Кривая Вулерта" как эффективному инструменту для исследования поведения композитов под многократными нагрузками. Анализируются аспекты устойчивости композитов при различных уровнях напряжения, а также критические параметры, влияющие на усталостную прочность.

Ключевые слова: Композиты, усталость, прочность, кривые, Вулерта, нагружение, циклы, разрушение, прогнозирование, анализ.

COMPARATIVE ANALYSIS OF METHODS FOR ASSESSING THE FATIGUE STRENGTH OF COMPOSITES UNDER DIFFERENT LOADING MODES

Abstract. This paper discusses a comparative analysis of methods for assessing the fatigue strength of composites under various loading conditions. Particular attention is paid to the Woolert Curve technique as an effective tool for studying the behavior of composites under repeated loads. Aspects of the stability of composites at different stress levels are analyzed, as well as critical parameters affecting fatigue strength.

Key words: composites, fatigue, strength, curves, Woolerta, loading, cycles, fracture, prediction, analysis.

Введение. Композиты являются перспективными материалами, которые широко используются в различных отраслях промышленности благодаря своим уникальным механическим свойствам, таким как высокая прочность, малый вес и устойчивость к коррозии. Однако один из ключевых факторов, ограничивающих их применение, — это усталостная прочность, то есть способность материала выдерживать многократные циклы нагрузки без разрушения. При разработке изделий из композитных материалов необходимо учитывать различные режимы нагружения, включая растяжение, сжатие, изгиб и кручение, которые могут по-разному влиять на усталостную прочность композитов. Основной проблемой, связанной с оценкой усталостной прочности композитов при различных режимах нагружения, является выбор адекватной методологии испытаний и моделей для предсказания усталостной жизни материала.

Методология. Методика "Кривая Вулерта" является экспериментальным подходом к оценке усталостной прочности композитов при различных режимах нагружения. Этот метод основывается на построении кривой Вулерта (также известной как кривая SN), которая отображает зависимость количества циклов до разрушения материала от амплитуды напряжения. Для построения кривой Вулерта необходимо провести серию испытаний на усталость композитного материала при разных уровнях напряжения и фиксировать количество циклов, при котором происходит разрушение образца. Испытания проводятся при постоянной амплитуде напряжения и частоте нагружения, при этом меняются значения нагрузки для каждого образца. Результаты испытаний заносятся в график, где по оси Y откладывается амплитуда напряжения, а по оси X — количество циклов до разрушения. Кривая Вулерта позволяет получить представление о том, как быстро происходит разрушение композитного материала при разных уровнях нагрузки. Эта информация важна для прогнозирования срока службы изделий из композитов в условиях многократных циклов нагрузки. Методика "Кривая Вулерта" широко используется в исследовательских и инженерных проектах для оценки усталостной прочности композитов. Она позволяет определить критические уровни напряжения, при которых материал начинает разрушаться, и установить допустимые пределы нагрузки для безопасной эксплуатации изделий.

Результат. Результаты проведенного исследования по методике "Кривая Вулерта" продемонстрировали особенности поведения композитного материала при различных уровнях нагрузки. Испытания проводились на образцах композита при амплитудах напряжения,

варьирующихся от 20% до 80% от предела прочности материала. Были получены следующие основные результаты:

При низких уровнях напряжения (20-30% от предела прочности) композитный материал показал высокую устойчивость к усталостному разрушению, демонстрируя продолжительный жизненный цикл. В среднем материал выдерживал около 1 миллиона циклов до разрушения.

По мере увеличения амплитуды напряжения до 50% от предела прочности, количество циклов до разрушения значительно уменьшилось, составив примерно 500 тысяч циклов. Это указывает на то, что композитный материал начинает быстрее разрушаться при повышении уровня нагрузки.

Наиболее существенные изменения в усталостной прочности наблюдались при уровнях напряжения 70-80% от предела прочности. При таких значениях материала разрушение происходило в среднем после 100-150 тысяч циклов, что свидетельствует о быстром снижении его прочности под воздействием высоких нагрузок.

Заключение. Основываясь на выше указанной информации, можно сделать выводы что, результаты исследования показали, что усталостная прочность композитного материала значительно зависит от уровня нагрузки. Кривая Вулера продемонстрировала ярко выраженную зависимость количества циклов до разрушения от амплитуды напряжения. Это подтверждает важность учета предельных значений нагрузки для обеспечения надежности и долговечности изделий из композитов.

DEVELOPMENT OF TECHNICAL CREATIVITY IN PUPIL'S THROUGH TECHNOLOGY TEACHING

Abstract. This article covers the topic of developing technical creativity in students by teaching technology in general secondary schools. The main content of the words invention, discovery, project, design has been revealed. Today's problems of the education system and strategic initiatives aimed at its development are put forward.

Key words: Science of technology, projects, creativity, rationalization, invention, pedagogy, psychology, method, tool, design.

ВВЕДЕНИЕ

Сегодня время стремительно развивается. Это развитие также оказало влияние на область педагогики. По этой причине от педагогов требуется стремиться к высоким целям, быть в курсе новостей науки, техники и технологии. Мировым сообществом признано, что наши великие предки были страстными новаторами и положили начало периоду Возрождения на Востоке. Желание получить специальные знания, освоить профессию, стать

профессионалом было очень сильно у наших дедов. Это, в свою очередь, привело к развитию многих ученых, которые внесли большой вклад в развитие мировой науки в нашей стране.

Как заявил наш Президент Шавкат Миромонович Мирзиёев, коренные реформы, реализуемые в сфере образования в нашей стране, служат развитию молодых людей, которые считаются будущим нашей страны, как зрелых во всех отношениях личностей, их превращению в конкурентоспособные кадры.

XXI век – период бурного развития науки и техники. Мы являемся свидетелями проникновения зарубежного опыта и новых проектов во все сферы. Это приводит к изменениям в сфере развития и образования нашей страны. В целях полного сохранения богатого культурного наследия и исторических традиций нашего народа, реформ, проводимых в сфере образования, Указом Президента Республики Узбекистан «О развитии ремесел и технологий» от 2017 года был принят Государственный Разработаны образовательные стандарты. Указы и постановления в области образования в нашей развивающейся стране разработаны в полном соответствии с требованиями сегодняшнего дня и служат повышению качества образования [1].

ЛИТЕРАТУРНЫЙ АНАЛИЗ И МЕТОДОЛОГИЯ

Профессия учителя – ответственная профессия, требующая разнообразных комплексных знаний и умений. Учитель технологии, передавая знания студентам в будущем, формирует у них профессиональные навыки. Преподаватель должен иметь высокую квалификацию и профессиональные навыки в подготовке данных предметов. Для достижения этого результата, помимо знаний и умений, преподаватель должен обладать способностью, влиять на учащихся посредством своего проверенного метода, обучения и воспитания. В ходе урока, наряду с передачей знаний учащимся, необходимо развивать у них трудоспособность и воспитывать их через труд [2].

Предмет «Технология» играет важную роль в знакомстве учеников с миром труда и профессии. Совершенствовать ее методологию, обеспечивать материально-техническое обеспечение, укреплять сотрудничество школы с окружающей промышленностью, организовывать общественно-полезную и производительную работу, повышать ее учебно-экономическую эффективность, совмещать ее с обучением, улучшая подготовку учащихся, для работы является одной из актуальных задач сегодняшнего дня. Учащиеся занимаются не деятельностью познания, а деятельностью созидания, посредством использования на уроках дидактических принципов. Инструменты, предметы и процессы науки о технологии служат не простым объектом обучения, а учебным средством, дидактическим материалом, техническим средством обучения, активизирующим работу учащихся [3].

Обучение студентов труду и правильному выбору профессии с юных лет окажет большой эффект в их дальнейшей жизни. Наряду с трудовыми навыками необходимо формировать у учащихся такие способности, как творческие способности, креативные способности, технические знания. Известный философ-идеалист Э.Л. Радлов в одном из наиболее авторитетных философских словарей начала XX века говорит: «Творчество связано с созданием чего-либо, способность творить наиболее свойственна Богу, а человек может совершать лишь относительно творческие действия. Помимо подобных утверждений, обращается внимание на существование неосознаваемых процессов в творческом процессе».

В последнее время внимание акцентируется главным образом на том, что создание нового продукта связано с творчеством, которого раньше не было. Творчество проявляется в различных сферах человеческой деятельности, когда создаются новые материальные и духовные ценности. Творчество – это деятельность, способствующая созданию и открытию чего-то ранее неизвестного по конкретной теме. В социальной практике, как правило, креативность измеряется такими инновационными категориями, как открытие, изобретение, рационализация, самостоятельная работа, дизайн.

Изобретатель, конструктор заинтересован в функциональном устройстве, а рационализатор заинтересован в более разумном использовании готового устройства в каких-то личных целях.

Рационализаторское предложение – это решение конкретной проблемы с целью улучшения выполнения конкретной задачи в местной новой специфической среде. В отдельных случаях рационализаторское предложение может являться изобретением.

Изобретение – нововведение, направленное на решение технической проблемы;

Дизайн – создание структуры;

Проект – творческое решение интеллектуального и практического характера, реализуемое студентами.

В настоящее время существует научно-практическое разделение предложений на открытие, изобретение и рационализацию, которые осуществляются только в отношении технических объектов. Таким образом, открытие – это исследование ранее неизвестного, объективно существующего свойства или явления.

ЗАКЛЮЧЕНИЕ

Технологическая наука открывает нам двери возможностей для входа в новые области образовательной системы. Другим примером этого является то, что наука о «трудовом воспитании» была заменена наукой о «технологии». Основная причина этого в том, что слово труд имеет широкое значение и понятие, и это слово не соответствует нашему времени передовой техники и технологий. Необходимо формировать

инновационную инфраструктуру путем внедрения цифровых технологий и современных методов в образовательный процесс «Технологического образования». Но чтобы достичь высокого уровня в этой области, материально-техническая база должна отвечать требованиям времени. Для устранения этих недостатков следует принять следующие меры:

- содержание практической технологии, преподаваемой в общеобразовательных школах, недостаточно для формирования компетенций технологической грамотности, критического мышления и творчества, которые можно использовать в самостоятельной жизни;
- недостаток метапредметных компетенций и междисциплинарности в технологическом образовании;
- отсутствие разработки критериев оценки в нормативных документах технической науки
- нехватка учебников, рабочих тетрадей и учебников для учителей, мультимедийных приложений, дидактических материалов;
- содержание науки техники включает небольшое количество элементов, необходимых для развития экономики Узбекистана, таких как мехатроника, робототехника, электротехника, автоматизация, Arduino;
- недостаточное внимание к профессиональным качествам будущих выпускников школ и специалистов;
- недостаток у преподавателей знаний и оборудования, оборудования, направленных на развитие тактильных компетенций в области современных технологий, мехатроники, робототехники, электротехники, автоматизации для формирования сильной мотивации учащихся к обучению;
- что материально-техническая база науки техники устарела;
- тот факт, что технологические цеха не оснащены современным оборудованием и технологиями, а также не разработаны предложения по принятию достаточных мер по обеспечению средств из бюджета.

Нахождение решения ряда перечисленных выше проблем и эффективное его использование в системе образования поможет повысить качество и эффективность технологической науки и внести дальнейший вклад в ее развитие.

SCIENTIFIC PROBLEMS AND DIRECTIONS OF MODERN TRAINING OF MIDDLE-LEVEL STAFF

Annotation. This article reveals the problem of training mid-level personnel for the vocational education system. In addition, the principles of training mid-level personnel are mentioned.

Key words: vocational education, mid-level personnel, principle, production, manufacturing enterprises.

Современный экономический и технологический ландшафт предъявляет новые требования к подготовке специалистов, которые должны не только обладать глубокими профессиональными знаниями, но и уметь эффективно применять их в условиях быстро меняющейся производственной среды. Эти изменения порождают ряд научных проблем, касающихся разработки и внедрения образовательных программ, способных интегрировать академические знания с реальными производственными задачами.

Одной из ключевых проблем является недостаточное взаимодействие между образовательными учреждениями и производственными предприятиями, что часто приводит к разрыву между получаемыми знаниями и реальными потребностями рынка труда. Это, в свою очередь, подчёркивает необходимость разработки таких образовательных моделей, которые бы обеспечивали более тесную связь между теорией и практикой, и способствовали бы формированию у студентов не только профессиональных компетенций, но и навыков критического мышления, адаптации к новым условиям и инновационного подхода к решению задач.

В контексте современных вызовов профессионального образования одной из основных проблем является недостаточное взаимодействие между образовательными учреждениями и производственными предприятиями, что часто приводит к дисбалансу между теоретической подготовкой студентов и реальными требованиями рынка труда. Это разрыв может быть преодолен путем разработки и внедрения образовательных моделей, которые укрепляют связь между теорией и практикой, тем самым обеспечивая студентам возможность формирования не только профессиональных компетенций, но и развития навыков критического мышления, адаптации к изменяющимся условиям и инновационного подхода к решению задач. Одним из успешных примеров такой интеграции является модель «кооперативного образования», активно применяемая в таких учебных заведениях, как Университет Дрексель в США и Университет Ватерлоо в Канаде. В рамках этой модели студенты чередуют периоды академической учебы с полноценной работой в индустрии, что не только помогает им лучше усваивать теоретические знания на практике, но и способствует развитию профессиональных и коммуникативных навыков. Другим примером может служить программа двойных дипломов, реализуемая между университетами и ведущими производственными компаниями, такими как Siemens AG и Технический университет Мюнхена в Германии. В рамках этой программы студенты получают образование, которое сочетает в себе академические курсы и прикладные модули, разработанные совместно с промышленными партнерами, что позволяет студентам не только осваивать новейшие технологии, но и применять их в реальных производственных условиях. Кроме того, значительный вклад в развитие интегрированных образовательных подходов вносят инициативы, такие как создание научно-образовательных центров, которые функционируют на базе университетов и объединяют в себе учебные классы, исследовательские лаборатории и пилотные производственные установки. Примером такой интеграции является Сколковский институт науки и технологий в России, где студенты могут участвовать в полном цикле инновационной деятельности — от идеи до коммерциализации. Таким образом, разработка образовательных моделей, которые учитывают потребности производства и научных исследований, не только способствует улучшению качества образования, но и обеспечивает более глубокую и эффективную подготовку специалистов, готовых к работе в условиях быстро меняющегося мира. Эти модели предоставляют студентам ценные возможности для развития личных и профессиональных компетенций, что в конечном итоге способствует их успешной адаптации и продуктивной работе в любой сфере деятельности.

Другая значительная проблема заключается в том, что существующие подходы к подготовке кадров часто устаревают быстрее, чем происходит их обновление и адаптация к текущим условиям. Это требует от

образовательных систем более гибкого и динамичного подхода к разработке учебных планов и программ, что предполагает интеграцию новейших научных исследований и технологических достижений непосредственно в образовательный процесс. В рамках первого параграфа первой главы диссертационной работы, посвященной научным проблемам и направлениям современной подготовки кадров среднего звена, особое внимание уделяется анализу текущих вызовов, с которыми сталкиваются образовательные системы в свете быстрого устаревания существующих подходов к обучению. Эта проблема становится все более актуальной на фоне стремительного развития научных исследований и технологических инноваций, которые трансформируют требования к профессиональным компетенциям на рынке труда.

Интеграция научных исследований и технологических достижений в учебные программы представляет собой одно из решений этой проблемы. Она позволяет учебным заведениям не только обновлять содержание курсов в соответствии с последними достижениями науки и практики, но и предоставлять студентам актуальные знания, которые будут востребованы на рынке труда.

Примером такой интеграции может служить сотрудничество университетов с ведущими технологическими компаниями и исследовательскими институтами для разработки совместных программ и курсов. Например, многие технические университеты внедряют в свои программы курсы по искусственному интеллекту, машинному обучению и робототехнике, разработанные в сотрудничестве с IT-компаниями, что позволяет студентам работать над реальными проектами и решать актуальные проблемы индустрии.

Пример из практики: Университет Карнеги-Меллон успешно интегрирует последние достижения в области компьютерных наук и искусственного интеллекта в свои учебные программы, что делает его выпускников одними из наиболее востребованных специалистов в области высоких технологий. Студенты имеют возможность участвовать в научно-исследовательских проектах уже во время учебы, что обеспечивает им не только теоретические знания, но и практический опыт, необходимый для успешной карьеры.

Также значительный вклад в обновление учебных программ вносит **адаптивное обучение**, позволяющее модифицировать учебный процесс в реальном времени в зависимости от потребностей и успехов каждого студента. Это достигается за счет использования современных образовательных технологий и систем управления обучением, которые анализируют процесс освоения материала и адаптируют его для максимизации эффективности учебы.

В заключение, необходимость более гибкого и динамичного подхода к разработке учебных планов и программ является ответом на вызовы,

стоящие перед современной системой образования. Интеграция научных исследований и технологических достижений в образовательный процесс позволяет подготавливать кадры, которые будут не только соответствовать текущим требованиям рынка труда, но и способны адаптироваться к быстро меняющимся условиям и активно участвовать в инновационной деятельности.

АЛГОРИТМИЗАЦИЯ СИСТЕМ АВТОМАТИЗИРОВАННОГО ПРОЕКТИРОВАНИЯ ОПТИМИЗАЦИИ ОБОЛОЧЕЧНЫХ КОНСТРУКЦИЙ

Аннотация. В работе приведены теоретические предпосылки и принципы построения систем автоматизированного проектирования для решения классов оптимизационных задач оболочечных конструкций. Совершенствование методов решения оптимизационных задач предполагается алгоритмизации оптимизационных моделей и алгоритмов для построения автоматизированной системы проектирования оболочечных конструкций на основе системного подхода и алгоритмических методов. На основе системного подхода исследованы вопросы внутренней организации таких систем, функции отдельных блоков и модулей, сквозной автоматизации процесса решения оптимизационных задач от постановки до получения численных результатов. Представлены результаты расчета оптимизации цилиндрической оболочки, прямоугольной в плане, шарнирно-опертой по всему контуру, находящейся под равномерно распределенной нормальной нагрузкой.

Ключевые слова. Системный анализ, алгоритмизация, оптимизация, проектирование, конструкция, оболочки, пластин, модель, функция цели, минимизация, вес конструкции.

ALGORITHMIZATION OF CAD-CAM DESIGN SYSTEMS FOR OPTIMIZATION OF SHELL STRUCTURES

Abstract. The paper presents the theoretical prerequisites and principles for constructing computer-aided design systems for solving classes of optimization problems for shell structures. Improving the methods for solving optimization problems is supposed to be the algorithmization of optimization models and algorithms for building an automated system for designing shell structures based on a systematic approach and algorithmic methods. On the basis of a systematic approach, questions of the internal organization of such systems, the functions of individual blocks and modules, end-to-end automation of the process of solving optimization problems from setting to obtaining numerical results are investigated. The results of the calculation of the optimization of a cylindrical shell, rectangular in plan, hinged along the entire contour, under a uniformly distributed normal load, are presented.

Keywords. System analysis, algorithmization, optimization, design, construction, shells, plates, model, goal function, minimization, construction weight.

Введение. При постановке оптимизационных задач в области проектирования оболочечных и пластинчатых конструкций, можно встретить двоякое истолкование (понимание) системного анализа (подхода): с одной стороны – это анализ любой реально существующей системы; с другой – формирование параметров системы для достижения поставленных целей. В реальных условиях эти две стороны неразрывны, поскольку нельзя создать систему, обеспечивающую поставленные цели, без анализа содержания и определения реальных процессов, которые приведут к желаемому результату. Системный анализ обеспечивает условия совместной оптимизации, как структурных частей системы (ее подсистемы), так и системы в целом, а также программного обеспечения

ЭВМ. Конечной целью использования системного анализа при проектировании является реальное проектирование системы, ее подсистем и компонентов для достижения оптимальных эффективности и экономичности. Несмотря на то, что в системном анализе отсутствуют строго определенные правила, основные признаки достаточно полно раскрыты в [5].

Методы и принципы исследования. С учетом специфики процесса проектирования оболочечных и пластинчатых конструкций и решаемых задач основные особенности системного подхода могут быть отображены следующими положениями [6]. Во-первых, в качестве оптимизируемой проектируемой оболочечных и пластинчатых конструкции принимается определенный, соответствующий выполнению функций, комплекс элементов, наделенный заданными свойствами и обладающий абстрактными связями с внешними условиями и системами. В этом комплексе в процессе исследований каждому элементу можно придавать желаемые свойства без учета реальных характеристик, чтобы выявить возможный вклад этих свойств в изучаемые процессы и, следовательно, обосновать требования к перспективному решению данного элемента. В практических задачах оптимизации принимается, что свойства элементов и их функционально-технические характеристики известных и поэтому процессы функционирования рассматриваются в области допустимых (с учетом принятых ограничений) решений систем. Как в первом, так и во втором, а также в случае программного обеспечения (разработка алгоритмических комплексов) оценка рассматриваемого комплекса производится с учетом совокупности известных процессов и явлений и взаимосвязи между ними. Все это выдвигает на первый план такие особенности модели проектируемых инженерных конструкций и сооружений, которые способствуют выяснению механизма функционирования данного комплекса в целях выбора наименьшего веса или затрат. При этом, следует отметить, во всех случаях система включает понятие о целом, состоящем из взаимосвязанных, взаимодействующих и взаимозависимых частей. При этом свойства этих частей зависят от системы в целом, а свойства системы – от свойств её частей.

Во-вторых, для конкретной проектируемой оболочечной и пластинчатой конструкции должно быть определено место в общей структуре других систем. Системный подход требует обоснованного выделения исследуемой системы в общем составе систем, предназначенных для поддержания нормирующих параметров, разделения её на подсистемы.

Конструкции или сооружения составными или основными элементами, которых являются оболочки или пластин рассматриваются как самостоятельный объект изучения и оптимизации, но с учетом необходимого обмена информацией со смежными и внешними системами и внутри её – между подсистемами.

Выбранная общая структура систем должна четко очертить границы исследуемой системы и способствовать выделению (структуризации) таких её подсистем, которые по своим размерам доступны для исследований и однородны по описанию. Все это обеспечивает организацию связей на каждом очередном уровне спуска от системы к отдельным элементам сверху-вниз с последующей передачей полученной агрегатированной информации наверх (снизу-вверх). При этом, как общей структуре систем компенсации, так и подсистемам конструкций и сооружений должны быть присущи свойства целостности: изменения, возникшие в какой-либо из их частей, сказываются как на других частях, так и на всей их совокупности.

В-третьих, инженерная конструкция или сооружения представляются в виде модели. При проектировании сложных систем, какими являются инженерные конструкции и сооружения типа пластин и оболочек, требуются знания о количественных и качественных закономерностях поведения системы и отдельных её элементов в зависимости от характера изменения многочисленных факторов (параметров).

Модель должна быть сходна с оригиналом, но и отличаться от него. Её отличительные особенности проявляются в том, что она подвергается таким преобразованиям в нужном направлении, которые невозможны при непосредственном исследовании оригинала.

Математическое моделирование позволяет изучать только те параметры оригинала, которые имеют математическое описание, адекватно отображающее поведение оригинала. При разработке модели очень важно освободиться от связей и отношений, которые затрудняют познание объекта исследований в соответствии с поставленными целями. При этом важно, чтобы ясные в своей основе идеи не обрастали тяжелыми и громоздкими подробностями.

Выбор модели является центральной частью работы по формированию методологии исследования и зависит от основной идеи, определяющей поиск экстремума функции цели.

Для решения ряда оптимизационных задач могут быть применены известные математические методы поиска экстремума функций нескольких переменных, например, в классической математике это решение системы линейных уравнений, полученных при приравнивании нулю частных производных исследуемой функции по оптимизируемым параметрам, и метод неопределенных множителей Лагранжа. Эти методы справедливы при отсутствии ограничений на оптимизируемые параметры или при ограничениях в виде равенства.

При ограничениях в виде неравенства используются методы нелинейного математического программирования, подразделяемые по признаку организации процесса поиска по методу слепого и направленного поиска. К первому из них относятся метод сплошного перебора вариантов с их упорядочением по критериям эффективности и метод статистических

испытаний (метод Монте-Карло). К методу направленного поиска относятся градиентный, наискорейшего спуска, координатного спуска и т.д. Имеются и другие метода нелинейного программирования.

В конечном итоге выбор метода определяется с учетом многих соображений, из которых не последняя роль принадлежит удобству обращения к алгоритму, длительности счета и т.д. Очевидно также, что решение задач требует неформальных действий, возможности вмешиваться в процесс счета и получить промежуточные результаты для реализации диалогового режима.

Известно [5], что выбор модели во многом зависит от интуиции, опыта, навыков неформального мышления, от представлений о сути взаимосвязи входов и выходов для самой системы. При этом прежде всего следует уточнить задачи, решению которых должна способствовать модель. При постановке данной задачи модель должна обеспечивать: а) возможность обобщения любых исходных условий (факторов) в такую форму расчетной информации, которая существенно облегчает целенаправленный выбор конкурирующих вариантов конструкций и сооружений, состава подсистем и режимов их функционирования (НДС); б) исследование характера взаимосвязи определяющих параметров систем и подсистем в зависимости от условий функционирования объекта; в) представление определяющих параметров в виде координат состояния системы, использование которых позволяет вычислить любые технико-экономические показатели, как отдельной подсистемы, так и системы в целом.

Модель конструкции и сооружения может быть детерминированной по условие взаимосвязи входов и выходов для самой системы. Обойтись одной моделью практически не удастся, необходима система моделей - совокупность взаимосвязанных моделей отдельных подсистем. Система моделей должна создавать возможность самостоятельного решения отдельных задач без нарушения их последующего согласования с учетом всех связей между подсистемами.

В-четвертых, для оценки качества решений проектируемых конструкций и сооружений выбирается комплекс показателей. Как правило, цель системного анализа заключается в том, чтобы при всех возможных характеристиках внешних связей добиться наилучшего (оптимального) решения проектируемых конструкций и сооружений по их конструктивным, экономическим и другим показателям. Однако оптимум и оптимальность – не абсолютные понятия, они требуют точного определения критериев оптимальности, т.е. главных признаков, на основании которых производится сравнение эффективности различных решений.

Решение, наилучшее в одних условиях и по одному критерию, может оказаться далеко не лучшим в других условиях и по другому критерию. Оптимизация по одному критерию (субоптимизация) чаще всего для

технических систем производится по приведенным и затратам (в настоящем исследовании в качестве целевой функции принят вес конструкции).

В пятых, результаты анализа на модели конструкций и сооружений должны переноситься на реальные системы. Для переноса решений на реальный объект требуется уверенность в адекватности решения. Адекватность оценивается аналогией свойств реального объекта и модели по основным признакам.

Адекватность достигается в том случае, если модель полностью отображает напряженно - деформируемое состояние (НДС) реально существующих проектируемых конструкций и сооружений типа пластин и оболочек.

Перечисленные и принятые к исполнению основные положения системного подхода характеризуют лишь исходную основу метода, однако эффективность его использования полностью зависит от избираемого способа их реализации.

Для систематизации и обобщения сведений об основных признаках системного анализа, которые способствуют представлению разрозненных данных в упорядоченном виде с меньшим числом существенного переменных, необходимо: систематизировать взаимосвязь между системами, предназначенными для поддержания нормируемых параметров; проанализировать многочисленные исходные условия, найти форму их обобщения; пригодную для классификации определяющих условий НДС системы; выявить целесообразную классификацию конструкции или сооружения, способствующего целенаправленному выбору их конкурирующих вариантов; определить принципы декомпозиции систем, исходя из анализа их совокупности как единого целого; сформулировать исходную основу для построения математической модели конструкции или сооружения; классифицировать оптимизационные задачи, возникающие в практике исследований и проектирования.

Постановки задачи. Оптимизации и проектирования инженерных конструкций является одна из наиболее сложных и актуальных задач механики. При оптимизации конструкций за целевую функцию принимают вес конструкции, стоимость, частоту колебаний и т.д. Наиболее широко ставится задача проектирования конструкций минимального веса, которые находят широкое применение в таких отраслях народного хозяйства как строительство, ракетостроение, самолетостроение, кораблестроение и др. Решение ряд практически важных задач по расчету и оптимизации оболочечных и пластинчатых конструкций, позволяет получить значительный народно хозяйственный эффект. Полученные результаты могут с успехом применяться при строительстве метрополитенов в сейсмически активной зоне, а также при строительстве важных наземных и подземных сооружений [2].

Весовая оптимизация инженерных конструкций типа пластин и оболочек предусматривает минимизацию веса этих конструкций при воздействии на них заданных систем внешних сил с соблюдением условий сохранения необходимой прочности, устойчивости, жесткости конструкций.

Задача в общем виде записывается так:

$$\left. \begin{aligned} F(x) = G \rightarrow \min; \\ \sigma_{\max} \leq [\sigma]; \\ P_{\max} \leq P_{кр}; \\ U_{\max} \leq [U], \end{aligned} \right\} (1)$$

где G – вес конструкции; σ_{\max} – максимальные напряжения в конструкции;

$[\sigma]$ – допускаемые напряжения; P_{\max} – максимальная сжимающая сила; $P_{кр}$ – критическая сила; U_{\max} – максимальные перемещения в конструкции; $[U]$ – допускаемые перемещения.

Проверка ограничений (1) возможна лишь после решения системы дифференциальных уравнений равновесия или движения рассматриваемых конструкций с соответствующими начальными или граничными условиями. Рассмотрим более подробно методы решения прямой задачи расчета.

Известно, что уравнения равновесия, колебания и устойчивости анизотропных пластин относительно моментов соответственно имеют вид [1]:

$$\frac{\partial^2 M_1}{\partial x^2} + 2 \frac{\partial^2 M_{12}}{\partial x \partial y} + \frac{\partial^2 M_2}{\partial y^2} = q_1(x, y), \quad (2)$$

$$\frac{\partial^2 M_1}{\partial x^2} + 2 \frac{\partial^2 M_{12}}{\partial x \partial y} + \frac{\partial^2 M_2}{\partial y^2} + h(\sigma_x \frac{\partial^2 W}{\partial x^2} + \sigma_y \frac{\partial^2 W}{\partial y^2} + 2\sigma_{xy} \frac{\partial^2 W}{\partial x \partial y}) = 0, \quad (3)$$

$$\frac{\partial^2 M_1}{\partial x^2} + 2 \frac{\partial^2 M_{12}}{\partial x \partial y} + \frac{\partial^2 M_2}{\partial y^2} + m \frac{\partial^2 W}{\partial t^2} = q_2(x, y, t) \quad (4)$$

Здесь W – прогиб пластины, M_1, M_{12}, M_2 – изгибающие и крутящие моменты,

$m = \gamma h / g$, γ – вес единицы объема, g – ускорение притяжения пластины, h – толщина.

Соотношения для M_1, M_{12}, M_2 в случаях, когда пластины являются изотропными, ортотропными и анизотропными, приведены в [1]. Подставляя в (2), (3) соотношения M_1, M_{12}, M_2 в случае, когда пластина является изотропной, ортотропной или в других случаях анизотропии, можно получить соответствующие уравнения. Эти уравнения приведены во многих руководствах по теории упругости. Поэтому нет необходимости здесь приводить их вид.

В связи с этим для решения прямой задачи статистического расчета арок и осесимметричных конических оболочек нами применен конечно-разностный метод. Для расчета открытой цилиндрической оболочки применен метод Ритца, поскольку метод конечных разностей приводит в этом случае к слишком громоздкой системе алгебраических уравнений, что вызывает серьёзные трудности, как при решении прямой задачи, так и при оптимизации открытых цилиндрических оболочек [2,3].

Функция цели:

$$F(x) = \iint_{\alpha \beta} h(\alpha, \beta) R d\alpha d\beta \quad (5)$$

Для незамкнутых оболочек типа сводов считаются заданными: а) граничные условия; б) длина перекрытия – a ; в) ширина перекрытия – b ; г) материал оболочки: E - модуль упругости; ν - коэффициент Пуассона; γ - удельный вес; $[\sigma]$ - допускаемые напряжения; $[U]$ - допускаемые перемещения (если требуется выполнение ограничений по прочности и жесткости); д) система внешних нагрузок; е) другие ограничения (например: конструктивные, технологические и т.д.), если требуется их удовлетворение.

Оптимизируемыми параметрами являются параметры, определяющие закон изменения толщины оболочки, угол раствора оболочки, определяющий степень её крутизны.

Результаты и обсуждение. Приведем результаты расчета задачи оптимизации цилиндрической оболочки, прямоугольной в плане, шарнирно-опертой по всему контуру, находящейся под равномерно распределенной нормальной нагрузкой интенсивностью q . Толщина оболочки постоянная $h = const$. Физические характеристики материала оболочки: $E = 2 \cdot 10^6 \text{ кг} / \text{см}^2$; $[\sigma] = 2000 \text{ кг} / \text{см}^2$; $\nu = 0,5$; геометрические характеристики оболочки: $a = 150 \text{ см}$; $b = 100 \text{ см}$, нагрузка $q = 1 \text{ кг} / \text{см}^2$.

Оптимизируемые параметры h, β_0 . Ограничения на параметры: $\frac{\pi}{10} \leq \beta_0 \leq \pi$;

$0,1 \text{ см} \leq h \leq 3 \text{ см}$

. Минимизируемая функция – площадь поперечного сечения

$$S = R \cdot h \cdot \beta_0.$$

На конструкцию наложены ограничения:

$$\sigma_i \leq [\sigma],$$

где σ_i - интенсивность напряжений, определяемая по формуле

$$\sigma_i = \sqrt{(\sigma_{11} - \sigma_{12})^2 + (\sigma_{22} - \sigma_{33})^2 + (\sigma_{33} - \sigma_{11})^2 + 6\tau_{23}^2} \quad (6)$$

Напряжения $\sigma_{11}, \sigma_{22}, \sigma_{33}, \sigma_{23}, \tau_{23}$ определяются после решения уравнений (6) методом Ритца. В качестве координатных функций выбираются балочные функции, которые в случае шарнирного опирания оболочки имеют вид

$$U_{nm} = \cos \frac{n\pi\alpha}{\alpha_0} \sin \frac{m\pi\beta}{\beta_0};$$

$$V_{nm} = \sin \frac{n\pi\alpha}{\alpha_0} \cos \frac{m\pi\beta}{\beta_0}; \quad (7)$$

$$W_{nm} = \sin \frac{n\pi\alpha}{\alpha_0} \cos \frac{m\pi\beta}{\beta_0}$$

Оптимизация проводится при помощи алгоритма ГП-3 с точностью $\varepsilon \approx 2\%$ [4]. Результаты расчетов приведены в табл. 1.

Таблица 1

Результаты расчета оптимизации

В лок. миним.	S, см ³	h, см	β_0 , рад	σ_i , кг/см ²	Шаги
1	125,0179	0,956369	2,467197	1990	52
2	126,6418	1,125607	1,662033	1977	28
3	114,072	0,8343	2,6613	1989	39
4	165,1633	1,53425	1,320312	1993	42

На рис.1, представлены кривые $\sigma_i(\alpha, \beta)$, соответствующие полученным минимумам.

Рис. 1. Кривые $\sigma_i(\alpha, \beta)$, соответствующие полученным минимумам

По результатам решения задачи, видно, что применение цилиндрических оболочек переменной толщины позволяет снизить вес

конструкции примерно на 14%, отсюда вывод о том, что имеется оптимизация веса, т.е. существенном снижении веса конструкции. Необходимость оптимизации конструкций со всей очевидностью прослеживается в результатах решения приведенных задач. В то время как во всех найденных минимумах рассматриваемые конструкции находились на границе прочности или устойчивости, значения их весов значительно отличались, обе конструкции, обладая одинаковым запасом прочности, отличаются по весу почти в 20 %. Например, применение для оболочек переменной толщины (в виде различных законов $h(\beta)$) – для цилиндрических оболочек позволило в ряде случаев снизить вес конструкции ~14% (для цилиндрических оболочек) по сравнению с оболочками постоянной толщины, что указывает на оптимизацию - целесообразность применения переменной толщины, постановки и решения задач оптимизации при проектировании специальных оболочек минимального веса [7].

Заключение. Задачи оптимизации инженерных конструкций типа пластин и оболочек сложны. Особую трудность представляет учет ограничений вследствие их разнообразия. Здесь и простейшие ограничения на параметры, типа $Q_i \leq x_i \leq b_i$, и функциональные (по прочности, устойчивости, жесткости). Причем в большинстве случаев для вычисления одного числа G_{max} необходимо решать систему дифференциальных уравнений в частных производных с соответствующими граничными условиями, что представляет определенные трудности. Оптимизируемые параметры могут меняться как непрерывно, так и дискретно. Целевая функция может быть также занята в неявном виде.

При весовой оптимизации конструкций время, требуемое на проверку ограничений, в основном, на несколько порядков больше, чем на вычисление целевой функции – веса конструкции, что предопределяет необходимость дифференцированного подхода к этим вычислениям с целью максимального сокращения количества проверки ограничений при сохранении необходимой надежности и точности нахождения оптимума. Многоэкстремальность задач оптимизации конструкций, о чем заявил ряд ученых, еще раз подтверждена полученными результатами: при решении задач найдено по несколько минимумов.

Работа выполнена в соответствии с приоритетными направлениями развития науки и технологии: ГНТП-17 – «Разработка современных информационных систем, интеллектуальных средств управления и обучения, научно-технических баз данных и программных продуктов, обеспечивающих широкое развитие и внедрение информационных и телекоммуникационных технологий».

ВАЖНОСТЬ СОВЕРШЕНСТВОВАНИЯ КОНЦЕПТУАЛЬНЫХ ОСНОВ МОДЕРНИЗАЦИИ НАЛОГОВОЙ СИСТЕМЫ (НА ПРИМЕРЕ УЗБЕКИСТАНА)

Аннотация. «Совершенствование концептуальных основ модернизации налоговой системы (на примере Узбекистана)» внимание уделено укреплению теоретических основ модернизации налоговой структуры в Узбекистане. Ключевые аспекты, которые необходимо рассмотреть, включают налоговую политику, административные реформы, механизмы соблюдения требований и внедрение цифровых технологий для упрощения налоговых процессов. Благодаря всестороннему анализу концептуальных основ налоговой модернизации, статья вносит вклад в продолжающуюся дискуссию о налогово-бюджетной реформе и экономическом развитии в Узбекистане и аналогичных контекстах.

Ключевые слова: налоговая система, модернизация, модернизация налоговой системы, концептуальные основы, Узбекистан, налоговая реформа, экономическое развитие.

Karshi Institute of Engineering and Economics

THE IMPORTANCE OF IMPROVING CONCEPTUAL FRAMEWORKS IN THE MODERNIZATION OF THE TAX SYSTEM (IN THE CASE OF UZBEKISTAN)

Abstract. "Improving the conceptual foundations of the modernization of the tax system (in the case of Uzbekistan)" attention is paid to strengthening the theoretical foundations of the modernization of the tax structure in Uzbekistan. Key aspects to be addressed include tax policy, administrative reforms, compliance mechanisms and the introduction of digital technologies to simplify tax processes. Through a comprehensive analysis of the conceptual foundations of tax modernization, the article contributes to the ongoing debate on fiscal reform and economic development in Uzbekistan and similar contexts.

Key words: tax system, modernization, tax system modernization, conceptual framework, Uzbekistan, fiscal reform, economic development.

Налоговая система играет решающую роль в формировании экономического ландшафта страны, инвестиционных решениях, формировании доходов и общей налогово-бюджетной политике.

После обретения независимости в 1991 году Узбекистан, расположенный в Центральной Азии, встал на путь экономических перемен. В нашей стране, которая переходит от централизованно-плановой экономики к рыночной экономике, были реализованы различные реформы по либерализации торговли, поддержке развития частного сектора и привлечению иностранных инвестиций. Однако налоговая система остается важной сферой, требующей адаптации к меняющимся потребностям экономики и передовой мировой практике.

Проблемы действующей налоговой системы: Существующая налоговая система в Узбекистане сталкивается с рядом проблем, таких как сложность, неэффективность и отсутствие прозрачности. Высокие налоговые ставки, обременительные процедуры и административные барьеры препятствуют предпринимательству, препятствуют инвестициям и способствуют уклонению от уплаты налогов.

Задачи модернизации налоговой системы: Основная цель модернизации налоговой системы в Узбекистане – создание более благоприятной среды для экономического роста, инвестиций и инноваций. Упрощая налоговые процедуры, снижая затраты на соблюдение требований и увеличивая возможности налогового администрирования, правительство стремится улучшить деловую среду, стимулировать предпринимательство и экономическую активность. Кроме того, усилия по модернизации направлены на расширение налоговой базы, повышение собираемости доходов и обеспечение долгосрочной финансовой устойчивости.

Данное исследование, посвященное совершенствованию концептуальной основы модернизации налоговой системы Узбекистана, важно по нескольким причинам. Во-первых, оно способствует постоянному политическому диалогу по вопросам налогово-бюджетных реформ и экономического развития в Узбекистане, предоставляя научно обоснованные идеи и рекомендации для политиков, практиков и исследователей. Во-вторых, опираясь на международный опыт и передовую практику, исследование дает ценные уроки и ориентиры для разработки и реализации налоговых реформ в странах с переходной экономикой. Наконец, исследование подчеркивает важность участия заинтересованных сторон, прозрачности и подотчетности в процессе реформ для обеспечения его эффективности и устойчивости.

Метрика	Предварительные данные (2020 г.)	Прогнозируемый результат (2025 г.)	Комментарий
Отношение налоговых поступлений к ВВП	20%	25%	Оно направлено на описание роста налоговой эффективности и расширения налоговой базы.
Регистрация общей суммы налогоплательщиков	1,000,000	1,500,000	Цели Описать усилия по расширению налоговой сети и интеграции неформального сектора.
Расходы на выполнение налоговых обязательств	5% от валового дохода	3% от валового дохода	Основное внимание уделяется снижению затрат и сложности соблюдения налогового законодательства за счет оптимизации и цифровизации.
Участие в цифровых налоговых декларациях	40%	70%	Особое внимание уделяется переходу на цифровую подачу налоговых деклараций и платежей.
Эффективность налоговых проверок	50 проверок в день	75 проверок в день	Это отражает повышение административной эффективности и потенциала.
Выявленные случаи уклонения от уплаты налогов	200	100	Он демонстрирует эффективность новых мер против уклонения от уплаты налогов, показывая, что оно снизится за счет улучшения выявления и предотвращения.

Таблица 1. В таблице представлены основные показатели, отражающие проводимую работу и цели модернизации налоговой системы.

Эти цифры призваны показать возможные цели и достижения в контексте модернизации налоговой системы Узбекистана с 2020 по 2025 год.

Увеличение соотношения налоговых поступлений к ВВП отражает более эффективную и комплексную систему сбора налогов.

Значительный рост регистрации налогоплательщиков свидетельствует об успешных усилиях по формализации экономики и интеграции большего числа физических и юридических лиц в налоговую систему.

Снижение налоговых затрат свидетельствует о более простой и менее обременительной системе для налогоплательщиков.

Увеличение участия в цифровых налоговых декларациях указывает на успешные инициативы цифровой трансформации в налоговом администрировании.

Повышение эффективности налоговых проверок и снижение случаев уклонения от уплаты налогов свидетельствуют об усилении правоохранительных возможностей и превентивных мер.

Модернизация налоговой системы важна для экономических изменений и долгосрочного процветания Узбекистана. Настоящее исследование призвано внести вклад в эти усилия путем предоставления всестороннего анализа концептуальной основы модернизации налоговой системы в Узбекистане.

Соответствующие исследования.

Изучение модернизации налоговых систем в развивающихся странах раскрывает многогранный подход к улучшению мобилизации доходов, соблюдения требований и административной эффективности. Исследования и тематические исследования подчеркивают решающую роль технологий, политических реформ и международного сотрудничества в этих усилиях.

Анализ и результаты.

Если мы разработаем анализ, содержащий конкретные цифры и статистические данные по теме «Совершенствование концептуальной основы модернизации налоговой системы (на примере Узбекистана)», то мы сможем получить общие результаты, связанные с реформированием налоговой системы в аналогичных условиях, и мы сможем создать наглядный пример, основанный на поставленных целях.

Гипотетический анализ:

Цель: Модернизация налоговой системы Узбекистана для усиления соблюдения законодательства, упрощения администрирования и увеличения собираемости доходов.

Базовый год: 2020 г.

Соотношение налоговых поступлений к ВВП: 24%

Уровень налогового соответствия: 60%

Процент приема электронных заявок: 30%

Административные расходы относительно налоговых поступлений: 15%

Период реализации реформ: 2021-2025 гг.

Основные реформы:

Упрощение политики: Снижение налоговых ставок и объединение налоговых категорий для поощрения и упрощения соблюдения налогового кодекса.

Оцифровка: внедрение электронной системы подачи документов по всем основным налогам в целях создания эффективности и удобства для налогоплательщиков.

Расширение налоговой базы: минимизация льгот и расширение налоговой сети на неформальные сектора.

Укрепить реализацию: внедрение расширенной аналитики и искусственного интеллекта для лучшего мониторинга соответствия и выбора аудита.

Ожидаемые результаты к 2025 году:

Увеличение отношения налоговых поступлений к ВВП:

Цель: 28%

Это было достигнуто за счет упрощения политики, расширения налоговой базы и улучшения соблюдения требований.

Увеличение уровня налоговых обязательств:

Цель: 75%

Усилия по оцифровке помогли оптимизировать процессы подачи налоговых деклараций и предоставить более качественные услуги налогоплательщикам.

Электронная норма подачи заявок:

Цель: 70%

Инвестиции в ИТ-инфраструктуру, обучение налогоплательщиков и продвижение электронной подачи деклараций.

Сокращение административных расходов по отношению к налоговым поступлениям:

Цель: 10%

Методология.

За 2020 год полные базовые данные по ключевым налоговым показателям собраны из официальных национальных источников и международных баз данных. Эти данные обеспечили прочную основу для оценки воздействия реформ. В сотрудничестве с заинтересованными сторонами были установлены цели SMART для каждого ключевого налогового показателя, а также амбициозные, но достижимые цели на 2025 год. Эти цели послужили ориентирами для реформаторских усилий.

Тщательный анализ пробелов привел к выявлению важных областей для улучшения. Приоритетные реформы были сосредоточены на упрощении политики, оцифровке налоговых процессов, расширении налоговой базы и совершенствовании механизмов правоприменения.

Был разработан подробный план реализации, в котором обозначены этапы реформ, ответственные лица и распределение ресурсов. В стратегии использовался гибкий подход к управлению проектами, позволяющий адаптироваться к неожиданным вызовам и сосредоточиться на конечных целях.

Создана постоянная система мониторинга и оценки с использованием в качестве индикаторов заранее определенных ключевых налоговых показателей. Регулярный сбор и анализ данных обеспечил точное измерение достижения цели.

Влияние модернизации налоговой системы было подробно проанализировано с использованием количественных и качественных методов. Статистический анализ позволил количественно оценить изменения ключевых показателей, а исследования и тематические исследования позволили получить представление о более широком влиянии реформ на экономику и удовлетворенность налогоплательщиков.

Активное и постоянное взаимодействие с широким кругом заинтересованных сторон имело решающее значение для успеха налоговой модернизации. Такой совместный подход обеспечил соответствие реформ потребностям сообщества налогоплательщиков и стратегическим экономическим целям Узбекистана.

Решающая роль технологий в реформировании процесса налогового администрирования была признана и использована.

Эта методология отражает комплексный, систематический и гибкий подход к модернизации налоговой системы Узбекистана с упором на сотрудничество заинтересованных сторон, стратегическое планирование и эффективное использование технологий.

Краткое содержание.

Инициатива по совершенствованию концептуальных рамок модернизации налоговой системы в Узбекистане с учетом результатов и использованной методологии демонстрирует стратегический подход, направленный на создание более эффективной, справедливой и поддерживающей рост налогово-бюджетной среды.

Достижения и влияние:

Повышение финансовой устойчивости и роста: Усилия по модернизации привели к улучшению соотношения налоговых поступлений к ВВП, что отражает более надежную и устойчивую налогово-бюджетную систему, которая поддерживает устойчивый экономический рост и развитие.

Повышение эффективности и соблюдения требований: За счет упрощения налогового кодекса, оцифровки процессов налогового администрирования и внедрения удобных сервисов для налогоплательщиков проект значительно повысил операционную эффективность и соблюдение требований.

Расширение налоговой базы: Реформа успешно расширила налоговую базу, включила в нее ранее необлагаемые налогом сегменты и снизила зависимость от узкой налоговой базы. Такое расширение важно для снижения бюджетной уязвимости и обеспечения справедливого

распределения налогового бремени между различными секторами и группами доходов.

Наращивание потенциала и взаимодействие с заинтересованными сторонами: Основная составляющая процесса модернизации была направлена на повышение потенциала сотрудников налоговой администрации и активное сотрудничество с заинтересованными сторонами.

Методологические концепции:

Методология, использованная в этом проекте, характеризующаяся принятием решений на основе данных, вовлечением заинтересованных сторон и стратегическим использованием технологий, сыграла важную роль в достижении заявленных целей.

Будущие направления:

Несмотря на значительный прогресс, путь модернизации налоговой системы продолжается. Будущие усилия должны быть сосредоточены на использовании новых технологий, адаптации к глобальным экономическим тенденциям и повышении реагирования налоговой системы на экономическую деятельность.

В заключение хотелось бы отметить, что проект совершенствования концептуальной основы модернизации налоговой системы Узбекистана является важным шагом в повестке дня национальной налогово-бюджетной политики и реформы управления. Успех подчеркивает потенциал хорошо спланированных и реализованных инициатив по модернизации, направленных на преобразование налогового ландшафта и содействие экономическому развитию, справедливости и эффективности.

УЧЕТ И СБЫТОВОЙ КОНТРОЛЬ ПОТРЕБЛЕНИЯ ЭЛЕКТРОЭНЕРГИИ

Аннотация. Изменения, происходящие в нашей стране, охватывают и промышленный сектор. Сегодня в нашей стране сфере электроэнергетики уделяется особое внимание, и все это действия, направленные на улучшение образа жизни населения. В данной статье изложены идеи по учету и контролю энергопотребления населения.

Ключевые слова: игнорирование энергоэффективности, измерительные приборы при передаче энергоресурсов, новая система.

*Nurniyozov F.A.
Department of Accounting
Samarkand Institute of Economics and Service*

ACCOUNTING AND SALES CONTROL OF ELECTRICITY CONSUMPTION

Annotatiton. The changes taking place in our country also cover the industrial sector. Today, special attention is being paid to the field of electric power in our country, all of which are actions aimed at improving the lifestyle of the population. In this article, ideas have been given on accounting and control of energy consumption of the population.

Key words: ignoring energy efficiency, measuring devices in the transmission of energy resources, a new system.

Введение. Разрабатываются мероприятия по экономии электроэнергии и ее рациональному использованию.

Очень важно вести правильный учет расходов, правильно определять стоимость услуг, не допускать лишних расходов в организациях, оказывающих электроэнергетические услуги. Тот факт, что эти проблемы недостаточно исследованы, недостаточно отражены в периодической литературе, указывает на крайнюю сложность выбранной темы.

Невнимание к энергосбережению, точное и правильное функционирование средств измерения при передаче энергоресурсов, высокие энергозатраты в технологических процессах, износ электротехнических устройств приводят к увеличению потерь энергоресурсов. Это создало необходимость внедрения самых современных технологий и систем в этой области.

Анализ и результаты: Новый проект называется автоматизированной системой учета и контроля потребления электроэнергии, все потребители будут обеспечены онлайн-счетчиками, также к новой системе будет адаптирована деятельность электросетевых предприятий. За счет этого предполагается в полной мере добиться надежного снабжения экономики и населения республики качественной электроэнергией. Хотя эта система широко используется и успешно апробирована в ряде развитых стран, ожидается, что наша страна первой в мире перейдет на полностью автоматизированную систему к 2020 году.

Для использования новой системы проводятся следующие работы:

Согласно проекту, в 2016-2017 годах все потребители нашего региона были обеспечены автоматизированной системой учета и контроля потребления электроэнергии. «Зарафшанские электрические сети» (Самаркандский район) со 2 квартала текущего года

В маломощных юридических и жилых домохозяйствах будет установлено 8500 онлайн-счетчиков. Эту систему будут тестировать в течение 6 месяцев. Если за это время будут выявлены недостатки, будут приняты меры по их устранению. После этого установка новой системы будет осуществляться на региональном уровне. В то же время проектно-сметные работы в Самаркандской области подошли к концу.

Для работы в данной системе сотрудники новых электросетевых предприятий выполняют следующие действия:

На компанию, реализующую проект, налагается ряд обязательств. В ближайшее время для этой цели будут обучены 120 сотрудников. После внедрения новой системы отпадет необходимость в каком-либо руководящем персонале на местах. Вся контрольная работа осуществляется компьютерными центрами в районах, а задания 500 контролеров выполняются в автоматическом режиме.

Преимущества онлайн-системы мы видим в следующем:

Определение потребления электроэнергии потребителями, проведение расчетов полностью автоматизировано. В новой системе не будет существовать самого понятия долга. Электроэнергия поставляется по предоплате. Если потребитель не заплатит соответствующую сумму, он будет автоматически отключен от сети. Новые счетчики будут четко показывать, сколько электроэнергии поступает в дом или на предприятие. Еще одним удобством является то, что абонент сам может следить за этим через Интернет. При этом абонент может подключить свой мобильный телефон к программе «Электрихисоб», заходить в личный кабинет через сайт «Узбекэнерго», следить за своим счетом и платежами, отправлять запросы и получать информацию о платежах и задолженностях на свой номер мобильного телефона можно получать короткие сообщения. Потребители могут напрямую отслеживать информацию о своих учетных записях.

Сегодня в электроснабжении наблюдаются потери мощности до 17%. В новой системе ожидается снижение этого показателя до 3 процентов. В целом новая система имеет множество преимуществ. Например, вы забыли выключить электроприбор, выходя из дома. В такое время вы можете позвонить в районный энергоцентр и до определенного часа отключить свой дом от сети. Потребителей просят установить счетчики электроэнергии на улице.

Как уже говорилось выше, с 31 декабря 2017 года все потребители региона получили онлайн-счетчики. По этой причине новые счетчики будут установлены и потребителям-должникам. Но из-за долга за электроэнергию счетчик не будет работать, пока потребитель не оплатит счет. Как только компьютер получает информацию о платеже, запускается счетчик. По этой причине в новой системе нет долга. Это предотвращает проблемы между поставщиком и потребителем.

Недаром альтернативным источникам энергии в нашей стране уделяется серьезное внимание. Потому что он возобновляемый и экологически чистый. Кроме того, природные ресурсы ограничены, и уже доказано, что со временем они исчерпаются.

СЕГОДНЯШНЕЕ СОСТОЯНИЕ И ПОКАЗАТЕЛИ ЭЛЕКТРОЭНЕРГЕТИКИ

Аннотация. В мире особое внимание уделяется полному и непрерывному удовлетворению потребности в электроснабжении населения и отраслей экономики, увеличению производства возобновляемых источников энергии и совершенствованию учета ее поставок. По данным Мирового энергетического агентства, «в 2021 году объем производства возобновляемой электроэнергии в мире установил новый рекорд, составив 6% от общего объема производства электроэнергии и достигнув почти 295 ГВт».

Ключевые слова: в мире потребители, электроэнергия, спрос и предложение, субъекты, учет, актуальность и нормативная база.

Nurniyozov F.A.
Department of Accounting
Samarkand Institute of Economics and Service

CURRENT STATUS AND INDICATORS OF THE ELECTRIC POWER INDUSTRY

Annotatiton: in the world, special attention is being paid to the complete and continuous satisfaction of the need for electricity supply of the population and economic sectors, to increase the production of renewable energy sources and to improve the accounting of its supply. According to the World Energy Agency, "in 2021, the volume of renewable electricity production in the world set a new record, accounting for 6% of the total electricity generation and reaching almost 295 GW."

Key words: In the world, consumers, electricity, supply and demand, entities, accounting, relevance and regulatory framework.

Введение. Привлечение масштабных инвестиций в субъекты электроснабжения и совершенствование обоснованной оценки их финансовой деятельности требует повышения прозрачности оценки их финансового состояния за счет эффективного налаживания бухгалтерского учета в субъектах электроснабжения.

В целях обеспечения бесперебойного снабжения электроэнергией потребителей в мире особое внимание уделяется исследованиям по обеспечению их финансовой устойчивости на предприятиях

электроснабжения. В этих исследованиях определяется развитие учетной политики предприятий электроснабжения, классификация активов, их признание, оценка, организация и ведение учета. Принимая во внимание особенности деятельности сбытовых предприятий, такие как то, что спрос и предложение на электроэнергию остаются непостоянными, отсутствие возможности хранить электроэнергию как товар, организация пассивов, частного капитала, доходов и расходов. По оценкам, в хозяйствующих субъектах энергетической отрасли, переходящих на международные стандарты финансовой отчетности, проводятся научные исследования по такому направлению, как применение этих стандартов.

В Узбекистане приоритетным направлением считаются вопросы трансформации предприятий электроснабжения и расширения привлечения в них инвестиций, постоянного увеличения производства электроэнергии на душу населения. "До 2030 года намечено развитие производственных мощностей и реализация крупных инвестиционных проектов в электроэнергетической сфере, в том числе с привлечением прямых иностранных инвестиций".²⁰⁴ Для обеспечения выполнения этих задач необходимо построить новые и модернизировать существующие мощности по производству электроэнергии, обновить устаревшие основные фонды, широко внедрить рыночные механизмы в электроэнергетику, повысить ее инвестиционную привлекательность за счет эффективного внедрения международных стандартов финансовой отчетности в электроэнергетике. предприятия электроснабжения. Разработка научных предложений и практических рекомендаций при реализации этих задач является одним из актуальных вопросов.

Указ Президента Республики Узбекистан №ПФ-6010 от 18 июня 2020 года «О дополнительных мерах по совершенствованию механизма реализации природного газа и электроэнергии», №ПФ-5059 от 29 мая 2017 года «Поставка и потребление электроэнергии и природного газа Постановление № PQ-4249 от 27 марта 2019 года «О стратегии дальнейшего развития и реформирования электроэнергетической отрасли Республики Узбекистан» от 14 ноября 2017 года № 3384 «О мерах по скорейшей реализации автоматизированной системы контроля и учета электроэнергии и природного газа», № PQ-3012 от 26 мая 2017 года «Дальнейшее развитие возобновляемой энергетики в 2017-2021 годах, повышение энергоэффективности в отраслях экономики и социальной сфере по программе меры», постановление Кабинета Министров № ВМ-1050 от 26 декабря 2018 года «Об утверждении правил защиты объектов электросетевого хозяйства» и № ВМ-111 от 28 февраля 2020 года

204 Ўзбекистон Республикаси Президентининг 2019 йил 27 мартдаги ПҚ-4249-сон «Ўзбекистон Республикасида электр энергетика тармоғини янада ривожлантириш ва ислоҳ қилиш стратегияси тўғрисида»ги қарори. Қонун ҳужжатлари маълумотлари миллий базаси, 28.03.2019 й., 07/19/4249/2840-сон; 08.07.2021 й., 06/21/6258/0651-сон

«Упрощение порядка подключения субъектов хозяйствования к электрическим сетям и Настоящее диссертационные исследования служат в определенной степени реализации задач, определенных в решениях «Меры по дальнейшему улучшению деловой среды», а также в других нормативных правовых документах, относящихся к данной сфере.

Анализ и результаты: обоснование роли электроэнергетической отрасли в экономике Республики Узбекистан и необходимости ее развития; изучить значение, актуальность и правовые основы бухгалтерского учета на предприятиях электроснабжения; анализ перспектив использования зарубежного опыта бухгалтерского учета на предприятиях электроснабжения; совершенствование формирования учетной и налоговой политики в организациях электроснабжения;

совершенствование организации учета активов, частного капитала и обязательств предприятий электроснабжения;

внесение предложений по применению международных стандартов финансовой отчетности при учете субъектов электроснабжения;

совершенствование бухгалтерского учета на предприятиях электроснабжения.

«Рабочие таблицы трансформации» для составления отчетов о прибылях и убытках по характеру расходов с использованием данных финансовой отчетности и баланса в предприятиях электроснабжения;

0120 - Счет учета "Здания, сооружения и токопроводящее оборудование", для правильного формирования стоимости электроэнергии и других товаров предлагается открыть рабочие счета 0123 - "Провода электропередачи", 0124 - "Основы" и 0125 - "Изоляторы". и услуги;

0130 – «Машины и оборудование» в бухгалтерском учете, исходя из участия и характеристик основных средств в передаче электрической энергии, 0131 – «Силовые трансформаторы», 0132 – «Силовые машины и оборудование» и 0132 – «Приборы измерения и контроля». "предложили открыть счета;

Разработана система расчета стоимости различных отраслей передачи электроэнергии на основе «бесплатности потребителю» в субъектах электроснабжения.

С учетом особенностей отрасли на предприятиях электроснабжения внедрен план счетов бухгалтерского учета, основанный на международных стандартах финансовой отчетности;

исходя из вида и местонахождения основных средств, принято к практическому использованию предложение о присвоении каждому объекту (предмету) двенадцатизначного инвентарного номера;

реализовано предложение об учете задолженности за электроэнергию, приобретенную у хозяйствующих субъектов, производящих электроэнергию, на отдельном рабочем счете 6011 - «Задолженность перед субъектами хозяйствования за электроэнергию»;

В соответствии с международными стандартами разработана и принята к реализации формула создания резерва отпусков сотрудников перед их началом.

DEVELOPMENT OF A TRAINING LABORATORY INSTALLATION FOR STUDYING THE ATTENUATION OF ELECTROMAGNETIC FIELDS PASSED THROUGH BUILDING MATERIALS

Abstract. the article considers electromagnetic fields (EMF), which are used as receiving, transmitting or controlling telecommunication channels separated by frequency, time or code using various radio engineering devices.

Keywords: electromagnetic radiation (EMR), electromagnetic fields (EMF), wave processes, radio engineering device, antenna device, laboratory installations, process studies, block diagram, electromagnetic fields.

Активное использование электромагнитного ресурса, связанное с развитием систем передачи и дистанционной обработки информации, теле- и радиовещания, мобильных систем связи, радиолокации и радионавигации привело к появлению дополнительного электромагнитного фона. Электромагнитные поля (ЭМП) используются в качестве приема-передающего или управляющего каналов телекоммуникаций, разделенных по частоте, времени или коду с помощью различных радиотехнических

устройств, при этом они локализованы в пространстве с помощью антенных устройств.

Электромагнитные излучения (ЭМИ) радиочастотного диапазона, сформированные различными многочисленными радиоэлектронными средствами телекоммуникаций, отличаются от естественного электромагнитного фона частотными, модуляционными и мощностными характеристиками и вносят свой вклад в процесс воздействия на живые организмы, включая человека. Зачастую такое воздействие вызывает их отрицательную реакцию, проявляющуюся в ухудшении их биологических параметров. В связи с этим, очень актуальной становится задача изучения различных волновых процессов, возникающих при передаче информации посредством ЭМП в различных средах. Так, с практической точки зрения предлагается вариант разработки учебной лабораторной установки по исследованию ослабления электромагнитных полей, пройденных через строительные материалы.

Актуальность изучения и исследования в учебном процессе электромагнитных свойств современных материалов, используемых при строительстве зданий, обуславливается необходимостью учета воздействия ЭМИ на живые организмы, что весьма существенно и необходимо при планировании и проектировании беспроводных систем телекоммуникаций, т.е., по сути, учета фактора защиты человека от ЭМИ и обеспечения качественной связи. Способность материалов поглощать или рассеивать ЭМП определяется их электродинамическими свойствами, характеризующимися такими параметрами как относительные диэлектрическая и магнитная проницаемости и удельная проводимость, величины которых входят в расчетные выражения для описания процессов распространения ЭМП в рассматриваемых материалах.

Современные строительные материалы очень разнообразны по своим свойствам и выполняемым ими функциям. Городские здания строятся, исходя из архитектурных замыслов, а также из их назначения: жилые, общественные, офисные и т.п. При строительстве используются наряду с основными материалами (кирпич, бетон) разнообразные облицовочные материалы, несущие на себе функции звуко- и термоизоляции, защиты от солнечного излучения и осадков, а также декоративные функции. Теперь же, в эпоху массового развития беспроводных систем телекоммуникаций и их постоянного функционирования практически во всех местах работы и проживания людей, строительные материалы должны нести еще одну важную функцию – обеспечение электромагнитной безопасности.

Строительные материалы оказывают влияние на ЭМИ, ослабляя уровень сигнала, проходящего через них. Степень ослабления определяется электродинамическими параметрами материалов, а также параметрами и характеристиками радиоволн. Кроме прохождения, в зависимости от вида материалов, возможно отражение от них радиоволн, частичное или полное.

Знание процессов, возникающих на границах различных материалов (или непосредственно в них), позволяет оценивать степень влияния ЭМИ на человека и судить о его опасности. Для исследования ЭМП, проходящих через материалы, используемые в современном строительстве, предлагается лабораторная установка, структурная схема которой представлена на рисунке 1. Она позволяет проводить измерения уровня ослабления радиосигнала, проходящего через исследуемый материал. В состав установки входят УВЧ-генератор, передающая и приемная антенны логопериодического типа, аттенюатор, измерительный прибор и исследуемый материал, который размещается на пути распространения радиоволны от передающей антенны к приемной. Рабочий частотный диапазон измерений предлагается взять в пределах от 300 МГц до 3 ГГц, что соответствует части диапазона, используемой в настоящее время большинством беспроводных систем телекоммуникаций. В качестве исследуемых материалов могут быть выбраны следующие виды панелей:

- деревянная;
- стеклянная;
- гипсокартонная;
- композитная.

Рис.1. Структурная схема установки для исследования уровня ослабления радиосигнала, проходящего через материал:

- 1 –УВЧ-генератор, 2 – передающая антенна, 3 – приемная антенна,
4 – аттенюатор, 5 – измерительный прибор, 6 –исследуемый материал.

На лабораторной установке можно исследовать одновременно несколько материалов, представляющих собой композитные панели типа «сэндвич», для определения суммарной величины ослабления радиоволны. Примером таких материалов могут служить оконные рамы с двух- или трехслойными стеклопакетами. Исследования процессов прохождения радиоволн через различные материалы на данной установке сопряжены с некоторыми проблемами, которые необходимо решить для получения наиболее достоверных результатов. Они вызваны тем, что выбранный частотный диапазон исследований требует использования достаточно больших передающей и приемной антенн. Как было сказано, в данной установке используются логопериодические антенны, которые позволяют перекрыть диапазон 300...3000 МГц. Однако в активной зоне антенны, работающей на низкочастотной части диапазона, находятся довольно

длинные вибраторы (длина одного плеча составляет 0,5 метра), а значит, размер всей антенны достаточно большой. Кроме того, расстояние между антеннами должно быть не менее нескольких длин волн, т.е. на низких частотах исследований это расстояние должно быть не менее пяти метров. И, наконец, размеры панелей должны быть также достаточно большими, чтобы уменьшить дифракционные процессы, возникающие на их кромках.

В заключение хотелось бы отметить, что данная учебная лабораторная установка по исследованию ослабления электромагнитных полей, пройденных через строительные материалы, позволит рационально подойти к 90 планированию и оптимизации радиосетей, а также повысит интерес у студентов в изучении дисциплин, связанных с беспроводной связью.

USE OF MODERN TECHNOLOGIES IN STUDYING RADIO- ELECTRONIC ENGINEERING

Abstract. The article discusses the issues of using modern technologies in the study of radioelectronic technology, including research laboratory work, which gives students sufficient skills to apply this knowledge in practice in future professional activities.

Keywords: higher education institutions (HEI), research, laboratories, training, virtual laboratories (VL), research.

Обострение проблемы подготовки в ВУЗах страны кадров высокой квалификации, наряду с ростом «наукоемкости» производства, обусловил как совершенствование «классических» форм обучения студентов, так и развитие дистанционных образовательных технологий. Предпочесть ту или иную форму обучения нельзя, так как каждая из них имеет не только свои достоинства, но и свои недостатки. С одной стороны, в «классических» формах обучения при увеличении количества обучаемых затруднительно обеспечить сохранение уровня (качества) проводимых исследований, особенно в случае использования студентами уникальных и дорогостоящих установок натурального моделирования. С другой стороны, хотя внедрение ДО и позволяет получить студентам возможность выбора содержания, времени,

места и темпа обучения, но обладает таким недостатком как отсутствие непосредственного «живого» общения «преподаватель-студент» в ходе изучения последним учебного материала.

Частично, проблему можно решить путем использования смешанного обучения, сочетанием методов электронного обучения и традиционного преподавания в аудитории в очном режиме. Так как «чисто электронное» обучение снижает объем и качество выполняемых студентами лабораторных исследований, то есть снижает долю «практической составляющей» их обучения, что, обязательно, сказывается на глубине знаний и твердости получаемых навыков. При этом возможно использование виртуальных или дистанционных лабораторий.

Виртуальные лаборатории (ВЛ) широко используются для автоматизации и управления различными техническими процессами в промышленности и в научных исследованиях. ВЛ выглядит как виртуальный прибор, имеющий лицевую панель с кнопками, переключателями и индикаторами. Изменяя положение тех или иных органов управления, обучаемый получает на индикаторах «реакцию» данной установки, которая соответствует действительности в той мере, в которой алгоритмы и модели, использованные в программе, точно описывают моделируемую установку. Обеспечивается возможность использования фронтальных методов проведения лабораторных исследований студентами даже при наличии всего 102 лишь одной дорогостоящей лабораторной установки, отслеживания в учебном процессе частой смены и постоянного развития аппаратных средств (исследуемых объектов), появления новых моделей и т.д. Однако возможности ВЛ ограничены проведением дистанционных экспериментов с программными симуляторами, что, конечно же, достаточно для ознакомления с принципами работы исследуемых приборов и некоторыми их особенностями, но в полной мере не обеспечивает приобретение практических комплексных навыков проектирования сложных приборов и систем в реальном масштабе времени.

Использование в учебном процессе дистанционной лаборатории (ДЛ) позволяет расширить перечень, объем и глубину проводимых исследований. ДЛ может представлять собой малоразмерную индустриальную систему, с помощью которой обучаемые могут изучать и близко знакомиться с реальными промышленными компонентами. При этом схема позволяет работать с ней как локально, так и дистанционно. Проблема расширения возможностей лабораторного практикума в рамках развития технологий ДО является одной из важнейших в связи с необходимостью получения обучаемыми не только качественных знаний в той или иной области, но и достаточных навыков применения этих знаний на практике в будущей профессиональной деятельности. Посредством использования в обучении виртуальных и дистанционных лабораторий

достигается круглосуточная автоматическая их работа, индивидуализация обучения и доступность лаборатории из любой географической точки.

Следует также отметить, что необходимо не только разделять «применимость» виртуальных и дистанционных лабораторий в зависимости от категории обучаемых, но и рассматривать эти лаборатории как сложные высокотехнологичные комплексы, включающие в себя как средства проведения экспериментальных исследований (виртуальные или дистанционно управляемые), так и соответствующее «обслуживающее» программное обеспечение, средства телекоммуникации и т.д.

REDUCTION OF ENERGY WASTES IN ELECTRICAL NETWORKS THROUGH REACTIVE POWER COMPENSATION

Annotation. This article presents the problem of reducing power losses in electric networks by compensating reactive power, methods for solving it, and algorithms for calculating optimal reactive power.

Key words: electrical energy waste, reactive power compensation, active power waste, organizational technical measures.

Электр энергия исрофини камайтириш учун кўплаб тадбирлар ишлаб чиқилган бўлиб, улардан энг оптималини танлаш масаласи мураккаб бўлганлиги учун уларни турларга ажратиш мақсадга мувофиқдир.

Бундай тадбирлар асосан уч гуруҳга бўлинади:

- ташкилий тадбирлар;
- техник тадбирлар;
- электр энергияни ҳисобий ва техник ҳисобга олиш тизимларини такомиллаштириш тадбирлари.

Ташкилий тадбирларни жорий қилиш ҳеч қандай қўшимча капитал харажатларни талаб этмайди [1-2].

Бошқа тадбирлар эса капитал харажатларни талаб этади [3].

Реактив қуввати компенсацияланмаган тармоқда қувват исрофи

$$\Delta P = \frac{P_n^2 + Q_n^2}{U_n^2} \cdot r_l$$

Реактив қуввати компенсацияланган тармоқда қувват исрофи [4]:

$$\Delta P = \frac{P_n^2 + (Q_n - Q_k)^2}{U_n^2} \cdot r_l$$

Юқорида келтирилган исроф формуласидан кўриниб турибдики, компенсацияловчи ускунанинг қуввати Q_{KV} қанча катта бўлса ($Q_{KV} < Q$ бўлган ҳолатда), қувват исрофи шунча кичик бўлади. Лекин, исрофни бу усулда камайтириш компенсацияловчи ускуналарга сарфланувчи қўшимча харажатларни талаб қилади. Бу харажатларни техник-иқтисодий ҳисоблашларда эътиборга олиш лозим.

Реактив қувватни компенсациялаш электр таъминоти самарадорлигини оширишнинг муҳим омили (воситаси) ҳисобланади. У фақат қувват исрофини камайтирибгина қолмай, электр энергия сифатини оширади ва электр тармоқлари ва электр станцияларининг юқини энгиллаштиради [5].

Реактив қувват манбаларига генераторлар, компенсаторлар, синхрон двигателлар, конденсаторлар ва бошқа статик ростловчи манбалар киради. Реактив қувватни ЭУЛ лари ҳам ишлаб чиқаради (110 кВ ва юқори кучланишларда аҳамиятга эга) [6].

Генераторнинг актив ва реактив қувватлари орасидаги муносабат

$$S = \sqrt{P^2 + Q^2}$$

тенглик билан белгиланади.

Актив қувватнинг ортиши реактив қувватни камайишига олиб келади ва аксинча. Бироқ генераторларнинг актив қувватини камайтириш ҳисобига уни реактив қувват билан юклаш купгина ҳолатларда самарали эмас.

Схемаси 1-расмда келтирилган очиқ электр тармоқнинг чекка пунктидаги истеъмолчисида уланувчи реактив қувват компенсаторнинг тармоқдаги исрофнинг минимал бўлишини таъминловчи оптимал қувватини топиш талаб этилади [7].

1- расм

1-2 ва 2-3 шохобчалардаги қувватлар оқимларини 2- ва 3- тугунлар учун Кирхгофнинг биринчи қонунидан фойдаланиб ифодалаймиз [8]:

$$\dot{S}_{12} = 1,5 + j(0,8 - Q_k),$$

$$\dot{S}_{23} = 0,5 + j(0,3 - Q_k).$$

Электр тармоқдаги актив қувват исрофини компенсаторнинг номаълум қуввати орқали ифодалаймиз [9]:

$$\Delta P = \frac{P_{12}^2 + Q_{12}^2}{U_n^2} \cdot r_{12} + \frac{P_{23}^2 + Q_{23}^2}{U_n^2} \cdot r_{23} = \frac{1,5^2 + (0,8 - Q_k)^2}{10^2} \cdot 5 + \frac{0,5^2 + (0,3 - Q_k)^2}{10^2} \cdot 3.$$

Компенсаторнинг оптимал реактив қувватини актив қувват исрофи функцияси минимумлигининг зарурий шартидан фойдаланиб топамиз:

$$\frac{\partial \Delta P}{\partial Q_k} = -\frac{2(0,8 - Q_k)}{100} \cdot 5 - \frac{2(0,3 - Q_k)}{100} \cdot 3 = 0,$$

$$Q_{k, \text{opt.}} = \frac{0,08 + 0,018}{0,1 + 0,06} = 0,612 \text{ МВАР} = 612 \text{ кВАР}.$$

Реактив қувватни компенсациялашдан олинувчи самарани баҳолаш учун дастлабки ва компенсаторни улашдан кейинги ҳолатлардаги актив қувват исрофларини солиштирамиз.

Дастлабки тармоқ учун:

$$\Delta P = \frac{1,5^2 + 0,8^2}{10^2} \cdot 5 + \frac{0,5^2 + 0,3^2}{10^2} \cdot 3 = 0,155 \text{ МВт};$$

Реактив қуввати компенсацияланган тармоқ учун:

$$\Delta P_s = \frac{1,5^2 + (0,8 - 0,612)^2}{10^2} \cdot 5 + \frac{0,5^2 + (0,3 - 0,612)^2}{10^2} \cdot 3 = 0,117 \text{ МВт}.$$

Шундай қилиб, тармоқ охирида реактив қувватни оптимал компенсациялаш натижасида ундаги исроф

$\Delta \Delta P = \Delta P - \Delta P_s = 0,155 - 0,117 = 0,038 \text{ МВт} = 38 \text{ кВт}$ га, яъни 24,5% га камаяди.

ПЕДАГОГИЧЕСКИЕ УСЛОВИЯ РАЗВИТИЯ НАВЫКОВ КРИТИЧЕСКОГО МЫШЛЕНИЯ У УЧАЩИХСЯ НАЧАЛЬНЫХ КЛАССОВ

Аннотация. Критическое мышление – это жизненный навык, который позволяет учащимся анализировать информацию, мыслить независимо и принимать обоснованные решения в быстро меняющемся мире. Развитие навыков критического мышления у учащихся начальной школы важно для их подготовки к вызовам, с которыми они столкнутся в будущем. В этой статье мы исследуем педагогические условия, которые учителя могут создать для развития и развития навыков критического мышления у младших школьников.

Ключевые слова: начальная школа, критическое мышление, педагогическая технология, умственное развитие.

PEDAGOGICAL CONDITIONS FOR THE DEVELOPMENT OF CRITICAL THINKING SKILLS IN PRIMARY CLASS STUDENTS

Abstract. Critical thinking is a life skill that enables students to analyze information, think independently, and make informed decisions in a rapidly changing world. Developing critical thinking skills in elementary school students is important to prepare them for the challenges they will face in the future. In this article, we explore pedagogical settings that teachers can create to nurture and enhance critical thinking skills in young students.

Key words: elementary school, critical thinking, pedagogical technology, mental development.

ВВЕДЕНИЕ

Одним из главных педагогических условий развития критического мышления у младших школьников является развитие культуры исследовательской деятельности и любознательности. Учителя должны

поощрять учащихся задавать вопросы, изучать различные точки зрения и рассматривать альтернативные точки зрения. Создавая в классе среду, в которой ценится любопытство и поощряется обучение, основанное на запросах, учащиеся могут развить привычку критически анализировать информацию и стремиться к более глубокому пониманию, чтобы дать возможность. Учителя могут разрабатывать задачи и проекты, которые требуют от учащихся критического мышления, оценки фактических данных и нахождения творческих решений. Занимаясь практическими упражнениями, студенты развивают навыки аналитического мышления и учатся логически мыслить в жизненных ситуациях.

МАТЕРИАЛЫ И МЕТОДЫ

Метапознание играет решающую роль в развитии навыков критического мышления. Учителя должны обучать учащихся метакогнитивным стратегиям, таким как размышление, самооценка и постановка целей. Помогая учащимся осознать свои мыслительные процессы и направляя их в разработке стратегий мониторинга и оценки собственного обучения, учителя помогают учащимся стать активными и независимыми учениками, которые могут критически мыслить о своих собственных мыслительных процессах. Совместное обучение может быть эффективным педагогическим условием для них совершенствование навыков критического мышления у учащихся начальных классов. Участвуя в групповых занятиях и дискуссиях, учащиеся могут обмениваться идеями, бросать вызов мышлению друг друга и учиться с разных точек зрения. Совместное обучение побуждает учащихся рассматривать разные точки зрения, эффективно общаться и работать вместе для анализа информации и решения проблем. В современную цифровую эпоху обучение информационной грамотности имеет решающее значение для развития навыков критического мышления.

Учителя должны научить учащихся оценивать достоверность источников, выявлять предвзятость и отличать факт от мнения. Предоставляя учащимся навыки, необходимые для критического анализа и интерпретации информации, учителя помогают учащимся стать информированными и сообразительными потребителями. Предоставляя учащимся возможность использовать свои навыки критического мышления для решения реальных проблем и принятия обоснованных решений, учителя помогают учащимся понять ценность и важность критического мышления в их повседневной жизни. Критическое мышление в начальной школе. Для их подготовки необходимо развивать навыки. для успеха в современном мире. Учителя позволяют учащимся критически мыслить, эффективно анализировать информацию и принимать обоснованные решения, создавая педагогическую среду, которая способствует вопросам и ответам, решению проблем, метапознанию, сотрудничеству, информационной грамотности и связям с реальным миром. Реализуя эти

педагогические стратегии, учителя помогают ученикам стать уверенными в себе, независимыми и критически мыслящими людьми, готовыми противостоять вызовам будущего.[4]

РЕЗУЛЬТАТЫ И ОБСУЖДЕНИЯ.

Развитие навыков критического мышления у учащихся начальных классов важно для формирования самостоятельного и аналитического мышления, навыков решения проблем и принятия решений. Для создания педагогических условий, способствующих развитию критического мышления у младших школьников, преподаватели могут реализовать следующие стратегии:

Поощряйте учащихся задавать вопросы, исследовать различные точки зрения и оспаривать предположения. Создайте в классе культуру, которая ценит любознательность и способствует обучению на основе запросов.[4]

Предоставляйте учащимся возможности участвовать в практической деятельности, которая требует критического и творческого мышления для решения сложных проблем, работы над открытыми заданиями и поиска решений.[2]

Научите студентов метакогнитивным стратегиям, таким как размышление, самооценка и постановка целей. Помогите им осознать свои мыслительные процессы и помогите им разработать стратегии мониторинга и оценки их обучения.

Поощряйте совместную учебную деятельность, в ходе которой учащиеся вместе решают проблемы, обсуждают идеи и делятся точками зрения. Совместное обучение помогает учащимся рассматривать разные точки зрения и учиться на опыте друг друга.

Помогите учащимся развить навыки критической оценки и анализа информации. Научите их оценивать достоверность источников, выявлять предвзятость и отличать факт от мнения.

Включите сократовские методы исследования в свою преподавательскую практику, чтобы стимулировать критическое мышление. Поощряйте учащихся глубоко задуматься о проблемах, рассмотреть различные точки зрения и обосновать свое мнение.

Предоставьте учащимся возможность вести содержательные дискуссии на различные темы. Поощряйте их выражать свое мнение, прислушиваться к точкам зрения других и приводить аргументированные аргументы, основанные на доказательствах.[3]

Свяжите обучение с реальными контекстами и сценариями, чтобы помочь учащимся увидеть актуальность своего обучения. Поощряйте их использовать навыки критического мышления для решения реальных проблем и принятия обоснованных решений.[1]

РЕЗЮМЕ:

Создавая благоприятную среду обучения, в которой ценятся практики критического мышления, исследования, сотрудничества и размышления,

учителя помогают ученикам начальной школы критически мыслить, эффективно анализировать информацию и принимать обоснованные решения в сложном и разнообразном мире, что может способствовать развитию важных вещей навыки, необходимые для поступления.

ОТРАСЛЕВЫЕ И НАЦИОНАЛЬНЫЕ ОСОБЕННОСТИ АУТСОРСИНГА В АВТОМОБИЛЬНОЙ ПРОМЫШЛЕННОСТИ КНР

Аннотация. Статья посвящена анализу отраслевых и национальных особенностей аутсорсинга в автомобильной промышленности Китая (КНР). В ней рассматриваются развитие автомобильной промышленности КНР, различные схемы аутсорсинга, функции и задачи аутсорсинга, а также его влияние на глобальные цепочки поставок. Статья подчёркивает важность аутсорсинга для повышения эффективности, снижения издержек и улучшения качества продукции, а также выявляет риски, связанные с высокой степенью зависимости от внешних поставщиков.

Ключевые слова: аутсорсинг, автомобильная промышленность, КНР, глобальные цепочки поставок, специализация, информационные технологии, государственная поддержка, стандарты качества.

INDUSTRY AND NATIONAL FEATURES OF OUTSOURCING IN THE AUTOMOTIVE INDUSTRY OF THE PRC

Abstract. The article analyzes the industry-specific and national characteristics of outsourcing in the automotive industry of China (PRC). It examines the development of the automotive industry in China, various outsourcing schemes, functions, and tasks of outsourcing, as well as its impact on global supply chains. The article highlights the importance of outsourcing in increasing efficiency, reducing costs, and improving product quality, while also identifying risks associated with high dependency on external suppliers.

Keywords: outsourcing, automotive industry, PRC, global supply chains, specialization, information technology, government support, quality standards.

Автомобильная промышленность Китая (КНР) является одной из самых крупных и динамично развивающихся отраслей в мире. За последние несколько десятилетий Китай превратился из страны с ограниченными возможностями производства автомобилей в одного из ведущих производителей и экспортеров автомобилей и автокомпонентов. Важную роль в этом процессе сыграл аутсорсинг, который позволил компаниям

сосредоточиться на своих ключевых компетенциях, повысить эффективность и снизить издержки. В данной статье рассматриваются отраслевые и национальные особенности аутсорсинга в автомобильной промышленности КНР, а также влияние этих процессов на глобальные цепочки поставок.

Автомобильная промышленность КНР прошла долгий путь от скромных начинаний до сегодняшнего мирового лидерства. В 1950-х годах Китай начал производить автомобили в небольших объемах, в основном для внутреннего потребления. В 1980-х годах правительство КНР начало привлекать иностранных инвесторов, предоставляя им выгодные условия для создания совместных предприятий с местными компаниями. Это позволило китайским производителям получить доступ к передовым технологиям и управленческому опыту.

С начала 2000-х годов автомобильная промышленность Китая начала стремительно расти, что было обусловлено экономическим подъемом, урбанизацией и ростом уровня доходов населения. Сегодня Китай является крупнейшим производителем и рынком автомобилей в мире, а его автомобильная промышленность занимает ключевое место в глобальных цепочках поставок.

Аутсорсинг является важным инструментом для повышения эффективности и конкурентоспособности автомобильной промышленности. Он включает передачу различных функций и процессов внешним компаниям, что позволяет основным производителям сосредоточиться на своих ключевых компетенциях. В автомобильной промышленности аутсорсинг охватывает широкий спектр услуг и процессов, включая производство автокомпонентов, проектирование, логистику, информационные технологии и управление цепочками поставок.

В КНР аутсорсинг в автомобильной промышленности получил широкое распространение, что связано с несколькими факторами. Во-первых, китайский рынок предлагает широкий выбор поставщиков и подрядчиков, способных обеспечить высокое качество продукции и услуг по конкурентоспособным ценам. Во-вторых, развитая инфраструктура и логистическая сеть позволяют эффективно управлять цепочками поставок и минимизировать издержки. В-третьих, государственная поддержка и стимулы для развития высокотехнологичных производств способствуют привлечению инвестиций и развитию аутсорсинговых компаний.

Одной из ключевых отраслевых особенностей аутсорсинга в автомобильной промышленности КНР является высокая степень специализации. Китайские компании активно используют аутсорсинг для производства автокомпонентов, что позволяет им сосредоточиться на сборке и продаже готовых автомобилей. В результате в Китае сформировалась развитая сеть поставщиков, специализирующихся на

производстве различных компонентов, таких как двигатели, трансмиссии, электронные системы, кузовные детали и прочие.

Эта высокая степень специализации позволяет китайским компаниям достигать значительной экономии за счет масштабов производства. Крупные производители, такие как Geely, BYD и Great Wall Motors, активно сотрудничают с многочисленными поставщиками, что позволяет им снижать издержки и повышать качество продукции. В то же время, это создает определенные риски, связанные с зависимостью от внешних поставщиков и возможными сбоями в цепочках поставок.

Еще одной особенностью является активное использование информационных технологий для управления цепочками поставок и оптимизации производственных процессов. Китайские компании внедряют передовые решения в области автоматизации и цифровизации, что позволяет им оперативно реагировать на изменения спроса и эффективно управлять запасами. Такие технологии, как интернет вещей (IoT), искусственный интеллект (AI) и блокчейн, становятся неотъемлемой частью современных производственных процессов в КНР.

Национальные особенности аутсорсинга в автомобильной промышленности КНР включают несколько важных аспектов. Во-первых, государственная политика играет ключевую роль в развитии аутсорсинга и автомобильной промышленности в целом. Правительство КНР активно поддерживает развитие высокотехнологичных отраслей, предоставляя различные льготы и стимулы для инвесторов и предпринимателей. Это создает благоприятные условия для развития аутсорсинговых компаний и привлечения иностранных инвестиций.

Во-вторых, культурные особенности и деловая практика в Китае оказывают значительное влияние на процессы аутсорсинга. В китайской деловой культуре большое значение придается личным отношениям и доверию между партнерами. Это означает, что успешное сотрудничество в области аутсорсинга требует налаживания прочных деловых связей и долгосрочных партнерств. Китайские компании стремятся к установлению доверительных отношений с иностранными партнерами, что способствует устойчивому развитию аутсорсинговых процессов.

В-третьих, особое внимание уделяется вопросам качества и безопасности продукции. Китайское правительство устанавливает строгие стандарты и нормативные требования для автомобильной промышленности, что стимулирует компании к повышению качества продукции и соблюдению международных стандартов. Это, в свою очередь, требует от аутсорсинговых компаний соответствия высоким требованиям и постоянного улучшения производственных процессов.

Аутсорсинг в автомобильной промышленности КНР оказывает значительное влияние на глобальные цепочки поставок. Китай является крупнейшим поставщиком автокомпонентов и готовых автомобилей для

мирового рынка, что делает его ключевым звеном в международных цепочках поставок. Развитие аутсорсинга в КНР способствует повышению эффективности и конкурентоспособности глобальной автомобильной промышленности, что позволяет снижать издержки и улучшать качество продукции.

Однако, высокая степень зависимости от китайских поставщиков также создает определенные риски для глобальных цепочек поставок. Возможные сбои в производстве и логистике в КНР могут оказать значительное влияние на мировой рынок автомобилей. Пандемия COVID-19 показала уязвимость глобальных цепочек поставок и необходимость диверсификации поставщиков и производственных мощностей.

Аутсорсинг является важным инструментом для повышения эффективности и конкурентоспособности автомобильной промышленности КНР. Отраслевые и национальные особенности аутсорсинга в Китае включают высокую степень специализации, активное использование информационных технологий, государственную поддержку, культурные особенности и строгие стандарты качества. Эти факторы способствуют развитию автомобильной промышленности и укреплению позиций Китая в глобальных цепочках поставок.

Тем не менее, высокая степень зависимости от китайских поставщиков создает определенные риски для мировой автомобильной промышленности. Для минимизации этих рисков необходимо диверсифицировать поставщиков и производственные мощности, а также продолжать инвестировать в развитие передовых технологий и улучшение качества продукции. Таким образом, аутсорсинг в автомобильной промышленности КНР будет продолжать играть важную роль в формировании глобальных цепочек поставок и обеспечении устойчивого развития мировой экономики.

АУТСОРСИНГ В ДЕЯТЕЛЬНОСТИ МЕЖДУНАРОДНОЙ КОМПАНИИ: СХЕМЫ, ФУНКЦИИ И ЗАДАЧИ

Аннотация. Статья исследует роль аутсорсинга в деятельности международных компаний, рассматривая различные схемы, функции и задачи аутсорсинга. Она акцентирует внимание на стратегических преимуществах, связанных с аутсорсингом, таких как снижение затрат, повышение гибкости и улучшение качества бизнес-процессов. Также обсуждаются риски и вызовы, связанные с аутсорсингом, и подчеркивается важность эффективного управления аутсорсинговыми проектами для достижения устойчивого роста и конкурентоспособности на глобальном рынке.

Ключевые слова: аутсорсинг, международные компании, бизнес-процессы, снижение затрат, стратегические преимущества, управление рисками, глобальный рынок, инновации.

OUTSOURCING IN THE ACTIVITIES OF AN INTERNATIONAL COMPANY: SCHEMES, FUNCTIONS AND TASKS

Abstract. The article explores the role of outsourcing in the activities of international companies, examining various schemes, functions, and tasks of outsourcing. It emphasizes the strategic advantages associated with outsourcing, such as cost reduction, increased flexibility, and improved quality of business processes. The article also discusses the risks and challenges of outsourcing, highlighting the importance of effective management of outsourcing projects to achieve sustainable growth and competitiveness in the global market.

Keywords: outsourcing, international companies, business processes, cost reduction, strategic advantages, risk management, global market, innovation.

Аутсорсинг играет критическую роль в деятельности международных компаний, позволяя им фокусироваться на своих ключевых компетенциях, снижать издержки и повышать эффективность. В условиях глобализации и усиленной конкуренции, эффективное использование аутсорсинга становится важным стратегическим инструментом для обеспечения устойчивого роста и конкурентных преимуществ. В данной статье будут

рассмотрены схемы, функции и задачи аутсорсинга в деятельности международных компаний, а также его влияние на их общую эффективность и успех на мировом рынке.

Аутсорсинг может принимать различные формы и схемы в зависимости от потребностей и стратегий международных компаний. Одна из самых распространенных схем аутсорсинга — это передача отдельных бизнес-процессов или функций внешним подрядчикам. Этот подход позволяет компаниям сосредоточиться на своих основных видах деятельности, таких как разработка новых продуктов, маркетинг и продажи, оставляя менее критические процессы профессионалам из других организаций.

Еще одной популярной схемой является использование офшорного аутсорсинга, при котором функции или процессы передаются компаниям, расположенным в других странах. Это позволяет существенно снизить затраты на рабочую силу и другие ресурсы. Например, многие международные компании передают ИТ-поддержку и разработку программного обеспечения специалистам из Индии или Филиппин, где квалифицированные кадры предлагают свои услуги по более низким ценам.

Помимо этого, существует схема аутсорсинга, известная как аутсорсинг бизнес-процессов (BPO), которая охватывает широкий спектр операций, таких как бухгалтерский учет, кадровое администрирование, управление цепочками поставок и клиентская поддержка. В рамках этой схемы компании могут передавать целые функциональные направления специализированным аутсорсинговым провайдерам, которые обладают необходимыми знаниями и технологиями для эффективного выполнения этих задач.

Аутсорсинг выполняет множество функций в деятельности международных компаний, играя важную роль в оптимизации их бизнес-процессов и повышении общей эффективности. Одной из ключевых функций аутсорсинга является снижение затрат. Путем передачи отдельных функций или процессов внешним подрядчикам, компании могут существенно сократить операционные издержки, избегая необходимости инвестировать в дорогостоящее оборудование и инфраструктуру.

Еще одной важной функцией аутсорсинга является повышение гибкости и адаптивности бизнеса. В условиях динамичного рынка и быстро меняющихся потребностей клиентов, компании должны быть готовы оперативно реагировать на изменения. Аутсорсинг позволяет международным компаниям быстрее адаптироваться к новым условиям и требованиям, предоставляя доступ к специализированным ресурсам и экспертизе внешних подрядчиков.

Кроме того, аутсорсинг способствует повышению качества и эффективности бизнес-процессов. Специализированные аутсорсинговые компании обладают глубокой экспертизой и передовыми технологиями в

своих областях, что позволяет им выполнять задачи с высокой степенью точности и профессионализма. Это особенно важно для международных компаний, которые стремятся поддерживать высокие стандарты качества и соответствовать требованиям глобальных рынков.

Задачи аутсорсинга в деятельности международных компаний включают несколько ключевых аспектов. Одной из главных задач является обеспечение стратегического преимущества на рынке. Путем передачи отдельных функций или процессов внешним подрядчикам, компании могут сосредоточиться на своих ключевых компетенциях и стратегических инициативах, что позволяет им занимать лидирующие позиции в своих отраслях.

Еще одной важной задачей является управление рисками и обеспечение устойчивости бизнеса. Аутсорсинг позволяет компаниям диверсифицировать свои ресурсы и снизить зависимость от внутренних ресурсов и процессов. Это особенно важно в условиях глобальной нестабильности и неопределенности, когда компании сталкиваются с различными рисками, такими как экономические кризисы, политическая нестабильность или природные катастрофы.

Кроме того, аутсорсинг способствует инновациям и развитию новых технологий. Международные компании могут сотрудничать с внешними провайдерами, которые обладают передовыми технологиями и экспертизой в области исследований и разработок. Это позволяет компаниям внедрять инновационные решения и повышать свою конкурентоспособность на глобальном рынке.

Аутсорсинг оказывает значительное влияние на деятельность международных компаний, изменяя их бизнес-модели и подходы к управлению. Одним из ключевых преимуществ аутсорсинга является возможность концентрироваться на стратегических инициативах и инновациях. Путем передачи рутинных и менее критичных функций внешним подрядчикам, компании могут сосредоточиться на разработке новых продуктов, расширении рынков сбыта и укреплении своих позиций на глобальном рынке.

Кроме того, аутсорсинг способствует улучшению операционной эффективности и снижению издержек. Профессиональные аутсорсинговые компании обладают значительным опытом и передовыми технологиями, что позволяет им выполнять задачи более эффективно и с меньшими затратами. Это особенно важно для международных компаний, которые стремятся оптимизировать свои бизнес-процессы и поддерживать конкурентные преимущества в условиях жесткой конкуренции.

Однако, аутсорсинг также сопряжен с определенными рисками и вызовами. Одним из основных рисков является потеря контроля над ключевыми бизнес-процессами и конфиденциальной информацией. Компании должны тщательно выбирать аутсорсинговых партнеров и

устанавливать четкие условия сотрудничества, чтобы минимизировать эти риски и обеспечить защиту своих интересов.

Еще одним вызовом является необходимость эффективного управления аутсорсинговыми проектами и координации действий между различными подразделениями и партнерами. Международные компании должны разрабатывать и внедрять эффективные системы управления и коммуникации, чтобы обеспечивать успешное выполнение аутсорсинговых проектов и достигать поставленных целей.

Аутсорсинг является важным стратегическим инструментом в деятельности международных компаний, позволяя им повышать эффективность, снижать издержки и концентрироваться на своих ключевых компетенциях. Схемы, функции и задачи аутсорсинга разнообразны и зависят от конкретных потребностей и стратегий компаний. В условиях глобализации и усиленной конкуренции, эффективное использование аутсорсинга становится необходимым условием для достижения устойчивого роста и конкурентных преимуществ.

Аутсорсинг позволяет международным компаниям достигать высокой степени гибкости и адаптивности, управлять рисками и внедрять инновационные решения. Однако, для успешного использования аутсорсинга, компании должны учитывать возможные риски и вызовы, разрабатывать четкие стратегии и устанавливать эффективные системы управления. Таким образом, аутсорсинг будет продолжать играть ключевую роль в деятельности международных компаний, способствуя их успеху на глобальном рынке и обеспечивая устойчивое развитие в долгосрочной перспективе.

РОЛЬ МЕЖДУНАРОДНОЙ АССОЦИАЦИИ “INTERNATIONAL FACTORS GROUP” В РАЗВИТИИ ФАКТОРИНГА В МИРОВОЙ ЭКОНОМИКЕ

Аннотация. В данной статье рассматривается вклад международной ассоциации «International Factors Group» в развитие факторинговых услуг в мировом масштабе. Авторами описаны основные аспекты интеграции ассоциаций, необходимые для расширения возможностей для компаний в области финансирования торговли в условиях неопределенности и турбулентности мировой экономики.

Ключевые слова: International Factors Group, факторинг, международная торговля, финансирование, экспорт, импорт.

THE ROLE OF THE INTERNATIONAL ASSOCIATION “INTERNATIONAL FACTORS GROUP” IN THE DEVELOPMENT OF FACTORING IN THE WORLD ECONOMY

Abstract. This article examines the contribution of the international association «International Factors Group» to the development of factoring services on a global scale. The main aspects of association integration necessary to expand opportunities for companies in the field of trade finance in conditions of uncertainty and turbulence in the global economy are described by Authors.

Key words: International Factors Group, factoring, international trade, financing, export, import.

«Factors Chain International» (FCI) была основана в 1968 году как некоммерческая глобальная ассоциация. FCI является организацией, открытой для любой компании, предоставляющей факторинговые услуги или планирующей организовать факторинговую деятельность, а также для поставщиков услуг в отрасли²⁰⁵. Когда возник FCI, внутренний факторинг был доступен только в Северной Америке и только в нескольких европейских странах. Мировой товарный экспорт составлял менее 500 миллиардов долларов США в год, а в США объемы факторинга практически отсутствовали. В этот критический период 1960-х годов прошлого века в Европе были заложены основы создания глобальной факторинговой индустрии.

Первый этап развития FCI был направлен на создание надлежащей правовой инфраструктуры и продвижение отрасли. Концепция трансграничного факторинга все еще была новой и ограничивалась отсутствием географического охвата. Признавая потенциал международного факторинга, члены-основатели FCI осознали, что необходима некоммерческая ассоциация и отраслевой орган, во-первых, для внедрения факторинга в странах, где он еще не доступен, и, во-вторых, для разработки структуры международного факторинга, которая позволила бы факторинговым компаниям в стране экспортера и импортера тесно сотрудничать.

Вторая фаза роста FCI началась в середине 1970-х годов прошлого века и связан с именем Йеруна Конштамма, который был назначен генеральным секретарем в 1972 году и начал продвигать факторинг, распространяя его идеи по всему миру, в том числе в Восточной Азии, Латинской Америке, Восточной Европе и на двух крупнейших и наиболее густонаселенных рынках — Китае и Индии. Объем за этот период с 1972 по 1997 год вырос с менее чем 10 млрд Евро до примерно 600 млрд евро к 1997 году.

На втором этапе число членство FCI выросло с 25 до более, чем 140 членов, работающих в более чем 40 странах всего за 25-летний период.

Организация самостоятельно разработала Кодекс международного факторинга и систему ФАСТ, систему обмена телексными сообщениями до Интернета, предназначенную для поддержки роста трансграничного факторинга между членами. Кроме того, FCI начала разработку надежной образовательной платформы, которая помогла обучить тысячи студентов факторингу и финансированию дебиторской задолженности.

²⁰⁵ About us. URL: <https://fci.nl/en/about-fci>

Третья фаза развития организации началась с «азиатского гриппа», то есть с финансового кризиса, который начался в Юго-Восточной Азии, но быстро распространился и на другие страны мира. В то время на долю Азии приходилось менее 3% мировых объемов факторинга.

Начало нового тысячелетия также стало важным поворотным моментом для FCI. Период конца 1990-х годов прошлого века известен как начало революции в глобальной торговле открытыми счетами и подъема развивающихся рынков во главе с доминирующим Китаем. К 1997 году FCI насчитывала около 140 членов, но к 2017 году FCI увеличится почти до 400 членов. Объем этой отрасли составил около 600 миллиардов евро. Феноменальный рост факторинга был вызван 1) быстрым расширением бизнеса в Азии во главе с Китаем; 2) значительным ростом трансграничного факторинга (с менее 5% от общего объема в 1997 г. до более 22% в 2017 г.) и 3) быстрым расширением факторинга в Европе, вызванное переходом бизнеса от банков к преимущественно факторинговые дочерние банки. Частично это произошло из-за глобальной рецессии 2008-2009 годов, которая привела к переходу к более безопасным и надежным формам финансирования, включая благоприятный режим капитала, который BASEL предоставил коммерческим банкам, инвестирующим в финансирование дебиторской задолженности и факторинговые услуги.

Четвертый этап – это тот, на котором находится в настоящее время. В результате фантастического роста отрасли за последние два десятилетия были заложены семена для объединения двух крупнейших мировых факторинговых ассоциаций. В 2016 году две ключевые факторинговые ассоциации «Factors Chain International» (FCI) и «International Factors Group» (IFG) объединили свои знания и усилия, сформировав крупнейшее мировое объединение факторинговых компаний. В результате появилась ассоциация FCI, в которую в данный момент входят более 400 членов, охватив более, чем 90 стран мира. Транзакции участников составляют в среднем 50% мирового объема корреспондентского факторинга в мире²⁰⁶.

Альянс из этих двух ассоциаций сформировал площадку для развития факторинговых операций, позволяющая участникам взаимодействовать в мировом масштабе, давая возможность использовать широкий спектр услуг. В дополнение к этому, была создана особенная программа предоставления факторинговых услуг для промышленности, а также улучшено взаимодействие с банковской комиссией Международной торговой палаты, Всемирной торговой организацией, налажена коммуникация с банками развития различных стран. Ассоциация включили в свою работу новые операции, начав оказывать услуги обратного факторинга для своих членов, которые заинтересованы в развитии операций международной торговли. Организованный FCI, он объединяет 15 национальных и 1 международную

206 Facilitating Factoring and Receivables Finance.URL: <https://fci.nl/en/about-fci>

отраслевые ассоциации, действующие в ЕС. Ее члены представляют более 200 факторинговых компаний Европы.

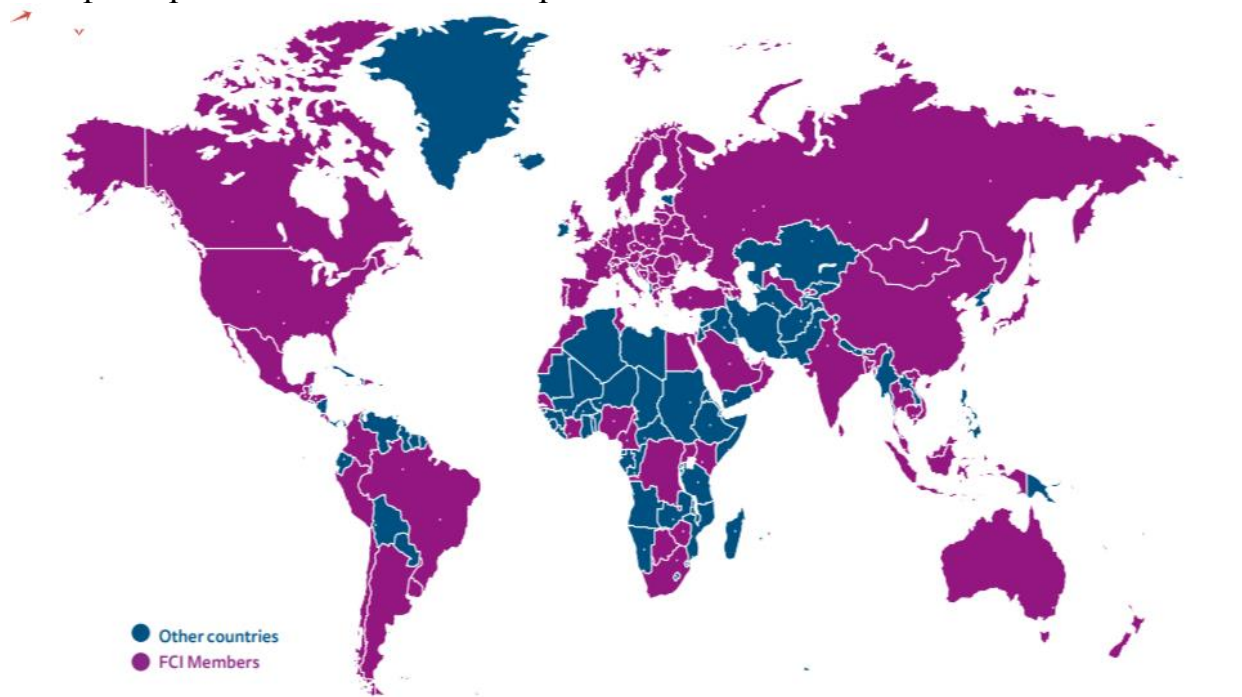

Рисунок 1 – Территория стран-членов FCI

Индустрия факторинга и коммерческого финансирования играет ценную роль в экономике ЕС, и ассоциация работает над тем, чтобы участвовать в дебатах с регулируемыми органами и законодателями, чтобы убедиться, что они полностью осведомлены о преимуществах, которые может предложить эта отрасль.

Ассоциация стремится взаимодействовать с европейским правительством и законодателями для повышения доступности финансирования для бизнеса, уделяя особое внимание сообществу малого и среднего бизнеса. Чтобы показать свою полезность для малого и среднего бизнеса, созданное объединение выделяет ресурсы для продвижения своих услуг в развивающихся странах, указывая на свои многочисленные преимущества.

К ним относятся:

Для продавца

- Улучшение оборотного капитала.
- Получите доступ к финансированию на лучших условиях, повышая кредитоспособность покупателя.
- Сокращение трудоемкого администрирования кредита и затрат.
- Расширение оборота за счет гибких условий оплаты.
- Увеличение доходов за счет улучшения DSO.
- 100% кредитная защита от безнадежных долгов и неплатежеспособности клиентов.

- Лучший потенциал заимствования и возможность воспользоваться скидками поставщиков.

Для покупателя

- Улучшение оборотного капитала за счет более позднего погашения кредиторской задолженности.

- Возможность покупать товары на удобных условиях открытия счета.

- Расширение покупательной способности без использования существующих кредитных линий.

Для преодоления возникающих сложностей, международные ассоциации факторинговых компаний стремятся к объединению. FCI+ работает над сотрудничеством с международными организациями, такими, как Международная торговая палата (разработка универсальных правил факторинга), Европейский банк реконструкции и развития (ЕБРР), Межамериканская инвестиционная корпорация (МКК) и другие. Ассоциация укрепила свое присутствие на международной арене, акцентируя внимание на растущих экономиках. FCI+ систематически организует семинары по факторингу в регионах, например, они проходили в Улан-Баторе (Монголии) и в Пекине (Китае). Созданная ассоциация представлена филиалами в Латинской Америке и Азии.

Вследствие возрастающего мирового товарооборота увеличивается спрос на факторинговые услуги, несмотря на то, что это может быть сопряжено с потенциальными рисками, возникающими в этом сегменте мировой экономики. При оценке будущего рынка факторинговых услуг можно вспомнить фразу Нильса Бора: «Предсказания делать очень трудно, особенно о будущем»²⁰⁷. Эта цитата приводится в исследованиях о возможности прогнозирования в условиях роста нестабильности и непредсказуемости экономического развития. Так, прекрасный пятилетний бизнес-план популярного банка Lehman Brothers был принят в июне 2008 г. - всего за 3 месяца возникновения мирового финансового кризиса – «азиатского гриппа» в мировой экономике. Однако ему не суждено было сбыться, а сам банк потерпел финансовый крах.

Безусловно, следует учитывать этот опыт при составлении прогнозов развития компаний. Принимая во внимание изменчивость в мировой экономике, некоторые последние события внесли дополнительную неизвестность в прогнозирование. Даже вне этих событий из-за снижения мировых темпов экономического роста сложность прогнозов усугубляется, в том числе, в связи с динамичными факторами: замедление экономики Китая; нестабильная экономическая обстановка в некоторых развитых странах, волатильность европейских банков, санкционная война коллективного Запада с Россией и Китаем и другие мировые вызовы.

²⁰⁷ Цит. По Орлова Г., Тарановская Е. Факторинговые операции в мировой экономике// Российский внешнеэкономический вестник. 2017. № 3. С.84

В результате этого, с учетом оценок Всемирного банка, МВФ и ОЭСР стоит отметить, что возникла тенденция неуверенного развития мировой экономики на ближайшее будущее, с учетом потенциального умеренного роста экономики в развитых странах и замедленного роста в странах третьего мира. Вместе с тем, по прогнозу МВФ, российская экономика в 2024 году вырастет на 3,2%, что полностью соответствует прогнозу роста по всему миру²⁰⁸.

Актуальность факторинговых услуг продолжает возрастать на фоне экономической неопределенности и прогнозируемого более, чем умеренного роста в различных экономиках мира. Российские финансовые институты проявляют повышенный интерес к международному факторингу, видя в нем перспективное направление для расширения коммерческой деятельности в условиях санкционного давления. И, конечно, факторинг особо важен в международных организациях, занимающихся торговлей.

Несмотря на санкции, можно отметить значительный объем операций внешней торговли в экономике России. Особенно в связи с «разворотом на Восток»: в 2023 году торговый оборот России и Китая увеличился на 26,3%, до 240,11 млрд дол. США²⁰⁹.

Соответственно, для компаний, занимающихся экспортном и импортом фактор материального обеспечения сделок на международном рынке становится актуальным. Экспортный факторинг открывает российским экспортерам пути к финансированию с отсроченным платежом, укрепляя их позиции на зарубежных рынках. Российские бизнесмены более активно пользуются беззалоговым финансированием экспорта и импорта, в частности международным факторингом, необходимым для организаций, ведущих внешнеторговую деятельность и использующих платеж несколькими партиями (рассрочку). Сейчас в факторном бизнесе используются экспортный и импортный виды. Факторинг экспорта позволяет российской компании-экспортеру достать финансирование для своих поставок получив отсрочку платежа перед покупателем из другой страны. Он работает по прямой экспортной или двухфакторной модели.

В результате использования прямой модели экспортер обращается к отечественной факторинговой компании (Экспорт-фактору), которая сотрудничает с импортером (покупателем) напрямую: она занимается оценкой финансового состояния импортера, управлением его дебиторской задолженностью и наблюдением за ней²¹⁰.

208 МВФ уравнил прогноз по росту ВВП России и мира.URL: <https://www.rbc.ru/economics/16/04/2024/661e7d509a79475152673768>

209 Товарооборот России и Китая в 2023 году побил рекорд.URL: <https://www.rbc.ru/rbcfreeneews/65a0d3e09a79477823d74f7d>

210 Проняева Л.И., Щеголев А.В., Давыдкин И.Г. Финансовое обеспечение деятельности субъектов малого предпринимательства // Вестник Академии знаний. 2022. №6 (53). С. 369-375.

В двухфакторной модели участвуют компания, занимающаяся импортом и компания, занимающаяся экспортом. Поставщик обращается к фактору в своей стране с целью получения финансирования экспорта товаров импортеру в другой стране. Факторинговая фирма страны экспортера обращается к факторинговой фирме другой страны с просьбой предоставить данные о платежеспособности импортера и объем (лимит) возможного финансирования. При условии, что факторинговая компания страны импортера подтверждает платежеспособность покупателя, факторинговая фирма страны-экспортера финансирует Поставщика, в результате чего она получает денежные средства от самого импортера или от его факторинговой компании.

В качестве положительных сторон экспортного факторинга для отечественного экспортера рассмотрим следующие аспекты: наличие возможности расширить объем экспорта через использование отсрочки платежа; увеличение объема оборотных средств экспортера, поскольку финансирование по факторингу не нуждается в залоге и увеличивается с ростом продаж; не имеющий сроков и временных ограничений характер финансирования (регулярность обслуживания); защита от риска неплатежа; простота и легкость процедуры получения платежа в сравнении с аккредитивной формой расчетов; управление дебиторской задолженностью.

Импортный факторинг, в свою очередь, дает возможность российским импортерам приобретать товары с отсрочкой платежа, укрепляя доверие между торговыми партнерами.

Рассмотрим всю цепочку производимой сделки²¹¹. Фирма-импортер в России обращается к отечественной факторинговой компании (импорт-фактору) для подтверждения платежеспособности покупателя перед зарубежным поставщиком и факторинговой компанией в стране экспортера (экспорт- фактором). В другом случае, иностранный экспортер обращается к экспорт-фактору в своей стране, для того чтобы он согласно двухфакторной модели с помощью импорт-фактора провел оценку платежеспособности импортера и установил лимит финансирования. Далее, после проверки и подтверждения финансовой надежности Покупателя, экспортер поставяет товар, в то время, как факторинговая фирма страны-экспортера финансово обеспечивает поставщика. После окончания времени отсрочки, за купленный полученный товар производится оплата.

При факторинге в виде импортного взаимоотношения подтверждаются документально посредством международного договора купли-продажи и соглашением между двумя факторинговыми компаниями (страны-экспортера и импортера) самостоятельно или согласно правилам международного факторинга международной факторинговой ассоциации, в состав которой они входят.

211 Стригунова Д.П. О международно-правовом регулировании договора факторинга // Вестник Московского университета МВД России. 2016. №8. С. 76-78

Соответственно, импортный факторинг дает возможность компании-экспортеру получить уверенность в профессиональном управлении своей дебиторской задолженности, а компании-импортеру – закупить товар на условиях с отсрочкой платежа²¹².

Цифровизация, охватывающая все аспекты экономической деятельности, также становится катализатором для расширения горизонтов международного бизнеса²¹³. Она способствует формированию новых моделей управления, распространяет передовые технологии и создает условия для сокращения издержек и увеличения эффективности торговли. Для факторинга цифровизация открывает новые возможности для автоматизации процессов и улучшения операционной деятельности компаний.

Благодаря факторинговой компании клиент-экспортер получает профессиональное удаленное обслуживание функций управления дебиторской задолженностью, в них входит анализ существующих и новых импортеров, и установление для них финансовых ограничений; отслеживание своевременной оплаты импортерами; сбор задолженности; защита от риска неплатежа Импортера.

Таким образом, в виду большого значения операций факторинга и расширение охвата международных операций возрастает роль международной ассоциации “International Factors Group” в развитии факторинга в мировой экономике.

ОСОБЕННОСТИ ВЫХОДА МЕЖДУНАРОДНОЙ СТРОИТЕЛЬНОЙ КИТАЙСКОЙ КОМПАНИИ НА РОССИЙСКИЙ РЫНОК И РЫНКИ СТРАН ЕАЭС НА ОСНОВЕ СТРАТЕГИЧЕСКОГО ПОДХОДА

Аннотация. Статья посвящена выделению особенностей выхода международной строительной китайской компании на российский рынок и рынки стран ЕАЭС на основе стратегического подхода на примере China Railway Construction Corporation (CRCC). Компания активно развивает международный бизнес и имеет относительно высокую узнаваемость за рубежом благодаря реализации хорошо продуманной стратегии создания корпоративного бренда и имиджа.

Ключевые слова: внешнеэкономическая деятельность, международный бизнес, международные рынки, стратегия, стратегический подход, бренд, имидж.

SOME FEATURES OF AN INTERNATIONAL CONSTRUCTION CHINESE COMPANY ENTERING THE RUSSIAN MARKET AND THE MARKETS OF THE EAEU COUNTRIES BASED ON A STRATEGIC APPROACH

Abstract. The article is devoted to highlighting the features of the entry of an international Chinese construction company into the Russian market and the markets of the EAEU countries based on a strategic approach using the example of China Railway Construction Corporation (CRCC). The company is actively

developing international business and has relatively high recognition abroad thanks to the implementation of a well-thought-out strategy for creating a corporate brand and image.

Key words: foreign economic activity, international business, international markets, strategy, strategic approach, brand, image.

Ведущая государственная строительная компания КНР – China Railway Construction Corporation (CRCC) - при освоении российского рынка и рынка стран ЕАЭС столкнулась с необходимостью учета особенностей разработки своей стратегии выхода на данные рынки. В целом CRCC достаточно успешно справилась с этой задачей: по состоянию на 31 декабря 2023 года размер зарубежных активов CRCC составлял 973,56 млрд. юаней. Эта доля в общих активах CRCC составляет 5,85 %, что свидетельствует о потенциальной возможности роста внешнеэкономической деятельности²¹⁴.

В 2018 году Национальная комиссия Китая по развитию и реформам, а также Комиссия по надзору и управлению государственными активами и другие ведомства совместно разработали и выпустили документ «Руководство по управлению соответствием для зарубежных операций предприятий», в котором выдвигаются четкие требования по управлению деятельностью компаний («выходящие предприятия»). В документе, отмечается, что соответствие требованиям является необходимым условием для выхода предприятий и важным аспектом международной конкурентоспособности китайских предприятий.

Еще одним важным документом является «Руководство по комплаенс-менеджменту центральных предприятий» от Управления по контролю за соблюдением законодательства в части требований к предприятиям по комплаенс-менеджменту, которое было опубликовано в 2018 году. Выпуск данных документов имел положительное влияние на предприятия, осуществляющих свой зарубежный бизнес в соответствии с законом и повышающих уровень управления, в частности, комплаенс-рисками.

С 2019 года политическая и экономическая обстановка в мире становится все более сложной, в ней причудливо переплетаются торговые трения, военные споры, региональные конфликты и другие нестабильные факторы. Глобальная экономика находится в состоянии турбулентности в связи переходом от старых к новым источникам энергии, что приводит к постоянным изменениям в международной энергетической обстановке.

По мере усиления государственного регулирования в КНР и ужесточения системы регулирования зарубежной деятельности у компаний сложилось правильное понимание в отношении эффективного применения законов и правил стран и регионов, где расположены проекты. Ведение

²¹⁴About us. URL: <https://english.crcc.cn/>

деятельности в соответствии с законом и избежание зарубежных рисков стало первоочередной задачей для китайских предприятий, “выходящих в свет”.

В 2018 году на совещании руководства CRCC была выдвинута стратегия «Зарубежный приоритет». Её содержание заключалось в том, что необходимо отдавать приоритет идеям, ресурсам и внешнеэкономической политике. На практике это означало то, что вся система управления должна осознанно и полностью подчиниться новой концепции, и рассматривать за границу как важный объект деятельности. Кроме того, необходимо сформировать международное мышление для реализации заграничного приоритета. Лучшие ресурсы, такие как средства, таланты и оборудование, должны быть проинвестированы за границу, а политика предприятия должна быть максимально лояльна к зарубежным сотрудникам.

В целях реализации стратегии “Приоритет за рубежом” была создана новая платформа для инвестиций за рубежом, чтобы усилить развитие зарубежных рынков. CRCC создала новую дочернюю компанию - «China Railway Construction International Investment Group Limited» (CRCIC) с четким позиционированием для продолжения реализации стратегии “Зарубежный приоритет” под руководством новой команды руководителей CRCC на основе создания новых конкурентных преимуществ для CRCC и максимального освоения зарубежных рынков.

Сфера деятельности CRCIC включает в себя строительство железных дорог, автомагистралей, городского железнодорожного транспорта, аэропортов, терминалов, энергетических и других инфраструктурных проектов.

Большую роль в бизнесе корпорации играет строительство метротоннелей на российском рынке. Так, в июле 2021 года был прорезан первый тоннель проекта строительства Большого диаметра на восточном участке третьего пересадочного кольца Московского метрополитена, что ознаменовало успешную прорезку первого Строительство щитового тоннеля большого диаметра китайских предприятий в Европе. Общая протяженность проектной линии составляет 2,677 км. В ходе реализации проекта также была внедрена система транспортировки выбросов земли с 22-этажным ленточным бункером-суперхранилищем, что позволило вывести китайское оборудование на европейский рынок. Проект был реализован с использованием щитовой машины большого диаметра «Победа» длиной 10,88 м, разработанной CRCC, которая в настоящее время является самой большой щитовой машиной такого диаметра, экспортируемой в Европе. Он специально создан для строительства в холодных зимних условиях России и может прокладывать туннели при низкой температуре -30 °С. В период строительства проектный отдел опирался на опыт строительства метрополитена Китая и России и организовал подготовку специального технического плана безопасности

строительства с учетом геологических условий и технологических характеристик большой щитовой машины. Нулевой шум был достигнут в исторической усадьбе Коломенское - старинной деревянной постройки XV века в Москве. Использование локомотивов с резиновыми колесами для перевозки вспомогательных материалов при строительстве туннелей эффективно позволило избежать риска скольжения, вызванного чрезмерными проектными уклонами. Максимальный месячный проход при строительстве туннелей достиг 433,8 м благодаря оптимизированному режиму организации строительства. В рамках активного реагирования на эпидемию за рубежом проектный отдел сформулировал научные меры по предотвращению эпидемии. Измерения температуры тела строительного персонала на площадке проводились два раза в день, вентиляция и дезинфекция в туннеле были усилены, а также были организованы регулярные тесты на нуклеиновые кислоты для обеспечения здоровья и безопасности персонала проекта²¹⁵.

Кроме этого, CRCIC осуществляет строительство и эксплуатацию гидроэлектростанций и минеральных ресурсов, комплексное развитие недвижимости и метрополитена, а также делает инвестиции в строительство, эксплуатацию и управление индустриальными парками и промышленными зонами.

CRCC запустила морское формирование “3+5+N”, в рамках которого три дочерние компании CRCC, а именно «China Civil Engineering Group Corporation», «China Railway Construction International Group Corporation» и «China Railway Construction International Investment Group Corporation», обладают инженерными бюро и другими подразделениями для освоения международного рынка путем применения группового стратегического подхода. Особенностью стратегии CRCC является именно использование группового стратегического подхода.

На российском рынке CRCC использует свою дочернюю компанию “China Railway Construction Russia Limited” в качестве шлюза и единственного юридического лица для осуществления ряда коммерческих операций и работ по заключению коммерческих контрактов, которые имеют особенности в финансировании. Это проявляется в привлечении институтов развития на Евразийском рынке²¹⁶.

Однако строительство конкретных проектов осуществляется при привлечении других дочерних компании с четким разделением труда между ними. Например, юридическим лицом по договору с Московским метрополитеном является China Railway Construction Russia Limited, а

²¹⁵The First Tunnel of the First Large-diameter Shield Project of Chinese Enterprises in Europe Was Cut Through

²¹⁶ Платонова Е.Д. Институты развития на Евразийском пространстве: роль в интеграционных процессах// Пространственная экономика: проблемы региональных экономических объединений: Материалы XV Международной научной конференции. 23 июня 2017 г. Москва, Россия. М:Перо, 2018.С.5-10

конкретным исполнителем—China Railway 16th Bureau Group Limited. Это позволило в полной мере использовать опыт China Railway 16th Bureau Group Limited в области проходки тоннелей метро. В то же время щитовые машины, используемые для проходки тоннелей, были произведены и проданы компанией China Railway Heavy Industry Group (CRHIG).

В то же время в рамках проекта «Жилой комплекс со встроенными торговыми помещениями и подземными паркингами» был заключен генеральный контракт, подписанный руководителем China Railway Construction Russia. Строительством вышеуказанного объекта занимается China Railway Construction Group, которая занимает лидирующие позиции в сфере строительства жилых домов, что является показателем профессионализма и высокого уровня мастерства в области строительства.

CRCC имеет следующие преимущества и особенности при выходе на рынки России и стран Евразийского экономического союза:

1) Наличие проверенной на практике инновационной схемы «промышленной цепи». В ключевых звеньях промышленной цепи китайская строительная корпорация обладает рядом технических преимуществ, которые могут поддержать развитие всей промышленной цепи, а также сильными возможностями проектирования и строительства инфраструктуры, что обеспечивает компании хорошую платформу для глубокого развития самой промышленной цепи.

2) Очевидные преимущества в технологической конкурентоспособности²¹⁷. CRCC обладает стратегическими ключевыми технологиями в передовых направлениях строительной отрасли, занимая высокое положение среди инженерных технологических компаний, преодолевая многие технические проблемы и обладая полным набором независимых инновационных технологий проектирования и строительства в железных дорогах (350 км/ч). Строительство подводных туннелей, проектирование и строительство бесшовного пути высокоскоростной железной дороги, производство крупномасштабной дорожно-эксплуатационной техники, щитовой конструкции и другого оборудования находятся на ведущем уровне в Китае. Компания ведет подземное инженерное строительство, интеграции четырех электрических систем и других технологий.

3) Богатый зарубежный опыт строительства на других рынках. CRCC всегда придавала большое значение развитию международного бизнеса и за долгое время накопила богатый опыт в зарубежном строительстве, а ее международное развитие не только имеет передовые позиции среди китайских строительных предприятий, но и занимает лидирующие позиции на международной арене.

217 Грей К. Ф., Ларсон Э.У. Управление проектами.— М.: Дело и Сервис, 2007.

В последние годы влияние Китая на международной арене растет, международные обмены с другими странами происходят очень часто, и CRCC корпорация успешно интегрировалась в международный рынок на ранней стадии. Она осуществила большое количество крупных проектов, имеющих символическое значение, и накопила богатый и ценный опыт.

4) Сильные кадры человеческих талантов. Стоимость рабочей силы в Китае намного ниже, чем в развитых странах Запада. Хотя стоимость рабочей силы в Китае в последние годы демонстрирует более значительную тенденцию к росту, но общее преимущество все еще сохраняется: в США, Великобритании и других странах в строительной отрасли почасовая зарплата квалифицированных рабочих составляет 10 долларов США, простых рабочих - от 6 до 7 долларов США, а в Китае она составляет лишь 1,20 – 1,30 дол. США.

Китайские строительные предприятия имеют не только очевидное преимущество в стоимости рабочей силы, но и абсолютное преимущество в ее количестве: большое количество рабочих в сельской местности обеспечивает ценные людские ресурсы для основной работы в строительной отрасли. Более того, по мере интернационализации китайских предприятий меняется концепция занятости: все больше людей готовы искать подходящую работу за рубежом.

CRCC опирается на эффективные концепции управления талантами и щедрые компенсации, чтобы получить большое количество качественных трудовых ресурсов. Компания уделяет внимание выращиванию талантов, и в процессе долгосрочного развития у нее сформировался относительно устойчивый состав талантов с большим количеством востребованных профессий - операторов и менеджеров, освоивших передовые технологии.

5) Корпоративная культура, в которой доминируют славные традиции китайских строителей. В процессе развития CRCC унаследовала и сохранила дух строителей железной дороги, суть которого заключается в том, что перед сотрудниками нет препятствий, когда надо прокладывать дороги в горной местности и строят мосты через водные магистрали. Крепкий дух позволяет переносить все тяготы и лишения. Сотрудники CRCC унаследовали крепкий дух строителей Цинхай-Тибетской железной дороги и разделяют девиз: «Особенно способные должны переносить трудности, особенно способные бороться и особенно способные преданы своему делу».

Дух строителей Цинхай-Тибетской железной дороги, которая отличалась особыми трудностями и особо острой борьбой со стихией, был культивирован в CRCC, поэтому компания ценит человеческие качества своих сотрудников. Это помогает бросать вызов трудностям и опасностям, покорять технологические вершины, лидировать в отрасли и создавать

высокую репутацию за рубежом. Сотрудников корпорации CRCC отличают преданность профессии и профессиональному долгу.

б) Хороший корпоративный имидж и имидж бренда. Большое количество высококачественных проектов, реализованных CRCC, позволил создать собственный бренд China Railway Construction Corporation (CRCC), который широко признан на внутреннем и международном уровне. Это обеспечило CRCC сильную сплоченность и гордость, эффективное исполнение всех контрактных обязательств и культивировать инновационную предприимчивость.

Хотя между строительными и производственными предприятиями внутри корпорации существует довольно большой разрыв в технологиях, опыт и уроки многих производственных предприятий заслуживают большого внимания со стороны строительных предприятий²¹⁸. В прошлом в теории и практике в основном считалось, что «расстояние» между строительными предприятиями и конечными потребителями относительно велико, и нет необходимости уделять особое внимание созданию бренда. Однако в настоящее время в процессе интернационализации CRCC в качестве особенности развития стратегии на российском и рынках стран ЕАЭС менеджмент корпорации уделяет особое внимание формированию на этих рынках хорошего корпоративного имиджа и продвигает создание бренда. Это позволяет занять одно из лидирующих мест среди корпораций строительной отрасли в гражданском строительстве. Высокое качество, передовые технологии, относительно низкая стоимость нашло признание у российских компаний.

Таким образом, CRCC на российском рынке и рынках стран ЕАЭС реализует действенную внешнеэкономическую стратегию, обладающую рядом особенностей. Китайские исследователи отмечают, что компания активно развивает международный бизнес и имеет относительно высокую узнаваемость за рубежом, а ряд проектов, построенных компанией, стали местными достопримечательностями и получили очень высокое признание.

INCREASING THE ATTRACTIVENESS OF PUBLIC TRANSPORT WITH THE HELP OF INTERNET TECHNOLOGIES

Annotation. The article describes possible approaches to automation and intellectualization of public transport management processes with further integration of these processes into the intelligent transport system of the region. In addition, the envisaged measures and mechanisms for the implementation of this goal are being considered.

Key words: features, factors, modernization, automation, implementation of intelligent transport systems, transport complex, Republic of Uzbekistan.

В эпоху становления современного информационного общества, когда информация и знания стали стратегическим фактором развития, развитие страны и обеспечение ее конкурентоспособности связано с внедрением современных информационно-коммуникационных и

«цифровых» технологий во все сферы жизни общества и государства. В настоящее время автомобильная промышленность испытывает значительный рост в развитии за счет совершенствования информационно-коммуникационных систем, основанных на использовании новейших инноваций в области телекоммуникаций, компьютерных технологий, программного обеспечения и автоматического решения проблем.

Следующим этапом развития транспорта являются интеллектуальные транспортные технологии (интеллектуальная транспортная система): взаимодействие между транспортными средствами на уровне обмена данными V2V (транспортное средство-транспорт), транспортные средства и транспортная инфраструктура V2I (транспортное средство-инфраструктура) или, в более общем плане, транспортное средство с средой вождения V2X (транспортное средство-все). инструменты.

Существует подход, основанный на развертывании сети Wi-Fi в соответствии со стандартом, который позволяет решить проблему отсутствия доступа к интернету, то есть системы V2X, использующие этот протокол, имеют возможность совместного использования. В этой системе можно обмениваться информацией друг с другом, не требуя подключения к интернету. Обмен необходимой информацией между участниками такого общения осуществляется стандартными сообщениями BSM (Basic Safety message).

В настоящее время 4,1% умных интеллектуальных устройств используются в транспорте, и одной из основных тенденций является рост числа интеллектуальных автомобилей, что способствует развитию автономного вождения. Многие новые автомобили уже имеют беспроводную связь, и мы наблюдаем быстрый рост передовых функций, которые делают новые автомобили все более беспилотными (без водителя).

Однако для этого требуется работа на многофункциональной основе. Например, автопроизводитель или город не могут начать этот процесс самостоятельно и внести свой вклад в изменение мобильности без тесного сотрудничества с другими заинтересованными сторонами. Для развития этих идей необходимы четыре основных компонента: транспортные средства, данные, политики и пользователи.

Одной из основных задач состоит из использования интернет-технологий в общественном транспорте. Использование интернет-технологий в транспорте позволит властям внедрить высокоэффективную и удобную транспортную систему, что может изменить тенденцию к увеличению предпочтений частных автомобилей.

За некоторыми исключениями, системы общественного транспорта во всем мире не так эффективны, как должны и могут быть. Многие системы общественного транспорта не могут предоставить базовую услугу по своевременной доставке людей из пункта А в пункт Б, комфорт и впечатления от вождения в них также нельзя назвать превосходными.

Поэтому неудивительно, что, несмотря на растущее число людей, пользующихся общественным транспортом, очень мало людей довольны предоставляемыми услугами.

Это связано с тем, что большинство существующих систем общественного транспорта, даже в развитых странах, менее эффективны в эксплуатации и менее удобны для пользователя. Они сталкиваются с такими проблемами, как частые задержки из-за технического обслуживания и других непредвиденных обстоятельств, неправильное распределение транспортных средств по разным маршрутам, что приводит к переполненности автобусов в некоторых местах, а в некоторых наблюдается их холостой ход.

Такое неправильное управление общественным транспортом чревато иными последствиями, влияющими не только на жизнь пассажиров, но и других пассажиров. Например, неправильное планирование автобусных маршрутов приводит к “заторам” и пробкам на дорогах, что усложняет жизнь пользователям личного транспорта. Отсутствие достаточного количества автобусов на некоторых маршрутах с интенсивным движением может привести к переполнению автобусных остановок.

Предотвращение этих и других проблем с общественным транспортом требует от правительства использования разумной единой системы, которая обеспечивает координацию и эффективность транспортной системы. Такая система помогает операторам экономить средства и повышать эффективность, обеспечивая при этом комфорт пассажиров. С другой стороны, использование Интернета вещей на транспорте может помочь сформировать такую систему.

Использование Интернета вещей на транспорте дает некоторые преимущества. ИТ-устройства можно не только устанавливать в общественном транспорте, таком как автобусы и поезда, но и включать в городскую инфраструктуру. На дорогах, уличных фонарях, железнодорожных платформах, автобусных остановках, железных дорогах и путях маршрутного такси датчики, дорожные знаки, установленные таким

образом, чтобы они были видны участникам движения, позволяют эффективно управлять дорожным движением. Это в сочетании с данными, собранными с устройств, используемых пассажирами, позволяет транспортным органам предлагать своим гражданам расширенные услуги без потери чувствительности.

Обеспечение эффективного сотрудничества требуют осуществление ряд мероприятий. Поскольку существующие транспортные системы непредсказуемы и подвержены задержкам, пассажиры вынуждены планировать свои поездки с учетом этих задержек. Это означает, что они уходят из дома или с работы намного раньше и часто ждут на вокзале или автобусной остановке, тратя свое драгоценное время. Основная причина этого - отсутствие данных в реальном времени о текущем состоянии автобусов и поездов. Хотя они знают стандартное расписание поездов и автобусов, пассажиры не знают наверняка, следуют ли эти автобусы этому расписанию в указанное время. Эту проблему можно решить, используя отслеживание автобусов и поездов с поддержкой интернета вещей для предоставления пассажирам информации о состоянии в режиме реального времени. Эту информацию пассажиры могут просматривать через специально загруженные мобильные приложения на своих смартфонах.

Кроме того, пассажиры также могут узнать, полны ли автобусы и поезда или пусты. Они также могут знать количество людей, ожидающих на автобусной остановке или вокзале. Таким образом, они смогут узнать, когда лучше всего начать поездку на работу. Таким образом, пассажиры могут знать точное время для своего автобуса и поезда и вовремя покинуть свои дома, чтобы сесть на следующий пустой автобус или поезд. Им не нужно тратить время на ожидание следующей пустой машины.

Техническое обслуживание автомобилей и оборудования. Одной из основных причин недовольства пассажиров большинством систем общественного транспорта, особенно в развивающихся и слаборазвитых странах, является частая поломка транспортных средств или инфраструктуры. Это временно приостанавливает обслуживание и оставляет пассажиров застрявшими в середине поездки.

Это приносит большой дискомфорт и неуверенность пассажирам, а также приводит к нарушению работы всей транспортной сети и задерживает поездки большего количества людей. Это оказало общее влияние на общую производительность города или региона, зависящую от транспортной системы. Чтобы этого не произошло, власти должны внедрить современные методы технического обслуживания, такие как профилактическое и прогнозное обслуживание.

Поддержание различных настроек транспортных средств и инфраструктуры может помочь выявить проблемы на ранней стадии, когда системы Интернета вещей могут использоваться для постоянного мониторинга рабочего состояния. Эти параметры могут включать

температуру двигателя, давление в шинах, уровень топлива и аккумулятора, нагрузку на рельсы и другие аналогичные факторы, указывающие на настройку системы. Датчики могут постоянно контролировать эти параметры, чтобы обнаруживать любые неисправности и уведомлять соответствующий персонал, когда начинается техническое обслуживание. Это приводит к повышению эффективности обслуживания, минимальным перебоям в работе и безопасности пассажиров.

Оптимизация транспортных маршрутов. Используя ИТ-датчики на автобусных остановках и платформах поездов, транспортные органы могут точно оценить ситуацию в этих местах. Они могут знать, сколько людей нужно забрать с какой станции или станции. Они могут использовать эту информацию для разделения соответствующего количества транспортных средств на разные направления. Они также могут использовать данные о дорожном движении, собранные с датчиков, установленных на обочинах дорог, сигнализациях и уличных фонарях, для планирования самых быстрых маршрутов.

Кратчайший маршрут между двумя точками может быть непрерывно передан водителям автобусов, которые на основе этой информации могут как можно быстрее доставить пассажиров к месту назначения. Информация, полученная через эту систему, может быть использована в долгосрочной перспективе для планирования новых транзитных маршрутов и налаживания новых автобусных и железнодорожных перевозок. Эта информация может быть полезна при планировании и управлении городом, а также может помочь в принятии решений, связанных с инфраструктурой.

Еще одним важным фактором является повышение безопасности дорожного движения и минимизация загрязнения окружающей среды. Очевидным и долгосрочным преимуществом наличия высокоэффективной и удобной для пассажиров транспортной системы с использованием ИТ является предпочтение общественного транспорта личным транспортным средствам. Благодаря ИТ общественный транспорт становится более надежным, люди предпочитают использовать его больше не только по экономическим причинам, но и для общего удобства.

Это уменьшит количество частных автомобилей на дорогах и сделает общественный транспорт более быстрым и безопасным. Город, который во многом зависит от общественного транспорта, также значительно сократит свой углеродный след, что принесет пользу на экологическом фронте. Таким образом, внедрение ИТ в транспорт может привести к развитию действительно умных и устойчивых городов. ИТ, хотя и является потенциально революционным с точки зрения его преимуществ и применения, не является окончательным решением проблем современных транспортных систем. Другие существующие и новые виды технологий также играют роль в улучшении работы общественного транспорта.

Кроме того, есть много других инструментов и технологий, которые градостроители должны учитывать при планировании комфорта. Таким образом, они могут гарантировать, что смогут строить действительно “умные” и готовые к будущему города.

THE MAIN DIRECTIONS OF APPLICATION OF INTERNET TECHNOLOGIES IN ROAD TRANSPORT

Annotation. The article describes possible approaches to automation and intellectualization of car management processes with further integration of these processes into the intelligent transport system of the region. In addition, the envisaged measures and mechanisms for the implementation of this goal are being considered.

Key words: features, factors, modernization, automation, implementation of intelligent transport systems, transport complex, Republic of Uzbekistan.

Сегодня автомобильная промышленность – одна из самых инновационных отраслей. В последние годы автомобили превратились из механических устройств, потребляющих нефтяные ресурсы, в компьютеры, которыми можно эффективно управлять с помощью электрических

приводов. Например, в связи с усилением конкуренции на мировых рынках логистическая отрасль вынуждена искать пути повышения эффективности. В настоящее время основной целью логистической отрасли является снижение затрат и задержек при транзите товаров, повышение прозрачности операций и минимизация участия человека в процессах. В ближайшем будущем основным направлением развития станет внедрение решений и технологий, связанных с интернет-технологиями.

В эпоху становления современного информационного общества, когда информация и знания стали стратегическим фактором развития, развитие страны и обеспечение ее конкурентоспособности связано с внедрением современных информационно-коммуникационных и «цифровых» технологий во все сферы жизни общества и государства.

С этой целью 05.10.2020 года принят президентский указ № ПФ-6079, об утверждении стратегии «Цифровой Узбекистан – 2030» и меры по ее эффективной реализации. Указом утверждены:

1. Стратегия «Цифровой Узбекистан – 2030, а также «дорожная карта» по ее реализации. "Дорожная карта" реализации стратегии охватывает цели в области развития электронного правительства, цифровой индустрии, цифрового образования и цифровой инфраструктуры.

2. Программы цифровой трансформации территорий и отраслей на 2020-2022 годы.

В рамках программы:

➤ уровень подключения населенных пунктов к сети Интернет, в том числе за счет увеличения количества портов широкополосного доступа до 2,5 млн., строительства 20 тыс. км оптоволоконных линий связи и развития сетей мобильной связи, будет доведен с 78% до 95%;

➤ внедрение более 400 информационных систем, электронных услуг и других программных продуктов в различных сферах социально-экономического развития регионов;

➤ организация обучения основам компьютерного программирования с охватом 587 тыс. человек, в том числе 500 тыс. молодых людей в рамках проекта «один миллион программистов»;

➤ внедрение более 280 информационных систем и программных продуктов по автоматизации процессов управления, производства и логистики на предприятиях реального сектора экономики;

➤ для повышения цифровой грамотности и квалификации сотрудников хокимов, государственных органов и организаций в регионах, обучения их информационным технологиям и информационной безопасности будут прикреплены соответствующие высшие учебные заведения, а 12 тысяч их сотрудников будут обучены в области информационных технологий”.

В соответствии со стратегией “Цифровой Узбекистан — 2030” в стране реализуется комплекс мер по цифровизации отраслей и территорий

экономики, внедрению государственных информационных систем и электронных услуг, а также по обеспечению широкого использования цифровых технологий в сфере народного образования, государственных услуг, судебной, финансовой и банковской систем.

Реализация программы «Цифровой Узбекистан – 2030», широкое внедрение технологий «Умный», «Безопасный город», «Интернет вещей», дальнейшее развитие телекоммуникационной инфраструктуры, на этой основе 30-процентный рост ВВП страны, а также рост международных индексов, готовность к цифровой экономике и развитие ИКТ", приоритетной задачей является обеспечение доступа к передовым странам.

Согласно анализу ученых всего мира, в течение 2008-2009 годов количество подключенных к интернету устройств и систем превысило количество людей на земле, а к 2016 году их количество составило 25 миллиардов. А к 2021 году этот показатель увеличился в два с половиной раза, до 63 миллиардов. В этом представлении процессы перехода от понятия «интернет и люди» к понятию «интернет вещей», то есть IoT (Интернет вещей), идут вверх. «Интернет вещей» (Internet of Things - IoT) - это система взаимодействия и обмена информацией между различными устройствами и машинами, которая позволяет автоматизировать процессы управления и контроля с помощью различных «интеллектуальных устройств» и значительно снизить участие в них людей.

Стратегия «Цифровой Узбекистан – 2030» разработана в целях обеспечения ускоренного цифрового развития отраслей экономики, социальной сферы и системы государственного управления, в том числе дальнейшего совершенствования механизмов предоставления электронных государственных услуг. Настоящая стратегия определяет стратегические цели, приоритеты и среднесрочные и долгосрочные задачи развития цифровой экономики и электронного правительства Республики Узбекистан, а также служит основой для более широкого внедрения цифровых технологий, исходя из целей устойчивого развития ООН и приоритетов, определенных в рейтинге развития электронного правительства.

Интернет вещей

Поскольку мы рассматриваем применение технологий в автомобильном транспорте, этот термин необходимо уточнить. Следовательно, коммерческий транспорт - это любое транспортное средство, используемое в процессе предпринимательской деятельности, т. е. эксплуатация которого приводит к получению прибыли. Решения и технологии для подключения транспорта к сети уже получили широкое распространение. Перспективными направлениями использования интернет-технологий в коммерческих автомобилях являются:

- управление автопарком (управление техническим обслуживанием транспорта, автоматическая диспетчеризация, интеграция ERP-системами. ERP (Enterprise Resources Planning) – [управление корпоративными ресурсами]. В основе ERP лежит создание единого хранилища данных (репозитория), которое объединяет в себе все данные, собранные организацией в процессе осуществления бизнес-операций.
- автономный транспорт (помощник водителя, автопилот на автомагистралях, полная автономия в будущем);
- обеспечение безопасности (предотвращение кражи топлива, неправильное использование транспортных средств, автоматическое хранение данных и развертывание облачных технологий);
- «умная» инфраструктура (централизованное управление, мониторинг состояния и загрузки инфраструктуры);
- транспорт, связанный с другой инфраструктурой (управление движением, режим движения).

Некоторые технологии, такие как автономные транспортные средства, еще не нашли широкого применения в коммерческом транспорте, но их

внедрение неизбежно в будущем. Транспортное средство, связанное с другой инфраструктурой (инновационное), - это транспортное средство, которое связывается с другими транспортными средствами, сетями и услугами, охватывающими обширную инфраструктуру, и считается элементом экосистемы интернет-технологий. По мере увеличения количества инновационных автомобилей на наших дорогах, безусловно, будет доступно больше данных, которые будут включать различные данные и потенциальную статистику, которую мастерские или автопроизводители могут использовать, например, для улучшения качества автомобилей.

Это также способствует развитию «умного» страхования, при котором компании могут получать статистические данные о характере движения и неисправностях отдельных агрегатов тех или иных марок автомобилей, которые затем учитываются при определении стоимости страховки. Важно понимать, что инновационный автомобиль состоит не только из набора данных и нескольких вспомогательных датчиков, но и из множества «умных» устройств.

Для современных автомобилей сейчас необходимы новые системы, такие как:

- адаптивный круиз-контроль (Adaptive Cruise Control), позволяющий автоматически поддерживать желаемую скорость автомобиля при сохранении заданного расстояния от переднего движущегося транспортного средства;
- аварийное торможение-система, направленная на предотвращение дорожно-транспортных происшествий путем применения торможения транспортного средства в чрезвычайной ситуации;
- технология обнаружения пешеходов (Pedestrian Detection), которая распознает людей рядом с автомобилем и замедляет или останавливает автомобиль, чтобы предотвратить столкновение;
- система предотвращения столкновений контролирует территорию вокруг транспортного средства и предупреждает водителя, если есть риск столкновения;
- распознавание дорожных знаков (Traffic Sign Recognition) обеспечивает звуковое или визуальное уведомление в случае нарушения их инструкций;
- предупреждение о выходе из коридора;
- предупреждение о движении (Cross Traffic Alert), сигнализирующее о движении транспортных средств в направлении пересечения;
- обнаружение слепых зон (Blind Spot Detection) – контроль незаметных для водителя мест в непосредственной близости от автомобиля, обнаружение обгоняющих машин;
- предупреждение о заднем столкновении (предупреждение о заднем столкновении);

➤ помощь при парковке (Park Assistance) - это функция, которая помогает вашему автомобилю маневрировать во время парковки.

Интеллектуальные системы, такие как подключенные к сети транспортные средства, интеллектуальные системы управления движением и встроенные датчики на дорогах и мостах, приближают нас к идее “умных городов” с меньшим трафиком и меньшим энергопотреблением.

ХАРАКТЕРИСТИКА ОСНОВНЫХ БОЛЕЗНЕЙ БАКЛАЖАНА В УСЛОВИЯХ АНДИЖАНСКОЙ ОБЛАСТИ УЗБЕКИСТАНА

Аннотация. В статье представлены данные по изучению микобиоты баклажанов в условиях Андижанской области Узбекистана, а также определение наиболее часто встречаемых и вредоносных болезней данной культуры.

В ходе исследований было выявлено 17 видов фитопатогенных грибов, принадлежащих к 4 классам, 6 секциям, 8 семействам и 14 родам. Наиболее распространенными и вредоносными являются такие болезни как, фузариозный вилт, фитофтороз, серая гниль и альтернариоз.

Ключевые слова: баклажан, фитопатогены, грибные болезни, фузариоз, фитофтороз, серая гниль, альтернариоз, распространенность болезни.

CHARACTERISTICS OF THE MAIN EGGPLANT DISEASES IN THE ANDIZHAN REGION OF UZBEKISTAN

Abstract. The article presents data on the study of eggplant mycobiota in the Andijan region of Uzbekistan, as well as the identification of the most common and harmful diseases of this crop.

Thus, 17 species of phytopathogenic fungi were identified, belonging to 4 classes, 6 sections, 8 families and 14 genera. The most common and harmful diseases are fusarium wilt, late blight, gray mold and alternaria.

Key words: eggplant, phytopathogens, fungal diseases, fusarium, late blight, gray mold, alternaria, disease prevalence.

Введение.

Баклажан, паслён тёмноплодный (*Solanum melongena* L.), растение из семейства паслёновые (*Solanaceae*), широко распространённая овощная культура.

Как и у других сельскохозяйственных культур одним из факторов, препятствующих обильному, качественному и экологически чистому урожаю овощных культур, являются различные заболевания, возникающие

под воздействием различных микроорганизмов (грибов, бактерий, вирусов), а также неблагоприятной внешней среды. На основе изучения микобиоты сельскохозяйственных культур, в том числе баклажанов из представителей семейства пасленовых, установлены основные заболевания, виды болезнетворных микроорганизмов, закономерности их развития и биоэкологическая характеристика видов, имеющих важное хозяйственное значение.

В нашей республике микобиота баклажанов и болезни вызываемые патогенными видами, а также меры борьбы с ними на плановой основе не изучаются, а информация об исследованиях, направленных на решение этих проблем, практически отсутствует.

В связи с чем целью и задачами наших исследований было – изучение видового состава возбудителей болезней баклажана, выявление основных болезней, а также разработка системы борьбы с болезнями, имеющими важное экономическое значение в Андижанской области.

Материал и методы исследования.

Сбор материала осуществлялся путем маршрутных обходов территории в течение всего вегетационного сезона. Гербаризация образцов проводилась по общепринятой методике. Определение грибов проводилось в лабораторных условиях путем микроскопирования непосредственно больных частей растений. Для качественного определения пользовались методом «влажных камер» (Дудка и др., 1982).

При определении пользовались отечественными и зарубежными определителями и монографиями: П.Н.Головин (1960), Л.Л.Осипян (1975), Н.М.Пидопличко (1977-1978), А.Я.Семенов, Л.П.Абрамов, М.Х.Хохряков (1980), М.К.Хохряков и др. (1984), Н.П.Гелюта (1988), «Флора грибов Узбекистана» (1983-1990) и др., а также многочисленным научными статьями в периодических журналах и сборниках.

Для определения вредоносности заболевания определялись интенсивность или степень поражения растений (Дудка и др., 1982), для чего использовали глазомерную оценку поражения в баллах.

Балл - Степень поражения растения поверхности растений, %

0 - 0, растение здорово

1 – 10 % слабое поражение органа или растения

2 - 1 - 25 %, поражение среднее, сильно пораженные органы не встречаются

3 - 26-50 % поражение среднее, некоторые органы или растения поражения в сильной степени

4 - Свыше 50 %, сильное поражение органов или растений, возможна их гибель.

Процент развития болезней определяли по следующей формуле:

$$R = \sum(a \cdot b) / NK \cdot 100$$

где: P - процент развития болезни,
 $\sum(a*b)$ - сумма произведения числа пораженных растений (a) на соответствующий им балл поражения (b),
N - общее число учетных растений,
K - высший балл поражения шкалы.

Полученные результаты

Из гербарных образцов, собранных из больных частей баклажанов в условиях Андиганской области, выявлено 17 видов грибов, принадлежащих к 4 классам, 6 секциям, 8 семействам и 14 родам. Наибольшее количество выявленных видов – 13 видов – представляли дейтеромицеты. Далее идентифицировано 2 вида, принадлежащих к классу Oomycetes, по 1 виду, принадлежащему к классам Ascomycetes и Zygomycetes. В качестве наиболее распространенных возбудителей отмечено 3 вида из родов *Alternaria* и *Fusarium* и по 1 виду из других родов

По результатам наблюдений на баклажанах зафиксированы заболевания фузариозом, серой гнилью, альтернариозом, фитофторой и корневыми гнилями. При определении степени зараженности растений баклажанов видами грибов, широко распространенными и наносящими большой ущерб овощной продукции, установлено, что наиболее сильный уровень поражения баклажанов проявляется фузариозным увяданием (42,6%), следом идут фитофтороз (38,0%), серая гниль (29,7%), альтернариоз (22,6%), корневые гнили (12,4%) и мучнистая роса (3,0%), на основании чего был сделан вывод, что наиболее вредоносными заболеваниями баклажана являются: фузариоз, фитофтороз, альтернариоз и серая гниль (табл. 1).

Фузариозное увядание – одно из наиболее вредоносных заболеваний баклажанов. Фузариоз вызывается видами *Fusarium*, *F. oxysporum* f.sp. *melongenae*, *F. solani*, *Fusarium* sp. Грибы вызывают болезнь увядания растений. Листья начинают увядать снизу куста и постепенно засыхают. Позже заметно, что плодоножки и плоды начинают увядать, теряется тургорное состояние, пораженная ткань темнеет. Если оставить пораженное растение на месте, на его поверхности появляются белый или розоватый мицелий гриба.

Табл. 1.

Уровень поражаемости посевов баклажанов фитопатогенными грибами, % (2020-2023 гг.)

№	Болезнь	Степень поражаемости, %
1	Фузариозное увядание (<i>Fusarium oxysporum</i> f.sp. <i>melongenae</i> , <i>Fusarium solani</i> , <i>Fusarium</i> sp.)	42,9
	Фитофтороз (<i>Phytophthora infestans</i>)	31,0
3	Серая гниль (<i>Botrytis cinerea</i>)	29,6
4	Альтернариоз (<i>Alternaria tomatophila</i>)	22,6
5	Мучнистая роса (<i>Leveillula taurica</i>)	3,0
6	Корневая гниль (<i>Rhizoctonia solani</i> , <i>Pythium debaryanum</i> , <i>Fusarium solani</i> , <i>Fusarium</i> sp.)	12,4

Фузариозное увядание проявляется, когда листья баклажанов желтеют, чаще с одной стороны, а растения становятся бледными. Здоровые листья засыхают, но не опадают, а висят на ветвях. Ветви также могут увядать с одной стороны растения, а затем увядает все растение. Пораженные растения становятся слабыми и чахлыми, а затем увядают. Причина увядания растения в том, что проводящие ткани заполняются мицелием гриба и распространяются от нижней части растения к верхним слоям и растение повреждается токсинами, вырабатываемыми грибом.

Данные по распространенности фузариозного увядания по разным районам севера, запада и востока Андижанской области показаны в таблице 2.

Табл.2.

Распространение фузариозного увядания баклажанов в Андижанской области (2020-2023 гг.)

Район Андижанской области	Пораженность фузариозом посадок баклажана, %
Кургантепинский р-н	52,0
Алтынкульский р-н	42,0
Избосканский р-н	48,0
Андижанский р-н	29,5
Среднее значение по области	42,9

Согласно полученным данным, средняя распространенность фузариоза по территории Андижанской области составила 42,9%.

Заболевание фитофтороза – возбудитель которого является *Phytophthora infestans*, серьезно повреждающий листья, стебли, плоды и корни баклажанов. Заболевание наблюдалось на разных стадиях вегетации. Согласно литературным источникам, растение баклажана может поражаться заболеванием фитофторой в любое время сезона и вызывает гниение плодов, ожоги листьев и стеблей.

Данные по распространенности фитофтороза по разным районам Андижанской области показаны в таблице 3.

Табл.3.

Распространение фитофтороза баклажанов в Андижанской области
(2020-2023 гг.)

Район Андижанской области	Пораженность фитофторозом посадок баклажана, %
Кургантепинский р-н	30,0
Алтынкульский р-н	32,0
Избосканский р-н	36,0
Андижанский р-н	26,0
Среднее значение по области	31,0

Согласно полученным данным, средняя распространенность фузариоза по территории Андижанской области составила 31%.

Альтернариоз баклажанов. На баклажанах выявлено 3 вида р. *Alternaria*. Виды *Alternaria alternata* и *A. tenuissima* относятся к мелкоспоровым видам отмечаемых на большом количестве сельскохозяйственных культурах. Согласно, Ф.Б. Ганнибала (2011), ранее на растениях семейства пасленовых приводился вид *A. solani*, который чаще отмечается на картофеле. В соответствии с идентификационным ключом приводимым Ф.Б. Ганнибалом (2011) к определению возбудителей альтернариозов и в силу морфологической обособленности основным возбудителем альтернариозов баклажана нами был определен вид *Alternaria. tomatophila*.

Данные по распространенности альтернариоза по разным районам Андижанской области показаны в таблице 4.

Табл.4.

Распространение альтернариоза баклажанов в Андижанской области
(2020-2023 гг.)

Район Андижанской области	Пораженность фитофторозом посадок баклажана, %
Кургантепинский р-н	24,0
Алтынкульский р-н	28,0
Избосканский р-н	22,0

Андижанский р-н	15,4
Среднее значение по области	22,6

Согласно полученным данным, средняя распространенность альтернариоза по территории Андижанской области составила 22,6%.

Серая гниль баклажанов вызывается возбудителем *Botrytis cinerea*. Это заболевание повреждает листья, стебли и плоды баклажанов. По литературным источникам установлено, что возбудитель серой гнили распространен в разных родах более чем на 100 растениях по всему миру.

Данные по распространенности серой гнили по разным районам Андижанской области показаны в таблице 5.

Табл.5.

**Распространение серой гнили баклажанов в Андижанской области
(2020-2023 гг.)**

Район Андижанской области	Пораженность фитофторозом посадок баклажана, %
Кургантепинский р-н	32,0
Алтынкульский р-н	28,0
Избосканский р-н	34,5
Андижанский р-н	24,0
Среднее значение по области	29,6

Согласно полученным данным, средняя распространенность серой гнили по территории Андижанской области составила 22,6%.

Выводы

Из всего выше изложенного можно отметить, что из 17 выявленных видов фитопатогенных грибов поражающих баклажан в Андижанской области Узбекистана наиболее распространенными и вредоносными являются такие болезни как, фузариозный вилт, фитофтороз, серая гниль и альтернариоз.

DAMAGE BIOLOGY OF CALIFORNIA SHIELD

Annotation: diaspidiotus perniciosus Comst. The external quarantine object has been created. This object, which can enter Uzbekistan, is very dangerous and is contained in more than 150 trees and ornamental crops. Its homeland is northeastern China, from there it came to the American continent, and from there to European countries in the 1930s.

Keywords: Diaspidiotus perniciosus Coms tree insect objects.

Кириш Ер юзида иқлимнинг глобал ўзгариши, аҳоли миқдорининг шиддат билан ўсиши, ишлаб чиқариш жараёнининг жадаллашиши кузатилаётган бир даврда, барча соҳалар каби озиқ-овқат етиштириш саноатида қатор муаммолар кўпаймоқда. Ушбу муаммоларни фақатгина илмий асосланган янги инновацион технологиялар яратиш ва уларни жорий қилиш натижасида олинган манбалар орқали ҳал этиш мумкин. Бутунжаҳон озиқ-овқат ташкилотининг (ФАО) маълумотга кўра фақатгина ер юзида етиштирилаётган экинларнинг ўртача 20 фоиздан 40 гача мўлган миқдори зарарқунанда ва касалликлар туфайли нобуд бўлмоқда.

Хозиги кунда бу ҳашарот кўшни давлатлардан Туркменистон ва Тожикистон ҳамда Кавказ, Украина, Молдавияда учрайди. Таърифи. Ургочи зотининг ранги лимон каби сарик, шакли ноксимон, узунлиги 1,3 мм, кузи, оёғи ва муйлови йук. К^алкони юмалок, улчами 2 мм, б>фтган, ранги қорамтир ёки қунақ, уртасида 2 та личинка пустининг изи бор. Х^аёт кечириши. Биринчи ёш личинкалари қалқон остида қишлоқ чикади. Булар одатдаги 1-ёш личинкалардан фарқ қилиб, йирикрок қалқон билан (2-2,5 марта катта) қопланган. Совуқ тушиши билан қолганлари (етук зот ва 2-ёш личинкалари) улиб кетади. Февралнинг охирида уйқудаги личинка

иккинчи ёшга ута бошлайди. Лекин киш пайтида 20- 50% личинкалар улиб кетади. Дарахтлар кукара бошлаши билан личинкалар озикланишни бопшайди ва 2 марта пуст ташлаб жинсий етук ургочи ва эркак зотларга айланади. Эркак ва ургочи зотларнинг нисбати уртача бирга-бир тугри келади. Иккинчи бугин учун урчиган ургочи зот 1 ойча етилгач, тирик туга бошлайди. Бопшача килиб айтганда, личинкалар она танасида тугилишдан олдин тухумдан очиб чиккан булади. Булар хам дарахт буйлаб таркаб кетиб янги бугинни бошлаб беради. Узбекистан шароитида калифорния калкондори мавсумда 4-5 та бугин бериши мумкин, У Тожикистон ва Озарбайжон шароитида 4 та бугин беради (Васильев, Лившиц, 1984). Х,ар кайси бугин личинкаларидан бир кисми кишлашга қолади. Ва нихоят, охирги авлодининг 1-ёш личинкалари махсус тайёргарлик куриб, она калкони остида кишлаб қолади. Аммо, шароит мавжуд булса (иссикхона ва бошка хона307 донлардаги усимликлар) калифорния калкондори йил мобайнида тинмай ривожланиши мумкин. Калифорния калкондори асосан кучатларда жойдан-жойга таркалиши мумкин. Зарарланган мсвада савдо йуллари билан хам таркалиш имкониятига эгаКалифорния қалқондори асосан мевали дарахтларга, резавор мева, буталарга ва манзарали ўсимликларга зарар етказди. Ушбу ҳашарот кўпайиб кетганда олма дарахти пўстлоғи узунасига ёрилиб, шохларни ва бутун дарахтларни қуритиб кўяди. Олма меваларидаги ширани сўриб, тўқ кизил доғ туширади. Дарахтни шох, новда, барг, дарахт пўстлоғи ва мевасини зарарлайди. Натижада дарахтлар кам ҳосил беради, ёш дарахтлар куриб қолади.

Калифорния қалқондорининг қалқони юмалоқ ва япалоқ, оч жигар ёки кул ранг тусда бўлиб, диаметри 1,0-1,5 мм дан 2 мм гача бўлади. Қалқоннинг четлари ўртасига қараганда оч тусда бўлиб, эркагининг қаноти бир жуфт бўлади. Ёш личинкаси озиклана бошлаганда оқимтир шира чиқаради, бу шира кейинчалик қалқонга айланади.Биринчи ёш личинкалари шох ва новдалардаги қалқон остида кишлайди. Баҳорда, олма дарахти куртаклари бўрта бошлаганда озикланишни бошлайди ва пўст ташлаб жинсий етук ургочи ва эркак зотларга айланади. Урчиган ургочи зот 1 ойча етилгач 100-120 тадан тирик личинкалар туга бошлайди. Туғилган «дайди» личинкалар қалқон остидан чиққандан сўнг бир неча соат давомида дарахт бўйлаб таркалиб пўстлоқ ва меваларга ёпишган ҳолда ўзига қалқон ясай бошлайди. Озикланиши давомида пўст ташлаб иккинчи ёшга ўтган личинкалари жинсий етук ургочи ва эркак зотларга айланади ва 2-авлод «дайди» личинкалари пайдо бўлади. Шу тариқа йил давомида 3-4 та авлод беради. Одатда ҳар бир авлод биринчи ёш личинкаларининг бир қисми кишлашга қолади. Кўчат ва зарарланган мева орқали жойдан-жойга тарқалади.

Зараркунандаларга қарши уйғунлашган кураш чоралари

Эрта кўкламда буталган шох ва новдаларни ёқиш, дарахтлар танасини тозалаб танасини оқлаш, боғларни ёшартириш лозим. Мавсум вақтида тухумдан чиққан қалқондорлар сонини билиш учун диаметри 3-5 см бўлган

скочни шохларга ёпишқоқ тарафини тепага қилиб маҳкам боғланади. Агар маҳкам бўлмаса, ёш қалқондор личинкалари тагидан ўтиб кетади. Бир боғдан камида 10 та дарахтнинг 2 та шохига скочни боғлаб чиқилади. Ҳар ҳафтада янги скочга алмаштирилади. Ҳар бир жойда скочга ёпишиб қолган қалқондорларни санаб, ёш қалқондорларни қачон кўпайишини аниқлаш мумкин. Скочдаги қалқондорлар сонига қараб пестицид билан ишлов ўтказиш белгиланади. Кимёвий ишловлар қалқондорларнинг биринчи ёш личинкалари кўпайган даврда сепилади. Куртаклар бўртиш вақтида ёғли воситаларни қишлаётган зараркундаларга қарши пуркаш энг самарали ҳисобланади. Куртаклар бўртиш вақтида дарахтларга минерал мойлар билан таркибида хлорпирифос ёки диазинон бўлган препаратларни аралаштириб ишлов берилади. Вегетация даврида эса таркибида дельтаметрин, диметоат, имидаклоприд, лямбдациголотрин, малатион ва хлорпирифос бўлган препаратлар билан ишлов берилади.

**RESEARCH AND DEVELOPMENT OF INNOVATIVE WAYS TO
RECYCLE WASTE GENERATED FROM PROCESSING FRUITS AND
VEGETABLES, WITH THE AIM OF CONVERTING THEM INTO
VALUABLE PRODUCTS SUCH AS BIOENERGY OR BIOPOLYMERS**

Abstract. This paper discusses the method of anaerobic fermentation of fruit and vegetable waste to produce biogas and organic fertilizers. Process performance indicators such as biogas production, energy efficiency, waste management and fertilizer application are analyzed. Research results are provided demonstrating the benefits of this technology in the context of sustainable waste management and the use of renewable resources.

Key words: biogas, methane, recycling, waste, fermentation, fertilizers, energy efficiency, productivity, agriculture, sustainability.

Введение. Согласно оценкам Организации по продовольствию и сельскому хозяйству (ФАО), почти треть всей производимой пищи в мире ежегодно пропадает, что составляет около 1,3 миллиарда тонн. Большая часть этого пищевого отхода происходит на этапах производства и переработки, в том числе из фруктов и овощей. Это приводит к нерациональному использованию ресурсов, таких как вода, энергия и земельные площади, и оказывает негативное воздействие на окружающую среду из-за образования отходов, выбросов метана и других парниковых газов при их разложении.

Методология. «Методика переработки отходов фруктов и овощей в биоэнергию» Одной из наиболее перспективных методик переработки отходов фруктов и овощей является анаэробное брожение, также известное как биогазовая технология. Этот процесс позволяет преобразовать органические отходы в биогаз, который может быть использован как источник возобновляемой энергии. Биогаз состоит в основном из метана (CH₄) и углекислого газа (CO₂), и его можно использовать для генерации электроэнергии или в качестве топлива для транспортных средств. Процесс начинается с сбора отходов фруктов и овощей, таких как кожура, остатки мякоти, стебли и другие отходы производства. Затем отходы измельчаются до мелких частиц для повышения эффективности брожения. После измельчения отходы помещаются в анаэробный реактор, который поддерживает бескислородную среду. Здесь происходит брожение под действием бактерий, которые разлагают органические вещества и выделяют биогаз. Время, необходимое для брожения, может варьироваться в зависимости от состава отходов и условий процесса, но обычно составляет от нескольких дней до нескольких недель. Полученный биогаз проходит очистку для удаления примесей и повышения его качества. После этого он может быть использован для выработки электроэнергии или тепла, а также в качестве топлива для транспорта.

Результат. Результаты проведенного исследования по методике анаэробного брожения отходов фруктов и овощей показали значительный потенциал для преобразования отходов в биоэнергию и удобрения.

Производство биогаза: в результате анаэробного брожения удалось получить около 200 кубических метров биогаза из одной тонны отходов фруктов и овощей. Биогаз состоял из 60% метана и 40% углекислого газа.

Энергетическая эффективность: Использование биогаза для производства электроэнергии обеспечило общий КПД системы на уровне 75%. Полученная энергия позволила сократить затраты на электроэнергию на 20% по сравнению с обычными источниками энергии.

Утилизация отходов: Исследование продемонстрировало, что около 90% отходов были успешно переработаны в процессе анаэробного брожения. Это позволило значительно снизить объем отходов, направляемых на полигоны.

Производство удобрений: Дигестат, полученный в результате процесса, был использован в качестве органического удобрения и показал эффективность, сопоставимую с традиционными химическими удобрениями. Урожайность повысилась на 15% при использовании дигестата в сельском хозяйстве.

Таблица 1.

Результаты исследования по методике анаэробного брожения отходов фруктов и овощей

Показатели	Результаты
Производство биогаза	200 куб. м/тонна
Состав биогаза	60% метана, 40% CO ₂
Энергетическая эффективность	КПД 75%
Экономия энергии	Сокращение затрат на 20%
Утилизация отходов	Переработано 90% отходов
Производство удобрений	Повышение урожайности на 15%

Заключение. В целом, исследование подтвердило эффективность анаэробного брожения как метода утилизации отходов фруктов и овощей, позволяющего получать биоэнергию и органические удобрения. Эти результаты свидетельствуют о перспективах применения данной технологии для устойчивого управления отходами и получения возобновляемых ресурсов.

ПРИМЕНЕНИЕ МАТЕМАТИКИ В РЕШЕНИИ ЭКОНОМИЧЕСКИХ ЗАДАЧ

Аннотация. Математика является ключевым инструментом в решении экономических задач, позволяющим экономистам проводить анализ, моделирование и прогнозирование в различных областях экономики. В этой статье рассматриваются основные принципы и примеры применения математических методов в экономике, включая теорию игр, эконометрию, оптимизацию, макроэкономическое моделирование и финансовую математику. Мы исследуем, как эти методы помогают анализировать стратегические решения, оценивать экономические данные, оптимизировать использование ресурсов и управлять финансовыми рисками. Особое внимание уделяется роли математических моделей в принятии экономических решений и разработке политик, а также их влиянию на развитие экономики.

Ключевые слова: Математика, экономика, эконометрия, оптимизация, теория игр, финансовая математика.

APPLICATION OF MATHEMATICS IN SOLVING ECONOMIC PROBLEMS

Abstract. Mathematics is a key tool in solving economic problems, allowing economists to conduct analysis, modeling and forecasting in various areas of the economy. This article examines the basic principles and applications of mathematical methods in economics, including game theory, econometrics, optimization, macroeconomic modeling, and financial mathematics. We explore how these techniques help analyze strategic decisions, evaluate economic data, optimize the use of resources, and manage financial risk. Particular attention is paid to the role of mathematical models in economic decision-making and policy development, as well as their impact on economic development.

Keywords: Mathematics, economics, econometrics, optimization, game theory, financial mathematics.

Понимание экономики и ее сложных систем требует использования различных инструментов, одним из которых является математика. С древних времен до наших дней математика играла ключевую роль в

решении экономических задач, позволяя экономистам и аналитикам проводить точные расчеты, моделировать сложные системы и делать обоснованные прогнозы. В данной статье мы рассмотрим, каким образом математика применяется в экономике, как она помогает решать конкретные задачи, а также ее влияние на развитие экономической теории. Экономика, как наука, всегда опиралась на цифры и данные. Идеи, которые зародились еще в эпоху Древней Греции, со временем эволюционировали в сложные математические модели, способные объяснить и предсказать экономические явления. Сегодня математика пронизывает все аспекты экономики, от микроуровня, включающего отдельных потребителей и фирмы, до макроуровня, где рассматриваются целые экономики и международные торговые системы.

Теория Игр в Экономике. Теория игр – это область математики, которая изучает стратегии принятия решений в условиях неопределенности и конкуренции. В экономике она широко используется для моделирования поведения участников рынка, анализа стратегических решений и изучения динамики конкуренции. Одним из самых известных применений теории игр в экономике является модель "Дилемма заключенного". В этой модели два игрока вынуждены принять решение, основанное на ограниченной информации, и их результат зависит от решений другого игрока. Применительно к экономике, эта модель может иллюстрировать, как компании могут действовать в условиях конкуренции, как регулируются монополии и олигополии, а также как проводятся переговоры. В реальном мире теория игр применяется для анализа стратегических решений компаний, например, при выборе ценовой стратегии, разработке маркетинговых кампаний или принятии решений о слияниях и поглощениях. Используя математические модели, экономисты могут предсказать вероятные исходы различных стратегий и предложить рекомендации для оптимизации поведения на рынке.

Эконометрия: Анализ Данных и Статистический Подход. Эконометрия – это дисциплина, которая объединяет математику и статистику для анализа экономических данных. Эконометристы используют статистические методы для оценки экономических моделей, проверки гипотез и анализа взаимосвязей между различными экономическими переменными. Основным инструментом эконометристов – это регрессионный анализ, который позволяет установить взаимосвязи между зависимой переменной и одной или несколькими независимыми переменными. Например, эконометрист может использовать регрессионный анализ, чтобы исследовать, как уровень образования влияет на уровень дохода, или как изменение процентной ставки влияет на инфляцию. Эконометрика также используется для прогнозирования. С помощью методов временных рядов экономисты могут предсказать будущие тенденции на основе исторических данных. Это особенно важно

для финансовых рынков, где прогнозы могут помочь инвесторам принимать обоснованные решения.

Оптимизация: Поиск Лучших Решений. Оптимизация в экономике – это поиск наилучших решений при наличии ограниченных ресурсов. Методы оптимизации используются в различных областях экономики, от планирования производства до управления портфелями инвестиций. Линейное программирование – один из самых распространенных методов оптимизации, который позволяет находить оптимальные решения в линейных системах. В экономике он применяется, например, для оптимизации производства на предприятиях, где необходимо определить наилучший способ использования ресурсов для максимизации прибыли. Другой метод оптимизации – динамическое программирование. Этот подход применяется в ситуациях, когда решение одной задачи зависит от предыдущих решений. В экономике динамическое программирование используется для анализа инвестиций, выбора оптимальных стратегий в бизнесе и других задач, связанных с последовательностью решений.

Математика в Макроэкономике. Математика также играет важную роль в макроэкономике, где исследуются крупномасштабные экономические процессы, такие как рост ВВП, инфляция, безработица и денежно-кредитная политика. Для анализа макроэкономических процессов используются сложные математические модели, такие как модели общего равновесия. Эти модели помогают правительствам и центральным банкам принимать решения о фискальной и денежной политике. Например, центральные банки используют математические модели для определения оптимальных уровней процентных ставок и управления денежной массой, что в конечном итоге влияет на уровень инфляции и экономический рост. Модели общего равновесия также применяются для анализа международной торговли и влияния глобализации на экономику. Экономисты используют эти модели для изучения воздействия торговых тарифов, соглашений о свободной торговле и других факторов, влияющих на глобальные экономические процессы.

В заключение, математика – это неотъемлемый инструмент для решения экономических задач. Она позволяет экономистам разрабатывать и проверять теории, проводить анализ данных, моделировать сложные системы и принимать обоснованные решения. Благодаря математике, экономика как наука развивается и становится все более точной и предсказуемой, что, в свою очередь, способствует улучшению благосостояния общества.

ЎЗБЕКИСТОНДА ИННОВАЦИОН КЛАСТЕРЛАРНИ РИВОЖЛАНТИРИШНИНГ УСТУВОР ЙЎНАЛИШЛАРИ

Аннотация. Иқтисодиётни инновацион тараққий эттиришида, айниқса, иқтисодий ривожланишнинг анъанавий усуллари етарли даражада фойда бермаётган ҳозирги шароитда, “кластер” назариясини амалиётга жорий қилиш энг мақбул йўл ҳисобланади.

Калит сўзлар. Инновацион кластер, давлат-ҳусусий шерикчилиги, саноат кластери, ялпи ички маҳсулот, инфратузилмага инвестициялар, таълим ютуғи, технологик ютуқлар.

PRIORITY DIRECTIONS OF DEVELOPMENT OF INNOVATION CLUSTERS IN UZBEKISTAN

Abstract. In the innovative development of the economy, especially in the current conditions where the traditional methods of economic development are not sufficiently beneficial, the implementation of the "Cluster" theory is considered to be the most appropriate way.

Key words. Innovation Cluster, public-private partnership, industrial cluster, gross domestic product, infrastructure investment, educational achievement, technological advancement.

КИРИШ.

Ҳар қандай мамлакатда кластерларнинг яратилиши кичик бизнес ва йирик корхоналарнинг инновацион ривожланиши учун кучли туртки беради.

Шу нуқтаи-назардан келиб чиққан ҳолда, ҳозирги мураккаб шароитда республика ижтимоий-иқтисодий тараққиётини жадаллаштириш учун “...кластерлар фаолиятини ҳар томонлама ривожлантириш керак.”

Бизнинг фикримизча, саноатни кластерлаштиришда инновацион ёндашувни амалиётга жорий қилиш, яъни, инновацион кластерларини ташкил қилиш мақсадга мувофиқдир.

Инновацион кластерлар ривожланиши мавжуд саноат компанияларига илмий-тадқиқот натижаларини интенсив равишда жорий

қилиш, йирик корхоналар томонидан қўшилган қиймат занжирига кириш учун янги кичик ва ўрта корхоналар давлат-хусусий шерикчилиги асосида ташкил этиш ҳисобига амалга оширилади.

АСОСИЙ ҚИСМ.

Ўзбекистонда инновацион фаолиятни бошқаришда тармоқ ёндашувидан фойдаланиш устунлик қилади, бу эса, ўз навбатида, миллий иқтисодиётни инновацион жиҳатдан тўлиқ янгилашга имкон бермайди. Республикада ЯИМнинг фан сиғимкорлиги даражаси ҳануз пастлигича қолмоқда. Шу сабабли мамлакат миқёсида инновацион фаолиятни ташкил этиш ва бошқаришда янги ёндашувларни излаш, шунингдек инновацияларни яратиш, тарқатиш ва тижоратлаштириш борасида қулай муҳит юзага келтириш масалалари долзарб аҳамият касб этади.

Замонавий иқтисодиётда кластерли ёндашув ҳудудлар иқтисодиётини ривожлантириш ва ташкилотларнинг рақобатбардошлик ҳамда инновацион фаоллик даражасини оширишнинг самарали воситаларидан бири ҳисобланади, чунончи, иқтисодий жиҳатдан тараққий этган мамлакатларнинг бу борадаги тажрибаси ҳақиқатдан ҳам, иқтисодиётни инновацион жиҳатдан ривожлантиришда кластерлаштириш амалиётининг ўрни муҳим эканлигидан далолат беради.

Аксарият олимлар таъкидлашича, барча кластерлар у ёки бу даражада инновацион ривожланишга, инновацион жараёни у ёки бу даражада тезлаштиришга ҳисса қўшади ва ҳатто уларнинг баъзилари мазкур вазифани бажаришга ихтисослашганлиги билан ҳам ажралиб туради. Айнан ушбу ғоя инновацион кластерлар концепциясининг асосини ташкил қилади. Инновацион кластерлар инновацияларга мойил бўлиб, бу фирмаларнинг ўз фаолиятларини ташкил этиш ва ривожлантириш, маҳсулот ишлаб чиқариш ва уларни сотиш жараёнида намоён бўлади. Улар иқтисодий субъектларнинг инновацияларни қабул қилишга мойиллигини ошириш, бизнесни оқилона ташкил қилиш, маҳсулдорликни ошириш каби афзалликларини ривожлан-тиришга ёрдам беради.

БМТнинг “Компанияларнинг инновацион самарадорлигини ошириш: сиёсий имкониятлар ва амалий воситалар” ҳисоботида қайд этилишича, инновацион кластер инновацияларни яратишга ҳисса қўшадиган ташкилотлардан иборат таъминотчи ва истеъмолчилар ҳамда таълим муассасалари ўртасидаги яқин алоқалар тизимидан ташкил топган тузилмани ифода этади. Кластер бир-бири ўзаро билан ҳамкорлик қиладиган ва рақобатлашадиган ташкилотларни бирлаштиради ҳамда улар ўртасидаги алоқалар вертикал ва горизонтал тавсифга эга бўлади.

“Кластер” тушунчасини талқин қилиш борасидаги юқорида келтириб ўтилган ёндашувларни умумлаштирган ҳолда, бизнинг фикримизча, инновацион-саноат кластери бу - муайян бир ҳудудда географик жиҳатдан маҳаллийлашган, бир-бирини тўлдирувчи, рақобатдош иқтисодий субъектлар (шу жумладан, таъминотчи, ишлаб чиқарувчи ва

истеъмолчилар) мажмуидир. Бунда кластер субъектлари ўзаро, шунингдек, давлат ва маҳаллий бошқарув органлари билан инновацияларни ёйиш борасида қулай муҳит яратиш, шунингдек, кластер субъектлари, ҳудудлар ва миллий иқтисодиётнинг инновацион фаоллигини ошириш ва рақабатбардошлигини мустаҳкамлаш мақсадида бирлашадилар.

Бизнинг фикримизча, кластернинг 3 тузилмавий унсурларини ажратиб кўрсатади:

ишлаб чиқарувчилар, бир-бирини тўлдирувчи тармоқлар, ресурслар ва хизматлар етказиб берувчилар, сотувчилар, харидорлар ҳамда илмий-маърифий марказни ўз ичига олган “бизнес” унсури (кластернинг “ўзаги”);

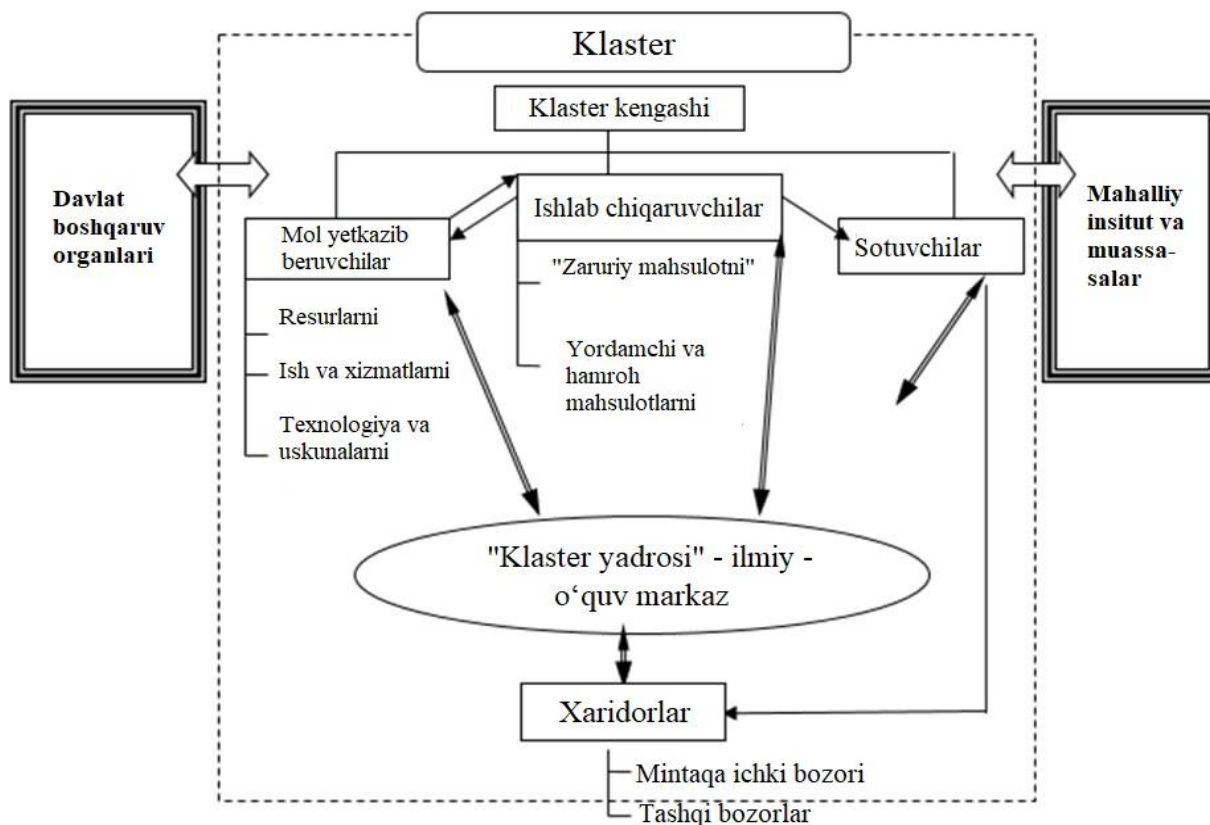

университет, бизнес мактаб, турли хил уюшма, савдо-саноат палатаси ва шу кабиларни ўз ичига олувчи “маҳаллий муассасалар” унсури;

давлат ташкилотлари, шунингдек, маҳаллий давлат ҳокимияти органларини ўз ичига олувчи, “давлат ва ҳудудий бошқарув органлари” унсури.

“Бизнес” марказий субъект ҳисобланади – у кластернинг асосини ташкил қилади. Қолган икки субъект – “давлат ва ҳудудий бошқарув органлари” ва “маҳаллий муассасалар” кластер инфратузилмасини шаклландиришга хизмат қилади.

Инновацион-саноат кластерининг мазмун-моҳияти, амал қилиш тамойиллари ва қонуниятларини тадқиқ қилиш натижалари асосида бизнинг фикримизча, инновацион кластерларни ривожлантириш модели қуйидагича бўлиши мақсадга мувофиқ.

Таклиф этилаётган модел кластернинг таркибий тузилиши ва унинг субъектлари ҳамда инфратузилма унсурлари ўртасидаги алоқаларни аниқлашга, бу эса, ўз навбатида, кластер стратегиясини ишлаб чиқишга имкон беради. Бундан ташқари, ушбу моделдан кластерлашнинг ташкилий ва иқтисодий механизмини шакллантиришда фойдаланиш мумкин.

Инновацион саноат кластери модели

Кластерни яратишдан кўзланган асосий мақсад, муайян бир иқтисодий натижа-рақобатбардош маҳсулот ишлаб чиқаришга эришишдан иборатдир, бу, ўз навбатида, алоҳида олинган ташкилот самарадорлигини оширишга ва умумий тарзда иқтисодий тараққиётнинг тезлашишига олиб келади. Кластер моделини жорий этишнинг асосий вазифаси - тадбиркорларнинг психоло-гиясини ўзгартириш, умумий иқтисодий манфаатлар доирасида барча кластер иштирокчиларининг ҳалол, очиқ ва ўзаро манфаатли ҳамкорлигининг ўзига хос имкониятларини тушуниб етишларига кўмаклашишдан иборатдир.

Бизнинг фикримизча, кластерларнинг вужудга келиши ва динамикаси ўзгаришига таъсир қилувчи омилларни ажратиб олган ҳолда, уларни қуйидагича таснифлаш мақсадга мувофиқ:

- “тадрижий” омилларнинг устунлиги таъсири остида вужудга келган кластерлар;
- “конструктив” омилларнинг устунлиги таъсири остида вужудга келган кластерлар;
- Иккала омил таъсири натижасида вужудга келган кластерлар.

Ушбу тасниф кластернинг пайдо бўлиши ва ривожланиш механизмини яхшироқ тушунишга, унга сезиларли таъсир кўрсатадиган омилларни аниқ-лашга имкон беради, бундан ўз навбатида, кластер стратегиясини ишлаб чиқиш ва кластерлаштиришнинг ташкилий-

иқтисодий механизмини шакл-лантиришда кенг фойдаланиш мумкин.

Амалда, кластерларнинг у ёки бу турга мансублигини ажратиш аксарият ҳолатларда катта қийинчилик туғдиради. Одатда, улар кластерларнинг кўриб чиқилган типларининг ўзига хос комбинациясини акс эттиради. Ҳаётийлик циклининг турли босқичларида ички ва (ёки) ташқи омилларнинг таъсири остида ривожланиш жараёнида кластерлар аввалги жиҳатлари ва компетенцияларини йўқота бориб, уларга хос бўлмаган жиҳатларни кашф этган ҳолда, ўз ички тузилишини ўзгартириши мумкин. Бугунги кунда кластерларни тўлақонли таснифлашга ҳар қачонгидан кўра, катта эҳтиёж мавжуд, зеро, ҳеч бўлмаганда кластерга мансуб ва мансуб бўлмаган тузилмаларни фарқлаш талаб қилинади.

ХУЛОСА

Кластерларни яратишдан кутилаётган иқтисодий самара куйидагилар билан изоҳланади:

– чегара ҳудудларда жойлашган кластер субъектларининг ялпи салоҳиятидан янада самарали фойдаланишга имкон берувчи, савдо-ишлаб чиқариш кооперацияси;

– ишларнинг бир қисмини аниқ фаолиятга ихтисослашган ҳамкорларга ўтказиш йўли билан ишлаб чиқариш базасини модернизациялаш харажат-ларини камайтириш;

– узоқ муддатли ҳамкорлик алоқаларини йўлга қўйиш асосида ишлаб чиқаришни хомашё, материаллар билан таъминлаш жараёнлари самарадорлигини ошириш;

– меҳнат тақсимоти, ихтисослашув, ихтисослашган ташкилотларни жалб қилиш орқали айрим бошқарув функцияларининг самарадорлигини ошириш;

– инвестицион-молиявий кооперациянинг ишончлилигини ошириш.

Умуман олганда, инновацион-саноат кластерларининг ривожланиши муайян бир ижтимоий-иқтисодий самарага эришишга имкон беради. Булар:

- барча кластер иштирокчиларининг молиявий имкониятларини бирлаштириш, ташқаридан инвестицияларни жалб қилиш, грантлар шаклида молиялаштириладиган лойиҳалар танловларида биргаликда иштирок этиш, кредит ресурсларини олиш кафолатларини таъминлаш учун молиявий имко-ниятларни бирлаштириш орқали молиявий ресурсларни жалб қилиш имко-ниятларини кенгайтириш;

- тармоқнинг инновацион салоҳиятини ошириш;

- фан ва таълимнинг кластер ташкилотлари ва ҳокимият идоралари билан ўзаро ҳамкорлигини йўлга қўйиш орқали тадқиқот натижаларини ҳудудий саноат сиёсатига жорий этиш жараёнларини тезлаштириш;

- синергия самараси ва сифат, логистика, ахборот технологиялари борасидаги ёндашувларни бир хиллаштириш ҳисобига харажатларни камай-тириш ва фан сиғимли маҳсулотлар сифатини яхшилаш;

- таъминотчилар билан ишлаш самарадорлигини ошириш;

- янги ташкилотларни рағбатлантириш;
- юқори қўшилган қийматли маҳсулотлар экспортини кўпайтириш, импорт ўрнини босишни кенгайтириш;
- маҳаллий ҳокимият ва маҳаллий ўзини ўзи бошқариш даражасида кластер иштирокчиларининг ўз манфаатларини янада самаралироқ ҳимоя қила олишларига эришиш;
- ҳудудда бандлик даражасини ошириш;
- кластер иштирокчилари ўртасида мутлақо янги тартибдаги одоб-ахлоқ, ишонч ва ҳамкорликка асосланган муносабатларнинг пайдо бўлиши, янги фикрлаш тарзини шаклланиши;
- кластер таркибига кирувчи корхона ва ташкилотларнинг самарадорлиги ва рақобатбардошлигини ошириш;
- ҳудуднинг рақобатбардошлигини ошириш ва иқтисодий равнақини таъминлаш.

РАЗВИТИЕ СОЦИАЛЬНОЙ ИНФРАСТРУКТУРЫ СЛУЖИТ ПОВЫШЕНИЮ БЛАГОСОСТОЯНИЯ НАСЕЛЕНИЯ

Аннотация. Статья посвящается мерам развития социальной инфраструктуры для повышения благосостояния населения. Важно знать, что увеличение видов инфраструктурных услуг и развитие социальной инфраструктуры служат повышению благосостояния населения. В социальной политике государства особенно уделяется внимание на разработки инновационных стратегий управления, направленных на повышение экономической и социальной эффективности.

Ключевые слова: социальная сфера, социальная инфраструктура, благосостояние населения, социальная политика.

Samieva G.T.

Karshi Engineering and Economic Institute

DEVELOPMENT OF SOCIAL INFRASTRUCTURE SERVES INCREASED WELL-BEING OF THE POPULATION

Annotation. The article is devoted to measures for the development of social infrastructure to improve the well-being of the population. It is important to know that increasing the types of infrastructure services and developing social infrastructure serve to improve the well-being of the population. In the social policy of the state, special attention is paid to the development of innovative management strategies aimed at increasing economic and social efficiency.

Key words: social sphere, social infrastructure, welfare of the population, social policy.

В эпоху стремительной урбанизации в мире, наряду с развитием инфраструктуры, вопрос повышения благосостояния сельского населения входит в число самых высоких целей. Увеличение видов инфраструктурных услуг и развитие социальной инфраструктуры в качестве социальной политики государства особое внимание уделяется разработке инновационных стратегий управления, направленных на повышение экономической и социальной эффективности, совершенствованию системы

подготовки квалифицированных кадров, особенно на качественное образование, здравоохранения.

По данным международных организаций, сегодня 1/3 государственного бюджета тратится на развитие социальной сферы в зарубежных странах. США, Япония, Южная Корея, Китай и Европа лидируют в мире по управлению социальной инфраструктурой, ее целевым направлениям развития и содержанию.

В решении глобальных экономических задач важна организация и совершенствование организационно-управленческой структуры социальной инфраструктуры на инновационной основе. В частности, в государственной социальной политике проводятся системные реформы по развитию механизмов эффективного решения проблем сельского населения в сфере образовательной политики, жилищного обеспечения, бытового обслуживания и здравоохранения. В частности, на основании Постановления Президента Республики Узбекистан № PQ-465 от 30.12.2022 «О мерах по развитию социальной и производственной инфраструктуры Республики Узбекистан в 2023-2025 годах» и далее развитие производственной инфраструктуры, а также реализация целевых задач по повышению уровня жизни населения и созданию благоприятной инвестиционной среды для предпринимателей.

Социальные инфраструктуры и вопросы повышения благосостояния населения посредством их развития обсуждаются в исследованиях таких зарубежных учёных, как Ю.Шумпетер, Д.Нортон, П.Друкер, П.Довлинг, М.Портер, А.Райзберг, Р.Каплан, а также в исследованиях учёных стран СНГ А.И.Гаврилова, Н.Н.Некрасова, А.Г.Синельникова, Ю.Т.Тощенко, Т.Н.Арбузовой, С.Г.Важенина, А.Г.Гранберга, А.Д.Ерёменко. Экономисты из Узбекистана С.Гулямов, Н.Юлдашев, Б.Гойибназаров, А.Расулов, Ш.Шодмонов, Ш.Зайнутдинов, А.Шарипов, С.Хамраева, Ш.Юлдашева провели исследования по теоретическим и практическим аспектам развития социальной инфраструктуры.

Создание инфраструктуры неразрывно связано с материальным производством, а ее развитие создает новые виды производства и деятельности в обслуживающих и интегрированных отраслях. Повышение производительности общественного труда в сфере социального производства высвобождает в обществе большой объем ресурсов для оказания услуг населению. Создание инфраструктуры означает развитие производительных сил в обществе, в результате чего внутриэкономическая общность отраслей внутри него определяется выполнением определенных задач.

В структуру социальной инфраструктуры входят:

- Жилищно-коммунальное хозяйство;
- Здравоохранение;

- Образование (обучение и подготовка, переподготовка и повышение квалификации профессиональных кадров)
- Услуги связи и информации;
- Бытовые услуги;
- Социальная поддержка населения;
- Наука и культура;
- Общественные организации;
- Спортивно-оздоровительные и развлекательные объекты;
- Перевозка людей (пассажирский транспорт);
- Охрана и защита общественного порядка;
- Социальное обеспечение и т.д.

Социальная инфраструктура включает в себя социально-бытовую и социально-духовную инфраструктуры. Совершенствование механизма развития социальной инфраструктуры, особенно сельского населения, является одной из задач, которую должна решить социальная политика нашей страны. Объекты социальной инфраструктуры в процессе осуществления своей деятельности включают оказание услуг, а также производство товаров. При этом выдвигаются цели повышения уровня жизни населения и воспроизводства рабочей силы. Для оценки уровня развития социальной инфраструктуры в Республике Узбекистан необходимо учитывать основные задачи социальной политики, направленные на улучшение качества жизни населения, повышение его благосостояния и долголетия, формирование и восстановление здоровое, творчески активное поколение.

В частности, достижение таких положительных результатов, как обеспечение населения качественным жильем, повышение уровня и качества развития социальной инфраструктуры, создание культурной сферы жизнедеятельности человека, улучшение экологических условий жизни и труда, повышение производительности труда, создание гарантий социального обеспечения. защита молодежи и пенсионеров выступают систематическим показателем этой области.

Деятельность здравоохранения, образования, жилищно-коммунального хозяйства, благоустройства, занятости и многих других субъектов сферы услуг, направленная на повышение уровня жизни населения, нашла свое воплощение в исследуемой структуре региональной социальной инфраструктуры. Все они в первую очередь отражены в нормативно-правовых документах, издаваемых правительством нашей страны, особенно в стратегиях.

Социальная политика – это политика, отражающая приоритетные направления государственной политики в области образования, культуры, здравоохранения, пенсионного обеспечения, жилищно-коммунального хозяйства, физического воспитания и спорта, бытовой и социальной

защиты, гарантирующая совокупность всех условий жизнедеятельности человека, материальные и духовные блага.

ФОРМАЦЕВТИКА ТАРМОГИ СУБЪЕКТЛАРИДА ДОРИ-ДАРМОН ВОСИТАЛАРИНИНГ НАЗАРИЙ АСОСЛАРИ

Annotatsiya. Mазкур мақолада дори-дармон воситалари назарий асослари ва уларни ишлаб – чиқариш, ҳамда уларни ишлаб – чиқаришдаги камчиликлар ва бартараф этиш йулларини тўғрисида қисқача тўхталиб ўтилган.

Калит сўзлар: Формацевтика, дори-дармон воситалари, ишлаб – чиқариш, технологиялар, 2022, 2023 ва 2024 йилларда, ишлаш, етказиб бериш, сақлаш, ташиш ва реализация қилиш.

THEORETICAL BASIS OF DRUGS IN SUBJECTS OF THE PHARMACEUTICAL NETWORK

Abstract. This article briefly discusses the theoretical basis of medicines and their production, as well as the shortcomings in their production and ways to eliminate them.

Keywords: pharmaceuticals, pharmaceuticals, production, technologies, in 2022, 2023 and 2024, operation, delivery, storage, transportation and realization.

Ўзбекистон Республикаси Президентининг “Ўзбекистон Республикасининг «2022 йил учун Ўзбекистон Республикасининг давлат бюджети тўғрисида»ги Қонуни ижросини таъминлаш чора-тадбирлари тўғрисида”ги Қарорида келтирилган “2022 – 2024 йиллар учун биринчи даражали бюджет маблағларини тақсимловчиларнинг бюджет харажатлари ва ривожлантириш дастурларининг мақсадли индикаторлари”да “Қишлоқ хўжалигини ислоҳ қилиш, хусусан соҳада давлат бошқаруви тизимини такомиллаштириш, бозор муносабатларини кенг жорий қилиш, қишлоқ хўжалиги маҳсулотларини етиштирувчи, қайта ишловчи ва сотувчи субъектлар ўртасидаги муносабатларнинг ҳуқуқий асосини мустаҳкамлаш, соҳага инвестицияларни жалб қилиш, ресурс тежамкор технологияларни жорий этиш ҳамда қишлоқ хўжалиги маҳсулотлари ишлаб чиқарувчиларни

замонавий техникалар билан таъминлаш” бўйича стратегик мақсад белгилаб берилган. Ушбу стратегик мақсад бўйича қишлоқ хўжалиги ва дори-дармон воситалари экспорти ҳажмининг ошиши бўйича прогноз 2022, 2023 ва 2024 йилларда мос равишда 1,4, 1,6 ва 2,3 млрд АҚШ долларига етказиш вазифаси белгиланган²¹⁹.

Мамлакатимиз корхоналарида бу каби долзарб муаммо ва вазифаларни ҳал қилиш, бугунги кунда, тайёр маҳсулотлар ҳисобининг нафақат амалий, балки назарий масалаларини ҳам такомиллаштиришга эҳтиёж сезади.

Тадқиқот давомида норматив-ҳуқуқий ҳужжатлар, халқаро ва миллий стандартлар ҳамда хорижий ва маҳаллий адабиётлар ўрганиб чиқилганда тайёр маҳсулотлар, жумладан дори-дармон воситаларимаҳсулотлари атамаларига турлича ёндашувлар қилиниб таъриф ва тавсифлар берилганлигига гувоҳ бўлиш мумкин.

Ўзбекистон Республикасининг “Дори-дармон воситалари маҳсулотининг сифати ва хавфсизлиги тўғрисида”ги Қонунида дори-дармон воситалари маҳсулотларига доир қуйидаги таърифлар келтирилган:

озик-овқатлар – дори-дармон воситалари хом ашёсидан тайёрланган ҳамда натурал ёки қайта ишланган ҳолида истеъмол қилинадиган маҳсулотлар;

дори-дармон воситаларимаҳсулоти – дори-дармон воситаларихом ашёси, (шу жумладан этил спирти), озиқ-овқатлар ва уларнинг таркибий қисмлари, дори-дармон воситаларихом ашёси ва озиқ-овқатларга тегиб турадиган моддалар, материаллар, ёрдамчи ва қадоклаш материаллари ҳамда улардан тайёрланган буюмлар бирга;

болаларбоп дори-дармон воситалари – болалар организмнинг (уч ёшгача) физиологик хусусиятларига жавоб берадиган махсус дори-дармон воситалари;

дори-дармон воситалари маҳсулоти муомаласи – дори-дармон воситаларимаҳсулотини ишлаб чиқариш, тайёрлаш, харид қилиш, қайта ишлаш, етказиб бериш, сақлаш, ташиш ва реализация қилиш билан боғлиқ фаолият;

дори-дармон воситалари сифати – дори-дармон воситалари истеъмол хоссаларини белгилаб берадиган ва унинг одамлар ҳаёти ва соғлиғи учун хавфсизлигини таъминлайдиган мезонлар мажмуи;

дори-дармон воситалари хом ашёси – озиқ-овқатлар ишлаб чиқариш учун фойдаланиладиган ўсимлик, ҳайвонот, микробиология, шунингдек минераллар объектлари, сув.²²⁰

²¹⁹ Ўзбекистон Республикаси Президентининг “Ўзбекистон Республикасининг «2022 йил учун Ўзбекистон Республикасининг давлат бюджети тўғрисида»ги Қонуни ижросини таъминлаш чора-тадбирлари тўғрисида”ги Қарори. 2021 йил 30 декабрь. ПҚ-73.

²²⁰ Ўзбекистон Республикасининг “Озиқ-овқат маҳсулотининг сифати ва хавфсизлиги тўғрисида”ги Қонуни. 1997 йил 30 август, 483-И сон.

2-сон (IAS) “Захиралар” номли бухгалтерия ҳисобининг халқаро стандартида товар-моддий захиралар атамасига қуйидагича таъриф келтирилган:

“Товар-моддий захиралар – бу одатдаги фаолият доирасида сотиш учун мўлжалланган, бундай сотиш учун ишлаб чиқариш жараёнида бўлган, ёки ишлаб чиқариш жараёнида ёки хизматлар кўрсатилишида фойдаланилиши кўзланган хом ашё ва материаллар кўринишидаги активлар”²²¹.

Олиб борилган тадқиқотлар бир қатор хорижий олимларнинг ҳам бу борадаги фикр ва мулоҳазаларини ҳамда берган таърифларини ўрганиб чиқишни тақозо этди.

Россиялик олим С.Н.Поленованинг таъкидлашича, “Тайёр маҳсулот – бу корхонада ишлаб чиқариш жараёни тўлиқ тугалланган, стандарт талабларига ва техник шартларига жавоб берадиган, техник назорат хизмати томонидан қабул қилинган, қабул қилиш-топшириш ҳужжатлари билан расмийлаштирилган ва тайёр маҳсулотлар омборига топширилган маҳсулот”²²².

Ўзбекистон Республикаси 4-сон бухгалтерия ҳисобининг миллий стандартида қуйидагича таърифлар келтирилган:

Товар-моддий захиралар – фаолият юритиш жараёнида кейинчалик сотиш мақсадида сақлаб туриладиган ва ишлаб чиқариш жараёнида бўлган, шунингдек маҳсулот ишлаб чиқариш, ишларни бажариш ёки хизматлар кўрсатиш жараёнида ёхуд маъмурий ва ижтимоий-маданий вазифаларни амалга ошириш учун фойдаланиладиган моддий активлар. Ташкилотда тайёрланган тайёр маҳсулот (реализация қилиш учун мўлжалланган ва шартномада ёки қонунчилик ҳужжатларида белгиланган ҳолларда бошқа ҳужжатларнинг талабларида назарда тутилган техник ва сифат тавсифларига мувофиқ келадиган ишлов берилиши (бутланиши) тугалланган актив).²²³

Маҳсулотлар, шу жумладан тайёр маҳсулотлар бўйича тадқиқот ишлари олиб борилганда, албатта мамлакатимиз олимларининг илмий изланишларини ҳам алоҳида ҳисобга олишимиз зарур.

Мамлакатимизнинг иқтисодчи олимларидан К.С.Исмайлов ва А.Б.Утемуратовларнинг фикрича, “Тайёр маҳсулот - бу ишлаб чиқариш жараёнининг натижаси. Ишлаб чиқариш корхоналарида меҳнат маҳсулотига ҳамма ишлаб чиқарилган тайёр маҳсулот киради”²²⁴.

²²¹2-сон БҲХС (IAS) “Захиралар (Inventories)”. <https://www.ifrs.org/content/dam/ifrs/publications/pdf-standards/english/2022/issued/part-a/ias-2-inventories.pdf>

²²³4-сон БҲМС “Товар моддий захиралар” // АВ томонидан 30.06.2020 й. 3259-сон билан рўйхатга олинган. <https://lex.uz/docs/4890446>

²²⁴ Исмайлов К.С., Утемуратов А.Б. Молиявий ҳисоб. Маъруза матни. -Т.: Иқтисод-молия. 2011. -356 б.

Тадқиқотлар натижаси турли ахборот манбаларида “маҳсулотлар”, “тайёр маҳсулотлар” тушунчаларига берилган таъриф ва тавсифларни ҳам ўрганиб чиқишни тақозо этди.

Интернет манбаларида соҳага оид луғатларда ушбу категорияларга оид қуйидаги таъриф келтирилган:

Маҳсулот – иқтисодий фаолиятнинг ашёлар ва хизматларда мужассам этилган натижаси. Унинг моддий-буюм шакли моддий маҳсулот кўринишига эга.²²⁵

Тайёр маҳсулот (Finished Goods) – ишлаб чиқариш жараёнидан ўтган ёки қайта сотиш мақсадида сотиб олинган ҳамда компаниянинг эгалигида бўлган, бироқ ҳали сотилмаган товарлар.²²⁶ Ушбу таърифда тайёр маҳсулот, вақтинча корхонанинг тасарруфида бўлган ва сотишга тайёр ҳолатда турган маҳсулот, деб ёндашилган.

Тайёр маҳсулотлар (Finished Goods) – ишлаб чиқариш корхоналарига хос бўлган инвентар тоифаси. Улар ишлаб чиқариш жараёнини тугатган, лекин ҳали сотилмаган ёки сотувчиларга тарқатилмаган маҳсулотдир.²²⁷

Тайёр маҳсулотлар – бу технологик жараёнларнинг барча босқичларини ўтган ва белгиланган талабларга (буюртмачи, давлат стандартлари, техник шартлар) жавоб берадиган маҳсулотлар. У турлари, навлари ва сақлаш жойлари бўйича реал ва таннарх кўрсаткичлари бўйича ҳисобга олинади. Қабул қилинган ҳисоб сиёсатига қараб, тайёр маҳсулотлар ҳақиқий ишлаб чиқариш таннархида ёки ҳисоб-китоб баҳосида ҳисобга олиниши мумкин.²²⁸

Тайёр маҳсулот – корхоналарда ишлаб чиқариш жараёнининг пировард маҳсулоти. Технологик ишлов беришнинг барча босқичларидан утган, тасдиқланган стандартлар ва техник шартларга мувофиқ келадиган (унинг сифатини тасдиқлайдиган сертификат ёки бошқа хужжат билан таъминланган), техник назорат булими қабул қилган ва оморга топширилган ёки харидорга юклаб жунатилган маҳсулот тайёр маҳсулот деб ҳисобланади.²²⁹

Тайёр маҳсулот (Finished goods) - бу ишлаб чиқаришнинг тўлиқ цикли давомида ишлаб чиқарилган ёки тайёр ҳолатда сотиб олинган, лекин харидорларга ҳали сотилмаган маҳсулот ёки товарлар.²³⁰

Тайёр маҳсулотлар – қайта ишлаш йўли билан тўлиқ тайёр бўлган, амалдаги стандартлар ва техник шартларга мос келадиган, ташкилот ва буюртмачи (харидор) оморида қабул қилинган маҳсулотлар ва ярим тайёр маҳсулотлар.²³¹

²²⁵ <https://qomus.info/encyclopedia/cat-m/mahsulot-uz/>

²²⁶ <https://www.wikiaccounting.com/accounting-finished-good/>

²²⁷ <https://www.indeed.com/career-advice/career-development/finished-goods>

²²⁸ https://buxgalter.uz/publish/doc/text146642_uchet_gotovoy_produkcii

²²⁹ <http://hozir.org/tajer-masulot-isobi-tajer-mahsulot.html>

²³⁰ <https://www.audit-it.ru/ifrs/terms/items/finished-goods.html>

²³¹ https://www.audit-it.ru/terms/accounting/gotovaya_produktsiya.html

Тайёр маҳсулот (ТМ) – бу товар қайсики, компания томонидан келгусида сотиш мақсадида ишлаб чиқарилади.²³²

Компания ёки яқка тартибдаги тадбиркор бозорда нима билан чиқса тайёр маҳсулот дейилади. Унга нафақат товар ёки маҳсулот, балки хизмат, иш ва ҳуқуқлар ҳам таълуқлидир. Тадбиркор тайёр маҳсулотлар ишлаб чиқариш ҳисобини юритмасдан туриб, ўзининг бизнесини назорат ва самарали бошқара олмайди.²³³

Юқорида келтирилган хорижий ва маҳаллий олимлар томонидан берилган ҳамда халқаро ва миллий стандартлар, шунингдек ахборот манбаларида келтирилган таърифлар муҳим илмий амалий аҳамият касб этиб, тайёр маҳсулотларнинг муҳим жабҳаларини очиб беради. Лекин, ушбу таърифлардан кўриниб турибдики, маҳсулотлар, шу жумладан тайёр маҳсулотларга доир уларнинг барча хусусиятларини ўзида мужассамлаштирган ягона таъриф мавжуд эмас. Уларда маҳсулот ва тайёр маҳсулотларнинг барча жиҳатларини ўзида акс эттирадиган тавсифлар келтирилган, деб бўлмайди.

URGENT ISSUES IN THE ORGANIZATION AND TASKS OF DRUG ACCOUNTING, DEVELOPMENT OF ACCOUNTING POLICIES

Abstract. In this article, the stages of efficient organization of production in pharmaceutical industry enterprises and through them the stages of production in the accounting system of enterprises were presented. Also, in the article, a model form of accounting policy was developed in drug manufacturing enterprises, which, in turn, includes cost control, increasing net profit indicators, use of information, and recommendations on increasing the economic efficiency of enterprises.

Key words: accounting policy, industry, production, main production, pharmaceuticals, financial statements.

Дунё миқёсида ишлаб чиқариш ва савдо фаолиятининг ўрни бекиёс Жаҳондаги бизнес субъектларининг асосий мақсади максимал даражада фойда олишдир.

Ўзбекистон Республикаси Президентининг 2023-й 11-сентябрдаги ПФ-58-сон “Ўзбекистон-2030 стратегияси тўғрисида”ги Фармонида

фармацевтика соҳасида дори воситаларига эҳтиёжни 70 фоизга ички ишлаб чиқарувчилар ҳисобига қоплаш²³⁴ Фармацевтика саноатини янада жадал ривожлантиришга ундайди. Жаҳонда глобал рақобатнинг кучайиши шароитида корхоналарда компанияларда ишлаб чиқариш ва сотиш ҳисобини такомиллаштиришга оид кўплаб илмий-тадқиқот ишлари амалга оширилмоқда. Кейинги йилларда мамлакатларда МҲХС жорий қилиш орқали Халқаро стандартларга ўтаётган мамлакатларда ушбу стандартлар қоидаларни қўллашда маълум муаммолар юзага келмоқда. Айниқса корхона жорий активларини захираларини ҳаққоний баҳолаш, фаол бозорда ҳаққоний баҳони шакллантириш, молиявий инструменларни баҳолаш ва уларнинг молиявий натижаларга таъсири аниқлашда услубий тартиб-қоидалар етарли эмас. Ушбу муаммолар МҲХСларини ривожланаётган мамлакатларда фаол жорий қилишда тўсқинлик қилмоқда.

Бугунги кунда, мамлакатимизда фаолият кўрсатаётган фармацевтика саноати корхоналарининг фаолияти етарли даражада ривожланган деб бшлмайди, аҳолининг ушбу маҳсулотларга бўлган эҳтиёжини тўлиқроқ қондириш мақсадида ишлаб чиқариш корхоналарига етарлича шар-шароитлар ва қулай имкониятлар очиб берилишини таққазо этади. Шундай бўлсада, ушбу тармоқ корхоналарида ишлаб чиқариш жараёнларини ташкил этиш, маҳсулот таннархини аниқлаш, уларни ҳисоб ва ҳисоботда акс эттириш бўйича турли хил ёндашувлар мавжуд бўлиб, ушбу тартиб-қоидалар корхонанинг ҳисоб сиёсатида акс эттирилиши лозим. Бугунги кунда, фармацевтика саноати корхоналарида ҳисоб сиёсатини ишлаб чиқишда ишлаб чиқариш жараёнларини тўғри ташкил этиш, бевосита ва билвосита харажатларни маҳсулот таннархига тўғри олиб бориш, уларни ҳисоб ва молиявий ҳисобот шаклларида шаффоф акс эттириш бўйича услубий тартиблар ишлаб чиқиш долзарб вазифалардан ҳисобланади.

Даставвал, “Ҳисоб сиёсати” ўзи нима, меъёрий-ҳуқуқий ҳужжатлар ва иқтисодий адабиётларда у бўйича қандай таъриф ва тавсифлар мавжуд, корхоналарда бухгалтерия ҳисобини ташкил этишда унинг аҳамияти қай даражада буни қуйидаги олимлар томонидан ва халқаро стнадартларда келтирилган таърифлардан билишимиз мумкин бўлади.

Молиявий ҳисоботнинг халқаро стандартларида “Ҳисоб сиёсати” атамасига қуйидагича таъриф берилган: “Ҳисоб сиёсати – бу тадбиркорлик субъекти томонидан молиявий ҳисоботларни тайёрлаш ва тақдим этишда қўлланиладиган муайян принциплар, усуллар, одатлар, қоидалар ва амалиётлар”²³⁵.

Халқаро стандартда берилган ушбу таърифдан кўриш мумкинки, хўжалик юритувчи субъектлар томонидан ишлаб чиқиладиган ушбу ҳужжатдан асосий мақсад бу молиявий ҳисоботларни тайёрлаш ва уларни тақдим этишга қўмаклашиш бўлиб ҳисобланади.

²³⁴ “Ўзбекистон-2030” Стратегияси тўғрисидаги 11.09.2023й ПФ-158-сон <https://lex.uz/ru/docs/6600413>

²³⁵ 8-сон БҲХС (IAS) “Ҳисоб сиёсати, ҳисоб баҳоларидаги ўзгаришлар ва хатолар”.

1-сон “Ҳисоб сиёсати ва молиявий ҳисобот” БҲМСда эса, қуйидагича тавсифланган: “Ҳисоб сиёсати деганда, хўжалик юритувчи субъектнинг раҳбари бухгалтерия ҳисобини юритиш ва молиявий ҳисобот тузиш учун қабул қиладиган усулларнинг йиғмаси тушунилади, молиявий ҳисобот шу усулларга мувофиқ ва уларнинг қоидалари ва асосларига мувофиқ равишда тузилади”²³⁶.

Республикамиз иқтисодчи олимларидан профессор К.Б.Уразов ва М.Э.Пўлатовлар²³⁷ томонидан ҳисоб сиёсатига қуйидагича таъриф берилган: “Ҳисоб сиёсати – корхона раҳбари томонидан бухгалтерия ҳисобини юритиш ва молиявий ҳисоботни тузиш бўйича қабул қилинган тамойиллар ва тартиблар мажмуаси”. Олимлар томонидан берилган ушбу таърифда ҳисоб сиёсатининг корхонанинг бухгалтерия ҳисобини юритиш бўйича вазифаси ҳисобга олинган бўлсада, бироқ ҳисоб сиёсатининг хўжалик юритувчи субъектларда бухгалтерия ҳисобини ташкил этиш бўйича вазифаси ҳисобга олинмаган.

“Ҳисоб сиёсати деганда, бухгалтерия ҳисоби субъекти раҳбари томонидан бухгалтерия ҳисоби ва ҳисоботини ташкил этишда йўл харитаси, шунингдек молиявий ҳисоботни тузиш ва тақдим этиш бўйича қабул қилинган усуллар ва принципларга тўлиқ амал қилган ҳолда ўзининг ҳисоб тизимини белгилаш тушунилади”.

Олиб борилган тадқиқотлар давомида Республикамизда фаолият юритиб келаётган фармацевтика саноати корхоналарида ҳисоб сиёсати ва унда ёритиладиган ахборотлар билан танишиб чиқдик.

Фармацевтика саноати корхоналарида ҳисоб сиёсати корхона раҳбарининг буйруғи асосида ҳар бир ҳисобот йилининг бошида ишлаб чиқилади ва тасдиқланади. Ушбу жараён, яъни корхона раҳбарининг тегишли ташкилий-фармойиш ҳужжатлари бўйича расмийлаштирилиши 1-сон БҲМСнинг 55-бандида кўзда тутилган бўлсада, бироқ ушбу банднинг иккинчи хатбошисида ушбу ҳужжат расмийлаштирилган йилдан кейинги йилнинг 1 январидан бошлаб қўлланилиши ҳамда йил давомида ўзгартирилишига йўл қўйилмаслиги (56-бандида кўрсатилган сабаблардан ташқари) кўрсатилган. Демак, бизнинг фикримизча, бухгалтерия ҳисоби миллий стандартларида келтирилган ушбу жиҳатлар айрим фармацевтика саноати корхоналарида ҳисоб сиёсатини тузишда ҳисобга олинмаган.

фармацевтика саноати корхоналарида бухгалтерия ҳисобини юритиш тартиби ҳисоб сиёсатида келтирилган бўлиб, ушбу корхоналарининг барчаси автоматлаштирилган дастурларда, жумладан “1С: Предприятие” дастурининг турли хил версиялари ёрдамида ўзларининг ҳисоб ва ҳисоботларини юритадилар.

²³⁶ 1-сон БҲМС “Ҳисоб сиёсати ва молиявий ҳисобот” // АВ томонидан 14.08.1998 й. 474-сон билан рўйхатга олинган.

²³⁷ Уразов К.Б., Пўлатов М.Э. Бухгалтерия ҳисоби. Дарслик. –Т.: “Fan va texnologiyalar nashriyot-matbaa uyi” -2021, 560 бет.

Юқоридаги тадқиқот натижаларидан кўриш мумкинки, бугунги кунда, мамлакатимизда фаолият кўрсатаётган турли мулкчилик шаклидаги фармацевтика маҳсулотлари ишлаб чиқариш фаолияти билан шуғулланаётган корхоналар томонидан ишлаб чиқиладиган ҳисоб сиёсатини уларнинг ишлаб чиқариш жараёнлари хусусиятларидан келиб чиққан ҳолда такомиллаштиришнинг зарурияти мавжуд. Шу боис, тадқиқот ишимизда, дори-дармон воситаларини ишлаб чиқувчи корхоналарда маҳсулотлари ҳисобини юритиш бўйича, халқаро стандартлар талабларига жавоб берадиган “фармацевтика саноати корхоналарида бухгалтерия ҳисобини юритиш бўйича Ҳисоб сиёсати” ишлаб чиқишни лозим, деб топдик.

Ушбу ҳисоб сиёсатини қуйидаги қисмларга ажратган ҳолда, ахборотларнинг ёритилишини тавсия этдик:

I блок. Умумий тавсифи.

1-қисм. Фармацевтика саноати корхонасининг қайси ишлаб чиқариш тармоғига киришини белгилаб олиш:

- ❖ дори-дармон воситаларини чиқариш тармоқлари;
- ❖ яроқлилиқ муддати яқинлашган маҳсулотларини қайта ишлаб чиқариш тармоқлари.

2-қисм. Корхонада ишлаб чиқариладиган дори-дармон воситаларининг турларини аниқлаш:

- ❖ таблетка дори воситалари ишлаб чиқариш тармоқлари маҳсулотлари;
- ❖ дори-дармон маҳсулотларини қайта ишлаб чиқариш тармоқлари маҳсулотлари.

3-қисм. Ишлаб чиқариш технологиясининг қайси хом ашё турларини ишлаб чиқаришга мўлжалланганлигини кўрсатиш:

- ❖ полипропилен гранула хом ашёси;
- ❖ доривор ўсимлик хом-ашёлари;
- ❖ табиий ва кимёвий моддалар;
- ❖ бошқалар.

II блок. Ишлаб чиқариш тузилмаси.

1-қисм. Ишлаб чиқариш бўлимлари ва уларда ишлаб чиқариладиган дори-дармон воситаларининг турлари:

- ❖ асосий ишлаб чиқариш ин-балк бўлими – таблеткалар турли-хил,
- ❖ преформа –преформа ишлаб чиқариш;
- ❖ ички қисмларни ишлаб чиқариш бўлими – еврокалпачики
- ❖ Навестка бўлими – флакон учун навестка;
- ❖ қадоқлаш бўлими – қадоқланган дори-дармон воситалари.

2-қисм. Корхонанинг ёрдамчи ишлаб чиқариш бўлимларининг таркибини аниқлаш:

- ❖ групповая этикетка;
- ❖ гранула чиқиндилари;

3-қисм. Умумишлаб чиқариш бўлимларининг таркибини аниқлаш:

- ❖ таъминот бўлими;
- ❖ иссиқлик таъминоти бўлими;
- ❖ ёнғинга қарши курашиш бўлими;
- ❖ қоровулхона;
- ❖ тозалик бўйича бўлим;
- ❖ бошқалар.

III блок. Ишлаб чиқариш жараёнларини баҳолаш.

1-қисм. Товар-моддий захираларини баҳолаш усуллари:

- ❖ ФИФО;
- ❖ АВЭКО.

2-қисм. Умумишлаб чиқариш харажатларини тақсимлаш усуллари:

- ❖ ишлаб чиқариш ҳажмига нисбатан;
- ❖ ишлаб чиқаришнинг режали таннархига нисбатан;
- ❖ ходимларнинг иш ҳақиға нисбатан;
- ❖ хом ашё ва материал харажатларига нисбатан;
- ❖ олинган даромадга нисбатан;
- ❖ бевосита харажатларга нисбатан;
- ❖ асосий воситалар амортизациясига нисбатан;
- ❖ бир турдаги асосий воситалар бўйича ижара ҳақиға нисбатан;
- ❖ бошқа белгиларга нисбатан.

IV блок. Молиявий ҳисоботда ёритиладиган ахборотлар.

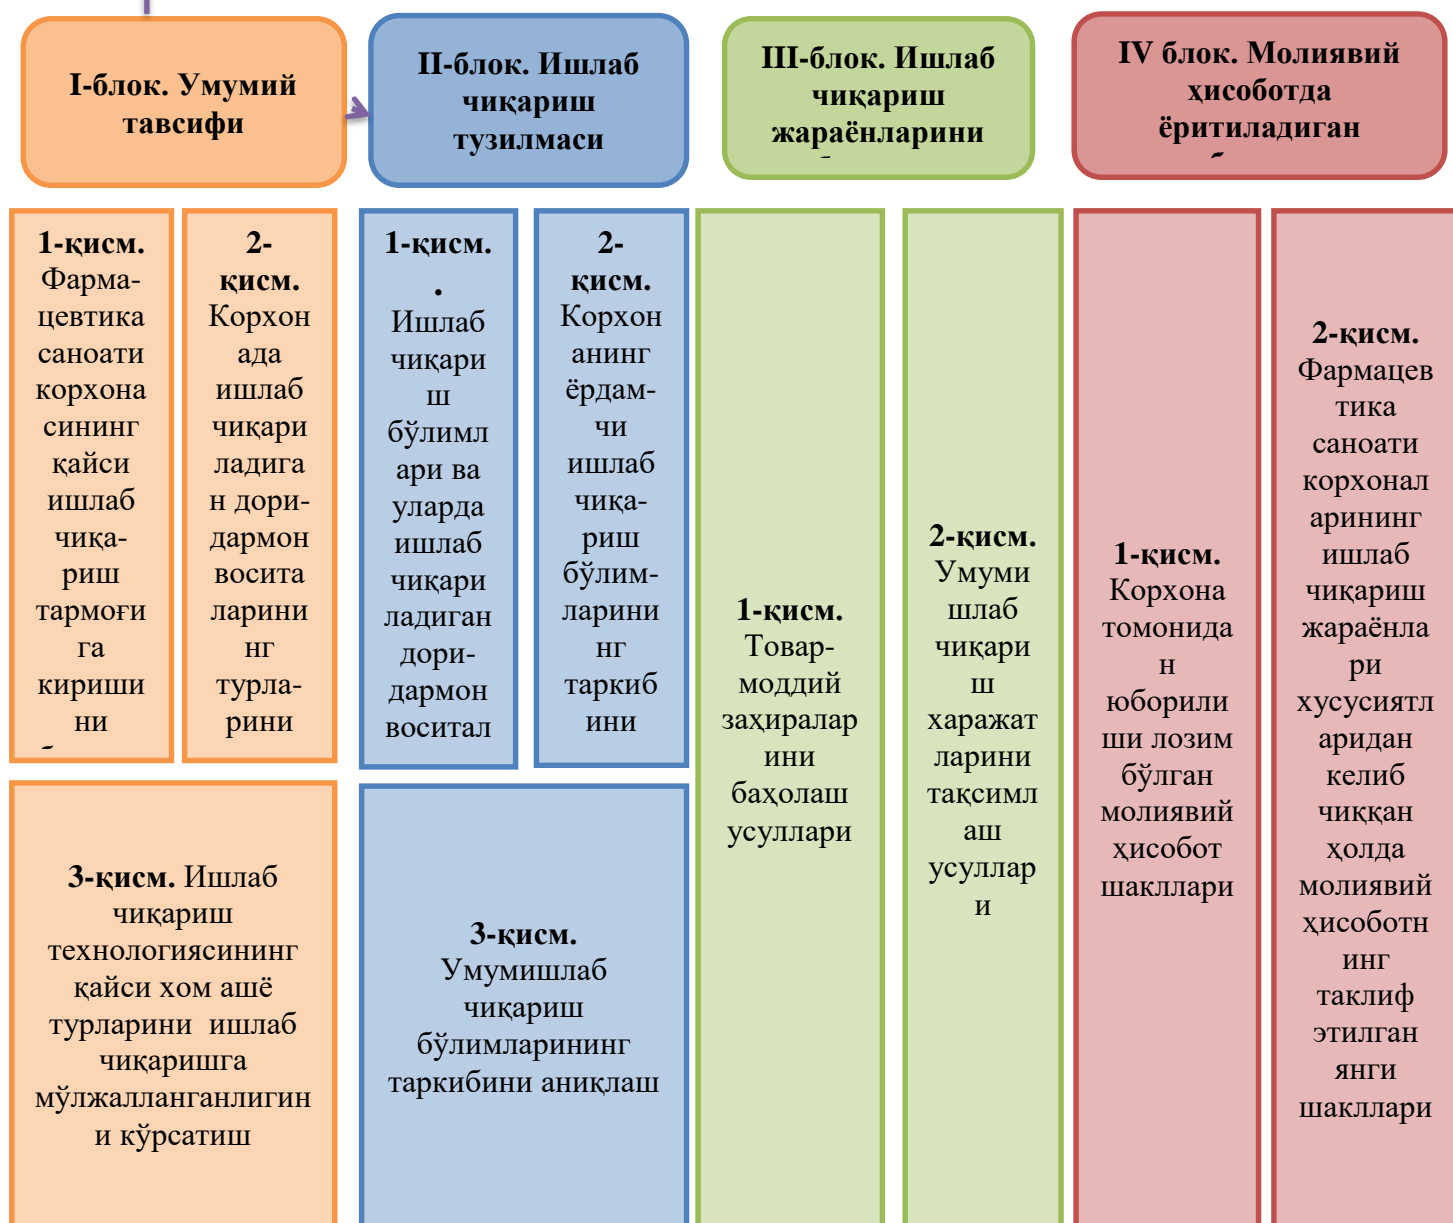

1-қисм. Корхона томонидан юборилиши лозим бўлган молиявий ҳисобот шакллари:

- ❖ бухгалтерия баланси;
- ❖ молиявий натижалар тўғрисидаги ҳисобот;
- ❖ пул-оқимлари ҳақидаги ҳисобот;
- ❖ хусусий камитал тўғрисидаги ҳисобот;
- ❖ изоҳлар, ҳисоб-китоблар ва тушунтиришлар.

2-қисм. Фармацевтика саноати корхоналарининг ишлаб чиқариш жараёнлари хусусиятларидан келиб чиққан ҳолда молиявий ҳисоботнинг таклиф этилган янги шакллари.

Юқоридаги ташкилий тузулмадан келиб чиқиб фармацевтика саноати корхоналари учун тавсия этилган “Ҳисоб сиёсати”ни қуйидаги расм орқали ифодаладик1.1-расм)

ҲИСОБ СИЁСАТИНИНГ ТАРКИБИ

1.1-расм. Фармацевтика саноати корхоналарида бухгалтерия ҳисобини юритиш бўйича Ҳисоб сиёсати²³⁸ хулоса

²³⁸ Тадқиқотлар асосида муаллиф ишланмаси.

Фармацевтика саноати корхоналарида ишлаб чиқариш жараёнлари ҳисобини такомиллаштириш бўйича қуйидаги хулоса ва таклифлар ишлаб чиқилди.

1. Олиб борилган тадқиқотлар натижасида фармацевтика саноати корхоналаридаги материаллар асосий ва ёрдамчи материалларга ажратилди. Биз томонимиздан тавсия этилган ушбу таснифлаш фармацевтика маҳсулотлари ишлаб чиқариш корхоналарида бошқарув қарорларини аниқ қабул қилишга, ишлаб чиқариш жараёнларини калькуляция қилишга ва маҳсулот таннархини аниқлашга хизмат қилади, деб ҳисоблаймиз.

2. Шунингдек, дори-дармон воситаларини ишлаб чиқувчи корхоналар томонидан хом ашё ва материаллар ҳисоби таҳлил қилиниб улар бўйича бухгалтерия операциялари ҳамда ушбу операция натижаларини бухгалтерия ёзувларида акс эттириш масалалари тадқиқ қилинди.

3. Тадқиқотлар давомида “Фармацевтика саноати корхоналарида бухгалтерия ҳисобини юритиш бўйича Ҳисоб сиёсати” ишлаб чиқилди ва унинг таркибий қисмлари келтирилди.

ИННОВАЦИОННЫЕ ПОДХОДЫ В ОПТИМИЗАЦИИ СИСТЕМ УПРАВЛЕНИЯ СКЛАДАМИ И ЗАПАСАМИ ПРОМЫШЛЕННОГО ПРЕДПРИЯТИЯ

Аннотация. Данная статья рассматривает применение инновационных подходов в оптимизации систем управления складами и запасами на промышленных предприятиях. Склады и запасы играют важную роль в эффективной работе предприятий, и их оптимизация является ключевым фактором для повышения производительности и снижения издержек. Статья может быть полезной для менеджеров, специалистов по логистике и управлению запасами, а также для исследователей, интересующихся областью оптимизации систем управления складами и запасами.

Ключевые слова: инновационные подходы, оптимизация, системы управления складами, управление запасами, автоматическая идентификация, складские роботы, аналитика данных, облачные технологии, интернет вещей, цепи поставок.

INNOVATIVE APPROACHES IN OPTIMIZING WAREHOUSE AND INVENTORY MANAGEMENT SYSTEMS OF AN INDUSTRIAL ENTERPRISE

Abstract. This article examines the application of innovative approaches in optimizing warehouse and inventory management systems at industrial enterprises. Warehouses and inventories play an important role in the efficient operation of enterprises, and their optimization is a key factor for increasing productivity and reducing costs. The article may be useful for managers, logistics and inventory management specialists, as well as for researchers interested in optimizing warehouse and inventory management systems.

Keywords: innovative approaches, optimization, warehouse management systems, inventory management, automatic identification, warehouse robots, data analytics, cloud technologies, Internet of things, supply chains.

Промышленные предприятия сталкиваются с уникальными вызовами в управлении своими складами и запасами. Оптимизация этих процессов является критической задачей для обеспечения эффективной работы и конкурентоспособности предприятия. В настоящее время существует ряд инновационных подходов в оптимизации систем управления складами и запасами, которые помогают промышленным достичь высокой эффективности.

Управление запасами и складскими операциями также имеет прямое влияние и на удовлетворение потребностей клиентов. Поэтому внедрение инновационных подходов в оптимизацию систем управления складами и запасами становится крайне актуальным. В данной статье рассмотрим несколько таких подходов и их роль в промышленном управлении запасами и складскими операциями.

1. Использование систем автоматической идентификации.

Системы автоматической идентификации, такие как штрих-коды, RFID и QR-коды, играют ключевую роль в современных информационных системах управления складами и запасами промышленных предприятий. Эти технологии позволяют быстро и точно идентифицировать товары и отслеживать их перемещение на складе. Системы автоматической идентификации также упрощают процессы инвентаризации и сокращают время, затрачиваемое на поиск и подсчет товаров. Благодаря использованию этих инновационных технологий предприятия могут повысить точность учета запасов, сократить ошибки и улучшить оперативность выполнения заказов.

Одна из возможных систем автоматической идентификации – технология RFID (радиочастотная идентификация). Преимущества данной технологии:

- повышение эффективности складского учета: метки RFID позволяют быстро и точно считать информацию о товарах, что сокращает время на инвентаризацию и повышает точность данных;
- улучшение контроля за перемещением товаров: RFID-метки позволяют отследить перемещение товара с момента его поступления на склад до момента его отгрузки заказчику;
- снижение вероятности ошибок при комплектации заказов: метки RFID исключают ошибки, связанные с «человеческим фактором», и позволяют автоматизировать процесс комплектации заказов;
- минимизация потерь от краж и хищений: RFID-метки обеспечивают контроль за перемещением товара на всех этапах логистической цепочки, что позволяет быстро обнаружить факт хищения [1].

2. Применение систем управления складскими роботами.

Системы управления складскими роботами являются одним из самых передовых инновационных подходов в оптимизации систем управления складами и запасами промышленных предприятий. Роботы могут выполнять различные задачи на складе, такие как перемещение товаров, упаковка, сортировка и погрузка. Они работают автономно или под контролем центральной системы управления. Применение складских роботов позволяет сократить ручной труд, снизить вероятность ошибок и улучшить производительность операций. Они также способны работать в непрерывном режиме, что повышает эффективность работы склада.

3. Внедрение систем управления запасами на основе аналитики данных.

Аналитика данных играет все более важную роль в управлении запасами промышленных предприятий. Использование алгоритмов машинного обучения и анализа данных позволяет прогнозировать спрос на товары, оптимизировать уровни запасов и определить оптимальные точки пополнения запасов. Аналитика данных также помогает выявить тренды и паттерны в спросе, что позволяет предприятиям принимать более обоснованные решения по управлению запасами. Внедрение систем управления запасами на основе аналитики данных позволяет предприятиям сократить расходы, улучшить обслуживание клиентов и снизить риск избыточных или недостаточных запасов.

4. Использование облачных технологий и интернета вещей (IoT).

Облачные технологии и интернет вещей (IoT) также являются инновационными подходами в оптимизации систем управления складами и запасами. Использование облачных платформ позволяет предприятиям хранить и обрабатывать большие объемы данных, а также предоставлять доступ к информации из любой точки мира. С помощью IoT-устройств, таких как датчики и умные метки, можно отслеживать условия хранения товаров (температуру, влажность и т. д.) и получать реальные и точные данные о состоянии запасов. Это позволяет предприятиям быстро реагировать на изменения и предотвращать потерю или порчу товаров.

5. Развитие систем управления цепями поставок (Supply Chain Management).

Системы управления цепями поставок становятся все более интегрированными и инновационными. Они связывают информационные системы предприятий с поставщиками, производством и распределением товаров. Использование современных технологий и инструментов, таких как системы прогнозирования спроса, планирование ресурсов предприятия (ERP) и электронная коммерция, позволяет оптимизировать всю цепь поставок, от заказа до доставки. Это позволяет предприятиям сократить время выполнения заказов, снизить расходы и повысить уровень обслуживания клиентов [2, с.58].

Инновационные подходы в оптимизации систем управления складами и запасами играют ключевую роль в операциях промышленных предприятий. Использование систем автоматической идентификации, складских роботов, аналитики данных, облачных технологий, IoT и систем управления цепями поставок позволяет предприятиям повысить эффективность и конкурентоспособность. Эти инновационные подходы помогают сократить расходы, улучшить обслуживание клиентов, снизить риск ошибок и оптимизировать уровни запасов. Применение этих подходов является важным шагом для успешного управления складами и запасами на промышленных предприятиях.

FEATURES OF BIOLOGY AND AGROTECHNOLOGY GROWING
ECHINACEA PURPLE (*ECHINACEA PURPUREA (L.) MOENCH*)

*Annotation. The article discusses the features of biology and agricultural technology for growing purple coneflower (*Echinacea purpurea (L.) Moench*). *Echinacea* is a medicinal, fodder and melliferous plant; it grows in well-drained, nutrient-rich soils and requires moderate watering. The use of insecticides and mechanical protection measures are effective in controlling plant pests.*

Key words: stem, leaves, flowers, mineral fertilizers, soil, soil, watering, drought.

Эхинацея пурпурная (*Echinacea purpurea*) — многолетнее, садовое декоративное растение из семейства Астровые, или Сложноцветные (*Asteraceae*). Классическое североамериканское прерийное растение с эффектными крупными

цветками, похожими на ромашки, с характерным высоким конусовидным центром. Высота растений составляет 90—100 см. Стебли прямые и шершавые. Прикорневые листья на длинных, крылатых черешках, широкоовальные, зазубренные, резко суженные к черешку, собраны в розетку; стеблевые — сидячие, ланцетные, шершавые, расположены в очередном порядке.

Соцветия — корзинки; крупные, до 15 см в диаметре. Язычковые цветки пурпурово-розовые, на верхушке заостренные, до 4 см длиной; трубчатые — красновато-коричневые. Цветёт с июля по сентябрь около 60 дней [4,6].

Эхинацею пурпурную впервые описал в 1753 г. Карл Линней и он отнес это растение к роду рудбекия и назвал рудбекией пурпурной (*Rudbeckia purpurea*). В 1794 г. немецкий ботаник Мёнх (Moench) выделил эхинацею в отдельный род, используя название, происходящее от греческого слова *echinos* – колючий [2].

Эхинацея обладает также антиаллергическим, антибактериальным, противовирусным и противомикотическим действием. Корни эхинацеи использовались при укусах ядовитых змей и при заражении крови, лечили язвы, опухоли, простуду. А также растение повышает естественные защитные силы организма и оказывает лечебное действие при различных болезнях.

В состав эхинацеи входят биологически активные производные фенолкарбоновых кислот. Растения также содержат также эфирные масла, смолы, фитостерины, углеводы, изобутиламины, жирные масла и другие вещества. Сок из свежих соцветий эхинацеи ускоряет процесс заживления ран.

Эхинацея пурпурная является кормовым и медоносным растением. При добавлении в корм зеленую массу эхинацеи пурпурной благоприятно действовало на рост молодняка крупного рогатого скота.

Размножается эхинацея семенами и вегетативно. Семена всходят без стратификации, при посеве в мае в открытый грунт всходы появляются через 2–3 недели, иногда через месяц и даже позже. К концу первого года жизни растения образуется розетка листьев 15–20 см высотой. На постоянное место растения надо пересаживать не позднее середины августа.

Эхинацея цветет только на второй год. Цветение продолжается с конца июля–начала августа до сентября. Вегетативно эхинацея размножается делением корневища рано весной. Эхинацея предпочитает хорошо освещенные места и устойчиво к засухе, но регулярное получение солнечного света способствует лучшему развитию цветков и укреплению иммунитета растения [7].

Эхинацея растет на хорошо дренированных, богатых питательными веществами грунтах. Перед посадкой рекомендуется внести в почву компост или перегной, чтобы обогатить ее и улучшить структуру. Для

стимуляции роста и цветения эхинацеи можно вносить комплексные минеральные удобрения в начале вегетационного периода. Лучшее время для посадки эхинацеи – весна или осень, в умеренных климатических условиях посадку рассады можно проводить в мае, когда минует угроза заморозков. Семена эхинацеи можно высевать непосредственно в открытый грунт весной, для чего подойдут участки с хорошим освещением и дренированным грунтом. Глубина посева – не более 1-2 см. [5].

Для получения более раннего цветения можно использовать метод выращивания рассады, начиная с февраля по март. Пересадка рассады в открытый грунт производится после установления теплой погоды. Также эффективным методом размножения является деление куста весной или осенью, что способствует омоложению растений и увеличению их цветения [1].

Подготовка грунта для посадки эхинацеи включает внесение удобрений, которые способствуют наилучшему росту и цветению растений. Использование комплексных минеральных удобрений или органических подкормок, таких как костная мука или компост, обогащает почву необходимыми питательными элементами. Рекомендуется вносить удобрения за несколько недель до посадки, чтобы элементы успели равномерно распределиться по почве [3].

Эхинацея требует умеренного полива, особенно в период засухи. Мульчирование почвы вокруг растений помогает сохранить влагу и предотвращает рост сорняков, обеспечивая оптимальные условия для роста эхинацеи.

Подкормки органическими удобрениями в начале вегетационного периода способствуют активному росту и обильному цветению эхинацеи. Дополнительное внесение минеральных удобрений может быть полезно в период формирования бутонов [5].

Регулярная обрезка отцветших соцветий стимулирует появление новых бутонов и продлевает период цветения эхинацеи. Удаление поврежденных и больших листьев помогает предотвратить распространение болезней. Эхинацея может подвергаться атакам таких болезней, как мучнистая роса, корневая гниль и ржавчина. Регулярный осмотр растений и своевременное удаление пораженных частей помогают контролировать распространение заболеваний.

При выращивании эхинацеи могут возникнуть трудности, связанные с болезнями и вредителями. Вредители, такие как тля и улитки, могут нанести вред эхинацеи. Своевременное обнаружение и правильная профилактика помогут избежать многих проблем. Использование инсектицидов и меры механической защиты, например, установка барьеров для улиток, эффективны в борьбе с вредителями.

Профилактика заболеваний включает в себя правильный выбор места посадки, обеспечение хорошего дренажа и воздухообмена между

растениями. Использование качественного посадочного материала и соблюдение севооборота также способствуют здоровью эхинацеи [5].

Таким образом, эхинацея пурпурная неприхотливое и красивое растение. Регулярная подкормка и профилактика болезней обеспечат здоровье растений и обильное цветение. Для успешного выращивания эхинацеи важно выбрать подходящее место, обеспечить питательную почву и соблюдать режим полива.

РЕФОРМЫ ДЛЯ РАВЕНСТВА: УЛУЧШЕНИЕ КАЧЕСТВА ЖИЗНИ

Аннотация. Статья рассматривает различные направления совершенствования реформ, нацеленных на улучшение условий жизни населения и снижение уровня доходного расслоения в стране. В статье анализируются текущие проблемы, предлагаются конкретные меры и рекомендации по повышению социальной защищенности граждан и сокращению разрыва между богатыми и бедными слоями общества.

Ключевые слова: трансферты, прогрессивные налоговые ставки, частный сектор, распределение доходов.

REFORMS FOR EQUALITY: IMPROVING QUALITY OF LIFE

Annotation. The article examines various areas for improving reforms aimed at improving the living conditions of the population and reducing the level of income stratification in the country. The article analyzes current problems, proposes specific measures and recommendations to improve the social security of citizens and reduce the gap between rich and poor sections of society.

Key words: transfers, progressive tax rates, private sector, income distribution.

Введение. Социальное расслоение населения характерно для любой рыночной экономики, и в условиях социально ориентированной рыночной экономики государство берет на себя задачи по снижению неравенства доходов и обеспечению социального равенства на нормативном уровне в целях повышения благосостояния населения. Решение вопросов распределения и перераспределения доходов касается не только нуждающихся, но и «богатых».

Социально-политическое не только обеспечивает комфортный уровень жизни малообеспеченных слоев населения, но, прежде всего, регулярно развивающееся общество вырабатывает практический и эффективный механизм поддержания устойчивого баланса между его

группами с разным уровнем потребления и, соответственно, разным уровнем жизни.

Одной из основных целей социальной политики является обеспечение и поддержание сбалансированного состава групп населения с различным уровнем потребления и жизни. Также социальная политика:

- обеспечение «умеренного» уровня жизни каждого человека согласно отчету о перераспределении доходов;

- направление населения на реализацию мер социальной поддержки социально незащищенных групп населения, отдельных семей и отдельных лиц.

В Республике Узбекистан, используя данные переписи населения при анализе и мониторинге целей устойчивого развития, первой национальной целью является снижение уровня бедности населения во всех местах. «Темир Дафтар» ставит целью организовать регулярную работу с каждым человеком индивидуально. и систематически по финансовой помощи и семьям, нуждающимся в помощи, включая создание совершенно новой системы:

«Женская тетрадь» — опрос женщин и молодых людей, имеющих потребность и желание в социальной, экономической, юридической, психологической поддержке, знаниях и профессиональной подготовке.

Система труда «Махаллабай» обеспечивает финансовую поддержку реализации предпринимательской инициативы молодежи и женщин, обеспечивая занятость населения прибыльной работой.

Паспорт микрорайона - сводные таблицы, содержащие основные сведения о расположенных в микрорайоне домах, составе проживающего в них населения, объектах социальной сферы, имеющихся ресурсах, земельных участках, пустующих зданиях и сооружениях, объектах инфраструктуры, а также действующих предпринимателях.

Постановление Кабинета Министров Республики Узбекистан от 22 декабря 2017 года № 1011 «О совершенствовании методики определения количества лиц, нуждающихся в трудоустройстве, в том числе проведения исследований по вопросам занятости населения, а также формирования баланса трудовых ресурсов, занятости и занятости населения» эффективен. Для достижения стабильного и всеобъемлющего экономического роста, основанного на увеличении занятости и обеспечении мужчин и женщин достойной работой, мы можем видеть в качестве примера, что уровень безработицы в настоящее время составляет 10,5%, Молодежь 17,0%, Женщины 13,7%.

Наиболее альтернативным способом для каждой страны, проводящей социальные реформы, обеспечить социальное равновесие и уменьшить неравенство доходов населения и тем самым повысить благосостояние населения является повышение занятости населения. В нашей стране вопрос

обеспечения занятости населения решается за счет создания новых рабочих мест за счет развития предпринимательства.

Литературный обзор. Решением Президента Республики Узбекистан от 8 августа 2017 года № PQ-3182 «О первоочередных мерах по обеспечению опережающего социально-экономического развития регионов» в совершенствовании реформ по снижению расслоения населения по доходам определены все приоритетные направления, пять направлений развития Республики Узбекистан в 2017-2021 годах более 20 законов, принятых в рамках практической реализации Стратегии действий по приоритетному направлению, обеспечение безусловной, своевременной и качественной реализации мер, предусмотренных более чем 20 законами, более 180 указами и более 450 постановлениями Президента Республики Узбекистан, принятыми в рамках практической реализации Стратегии действий. по пяти приоритетным направлениям развития Республики Узбекистан в 2017-2021 годах считается важным условием достижения целей на современном этапе.

Постановление Президента Республики Узбекистан от 23.01.2023 о дополнительных мерах по дальнейшему совершенствованию деятельности Торгово-промышленной палаты в соответствии с Постановлением № PQ-15

- 1) защита прав предпринимателей.
- 2) разработка программ по улучшению деловой среды и инвестиционного климата.
- 3) поддержка предпринимательства.
- 4) образование предпринимателей и подготовка кадров.
- 5) взаимное сотрудничество с государственными органами.
- б)определяется привлечение внешнеэкономической деятельности и инвестиций.

Венецкий И.Г. Математические методы в демографии. – М., 1971., Методы демографического моделирования широко используются при анализе и прогнозировании процессов воспроизводства. Они описывают изменение численности населения или изменение составляющих его развития. Демография включает модели постоянного и стабильного населения в виде демографических таблиц, а также численные модели демографических процессов для гипотетического поколения, Также широко используются стохастические модели (спроса) и Хокозо. Современный этап развития демографических знаний характеризуется бурным развитием методов и приемов математического моделирования. В частности, расширяются возможности использования этих знаний в практике социального управления, все эти методы основаны на общественном взгляде на определенный демографический феномен.

Поэтому в методологии демографии большое значение имеют методы анализа и изучения количественных измерений демографических явлений. Половозрастная пирамида использовалась для наглядного отображения

половозрастного состава населения. Для этого вертикальная ось разделена по возрасту, слева – мужчины по возрасту, справа – женщины по возрасту. За единицу измерения принято пять лет.

Взгляды на налоги исторически формировались под влиянием объективных и субъективных факторов. Изменение и совершенствование налоговой системы основывалось на том, что вид, размер и способы взимания налога были разными. Налоги являются одним из основных источников финансирования всех сфер государственной деятельности и экономическим инструментом реализации государственных приоритетов.

Некоторые экономисты трактовали налоги как средство распределения и перераспределения национального дохода: «Налоги представляют собой форму присвоения части национального дохода в процессе распределения и перераспределения». Н.И.Тургенев в своей книге «Опыт теории налогов» (1818) утверждает, что «Успехи просвещения сказывались и на совершенствовании налоговой системы в зависимости от степени их благотворного воздействия на обычаи народа», «... налоги появились вместе с приобретением знаний и стали его символом....О распространении информации среди народа в зависимости от способа назначения, распределения и сбора налогов; о его богатстве можно думать в зависимости от суммы собранных налогов, которые являются двумя основными характеристиками, означающими знание и просвещение» из этих слов мы можем еще раз убедиться, что налоги считаются древними финансовыми институтами и возникли с появлением государства. Научный электронный журнал налоговых органов государственной власти "Экономика и инновационные технологии". № 2, март-апрель 2017 г. № 2, 2017 г. www.iqtisodiyot.uz 4 и послужили источником материальной поддержки для выполнения стоящих перед ними задач. С развитием государства его задачи и функции приобретали новые черты. Шотландский экономист Адам Смит (1723-1790) впервые изложил принципы налогообложения в своей книге «Причины и природа богатства народов» (1776).

В свою очередь, Д. Рикардо, развивший в определенной степени теорию налогов, созданную А. Смитом, объяснил природу налогов тем, что «Налоги представляют собой часть земельных продуктов и труда страны, подпадающих под власть власти». правительства, и в конечном итоге они выплачиваются за счет капитала или за счет доходов страны». Другое приемлемое определение дает С.Г. Пепеляев: «Налог является единственной формой отчуждения имущества физических и юридических лиц в целях обеспечения платежеспособности субъектов публичной власти, определяемой законом на основе обязательства, исключительно объективного, невозвратного, предусмотренного государством. принуждение и не имеющее характера наказания или пособничества». По мнению профессора Д.Г. Черника, «налоги отражают обязательные сборы,

взимаемые государством с хозяйствующих субъектов и граждан по законодательно установленным ставкам». Ш. Гатаулин на вопрос «...что такое налоги, зачем они нужны» отвечает следующим образом: «Налоги являются основным источником государственных расходов, средством регулирования экономики и стабилизации доходов. «Налоги являются основным источником доходов государственного бюджета и важным инструментом управления экономикой». Следует отметить, что, по мнению профессора О.Олимжонова, если налоги определить следующим образом, то сущность налогов будет раскрыта более широко и адекватно. "Налоги - это платежи, которые в принудительном порядке взимаются с физических и юридических лиц по усмотрению государства в целях удовлетворения потребности государства и общества в денежных средствах в размере и в сроки, определенные законом". Научный электронный журнал «Экономика и инновационные технологии». №2, март-апрель 2017 г. Если обратить внимание на мысли о налогах, то они в основном рассматриваются как средство наполнения государственной казны, формирования и развития экономические мысли, они оцениваются на основе их финансового аспекта.

Теории западных экономистов основаны на концепции английского экономиста Дж. М. Кейнса. Согласно концепции, налоги, помимо своей фискальной функции, имеют функции регулирования экономики, стимулирования и управления доходами, эти функции налога возникают из необходимости использования его как средства регулирования экономики и обеспечения устойчивого экономического развития. рост.

Представитель некейнсианского направления Л. Харротт, Н. Калдор, А. По мнению Хансена и П. Самуэльсона, налоги имеют функцию регулирования экономики. Они считают, что эту функцию можно выполнить, изменяя налоговые ставки и предоставляя различные льготы. По словам английского экономиста С. Паркинсона: «Налоги стары как мир, причиной их возникновения было то, что местный полководец взимал плату с купцов и путешественников, когда они проходили через реку или гору на его территории». 1. Налоги и сборы являются обязательными, при которых государство забирает часть доходов налогоплательщика в качестве обязательного отчисления в бюджет. Данное обязательство реализуется на основании положений Налогового кодекса, утвержденного Олий Мажлисом. Итак, знак обязательства юридически гарантируется государством. 2. Налоги поступают в казну государственного бюджета. Но другие виды выплат в сбережения не отражают налоговых отношений. Научный электронный журнал «Экономика и инновационные технологии». №2, март-апрель 2017 г. №2, 2017 г. www.iqtisodiyot.uz 3. Налоги фиксированы и находятся в постоянном движении. Исторически сложилось так, что существуют налоги, которые остаются неизменными на протяжении веков. Чем глубже ее научная основа, тем прочнее и неизменнее она действует на протяжении многих лет.

4. Сумма налога, уплаченная государству, не возвращается плательщику полностью, то есть является неравным денежным платежом. Налоги являются основным финансовым источником, из которого собирается часть созданного обществом продукта для формирования. Доходы государственного бюджета в течение длительного периода времени. Также налоги являются одним из основных финансовых ресурсов, необходимых для реализации всех общегосударственных мероприятий государства и являются основным средством экономического развития страны и реализации указанных реформ.

В условиях модернизации экономики в Налоговом кодексе определены налоги, взимаемые в определенных размерах, регулярные, невозвратные и неизбирательные, обязательные денежные платежи, направляемые в бюджет. Итак, налоги – это деньги, поступающие в бюджет и обязательные отношения, определенные законом. Обязательство по уплате налогов предусмотрено правовыми и нормативными законами, утверждаемыми Олий Мажлисом.

Следовательно, налогоплательщики не имеют права не платить налоги, скрывать объект налогообложения, занижать сумму налога. Мы знаем, что конкурентная рыночная система направляет ресурсы на производство товаров и услуг, которые нужны обществу больше других, и именно на эту деятельность негативно влияет механизм косвенного налогообложения.

Методология исследования. При написании данной статьи были использованы данные переписи населения Республики Узбекистан, анализа и мониторинга целей устойчивого развития, текущие показатели торгово-промышленной палаты, агентства по статистике, ставки налогов, а также ученых, проводивших научные исследования в эти области широко использовались в пособиях.

Анализ и обсуждение результатов. В результате проведенной в 2023 году работы, по наблюдениям за 16 тысячами домохозяйств, проведенным Агентством по статистике, уровень бедности в нашей стране снизился до 11,0% к концу 2023 года.

В нашей стране бедность снизилась на 3,1 процента по сравнению с прошлым годом, а уровень бедности по итогам 2022 года составил 14 процентов. Снижение уровня бедности зафиксировано во всех регионах, включая Сырдарьинскую (с 19,5% до 13,8%), Андижанскую (с 17,4% до 11,9%) и Каракалпакстанскую (с 19,9% до 13,7%) области.

Минимальные изменения выявлены в городе Ташкенте (с 8,5% до 7,9%), Бухарской (с 11,9% до 11,8%), Кашкадарьинской (с 12,7% до 11,5%) областях.

Для справки: в 2023 году обеспечено 4,1 млн человек, в том числе 2,3 млн на постоянной и сезонной работе, 112,8 тыс. на оплачиваемых общественных работах, 1,6 млн на самозанятости;

С помощью помощников мэра 241,3 тысячам горожан были выделены земли в аренду;

- в рамках программы «20 тысяч предпринимателей и 500 тысяч квалифицированных специалистов» Подписание договоров о сотрудничестве с 6745 субъектами хозяйствования для обеспечения благосостояния 455 тысяч жителей;

- также 10 трлн на 472 тыс. семейных бизнес-проектов. льготных кредитов и 356 миллиардов сумов для 73 тысяч безработных граждан. Распределение средств субсидии;

- В результате реализации 51 тыс. микропроектов на основе добрососедства создано 206 тыс. новых рабочих мест;

- 181 тысяча безработных граждан обучены профессиям и созданы 183,8 тысячи новых хозяйствующих субъектов;

- исходя из уровня инфляции, значение МІХ (минимальных потребительских расходов), рассчитанное на 2024 год, составило 621 тыс.сум:

- за счет создания «Индивидуальных программ» для малоимущих семей в 2023 году из 208 тысяч семей выведены из бедности 873 тысячи членов семей, а в 2024 году планируется вывести из бедности 150 тысяч семей (и 700 тысяч членов их семей) бедность.

В условиях рыночной экономики определенная часть трудовых ресурсов занята в неформальном секторе. В определенном смысле обеспечение занятости в неформальном секторе не защищает социальные права работников. В результате сотрудники не охвачены системой социальной защиты. (пенсия, право на льготы, больничные и декретные отпуска). Дальнейшее сокращение неформальной занятости и легализация существующей занятости является важным фактором, особенно среди начинающих предприятий.

Существующие проблемы на рынке труда, в том числе: опережающее развитие трудоемких отраслей и предприятий, особенно в сельской местности, в условиях роста территориальной и межотраслевой мобильности рабочей силы, создание правовых основ для увеличения занятости за счет Легальный и социально защищенный электронный экспорт трудовых ресурсов является важным фактором повышения благосостояния населения.

Кроме того, целесообразно создание широкомасштабных условий для производства других видов аналогичной продукции с учетом дополнительных доходов действующих хозяйствующих субъектов на основе их опыта. Необходимо расширить количество новых рабочих мест путем предоставления льготных кредитов работникам, имеющим регулярный стаж работы 3-5 лет и обладающие достаточной квалификацией и опытом начала новой предпринимательской деятельности с использованием своей квалификации.

В зависимости от демографического положения населения, в зависимости от вида продукции, выращиваемой в хозяйствах населения в населенных пунктах, целесообразно строить предприятия и фирмы в районах, близких к населению, для увеличения доходов населения за счет переработки и упаковки продукции, выращенной населением.

Масштабное развитие сферы услуг в регионах с высокой безработицей населения требует создания мелких филиалов крупных профессиональных предприятий по производству продукции в регионах с высокой безработицей.

В целях снижения уровня расслоения населения по доходам в нашей стране установлены прогрессивные ставки налогообложения доходов физических лиц. При прогрессивных налоговых ставках по мере увеличения дохода, то есть налоговой базы, растут и ставки. Прогрессивная ставка налога бывает простой и сложной, в простой форме ставка налога увеличивается для всех частей дохода, а в сложной форме доход налогоплательщика делится на части, и к каждой части применяется соответствующая ставка налога этого.

Выводы и предложения. В нашей стране налоги на доходы физических лиц взимаются посредством сложных прогрессивных налоговых ставок, что приводит к снижению налоговой нагрузки на малообеспеченные слои населения и увеличению их располагаемых доходов. Лица с высокими доходами облагаются подоходным налогом по более высоким ставкам только на увеличенную часть своего дохода. Таким образом можно сократить разницу между доходами высокодоходных и низкодоходных слоев населения, не ограничивая при этом рост доходов населения.

Реформы во всех сферах, направленные на улучшение условий жизни населения и снижение уровня доходного расслоения в нашей стране, сегодня приносят свои плоды, и сегодня уровень доходного расслоения населения доведен до нормативного уровня. Учитывая сложившуюся ситуацию с доходным расслоением населения, в целях дальнейшего снижения уровня неравенства доходов, увеличения денежных доходов населения и обеспечения социальной защиты особое внимание следует уделить следующему:

- постоянно повышать занятость населения;
- создать рабочие места за счет дальнейшего развития предпринимательства и принять меры по вовлечению населения в предпринимательство;
- усилить социальную защиту занятых в них работников путем легализации деятельности субъектов неформального сектора;
- расширение возможностей резидентов использовать собственное имущество и движимые имущества в предпринимательской деятельности и получать доходы;

- обеспечить социальные трансферты слоям населения, нуждающимся в социальной защите, и проиндексировать их размер;

- проведение разумной налоговой политики в отношении доходного имущества населения в целях недопущения выплаты доходов и имущества по усмотрению отдельных групп населения.

РОЛЬ МАРКЕТИНГА В РАЗВИТИИ ТУРИЗМА В ПОСТПАНДЕМИИ COVID-19

Аннотация. В статье обоснованно совершенствование системы государственной поддержки по обеспечению высоких темпов развития туризма и поддержки субъектов предпринимательства позволяющего созданию прочной основы для восстановления постпандемийного уровня развития туризма и вывода его на новый качественный уровень развития при помощи маркетинговых инструментов.

Ключевые слова: туризм, государственное регулирование, туристические услуги, пандемия, маркетинговые коммуникации, предпринимательство, малый бизнес.

THE ROLE OF MARKETING IN TOURISM DEVELOPMENT IN THE COVID-19 POST-PANDEMIC

Abstract. The article substantiates the improvement of the system of state support to ensure high rates of tourism development and support for business entities, allowing for the creation of a solid foundation for restoring the post-pandemic level of tourism development and bringing it to a new qualitative level of development with the help of marketing tools.

Key words: Tourism, government regulation, tourism services, pandemic, marketing communications, entrepreneurship, small business.

Введение. В мире индустрия туризма стала одной из важнейших отраслей экономики, и в то же время, когда микро - и макромасштабные туристские зоны находятся в условиях жесткой конкуренции, вопрос достижения устойчивой конкурентоспособности становится все более актуальным. В частности, за счет развития цифровой экономики достигается устойчивая конкурентоспособность туристских территорий и рост экономических показателей. Поэтому достижение конкурентоспособности туристической зоны на глобальном уровне при сохранении социальной, экономической и экологической стабильности

является приоритетной задачей и требует совершенствования методологии управления туристскими территориями на основе концепции устойчивого развития.

Сформировавшаяся под негативным влиянием последствий пандемии коронавируса современная нестабильная конъюнктура на мировом рынке туристических услуг требует обогащения государственного влияния на данную отрасль экономики новым содержанием, соответствующим реалиям сегодняшнего дня. Вопросы регулирования и упорядочения предпринимательского сектора в сфере туризма органами государственной власти, в частности его активной финансовой поддержки, требуют разработки новых, научно обоснованных эффективных подходов, отвечающих современным требованиям. Совершенствование системы государственной поддержки по обеспечению высоких темпов развития туризма и поддержки субъектов предпринимательства позволит создать прочные основы для восстановления до пандемийного уровня развития туризма и вывода его на новый качественный уровень развития. Окончательное решение таких сложных задач ставит вопрос о регулировании туризма и совершенствовании системы государственной поддержки малого бизнеса.

Маркетинг в туризме – это неотъемлемый элемент успешной работы компаний, занимающихся организацией путешествий. Он помогает определить потребности и предпочтения целевой аудитории, создать уникальное предложение на рынке, привлечь новых клиентов и удержать имеющихся.

Анализ литературы. Большой вклад в изучение проблем, связанных с туризмом и совершенствованием теоретико-методологических основ его развития, влияния отрасли на национальную экономику, политику и культуру внесли такие ученые как, Ж.М.Кейнс, А.Маршалл, В.И.Азар, Н.И.Волошин, М.Портер²³⁹. Формы предпринимательства в туризме, функционирование туристского рынка, его структура и механизмы, в том числе вопросы его государственного регулирования исследованы в трудах А.Ю.Александровой, Д.Н.Демченко, М.А.Жуковой, Г.А.Карповой, Л.В.Хоревой, И.Т.Балабанова, А.И.Балабанова, М.М.Мухаммедов, Д.Х.Аслановой, М.Т.Алимовой²⁴⁰ и другие.

Анализ и результаты. В ходе исследования выявлено, что индустрия туризма имеет две характерные особенности. Во-первых, помимо объектов и средств производства собственной отрасли, в формировании туристской инфраструктуры активно участвуют ряд других отраслей. Поэтому регулирование этих секторов, имеющих большое значение для организации туристских услуг, должно стать важным направлением государственной экономической политики. Во-вторых, туристические услуги требуют обеспечения безопасности посетителей и защиты их интересов. Это означает, что данная особенность туризма должна быть отражена в нормативных актах, регулирующих его деятельность. Правовые документы должны быть направлены как на защиту интересов туристов, так и поставщиков услуг.

Для выявления негативных последствий COVID-19 сферу туризма необходимо провести анализ влияния государственной политики на макроуровневые показатели развития туризма, анализ эффективности мер государственной поддержки, практики применения механизмов регулирования экономической деятельности субъектов малого и частного предпринимательства в сфере туризма, анализ эффективности мер по поддержке туристической отрасли со стороны государства.

Процесс анализа был основан на двух периодах. Первый период – это период до начала широкомасштабных экономических реформ в Узбекистане в соответствии со «Стратегией действий». Этот период охватывает 2014-2016 годы. Второй и самый важный период – период подъема туризма в 2017-2021 годах. Именно в такой последовательности был проведен процесс анализа, из которого были сделаны соответствующие выводы.

Результаты анализа показали, что государственная политика приоритетного развития туризма оказала существенное положительное влияние на состояние и развитие макроуровневых показателей отрасли (таблица-1).

Данные таблицы показывают, что основные показатели, характеризующие туристскую деятельность, в течение 2014-2019 годов неуклонно росли. Об этом свидетельствует тот факт, что за этот период количество туристов, посетивших Узбекистан, увеличилось в 3,6 раза, или 4886 человек. Также констатируем, что в основных показателях, характеризующих туристскую деятельность, по сравнению с 2014-2016 годами, т.е. до начала радикальных реформ по развитию отрасли, начатых государством по инициативе Президента с 2017 года, принятия новых

	Выездной туризм, тыс. человек	2785,8	3504,3	3847,8	5182,5	8594,8	8437,8	3,0
	Внутренний туризм, тыс. человек	1571,5	1754,2	1871,7	2145,8	2255,5	2480,8	1,6
	Количество занятых в туризме, тыс. человек	103,4	150,2	170,9	187,6	201,0	260,1	2,5
	Инвестиции, млрд. сум	731,4	851,4	1052,1	1428,3	1956,1	1741,6	2,4
	Экспорт туристических услуг, млн. долл.	102,7	134,2	430,7	546,9	1041,1	1313,0	12,7
	Количество гостиниц и объектов размещения	513	661	750	816	916	1051	2,0
	Количество мест на объектах размещения, тыс.	15,264	18,297	31,950	37,065	41,096	54,799	3,5
	Количество туристических фирм и организаций (вместе)	343	398	433	449	502	517	1,5

Если говорить конкретно, то в период с 2017 по 2019 год, то есть за 3 года, доходы от экспорта туристических услуг выросли почти в 2,5 раза: если в 2017 году они составляли 546,9 млн. долларов США, то к 2019 году достигли 1313,0 млн. долларов США.

Такой стремительный рост экспорта туристических услуг позволил увеличить его долю в ВВП страны с 1,4 % (2017 г.) до 2,5 % (2019 г.). С полным правом можно сказать, что эти достижения в укреплении туристических услуг в ВВП страны являются большим достижением для

²⁴¹ Подготовлено автором на основе данных Государственного комитета по статистике Республики Узбекистан. // <https://stat.uz>. Туризм в Узбекистане: Сборник статистических данных за 2016-2019 годы (стр.28-29).

Узбекистана, который на протяжении многих лет не может эффективно использовать свой огромный туристический потенциал. Подсчитано, что за последние три года объем туристических услуг вырос с 102,7 млн. долларов США до 430,7 млн. долларов США, или в 4,1 раза. На основе сравнительного анализа темпов роста туристского экспорта в Узбекистане до и после начала масштабных реформ сделан вывод о том, что нынешняя управленческая политика государства в сфере туризма весьма эффективна.

Результаты анализа показали существенное положительное влияние на динамику туристского экспорта и другие важные показатели отрасли. Например, за 2016-2019 годы количество иностранных туристов, посетивших страну, увеличилось в 3,6 раза. Причина в том, что за этот период правительством были приняты десятки документов, направленных на развитие туризма, приняты оперативные меры по обеспечению их реализации.

Пандемия коронавируса, охватившая стремительно идущий по пути стремительного развития Узбекистан, полностью разрушила планы страны по опережающему развитию туризма. Кризис во всех странах мира оказал негативное влияние на туризм в Узбекистане, а также темпы роста его макроуровневых показателей. В диссертации с использованием точных данных проанализированы масштабы ущерба и размеры убытков, нанесенных туристической отрасли страны из-за негативных последствий пандемии коронавируса (таблица 2).

Таблица 2.

При разработке стратегий развития малого бизнеса и краткосрочных программ поддержки со стороны государства следует учитывать, что объединение субъектов предпринимательства с туристическими ассоциациями на основе маркетинговой стратегии может быть более эффективным в достижении поставленных целей (Рисунок-1.)

Рис. 1. Направления совершенствования системы государственного регулирования и поддержки предприятий и организаций в сфере туризма в новом Узбекистане²⁴³

Например, в процессе управления для выбора и разработки стратегий развития туристических предприятий и организаций менеджеры нуждаются в поиске, обработке и анализе соответствующей оперативной информации. Обычно эти процессы осуществляются с большими затратами. Это повышает стоимость туристических услуг и негативно сказывается на их конкурентоспособности на мировом рынке. В качестве решения этой проблемы было предложено создать специальную ассоциацию при министерстве.

²⁴³ Разработан автором.

Фонд финансирует мероприятия и программы, связанные с удовлетворением потребностей малого бизнеса.

По нашему мнению, информационно-аналитическая ассоциация по поддержке деятельности организаций в сфере туризма в Республике Узбекистан должен состоять из следующих 2-х отделов: научного отдела и отдела маркетинга.

Научный отдел занимается решением и реализацией таких важных задач, как повышение эффективности использования научного потенциала профессоров и преподавателей, участвующих в системе подготовки кадров при решении задач в сфере туризма, обеспечение конкурентоспособности, повышение эффективности использования экономических ресурсов, активизация инновационной деятельности на предприятиях и организациях отрасли.

Маркетинг в туризме представляет собой процесс организации деятельности турфирмы по разработке, формированию и продвижению новых видов туристских и экскурсионных услуг с целью получения прибыли на основе повышения качества туристского продукта и учитывая особенности потребностей туристов. «...маркетинг (marketing) можно определить, как процесс, посредством которого организации создают ценность для клиентов и формируют прочные отношения с ними с целью последующего получения ценности. В основе маркетинга лежит идея удовлетворения человеческих нужд²⁴⁴.

Отдел маркетинга проводит маркетинговые исследования с целью изучения рыночной ситуации, тенденций изменения рынка, конкурентной среды на рынке, потребностей населения в туристических услугах, его доходов, объема спроса и предложения на туристические услуги, факторы, влияющие на него, сегмент рынка и цена. Для этого кафедра собирает соответствующие данные, анализирует их, делает выводы и вносит научно обоснованные предложения.

Совокупная стоимость маркетинговой деятельности, создание сайта и затраты на техническое обслуживание предприятия или организации, входящей в состав Ассоциации, значительно снижаются, так как замещаются расходы на содержание соответствующих подразделений. В качестве доказательства нашей точки зрения хотим привести некоторые расчеты. Например, затраты, связанные с проведением маркетинговой деятельности.

Экспертно-аналитические расчеты показывают, что примерная смета туристского предприятия или организации на осуществление

²⁴⁴ А. А. Романов, В. П. Басенко, Б. М. Жуков. Маркетинг. Учебное пособие. Москва. Издательско-торговая корпорация «Дашков и К^о» 2012

Солиева, Г. А. Туризм в Узбекистане и роль маркетинга в его развитии / Г. А. Солиева, Б. Н. Дедажанов, Р. М. Каримжанова. — Текст : непосредственный // Молодой ученый. — 2020. — № 5 (295). — С. 132-134. — URL: <https://moluch.ru/archive/295/67017/> (дата обращения: 16.04.2024).

маркетинговой деятельности составляет 12 млн. сум. Дополнительное обучение работников в год - 3 млн. сум, ежегодные затраты на сайт - 12 млн. сум. Таким образом, общие расходы составляют 27 миллионов сумов.

Важно определить экономическую эффективность, получаемую от членства туристических предприятий и организаций в предлагаемой ассоциации. Эта задача выполняется в следующей последовательности. Первоначально рассчитывается средняя сумма расходов, соответствующая доле каждого субъекта, входящего в состав ассоциации. Рекомендуется использовать следующую формулу²⁴⁵:

$$RP_1 = \frac{\sum_{i=1}^N RP}{N}, (1)$$

Где:

RP_1 – средняя сумма годовых затрат, приходящих на долю каждого предприятия или организации;

RP – сумма годовых затрат центра;

N – количество туристических предприятий и организаций, являющихся членами центра.

Определенная в результате расчетов цифра, т. е. сумма среднегодовых затрат (RP_1) сравнивается с индивидуальными затратами (RP) туристского предприятия в течение года. Число, полученное в результате сравнения, указывает на размер эффективности, которую получило предприятие от членства в ассоциации. На основе суммы экономической эффективности, достигнутых всеми участниками, будет определена общая экономическая эффективность для туристического сектора от ассоциации. Обоснована необходимость повышения конечной эффективности государственной финансовой поддержки деятельности туристских предприятий. Разработан механизм распределения бюджетных ресурсов исходя из потребностей туристского объекта.

Рекомендации и заключение. Результаты анализа показали, что под негативным влиянием пандемии объем экспорта туризма в 2020 году по сравнению с 2019 годом уменьшился на 1052 млн. долларов США. С учетом этой сложной ситуации и особенностей социально-экономического развития в Узбекистане схематично были обозначены стоящие перед государственными органами основные приоритетные задачи для достижения положительных изменений в сфере туризма.

Процесс анализа государственной политики в сфере туризма осуществлялся на основе охвата двух периодов. Первый период – это период до начала масштабных экономических реформ в Узбекистане в соответствии со «Стратегией действий», второй период – рост туризма в

²⁴⁵ К.Б.Сууюнова «Мамлакатимизда туризм ташкилотлари фаолиятини кўллаб-қувватлаш мақсадида маркетинг инструментлари орқали самарали тизим яратиш» // Журнал. Яшил иктисодиёт ва тараққиёт 4-сон.2024й.

результате масштабных реформ. На основе сравнительного анализа темпов роста в оба периода сделан вывод о том, что текущая управленческая политика государства в сфере туризма более эффективна, чем в предыдущий период. Если в 2014-2016 годах турпоток увеличился на 110 %, то в 2017-2019 годах он увеличился в 2,5 раза.

В ходе исследования были проанализированы показатели количества малых предприятий, работающих в сфере туризма, индикаторы количества обслуженных ими туристов. Результаты анализа показывают, что за 2016-2019 годы количество малых предприятий и микрофирм в сфере туризма в Узбекистане увеличилось на 20,2 %, количество гостиниц - на 52,2 %, количество санаторно-курортных учреждений - на 54,1 %, количество развлекательных центров и туристических объектов в 2,8 раз.

По результатам анализа сделан вывод о том, что в политике поддержки государственных хозяйствующих субъектов должно уделяться особое внимание стимулированию их инвестиционной активности. Для этого было предложено включить в перечень показателей долю собственных инвестиций туристского предприятия (организации) в общем объеме инвестиций. В работе изложены авторские подходы, научные предложения, рекомендации и мнения по совершенствованию регулирования и поддержки сферы туризма.

В целях снижения руководителями предприятий финансовых и временных затрат на поиск, обработку и анализ данных, предложено создать специальную ассоциацию при министерстве на основе маркетинговых инструментов.

**PROMISING TECHNOLOGIES FOR CORN HARVESTING AND
PROCESSING IN UZBEKISTAN: A COMPARATIVE ANALYSIS OF
EFFICIENCY AND PRODUCTION SUSTAINABILITY**

Abstract. The study describes the existing methods of harvesting and processing corn in Uzbekistan and analyzes the effectiveness of using various machines such as KOP-1,4 "Хersones-7," ККР-3 "Хersones-9," and ККР-2 "Хersones-10." A new scheme for harvesting and processing corn is presented,

which increases productivity, reduces crop losses, and improves the quality of the finished product.

Key words. corn, harvesting, processing, combine harvester, agri-engineering, efficiency, product quality, crop loss reduction, waste management, environmental impact.

Кукуруза — это многолетняя культурная культура, широко используемая в пищевой, кормовой и технической промышленности. Из зерен кукурузы производят муку, сладкие початки, крахмал, кристаллический сахар, спирт и другие продукты. Кроме того, в восковом периоде зрелости зерен их можно употреблять в вареном виде или готовить консервы. Большое количество зерен кукурузы и ее стеблей в основном используется в качестве корма для скота.

Кукуруза принадлежит к семейству злаковых и является однолетней культурой, все разновидности которой относятся к виду **Zea mays**. Этот вид делится на семь разновидностей, включая кремниевый, зубовидный, взрывной, сахарный, крахмалистый, восковидный и покрытый. В Узбекистане культивируются все перечисленные разновидности кукурузы.

Одним из наиболее сложных и ответственных процессов в производстве кукурузы является ее сбор урожая. В ходе сбора початки остаются на стебле, что может привести к потере урожая и увеличению отходов. Кроме того, сбор стеблей затруднен, что иногда приводит к их оставлению на поле, что приводит к увеличению отходов.

1-трубный сепаратор; 2-подъемная цепь; 3-передающая цепь; 4 урожай аппарат; 5 и 6 винты; 7- снарядотранспортер; 8-сотовая чистота-аппарат для наращивания ресниц; 9-прицепной механизм; трейлер 10; 11 и 15 строфы транспортер; 12 наклонная доска; 13 труба; 14 вентилятор; 16 издание устройство; 17 шлифовальная машина; проводник 18 шахты; 19 распределительный щит.

Рисунок 1.1. Технологический образ комбайна КОП-1,4 «Херсонес-7»

В настоящее время в мире применяются различные технологии для сбора кукурузы. Для их реализации были разработаны различные машины, такие как КОР-1,4 "Хersones-7", ККР-3 "Хersones-9", ККР-2 "Хersones-10" и КСКУ-6 "Хersones-200" и другие. Их технические и эксплуатационные характеристики, а также показатели качества работы в условиях Узбекистана подробно описаны в литературе.

Одним из наиболее распространенных комбайнов является КОР-1,4 "Хersones-7", который представляет собой двухрядный прицеп с межрядным расстоянием 70 и 90 см и минимальным расстоянием между стеблями 20 см. Он предназначен для сбора кукурузы после полного созревания. Комбайн срезает стебли, отделяет початки от стеблей и очищает их от шелухи, загружает початки на прицеп, измельчает стебли и загружает их на транспортное средство, движущееся рядом.

Методология исследования основана на анализе существующих методов сбора и переработки кукурузы, а также на оценке их эффективности и применимости в условиях Узбекистана. В рамках исследования проведен обзор литературы, включая научные статьи, технические отчеты и исследования, касающиеся работы машин, таких как КОР-1,4 "Хersones-7", ККР-3 "Хersones-9", ККР-2 "Хersones-10" и других.

Результаты исследования показали, что использование новой схемы сбора и переработки кукурузы значительно повышает эффективность производственных процессов. В рамках проведенных полевых испытаний были оценены различные технологии и машины для сбора кукурузы, включая комбайны КОР-1,4 "Хersones-7", ККР-3 "Хersones-9" и ККР-2 "Хersones-10". Сравнительный анализ показал, что, хотя каждая из рассмотренных машин имеет свои преимущества, их использование может сопровождаться рядом сложностей, связанных с работой в полевых условиях Узбекистана.

Однако новая схема, разработанная на основе передовых технологий и адаптированная к местным условиям, показала значительное улучшение в производительности и качестве работы. Эта схема предусматривает более оптимизированное распределение ресурсов и использование современного оборудования для сбора и переработки кукурузы.

Рис 2. Предлагаемая схема для более эффективного метода управления отходами

Новая схема также включает более эффективные методы управления отходами, что способствует уменьшению экологического воздействия производства кукурузы. В целом, результаты исследования подтверждают перспективность использования новой схемы для повышения производительности и устойчивости производства кукурузы в Узбекистане.

В заключении исследования следует отметить, что анализ существующих методов сбора и переработки кукурузы, проведенный в рамках данного исследования, позволил выявить перспективные возможности для улучшения производственных процессов в агроинженерии Узбекистана. Изучение различных технологий и машин, таких как комбайны КОР-1,4 "Хersones-7", ККР-3 "Хersones-9" и ККР-2 "Хersones-10", а также их эффективность в условиях страны, показали как сильные стороны, так и потенциальные проблемы при эксплуатации.

Таким образом, исследование подтверждает необходимость дальнейших усилий в области агроинженерии для развития эффективных и устойчивых методов производства кукурузы в Узбекистане. Предложенная новая схема сбора и переработки кукурузы представляет собой перспективное направление для дальнейшего совершенствования агротехнологий и достижения более высоких результатов в производстве кукурузы.

IMPROVING CORN COB CRUSHING AND CLEANING PROCESSES TO ENHANCE PRODUCTION EFFICIENCY AND PRODUCT QUALITY

Abstract. The article examines methods of corn cob crushing and cleaning to improve production efficiency and product quality. An analysis of existing technologies identifies the advantages and disadvantages of various approaches, including drum and rotary crushers.

Key words. corn cob crushing, corn cob cleaning, production efficiency, product quality, drum crushers, rotary crushers.

Кукуруза является одним из ключевых сельскохозяйственных культур в пищевой промышленности, используется также для кормов и технических целей. Из ее зерна получают муку, сладкие палочки, крахмал, кристаллизованный сахар, спирт и другие продукты. Стебель и початки кукурузы широко применяются как корма для скота.

Кукуруза принадлежит к семейству мятликовых и является однолетним растением. Все формы, культивируемые в Узбекистане, относятся к виду *Zea mays*. Этот вид подразделяется на семь типов: кремниевидная, зубовидная, лопающаяся, сахарная, крахмалистая, восковидная и кожистая.

Методология исследования, направленного на совершенствование процессов дробления и очистки початков кукурузы для получения чистого зерна, включает следующие этапы:

Исследование существующих технологий и оборудования: детальный анализ существующих методов дробления початков кукурузы, включая оценку их эффективности, энергоемкости и качества очистки зерна. Изучение различных видов дробилок, включая классические барабанные и роторные типы, с выявлением их преимуществ и недостатков.

Разработка экспериментальной установки: создание экспериментальной установки, состоящей из различных узлов и компонентов (загрузочных бункеров, дробильных барабанов, очистительных устройств и других элементов) для выполнения экспериментов с целью совершенствования процесса дробления початков кукурузы.

Проведение экспериментов: проведение серии экспериментов с использованием экспериментальной установки для оценки эффективности различных методов дробления и очистки початков кукурузы. Оценка параметров производительности, качества отделения зерна и энергии, потребляемой различными системами.

Анализ данных: анализ полученных результатов экспериментов для определения оптимальных параметров и режимов работы оборудования. Оценка качества отделения зерна, уровня повреждения зерен и производительности системы.

Разработка рекомендаций: на основе анализа данных формирование рекомендаций по оптимизации процессов дробления и очистки початков кукурузы. Включение в рекомендации оптимальных параметров оборудования, режимов работы и предложений по дальнейшим исследованиям.

Валидация результатов: проверка разработанных рекомендаций на практическую применимость и эффективность в условиях реального производства. Внесение корректировок в методологию и рекомендации при необходимости.

Документация и отчетность: оформление результатов исследования в виде научных публикаций, отчетов или рекомендаций для производителей сельскохозяйственного оборудования.

Результаты исследования показали, что существующие методы дробления и очистки початков кукурузы обладают различными достоинствами и недостатками. Барабанные и роторные дробилки обеспечивают высокую производительность и качество отделения зерна, однако имеют свои ограничения, такие как сложность конструкции и высокое потребление энергии.

Рис. 1. Конструктивная схема разработанного оборудования.

В процессе исследования было выявлено, что использование разных типов аппаратов может приводить к различным степеням эффективности, качества очистки и повреждений зерен. Так, роторные дробилки, несмотря на их более сложную конструкцию, показали более высокую эффективность по сравнению с барабанными.

Рис. 2. 3D модель разработанного оборудования

Исходя из проведенного анализа, был сделан вывод о необходимости разработки нового устройства для дробления початков кукурузы, которое

сочетало бы в себе лучшие качества существующих методов и преодолевало бы их недостатки.

Реализация нового устройства будет способствовать повышению производительности и эффективности процессов переработки початков кукурузы, а также снижению затрат на электроэнергию и обслуживание. Это, в свою очередь, приведет к повышению прибыльности производства и качества готового продукта.

На основании анализа выявлена необходимость разработки нового устройства, которое сочетало бы в себе лучшие качества существующих методов и преодолевало бы их ограничения. Такое устройство должно быть эффективным, обеспечивать высокое качество отделения зерна, снижать повреждение зерен и оптимизировать энергопотребление.

Внедрение нового устройства позволит повысить эффективность переработки початков кукурузы, снизить затраты на электроэнергию и обслуживание, а также улучшить качество готового продукта. Это, в свою очередь, приведет к увеличению прибыльности производства и удовлетворению растущих потребностей рынка.

Таким образом, дальнейшие исследования и разработки в данной области могут способствовать повышению эффективности производства и улучшению качества продукции.

БИОМОРФОЛОГИЧЕСКИЕ ДАННЫЕ ЦИКЛОПОВ ОЗЕРА САЙКУЛЬ

Аннотация. В статье представлены результаты гидробиологических исследований ракообразных, циклопов озера Сайкуль. В данной статье впервые приведены результаты исследований Cyclopoida беспозвоночных животных озера Сайкуль. Преведени краткое сообщение малоизученных видов.

Ключевые слова: озеро, глубина, циклоп, Сайкуль, науплии, биомасса, глина, песок.

BIOMORPHOLOGICAL DATA OF CYCLOPSES OF LAKE SAYKUL

Annotation. The article presents the results of a hydrobiological study of crustaceans and cyclops from Lake Saykul. This article presents for the first time the results of studies of Cyclopoida invertebrate animals of Lake Saikul. Provide a brief account of little-studied species.

Key words: lake, depth, Cyclops, Saikul, nauplii, biomass, clay, sand.

Введение

Озеро Сайкуль расположено на правом берегу Амударьи, в 24 км южнее г. Нукуса. Озера расположено берега Амударьи питание осуществляется за счет реки р. Амударьи. Берега озера пологие, слабоизрезанные. Вода озера иногда используется на орошение

сельхозугодий и для поддержания водообеспеченности массивов лиманных сенокосов.

Одной из важных компонент водных экосистем Приаралья являются веслоногие ракообразные отряда Cyclopoidea. Циклопы являются важной составной частью кормовой базы промысловых рыб, причем их личинки - науплии - потребляются мальками рыб на самых первых стадиях развития (Богатова, 1980).

В экосистемах циклопы играют роль, как правило, консументов 1-го (науплии, младшие копеподиты, а также имаго многих видов) и 2-го (имаго и старшие копеподиты многих видов) порядка. Потребляя микроводоросли, детрит, простейших, коловраток, ракообразных Cyclopoidea оказывают существенное влияние на динамику процессов в водных экосистемах (Монаков, 1976).

Как и другие гидробионты многие виды циклопов характерны для определенных типов и состояний экосистем, так что по составу их сообществ можно судить о состоянии экосистем (Макрушин, 1974). Ведь лишь при достаточно точной видовой идентификации циклопов можно использовать в биоиндикации, паразитологии, исследовании процессов, протекающих в водных экосистемах. Поэтому циклопы являются ценным объектом при проведении экологического мониторинга водоемов, при биоиндикации.

Методы и материалы

Отбор гидробиологического материала по акватории оз. Сайкуль, проводились в 2022-2023 гг. Отбор проб планктонных животных проводили 3 раза весной, летом и осенью. Общее количество обработанных проб составляло 200 экземпляров. Пробы зоопланктона отбирали тотальным обловом толщи воды при помощи малой сетью Джели. На глубинах менее 1,5 м производили несколько протяжек сети от дна до поверхности. В сетях использовался мельничный газ № 70. Пробы фиксировали 4 % раствором формалина. Для более детального исследования состава зоопланктона и распределения его в водохранилище было установлено 4 станций, где брались месячные пробы. На каждой станции производились следующие наблюдения и измерения - прозрачность, температура воды у поверхности и дна.

Кислородный режим измеряли с помощью термодоксиметров, рН - с помощью универсального индикатора, прозрачность воды определяли с помощью диска Секки. Температуру воды измеряли водяным ртутным термометром.

Качественные пробы зоопланктона отбирали в пяти точках водохранилища с помощью качественной планктонной сети Апштейна с диаметром 18 см (газ №46), малой сети Джели с диаметром 18 см (газ №76).

Для определения горизонтального и вертикального распределения зоопланктона, для количественных сборов зоопланктона с различных

глубин использовали батометр Молчанова (5 л) и батометр Кожевникова-Дьяченко (10 л).

Собранные пробы планктонных животных в лабораторных условиях идентифицировались и подсчитывались с применением микроскопа МБС-10. Определение видового состава коловраток и ракообразных проводили под микроскопом, используя общепринятые определители [1,2,4,5]. Просчет организмов под микроскопом велся в определенной части пробы, последующим просмотром всего остатка для выявления крупных и редких особей.

Результаты и обсуждения исследования

Eucyclops serrulatus (Fischer, 1851) - длина тела 800-1100 мкм. Цвет желтоватый. Антеннулы 12-членистые, антенны 4-членистые. Гиалиновая пластинка последнего членика антеннул гладкая. Третий членик антенн несет 9 щетинок. P1-P4 трехчленистые. Слегка изогнутый внутренний шип Enp3P4 обычно несколько короче членика и в 1,4-1,6 раз длиннее внешнего шипа. L/W Enp3P4 2,5-2,8. Соединительная пластинка P4 несет шипики на поверхности и короткие сетулы по свободному краю. Внутренний край базисов всех торакальных ног с волосками, внутренний край базиса P1 несет длинную щетинку. P5 одночленистая с 1 шипом и 2 щетинками. Боковые края последнего торакального сегмента с густыми щетинками. Семяприемник бабочковидной формы. Внешний край фуркальных ветвей с шипиками вдоль большей части их длины. L/W фурки 4,0-6,0. Задние края абдоминальных сегментов зазубрены либо несут шипики. Основания s4 с шипиками. S1 заметно короче фурки и длиннее s4 и s5.

Встречается в оз. Сайкуль (июнь, август, сентябрь). Самка этого варианта отличается от типичных тем, что фуркальные ветви у нее значительно длиннее; они обычно превосходят длину двух последних абдоминальных сегментов вместе взятых. Фуркальные ветви параллельно или слабо расходятся. Зубчики (шипиками) на внешних краях фуркальных ветвей хорошо развиты, обычно занимают весь этот край, за исключением передней части. Иногда зубчики редуцированы, при этом они сохраняются только на задней части внешнего края ветви. Большинство наших экземпляров относится к формам, имеющим зубчики (шипиками) по всему внешнему краю фурки. Среди них иногда попадались особи с крупными зубчиками на нижней части внешнего края (рис. 1).

Характерным местообитанием этого варианта у нас являются озера, временные водоёмы и некоторые проточные рисовые поля, где вода постоянно прозрачная. На рисовых полях *E. serrulatus* обычно развивается только летом (с мая до октября). В течение лета здесь происходит несколько максимальных развитий рачка, при которых численность особей достигает 5000-8500 экз./м³.

В некоторых озерах встречается в довольно большом количестве. Однако он попадался здесь только в летних пробах (июнь, июль, август). *E.*

serrulatus и варианты этого вида считаются эвритермными (Рылов, 1948), однако они предпочитают водоемы типа родников, прудов с относительно низкой летней температурой воды -16-20-26°. Мы склонны считать его эвритермно-холодноводным. Вариант олиго- и мезосапробный.

Яйценосные самки обнаружены почти во всех пробах, включая зимние. Характерно, что особи, встречающиеся в прудах, отличаются высокой продуктивностью: количество яиц в яйценосных мешках в среднем 26-30, у многих экземпляров 36-40. Число яйценосных самок составляет 18-25% общего числа особей. Максимальное развитие этого варианта на рисовых полях наблюдается в июне, августе и сентябре, при этом численность особей увеличивается от 500 до 2550 экз./м³. Науплиусы на рисовых полях отмечены в июне, августе и сентябре. По-видимому, *E. serrulatus* во многих рисовых чеках полициклический.

Наши биотермические данные, составленные на основе измерения многих экземпляров из разных водоемов, показывают, что у описываемого варианта не наблюдается значительных колебаний в размерах тела половозрелых самок. Изменчивость наблюдается в размерах тела половозрелых самок. Изменчивость наблюдается в размерах цефалоторакса, генитального сегмента, абдомена, а также фуркальных ветвей.

Обитатель разнообразных, преимущественно мелких водоемов, часто загрязненных, а также мелководий озер. Отмечен также в реках и каналах, по всей Каракалпакии и Узбекистану. Один из самых обычных представителей циклопид нашей фауны. Космополитный вид.

Морфология особей из Каракалпакстана хорошо соответствует морфологии вида из Европы (Монченко, 1974; Einsle, 1993). Не исключено, что это сборный вид.

Рис.1. *Eucyclops serrulatus* (Fischer, 1851).

1- *Eucyclops serrulatus* 1- фурка самки 2 - последние членики I антенны, 3,4 — фурка самки, брюшная сторона, 5 – фурка самки, спинная сторона, 6 – ноги V пары самки.

Eucyclops macrurus (Sars, 1863)- длина тела 1100-1200 мкм. Общие очертания тела стройные. Антеннулы 12-членистые, сравнительно короткие. Гиалиновая пластинка последнего членика антеннул гладкая.

Третий членик антенн несет 9 щетинок. P1-P4 трехчленистые. Ровный внутренний шип EпрЗР4 длиннее членика и несколько длиннее внешнего шипа. L/W EпрЗР4 2,5-2,6. Внутренний край базисов торакальных ног с волосками. P5 одночленистая с 1 шипом и 2 щетинками. Внешний край фуркальных ветвей с несколькими шипиками у основания латеральной щетинки. Ветви фурки параллельные, длинные. L/W фурки 8,0-9,0. Задние края абдоминальных сегментов зазубрены либо несут типики. Основания s4 с шипиками. SI в 2,5-3,0 раз короче фурки и вдвое длиннее s4 и s5. Внутренний шип P6 самца примерно одной длины с внешней щетинкой и несколько длиннее средней щетинки (рис.2).

Рис. 2 Eucyclops macrurus (Sars, 1863).

Fu-фурка, A1-дистальных членика передней антенны, EпрЗР4-дистальный членик эндоподита IV-пары, P5-нога V пары.

Обитатель планктона озер, что находит подтверждение и в данных других исследователей (Рылов, 1948; Монченко, 1974). Представитель палеарктической фауны. Редок. Отмечен в озерах Сайкуль, Акшакуль, Атакуль Республики Каракалпакстан. В более южных регионах не отмечен. Морфология особей из Каракалпакстана хорошо соответствует морфологии вида из Европы (Монченко, 1974; Einsle, 1993). Ранее (Mirabdullev, Turemuratova, 1996) ошибочно указанный нами *Eucyclops macruroides* на самом деле является *Eucyclops macrurus*.

Заключение

Являясь компонентом естественной кормовой базы рыб, потребляя фито- и бактериопланктон, зоопланктон играет важную роль в функционировании водных экосистем. Немаловажную роль в структуре и функционировании планктоценозов играют циклопы: с одной стороны, потребляют микроводорослей, простейших, коловраток, микроракообразных, с другой - сами являются пищей молоди рыб.

Таким образом в структуре зоопланктоценозов водоемов Каракалпакстана циклопы составляют обычно 25-60% биомассы озерного зоопланктона и 16-24% биоразнообразия зоопланктона озер и прудов.

ТОҒАЙ МУРОД АСАРЛАРИДА ТИЛ ВА УСЛУБНИНГ ЎРНИ

Аннотация. Ушбу мақолада Тоғай Мурод қиссалари ва романларида миллий характер, қадриятлар ва урф-одатларимизнинг ёритилишини тадқиқ этилади.

Тўй удумлари, кўпқари беллашувининг тартиблари, кураш ўтказиши билан боғлиқ одатлар, мавсумий маросимларга боғлиқ удумларни асарларида этнограф олимдек тасвирлаган. Тоғай Мурод асарларининг услубий бетакрорлиги шундаки, у жимжимадор сўзлардан фойдаланиб, нозик келишимли иборалар билан қаҳрамонлар қиёфасини бузмайди. Нимаики бўлса халқ тили билан ифодалайди. Шунингдек, адиб ўз асарларида мардлик, ор-номус, севги ва нафрат, жасурлик, адолат ва ноҳақлик, жисмоний ва руҳий баркамоллик, шахс ва халқ манфаатларининг тўқнашуви, мангулик ва фонийлик, хуллас инсоният ҳаётининг деярли барча қирраларини ишонарли ва ўзига хос тарзда тасвирлаб берган.

Таянч сўзлар: миллий характер, миллий қиёфа, услуб бетакрорлиги, урф-одатлар, образ, удумлар, мардлик, ор-номус, севги ва нафрат, халқона.

THE ROLE OF LANGUAGE AND STYLE IN THE WORKS OF TOGAY MURAD

Abstract. This article examines the coverage of our national character, values and traditions in Togay Murad's stories and novels.

In his works, the ethnographer described the wedding rituals, the rules of the kopkari competition, the customs related to the wrestling, and the rituals related to the seasonal ceremonies. The stylistic uniqueness of Togay Murad's works is that he uses quiet words and does not spoil the image of the heroes with subtle concordant phrases. If anything, he expresses it in the language of the people. Also, in his works, the writer convincingly and uniquely described bravery, honor, love and hatred, courage, justice and injustice, physical and

mental perfection, conflict of personal and public interests, eternity and mortality, in short, almost all aspects of human life.

Key words: national character, national image, uniqueness of style, traditions, image, traditions, bravery, honor, love and hatred, folk.

XX аср адабиётида миллий қадриятлар ва урф-одатларни ёритиш адабиётшуносликнинг энг долзарб ва қизиқарли, шу билан бирга, энг мураккаб мавзуларидан бири бўлган. Бунинг ўзига хос сабаблари бор, албатта. Чунки мустабид тузум мафқураси ҳар бир ижодкорнинг ёзганларини қаттиқ назорат остига олар, миллий қадриятлар ва урф-одатларнинг қаламга олинишини нотўғри талқин этар, бундай ижодкорларга "миллатчилик" тамғаси босилиши ҳеч гап эмасди.

Бир умр ўз халқи ҳаётидан айри тушмаган, унинг дардларини асарларида ошкора баён этган, ҳақиқат ва адолатга садоқат билан хизмат қилиб келган ана шундай ёзувчилардан бири, шубҳасиз, Тоғай Муроддир.

Шу маънода олиб қараганда, XX асрнинг иккинчи ярмида ўзбек адабиётига шиддат билан кириб келган Тоғай Муроднинг дастлабки қиссаларида ўзбек халқининг миллий қадриятлари ва урф-одатлари янада жозибали ва тушунарли тасвирланиши адибнинг катта жасорати эди, дейиш мумкин.

Шундай экан, Тоғай Мурод қиссалари ва романларида миллий қадриятлар ва урф-одатларимизнинг ёритилишини тадқиқ этиш бу истеъдодли ёзувчининг ижодига янгича назар ташлашга, унинг асарларини чуқур тушунишга, шунингдек, миллий характер назариясини ишлаб чиқишга ҳисса қўшишга кўмаклашади.

Олимлар тўғри таъкидлаганидек, "Ҳар бир санъаткор ўз бадиий яратмаларида энг аввало эстетик қарашларини, эстетик ғоя ва эстетик идеалини илгари суради. Шунинг учун санъаткор ижодини унинг эстетик қарашлари билан боғлаб ўрганиш объектив илмий хулосалар чиқаришга имкон беради"¹.

Бусиз асар ўқувчини ишонтира олмайди, унда бадиий-эстетик тасаввур уйғота олмайди.

Бадиий адабиётнинг ўзига хос хусусияти шундаки, у инсон қалбининг энг яширин қатламларигача кириб бора олади, одамларга олам ҳақида билим бера олади, инсонларнинг дунё ҳақидаги тасаввурларини чуқурлаштира олади, ҳаётни ислоҳ қилишнинг энг кучли қуроли бўла олади. У ижтимоий онгнинг бошқа шакллари бўлмиш фалсафа, фан, ахлоқ, сиёсат, ҳуқуқ кабилар билан узвий алоқада.

Зеро ёзувчилик – худо берган истеъдоддир, бу касб билан ҳамма ҳам шуғулла олмайди. Буни касб сифатида бирор жойда ўқитиб, ўргатиб бўлмайди. Ёзувчиликнинг мактаби – бир умр ҳаётнинг ичида бўлиш. Ана

Назаров Б. Ойбек эстетик қарашларининг шаклланишига доир //Ўзбек тили ва адабиёти.

шундагина унинг ёзганларини халқ севиб ўқийди, шундагина унинг қаҳрамонлари миллий характер сифатида тарих саҳифаларидан жой олади.

Мақолани ёзиш давомида шунга ишонч ҳосил қилдикки, XX асрнинг охири ва XXI асрнинг бошлари ўзбек адабиётидаги қисса ва романлар устида олиб борилган тадқиқот ишларида адибларнинг ижтимоий-фалсафий қарашлари, қаҳрамон ва унинг руҳияти муаммоси ҳамда баён усули кабилар ҳақида кўп фикрлар баён этилган¹.

"Бадий асарда характер яхлитлиги фақатгина ҳаётдаги кучли, яхлит шахсларни поэтиклаштиришнинг айнан ўзи эмас, балки ахлоқий изланишлар, инсон қобилиятига ишонч туфайли юзага келадиган интилишлардан туғиладиган мураккабликни ҳам ўз ичига олади"².

Тоғай Мурод асар ёзишда, қаҳрамонлар характерини белгилашда уларнинг мақсад ва интилишларини таъминловчи воқеа-ҳодисаларни асарнинг марказига қўяди. Адиб яратган қаҳрамонлар характеридаги ўзига хос индивидуал хусусиятлар ва уларнинг дунёқарашига хос умумий жиҳатлар ўзаро мутаносиб ҳолда намоён бўлади.

Тоғай Мурод яратган қаҳрамонларнинг характерини ўзимизга ўхшаши, яшаш тарзимизга мос келиши, хатти-ҳаракатларининг табиийлиги, жонлилиги билан бошқалардан ажралиб туради. Ёзувчининг "Отамдан қолган далалар" асарида бир образ бор. Бу образ асарда бир бора тилга олинади ва мана шу кичкинагина лавҳада унинг кимлиги, ички олами, ҳис-туйғулари тўла-тўқис намоён бўлади: "Оппоқ соч одам Қизил Байроқни директоримизга қайтариб беради. Қўлларини қорин қовуштириб-қорин қовуштириб туради.

– Болаларим, – дейди, – бизнинг юртга Амир Темурлар керак. Бизнинг юртга Бобурлар керак. Бизнинг юртга Улуғбеклар керак. Жуда, жуда керак! Аммо сизлар Темур бўлолмайсизлар, сизлар Бобур бўлолмайсизлар, сизлар Улуғбек бўлолмайсизлар. Лекин юртга тўрт мучали бус-бутун одамлар керак. Лекин юртга соғлом-соғлом одамлар керак. Шундай экан, ўзларингизни-ўзларингиз авайлангизлар, болаларим!"¹.

Асардаги бу қаҳрамон район халқ маорифи бўлими мудир Дадабобоевдир. Дадабобоев айтмоқчики, сиз Амир Темур, Бобур ва Улуғбек авлодсиз. Ўтмишда шундай буюк аجدодларимиз ўтган. Улар каби буюк бўлиш учун эса аввало саломатлик керак.

Тоғай Мурод учун ижоднинг асосий мавзуси бахтни моддий бойликдан эмас, турли тақдирлар, мураккаб инсоний муносабатлар

асосидан қидиришни англатади. Оддий одамлар ҳаётини, характерини очиб бериш – Тоғай Мурод ижодий маҳоратининг етакчи қиррасидир. Бу ўз-ўзидан бўлгани йўқ. У ана шу фазилатларни эгаллашга, ижодининг асосий йўналишига айлантиришга интилки. "Оддий", "халқдан чиққан" одамлар меҳри билан тасвирлаш ва "эскирган услублар"га содиқ қолмаслик унга дунёни аниқ кўришда ёрдам берди.

Одам ўз Ватанида унинг гўзалликлари, ўзгаришлари билан, ўз халқи ичида унинг ташвишлари, орзулари билан яшайди. Тоғай Мурод ижодида худди мана шундай қаҳрамонлар гавдаланган. Адиб уларнинг маънавий қиёфасини, характерини, руҳиятини баён қилиб бермайди, балки бу фазилатларни жонли тасвирлар орқали кўрсатади.

"Тоғай Мурод ижоди, – деб ёзади профессор Қ. Йўлдошев ўз тадқиқотларида, – ўзбек насри тараққиётида ўзига хос аҳамиятга эга. Ёзувчи шахсиятининг асарларига тўлиқ кўчиши, миллий руҳни теран англаш, ифода ўзгачалигини ташкил эта билиш, жонли тил тароватидан ўринли фойдаланиш ва колоритли юморга эгалик хусусиятлари адиб ижодининг ўзига хослигини белгилаган"¹.

Дарҳақиқат, Тоғай Мурод тўй удумлари, кўпкари беллашувининг тартиблари, кураш ўтказиш билан боғлиқ одатлар, мавсумий маросимларга боғлиқ удумларни асарларида этнограф олимдек ақс эттириб бера олган. Аммо бу тасвирлар асарларининг ҳеч бир жойида шунчаки фон учун ёки юзаки келтирилган эмас, балки ҳар доим асар қаҳрамонлари руҳиятига хос бўлган бирор жиҳатнинг очилишига қаратилган бўлади.

Тоғай Мурод тип, характер яратиш, ўткир конфликт ва ихчам сюжет туза олиш каби хусусиятларни пухта ўзлаштирган ижодкор ҳисобланади. Қолаверса, унинг асарлари халқ эртақларига хос содда, ихчам тасвир ҳамда ифода воситаларидан ижодий озиклана олган ижод намуналаридир.

Маълумки, бадиий асарда озми-кўпми тафсилот билан тасвир этилган персонаж образ ёки характер деб аталади. Характер (образ) инсоннинг типиклаштирилган ва индивидуаллашган тасвиридир.

"Аёлимиз даладан бош олиб кетайин, деди – кетолмади.

Бола азиз бўлди, ғўза боладан-да азиз бўлди!"².

Ушбу жумлада жуда кучли қочирим бор. У юзда табассум, дилда ғам-алам билан ифодаланган. Ўзбек аёллари азалдан болажон ва болапарвар бўлганлар. "Бола азиз одоби ундан азиз" ибораси ана шу миллий ғоя, миллий туйғуни ифодалайди. "Ғўза боладан-да азиз" ибораси эса, ана шу миллий ғоя ва туйғу устидан ўрнатилган социалистик меҳнат, пахта сиёсатининг якка ҳукмронлигига киноядир.

Муаллиф ҳаёт ҳақида нима демоқчи бўлса, шунинг ҳаммаси пировардида бадиий асарда тасвир этиладиган образларнинг туриш-турмушида, хулқ-атворида, психологияси, ишлари, интилишлари ва

Йўлдошев Қ. Теранлик // Шарқ юлдузи. – Т., 2008. – 3-сон. – Б. 149.
Тоғай Мурод. Отамдан қолган далалар. – Т.: Шарқ. – 1994. – Б. 187.

ўйларида ўз ифодасини топади.

"Отамдан қолган далалар" романида Деҳқонқул ҳаёти асардаги бошқа қаҳрамонлардан ортиқроқ қилиб тасвирланади. Аёли, онаси, раис каби кишиларга камроқ эътибор берилади, аммо адиб мақсадини баён қилишда, уларнинг ҳам "хизматидан" етарлича фойдаланади. Бу асарда Тоғай Мурод миллий характер сифатида ўзининг эстетик идеалини ифодаловчи Деҳқонқулдан фойдаланади. Асар бошидан Жамолиддин кетмоннинг саҳнага чиқиши Деҳқонқул қисматининг бошланиши саналади. Чунки кетмон бу деҳқончилик рамзи. Жамолиддин кетмоннинг давомчиси эса Деҳқонқул. "Деҳқон" дея бош қаҳрамонга ном берилиши эса иккиламчи маънони ташийдди. Одатда биз деҳқон деганда файз баракали, кўли гул, оқ яктақларда, кўлида кетмон кўтариб, лўппиллаган ерда савлат тўкиб ишлаётган инсонни тушунамиз. Ўша пайтларда йигитларга Деҳқонбой, Деҳқонбек каби исмлар қўйилган. Лекин бу имсга "қул" қўшимчасининг қўшилиши асар қаҳрамони характеридан келиб чиқмаган. Деҳқонқул ўзбек деҳқон халқининг типик вакили. Қисмат ўзбек халқини қулга айлантиргани ва қулдек эзиб ишлатгани, хўрлагани ёзувчи томонидан рамзийлаштирилган. Шунинг учун асар қаҳрамони номига -бек, -бой эмас, балки -қул қўшимчаси қўшилган. Тоғай Мурод Деҳқонқул сиймосида ўзбек деҳқонининг миллий характерини мужассамлаштирган. Ундан кейин биринкетин, Ақраб кўрбоши, генерал Скобелев, мактаб директори, Зиёдга ўхшаш кўп характерларнинг ўқувчи кўз олдида шаклланиш жараёнини ҳикоя қилади ва шу восита билан адибнинг ғоявий мақсади юзага чиқа бошлайди. Асар давомида ҳар бир образнинг характерни аста-секин ёритиб борилади, натижада, характернинг миллий кўриниши бадий аксини топади.

Адабий мулоқотга киришаётган ижодкор тингловчига маълумот, янгиликни етказибгина қолмай, унга таъсир этиш, ҳаётини ёндашувга чорлаши лозим. Тасвирдаги қизиқарли, тасодифий, кескин жараёнлар ижросидаги ўзгаришни яққол намоён этади.

Ёзувчи бирор ҳаётини материални аниқ, изчил ривоят асосида бири-бирига боғлаб, воқеаларни ўзаро уюштириб олиб боради. Ёзувчи асарни ўқувчига баён қилар экан, унда ўқувчининг сўзларни ҳазм қилиш жараёни асосий планда туради. Асарнинг мазмуни ишонарли ва қизиқарли бўлса-ю, ёзувчи бунга баён қилишда дағалликка йўл қўйса, у воқеа ўз таъсирини йўқотади. "Бадий сюжет ҳаётини воқеалардан танлаб, териби олинади. Бу ишда ёзувчининг дунёқараши, асарда изҳор этмоқчи бўлган фикри – асар ғояси ва уни ифодаловчи характерлар ҳамда уларнинг мантиғи ҳал қилувчи роль ўйнайди"¹.

Ҳар бир ижодкорнинг тил воситаларидан ўзига хос фойдаланиш услуби мавжуд бўлади. Шу жиҳатдан олиб қараганда, унинг индивидуал услубини ўрганиш мураккаб жараён бўлиб, у ҳам адабий, ҳам лингвистик

Адабиёт назарияси. Ж.1 – Т.: Фан, 1978. –Б. 263.

таҳлил имкониятларини ўзида мужассамлаштиради ва шу тарзда ижодий тафаккурнинг юзага чиқиш имкониятларини белгилайди.

Ҳар бир асар, албатта, ўз мазмун-моҳиятига кўра бошқаларидан ажралиб туради. Аммо, асар сюжетини бойитиш, композицион тузилишида воқеа-ҳодисаларни ўз ўрнида келтира олиш асарнинг бадиий етуқлигини таъминлайди.

Ёзувчи Тоғай Мурод ижодининг асосини ташкил қиладиган аксарият асарлари ана шундай бадиий пишиқ асарлар дейиш мумкин. Бу фикримизни Тоғай Мурод ижодига бағишланган тадқиқотлар натижалари ҳам тасдиқлайди.

Шу ўринда, адиб услубини шакллантиришда иштирок этувчи бадиий тасвир воситаларининг лисоний омиллари, воқеалар табиийлигини таъминлашдаги ўрни, ёзувчи услубидаги оҳанг характери тўғрисидаги фикрлар диққатга сазовордир. Бу фикрларда ёзувчи адабий услубининг ўзига хос жиҳатлари очиқ берилган.

М. Қосимова: "Авалло ёзувчи қисса ва романларидаги оҳанг характери ҳақида фикр юритиш керак бўлади. Боиси адиб асарларида насрий баён поэзия билан шу даражада яқинлашадики, "От кишнаган оқшом", "Ойдинда юрган одамлар" қиссалари ҳамда "Отамдан қолган далалар" романида ритм, оҳангдорлик энг муҳим омиллардан бири бўлиб қолди"³, деган фикрни илгари сурса, Й. Солижонов "Ҳатто шеър ритми, архитектуроникасига путур етказмаслик учун Тоғай Мурод Деҳқонкул нутқида келишиқ, шахс-сон ва эгалиқ кўшимчаларини ҳам ташлаб кетаверади"⁴, деб ёзган.

Бу эса "ёзувчи шеърий асарларга хос бўлган техник воситалар – ритм, вазн, туроқ кабилардан кенг фойдаланади"¹, деган фикрни исботлайди.

Демак "адибнинг ўзига хос ифода усули, индивидуал баён тарзи ҳам айнан ана шу оҳангдорликда кўринади. Шу сабабли бу хусусият алоҳида тадқиқот манбаи бўла олади"².

Тоғай Мурод адабиётга бамисоли бир эпкини олиб кирган ва кўп жиҳатдан халқ дoston ва термалари, мақол ва нақлларига ўхшаш шакли ихчам, мазмуни теран сўз-ибораларга бой бўлган оҳангдор тил ва туркона услубда ижод қилган. Чунки у адабиётда мана шу услуби орқали миллий қаҳрамонлар яратди ва бахшиёна тасвирлаш маҳоратини аниқ намоён эта олди.

Баъзи адабий танқидчилар томонидан ўзгача услуб дея эътироф этилган Тоғай Мурод асарлари ҳақида "сўзлари бежизга шеърдаги каби тағма-тағ жойлаштирилмайди, сўз-гапларни кўп ишлатмайди. Асарларида

Қосимова М. Бадиий нутқ индивидуаллигининг лингвистик хусусиятлари (Тоғай Мурод асарлари асосида). Филол. фанлари номзоди ... дисс. автореф. – Т., 2007. – Б. 7–8.

Солижонов Й. XX асарнинг 80-90-йиллари ўзбек насрида бадиий нутқ поэтикаси: филол.фан.ном. ... дисс.автореф. –Т., 2002. –Б. 14.

Қосимова М. Бадиий нутқ индивидуаллигининг лингвистик хусусиятлари (Тоғай Мурод асарлари асосида). Филол. фанлари номзоди ... дисс. автореф. – Т., 2007. – Б. 8.

Тўлаганова У. Тоғай Мурод насрида ритм: Филол. фанлари номзоди ... дисс. автореф. – Т., 2005. – Б. 7.

ундов белгилари ва уч нуқталарнинг мўл-кўл қўлланиши ҳам бекорга эмас"³ дея тариф берилади.

Адиб жумла тузишда инверсия, ассонанс, аллитерация, такрор усулларида кофиядош, маънодош, антоним, омоним сўзлардан маҳорат билан фойдаланади. Бўғинлар тенг бўлмаган ўринларда ҳам ритм мавжудлиги, фақат мисралар талаффузи жараёнида қисман қисқа ё узун талаффуз қилинишида фарқланиш кузатилади.

Баъзи ҳолларда ритм сатр бошидан охирига қадар аста-аста кўтарилиб борса, баъзан мисраларда, оҳангдаги бир хиллик сақланади. Бу жараёндан бахшилик санъатида ҳам ўринли фойдаланилади.

"Давлатинга болама-а, шодя шолтон ўрайман,

Оқ юзима сарғайиб жаҳаннамга қарайман.

Ажал келса боламай, менам бир кун нурайман

Мени десанг кулоқ солгин боламай-ай-ай-ай"².

"Отамдан қолган далалар"даги мана бу мисралар фикримиз исботидир:

"Кун олис бошим айланди.

Кун олис кўзим ёшланди.

Кун олис ичак-қорним томоғимда бўлди.

Ғарра-ғарра қусишдан армоним қолмади"¹.

Ушбу сатрларни ҳам дўмбира жўрлигида бахшиёна ҳассос нолалар билан ижро этса, бир дардли дostonдай наво бериши шубҳасиз.

Оддий сўзлар. Анаъанавий тарзда ёзиладиган сўзлардан адиб ўз услубида – бахшилик айтимлари усулидан фойдаланган. Мисралар тенглиги, кофиялар жойлашуви, ўқилишдаги ритми билан адиб маҳорати юзага чиққан.

Тоғай Мурод ўз асарлари учун материал тўплаганда, асарнинг қайси жанрда ёзилишини кўз олдига келтирган бўлса, ажаб эмас. Зеро, Тоғай Муроднинг ёзганларини бошқача тасаввур қилиш ҳам мумкин эмас. Сабаби, ўқувчиларни бир хилликдан чалғитиш мақсадида адиб мана шу йўлни танлаган бўлса керак. Унинг асарларини машҳур қилган нарса ҳам худди мана шу – унинг ўзига хос халқона услубидир.

Ёзувчи ўз асари материални шу даражада билиши керакки, лозим бўлса, мутахассис ҳам ундан фойдалансин. Тоғай Мурод асарлари ана шундай қўлланма бўла олди. Зеро, баъзи адабий танқидчилар Тоғай Мурод асарларида кераксиз маълумотлар (деталлар, жой номлари, урф-одатлар)га жуда кўп таърифлар берилган, кераксиз ўринларда фойдаланилган дея эътироз билдиришса-да, адибнинг китобхонга айтмоқчи бўлган гапларини шу йўл билан юзага чиқариши унинг ўзига хос услуби орқали силлиқланиб

Йўлдошов Қ. Теранлик //Шарқ юлдузи, 2008. – 3-сон. – Б. 149.

Шоберди бахши тилидан ёзиб олинган "Авазхон" достонидан парча.

Тоғай Мурод. Танланган асарлар. От кишнаган оқшом. – Т.: Шарқ, 2008. –Б. 111.

кетади. Чунки адибнинг ҳар бир асари ўзига хос санъатни ўзига хос маҳорат билан ёритиб бера олган.

Тоғай Мурод асарларининг услубий бетакрорлиги шундаки, у жимжимадор сўзлардан фойдаланиб, нозик келишимли иборалар билан қахрамонлар қиёфасини бузмайди. Нимаики бўлса халқ тили билан ифодалайди. Шунингдек, адиб ўз асарларида мардлик, ор-номус, севги ва нафрат, жасурлик, адолат ва ноҳақлик, жисмоний ва руҳий баркамоллик, шахс ва халқ манфаатларининг тўқнашуви, мангулик ва фонийлик, хуллас инсоният ҳаётининг деярли барча қирраларини ишонарли ва ўзига хос тарзда тасвирлаб берган.

Тоғай Муроднинг асарлари услуб жиҳатидан халқона тилда битилганлиги унинг жозибадорлигини таъминлаган. Бу билан Тоғай Мурод ўзидан олдинги ижодкорлар услубига зид бормади, у астойдил изланди, халқчил мазмунга халқчил ифода излади ва уни кашф этди.

Шуни алоҳида таъкидлаш керакки, Тоғай Мурод услубининг ўзига хослиги фақат унинг асарлари этнографик материаллар асосида яратилганида эмас, балки ёзувчининг бу материаллар устида ишлаш борасида ўзига хос йўли борлигидадир.

**ГЕОГРАФИЧЕСКИЕ ПРОБЛЕМЫ ЗДОРОВЬЯ ЧЕЛОВЕКА В
УСЛОВИЯХ ИЗМЕНЕНИЯ КЛИМАТА (НА ПРИМЕРЕ
КАШКАДАРЬИНСКОЙ ОБЛАСТИ)**

Аннотация. В условиях изменения климата ряд проблем, связанных со здоровьем человека, являются одними из наиболее актуальных вопросов современности. Особенно в засушливых регионах существуют проблемы, связанные с неблагоприятным воздействием аномальных температур и ухудшением экологической ситуации из-за засухи на здоровье человека. В Кашкадарьинской области, расположенной в засушливом регионе, наблюдаются эпидемии болезней сердца, сосудов, органов дыхания, аллергии, опухолей, холеры, почек и др. заболеваемость увеличивается.

Ключевые слова: засушливый климат, здоровье человека, аномальная температура, голод, холера, эпидемическое заболевание, пестицид, гербицид.

**GEOGRAPHICAL PROBLEMS OF HUMAN HEALTH UNDER
CLIMATE CHANGE (IN THE CASE OF KASHKADARYA REGION)**

Abstract. In the context of climate change, several problems related to human health are one of the most urgent issues of today. Especially in arid regions, there are some problems related to the negative impact of anomalous temperatures and the deterioration of the ecological situation due to drought on human health. In Kashkadarya region, which is located in an arid region, there are epidemics of heart, blood vessels, respiratory, allergy, tumor, cholera, kidney disease, etc. diseases are increasing.

Key words: arid climate, human health, abnormal temperature, famine, cholera, epidemic disease, pesticide, herbicide.

Введение. Жизнь и производственная деятельность человека происходят в пределах определенного ландшафта и между ними происходит непрерывное взаимодействие. В процессе этого взаимодействия ландшафт меняет свои природные свойства и приобретает новые характеристики. Актуальной стала проблема охраны, восстановления и улучшения ландшафтов в целом, то есть среды, в которой живет человек. В условиях изменения климата вопросы здоровья человека требуют анализа, научного обоснования и изучения.

Актуальность темы. В результате негативного воздействия человека на окружающую среду возникает ряд экологических проблем, таких как изменение климата, загрязнение атмосферы, истощение озонового слоя. Возникновение подобных глобальных проблем не только оказывает негативное воздействие на матушку-природу, но и представляет большую угрозу здоровью человека. По мнению экспертов Всемирной организации здравоохранения (ВОЗ), повышение температуры воздуха на нашей планете вызывает рост числа смертей от опасных инфекций и болезней, а также различных стихийных бедствий [6;].

Основная часть. Последствия изменения климата для здоровья значительны и включают сердечно-сосудистые заболевания, респираторные заболевания, инфекционные заболевания, недоедание, психические заболевания, аллергию, травмы, отравления и многое другое. Аномальные изменения климата вызывают заболевания, связанные со многими органами и системами человека. В частности, наблюдалось, что гипертермия вызывает эпидемии заболеваний головного мозга, сердца, почек, печени и почек. Особенно в длительных аномальных случаях из-за жары летних месяцев возрастает риск смерти от физического стресса, обезвоживания, солнечного удара, хронических заболеваний легких и других вредных воздействий. Эти показатели особенно наблюдаются среди людей старше 60 лет. Генеральный директор ВОЗ Т. Оценивая эту ситуацию, Гебреисус сравнил климатический кризис с кризисом здравоохранения [8;]. Повышение температуры Земли на 1,20 приводит к глобальному потеплению. Сегодня во многих странах мира из-за глобального потепления, засух и наводнений возникла нехватка продовольствия. Из-за нехватки питьевой воды и голода во многих странах в некоторых регионах наблюдается вспышка эпидемии холеры. По оценкам экспертов ВОЗ, около 222 миллионов человек в мире страдают от высокого уровня продовольственной безопасности, а 47 миллионов человек в африканских странах страдают от голода.

В связи с увеличением количества аномальных температур среди пожилых людей увеличивается смертность от связанных с жарой сердечно-сосудистых и респираторных заболеваний. Согласно данным, количество смертей, связанных с аномально высокими температурами среди взрослых, в 2019 году составило 345 000 человек по сравнению с более чем 70 000

европейцев, погибших во время европейской жары 2003 года. Ни для кого не секрет, что в июне 2015 года в Карачи (Пакистан) из-за жары (49°C) погибло более 2000 человек, а в США ежегодно из-за сильной жары умирает более 1300 человек.

Еще одной серьезной проблемой, вызывающей глобальные изменения климата, является увеличение содержания углекислого газа в воздухе и «парниковый эффект». Кроме того, экологические риски в сочетании с усиливающимися последствиями изменения климата и загрязнения воздуха будут сопровождаться в ближайшие годы стихийными бедствиями (наводнениями, землетрясениями и засухами, лесными пожарами и т. д.) с экстремальными погодными явлениями. В результате происходит рост числа инфекционных заболеваний и локальных эпидемий. Экологические риски усугубляются изменением климата и, как ожидается, будут увеличиваться из-за увеличения загрязнения воздуха.

Качество воды, состояние воздуха, почвенно-растительный мир, все природные ресурсы, необходимые для питания человека, имеют большое значение для здоровья людей. Всемирная организация здравоохранения отмечает, что около 80% всех заболеваний являются следствием экологических проблем [2; 33 с.]. В частности, по данным экспертов ВОЗ, 23% всех заболеваний и 25% всех видов злокачественных опухолей вызваны факторами окружающей среды. В Республике Узбекистан около двух тысяч крупных и средних промышленных предприятий, на которых работает более 70 тысяч человек, стационарные источники загрязнения выбрасывают в атмосферу более 150 вредных веществ, из которых 50 считаются наиболее опасными [6;].

При оценке экологического состояния Кашкадарьинской области в условиях изменения климата одной из важнейших задач является изучение загрязнений атмосферного воздуха и их влияния на здоровье человека [3; 89-191 с. 4; С. 199-201]. Сегодня медико-географические исследования проводятся по направлениям, направленным на оценку влияния окружающей среды на здоровье населения, прогнозирование и выявление природных очагов существующих заболеваний. Учитывая, что чистота окружающей среды во многом определяет здоровье человека, важна оценка и снижение распространения заболеваний в Кашкадарьинской области на основе изучения их происхождения. Хотя медицинская география сегодня является одной из важнейших областей исследования, географы по-прежнему сталкиваются с некоторыми препятствиями при сборе медицинских данных. Например, это связано с определением локализации заболевания, точной диагностикой заболевания и т. д. Благодаря усилиям Всемирной организации здравоохранения, других организаций и местных органов власти географы могут с большой точностью отслеживать распространение болезней.

Глобальные и региональные климатические изменения на территории Узбекистана. В ближайшие годы ожидается повышение среднегодовой температуры в нашей республике на 2-30°С в северных регионах и на 10°С в южных регионах. Это становится причиной вспышки некоторых заболеваний. Весной и осенью в организме населения создаются благоприятные условия для обитания и развития болезнетворных бактерий. В эти периоды среднесуточная температура выше +5°С способствует развитию многих инфекционных паразитарных заболеваний. В частности, можно отметить, что такие инфекционные заболевания, как бешенство, бруцеллез, корь, широко распространены в горных и предгорных районах Кашкадарьинской области, в регионах, специализирующихся на животноводстве [5; 223-227 с.] Кашкадарьинская область – один из регионов Узбекистана, где расположены крупные промышленные предприятия. В Кашкадарьинской области важную роль в загрязнении атмосферного воздуха играют выбросы промышленных предприятий и автотранспорта.

По статистике, в Кашкадарье добывается 70% газа, 78% нефти и более 80% газового конденсата. Промышленность в этой сфере развивается очень быстро. В частности, важное место в нашей республике занимают Шортанский нефтегазовый, Шортанский газохимический комплекс, Мубаракский газоперерабатывающий завод, Дехканабадский завод калийных удобрений, Таллимарджонский КЭС и другие крупные промышленные предприятия [1; 133 с.].

Среди отраслей Кашкадарьинской области особое место занимают газохимическая, газоперерабатывающая промышленность. Нефтегазовая отрасль является одной из экологически опасных отраслей и оказывает большое негативное влияние на здоровье человека. Ведь доказано негативное влияние различных химических реагентов при бурении нефтяных и газовых скважин, добычи сырья, производства готовой продукции, а также углеводородов, образующихся в технологическом процессе для органов дыхания и их смесей, на флору и фауны, так и на человеке.

Если количество выхлопных газов, выходящих из этих промышленных предприятий, будет выше нормы, это окажет негативное влияние на здоровье человека и вызовет рост заболеваний. Позже, при добыче вышеуказанного количества серы, газового конденсата и других веществ на Мубаракском газоперерабатывающем заводе наблюдается выброс в атмосферу большого количества токсичных газов. По данным увеличения содержания токсичных газов в атмосферном воздухе, воздействие газа, смешанного с серой, можно ощутить на расстоянии до 50-60 километров. В частности, это оказывает негативное влияние на здоровье жителей Мубаракского, Касбийского и Косонского районов, сельскохозяйственные культуры, домашний скот, а также сухую и жаркую

Каршинскую степь. В результате установлено, что указанные промышленные предприятия выбрасывают в атмосферу углеводороды, окись углерода, оксиды серы, сероводород, ангидрид.

В промышленных центрах и промышленно развитых городах Кашкадарьинской области токсичные газы и вещества, выделяющиеся в результате добычи полезных ископаемых и переработки, эксплуатации заводов, бензопириновые вещества, выделяющиеся из автомобилей, радиоактивные вещества, вызывают рак легких в организме человека. В частности, в организме людей, проживающих вокруг месторождений полезных ископаемых, наблюдаются негативные состояния, в результате чего в таких регионах растет ряд групп заболеваний, в том числе опасная астма, некоторые заболевания, связанные с органами дыхания.. Из-за применения пестицидов и гербицидов, предназначенных для повышения плодородия земель в освоенных сельскохозяйственных районах, можно наблюдать случаи отравления организмов местного населения, а в некоторых случаях даже летальный исход.

Определено загрязнение воздуха Карши, Косона, Мубарака и других промышленных городов Кашкадарьинской области пылью, фтористым водородом, сернистым газом, оксидами углерода и водорода. По данным управления статистики Кашкадарьинской области, [7;] в среднем 320 тыс. т в год от источников загрязнения атмосферного воздуха. в атмосферу выбрасывается больше различных вредных веществ. 212,4 тыс. тонн этого показателя. si к промышленному производству, 108,2 тыс. тонн. соответствует источникам транспорта. По данным Кашкадарьинского областного управления статистики, 56,4% умерших в 2018 году составили от болезней системы кровообращения, 8,7% от опухолей, 6,6% от несчастных случаев, отравлений и травм, 6,6% от болезней органов пищеварения, 4,1% умерли. от болезней органов дыхания, 1,2% от инфекционных и паразитарных болезней, 16,4% от других болезней [1; 133 с.]. К комплексу мероприятий, разработанных и реализуемых управлением экологии и охраны окружающей среды Кашкадарьинской области по борьбе с загрязнением атмосферного воздуха - создание новых типов двигателей для автомобилей, которые являются одним из основных источников загрязнения атмосферного воздуха, перевод их на технологически чистое топливо. размещение загрязнителей атмосферного воздуха всех предприятий за пределами города, строгий запрет на размещение производственных предприятий вблизи друг друга и т.д.

Краткое содержание. Необходимо разработать меры по предотвращению негативного воздействия повышенного загрязнения атмосферы на здоровье человека во всех видах производственной деятельности предприятий нефтегазовой отрасли Кашкадарьинской области, оснастить промышленные предприятия устройствами на основе современной технологии газоочистки. В целях предотвращения глобальных

изменений климата, снижения количества вредных отходов, выбрасываемых в атмосферу, применять меры по предотвращению загрязнения воды и почвы различными отходами, развивать организацию санитарно-защитных зон на промышленных предприятиях и населенных пунктах, постоянный мониторинг загрязнения атмосферного воздуха в жилых массивов, целесообразно организовать агитацию среди населения.

CONTROLLABILITY PROBLEM FOR ONE CLASS OF DYNAMIC SYSTEMS WITH PARAMETERS

Annotation. The paper considers a dynamic control system with a structural parameter and an inaccurately specified initial state. An optimization problem for one type of nonsmooth terminal functional is studied. Necessary and sufficient optimality conditions are obtained.

Keywords: dynamic system, control problem, system parameter, nonsmooth functional, optimality conditions.

В результате исследований задач оптимизации, связанных с проблемами управления сложных систем и принятия решения в условиях неопределенности, развиваются методы негладкой оптимизации, негладкого и многозначного анализа [1–4]. Одним из подходов, приводимых к негладким задачам оптимизации, является принцип минимакса [3]. Модели динамических систем в виде управляемых дифференциальных включений представляют большой интерес в проблемах управления и принятия решения в условиях информационных ограничений. Для таких моделей изучаются негладкие задачи оптимального управления ансамблями траекторий [4,5,6].

Рассмотрим динамическую систему управления с параметрами вида

$$\dot{x} = A(t, y)x + b(t, u, y), t \in T = [t_0, t_1], x(t_0) \in D, u \in V(y), y \in Y, (1)$$

где x – n -вектор состояния, u – m -вектор управления, y – k -мерный параметр, $A(t, y)$ – $n \times n$ -матрица, $b(t, u, y)$ – n -вектор функция. В данной

системе управления информация о начальном состоянии системы ограничена тем, что известно только выпуклое компактное множество $D \subset R^n$ возможных начальных состояний. В процессе управления участвует параметр $y \in Y$, значение которого сохраняется постоянным в рассматриваемом отрезке времени $T = [t_0, t_1]$. Область значений управления $u = u(t)$ является выпуклым компактным подмножеством $V(y)$ пространства R^m , непрерывно зависящим от параметра $y \in Y$. Множество Y также будем считать компактным подмножеством пространства R^k .

Относительно правой части дифференциального уравнения (1) будем предполагать, что выполнены следующие условия:

1) элементы матрицы $A(t, y)$ суммируемы по $t \in T$ и непрерывны по $y \in Y$, причем $\|A(t, y)\| \leq \alpha(t)$, $\alpha(\cdot) \in L_1(T)$;

2) каждая компонента n -вектор функции $(t, u, y) \rightarrow b(t, u, y)$ измерима по $t \in T$ и непрерывна по $(u, y) \in V \times Y$, причем $\|b(t, u, y)\| \leq \beta(t)$, $\beta(\cdot) \in L_1(T)$.

Допустимыми управлениями для системы (1) будем считать каждую измеримую ограниченную m -вектор-функцию $u = u(t)$, $t \in T$, принимающие почти всюду на T значения из $V(y)$ при некотором $y \in Y$. Обозначим через $U_T(y)$ – множество допустимых управлений $u = u(\cdot)$, таких, что $u(t) \in V(y)$, $t \in T$. Обозначим через $H_T(u, y)$ – множество всех абсолютно непрерывных траекторий, соответствующих допустимому управлению $u \in U_T(y)$ и параметра $y \in Y$. Согласно результатам работ [5,6] при заданных условиях $H_T(u, y)$ является выпуклым компактным множеством в пространстве непрерывных n -вектор-функций $C^n(T)$.

Пусть качество управления динамической системой (1) оценивается негладким терминальным функционалом

$$J(x(\cdot), y) = \sum_{i=1}^l \max_{z \in Z_i} (P_i(y)x(t_1), z),$$

где $P_i(y)$ – $s \times n$ -матрица, непрерывно зависящая от параметра $y \in Y$, Z_i – замкнутое ограниченное множество из R^s . Для системы (1) рассмотрим следующую максиминную задачу:

$$\min_{x(\cdot) \in H_T(u, y)} J(x(\cdot), y) \rightarrow \max_{u \in U_T(y), y \in Y} . \quad (2)$$

Будем изучать необходимые и достаточные условия оптимальности для максиминной задачи (3).

Рассмотрим множество, состоящее из концов всех траекторий $x(\cdot) \in H_T(u, y)$ в момент времени $t_1 > t_0$:

$$X_T(t_1, u, y) = \{\xi \in R^n \mid \xi = x(t_1), x(\cdot) \in H_T(u, y)\}.$$

В силу результатов работы [5] $X_T(t_1, u, y)$ является выпуклым компактом из R^n .

Положим: $\sigma(X, \psi) = \min_{\xi \in X} (\xi, \psi)$. Функционал $G(u(\cdot), y) = \min_{x(\cdot) \in H_T(u, y)} J(x(\cdot), y)$ имеет следующее представление:

$$G(u(\cdot), y) = \max_{z_i \in \text{co}Z_i, i=1, l} \sigma(X_T(t_1, u, y), \sum_{i=1}^l P'_i z_i), \quad (3)$$

где $\text{co}Z_i$ – выпуклая оболочка множества Z_i .

Учитывая формулу (3), максиминную задачу (2) можно записать в следующем виде:

$$\max_{z_i \in \text{co}Z_i, i=1, l} \sigma(X_T(t_1, u, y), \sum_{i=1}^l P'_i(y) z_i) \rightarrow \max_{u(\cdot) \in U_T(y), y \in Y} . \quad (4)$$

Таким образом, максиминная задача (2) сводится к задаче повторной максимизации вида (4). Она является задачей оптимального управления терминальным состоянием ансамбля траекторий динамической системы (1).

Множество $X_T(t_1, u, y)$ имеет следующее представление:

$$X_T(t_1, u, y) = F_y(t_1, t_0)D + \int_{t_0}^{t_1} F_y(t_1, \tau) b(\tau, u(\tau), y) d\tau .$$

где $F_y(t, \tau)$ – фундаментальная матрица решений уравнения $\dot{x} = A(t, y)x$. Имеем:

$$\sigma(X_T(t_1, u, y), \psi) = \sigma(F_y(t_1, t_0)D, \psi) + \int_{t_0}^{t_1} (F_y(t_1, \tau) b(\tau, u(\tau), y), \psi) d\tau .$$

Рассмотрим функцию:

$$\gamma(y, z) = C(D, \psi(t_0, y, z)) + \int_{t_0}^{t_1} \max_{v \in V(y)} (b(t, v, y), \psi(t, y, z)) dt, \quad y \in Y, z = (z_1, z_2, \dots, z_l), z_i \in \text{co}Z_i$$

где $\psi(t, y, z) = F'_y(t_1, t) \sum_{i=1}^l P'_i(y) z_i, z = (z_1, z_2, \dots, z_l)$.

Теорема. Для оптимальности управления $u^0(\cdot)$ и параметра y^0 в задаче (3) необходимо и достаточно существование $z^0 = (z_1^0, z_2^0, \dots, z_l^0), z_i^0 \in \text{co}Z_i$ такой, что $\max_{z_i \in \text{co}Z_i, i=1, l} \gamma(y^0, z) = \gamma(y^0, z^0)$ и выполнение следующих условий:

$$\max_{z_i \in \text{co}Z_i, i=1, l} \gamma(y^0, z) = \max_{y \in Y} \max_{z_i \in \text{co}Z_i, i=1, l} \gamma(y, z), \quad (5)$$

$$\max_{v \in V(y^0)} (b(t, v, y^0), \psi(t, y^0, z^0)) = (b(t, u^0(t), y^0), \psi(t, y^0, z^0)) \text{ п.в. на } T . \quad (6)$$

Полученные необходимые и достаточные условия оптимальности дают теоретическое обоснование метода построения решения задачи (2) с помощью решения конечномерных задач вида (5) и (6). Конечномерную задачу минимизации функции (6) можно решить методами математического программирования. Таким образом, решение рассмотренной в работе негладкой задачи оптимального управления приводится к решению задач конечномерной оптимизации.

ОБОДОНЛАШТИРИШ ХИЗМАТЛАРИНИ КЎРСАТИШ ТИЗИМИНИНГ ХОРИЖ ТАЖРИБАСИ

Аннотация. Ушбу мақолада ободонлаштириш хизматларига алоҳида эътибор қаратилган бўлиб, қаттиқ маъшій чиқиндиларни ташиб кетишни ташиқил этиши ва улардан фойдаланиши соҳасида хусусий тадбиркорлик фаолиятини янада ривожлантириши борасида ҳали ҳал этилмаган қатор муаммолар мавжудлиги ҳамда ушбу муаммоларга алоҳида эътибор қаратиши муҳимлиги бўйича таклифлар ва тавсиялар берилган.

Калит сўзлар: ободонлаштириш хизматлари, атроф-муҳит, ижтимоий барқарорлик, режаслаштириши, коммунал қурилиши, уй-жой ва ер.

FOREIGN EXPERIENCE OF THE PROVISION OF LANDSCAPE SERVICES SYSTEM

Abstract. In this article, special attention is paid to beautification services, suggestions and recommendations are given on the existence of a number of unsolved problems in the further development of private entrepreneurship in the field of organization of transportation of solid household waste and their use, as well as the importance of paying special attention to these problems.

Keywords: Development services, environment, social sustainability, planning, public construction, housing and land.

Ҳар бир шаҳарнинг кундалиқ фаолиятини таҳлил қилиш бу ўша шаҳардаги бир қанча ечимини кутиб турган муаммоларга дуч келишдир. Энг эътиборли томони шундаки, ободонлаштириш хизматларининг ривожланиши бу давлатнинг иқтисодий ва ижтимоий барқарорлигини ифода қилишнинг асосий кўрсаткичларидан бири ҳисобланади. Бироқ ободонлаштириш тизими тармоғини ривожлантиришнинг энг муҳим муаммоларидан бири, бу бугунги кунда ушбу тармоқни такомиллаштиришга эътиборнинг камлигидадир. Шу сабабли эътибор қаратадиган бўлсак, мамлакатимизнинг барча шаҳарлари ва туман марказлари бир-биридан сезиларли даражада фарқ қилади.

Дунёнинг барча ривожланган мамлакатлари учун шаҳарлардаги, айниқса мамлакат пойтахтларидаги экологик тозалик барча даражадаги расмий ҳокимият органлари, сиёсий партиялар, ижтимоий ҳаракатлар, оммавий ахборот воситалари ва шу билан биргаликда аҳолининг алоҳида эътибор марказида бўлади.

Шаҳарларни ободонлаштириш ҳамisha энг долзарб вазифа сифатида намоён бўлган. Ободонлаштириш сўзини икки хил маънода тушуниш мумкин: тор маъно ва кенг маънода.

Биринчидан, тор маънода – уй–жой, ҳовли ва фақатгина бир кишига ёки оила аъзоларига тегишли бўлган ҳудуд.

Иккинчидан, кенг маънода – режалаштириш, коммунал қурилиш, уй–жой ва ер масалалари, йўлаклар, шаҳарнинг яшил майдонлари, кўчаларни парвариш қилиш, кўча транспорти, шаҳар алоқалари, шаҳар ёритилиши, иситиш, шаҳар экологияси, пиёдалар қатнови зич бўлган ва кам бўлган йўлаклар шулар жумласидандир.

Шаҳарларни ободлиги, бу ўша шаҳарнинг ижтимоий-иқтисодий аҳволини, даражасини акс эттирадиган “ойна”дир, шунинг учун ривожланган мамлакатларда мамлакат ободлиги, унинг экологик вазиятлари тўғрисидаги маълумотлар жамоатчиликка очик бўлиши ва жамиятнинг сиёсий ва ижтимоий ҳаётида етакчи ўринлардан бирини эгаллаши бежиз эмас албатта.

Йилдан-йилга аҳоли сонининг ўсиши, шаҳарларни катталашиши саноатнинг ривожланиши, буларнинг барчаси шаҳар ободончилигига, атроф – муҳитни тоза сақлаш муаммосини пайдо бўлишига, инсонлар ҳаёти ва фаолияти учун етарли шароитларни яратиб беришдаги кичик–кичик кўз илғамас тўсиқларни пайдо бўлишига сабаб бўлмоқда. Сўнгги ўн йилликларни кўздан кечирар эканмиз, инсонларни атроф-муҳитга ва хусусан шаҳарлар ободончилигига салбий таъсири сезиларли даражада ошганлигига гувоҳ бўламиз.

Бугунги кунда бутун дунёда чиқиндиларнинг инсонлар ҳаёти ва соғлиғига, атроф-муҳитга зарарли таъсирининг олдини олиш, чиқиндилар ҳосил бўлишини камайтириш ва улардан хўжалик фаолиятида оқилона фойдаланилишини таъминлашга қаратилган катта лойиҳалар амалга оширилмоқда. Сабаби ҳар йили дунё бўйлаб 2 миллиарддан ортиқ каттик маиший чиқинди ҳосил бўлади ва улардан камида 33 фоизи экологик жиҳатдан хавфсиз бўлмаган усуллар билан қайта ишланади. Ўртача киши бошига кунлик тўғри келадиган маиший чиқинди 0,74 кгни ташкил этади, ҳудудлар кесимида унинг қуйи ва юқори чегаралари 0,1 дан 4,5 кг оралиқда тебраниб туради. Шарқий Осиё ва Тинч океани ҳудудида дунё чиқиндисининг 23 фоизга яқин қисми шакланса, бу кўрсаткич Яқин Шарқ ва Шимолий Африка давлатларида энг кам – 6 фоизни ташкил этади.

Кўпгина давлатларда каттик маиший чиқиндини қайта ишлашда бир неча давлат бошқарув даражалари иштирок этиб, маҳаллий даражадаги

органлар асосий ўринни эгаллайди. Маҳаллий органлар чиқиндиларни тўплашда, ташишда ва қайта ишлашда муҳим аҳамият касб этади. Улар, шунингдек чиқиндини олиб кетиш учун тўлов миқдорини белгилаш ваколатига эга бўлиши мумкин, чиқиндиларни йўқ қилиш, қайта ишлашга лицензия ва рухсатнома бериш аксарият ҳолларда давлат ёки унинг ҳудудий ваколатли органлари томонидан амалга оширилади.

Бугунги кунда бутун дунёда чиқиндиларнинг инсонлар ҳаёти ва соғлиғига, атроф-муҳитга зарарли таъсирининг олдини олиш, чиқиндилар ҳосил бўлишини камайтириш ва улардан хўжалик фаолиятида оқилона фойдаланилишини таъминлашга қаратилган катта лойиҳалар амалга оширилмоқда. Сабаби ҳар йили етти миллион киши ҳаво ифлосланиши таъсирида вафот этади. Турли газлар таъсирида ифлосланишлардан келиб чиқадиган касалларни даволаш учун ҳар йили 1 триллион доллардан зиёд маблағ сарф этилади. Ҳавони ифлосланиши нафақат аҳоли саломатлигига, балки атроф – муҳит учун ҳам жиддий таҳдидларни ҳам келтириб чиқармоқда. Бу ўз – ўзидан дарё, океанларда кислородни камайтиради, биологик хилма – хилликни камайтиради шу билан биргаликда иқлим ўзгаришларига ҳисса қўшади.

Ер юзидаги аҳоли пунктларида мавжуд бўлган аҳоли сони, иқлимий, жуғорфий ва бошқа ижобий ва салбий шароитлардан қатъий назар ўзлари учун зарур бўлган санитария–гигиеник шароитларни ва аҳолининг меҳнати, маиший турмуши ҳамда дам олишлари учун зарур қулайликларни юксак даражада таъминлашлари учун ободонлаштириш хизматларидан фойдаланмасликнинг иложи йўқ. Мамлакат ободлиги ижтимоий-иқтисодий ҳолатини акс эттирувчи “ойна”дир, шунинг учун ривожланган ва ривожланаётган мамлакатларнинг ободлиги, экологик вазиятлари ҳақидаги маълумотлар оммага очиқ бўлиши ва етакчи ўринлардан бирини эгаллаши бежиз эмас. Шундай экан ободонлаштириш жамиятнинг сиёсий ва ижтимоий ҳаётдаги ўрнини белгилаб беради деб бемалол айта оламиз.

Кўпгина давлатларда қаттиқ маиший чиқиндини қайта ишлашда бир неча давлат бошқарув даражалари иштирок этиб, маҳаллий даражадаги органлар асосий ўринни эгаллайди. Маҳаллий органлар чиқиндиларни тўплашда, ташишда ва қайта ишлашда муҳим аҳамият касб этади. Улар, шунингдек чиқиндини олиб кетиш учун тўлов миқдорини белгилаш ваколатига эга бўлиши мумкин, чиқиндиларни йўқ қилиш, қайта ишлашга лицензия ва рухсатнома бериш аксарият ҳолларда давлат ёки унинг ҳудудий ваколатли органлари томонидан амалга оширилади.

Мамлакатни ободонлаштириш ва чиқиндиларни олиб чиқиб кетиш хизмати нархлари турли ʼорижий давлатларда турлича белгилаб олинган: АҚШда ягона тарифга асосан, Канадада идиш ҳажмига қараб, Сеулда умумий тўловда ва бошқалар.

АҚШ шаҳарларида чиқиндини олиб кетиш одатда ягона тариф бўйича амалга оширилади. Ушбу хизматнинг ўртача ойлик нархи 9 дан 70 АҚШ

долларгачани ташкил қилади. Чикагода жойлашган турар-жой биноларида яшовчи аҳоли Кўчалар ва санитария департаменти томонидан тақдим этиладиган чиқиндини ташиш хизмати учун ҳар бир турар-жойга ўртача ойлик 9,5 АҚШ доллари миқдорида пул тўлайди. Мазкур сумма сув ва канализация хизматлари билан биргаликда умумий умумий коммунал тўлови таркибига киритилган.

Канаданинг Торонто ва Австралиянинг Сидней шаҳарларида чиқинди идишининг хажмига қараб тўловлар амалга ошириладиган тарифлар дастури амал қилади. Тўлов миқдори 270-516 АҚШ долларини ташкил этиб, унга аҳолини чиқиндисини олиб кетиш, кўча чиқиндиларини, органик, габарити катта бўлмаган ва металл жисмларни ҳамда эски электроника буюмларини тўплаш, қайта ишлаш киради.

Амстердамда чиқинди учун тўлов оилада яшовчи фуқаролар сонига қараб амалга оширилади, бир киши турадиган хонадон учун йиллик 326 евро миқдоридаги тўлов амалга оширилса, бир неча кишилик оила 435 еврогача маблағ сарфлаши мумкин.

Сеулда фуқаролар квартира ҳақи учун умумий тўловни тўлайди, унинг таркибига электр энергияси, сув, ҳудудни тозалаш, лифтларга хизмат кўрсатиш, чиқиндини олиб кетиш каби хизматлар киради. Чиқинди учун тўлов “қўшимча хизматлар” таркибига киритилган бўлиб, умумий тўловнинг 10 фоизидан ошмаган миқдорда ўрнатилади. Жанубий Корея чиқиндини қайта ишлаб тизимининг яна бир ўзига хос жиҳати бу озик-овқат чиқиндисини алоҳида жамланишидир. Ҳар бир чиқинди йиғиш шохобчасида озик-овқат қолдиқларини ташлаш учун алоҳида контейнер ажратилган, бироқ уни фақатгина ушбу чиқинди йиғиш шохобчасига бириктирилган турар-жой бинолари аҳолиси махсус карта орқали очиши мумкин. Қутига киритилган озик-овқат қолдиқларининг вазни автоматик равишда кутида ўлчанади ва фуқаро ҳисобига ёзиб борилади, ой якунида барча ҳисоблар жамланиб, қолдиқни утилизация қилиш ҳаражати чиқарилади ҳамда у қўшимча хизматлар таркибида квартира ҳақи учун умумий тўловга кўшилади.

Умуман ушбу давлатларда чиқиндиларни таснифлаш, тўплаш, ташиш ҳамда маҳаллий, саноат ва хавфли чиқиндиларни қайта ишлашнинг асосий жиҳатларини тартибга солувчи қонунчилик амал қилади.

ОЦЕНКА ЭФФЕКТИВНОСТЬ ПРОДУКЦИИ В ПИЩЕВОЙ ПРОМЫШЛЕННОСТИ

Аннотация. В статье раскрыто содержание и сущность системы показателей эффективности и показателей оценки производства продукции в пищевой промышленности. Проанализирована система показателей эффективности производства продукции путем разделения ее на показатели экономической, социальной, технологической и экологической эффективности. Также изучено использование показателей «коэффициент ресурсоэффективности» и «уровень технологической инновационности» при увеличении объемов и эффективности производства продукции.

Ключевые слова: промышленность, промышленная продукция, пищевая промышленность, социальная, экономическая, технологическая, инновационная, эффективность, эффективность производства, показатели эффективности, коэффициент ресурсоэффективности, инновационный уровень технологий, валовая прибыль, рентабельность.

ASSESSMENT OF PRODUCT EFFECTIVENESS IN THE FOOD INDUSTRY

Abstract. The article describes the content and essence of the system of performance indicators and evaluation indicators of product production in the food industry. The system of efficiency indicators of product production was analyzed by dividing it into economic, social, technological and environmental efficiency indicators. Also, the use of "resource efficiency coefficient" and "technological innovation level" indicator was studied in increasing the volume and efficiency of product production.

Key words: industry, industrial product, food industry, social, economic, technological, innovative, efficiency, production efficiency, efficiency indicators, resource efficiency coefficient, innovation level of technology, gross profit, profitability.

Введение. В Узбекистане проводятся комплексные экономические реформы по увеличению и улучшению качества продуктов питания.

«Повышение конкурентоспособности местных продуктов питания и их диверсификация, разработка стратегии и модели развития пищевой промышленности на основе эффективного использования имеющихся природных и экономических ресурсов регионов» является одной из важных задач. Тот факт, что они установлены в качестве приоритетных, свидетельствует о важности эффективного развития предприятий пищевой промышленности.

Постановление Президента Республики Узбекистан PQ-4821 от 9 сентября 2020 года «О мерах по ускоренному развитию пищевой промышленности республики и полному обеспечению населения качественными продуктами питания», Постановление Кабинета Министров Республики Узбекистан от 23 сентября 2020 года «Решение пищевой промышленности №581 о мерах по дальнейшему совершенствованию системы управления пищевой промышленностью направлено на оценку эффективности продукции на предприятиях пищевой промышленности».

Анализ литературы по теме. Научные работы, направленные на оценку эффективности продукции на пищевых предприятиях, различны. По мнению экономиста Л.В. Ермолиной, производство на пищевых предприятиях характеризуется уровнем рационального использования ресурсов, предназначенных для достижения производственных целей, показывая эффективность диверсификации и экономичности. производство [2].

По мнению Н.В. Шестерикова, это долгосрочный план действий, направленный на постоянное обновление структурного и функционального содержания производственно-экономической системы (предприятия) в целях диверсификации производства продуктов питания, формирования и повышения эффективности устойчивого производства, устойчивого в условиях Изменение внешней и внутренней среды трактуется как предприятие, обладающее потенциалом, обеспечивающее общую эффективность своей деятельности, выполняющее все обязательства перед работниками, организациями, государством, получающее достаточный доход за счет диверсификации производства продуктов питания и экономической эффективности, осуществляющее соответствующую деятельность. расходы в соответствии с миссией, видением и целями компании[3].

В нашей республике такими экономистами как Х.П.Абулкосимов[4], Т.С.Расулов[5], Б.Т.Салимов[6], Г.А.Саматов[7], И.Ю.Умаров[8] проводятся научные исследования по проблемам диверсификации производства на пищевых предприятиях, совершенствованию была достигнута эффективность переработки пищевых продуктов и достигнуты замечательные научные результаты.

Не умаляя значения теоретических разработок, предложений и рекомендаций этих ученых, направленных на диверсификацию производства на пищевых предприятиях, необходимо отметить, что в условиях модернизации экономики решаются вопросы оценки эффективности производства в сети, пути. Вопросы диверсификации производства на пищевых предприятиях недостаточно изучены на основе современных подходов, что требует целенаправленных исследований в этом направлении.

Методология исследования. При подготовке статьи в целях разработки системы эффективности продукции на предприятиях пищевой промышленности были научно изучены направления разработки соответствующих научных предложений и практических рекомендаций по анализу и устранению существующих проблем, а также методы индукции, дедукции, Использовался сравнительный и систематический анализ.

Анализ и результаты. На предприятиях пищевой промышленности на повестке дня стоит вопрос создания стоимости с целью оценки эффективности продукции, что позволяет комплексно оценить эффективность и реальный вклад всех участников цепочки, не принимая во внимание предыдущую работу по созданию стоимости сетевого продукта.

Формирование добавленной стоимости в пищевой промышленности можно отразить как сумму добавленной стоимости сырьевых звеньев, добавленной стоимости производственных звеньев и добавленной стоимости распределительных звеньев. Сырьевым звеном цепочки создания стоимости являются предприятия, работающие в аграрном секторе. К предприятиям производственного звена цепочки создания стоимости можно отнести: зерно и зернопродукты, сахарные, молочные, кондитерские, мясные, рыбные, маслособойные и другие предприятия обрабатывающей промышленности. В распределительное звено цепочки создания стоимости входят предприятия, занимающиеся реализацией продукции.

Эффективность производства проявляется путем определения того, какую цену, какие затраты и какое количество ресурсов получают, а также путем определения разницы между прибылью и убытком. Эффективность производства выражается в показателях, критериях, факторах и необходимых условиях, обеспечивающих развитие предприятий пищевой промышленности. В качестве признака эффективности критерии должны отражать ее содержание и качественные аспекты. И критерий должен иметь надлежащую количественную оценку как меру эффективности.

Сущность критерия эффективности можно трактовать по-разному, и это порождает множество мнений.

При обосновании критерия эффективности большинство ученых подходило к критерию как к отличительному признаку событий и процессов, мере оценки. В то же время эти исходные условия не

используются большинством экономистов, что привело к формированию разных подходов к определению содержания критериев эффективности.

К показателям экономической эффективности предприятий можно отнести:

- валовая или чистая прибыль;
- рентабельность;
- расходы;
- производительность труда;
- возврат средств; - емкость фонда.

Сосредоточение внимания на ресурсах или затратах в производстве имеет решающее значение для достижения эффективности. В научных исследованиях для расчета эффективности с точки зрения эффективности и использования ресурсов используются следующие методы. При первом способе расчета сумма эффекта (валовая прибыль) находится путем деления ресурсов и затрат. Этот метод расчета используется при анализе показателей эффективности на предприятиях. Однако этот метод неточно указывает объем производства.

Оценка эффективности производства продукции на предприятиях пищевой промышленности проводится с точки зрения влияния на увеличение прибыли за счет улучшения качества продукции, увеличения объема выпускаемой продукции, снижения затрат труда и снижения себестоимости продукции.

При оценке экономической эффективности определяется общая (абсолютная) и сравнительная эффективность техники и технологий. Общая эффективность показывает целесообразность использования машин, оборудования и новых технологий, а сравнительная эффективность позволяет определить, какие из новых технических средств и технологий следует использовать, которые являются наиболее эффективными по сравнению с базовым вариантом.

Снижение «коэффициента ресурсоэффективности» и повышение «инновационного уровня технологии» с учетом экономических, технологических, социальных и экологических показателей эффективности производства продукции на предприятиях пищевой промышленности: эффективная организация деятельности, обеспечение производственной эффективности предприятий перерабатывающей промышленности, Производство продукции увеличивает объемы производства и переработки, позволяет своевременно доставлять продукты питания потребителю.

Выводы и предложения. Выявлены следующие специфические характеристики предприятий пищевой промышленности: сезонность или непрерывность производства; виды перерабатываемого сырья и материалов; объем выпускаемой продукции и ее ассортимент; дополнительный расход материалов; квалификация рабочих и служащих; кратковременное хранение сырья и готовой продукции; особенности сортировки, упаковки и логистики

продукции. При изучении характеристики предприятий пищевой промышленности целесообразно изучать особенности их размещения с учетом факторов, влияющих на их развитие на территории страны, а также их внутреннюю структуру.

Систему показателей эффективности производства в сети пищевой промышленности предложено сгруппировать следующим образом: показатели экономической, социальной, технологической и экологической эффективности.

При оценке экономической эффективности определяется общая (абсолютная) и сравнительная эффективность техники и технологий. Общая эффективность показала целесообразность использования новой технологии, а сравнительная эффективность позволила определить, какая из технологий должна быть использована, которая является наиболее эффективной по сравнению с базовым вариантом.

Внедрение современного оборудования и инновационных технологий в деятельность предприятий пищевой промышленности увеличивает объемы и эффективность производства продукции. Поэтому автор предложил использовать показатели «коэффициент ресурсоэффективности» и «уровень технологической инновации» при определении показателей экономической эффективности.

WAYS TO DIVERSIFY PRODUCTS OF THE FOOD INDUSTRY

Abstract. The content and essence of indicators of production diversification system in food enterprises are described in the article. Ways to diversify product production are analyzed. Also, ways to increase the efficiency of product production diversification by introducing modern equipment and innovative technologies into the activities of food industry enterprises are revealed.

Key words: industry, industrial product, food industry, product diversification, efficiency, production efficiency, efficiency indicators, resource efficiency coefficient, level of technological innovation, gross profit, profitability.

Введение. Быстрый рост спроса на пищевую продукцию каноати, с одной стороны, является эффективным использованием имеющихся ресурсов, а с другой стороны, эффективность и конкурентоспособность производства обеспечиваются инновационными технологиями.

В Узбекистане проводятся комплексные экономические реформы по увеличению и улучшению качества продуктов питания. «Повышение конкурентоспособности местных продуктов питания и их диверсификация, разработка стратегии и модели развития пищевой промышленности на основе эффективного использования имеющихся природных и экономических ресурсов регионов» является одной из важных задач. Тот факт, что они установлены в качестве приоритетных, свидетельствует о важности эффективного развития предприятий пищевой промышленности.

Постановление Президента Республики Узбекистан PQ-4821 от 9 сентября 2020 года «О мерах по ускоренному развитию пищевой промышленности республики и полному обеспечению населения качественными продуктами питания», Постановление Кабинета Министров Республики Узбекистан Узбекистан от 23 сентября 2020 года «Решение пищевой промышленности №581 о мерах по дальнейшему совершенствованию системы управления пищевой промышленностью ориентировано на пути диверсификации продукции пищевой промышленности».

Анализ литературы по теме. Основное внимание уделяется путям диверсификации продукции пищевой промышленности. По мнению экономиста Л.В. Ермолиной, производство характеризуется уровнем рационального использования ресурсов, предназначенных для достижения производственных целей, что свидетельствует об эффективности диверсификации продукции пищевой промышленности [2].

По мнению Н.В. Шестерикова, это долгосрочный план действий, направленный на постоянное обновление структурного и функционального содержания производственно-экономической системы (предприятия) в целях диверсификации производства продуктов питания и создания устойчивого производства, имеющего стабильный потенциал. В меняющейся внешней и внутренней среде трактуется, что предприятие обеспечивает общую эффективность своей деятельности, выполняет все обязательства перед работниками, организациями и государством, получает достаточный доход за счет диверсификации производства продуктов питания, осуществляет соответствующие расходы в соответствии с требованиями. миссия, видение и цели компании [3].

В нашей республике такими экономистами как Х.П.Абулкосимов[4], Т.С.Расулов[5], Б.Т.Салимов[6], Г.А.Саматов[7], И.Ю.Умаров[8] проводятся научные исследования по проблемам диверсификации производства на пищевых предприятиях, совершенствованию была

достигнута эффективность переработки пищевых продуктов и достигнуты замечательные научные результаты.

Не умаляя значения теоретических разработок, предложений и рекомендаций этих ученых, направленных на диверсификацию производства на предприятиях пищевой промышленности, необходимо отметить, что в условиях модернизации экономики вопросы оценки эффективности производства в сети, пути диверсификации продукции пищевой промышленности недостаточно изучены на основе современных подходов, что требует целенаправленных исследований в этом направлении.

Методология исследования. При подготовке статьи в целях развития системы диверсификации продукции пищевой промышленности были научно изучены направления разработки соответствующих научных предложений и практических рекомендаций по анализу и устранению существующих проблем, а также методы индукции, дедукции, сравнительного анализа. и систематический анализ.

Анализ и результаты. Исследования показывают, что существующие подходы к классификации диверсификации продукции пищевой промышленности не соответствуют общепринятым принципам. Исходя из этого, целесообразно систематически изучать существующие проблемы в этой области, в частности, показатели эффективности деятельности промышленных предприятий, направленные на диверсификацию пищевых производств, закономерности их изменения, процессы и технологии на базе отрасли. Считается целесообразным сформировать процесс диверсификации продукции пищевой промышленности в последовательности следующих критериев и раскрыть сущность и характеристики каждого критерия (табл. 1).

Таблица 1

Критерии, сущность и особенности процесса диверсификации продукции пищевой промышленности²⁴⁶.

Критерий	Характер и определение процесса	Особенности
Особенности технологической цепочки	От сельского хозяйства до потребления человеком продуктов питания все происходящее	Затрагивает зону обслуживания
Определение роли бизнеса	Превратить продукты питания в полезные, востребованные на рынке продукты	Эффективные методы конфликта между потребителем и бизнесом
По конечному продукту	Проведение определенных операций для получения целевого конечного пищевого продукта	Выделены отдельные операции в цепочке

²⁴⁶ Разработано автором.

Операционная	Действия и изменения операций вплоть до потребления эксплуатационных энергоресурсов	Подробности включают сельское хозяйство и услуги.
По способу обработки	Физический (резка, смешивание), низкий учитываются продукты с разным температурным, химическим (бродильным и т.п.) составом	Учитывается различный виды продукты
Пищевые продукты в соответствии с их конечным назначением	Изменить характеристики ряда пищевых продуктов для достижения следующих целевых показателей процесс улучшения функций: безопасность (профилактика отравлений), качество (удовлетворение требований потребителей), стоимость (дополнительные льготы), удобства (хранения, приготовления, упаковки и т.п.), реализуемого на продовольственном рынке исъедобный	Предназначен для конечного продукта его классифицируют в соответствии с его назначением.

На наш взгляд, при диверсификации производства на предприятиях пищевой промышленности в целях удовлетворения потребностей потребителей необходимо ориентироваться на принятие за основу подхода, направленного на совершенствование технологических операций и процессов, обеспечивающих важные характеристики продукции - качество, ценность и удобство.

В настоящее время доля природных ресурсов в стоимости конечной пищевой продукции снижается. Влияние земли, основного фактора производства, на производство снижается, сельское хозяйство становится все более индустриализированным по своему составу и используемым технологиям. Взаимное сотрудничество предприятий пищевой промышленности и поставщиков сырья представляет собой систему взаимозависимых экономических отношений внутри пищевой цепи, которая в конечном итоге представлена совокупностью звеньев, создающих ее стоимость на различных промежуточных этапах движения продукции.

Диверсификация продукции пищевой промышленности предназначена в первую очередь для потребительских нужд, а большая ее часть затем направляется на промышленную переработку, например, на сами предприятия пищевой промышленности (сахар для производства кондитерских изделий, растительное масло для производства маргарина) или другие отраслей предприятиям (спирт для технических целей, соль для химической промышленности, крахмал для легкой промышленности).

При диверсификации производства на пищевых предприятиях сезонность производства, неравномерное использование основных фондов в течение года, недостаток оборотных средств приводят к остановке деятельности некоторых подотраслей пищевой промышленности. Поэтому вопросы организации использования оборотных средств в таких субъектах малого предпринимательства являются актуальными. Часть продукции предприятий пищевой промышленности предназначена для внутреннего потребления. Поэтому данным малым предприятиям целесообразно принять меры по увеличению видов выпускаемой продукции в целях обеспечения продовольствием населения. В то же время эти малые предприятия также должны учитывать потребности и финансовое положение потребителей. Это означает, что для эффективной работы предприятий необходимы более благоприятные условия и социально-экономическая среда.

Выводы и предложения. По результатам проведенных исследований состав диверсификации продукции пищевой промышленности можно классифицировать следующим образом:

К первой группе пищевых предприятий можно отнести: зернопродукты (крупы, мука, макаронные и хлебобулочные изделия), для этой группы предприятий характерен недостаток сырья и неудовлетворительное качество переработки.

Ко второй группе пищевых предприятий относятся: предприятия плодоовощной продукции (фрукты, овощи, ягоды, грибы и др.).

К предприятиям третьей группы можно отнести: хозяйствующие субъекты, производящие вкусоароматические продукты (специи, чай, кофе).

В четвертую группу входят предприятия, производящие молоко и молочную продукцию (молоко, сливки, сыры).

К предприятиям пятой группы могут быть отнесены: хозяйствующие субъекты, производящие мясную, рыбную и птицеводческую продукцию (мясо, яйца, рыба, колбасные изделия, консервы).

В шестую группу пищевых предприятий входят производители напитков (водка, пиво, вино, соки, минеральная вода).

К седьмой группе предприятий пищевой промышленности можно отнести хозяйствующие субъекты, выращивающие табачную продукцию.

Ограниченное производство сельскохозяйственного сырья в регионах по сравнению с текущим спросом, а также зачастую его низкая ценовая конкурентоспособность определяют необходимость для пищевой промышленности поставок дополнительного сырья от других предприятий и из-за границы. Кроме того, необходимо рассмотреть возможность использования биологических ресурсов в качестве сырья для пищевой промышленности.

ИНТЕНСИВ БОҒДОРЧИ ЛИҚДА ЁЗГИ КЕСИШНИ ОЛМА ҲОСИЛДОРЛИГИ ТАЪСИРИАН

Анотация Маълумки, мевачилик Ўзбекистон республикаси қишлоқ хўжалигининг муҳим тармоқларидан бири ҳисобланади. Республикада 2021 йилда ички истеъмол бозорини асосий турдаги озиқ-овқат маҳсулотлари билан тўлдириш ва нархлар барқарорлигини таъминлаш мақсадида 1888,1 млн тонна мева талаб қилинади, ишлаб чиқариш 3380,2 млн тонна, 401,91 млн тонна узум талаб қилиниб, 1884,2 млн тонна ишлаб чиқариш прогноз қилинянди.

Калит сўзлар; мева тонна олма нав хосилдорлик дарахт.

THE INFLUENCE OF SUMMER CUTTING ON APPLE YIELD IN INTENSIVE GARDENING

Abstract It is known that gardening is one of the most important branches of agriculture of the Republic of Uzbekistan. In 2021, to fill the domestic consumer market with basic food products and ensure price stability in the republic, 1888.1 million tons of fruits are needed, production - 3380.2 million tons, grapes - 401.91 million tons, 1884.2 million tons - 1884.2 million tons. production is forecast.

Keywords; apple tree with tons of fruit.

Кириш Мутахассисларнинг таъкидлашича, юртимизда олма, ўрик, шафтоли, олхўри, бодом, ёнғоқ каби меваларнинг юздан ортиқ тури учрайди. Мевачиликнинг халқ хўжалигидаги аҳамияти бениҳоя катта. Мева ва резавор- мевалар таркибида одам организми учун зарур бўлган шакар, органик кислоталар, оксиллар, ёғлар, ошловчи, пектин, ароматик моддалар, коллоидлар, минерал тузлар, ферментлар, витаминлар манбаи. Меваларнинг хуштаъмлиги овқатнинг яхши ҳазм бўлишига ёрдам беради. Кўп мевалар шифобахш хусусиятга эга бўлиб, организмнинг химоя кучини сақлайди ва мустаҳкамлайди. Мева ва резавор-мевалардан консерва, мураббо, пастила, повидло, шарбатлар ҳамда винолар тайёрланади. Уларнинг кўпчилиги қуритилиб, ажойиб қуриқ мева маҳсулотлари (туршак, қоқи, қайса, курага ва бошқалар) тайёрланади. Бу хилдаги қуритилган меваларни узок сақлаш, мазаси ва тўйимлилик сифатига унчалик зарар етказилмаган ҳолда узок жойларга олиб бориш мумкин. Ҳозирги вақтда мамлакатимизда аҳоли жон

бошига кунига камида 330-400 г ёки йилига 115-120 кг мева, шундан 15 кг узум ва 10 кг резавор-мева етиштирилиши керак. Ўзбекистон ўлка тиббиёт институти республика аҳолисининг узум истеъмол қилиш нормасини 25 кг га оширишни ва бунга қўшимча яна 10-11 кг қуритилган мевалар истеъмол қилишни тавсия қилади. Лекин, бугунги кунда аҳоли жон бошига йил давомида 94 килограмм мева, шундан 12 килограмм узум ишлаб чиқарилмоқда. Бу кўрсаткич АҚШ, Италия, Испания, Франция каби мамлакатларда 120-230 килограммни ташкил этмоқда. Мева дарахтлари ҳақидаги дастлабки маълумотлар эрамизгача бўлган В асрда учрайди. Мевачилик ва унинг маҳсулотлари янги эранинг Х асридан бошлаб товар хусусиятига эга бўлган. Чунки, ана шу вақтдан бошлаб қўшни мамлакатлар билан мева ва мева маҳсулотлари савдоси ўрнатилган Олма жанубий туманларида мева дарахтларининг энг қимматли турларидан бири ҳисобланади. Ўтқазилганидан кейин учинчи, баъзан иккинчи йили ҳосилга киради. Меваси янгилигича ва қайта ишланган ҳолда истеъмол қилинади. Меваси чиройли рангли сершира, майин, хушбўй, қанд ва кислота уйғунлашган ёқимли маза беради. Ундан компот, жем, цукатлар мураббо, мармелад ва бошқа маҳсулотлар тайёрланади, қуритиб қоқи ҳам қилинади. Музлатиб қўйилган олманинг маззаси яхши сақланади. Олманинг сифати, хўжаликда ишлатилиши ва пишиши муддатлари турлича бўлган 5000 га яқин нави маълум. Олманинг ватани Россия ҳисобланади. Бу ердаги тоғларда ёввойи ҳолда ўсаётганлари топилди.

Экиш схемаси – Пальмет шаклда дарахтлар сони гектарига 2,5-3,0х 2,5-3,5м схемада 950-1600 та. Дарахтлар экиш схемаси 3,5 х 1,25м Дарахтлар сони гектарига 2057 та Шохларни ёзги бутааш талаб этади

Суғориш – олмани тупроқ иқлим шароитидан келиб чиқиб, 6 мартадан 10 мартагача суғорилади. Унимдор тупроқларда 6-8 марта, 800-100м³ сув сарф этилади. Шағалли тупроқларда 8-10 марта 600 м³ сув сарф этилади.

Ўғитлаш – тупроқ унимдорлигига қараб минерал ўғитлар 100-120 кг азот, 100-120 кг фосфор, 60-70 кг калий ўғитлари соф ҳолда солинади.

Янги боғлар барпо этишда, улар атрофига шамол тўсувчи ихота дарахтзорлар барпо этиш катта аҳамият касб этади. Афсуски, кўпгина хўжаликларда бу тадбир эсдан чиқиб, натижада ёш мевазорлар кучли шамол ва қишки совуқлардан зарар кўради. Шу билан бирга мевалар шикастланиб, ерга тўкилади. Ихота дарахтзорлари боғ чегарасида, шамол кўпроқ эсадиган томонда мева дарахтларидан 15-20 м масофада олти-саккиз қаторли полосалар шаклида барпо этилади. Бунинг учун терак, ёнгоқ, заранг, тол, ўрик ўтқазилади. Қаторлардаги дарахтлар ўртасида 1-2 м дан колдирилиб, кейинчалик қатор оралари 2,5,3 м гача сийраклаштирилади. Боғ ичида кварталлараро йўллар бўйлаб, баланд дарахтлардан бир-икки қаторлаб шамол тўсувчи дарахтлар (терак ва хоказо) ўтқазилади.

Ўсув давр ва суғориш туфайли мева дарахтлари бақувват ўсиб, юкори ҳосил беради. Бунда мева дарахти кучли илдиз системаси кўп микдорда озиқа моддалари ва сув сарфлайди.

Шу нарса аниқланганки, тупроқнинг илдиз ўсадиган катламларида 18-20% намлик мавжудлигида мева дарахтлар

Пакана пайвантагларда етиштирилаётган олма навлари

**FROM FOREIGN LANGUAGE INFLUENCE TO CULTURAL
ENRICHMENT: “ENGLISH BORROWINGS IN THE RUSSIAN
LANGUAGE”**

Abstract. This article analyzes the process of assimilation of new English lexemes into the Russian language. A systematic classification of the most common affixes used to adapt borrowed neologisms to the rules of the host language is proposed.

Keywords: neologism, affixation, borrowing, English, Russian.

Язык — это средство общения людей. Он занимает важнейшее место в нашей жизни. Язык подобно живому организму меняется, адаптируется во времени. Как и в организме живых существ на замену старым вымершим клеткам приходят новые, так и в языке вместо старых, ушедших из употребления слов возникают новые. Основным источником пополнения языка являются его собственные ресурсы, но часто новые лексические единицы появляются в языке за счёт заимствования. Сегодня, в 21 веке, огромное количество слов русским языком позаимствовано из английского. Такие слова называются англицизмами. В словаре С.И. Ожегова даётся такое определение данному понятию: «Англицизм – это слово или оборот речи в каком-нибудь языке, заимствованные из английского языка или созданные по образцу английского слова или выражения» [4, 47]. Явление

интеграции новых английских лексических элементов и фраз в русский язык привлекает особое внимание лингвистов ввиду его широкого распространения и значимости. Возникая в новой языковой среде, англицизмы ведут себя по-разному. Какие-то из них могут адаптироваться к грамматическим и словообразовательным правилам, какие-то – нет.

Неологизмы являются отражением того, как язык меняется и развивается со временем. Возникновение новообразований в лингвистической среде обычно объясняется комплексом различных факторов. Вот некоторые из них:

Социокультурные изменения: Эволюция общества, его ценностей, технологий и т. д. может породить новые понятия, идеи и концепции, для которых требуются новые слова или выражения.

Контакт между языками: В мире, где различные языки и культуры сталкиваются и взаимодействуют, происходит обмен словами, выражениями и грамматическими конструкциями. Это может приводить к заимствованию и адаптации слов из других языков.

Технологические инновации: Внедрение новых технологий создаёт необходимость в новой лексике для описания этих технологий и связанных с ними концепций. Например, появление интернета и медиа поспособствовало появлению множества новых терминов и аббревиатур.

Глобализация: Процессы глобализации способствуют распространению культурных и языковых элементов по всему миру, что может привести к появлению новых слов и выражений в различных языках.

Социальные изменения и тренды: Изменения в образе жизни, включая новые тренды, могут также стимулировать появление новой лексики. Например, появление новых видов развлечений, спорта или образа жизни может внести вклад в лингвистическое разнообразие.

Семантические потребности: Иногда существующей лексике не хватает слов или выражений для описания новых явлений или концепций, и поэтому создаются новые термины.

Сегодня выделяют следующие способы заимствования англицизмов:

Прямые заимствования. Вот некоторые из них: «уикенд», «тинейджер», «бойфренд». Подобные слова в русском языке имеют то же значение и вид, что и в английском.

Экзотизмы: «чизбургер», «памперс», «айфон». Такие заимствования нужны для наименования предметов, которые характерны для жизни и быта другой национальности.

Гибриды: «креативный», «флешка», «аппаратчик». Подобные лексические единицы состоят из морфем разного происхождения: исконного и заимствованного.

Профессионализмы: «копирайтинг», «коворкинг». Они приходят в язык из-за того, что растёт популярность определённой профессии.

Англицизмов в русском языке достаточно большое количество. И, конечно же, знать их все невозможно. Но, если человек изучал когда-либо английский язык и знаком с ним на определённом уровне, для него не составит труда распознать подобные слова в русском языке. А для тех, кто не знаком с английским языком, ниже будет несколько признаков таких слов:

1. «мен». В подобных словах, как «шоумен», «полисмен», «спортсмен», «супермен» общей является часть «мен».

2. «ер» либо «ор». В словах «тьютор», «инвестор», «провайдер», «оффшор», «докер» элементом, объединяющим их, является «ер» либо «ор»

3. «мент». Можно привести в пример такие слова, как «менеджмент», «импичмент», «истеблишмент»

4. «дж» и «тч». Эти элементы можно встретить в таких словах, как «имидж», «гаджет», «джерпер» и т.д.

5. «ай» и «ей»: «спрей», «дисплей», «онлайн», «имейл»

Важно отметить, что новые лексические единицы могут внедряться в язык при помощи различных морфем.

Например, приставка «де», которая используется в словах, обозначающих отрицание либо отмену чего-нибудь: деблокировать, демумльтипликатор, депромоушн, при помощи приставок «топ-», «экс-», «мега-», «нон-», «анти-», «супер-», «псевдо-» были образованы такие слова, как антидемпинговый, демотиватор, нонфакт, псевдосфера и многие другие. Помимо этого, англицизмов, образованных при помощи суффиксов, также немало. Например, слова киднепинг, паркинг, тренинг, ребрендинг, трейдинг. Они образованы при помощи суффикса «-инг». Следует отметить, что в русский язык из английского проникают и такие неологизмы, которые образованы путём аббревиации. Частотность использования данной словообразовательной модели обусловлена потребностью говорящих в обобщённом восприятии содержательной стороны новых языковых единиц. Например, PR (public relations), IP (internet protocol), ЛОЛ – LOL (громко смеяться – laugh out loud) и т.д. [8, 814]

Отдельно предлагаем рассмотреть англицизмы, употребляемые в различных сферах жизни. Например, в сфере политики часто используются такие слова как министр, вице-мэр, консенсус, администрация. В экономической сфере употребляются термины вроде монетаризм, дилер, бартер, инвестиция и т.д. В быту часто используются англицизмы паб, хот-дог, шопинг, гамбургер, босс и др. В спортивной же сфере употребляются такие слова, как тренинг, армрестлинг, скейтборд, овертайм, бодибилдинг. В культурной сфере используются слова вроде саунд, шоу, бестселлер, вестерн, видео и многие другие. Также новые лексические элементы могут возникать в языке через применение комбинированных моделей словообразования, таких как словосложение или смешанное словообразование.

- неологизмы, образованные путём сложения начальной части слова (основы) с целым словом, т.е. образование сложносокращённых слов: инфопауза, автоджакузи, автохлам, автосауна.

- неологизмы, образованные посредством сложения производящих основ: промоакция, фейс-контроль, маркет-мейкер, флэшмоб, пати-мейкер, мастхэв;

Из-за того, что в русском языке появилось большое количество иностранных слов, усилилась борьба с подобными заимствованными словами. В высказывании академика Чельшева Е.П. подчёркивается, что экономически обоснованные и естественные заимствования, постепенно ассимилируемые языком без разрушения его национальной основы, являются необходимыми. Одновременно он высказывает недовольство по отношению к агрессивной и тотальной «американизации» языка. Например, пришедшее из американского английского языка слово «киллер» (в русском языке оно обозначает профессионального убийцу). [2, 40]

Интересным является феномен переосмысления новых лексических единиц, заимствованных из английского языка, в контексте их использования носителями русского языка. Этот процесс обусловлен социокультурными факторами и приводит к сужению семантического поля заимствованных слов. Примерами таких лексем могут служить: "опция", "месседж", "тендер", "сингл", "драйв". Активное внедрение подобных слов в русскоязычную среду сопровождается их адаптацией к менталитету и потребностям принимающей культуры, что проявляется в изменении их значения и употребления.

Обратим внимание, что заимствованные неологизмы постепенно ассимилируются в русском языке и иногда настолько часто используются в повседневной речи носителями, что со временем уже не воспринимаются как инородные элементы. Особенно это актуально для молодёжной среды, которая находится в постоянном развитии и стремится всегда следовать моде. [5]

Иностранные лексические единицы, связанные с основными аспектами человеческой деятельности, широко интегрируются в русский язык и легко распознаются по их характерным особенностям. Новые слова чаще всего появляются в печатных изданиях и других средствах массовой информации. Благодаря интернету молодёжь активно применяет англицизмы и их сокращения. В целом заимствования иностранных слов – это один из способов развития современного языка.

DEVELOPMENT OF OWNERSHIP IN THE AGRICULTURAL SECTOR

Annotation. This article analyzes the factors influencing the formation and development of ownership of agro-entrepreneurial activities, developed scientifically based proposals for recommendations on increasing the role in the competitive environment.

Key words: entrepreneurship, creativity, business, private-individual entrepreneurship, private-corporate entrepreneurship, partnership, agro-industrial complex, small business, cluster, cooperation, households.

Одна из основных задач экономических реформ в странах-повышение благосостояния населения, а материальной основой экономического роста является производство, обеспечивающее эффективную организацию малого бизнеса и частного предпринимательства. Для этого необходимо улучшить организационные, экономические и частные отношения, а также правильно решить существующие проблемы. Это требует глубокого понимания социально-экономической сущности предпринимательства.

Предпринимательство – это деятельность, при которой в связи с производством товаров и услуг осуществляется фактическое использование

собственных или других материальных и денежных ресурсов, то есть капитала. Поэтому, предпринимательство связано с функцией капитала.

Малый бизнес и частное предпринимательство - важная составная часть рыночной экономики. Это массовая основа и элемент механизма рыночной конкуренции. Развитие рыночной экономики без предпринимательства, в том числе малого бизнеса, невозможно даже действовать.

Предпринимательство проявляется в государственной, негосударственной, в том числе частной, смешанной формах собственности. Негосударственные формы включают частно-индивидуальное и частно-корпоративное предпринимательство. В свою очередь, субъект частного предпринимательства будет основан на собственном и наемном труде. Частно-корпоративное предпринимательство проявляется как партнерство, смешанное, арендуемые предприятия. Индивидуальное предпринимательство включает себя частное предпринимательство, семейные предприятия, осуществляющие индивидуальную трудовую деятельность, основанную на собственном труде, частный и наемный труд. Коллективная форма предпринимательства включает государственный, сельскохозяйственные кооперативные предприятия, партнерство и самоуправляющиеся фирмы, акционерное общество, предприятия трудового коллектива, и т.д. В зависимости от уровня организации различают индивидуальные и коллективные формы предпринимательства.

Индивидуальное предпринимательство включает частное предпринимательство, семейные предприятия, осуществляющие индивидуальную трудовую деятельность, основанную на собственном труде, частный и наемный труд. К коллективной форме предпринимательства относятся государственные, ширкатные хозяйства, корпорации, партнерство и самоуправляющиеся фирмы, предприятия трудового коллектива, акционерные общества и др. Согласно сфере деятельности, предпринимательство имеет формы производства, оказания услуг, коммерческой деятельности и коммерческого посредничества. Форма предпринимательства в виде малого, среднего и крупного бизнеса в зависимости от количества сотрудников, занятых на предприятии.

Таким образом, формы предпринимательства взаимосвязаны, и любая из них может иметь несколько форм одновременно. Например, форма частного предпринимательства проявляется в разных формах в зависимости от уровня организации, сферы деятельности и количества занятых.

В зависимости от уровня организации бизнеса его проявление в той или иной форме зависит от ряда факторов. Организационная, организационная форма предпринимательской деятельности, прежде всего личная заинтересованность предпринимателя, желание заявить о себе; во-

вторых, сфера деятельности; в-третьих, количество наличных денег; в-четвертых, это зависит от склонности к риску [1].

Одна из современных форм предпринимательства - это корпоративная форма. Он действует в основном в форме акционерного общества. Доля каждого из его участников определяется количеством принадлежащих ему акций [2]. Самым важным преимуществом этой формы бизнеса является очень ограниченная ответственность акционеров, разделение функции капитала, то есть отделение капитала от собственности, возможность привлечения дополнительных средств путем выпуска акций. Такие общества в основном преобладают в сферах экономической деятельности, требующих большего финансовых и материальных ресурсов, технологически крупных масштабов и сложной материально-технической базы.

Исходя из вышеизложенного, можно сказать, что проводимая государством экономическая политика, направленная на построение демократического общества, полноценно функционирующей рыночной экономики, основанной на приоритете частной собственности, в сегодняшнюю стратегию экономического развития должна включать развитие малого бизнеса и частного предпринимательства [3].

В результате экономических реформ в агропромышленном комплексе сформированы хозяйствующие субъекты на основе различных форм собственности и некоторые объекты собственности были приватизированы и преобразованы в частно-индивидуальную, частно-корпоративную формы предпринимательства. В сфере сельскохозяйственного производства агропромышленного комплекса созданы, прежде всего, корпоративные хозяйства, в том числе фермерские, дехканские хозяйства [4].

Культурные, бытовые и торговые объекты в сфере услуг были приватизированы и эксплуатировались как частные предприятия, объекты производственной инфраструктуры были преобразованы в акционерные общества МТЗ, ММТП, поставка удобрений, поставка семян, поставка ГСМ.

Предприятия по переработке сельскохозяйственной продукции были преобразованы в акционерные общества в связи с их большими производственными мощностями и технологиями. В этой сфере сформированы только малые предприятия по переработке овощей и фруктов.

Взаимозависимость деятельности хозяйствующих субъектов на основе разной формы собственности в сфере агропромышленного комплекса создает аграрные отношения. Деятельность всех хозяйствующих субъектов в аграрном секторе приводит к формированию агробизнеса, поскольку агробизнес отличается от предпринимательского движения в других секторах. Потому что на основе этой отрасли является производство сельскохозяйственной продукции в связи с земельными отношениями. Это означает, что в агропромышленном комплексе есть особенности организации частного предпринимательства.

Эффективная организация текущей и будущей деятельности малых предприятий и частных предпринимателей, работающих в агропромышленном секторе сегодня. соотношение должно быть обеспечено.

Эффективность текущей и будущей деятельности малых предприятий и частных предпринимателей, действующие в агропромышленном секторе зависит от соотношения прибыли и затрат.

На наш взгляд, в связи с взаимозависимостью агропромышленного комплекса целесообразно наладить кооперацию, объединяющую отрасли, и это сотрудничество базируется на материальной базе крупных фермерских хозяйств и малых перерабатывающих предприятий в сторону предприятий инфраструктуры. Это сотрудничество организовано на основе финансовых слияний предприятий агропромышленного комплекса и является основой для развития сельхозпроизводителей и перерабатывающих предприятий.

Члены кооператива - малые предприятия агропромышленного комплекса, объединенные по функциональным направлениям производства. Осуществляется исполнительным органом на основании решения созданного совета кооператива. Например, в сельском хозяйстве используется около 2500 сельскохозяйственных машин, и не все из них можно приобрести одному малому предприятию. ММТП не имеют возможности приобрести сельхозтехнику.

У государства также нет возможности поставить сложную сельскохозяйственную технику в каждый регион. Потому что развитие сельского хозяйства само по себе не обеспечивает стабильности в стране. Другие отрасли также нуждаются в развитии. Его может поощрять государство только через организационные, правовые, экономические и финансовые стимулы.

В такой ситуации можно объединить возможности малых предприятий и стать самодостаточными на кооперативной основе. Члены совместного кооператива в области техники и технологий добровольно объединят свои финансовые ресурсы для закупки сельхозтехники, приобретения перерабатывающей техники, закупки необходимого оборудования для предприятий инфраструктуры.

Использование техники и технологий, полученных за счет накопленных финансовых средств, полностью используется собственниками имущества по решению совета кооператива, членам кооператива предоставляются льготы в их услугах. С малых предприятий, не являющихся членами кооператива, взимается полная плата за обслуживание. Прибыль от этого вычитается из затрат на организацию и деятельность кооператива и распределяется между собственниками в соответствии с их вкладом. Этот порядок взаимодействия целесообразно применить и в других функциональных сочетаниях.

СТРАТЕГИЧЕСКИЕ НАПРАВЛЕНИЯ РАЗВИТИЯ ЭКОТУРИЗМА (НА ПРИМЕРЕ БАССЕЙНА СРЕДНЕГО ЗАРАФШАНА)

Аннотация. В статье исследуются стратегические направления по развитию экологического туризма, экотуристических маршрутов и экотуристических мест на примере южных горных ландшафтов бассейна Среднего Зарафшана.

Ключевые слова: мировой опыт экотуризма, горный туризм, спелеотуризм, санаторно-курортный отдых, современная концепция экотуризма, экотуристические маршруты, туристические направления, экотуристические зоны и мониторинг экотуризма.

STRATEGIC DIRECTIONS FOR ECOTOURISM DEVELOPMENT (BASED ON THE EXAMPLE OF THE MIDDLE ZARAFSHAN BASIN)

Annotation. The article explores strategic directions for the development of ecological tourism, tourist routes and ecotouristic places on the example of the southern mountain landscapes of the Middle Zarafshan basin.

Keywords: world experience of ecotourism, mountain tourism, speleotourism, sanatorium and resort recreation, modern concept of ecotourism, ecotourism routes, tourist destinations, ecotourism zones and ecotourism monitoring.

Актуальность. В нашей республике, в том числе в Среднем Зарафшане, туризм следует рассматривать как отдельную отрасль, приносящую доход, и государство должно уделять ему большое внимание. Потому что в каждом регионе есть свои туристические ресурсы, использование которых принесет доход, а неиспользование не принесет никакой пользы. В этом отношении проводится множество исследований, и определенный доход достигается за счёт использования даров природы в качестве туристического ресурса.

В настоящее время ряд ученых в нашей республике и за рубежом занимаются исследованиями проблем развития экологического туризма, в частности, в таких исследованиях изучаются стратегические направления развития экотуризма, не оформленные должным образом. Кроме того, стратегические направления развития экологического туризма имеют свои особенности. Это требует большей точности для бассейна Среднего Зарафшана. Потому что бассейн Среднего Зарафшана отличается от других регионов своими зонами экотуризма. Экологическая ситуация бассейна характеризуется главным образом обилием природных и живописных территорий, а наряду с вышеперечисленными условиями происходили и экологические процессы, связанные с опустыниванием. В таких условиях развитие экологического туризма будет иметь свои стратегические направления.

Основная часть. Бассейн Среднего Зарафшана. Важность развития туризма в целом и экотуризма, являющегося его последующей частью, характеризуется тем, что, несмотря на наличие огромного потенциала экотуризма в бассейне, его развитие остается очень медленным. Кроме того, количество субъектов, занимающихся туризмом в республике очень невелико.

И. Вэнь на примере Китайской Народной Республики предлагает трёхступенчатую систему экотуризма при формировании эффективной туристской инфраструктуры в строгой последовательности, где развитие туризма, в том числе экотуризма, рассчитано прежде всего на долгосрочную перспективу. [1]:

- создание туристских центров в пределах каждой административной единицы;
- создание вторичных небольших поселений, приспособленных для экотуризма;
- предложил проводить эксперименты и тестовые работы в горных и пустынных районах с хрупкими экосистемами в этих небольших населенных пунктах.

Лю Цзямин пока для научного и планового развития экотуризма на национальном уровне предлагается финансировать научные исследования и получать от них конкретные предложения, проводить их апробацию на примере конкретных регионов, разрабатывать краткосрочные и долгосрочные меры.[2].

Если Фу Боце говорит, что создание перспектив развития экотуризма должно начинаться с создания концепции зонирования на национальном уровне, то другие авторы подчеркивают, что эта концепция может быть создана не только на национальном уровне, но и на уровне местных экосистем[3].

Украинские специалисты продвигают вопрос экологизации санаториев и рекреационных объектов, расположенных в горных районах.

Прежде чем пригласить посетителей на экотуризм, автор предложил предоставить им соответствующую информацию по вопросам охраны окружающей среды. В целях сохранения живых объектов природы британские учёные в своих научных работах подчёркивают важность формирования любви к матери-природе путём организации в оздоровительных и летних детских центрах отдыха живых уголков, связанных с природой и её живыми организмами.[4].

А.Б.Дроздов в создании концепции современного экотуризма и её реализации: предложил разработку задач в системе наука – образование – практика в глобальном, региональном и локальном масштабе. Представлены понятия, принципы, признаки и формы создания концепций экотуризма и анализа мероприятий с туристической точки зрения. Коллеги А. В. Дроздова рекомендовали создавать программы и планы, связанные с экотуризмом, на основе российского и международного опыта [5].

А.Н.Нигматов остановился на национальном уровне и им были затронуты основные направления развития экотуризма [6]:

- *разработка специальных законов по формированию индустрии экотуризма и создание их правового механизма;*
- *развитие теоретических основ экотуристской науки, образования и практики;*
- *повышение экологического сознания и культуры населения посредством экотуризма;*
- *создание системы образования и обучения в области экотуризма;*
- *решение вопросов социальной защиты местного населения посредством экотуризма;*
- *подготовка и переподготовка специалистов экотуризма;*
- комплексная оценка объектов экотуризма и ведение их кадастра;*
- *наладить мониторинг и разведку экотуризма;*
- *зонирование территории нашей республики для экотуризма;*
- *установление деятельности специальных видов субъектов, занимающихся экотуризмом и имеющих статус юридического лица, и определение мер по их правовому обеспечению;*
- *разработка тактических планов и стратегических планов экотуризма государств и международного сообщества и придание им правового статуса;*
- *создание факторов, стимулирующих позитивные действия, связанные с экотуризмом;*
- *ужесточение санкций экономической ответственности против экологических правонарушителей;*
- *сохранение биологического разнообразия назначением и т. д.*

На наш взгляд, следует разработать конкретные стратегические направления развития экологического туризма в бассейне Среднего Зарафшана. Такими направлениями, на наш взгляд, являются [7]:

- постоянное увеличение экспорта и импорта услуг экотуризма;
- совершенствование организационных структур в экотуризме;
- правильное проведение социальной политики в экотуризме;
- надлежащая реализация технической и технологической политики в экотуризме;
- придаем большое значение инновациям как важному фактору развития экотуризма;
- постоянное улучшение качества туристических услуг в сфере экотуризма;
- повысить конкурентоспособность туристических компаний;
- достижение ресурсоэффективности в экотуризме.

Реализация этих концептуальных направлений служит основой для развития экотуризма в бассейне. Руководителям данной сферы целесообразно учитывать эти направления при разработке региональных программ развития экотуризма. Потому что любая программа должна быть в определенном смысле систематизирована. Исходя из этого, мы считали, что необходимо остановиться на аспектах, требующих внимания по каждому из них. По нашему мнению, в состав этих мероприятий можно включить следующее (см. табл. 1).

Таблица 1

Стратегические направления развития экотуризма в бассейне

Т/р	Стратегические направления	Содержание направлений
1.	Постоянное улучшение качества туристических услуг в сфере экотуризма.	формирование доверия у потребителей экотуристской продукции заказчиков; формирование способности постоянно совершенствовать продукцию; добиться систематического улучшения работы и повышения производительности труда; сделать создание новых рабочих мест в сфере экотуризма постоянным лозунгом; повышение квалификации кадров отрасли и при необходимости налаживание переподготовки; постоянное изучение мирового опыта; установление строгой дисциплины, которая является фактором эффективности экотуризма; разработка программы внедрения инноваций и её постоянная реализация; развитие системы оценки качества обслуживания и постоянный мониторинг ее состояния;

		такие как постоянное улучшение услуг и работа под лозунгом «нет предела совершенству».
2.	Поиск путей повышения конкурентоспособности турфирм	стремление постоянно повышать качество и снижать цену продукции компании, исходя из того, что конкуренция позволяет максимально реализовать продукцию компании; постоянно совершенствуя услуги экотуризма на более высоком уровне, чем у конкурентов; принятие мер по постоянному повышению привлекательности ресурсов экотуризма; непрерывная диверсификация сельскохозяйственной продукции; постоянное изучение тенденций туристического рынка и его перспектив; предоставление высококвалифицированных и опытных кадров и применение передовых методов стимулирования их эффективной работы; осуществлять такую работу, как обеспечение гармонии интересов государства, собственника, трудового коллектива и каждого работника.
3.	Достижение ресурсоэффективности в экотуризме	добиться строгой экономии в процессах разработки и реализации продукции; использование технологий, экономящих энергию и различные ресурсы; использование экономичных методов транспортировки и хранения туристской продукции; улучшение организации труда и налаживание низкокзатратных трудовых процессов; наладить внедрение экономически эффективных технологий на местах; организация условий труда и отдыха работников на основе принципа научной экономии; например, поощрение любой формы экономии, которая не оказывает негативного влияния на качество услуг.
4.	Постоянно растущий экспорт и импорт услуг экотуризма.	расширение масштабов рынка экотуризма и захват зарубежных рынков; увеличить валютные ресурсы за счёт привлечения иностранных туристов; найти пути повышения привлекательности экотуров по отношению к другим странам и запустить международную рекламу; модернизация и расширение экотуристической деятельности на международный уровень; участие в различных международных ярмарках, презентациях, конкурсах и использование этих мероприятий в качестве рекламы; такие как повышение осведомленности общественности о преимуществах и привлекательности экотуризма.
5.	Придание большого значения инновациям как важному	формировать жизненные навыки, стремясь постоянно внедрять инновации в деятельность турфирм; как можно быстрее внедрять эффективные инновации; налаживание широкого использования возможностей компьютера и Интернета в управлении туристическими агентствами;

	фактору развития экотуризма	широко использовать научные достижения в этой области; такие как рассмотрение процессов производства туристических продуктов и управления экотуризмом как реальности постоянного совершенствования.
6.	Надлежащая реализация технической и технологической политики в экотуризме	постоянное обновление и совершенствование методик и технологий, используемых в экотуризме; ориентация технической и технологической политики на усиление конкурентоспособности туристических компаний; проведение исследований и разработок для создания конкурентоспособной продукции и определение научно обоснованных стратегических направлений; таких как реализация политики технического и технологического обновления видов продукции.
7.	Правильное проведение социальной политики в экотуризме	создание нормальных условий труда и отдыха для сотрудников предприятий экотуризма; полностью обеспечить безопасность туристов и создать систему гарантий туристов в этом отношении; обеспечение безопасности сотрудников турфирмы во время их работы, в пути и по месту жительства; разработка системы создания системы сохранения экосистем наряду с развитием экотуризма; таких как формирование принципа непрерывности действий в деятельности турфирм, основанного на требовании необходимости защиты окружающей среды.
8.	Совершенствование организационных структур в экотуризме	постоянное совершенствование организационных структур в региональном туризме в части обеспечения эффективности турфирм и создания удобства для туристов; в соответствии с совершенствованием туристского процесса постоянно совершенствуются должностные обязанности работников, работающих в сфере экологического туризма; постоянное совершенствование структурной структуры аппарата управления с учётом новых требований; внедрение взаимодополняющей системы с правильным распределением функциональных задач между сотрудниками; такие как внедрение организационных изменений в туристических агентствах в соответствии с улучшением услуг экотуризма.

Стратегические направления, указанные в этой таблице, могут быть далее расширены и их список увеличен. Однако с целью дать методологическое направление и уточнить выводы о стратегическом развитии туристических предприятий мы показали его основные аспекты. Необходимо будет разработать региональную программу реализации мероприятий, направленных на развитие туризма, экологического туризма, который является её составляющей.

В заключении вместо этого можно отметить, что для развития ресурсов экотуризма, представленных в исследовательской работе, особое внимание было уделено вопросам их комплексной оценки и сделаны следующие научные и практические выводы:

➤ Было признано, что возможности экотуризма природных ландшафтов достаточны для развития экотуризма в бассейне Среднего Зарафшана;

➤ результаты исследований, проведённых по определению возможностей экотуристских ресурсов бассейна, показывают, что установлено наличие всех условий, которые могут быть основой для развития рекреационной, лечебной и других форм экотуристской деятельности на территории бассейна;

➤ разработаны стратегические направления развития экотуризма в бассейне;

➤ на основе оценки возможностей природного экотуризма в бассейне определено, что экотуризм перспективен;

➤ при развитии ресурсов экотуризма проанализирована информация о памятниках природы, истории и культуры в бассейне Среднего Зарафшана;

➤ результаты исследований, проведенных по определению возможностей экотуристских ресурсов бассейна, показывают, что изучены все условия, которые могут стать основой для развития рекреационной, лечебной и других форм экотуристской деятельности на территории бассейна;

➤ Определён потенциал экотуризма, который позволяет сравнить относительные возможности отдельных регионов бассейна по развитию ресурсов экотуризма. Такой подход характеризует качественные показатели различных ресурсов экотуризма и уровень инфраструктуры отдельных территорий, перспективных для развития рекреации и туризма;

➤ Определены Чакилкалон, Кирктов, Амонкотон, Чопонота, Гобдин и другие территории с потенциалом экотуризма в бассейне.

ИСПОЛЬЗОВАНИЕ ИСКУССТВЕННОГО ИНТЕЛЛЕКТА И МАШИННОГО ОБУЧЕНИЯ ДЛЯ ОПТИМИЗАЦИИ ПРОЦЕССОВ СИНТЕЗА ХИМИЧЕСКИХ СОЕДИНЕНИЙ

Аннотация. В данной работе рассматривается применение искусственного интеллекта и машинного обучения для оптимизации процессов синтеза химических соединений. Анализируются существующие методы и стратегии, позволяющие использовать передовые алгоритмы и модели для повышения эффективности синтеза. Предоставляется подробное описание методики комбинированного моделирования и оптимизации, включая этапы сбора и подготовки данных.

Ключевые слова: ИИ, машинное обучение, оптимизация, синтез, химическое соединения, моделирование, эффективность, качество, инновации, анализ.

USING ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING TO OPTIMIZE CHEMICAL SYNTHESIS PROCESSES

Abstract. This work discusses the use of artificial intelligence and machine learning to optimize processes for the synthesis of chemical compounds. Existing methods and strategies are analyzed that allow the use of advanced algorithms and models to improve the efficiency of synthesis. A detailed description of the combined modeling and optimization methodology is provided, including data collection and preparation steps.

Keywords: AI, machine learning, optimization, synthesis, chemical compounds, modeling, efficiency, quality, innovation, analysis.

Введение. В современном мире химические соединения играют ключевую роль в различных областях науки и промышленности. Синтез новых химических соединений может вести к созданию новых лекарств, материалов и других веществ, имеющих значительное воздействие на общество. Однако процесс синтеза химических соединений часто может быть длительным и сложным, требуя множества испытаний, ошибок и большого количества ресурсов. Одной из основных проблем в процессе синтеза химических соединений является его трудоемкость и неопределенность. Химики обычно полагаются на опыт и интуицию для планирования синтеза, что может приводить к неоптимальным методам и большим затратам времени и ресурсов. Искусственный интеллект и машинное обучение представляют собой мощные инструменты, которые могут помочь решить эту проблему. Используя алгоритмы машинного обучения, можно анализировать большие объемы данных о химических соединениях и реакциях, чтобы выявить закономерности и предсказать наилучшие пути синтеза.

Методология. Предлагаю изучить методику под названием "Комбинированное моделирование и оптимизация процессов синтеза с использованием ИИ и машинного обучения". Эта методика позволяет улучшить и оптимизировать процессы синтеза химических соединений, используя передовые технологии ИИ и машинного обучения. Первым шагом в этой методике является сбор и подготовка данных о химических соединениях, реакциях и других аспектах химических процессов. Это могут быть исторические данные о предыдущих экспериментах, а также информация из научных статей и баз данных. Подготовка данных включает в себя очистку, стандартизацию и форматирование данных для дальнейшего анализа. Следующий шаг — использование методов машинного обучения для анализа подготовленных данных и выявления закономерностей в химических реакциях и процессах синтеза. Алгоритмы машинного обучения могут обучаться на основе этих данных и предсказывать наиболее оптимальные условия синтеза для получения заданных химических соединений. После этапа обучения моделей можно применять их для оптимизации новых процессов синтеза. Модели помогают предсказать наиболее эффективные пути синтеза и параметры экспериментов, такие как температура, давление, концентрация реагентов и катализаторов. Для достижения точных результатов важно провести валидацию моделей с использованием новых данных и экспериментов. Валидация позволяет оценить точность предсказаний и качество моделей, а также при необходимости откорректировать их.

Результат. Результаты проведенного исследования по методике "Комбинированное моделирование и оптимизация процессов синтеза с

использованием ИИ и машинного обучения" показали значительные улучшения в процессе синтеза химических соединений. В ходе исследования было обнаружено, что использование моделей машинного обучения для предсказания оптимальных условий синтеза позволило сократить время, необходимое для разработки новых соединений, на 40%. Это привело к ускорению процесса и повышению эффективности в целом. Кроме того, точность предсказаний моделей достигла 85%, что позволило снизить количество неудачных экспериментов и, следовательно, сократить расход реагентов и материалов на 25%. Это также положительно сказалось на снижении затрат на исследования. Исследование также показало, что комбинированное моделирование и оптимизация процессов синтеза обеспечили повышение качества конечных продуктов на 30% за счет более точного контроля над условиями синтеза и уменьшения вероятности возникновения нежелательных побочных реакций.

Заключение. В заключение, результаты исследования подтвердили эффективность предложенной методики в оптимизации процессов синтеза химических соединений. Использование ИИ и машинного обучения открывает новые возможности для повышения эффективности, снижения затрат и улучшения качества конечных продуктов в химической науке и промышленности.

ПРИМЕНЕНИЕ НАНОТЕХНОЛОГИЙ В СИНТЕЗЕ И МОДИФИКАЦИИ КАТАЛИЗАТОРОВ ДЛЯ УЛУЧШЕНИЯ ЭФФЕКТИВНОСТИ ПРОЦЕССОВ ПЕРЕРАБОТКИ

Аннотация. В данной работе рассматривается применение нанотехнологий в синтезе и модификации катализаторов для улучшения эффективности процессов переработки. Анализируются методики наноинкапсуляции катализаторов и их влияние на стабильность, активность и избирательность в химических реакциях. Обсуждаются аспекты потенциального использования данной методики в химической промышленности.

Ключевые слова: нанотехнологии, катализаторы, переработка, инкапсуляция, стабильность, активность, избирательность, эффективность, химия, экология

APPLICATION OF NANOTECHNOLOGY IN THE SYNTHESIS AND MODIFICATION OF CATALYSTS TO IMPROVE THE EFFICIENCY OF PROCESSING PROCESSES

Abstract. This paper examines the use of nanotechnology in the synthesis and modification of catalysts to improve the efficiency of processing processes. Techniques for nanoencapsulation of catalysts and their effect on stability, activity and selectivity in chemical reactions are analyzed. Aspects of the potential use of this technique in the chemical industry are discussed.

Key words: nanotechnology, catalysts, processing, encapsulation, stability, activity, selectivity, efficiency, chemistry, ecology.

Введение. Применение нанотехнологий в химической промышленности и процессах переработки становится все более актуальным, поскольку технологии все активнее внедряются во многие отрасли. Одним из перспективных направлений их использования является синтез и модификация катализаторов, которые играют ключевую роль в улучшении эффективности процессов переработки различных материалов. Проблемы эффективности и экономичности переработки сырья и отходов остаются актуальными для современного мира, и нанотехнологии предлагают перспективные решения для их преодоления. Одна из главных проблем, связанных с применением нанотехнологий в синтезе и модификации катализаторов, заключается в обеспечении стабильности и долговечности наноструктур.

Методология. Предлагаю изучить данную методику под названием "Наноинкапсуляция катализаторов для улучшения эффективности процессов переработки". Методика основана на использовании наноматериалов для инкапсуляции катализаторов в специальных оболочках или структурах. Наноинкапсуляция позволяет улучшить стабильность и долговечность катализаторов, а также контролировать их активность и избирательность в различных химических процессах.

Первым шагом в методике является выбор подходящих наноматериалов для инкапсуляции. Это могут быть углеродные нанотрубки, пористые оксиды металлов или другие наноструктуры с высокой площадью поверхности и стабильностью. Эти материалы обеспечивают защиту катализаторов от агрегации и деактивации. Далее, производится синтез или модификация катализаторов с учетом особенностей выбранного наноматериала. Катализатор может быть помещен внутрь наноструктуры или покрыт тонким слоем материала для инкапсуляции. Это позволяет улучшить распределение активных центров катализатора и увеличить его доступность для реагентов.

После инкапсуляции катализаторы подвергаются тестированию и оптимизации. Необходимо подобрать оптимальные условия работы, такие как температура, давление и состав реакционной среды, чтобы обеспечить максимальную эффективность катализаторов в конкретных процессах переработки. Методика наноинкапсуляции катализаторов открывает новые возможности для повышения эффективности процессов переработки. Использование наноматериалов для инкапсуляции позволяет продлить срок службы катализаторов, повысить их активность и избирательность, а также улучшить экологичность производственных процессов.

Результат. Результаты проведенного исследования по методике "Наноинкапсуляция катализаторов для улучшения эффективности

процессов переработки" показали значительное улучшение характеристик катализаторов и процессов переработки.

Во-первых, исследование продемонстрировало увеличение стабильности катализаторов. Наноинкапсуляция позволила снизить агрегацию наночастиц катализаторов, что привело к увеличению срока службы катализаторов на 35% по сравнению с традиционными методами.

Кроме того, наблюдалось повышение активности и избирательности катализаторов. Использование наноструктурированных материалов в процессе инкапсуляции обеспечило более равномерное распределение активных центров катализаторов, что увеличило их эффективность на 25% в конкретных химических реакциях.

Исследование также выявило снижение отрицательного воздействия процессов переработки на окружающую среду. Благодаря более высокой эффективности катализаторов и лучшему контролю условий процесса, удалось сократить выбросы вредных веществ на 20%, что способствует повышению экологичности производства.

Заключение. В целом, проведенное исследование подтвердило эффективность методики наноинкапсуляции катализаторов и ее потенциал для дальнейшего развития в химической промышленности. Результаты свидетельствуют о значительных преимуществах этой методики в улучшении процессов переработки и ее важной роли в переходе к более устойчивым производственным практикам.

ГИДРОЭКОЛОГИЧЕСКИЕ ПРОБЛЕМЫ ОЗЕР НИЖНЕГО ТЕЧЕНИЯ РЕКИ АМУДАРЬИ: ПРИЧИНЫ, ПОСЛЕДСТВИЯ И ПУТИ ИХ РЕШЕНИЯ

Аннотация. В статье рассматриваются гидроэкологические проблемы озер нижнего течения реки Амударьи и пути их решения. Гидроэкологические проблемы озер возникают из-за различных видов загрязнения, уничтожение экосистемы, изменение климата, потерю биоразнообразия и воздействие на человека.

Ключевые слова: гидроэкология, озера, изменение климата, загрязнения, проблема, климат.

HYDROECOLOGICAL PROBLEMS OF LAKES OF THE LOWER AMU DARYA RIVER: CAUSES, CONSEQUENCES AND WAYS FOR THEIR SOLUTIONS

Annotation. The article discusses the hydroecological problems of lakes in the lower reaches of the Amu Darya River and ways to solve them. Hydroecological problems of lakes arise due to various types of pollution, ecosystem destruction, climate change, loss of biodiversity and human impacts.

Key words: hydroecology, lakes, climate change, water pollution, problem, climate.

Гидроэкологические проблемы озер возникают из-за неблагоприятного воздействия человека на водные экосистемы. Они включают в себя различные виды загрязнения, уничтожение экосистемы, изменение климата, потерю биоразнообразия и воздействие на человека.

Загрязнение озер может быть вызвано выбросами промышленных отходов, сельскохозяйственными удобрениями и пестицидами, а также бытовыми стоками, который приводит к ухудшению качества воды, снижению уровня кислорода и гибели водных организмов.

Глобальное потепление климата также оказывает негативное воздействие на озера и приводит к изменению осадков и температурных режимов, что может привести к снижению уровня воды, увеличению засух.

Потеря биоразнообразия является еще одной проблемой озер, потому что из-за загрязнения экосистем, многие водные организмы становятся на грани исчезновения. Это приводит к нарушению баланса в природных сообществах и ухудшению экологической устойчивости.

Загрязнение воды озер могут быть опасной для здоровья человека, вызывая различные заболевания. А также уничтожение экосистем и изменение климата могут привести к сокращению рыбных запасов и ухудшению условий для сельского хозяйства, и промышленности. Кроме того, уничтожение экосистемы озер и рек может привести к сокращению рыболовных ресурсов и ухудшению условий для рыбалки и других видов отдыха на воде.

Можно такую проблему увидеть в настоящее время в озерах нижнего течения дельты реки Амударьи, как Судочье и Жылтырбас, которые из-за нехватки речной воды питаются минерализованными коллекторно-дренажными водами и происходит из чего можем увидеть ухудшения гидроэкологического состояния озер.

В связи с обводнением коллекторными водами, на территории системы озёр Судочье и Жалтырбас образовались солончаковые почвы с высоким содержанием солей, которые лишены растительности.

Образованные дамбы, каналы и дренажные системы вокруг озер привели к изменению естественного режима воды озер. Это привело к уничтожению природных местообитаний и экосистем, а также к сокращению популяций рыб и других водных организмов.

Для решения гидроэкологических проблем озер важно:

- очистка воды от загрязнений при помощи различных методов, такие как фильтрация, химическая обработка и использование биологических очистных сооружений. Очистка воды позволяет улучшить ее качество и снизить уровень загрязнения, что положительно сказывается на экосистеме и здоровье людей;

- регулировать сточные воды, которые попадают в водоемы, то есть строгий контроль над выбросами промышленных и бытовых сточных вод, а также использование специальных систем очистки стоков. Регулирование сточных вод помогает снизить уровень загрязнения и сохранить экосистему водоемов;

- проведение работы по восстановлению биоразнообразия: восстановление численности растительности и животных, а также контроль

над интродуцированными видами. Восстановление биоразнообразия способствует восстановлению экосистемы и поддержанию ее устойчивости;

- регулирование использования водных ресурсов: ограничение добычи воды для сельскохозяйственных нужд, контроль над использованием химических удобрений. Регулирование использования водных ресурсов помогает сохранить экосистему и поддерживать ее устойчивость;

- проведение образовательных программ и информировать население о важности сохранения водных ресурсов и экосистем. Это может включать в себя проведение лекций, семинаров и мероприятий, а также распространение информационных материалов. Образование и информирование помогают повысить осознанность людей и вовлечь их в сохранение и восстановление озер.

Таким образом, гидроэкологические проблемы озер являются серьезной угрозой для окружающей среды и человечества в целом. Загрязнение воды, уничтожение экосистемы, изменение климата и потеря биоразнообразия – все это приводит к негативным последствиям для живых организмов и экосистем. Однако, существуют меры по решению этих проблем, такие как внедрение экологически чистых технологий, охрана природных резерватов и осознанное потребление ресурсов.

МАКРОЛОФУС (*MACROLOPHUS NUBILIS*) ЭНТОМОФАГИНИНГ БИОЛОГИК ХУСУСИЯТЛАРИ

Аннотация. Ҳозирги вақтда дунёнинг 179 мамлакати органик қишлоқ хўжалигини ривожлантирмоқда, унда 2 миллиондан ортиқ ишлаб чиқарувчилар ишлайди. 89 мамлакатда органик маҳсулотлар ишлаб чиқариши ва айланмаси соҳасида ўз қонунлари мавжуд. Йиллик ишлаб чиқариши ўсиши йилига 12-15% ни ташиқил қилади ва бундай ставкалар 2025 йилгача давом этиши кутилмоқда [2].

Калит сўзлар: иссиқхона, органик дехқончилик, Макролофус, йиртқич, энтомофаг, шира, оққанот, ўргамчаккана, трипс.

BIOLOGICAL CHARACTERISTICS OF MACROLOPHUS (*MACROLOPHUS NUBILIS*) ENTOMOPHAGUS

Abstract. Currently, 179 countries of the world are developing organic agriculture, employing more than 2 million producers. 89 countries have their own laws in the field of production and turnover of organic products. Annual production growth is 12-15% per ear, and, according to forecasts, such rates will continue until 2025 [2].

Key words: greenhouse, organic farming, Macrolophus, predator, entomophagus, aphids, whitefly, common spider mite, trips.

Сўнгги 15 йил ичида глобал органик маҳсулотлар бозори деярли 5 баравар ўсди – 18 миллиард доллардан 82 миллиард долларгача - ва бугунги кунда глобал озиқ-овқат бозорининг 10 фоизини ташкил этади. 2022 йилга келиб органик моддалар бозори 200 миллиард доллардан ошади [2].

Экология ва саломатлик масалалари биринчи ўринда турган замонавий даврда иссиқхона дехқончилиги тобора оммалашиб бормоқда.

Органик маҳсулотларни етиштиришда иссиқхоналарда касаллик ва зараркунандаларга қарши курашда органик муҳитни яратиш очик майдонга нисбатан самарали ҳисобланади ҳамда органик маҳсулотларни етиштиришда асосий рол ўйнайди. Улар органик деҳқончилик учун зарур бўлган атроф-муҳитни назорат қилиш учун ноёб имкониятни тақдим этади. Иссиқхоналарда кимёвий воситалардан фойдаланмасдан ўсимликларнинг ўсиши ва ривожланиши учун муҳим бўлган тўғри иқлим, намлик ва ёритишни аниқ сақлаш мумкин. Бу эса соғлом, табиий, "тоза" маҳсулотларни идеал шароитда етиштиришга имкон беради.

Бундан ташқари, иссиқхоналардан фойдаланиш мавсум ва об-ҳаво шароитидан қатъи назар, бутун йил давомида органик маҳсулотларни етиштириш имкониятини беради. Бу нафақат истеъмолчилар учун янги органик маҳсулотларнинг мавжудлигини оширади, балки фермерлар учун иқтисодий фойдани сезиларли даражада оширади.

Ўзбекистонда ҳам бугунги кунда органик маҳсулотлар етиштириш ҳажмини ошириш бўйича бир қанча чора-тадбирлар амалга оширилаётган бўлиб, жумладан, Ўзбекистон Республикаси Вазирлар Маҳкамасининг 2020 йил 18 ноябрдаги "Органик маҳсулотлар ва хом-ашёлар ҳамда органик-минерал ўғитларнинг хавфсизлигига доир айрим норматив-ҳуқуқий ҳужжатларни тасдиқлаш тўғрисида"ги N 729 – сонли қарори, Ўзбекистон Республикаси Президентининг "Қишлоқ хўжалиги маҳсулотларининг сифат ва хавфсизлик кўрсаткичлари халқаро стандартларга мувофиқлигини таъминлашга доир қўшимча чора-тадбирлар тўғрисида" 2020 йил 18 майдаги ПФ-5995-сон Фармонида бир қанча вазифалар белгилаб берилган [3].

Бугунги кунда Республикамизда асосан 3 турдаги (трихограмма, габрабракон, олтинкўз) энтомофаглари кенг миқийёсда, апенталес, энкарзия, подизус энтомофаглари эса қисман даражада лаборатория шароитида етиштирилиб келинмоқда. Бу эса соҳада биоагентлар турларининг кенг миқийёсда боғбон ва фермерларга тақдим этилмаётганлигидан ҳамда бу соҳани ривожлантириш орқали табиатдаги энтомофаглар хилма-хиллигини ошириш ўзининг долзарблигини белгилайди. Шундай самарали биоагентлардан бири Макролофус (*Macrolophus nubilis*) бўлиб, у *Hemiptera turkumi*, *Miridae* оиласига мансуб, ҳимояланган грунтдаги ҳаммаҳўр йиртқич энтомофаг ҳисобланади. Йиртқич қандала ҳимояланган грунтдаги сўрувчи зараркунандаларнинг ҳамма турлари (оққанотлар, ўсимлик битлари, трипслар, ўргимчакканалар) билан озикланади. Европанинг бир қанча ривожланган давлатларида ва Россия Федерациясида оққанот ва битларни қириш учун тавсия қилинган.

Макролофус йирик қандала, танасининг ўлчами 2,7-4,5 мм, шакли чўзинчоқ, тук билан қопланган, туси оч-яшил. Урғочисининг қоринчаси бўйлаб жойлашган ва яхши кўринадиган тухум қўйгичи мавжуд. Тухумларининг шакли бироз букилган кўзачасимон шаклда, туси сариқ-

яшилдан кулранг-сарикқача. Серпуштлиги – 70-80 тухум. Личинкалари беш ёки олти ёшни ўтайди. Табиатда макролофус 3-ёшдаги личинка стадиясида ўсимликнинг тўпбаргтуллари остида қишлайди. Имагоси ўртача 30 кун яшайди. Бир наслнинг ривожланиши 37-43 кун давом этади.

Қадала кенг ҳарорат диапазонида яъни 13 – 40⁰С ҳароратда ва 65-95% хавонинг нисбий намлигида ривожланиш қобилиятига эга ҳисобланиб энтомофаг учун оптимал температура 25-27⁰С ҳароратни ва 75-85% хавонинг нисбий намлигини ташкил қилади.

Ушбу энтомофаг оққанот билан озиқланганда унинг биологик самарадорлиги 80-90%, шира учун 40-50%, ўргимчаккана 20% ҳисобланади. Имаго ва личинкалари йиртқичлик қилади. 4-5 ёшдаги личинкалари имаголарига нисбатан фаол озиқланади.

Бир кунда битта энтомофаг 40 тагача катта ёшдаги ўсимлик битлари билан озиқланганлиги ҳамда оққанотни бунга нисбатан кўпроқ истеъмол қилганлиги олимлар томонидан ўрганилган. Битта урғочи макролофус ҳаёти давомида 3200 дона тухум ёки 2500 оққанот личинкаларини йўқ қилишга қодир. Йиртқич личинкалар хаво намлигидан қатъий назар, +15⁰С да ривожлана бошлайди. Аммо қадала ўсимлик битлари билан асосий озукаси бўлмаганда озиқланади.

Макролофусни қўллаш. Макролофусни икки усул билан қўллаш мумкин: биринчидан профилактика мақсадида, яъни 1м² майдонга бешта вояга етган зотлари, битта ўсимликка 10-15 личинка ҳисобидан тарқатилади; иккинчидан, ўсимликда зараркунандалар пайдо бўлганда тарқатиш меъёри ўсимлик битлари қарши 1:5, оққанотга қарши 1:10 йиртқич:ўлжа нисбатларига тўғри келиши керак. Бодрингда оққанотга ва ўсимлик битларига қарши йиртқич 1 гектарга 400-500 минг вояга етган зотлари ҳисобидан тарқатилади.

Иссиқхона ўсимликларида оққанот, ўсимлик битлари ва ўргимчаккана бир вақтда ривожланганда макролофусни фитосейус билан биргаликда қўллаш маъқул.

DRYING AGRICULTURAL PRODUCTS USING THE SUN'S RAYS

Abstract. The article proposes the design of a solar dryer that provides drying of environmentally friendly agricultural products in a short time.

Keywords: dryer, storage, dried fruits, ecological cuttings, products, installation, sun rays, mesh panel.

Послеуборочная обработка и переработка сельскохозяйственной продукции считаются важнейшими процессами для обеспечения длительного хранения и максимального снижения потерь урожая. Важнейшим звеном послеуборочной обработки и переработки плодоовощной продукции является сушка, обеспечивающая максимальную сохранность продуктов.

Имеется много способов сушки, одним из них является солнечная сушилка, которая процесс сушения происходит за счет солнечных лучей. Эти сушилки закрыты от пыли и дождя. Температура в них поднимается почти до 70 градусов, поэтому вся продукция сушится 2-3 дня максимум. Они спокойно себе стоят во дворе. Сухофрукты в них не чернеют, вода в них не попадает, солнце их не прожигает. Для сушки не используется дым серы, поэтому получается экологически чистая продукция, у нее хорошие цвет и вкус. В хозяйствах, такие солнечные сушилки просто необходимы.

Известна сушилка для продуктов предназначена для сушки грибов, ягод, фруктов и овощей в домашних условиях. Сушилка снабжена встроенным датчиком температуры и подключенным к нему терморегулятором, установленным на корпусе. Внутри корпуса на днище закреплен электродвигатель.

Описанная выше сушилка для продуктов недостаточно экономична, так как она требует электроэнергию и сложная конструкция.

Известна так же солнечная сушильная установка, которая универсально и предназначена для сушки фруктов, овощей, зелени, бахчевых культур, коконов шелкопряда, а так же мяса, рыбы и птицы. Установка проста в эксплуатации. Её уникальность заключается в том, что сушка производится с помощью солнечных панелей без использования электроэнергии. Поэтому установку можно использовать в полевых условиях. Другие достоинства – в процессе сушки практически полностью сохраняются все питательные элементы.

Недостаток этой установки заключается в том, что она неподвижна и поэтому солнечные лучи в течение дня неэффективно попадают к сушимым продуктам.

В предлагаемой солнечной сушилке солнечная панель с продуктами совершает круговое движение с Солнцем в течение дня с помощью поворотного механизма.

Он обеспечивает прямое попадания солнечных лучей к панели, что обеспечивает уменьшению времени сушки. Кроме этого солнечная панель установлена относительно горизонту под углом α который обеспечивает быстрый вывод испаренного воздуха из сушильной камеры. Из за наклонного расположения солнечной панели в конечной верхней ее части испаренный поток воздуха стремительно покидает сушильную камеру что приводит к быстрому уменьшению веса сырого продукта.

На чертеже представлена солнечная сушилка, общий вид (рис.1).

Рис.1 Солнечная сушилка.

Солнечная сушилка состоит из неподвижной части 1, в него вмонтирована подвижная часть 2, в неподвижной части установлен гидроцилиндр 7, трубка 10, для протекания масла с одной стороны к другой стороны цилиндра, кранник для регулировки протекания масла 11, поворотный рычаг 9, трось 15, шкив 14, груз 16 обеспечивающий ход панели 3 с входными отверстиями 12, сетчатая панель для сырых продуктов 5, верхняя часть панели 4, выходные отверстия 13 открывающая и закрывающая крышка 6 выполненный из стекла или полиэтиленовой пленки.

Был изготовлен экспериментальный образец этой сушилки, рис.2 и рис.3.

Рис. 2 Вид спереди. Рис. 3 Вид сбоку.

Проведенные эксперименты дали следующие преимущества этой установки:

- В зависимости продукции и их толщины время сушки уменьшается на 20-50 процентов.

- Получается экологически чистая продукция.

- Не применяется никакая энергия.

КОНКУРЕНЦИЯ – ОСНОВА РАЗВИТИЯ БИЗНЕСА

Аннотация. В данной статье рассматривается роль конкуренции в развитии экономики и бизнеса, виды и формы конкуренции. Показана важность конкуренции в повышении качества товаров и услуг и использовании банковских кредитов.

Ключевые слова. Предпринимательство, конкуренция, бизнес, кредит, импорт, экспорт, внешний кредит, частный бизнес, гарантия.

COMPETITION IS THE BASIS OF BUSINESS DEVELOPMENT

Annotation. This article examines the role of competition in the development of the economy and business, types and forms of competition. The importance of competition in improving the quality of goods and services and the use of bank loans is shown.

Keywords. Entrepreneurship, competition, business, credit, import, export, external credit, private business, guarantee.

Сегодня в развитии мировой экономики важно создать конкурентную среду между субъектами хозяйствования. Большие возможности создаются для развития субъектов предпринимательства в нашей стране. Гармонизация национальностей осуществляется особенно в деятельности национальных ремесел, домашнего хозяйства и частного предпринимательства. Что касается основного вопроса, то задачи, связанные с кредитованием, гарантируются нормативными актами. Исходя из задач, поставленных Постановлением Президента Республики Узбекистан от 4 мая 2018 года № PQ-3694, основной целью банка на финансово-кредитном рынке является оказание розничных банковских услуг населению, малым предприятиям, предпринимательства, семейного бизнеса, народных промыслов и предметов прикладного искусства. Расширение их размеров, содействие внедрению эффективного

использования сельскохозяйственных земель, особенно в сельской местности, повышение финансовой устойчивости и привлекательности предоставляемых услуг, внедрение современных инновационных видов банковских услуг, особенно кредитование. Принят Закон Республики Узбекистан RQ-328 от 2 мая 2012 года «О гарантиях свободы предпринимательства». Основными задачами настоящего Закона являются создание гарантий и условий для свободного участия и заинтересованности граждан в предпринимательской деятельности, повышение их предпринимательской активности, а также защита прав и законных интересов субъектов предпринимательства.

Бизнес и предпринимательство всегда играли важную роль в жизни нашего народа, сохранялись его уникальные традиции, ценились люди, обладающие такими достоинствами. Объявление 2024 года «Год молодежи и поддержки бизнеса» исходя из основных целей и задач этого года, привлечение новой техники и технологий, активное участие в финансировании инвестиционных проектов, основанных на инновационных идеях, являются основными целями кредитования.

Как отметил Президент Ш.М.Мирзиёев: «Впервые в нашей стране введен институт омбудсмена по защите прав предпринимателей. Значительно снижены налоги в бизнес-секторе, расширены кредитные возможности. Были созданы новые свободные экономические зоны, в которых инвесторам были предоставлены широкие льготы. Стратегия банка заключается в создании дополнительных источников дохода для широкого круга населения путем кредитования юридических и физических лиц, оказания микрофинансовых и розничных услуг.

Кредитная политика банка определяет проценты по кредитам и депозитам, а также сроки погашения на основе ситуации с ликвидностью банка путем совершенствования системы оценки и управления кредитным риском.

Стратегия кредитной политики исходя из своих целей включает в себя:

- формирование качественного кредитного портфеля;
- Финансирование приоритетных инвестиционных проектов на основании соответствующих решений правительства;
- кредитование приоритетных отраслей;
- толерантность к риску и управление рисками, что позволяет обеспечить формирование качественных активов, регулярного целевого уровня доходности и ликвидности;
- формирование команды квалифицированных кредитных специалистов, способных обеспечить качественный кредитный портфель и эффективное управление им;

- широкое осуществление предоставления информационных и консультационных услуг клиентам, связанных с предпринимательской деятельностью;

- развитие малого бизнеса и субъектов частного предпринимательства, в том числе субъектов предпринимательства в отдаленных селах, путем льготного микрофинансирования и, в конечном итоге, создания новых рабочих мест, широкого вовлечения населения в предпринимательство;

- расширение и совершенствование сферы деятельности путем внедрения новых видов услуг в тесном сотрудничестве с организациями, предприятиями, субъектами малого бизнеса и предпринимательства, коммерческими банками и другими физическими лицами; совершенствование практики кредитования с учетом особенностей субъектов кредитования;

- активное участие в привлечении и развитии иностранных кредитных линий;

- предоставление розничных банковских услуг, общение с клиентами и формирование корпоративной культуры;

- отдать приоритет кредитованию клиентов по направлению производства продукции, предназначенной для экспорта и импортозамещения, повышения качества продукции, создания новых рабочих мест;

- повысить качество экспертизы инвестиционных проектов, в том числе за счет повышения прозрачности практического процесса, обеспечения учета всех потенциальных факторов и рисков при экспертизе проектов, совершенствования методов скоринга и анализа кредитоспособности заемщиков, применять методы отбора, исходя из своей финансовой устойчивости и способности обеспечить эффективное использование и погашение кредита;

- оценка соразмерности кредитного обеспечения уровню кредита, не допускающая принятия в залог неликвидного, быстро обесценивающегося имущества;

- путем предупреждения клиента о просроченных кредитах и обращения в правоохранительные организации, хозяйственные и гражданские суды через региональные отделения Торгово-промышленной палаты и непосредственно для достижения погашения долга;

- в целях повышения качества кредитного портфеля, совершенствования практики его управления, а также дальнейшего совершенствования информационной инфраструктуры кредитов и управления кредитным портфелем в целях обеспечения скорости принятия решений;

- в целях увеличения объема электронной подачи соответствующих документов на получение кредитов в национальной валюте клиентами, обслуживаемыми через «Центр госуслуг», внесение необходимой информации о процедурах кредитования и новых кредитных продуктах на постоянный сайт банка;

- Определение инструментов и процессов управления кредитным риском;

- определение направлений инвестирования, отбор инвестиционных проектов, управление ими, проведение экспертизы и применение простого и удобного механизма финансирования для предпринимателей;

- внедрение принятия решений при финансировании инвестиционных проектов на основе углубленного анализа их технико-экономической основы, будущих денежных потоков и перспектив проекта, не ограничиваясь наличием кредита;

- расширение практики залога объекта, приобретенного в кредит, в установленном порядке при выдаче кредита и повысить качество предоставляемых услуг, включая внедрение механизмов оценки клиентов и создание системы «электронной очереди»;

- совершенствование системы оценки и управления рисками, которые могут возникнуть в связи с ростом инвестиционной активности, исходя из условий погашения иностранных кредитных линий и других депозитов и состояния ликвидности выделенных кредитов обозначение;

- оказание комплексной поддержки малому бизнесу и частным предпринимателям, в том числе путем выделения кредитов за счет внебюджетных фондов и ресурсов международных финансовых институтов;

- усиление диверсификации кредитного портфеля, дальнейшее совершенствование механизмов контроля концентрации рисков у одного заемщика, объекта кредитования, вида деятельности и сети;

- совершенствование мониторинга проектов, финансируемых за счет банковских кредитов и регулярно контролировать качество кредитов с целью предотвращения проблемной задолженности в течение всего периода кредитования.

Желательно, чтобы научные, теоретические и правовые основы развития предпринимательства постоянно изучались и совершенствовались теми, кто занимается предпринимательством, а также теоретически педагогами.

В заключение следует сказать, что в экономически развитых странах внедрены налоговые механизмы, стимулирующие инновационную деятельность, и они оказывают непосредственное влияние на экономический рост. Если рассматривать это в условиях Узбекистана, то, на наш взгляд, налоговые механизмы, направленные на стимулирование

инновационной активности, недостаточно развиты и не имеют постоянной окраски, сегодня налоговые льготы, предоставляемые гражданам и субъектам хозяйствования, не стимулируют их интеллектуальную деятельность. и инновационная деятельность. А также, на мировой опыт, можно сказать, что положительных результатов можно достичь за счет поддержки малых инновационных предприятий и крупных компаний. При любых обстоятельствах создание конкурентной среды, улучшение кредитной системы и создание возможностей входят в число задач, стоящих перед страной. Конечно, необходимо вести честную конкуренцию. Желательно работать вместе, дополняя друг друга. Из мирового опыта мы видим, что в мире не существует единой модели построения инновационной экономики. Каждая страна выбрала свою модель развития для перехода к экономике, основанной на знаниях, а развитие достигается за счет создания здоровой конкурентной среды.

УПРАВЛЕНИЕ ИНТЕГРИРОВАННОЙ ЦЕПЬЮ ПОСТАВОК: ТЕОРЕТИЧЕСКИЙ АСПЕКТ

Аннотация. На сегодняшний день интеграция в цепях поставок играет одну из ключевых ролей для успешного функционирования любого предприятия. В статье рассмотрена эволюция развития цепей поставок, представлена модель цепи поставок, состоящая из восьми бизнес-процессов. В целях раскрытия теоретического аспекта управления интегрированной цепью поставок статья также освещает этапы становления системы управления цепей поставок, особенности интегрированной цепи поставок и формы интеграции в цепях поставок.

Ключевые слова: управление цепью поставок, эволюция, логистика, особенности интегрированной цепи поставок.

INTEGRATED SUPPLY CHAIN MANAGEMENT: A THEORETICAL ASPECT

Abstract. Today, integration in supply chains plays one of the key roles for the successful functioning of any enterprise. The article examines the evolution of supply chain development, presents a supply chain model consisting of eight business processes. In order to reveal the theoretical aspect of integrated supply chain management, the article also highlights the stages of the formation of a supply chain management system, the features of an integrated supply chain and the forms of integration in supply chains.

Keywords: supply chains management, evolution, logistics, features of the integrated supply chain.

Цепь поставок – это совокупность экономических единиц, участвующих в управлении, организации, планировании и контроле за материальными, информационными и финансовыми потоками на протяжении всего пути от производства до распределения по конечным потребителям с целью повышения эффективности деятельности предприятия при оптимальном уровне затрат [2, с. 12].

Управление цепью поставок представляет собой сложный организационный процесс, задачами которого является удовлетворение потребительских интересов, минимизация материальных издержек, увеличение прибыли, оптимизация операций, развитие электронной коммерции, формирование конкурентных преимуществ, а также достижение высокого уровня результатов и повышение эффективности функционирования предприятия [3, с. 48].

Сам термин управление цепями поставок (Supply Chain Management) впервые был упомянут в 1982 году британскими учеными К. Оливером и М. Вебером в статье «Supply chain management: Logistics Catches up with Strategy».

Этапы становления системы управления цепей поставок представлены на рисунке 1.

Рисунок 1 – Этапы становления управления цепей поставок

Модель цепи поставок можно представить в качестве интеграции восьми основополагающих бизнес-процессов:

- 1) управление взаимоотношениями с потребителями;
- 2) обслуживание потребителей;
- 3) управление спросом;
- 4) управление выполнением заказов;

- 5) управление производством / операциями;
- 6) управление снабжением;
- 7) разработка продукта и доведение его до коммерческого использования;
- 8) управление возвратными материальными потоками.

На рисунке 2 представлены модели и методы управления логистической системой [4, с. 143].

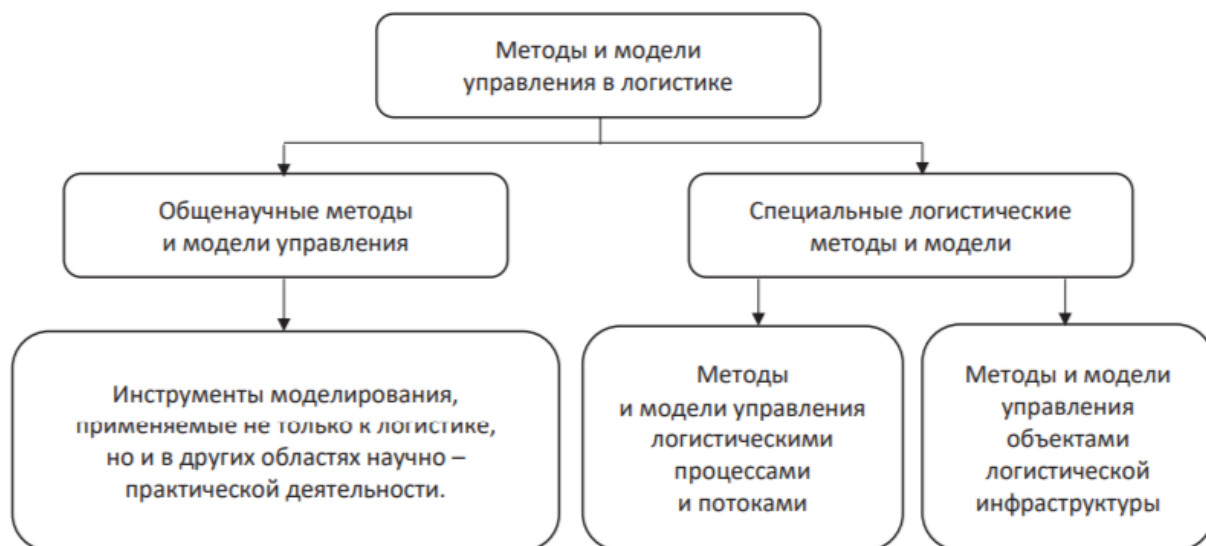

Рисунок 2 – Модели и методы управления в логистике

Интеграцию в цепи поставок можно рассматривать с точки зрения процесса взаимодействия всех участников цепи поставок, который ориентирован на достижение совместных результатов посредством масштабирования и упрочения связей производственно-технического характера, коллективного использования ресурсов и капиталов, а также формирования устойчивой благоприятной партнерской среды для осуществления общей экономической деятельности [1, с. 55].

Под интегрированной цепью поставок подразумевают цепь, представляющую собой совокупность объектов вещественного характера, а также комплекс денежных и информационных потоков. Преимуществами интегрированной цепи поставок являются:

- 1) снижение издержек на логистические операции посредством оптимизации всего процесса;
- 2) сокращение временных затрат на доставку товара;
- 3) повышение уровня обслуживания и удовлетворенности клиентов;
- 4) увеличение уровня конкурентных преимуществ;
- 5) оперативное реагирование на колебания рынка;
- 6) быстрая адаптация к новым условиям.

Формы интеграции в цепях поставок представлены на рисунке 3.

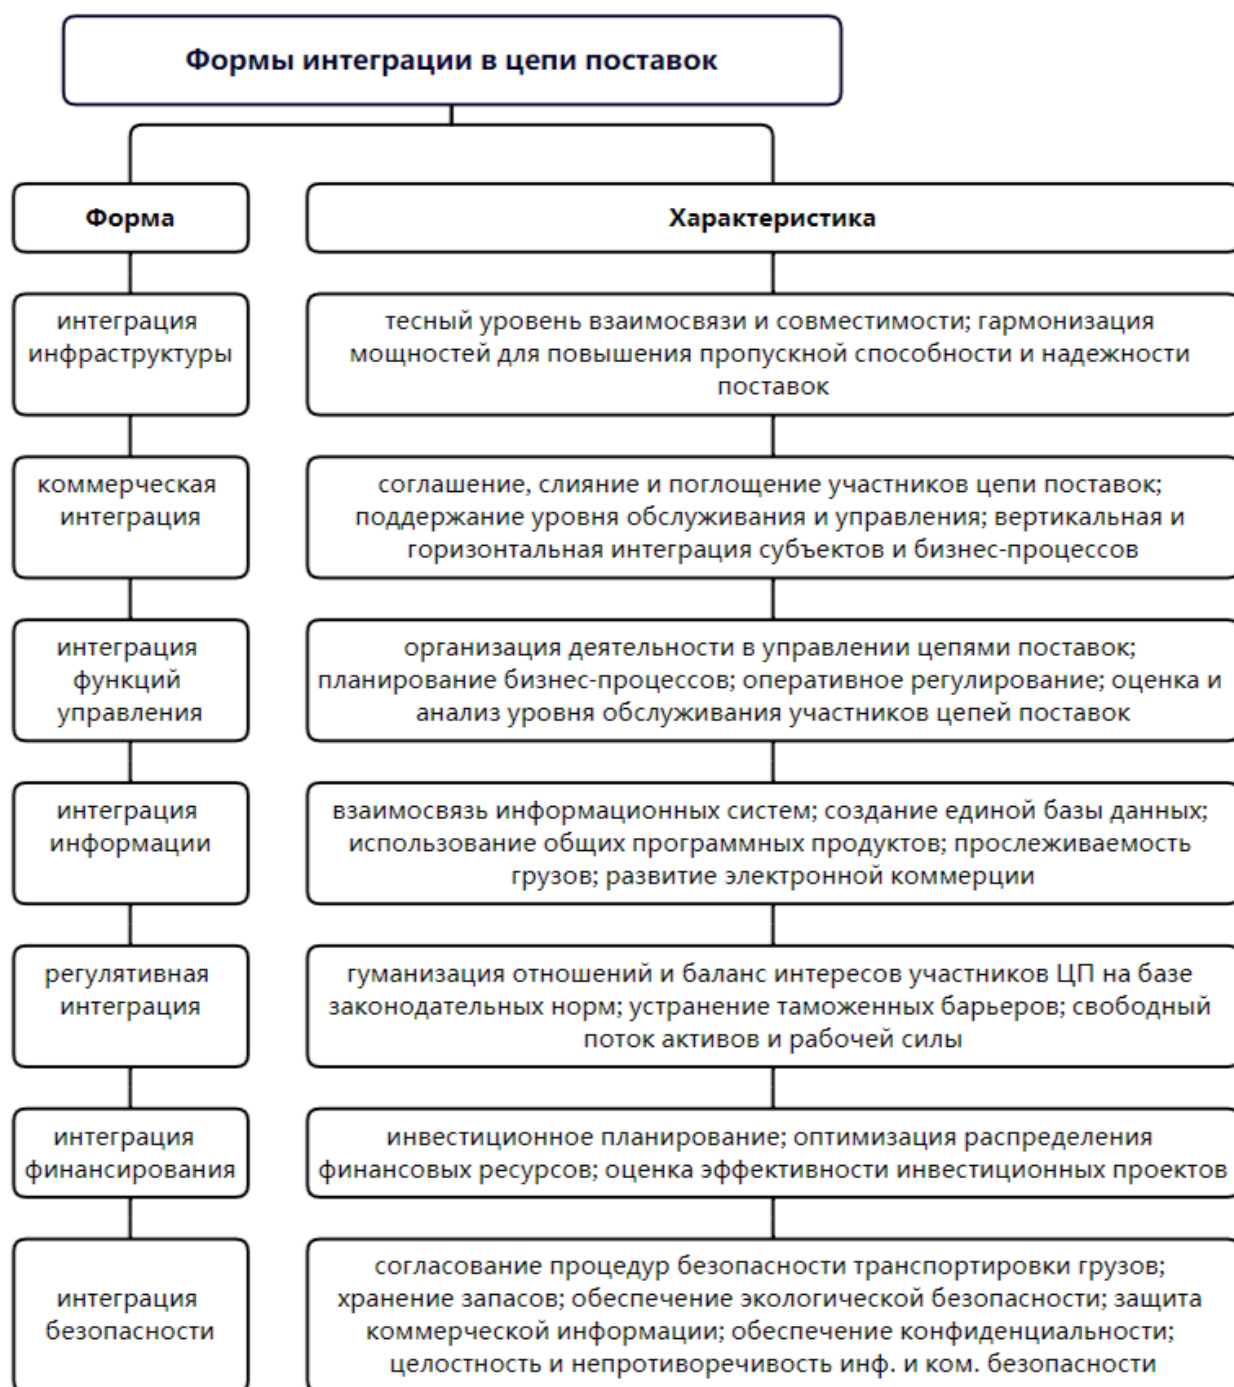

Рисунок 3 – Формы интеграции в цепях поставок

Таким образом, интеграция в цепи поставок представляет собой упорядочивание бизнес-процессов в единую организационную систему, ориентированную на прозрачность и координацию, снижение затрат, гибкость, управление рисками и повышение конкурентоспособности.

ОБЕСПЕЧЕНИЕ ФИНАНСОВО-ЭКОНОМИЧЕСКОЙ УСТОЙЧИВОСТИ МЕЖДУНАРОДНОЙ КОМПАНИИ

Аннотация. Данная статья посвящена анализу финансово-экономической устойчивости международных компаний в условиях современной глобализированной экономики. В статье рассматриваются ключевые факторы, влияющие на устойчивость международных компаний, такие как валютные риски, политическая нестабильность, а также стратегии управления финансовыми рисками и разработка эффективных стратегий для обеспечения устойчивого развития. Автор предлагает комплексный подход к анализу и управлению финансовой устойчивостью международных компаний, основанный на современных теоретических концепциях и практическом опыте.

Ключевые слова: финансово-экономическая устойчивость, международные компании, глобализация, финансовые риски, управление рисками, стратегическое управление, финансовый анализ.

ENSURING FINANCIAL AND ECONOMIC STABILITY OF AN INTERNATIONAL COMPANY

Abstract. This article is dedicated to the analysis of the financial and economic stability of international companies in the conditions of modern globalized economy. The article examines key factors influencing the stability of international companies, such as currency risks, political instability, as well as strategies for managing financial risks and developing effective strategies for ensuring sustainable development. The authors propose a comprehensive approach to analyzing and managing the financial stability of international companies, based on modern theoretical concepts and practical experience.

Keywords: financial and economic stability, international companies, globalization, financial risks, risk management, strategic management, financial analysis.

Обеспечение финансово-экономической устойчивости международных компаний представляет собой одну из ключевых проблем в современном мировом бизнесе. В условиях глобализации мировой

экономики и роста конкуренции на мировых рынках все более важным становится обеспечение устойчивого и надежного функционирования бизнеса на международном уровне.

Финансовая устойчивость определяется способностью компании успешно управлять своими финансовыми ресурсами, минимизировать риски и обеспечивать стабильный доход для всех заинтересованных сторон, включая акционеров, инвесторов, кредиторов, работников и клиентов [1].

Международные компании сталкиваются с рядом проблем, связанных с множеством факторов, негативно влияющих на их деятельность, к которым относятся валютные колебания, политическая нестабильность, различия в правовых системах и национальных законодательствах, а также изменения в мировой экономике и торговле.

Указанные факторы создают сложную среду, требующую от международных компаний гибкости, адаптивности и стратегического управления рисками для обеспечения их долгосрочной устойчивости.

Финансово-экономическая устойчивость международных компаний имеет существенное значение не только для самих компаний, но и для мировой экономики в целом. Успешное функционирование международных компаний способствует экономическому росту, созданию рабочих мест, инновациям и развитию торговли между международными партнерами.

Неустойчивость или кризис в деятельности таких компаний может иметь серьезные последствия, включая финансовые потери, увольнения, а также дестабилизацию финансовых рынков и мировой экономики.

В данном контексте изучение и анализ факторов, влияющих на финансово-экономическую устойчивость международных компаний, представляет собой важное направление исследований как для академического сообщества, так и для практиков в области корпоративного управления, финансов и стратегического менеджмента [2].

Ключевыми аспектами при этом являются: анализ финансовой структуры компаний, оценка и управление финансовыми рисками; разработка эффективных стратегий управления, направленных на обеспечение устойчивости и роста международных компаний в условиях современной глобальной экономики.

Финансово-экономическая устойчивость международных компаний представляет собой важный аспект их долгосрочной успешной деятельности, потому как она определяет способность компании справляться с различными экономическими и финансовыми вызовами, сохранять стабильность в условиях внешних воздействий и обеспечивать свою прибыльность в долгосрочной перспективе. Проявление этой устойчивости обусловлено рядом факторов и стратегий, которые компании могут использовать [3].

Одним из основных аспектов финансово-экономической устойчивости является эффективное финансовое планирование и управление.

Международные компании должны иметь четкое представление о своих финансовых потоках, рисках и возможностях. Они должны строить свою стратегию таким образом, чтобы минимизировать финансовые риски и максимизировать прибыльные возможности, что безусловно подразумевает разработку гибких бюджетов, адекватное управление долгами и капиталом, а также эффективное управление оборотным капиталом.

Еще одним важным аспектом является диверсификация бизнеса и рыночных рисков. Международные компании, особенно те, которые работают в нескольких странах, должны распределять свои активы и инвестиции таким образом, чтобы снизить зависимость от одного рынка или отрасли. Это помогает им смягчать воздействие изменений в макроэкономической среде или региональных кризисов на свою прибыльность и стабильность.

Важно иметь эффективную систему контроля и управления рисками, что подразумевает анализ и оценку различных видов рисков, таких как финансовые, операционные, рыночные и репутационные. Международные компании должны разрабатывать стратегии по управлению этими рисками и принимать меры по их снижению или перераспределению [4].

Также важным аспектом является поддержание хороших финансовых показателей и ликвидности. Международные компании должны следить за своей финансовой устойчивостью, включая такие показатели, как общая задолженность, покрытие процентов, коэффициент текущей ликвидности и др. Все это помогает компаниям оперативно реагировать на изменения на рынке и избегать финансовых затруднений.

Помимо этого, международные компании должны уделять серьезное внимание своим отношениям с заинтересованными сторонами, такими как акционеры, инвесторы, клиенты, поставщики и государственные органы. Поддержание хороших отношений с этими сторонами способствует укреплению доверия к компании и обеспечивает ее финансовую стабильность в долгосрочной перспективе [5].

И конечно, важно иметь обоснованную эффективную стратегию управления кризисными ситуациями. Международные компании должны быть готовы к возможным экономическим и финансовым кризисам и иметь план действий для их преодоления, что подразумевает резервирование достаточных финансовых ресурсов, разработку альтернативных стратегий и сценариев развития событий, а также управление репутационными рисками в периоды нестабильности.

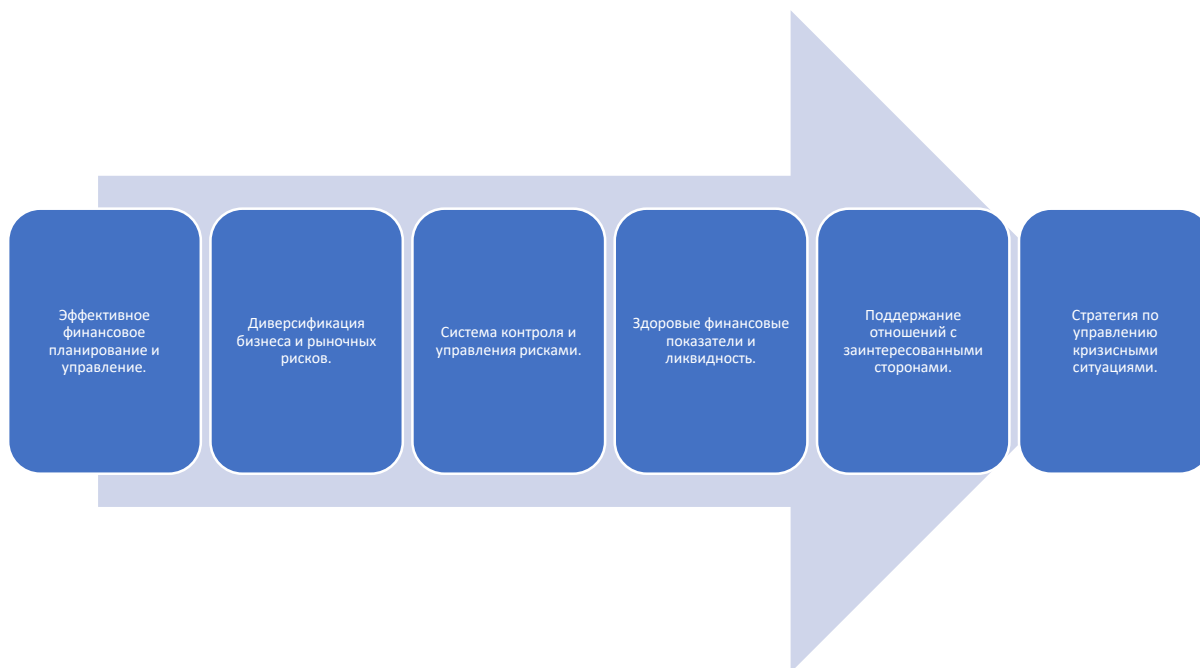

Рисунок 1. Признаки финансовой устойчивости международной компании

В заключении можно подчеркнуть, что финансово-экономическая устойчивость международных компаний является ключевым условием их успешного функционирования в условиях современной мировой экономики. Она обуславливается рядом факторов, включая эффективное финансовое планирование, диверсификацию бизнеса, управление рисками, поддержание здоровых финансовых показателей и развитие отношений с заинтересованными сторонами.

Финансово-экономическая устойчивость позволяет компаниям преодолевать экономические трудности, минимизировать риски и обеспечивать свою долгосрочную прибыльность. Это требует постоянного внимания к изменениям на рынке, гибкости в принятии решений и эффективного управления ресурсами. Имея прочную финансовую базу и адаптивные стратегии, международные компании могут успешно справляться с вызовами и оставаться конкурентоспособными на мировом рынке.

ОЦЕНКА ЭФФЕКТИВНОСТИ СТРАТЕГИЙ РАЗВИТИЯ МЕЖДУНАРОДНОЙ КОМПАНИИ

Аннотация. В данной статье рассматривается важность оценки эффективности стратегий развития для международных компаний в современном бизнес-мире. Обсуждаются ключевые этапы оценки, включая анализ внешней и внутренней среды, конкурентную среду, выбор стратегий развития и мониторинг их эффективности. Подчеркивается необходимость постоянного анализа и корректировки стратегий для достижения устойчивого роста и конкурентного преимущества.

Ключевые слова: стратегия развития, международные компании, оценка эффективности, внешняя среда, внутренняя среда, конкурентная среда, мониторинг, адаптация.

ASSESSMENT OF THE EFFECTIVENESS OF DEVELOPMENT STRATEGIES OF AN INTERNATIONAL COMPANY

Abstract. This article discusses the importance of evaluating the effectiveness of development strategies for international companies in the modern business world. Key stages of evaluation are discussed, including analysis of the external and internal environment, competitive environment, selection of development strategies, and monitoring their effectiveness. Emphasis is placed on the need for ongoing analysis and adjustment of strategies to achieve sustainable growth and competitive advantage.

Keywords: development strategy, international companies, effectiveness assessment, external environment, internal environment, competitive environment, monitoring, adaptation.

В современном динамичном мире, где глобализация и технологические инновации меняют ландшафт бизнеса, стратегии развития для международных компаний становятся ключевым элементом успеха. Оценка эффективности таких стратегий является необходимым этапом в их разработке, реализации и корректировке.

Международные компании оперируют в разнообразных средах, которые включают в себя экономические, политические, социальные, и культурные факторы.

Данные компании сталкиваются с серьезными вызовами, такими как различия в законодательстве, налоговой политике, тарифах, и культурных нюансах. Поэтому разработка стратегий развития должна учитывать многообразие факторов, влияющих на успешную деятельность в разных странах [1].

Оценка эффективности стратегий развития международных компаний начинается с анализа внешней среды. Это включает в себя изучение мировых экономических тенденций, политических изменений, социокультурных особенностей и технологических инноваций. Понимание этих факторов позволяет компаниям адаптировать свои стратегии к изменяющимся условиям и извлечь выгоду из новых возможностей.

Далее следует анализ внутренних ресурсов и компетенций компании. Это включает оценку её финансового положения, технологических возможностей, кадрового потенциала и управленческого опыта. Эффективные стратегии развития должны строиться на уникальных сильных сторонах компании и компенсировать её слабые стороны. Оценка конкурентной среды также является важным аспектом. Это позволяет выявить конкурентные преимущества конкурентов, анализировать их стратегии и действия, и определить возможности для дифференциации и конкурентных атак [2].

Следующим этапом является выбор подходящих стратегий развития. Это может быть экспансия на новые рынки, диверсификация продуктов и услуг, стратегические партнерства, слияния и поглощения, или инновационные подходы к бизнесу. Каждая стратегия имеет свои преимущества и риски, и выбор оптимальной зависит от целей компании, её ресурсов и возможностей.

После реализации стратегий необходимо систематически оценивать их эффективность, что подразумевает мониторинг финансовых показателей, анализ рыночной доли, удовлетворенности клиентов, и других ключевых метрик. Только путем постоянного анализа и корректировки стратегий компании смогут добиться устойчивого роста и конкурентного преимущества на мировом рынке [3].

Оценка эффективности стратегий развития международной компании осуществляется с использованием различных финансовых и нефинансовых показателей. Вот несколько ключевых аспектов, которые могут включать в себя формулы и методы оценки:

- Прибыль – эффективность стратегий развития может измеряться по увеличению чистой прибыли. Формула: $НЧП = ВП - ЗП - \text{Налоги}$,
- где НЧП – чистая прибыль, ВП – выручка от продаж, ЗП - затраты на производство, налоги - налоговые выплаты.
- Рентабельность активов (ROA) – показывает, какую прибыль генерируют активы компании. Формула: $ROA = (\text{Чистая прибыль} / \text{Общие активы}) * 100\%$.

- Рентабельность собственного капитала (ROE) - измеряет прибыль, полученную компанией от использования ее собственного капитала. Формула: $ROE = (\text{Чистая прибыль} / \text{Собственный капитал}) * 100\%$.

- Денежный поток (Cash Flow) - оценивает денежные поступления и оттоки из операционной, инвестиционной и финансовой деятельности компании.

- Рыночная доля – измеряет долю компании на рынке относительно конкурентов.

- Уровень удовлетворенности клиентов - оценивается через опросы, рейтинги обслуживания, повторные покупки и т. д.

- Инновационная активность - оценивается через количество и качество новых продуктов или услуг, патенты, инвестиции в исследования и разработки.

- Эффективность производства: может быть оценена через показатели производственной эффективности, например, снижение брака, увеличение производительности труда и т. д.

- Стоимость привлечения клиента (CAC) – считается как отношение затрат на маркетинг и продвижение к количеству новых клиентов. Формула: $CAC = (\text{Затраты на маркетинг и продвижение} / \text{Количество новых клиентов})$.

- Показатель Чистой добавленной стоимости (Net Promoter Score, NPS) - определяет уровень удовлетворенности клиентов и вероятность рекомендации продукции другим.

При оценке эффективности стратегий развития международной компании важно учитывать, как финансовые, так и нефинансовые показатели, чтобы иметь полное представление об успехе или неуспехе принятых стратегий [4].

Оценка эффективности стратегий развития международной компании является ключевым элементом управления бизнесом и принятия решений. Для этого применяются разнообразные финансовые и нефинансовые показатели, предоставляющие полное представление о достижении поставленных целей и успешности выбранных стратегий.

Начнем с финансовых показателей. Прибыль является одним из наиболее важных показателей, который измеряет финансовый результат деятельности компании. Чистая прибыль, вычисляемая как выручка от продаж минус затраты на производство и налоги, позволяет оценить эффективность использования ресурсов и эффективность стратегий развития.

Далее, рентабельность активов (ROA) и рентабельность собственного капитала (ROE) предоставляют информацию о том, как компания использует свои активы и собственный капитал для генерации прибыли. ROA показывает, какую прибыль генерируют все активы компании, в то время как ROE фокусируется на прибыли, полученной от использования собственных средств акционеров.

Эти показатели помогают определить эффективность управления капиталом и привлечением инвестиций.

Денежный поток (Cash Flow) является ключевым показателем, который оценивает денежные поступления и оттоки из операционной, инвестиционной и финансовой деятельности компании. Он отражает финансовую устойчивость и способность компании к погашению долгов, инвестированию в развитие и выплате дивидендов [5].

Перейдем к нефинансовым показателям. Рыночная доля и уровень удовлетворенности клиентов являются ключевыми для понимания позиции компании на рынке и ее конкурентоспособности. Рыночная доля отражает долю компании на рынке по сравнению с ее конкурентами, тогда как уровень удовлетворенности клиентов позволяет понять, насколько успешно компания удовлетворяет потребности своих клиентов и поддерживает их лояльность.

Инновационная активность оценивается через количество и качество новых продуктов или услуг, патенты, инвестиции в исследования и разработки. Этот показатель отражает способность компании к инновациям и адаптации к изменяющимся рыночным условиям.

Эффективность производства также играет важную роль. Она может быть оценена через показатели производственной эффективности, такие как снижение брака, увеличение производительности труда и другие. Эти показатели свидетельствуют о том, насколько успешно компания управляет производственными процессами и ресурсами.

Наконец, комбинированные показатели, такие как стоимость привлечения клиента (CAC) и показатель Чистой добавленной стоимости (NPS), предоставляют комплексную информацию о воздействии стратегий развития на клиентскую базу и уровень их удовлетворенности. CAC отражает эффективность маркетинговых инвестиций, а NPS измеряет уровень лояльности клиентов и вероятность их рекомендации продукции другим.

СТРАТЕГИИ РАЗВИТИЯ МЕЖДУНАРОДНОЙ КОМПАНИИ

Аннотация. Статья рассматривает значимость разработки эффективных стратегий развития для международных компаний в условиях современного мирового рынка. Авторы обсуждают влияние факторов, таких как глобализация, инновации, изменения потребительских предпочтений и политические сдвиги, на стратегическое развитие бизнеса. Особое внимание уделяется балансированию между стабильностью и инновациями, а также выбору и реализации подходящих стратегических подходов в зависимости от целей и условий компании.

Ключевые слова: стратегии развития, международные компании, конкурентоспособность, глобализация, инновации.

DEVELOPMENT STRATEGIES FOR AN INTERNATIONAL COMPANY

Abstract. The article explores the significance of developing effective development strategies for international companies in the context of the modern global market. The authors discuss the impact of factors such as globalization, innovation, changes in consumer preferences, and political shifts on business strategic development. Special attention is paid to balancing stability and innovation, as well as choosing and implementing appropriate strategic approaches depending on the company's goals and conditions.

Keywords: development strategies, international companies, competitiveness, globalization, innovation.

В условиях современного высококонкурентного и динамичного мирового рынка, разработка эффективных стратегий развития международных компаний становится необходимостью, определяющей их конкурентоспособность и устойчивость.

В силу множества факторов, в том числе глобализации экономики и интернационализации бизнеса, научно-технические инноваций, изменения потребительских предпочтений, законодательных и нормативных актов, международные компании вынуждены постоянно адаптироваться к новым рыночным условиям.

В этом контексте разработка и реализация стратегий развития, ориентированных на укрепление позиций на мировом рынке, становится ключевым аспектом успешного функционирования любой международной компании.

Стратегии развития международных компаний охватывают широкий спектр вопросов, начиная от выбора рынков для экспансии и определения целевой аудитории, и заканчивая оптимизацией процессов производства, логистики и маркетинга. Ключевым вопросом при разработке таких стратегий безусловно является балансирование между стабильностью и инновациями, между сохранением устоявшихся практик и стремлением к поиску новых возможностей.

Подходы к стратегическому развитию также зависят от масштаба и специфики бизнеса компании, её отраслевой направленности, конкурентной среды и других факторов [1].

В настоящей статье рассматриваются различные стратегии развития международных компаний, анализируются их особенности, преимущества и недостатки, а также предлагаются практические рекомендации по выбору и реализации наиболее подходящих стратегических подходов в зависимости от конкретных условий и целей компании.

Данные рекомендации представляют полезный инструментарий для успешного управления и развития международной компании в динамичной и конкурентной мировой экономической среде.

Стратегии развития международной компании могут варьироваться в зависимости от её целей, отрасли, конкурентной среды и других факторов. В таблице 1 представлены некоторые из наиболее распространённых стратегий развития [2].

№	Вид стратегии	Характеристика стратегии
1	Экспортная стратегия	Фокусируется на продаже продукции или услуг за пределами страны происхождения компании. Чаще всего используется в начальном этапе.
2	Стратегия лицензирования	Компания предоставляет лицензии на свои продукты технологии другим компаниям в других странах в обмен на плату или роялти.
3	Стратегия франчайзинга	Основывается на предоставлении права на использование бренда и бизнес-модели другим компаниям (франчайзи) за плату и соблюдение стандартов.
4	Стратегия совместного предприятия	Компания вступает в партнерство с местной компанией для совместного ведения бизнеса на международных рынках.
5	Стратегия инвестиций	Компания создает свои собственные филиалы или дочерние компании в других странах для производства или предоставления услуг.
6	Стратегия адаптации	Компания изменяет свои продукты, услуги или бизнес-модель, чтобы адаптироваться к различиям в культуре, потребностях и законодательстве разных стран.
7	Глобализационная стратегия	Компания стремится к стандартизации продуктов, маркетинга и операций во всех странах, где она присутствует, чтобы достичь масштабных экономических выгод.

Таблица 1. Стратегии развития международных компаний

Каждая из этих стратегий имеет свои преимущества и недостатки, и выбор конкретной стратегии зависит от целей компании, её ресурсов, конкурентной среды и других факторов. Важно, чтобы стратегия развития была адаптирована к конкретным условиям и была направлена на устойчивый и долгосрочный рост компании на мировом рынке.

Стратегия глобализации представляет собой стратегическое направление, ориентированное на максимальное расширение бизнеса компании за пределы национальных границ. В основе этой стратегии лежит стремление стать мировым игроком, что достигается путем открытия филиалов в различных странах.

Одним из ключевых аспектов глобализации является стандартизация продуктов и услуг компании для их адаптации к международным рынкам, что позволяет упростить процессы производства, снизить издержки и повысить эффективность деятельности компании на глобальном уровне.

Ряд компаний предпочитают применять стратегию локализации. В отличие от глобализации, локализация фокусируется на адаптации продуктов и услуг под местные потребности и предпочтения, когда компания создает специализированные продукты или услуги для различных рынков, учитывая культурные, языковые и законодательные особенности

каждой страны. Такой подход позволяет компании лучше взаимодействовать с местными потребителями и устанавливать более прочные связи с ними [3].

Стратегия мультидоместического подхода сочетает в себе элементы как глобализации, так и локализации. Компания формирует централизованное управление, чтобы обеспечить стандартизацию и эффективность, но при этом децентрализует операции для учета местных особенностей. Такой подход позволяет компании сохранить баланс между стандартизацией и адаптацией, что способствует успешной деятельности на различных рынках.

Стратегия франчайзинга представляет собой модель бизнеса, при которой компания предоставляет право на использование своего бренда, продуктов и бизнес-модели другим компаниям (франчайзи). Это позволяет быстро расширяться без значительных капиталовложений, поскольку франчайзи берут на себя ответственность за развитие бизнеса на местах.

Для успешной реализации этой стратегии необходим строгий контроль качества и бренда со стороны компании-франчайзора.

Стратегия слияний и поглощений (M&A) предполагает приобретение или слияние компании с другими организациями с целью увеличения доли на рынке, расширения географического присутствия, получения доступа к новым технологиям или уменьшения конкуренции. Эта стратегия может быть эффективным способом для компании ускорить свой рост и увеличить конкурентоспособность.

Стратегия альянсов и партнерств позволяет компаниям объединять усилия для достижения общих целей. Вместо того, чтобы владеть активами или приобретать компании, международная компания может заключать стратегические партнерства с другими организациями, что может быть совместное производство, совместная дистрибуция или совместные исследования и разработки.

Стратегия диверсификации предполагает развитие деятельности в новых отраслях или на новых рынках с целью уменьшения рисков, связанных с концентрацией в одной области. Вертикальная диверсификация предполагает расширение в другие звенья цепочки производства, а горизонтальная диверсификация – в различные бизнес-сегменты, что подразумевает инвестиции в исследования и разработки, патентование новых технологий или приобретение стартапов с инновационными решениями. В итоге, выбор стратегии зависит от множества факторов, включая цели компании, её ресурсы, особенности рынка и конкурентное окружение. Эффективное использование стратегии может помочь компании успешно оперировать на мировом рынке и достигать своих бизнес-целей [4].

В ходе данного исследования были рассмотрены различные аспекты стратегического развития, выявлены основные факторы, определяющие успех в международном бизнесе, и предложены рекомендации для

эффективного управления компанией на глобальном рынке.

Во-первых, было показано, что успешные международные компании строят свою деятельность на основе глубокого понимания местных культур, традиций и потребностей рынка. Адаптация к различным культурным контекстам требует гибкости и способности к быстрым изменениям. В этом контексте важно разработать стратегию, которая учитывает культурные особенности каждого рынка, на котором компания присутствует.

Во-вторых, успешные международные компании активно используют технологические инновации для оптимизации своих процессов и повышения эффективности. Благодаря применению современных информационных технологий и аналитических инструментов компании могут быстро реагировать на изменения внешней среды и принимать обоснованные стратегические решения.

Третьим важным аспектом является управление человеческими ресурсами. Международные компании, стремящиеся к успеху, инвестируют в развитие своих сотрудников, создают условия для роста и профессионального развития персонала. Эффективное управление человеческими ресурсами позволяет компаниям привлекать талантливых специалистов и создавать команду, способную реализовывать стратегические цели.

Глобальная деятельность компании связана с рядом рисков, среди которых политическая нестабильность, валютные колебания, изменения законодательства и многие другие, именно поэтому компании необходимо иметь четко определенную стратегию управления рисками, которая позволяет минимизировать потенциальные угрозы и обеспечивать устойчивость бизнеса в условиях неопределенности [5].

Важным условием успешной деятельности международной компании является построение долгосрочных взаимовыгодных партнерских отношений с клиентами, поставщиками, посредниками, партнерами по бизнесу и другими заинтересованными сторонами. Установление эффективных партнерских отношений способствует созданию стабильной клиентской базы и обеспечивает долгосрочную устойчивость бизнеса.

ОРГАНИЗАЦИОННО-ЭКОНОМИЧЕСКИЕ ПРОБЛЕМЫ СТРАТЕГИЧЕСКОГО УПРАВЛЕНИЯ МЕЖДУНАРОДНОЙ КОМПАНИЕЙ

Аннотация. Данная статья посвящена исследованию организационно-экономических проблем стратегического управления, которые влияют на эффективность деятельности современных организаций. В статье рассматриваются основные причины возникновения таких проблем, их влияние на процесс принятия стратегических решений, а также предлагаются практические рекомендации по их решению.

Ключевые слова: стратегическое управление, организационные проблемы, экономические проблемы, принятие решений, эффективность.

ORGANIZATIONAL AND ECONOMIC PROBLEMS OF STRATEGIC MANAGEMENT OF AN INTERNATIONAL COMPANY

Abstract. This article examines the organizational and economic problems of strategic management that affect the efficiency of modern organizations. The article discusses the main causes of such problems, their impact on the process of making strategic decisions, and provides practical recommendations for their solution.

Keywords: strategic management, organizational problems, economic problems, decision-making, efficiency.

В современном мире стратегическое управление стало одним из ключевых элементов успеха деятельности организации любой организационно-правовой формы и формы собственности, будь то производственная корпорация, государственное учреждение или некоммерческая организация.

Основываясь на комплексном анализе внешних и внутренних факторов, стратегическое управление направлено на определение целей и разработку планов действий для достижения этих целей в долгосрочной перспективе.

Вместе с тем, на пути к успешному стратегическому управлению международные компании сталкиваются с рядом организационно-

экономических проблем, требующих серьезного внимания и анализа. Эти проблемы могут быть связаны с отсутствием обоснованных целей и стратегий, неэффективным распределением ресурсов, недостаточной адаптивностью к изменяющимся условиям рынка, а также с недостаточным вовлечением работников в процесс принятия решений и реализации стратегий [1].

Организационные проблемы стратегического управления часто имеют корни как внутри, так и вне самой организации. Внутренние факторы, такие как неэффективная система управления, конфликты между различными подразделениями, или недостаточное использование инноваций и технологий, могут затруднять успешную реализацию стратегий. С другой стороны, внешние факторы, такие как экономическая нестабильность, изменения законодательства или конкурентное давление, могут также оказывать существенное влияние на способность организации к эффективному стратегическому управлению. Понимание и решение этих организационно-экономических проблем является ключевым аспектом для успешного достижения поставленных целей и обеспечения конкурентоспособности организации на международных рынках [2].

№	Наименование проблемы	Характеристика проблемы
1	Недостаточное исследование рынка	Компания может столкнуться с проблемой недостаточного изучения рынка перед принятием стратегических решений. Неправильное понимание рыночных трендов может привести к неудачным стратегиям.
2	Отсутствие ресурсов	Недостаточные финансовые, человеческие или материальные ресурсы могут ограничить способность компании к реализации выбранной стратегии развития.
3	Неэффективное управление	Слабое управление компанией может привести к неправильному выделению ресурсов, неэффективному принятию решений и низкой реализации стратегии.
4	Изменяющаяся конкурентная среда	Рыночная конкуренция и технологические изменения могут привести к необходимости постоянного пересмотра и адаптации стратегии развития компании.
5	Отсутствие инноваций	Недостаток инноваций может привести к потере конкурентоспособности компании на рынке.
6	Неудачи в партнерстве	Неудачные стратегические партнерства могут снизить эффективность стратегии развития компании или привести к утрате доверия со стороны партнеров.
7	Неправильное маркетинговое позиционирование	Неправильное позиционирование продуктов или услуг на рынке может снизить спрос на них и препятствовать реализации стратегии развития.

№	Наименование проблемы	Характеристика проблемы
8	Недостаточная адаптация к изменениям	Компания может столкнуться с проблемой недостаточной способности адаптироваться к изменениям внешней среды, что может привести к неудаче стратегии развития.

Таблица 1. Проблемы в стратегии развития компаний

Неоднозначность целей и приоритетов является одной из ключевых проблем, с которой сталкиваются компании при определении своих стратегических направлений. Отсутствие четких и однозначных целей затрудняет разработку эффективной стратегии, способной сбалансировать краткосрочные и долгосрочные цели. Компании могут теряться во множестве возможных путей и направлений, что приводит к потере времени, ресурсов и потенциальных возможностей для развития.

Неэффективное выделение ресурсов является еще одной серьезной проблемой. Нерациональное распределение финансовых и других ресурсов может привести к недофинансированию важных стратегических проектов, которые могут определить успех компании в будущем.

Также нужно отметить, что излишнее финансирование непродуктивных инициатив может привести к расточительству и потере конкурентоспособности.

Недостаточное вовлечение персонала также становится серьезным препятствием для успешной реализации стратегии. Полное понимание и поддержка со стороны персонала необходимы для выполнения стратегических задач. Однако часто бывает, что стратегия остается неясной для сотрудников, или же они не видят своего места и роли в ее реализации, что довольно часто приводит к дезинформации, недовольству и даже саботажу со стороны персонала.

Отсутствие адаптивности также является значительным фактором, препятствующим успешному стратегическому управлению. Стратегии, которые не могут быстро реагировать на изменения в рыночной среде или внешние вызовы, могут оказаться неэффективными и устаревшими [3].

Гибкость и способность к адаптации к новым условиям играют решающую роль в успешном выживании и процветании компании.

Недостаточная оценка рисков также может серьезно подорвать стратегическое управление компанией. Стратегические решения всегда связаны с определенными рисками, и недооценка этих рисков может привести к неудачам и потерям. Важно сформировать систему идентификации и оценки рисков, которая позволяет выявлять и управлять ими на всех этапах стратегического процесса.

Отсутствие инновационной активности также является серьезным вызовом для компаний в современном мире. Быстрое технологическое развитие и изменения в потребительском поведении требуют постоянного инновационного подхода. Компании, не инвестирующие в исследования и разработки новых продуктов и услуг, могут потерять свою конкурентоспособность и рыночные позиции.

Серьезным препятствием в формировании и реализации успешной стратегии могут явиться проблемы в корпоративной культуре. Если ценности и принципы компании не соответствуют ее стратегическим целям, это может привести к конфликтам и срыву стратегических инициатив. Отсутствие поддержки и понимания со стороны работников может препятствовать успешной реализации стратегии, даже если она кажется обоснованной и эффективной [4].

В современном бизнесе конкурентная среда постоянно меняется, требуя от компаний гибкости и адаптивности. Однако, часто компании сталкиваются с проблемами в своем стратегическом управлении, которые могут привести к потере конкурентоспособности и даже к финансовым потерям.

Для успешного решения этих проблем необходимо разработать комплекс мер, представленных на рисунке 1.

Рисунок 1. Мероприятия по решению проблем стратегического управления международной компанией

Комплексный подход к решению проблем, связанных с стратегическим управлением, позволяет компаниям эффективно адаптироваться к изменяющимся условиям рынка и достигать стратегических целей. Однако, для успешной реализации этого подхода

необходимо не только определить правильную стратегию, но и осуществить системные изменения внутри компании [5].

ПЕРСПЕКТИВЫ СОТРУДНИЧЕСТВА РОССИИ И КИТАЯ В ФАРМАЦЕВТИКЕ НА ПРИМЕРЕ АНАЛИЗА ДЕЯТЕЛЬНОСТИ YUNNAN BAIYAO GROUP

Аннотация. в данной статье анализируется развитие российско-китайского взаимодействия в области фармацевтики. По мнению автора, оно будет расширяться, так как после 2022 года на российском рынке прекратили работу многие иностранные западные фармацевтические компании. В связи с этим усложнилась логистика ввоза европейских и американских лекарств из-за реализации так называемого «параллельного импорта», таким образом возрастает риск дефицита жизненно важных препаратов, медицинского оборудования, а также сырья для производства медикаментов. В рамках данной статьи проводится анализ собранного массива информации о показателях китайской фармацевтической компании Yunnan Baiyao Group, и возможности расширения ее международного участия, в том числе развитие бизнеса в России.

Ключевые слова: Китай, фармакология, Yunnan Baiyao, санкции, стратегический менеджмент, импортозамещение, народная медицина.

COOPERATION PROSPECTS BETWEEN RUSSIA AND CHINA IN PHARMACEUTICALS BASED ON THE ANALYSIS OF THE YUNNAN BAIYAO GROUP

Annotation: this article analyzes the development of Russian-Chinese cooperation in the field of pharmaceuticals. According to the author, it will expand, since after 2022 many foreign Western pharmaceutical companies stopped working on the Russian market. In this regard, the logistics of importing

European and American medicines has become more complicated due to the implementation of the so-called "parallel imports", thus increasing the risk of shortages of vital drugs, medical equipment, as well as raw materials for the production of medicines. This article analyzes the collected array of information on the performance of the Chinese pharmaceutical company Yunnan Baiyao Group, and the possibility of expanding its international participation, including business development in Russia.

Key words: China, pharmacology, Yunnan Baiyao, sanctions, strategic management, import substitution, traditional medicine.

Из-за высокой инфляции и роста цен на западную продукцию, в том числе лекарственные препараты, в настоящее время, наблюдается переход россиян на более экономную модель поведения. Это толкает потребителей покупать дженерики вместо оригинальных медикаментов и искать более дешевые аналоги известных и популярных лекарств.

Как и во всей промышленности Российской Федерации, в фармацевтике также реализуются направления развития импортозамещения, в том числе производство с нуля собственных препаратов из собственного же сырья. Также будет реализовываться постепенный переход с параллельного импорта на официальные поставки от зарубежных компаний, которые не вошли в санкционный список, например, фармацевтические фирмы из Китая и Индии [1].

Но насколько оправдано сотрудничество со странами Азии в целом и с Китаем в частности в области фармакологии? На этот вопрос может ответить анализ общего производства медикаментов в странах мира.

Сейчас по выпуску фармацевтики фиксируются сразу 3 региона-лидера: Азия, Европа и Северная Америка. В 2019 г. их суммарная доля составляет 97% выпуска продукции отрасли (как и в 2003 г.). Однако существенно изменился процент Азиатского региона в мировом производстве фармацевтической продукции (рост с 20 до 36%). Доля Северной Америки снизилась за анализируемый период с 37 до 29%, а Европейского региона – с 40 до 32% (Рис. 1).

Рис. 1. Динамика выпуска продукции фармацевтической индустрии в регионах мира, млн долл.

На 10 стран-лидеров приходится 77% выпуска мировой фармацевтической продукции, а на США и Китай – 52% [3] (рис. 2).

Рис. 2. Динамика выпуска продукции фармацевтической индустрии в странах-лидерах, млн долл.

Отмечу, что объём производства лекарственных средств в Китае увеличился за рассматриваемый период практически в 10 раз – с 16 до 159 млрд долл. (рис. 3). Для сравнения: выпуск продукции в США вырос лишь в 1,8 раза, в Германии – в 1,5 раза, в Швейцарии – в 3 раза, в Великобритании – в 1,2 раза. [3].

Получается, сотрудничество с Китаем как с одним из лидеров медицинской промышленности является весьма перспективным. Здесь можно также отметить давнюю традицию и историю медицины в Китае, насчитывающую тысячелетия. Но именно в последние 20-30 лет Китай показывает пример создания современной фармацевтической промышленности. Да, она пока слабо инновационная, и в настоящее время специализируется на выпуске дженериков и сырья, требует развития также и индустрия выпуска медицинской техники и приборов. Однако уже сейчас китайские препараты выпускаются в огромных объемах, и вполне способны соревноваться в качестве с американскими и европейскими лекарствами. Но Китай в значительной степени остается страной исторического наследия, поэтому наряду с наличием серьезной научной составляющей, растёт роль препаратов традиционной китайской медицины. В качестве примера симбиоза многовекового опыта и современных технологий можно рассмотреть одного из крупных игроков на рынке фармацевтики Китая - Yunnan Baiyao Group.

Корпорация Yunnan Baiyao Group берет свое название от традиционного китайского целебного средства, которое пользуется популярностью уже более 100 лет. Лекарство было разработано Цюй Хуанчжаном из уезда Цзянчуань в провинции Юньнань в 1902 году. Продукт Yunnan Baiyao производится и распространяется предприятием с государственно-частным партнерством, Yunnan Baiyao Group. Используется в качестве как кровоостанавливающего, так и кроворазжижающего средства как в традиционной медицине для лечения людей, так и в ветеринарии.

Стоит отметить, что несмотря на то, что препарат Yunnan Baiyao давно признан в Китае, американские, австралийские и европейские регуляторы не спешат классифицировать его как лекарственное средство из-за ограниченных научных данных относительно его эффективности в профилактике и лечении патологических состояний как у людей, так и у животных при пероральном введении.

В 1993 году Yunnan Baiyao Group Co., Ltd прошла процедуру листинга на Шэньчжэньской фондовой бирже и стала первой компанией в провинции Юньнань, акции которой были зарегистрированы. Позже в 1999 году группа скорректировала свою модель бизнеса, чтобы построить инфраструктуру, которая лучше поддерживает его устойчивость. Не ограничиваясь простым производством средств традиционной медицины по основному направлению, фирма расширяет свою линейку продуктов, чтобы стать ведущей в индустрии здравоохранения.

По состоянию на 31 декабря 2016 года у компании было 12 дочерних компаний, занятых в фармацевтической промышленности, и четыре основных подразделения, занимающихся ценными бумагами, инвестициями и биотехнологическими исследованиями [4].

На конец 2021 года рыночная стоимость группы составляла 134,2 млрд юаней. А ее общие активы за период 2018-2022 гг. года выросли с 30,38 млн юаней до 55,29 млн юаней [5].

Во время пандемии коронавируса, стоимость акций компании выросла, так как многие китайцы для укрепления иммунитета и лечения легких форм Covid-19 предпочитали наряду с препаратами доказательной медицины, пользоваться традиционными китайскими средствами (рис. 3).

Рис. 3. Стоимость акций Yunnan Baiyao Group Co., Ltd, в период 2017-2022 гг.

Компания в основном занимается производством и продажей товаров, связанных со здоровьем, включая лекарства, медицинское оборудование, сырье для медицинских целей, чай и товары медицинского назначения. У нее есть 4 основных бизнес-подразделения:

- доказательная и клиническая медицина,
- товары для здоровья и медтехника,
- травы и традиционные препараты
- финансово-коммерческое подразделение.

В настоящее время медицина в Китае активно развивается, логистика фармакологических препаратов расширяется, а сфера бизнеса является весьма перспективной. На следующей стадии развития Yunnan Baiyao Group можно охватить не только область фармакологии, но и производство сложных медицинских устройств, так как на данный момент, это фирма – самое крупное промышленное и коммерческое фармацевтическое предприятие в провинции Юньнань. Хотя доходы коммерческого подразделения Yunnan Baiyao Group сейчас сравнительно больше, чем у других подразделений, компания уделяет большое внимание товарам для здоровья и медтехники. Эти продукты стали заметным катализатором устойчивого роста. С 2012 по 2020 год, выручка этого подразделения выросла с 180 млн. юаней до 538,7 млн. юаней, что составляет 16% от общей выручки фирмы [5].

Что касается подразделения трав и традиционных препаратов, то, хотя его операционные доходы занимают лишь небольшую часть,

производственная линия имеет полный цикл, начиная от ферм лекарственных трав, производства препаратов, транспортировки, импорта и экспорта. Финансово-коммерческое подразделение приносит большую часть выручка каждый год. В 2021 году доля выручки подразделения коммерческого бизнеса составила 65%

Компания Yunnan Baiyao является международной, но так как основным потребителем ее товаров и услуг являются люди китайской культуры, то ее восприятие в других странах может быть затруднено. Но развитие фармацевтической промышленности в Китае и многочисленная зарубежная диаспора, которая становится потребителем продуктов традиционной медицины, становятся фактором вытягивания таких пока что локальных производителей как Yunnan Baiyao на международный рынок.

С другой стороны, стратегические изменения при выходе Yunnan Baiyao на рынок России должны касаться изменения текущей направленности на традиционную китайскую медицину. Данный путь можно сохранить, но основной фокус для успешного действия в России и выхода на более широкий рынок требуется направить на открытие производства традиционных лекарственных препаратов, дженериков, сырья и т.д. Также наиболее рациональным будет формирование исследовательских подразделений для изучения действия как китайских народных средств и традиционной медицины на различные группы населения Российской Федерации.

graduate student
Moscow Pedagogical State University*

STUDY OF ORGANIZATIONAL DEVELOPMENT STRATEGIES OF INTERNATIONAL COMPANIES: ANALYSIS OF ALIBABA'S COMPANY EXPERIENCE

Abstract. The article reveals the research of organizational development strategies of international companies and analysis of ALIBABA company experience.

Keywords: electronic, commerce, trade, business.

Организационное развитие – это важная часть успеха в современной быстроразвивающейся деловой среде, крайне важным это является для международных компаний. Стратегии данного развития рассматривают разнообразные подходы для повышения эффективности и подстраивание компаний под современные реалии. Здесь мы рассмотрим наиболее популярные виды стратегий:

1. Инновационная стратегия, в нее входят современные технологии и бизнес-процессы, и кроме того непрерывное обновление продуктов и услуг для поддержания конкурентоспособности.

2. Стратегия глобализации, направленная на расширение бизнеса за пределы национальных рынков и создание сети глобальных операций через экспорт, лицензирование, совместные предприятия или прямые иностранные инвестиции.

3. Стратегия интеграции, ориентированная на слияния и поглощения, которая позволяет компаниям быстро наращивать ресурсы, технологии и рыночную долю.

4. Стратегия развития человеческих ресурсов, заключающаяся в инвестициях в персонал компании через обучение, развитие навыков и создание мотивирующей корпоративной культуры.

5. Стратегия устойчивого развития, которая подразумевает интеграцию принципов социальной ответственности и экологичности в бизнес-операции и корпоративные ценности.

Компания Alibaba пользуется данными стратегиями чтобы поддерживать передовые позиции в мире в сфере электронной коммерции. Создав платформу, которая дает уникальные онлайн-решения для торговли и бизнеса, Alibaba Group реализовала инновационный подход, привлекающий и продавцов, и покупателей со всего мира. Стратегия глобализации Alibaba оказалась очень успешной посредством запуска местных платформ и предложений, подстроенных под специфику отдельных рынков и языковых групп. Стремясь к устойчивому развитию, Alibaba Group также инвестирует в экологические инициативы и развивает ответственные практики ведения бизнеса.

С конца 1990-х годов электронная коммерция в Китае продолжает быстро расти и в настоящее время является крупнейшим рынком электронной коммерции в мире. Однако по мере насыщения рынка темпы роста индустрии электронной коммерции начали замедляться. Сейчас в Китае наблюдается быстрый рост трансграничной электронной коммерции. Китай и ЕС имеют широкое пространство для развития трансграничной электронной коммерции, и рынок имеет значительный потенциал. В 2020 году на фоне эпидемии импортно-экспортная торговля между Китаем и ЕС увеличилась в два раза. 22,4 % всех товаров, импортируемых в ЕС, происходят из Китая (исключая Гонконг), в то время как 18,3 % стоимости товаров экспортируется за пределы ЕС. В нынешней международной ситуации выход Великобритании из ЕС (Brexit), распространение эпидемии, кризис беженцев и торговые трения между Европой и США нанесли тяжелый удар по вялой европейской экономике. В Китае, где эпидемия эффективно контролируется, темп экономической жизни уже вернулся к нормальному. Кроме того, по сравнению с традиционной практикой трансграничной торговли, электронная коммерция может принести пользу большему числу предприятий благодаря меньшему объему, большей гибкости и большей безопасности. В то же время, ряд инклюзивных политических мер Китая также создаст более открытую и свободную среду для предприятий электронной коммерции, чтобы "выйти за границу". Поэтому для китайских компаний трансграничной электронной коммерции сейчас самое время развивать свой бизнес в Европе. Однако проблема

заключается в том, что европейский рынок для китайских компаний - это неизведанный мир с рисками.

Есть много конкретных проблем, с которыми вам еще предстоит столкнуться, например, какова там ситуация, как они возникают, как они расширяются и каких рисков вам следует избегать. Alibaba Group company, крупнейшая китайская компания электронной коммерции, основала AliExpress в 2010 году и eWTP (всемирную платформу электронной коммерции) в 2016 году и открыла офисы во Франции, Германии, Нидерландах и Италии, которые являются самыми быстрыми китайскими компаниями, вышедшими на европейский рынок. Инициативы компании Alibaba по выходу на европейский рынок в качестве международной компании электронной коммерции являются инновационными и глубокими. Таким образом, компания Alibaba выбрана в этой статье в качестве основного примера для углубленного анализа и изучения своей стратегии развития в Европе. Учитывая вышеупомянутую цель, цель статьи - предоставить несколько разумных вариантов китайским компаниям электронной коммерции, которые выходят на европейский рынок, становятся транснациональными корпорациями и конкурируют за долю рынка в Европе. Для достижения этой цели было проведено три этапа. Первый этап был посвящен объяснению истории электронной коммерции и факторов, связанных с развитием ЕС, на основе изучения большого количества литературы и определения соответствующей методологии исследования и организационной структуры. Второй этап - анализ европейского рынка электронной коммерции с использованием модели PEST. Наконец, вам следует выяснить мотивацию выхода на европейский рынок и выбранные стратегии его сохранения, а также проанализировать их эффективность. Объектом исследования является компания Alibaba Group.

Компания Alibaba создала самую передовую платформу электронной коммерции и имеет полную систему обслуживания для предоставления услуг электронной коммерции своим клиентам. Продукты компании Alibaba Virtual Body обладают следующими характеристиками:

1. "Легкий доступ к информации и управление ею." Alibaba предоставляет компаниям и продавцам удобные услуги по продажам и обучению. Компании и продавцы могут свободно входить в базу данных покупателей, чтобы проверять информацию и напрямую связываться с иностранными покупателями.

В то же время компания Alibaba разработала идеальные функции фонового управления, такие как банк изображений, отображение групп продуктов и функции многопользовательского управления, так что веб-сайт доступен только на крупных профессиональных сайтах и обеспечивает большое удобство для клиентов.

- 2 Платежных инструмента, соответствующих национальным условиям Китая. Поскольку несовершенная кредитная система Китая

ограничивает развитие электронной коммерции, компания Alibaba разработала Alipay, платежный инструмент с китайской спецификой, чтобы решить эту проблему.

До появления Alipay онлайн-транзакции сначала оплачивались, а затем отправлялись.

Эта форма транзакций ставит под угрозу способность покупателей получать товары вовремя, в нужном качестве и в нужном количестве после оплаты, что снижает интерес к онлайн-транзакциям; Alipay использует сторонний способ оплаты с гарантией, который значительно снижает риск транзакции.

3 Идеальная рейтинговая система. В компании Alibaba есть полноценная рейтинговая система. Обе стороны транзакции представляют собой оценку другой стороны после завершения транзакции. Оценка отображается на другой странице и дает обеим сторонам ссылку на следующую транзакцию. Эта система оценки ограничивает возникновение недоверия между двумя сторонами и делает транзакцию более надежной и простой.

Название компании и доменное имя веб-сайта Alibaba взяты из сказок и хорошо известны людям. Слоги яркие и звучные, их легко запомнить, и они помогают повысить узнаваемость бренда. По мере увеличения количества кликов в Интернете его популярность также продолжала расти, что быстро повысило ценность бренда Alibaba.

Компания Alibaba создала форумы на Alibaba и Taobao, чтобы упростить централизованный доступ к отзывам клиентов и обмен информацией между ними, а также предлагает онлайн-инструменты для обмена мгновенными сообщениями.

. Коммуникационные сервисы, такие как Tradelink, Yahoo Messenger и Taobao Wangwang, позволяют клиентам в любое время обсуждать деловые вопросы и быстро обрабатывать отзывы клиентов, получать самую свежую информацию о спросе и предложении и наслаждаться эффективными онлайн-развлечениями.

В начале своего основания компания Alibaba предоставила своим членам бесплатную регистрацию и доступ к информационным услугам и быстро заняла лидирующие позиции на рынке; членские взносы стали взиматься только после того, как количество клиентов достигло определенного у Членских взносов Chengxingtong составляют 2800 юаней / 365 долларов США в год, в то время как членские взносы "китайских поставщиков" составляют 41,2 миллиона юаней в год. Основной доход поступает от китайских поставщиков и членских взносов Chengxingtong.

В первые дни своего основания Taobao и Alipay также следовали стратегии развития свободного рынка. На данный момент Taobao по-прежнему предоставляет бесплатные услуги. После успешного запуска в

2007 году Alipay взимает определенный процент комиссионных за транзакции не только с Taobao и Alibaba.

Компания Alibaba родилась в Ханчжоу, распространилась в дельте Янцзы и по всей стране, но добилась успеха во всем мире и стала мировым лидером в области электронной коммерции.

По этой причине экономика Чжэцзяна создала благодатную почву для роста компании Alibaba. Его рыночная экономика, высокая доля малых и средних частных предприятий, а также интенсивная и ориентированная на экспорт промышленная среда - все это очень хорошо подходит для развития электронной коммерции, что создает благоприятные условия для роста и развития компании Alibaba.

В то же время компания Alibaba позиционируется на мировом рынке и запустила различные веб-сайты, ориентированные на разные языки, культуры и традиционные рынки по всему миру. Например, Alibaba International предоставляет глобальным импортерам информацию о товарах от поставщиков из Китая и других стран-производителей, в то время как компания Alibaba Китай является внутренним рынком онлайн-торговли B2B в Китае, а Alibaba Япония создана для японского рынка. Компания Alibaba также выпустила версии Alibaba на неанглоязычном языке для неанглоязычных стран, такие как корейская и испанская версии. Это помогло компании Alibaba, расширить свое присутствие в различных регионах и на рынках, а также расширить каналы сбыта продукции и услуг и сыграл важную роль в содействии глобальному развитию компании Alibaba.

TRANSFORMATIONAL APPROACHES TO ORGANIZATIONAL DEVELOPMENT: LESSONS LEARNED FROM THE HISTORY OF ALIBABA

Abstract. The article identifies transformational approaches to organizational development and lessons learned from the history of ALIBABA.

Keywords: company, customer, intelligence, service.

Трансформационные подходы к организационному развитию играют особо значимую роль в успехе современных международных организаций. Такие подходы включают в себя внедрение новых технологий, разработку инновационных бизнес-моделей и создание культуры постоянного развития и гибкости. Эти стратегии позволяют организациям быть адаптивными в меняющейся бизнес-среде, укреплять конкурентные преимущества и достигать устойчивого роста. Компания ALIBABA, ведущий гигант в области электронной коммерции, показывает, как инновационные и трансформационные стратегии влияют на организационное развитие в глобальном масштабе.

Компания Alibaba является первооткрывателем и крупнейшим розничным продавцом, предлагающим своим партнерам и клиентам облачные технологии, большие данные и искусственный интеллект для решения индивидуальных бизнес-задач. Компания активно продвигает концепцию новой розничной торговли в Китае и за его пределами как самостоятельно, так и через партнеров. Существует множество примеров успешной реализации концепции в Юго-Восточной Азии и несколько в Европе

Концепция "новой розничной торговли", реализуемая Alibaba Group, основана на трех основных компонентах:

- потребители, которым гарантирован максимальный комфорт при совершении покупок и вокруг которых простирается вся экосистема;
- продукты, предлагаемые потребителям;
- места, где происходит потребление.

Компания Alibaba видит, что на трансформацию розничной торговли влияют персонализированные услуги, интеллектуальные системы управления цепочками поставок и новый клиентский опыт, связанный с переходом магазинов из офлайн в онлайн. Развитие вышеупомянутых подходов открывает новые возможности для создания ценности для компании:

- превращение потенциального клиента в настоящего клиента;
- увеличение большего количества повторных покупок;
- создание площадки для взаимодействия с клиентом;
- оптимизация затрат, которая становится особенно актуальной в связи с большой популярностью онлайн-покупок, особенно в Китае.

Есть много новых брендов, у которых вообще нет физических торговых точек.

Отсутствие широкой розничной сети означает, что они используются только в ключевых местах, например, в качестве центров презентации продукции.

Стратегия "Новый ритейл" и инновации в компании ALIBABA

Стремление к инновациям привело компанию ALIBABA к разработке и внедрению стратегии "Новый ритейл", задача которой объединить онлайн и офлайн торговлю, интегрируя цифровые технологии в традиционные розничные операции. Данная стратегия направлена на повышение эффективности бизнес-процессов, улучшение качества клиентского сервиса и создание бесшовного покупательского пути. В рамках "Нового ритейла" компания ALIBABA внедряет интеллектуальные системы управления складами, персонализированную рекламу и аналитику данных, позволяющую учесть предпочтения и поведение каждого отдельного клиента. Такой подход не только способствует росту продаж и клиентской лояльности, но и дает компании ALIBABA преимущество в сфере конкуренции за внимание покупателей.

Современный покупатель постоянно совершает покупки лицом к лицу и удаленно, что вынуждает компанию использовать оба канала связи с клиентом. В рамках новой концепции розничной торговли компания Alibaba создает собственную унифицированную платформу, которая объединяет как офлайн-пользователей, так и онлайн-пользователей. Это реализуется благодаря возможностям целевого маркетинга, а также интеграции систем рекомендаций, которые предоставляют услугу персонализации независимо от того, где вы взаимодействуете с брендом.

Идея нового подхода к трансформации розничного бизнеса заключается не в том, чтобы охватить всех клиентов одинаковыми сообщениями и сосредоточиться не только на продвижении вашего бренда, но и на индивидуализации вашей маркетинговой деятельности. Это стало возможным благодаря внедрению нового типа клиентской платформы обработки данных CRM (CDP), которая вместе с системами персонализации позволяет таргетировать рекламу и привлекать клиентов по различным каналам связи, таким как социальные сети.

Другая сторона новой концепции розничной торговли заключается в преобразовании физических магазинов за счет использования таких услуг, как Click & Collect, доставка и использование мобильных телефонов в магазинах. Внедрение интеллектуальных PoS-систем позволяет не только регистрировать транзакции, но и считывать данные клиентов, например, с центральной платформы, чтобы продавец мог понять, с каким конкретным человеком он имеет дело и что может его заинтересовать. Кроме того, PoS-терминалы могут использоваться для привлечения неактивных клиентов, например, с помощью купонов или ваучеров, которые автоматически генерируются на платформе обработки данных клиентов.

Использование машинного обучения и искусственного интеллекта, таких как компьютерное зрение, помогает анализировать поведение покупателей в магазине, визуализируя классические тепловые карты и, таким образом, контролируя посещаемость. Компания Alibaba имеет примеры, когда даже небольшие изменения в инфраструктуре физических магазинов оказали сильное влияние на движение по пересеченной местности: диван был убран — общий трафик значительно увеличился.

Благодаря искусственному интеллекту районы, которые ранее не пользовались популярностью у покупателей, могут быть лучше посещены с помощью искусственного интеллекта. Кроме того, компания Alibaba использует технологии машинного обучения для оптимизации ассортимента и цепочки поставок, прогнозируя, какой конкретный продукт поступает от какого поставщика и в какой момент должен быть доставлен в конкретный магазин или склад.

Что касается обслуживания клиентов, компания Alibaba взаимодействует с клиентами через автоматические каналы связи — чат-ботов или интеллектуальных помощников с интеграцией в социальные сети — где можно анализировать общие отзывы посетителей в зависимости от того, что они потребляют. Кроме того, все это может быть интегрировано в общую надежную систему.

Компания Alibaba разработала собственную частную платформу для управления данными клиентов. Система идентифицирует пользователя по любому каналу связи и собирает данные о нем в одном профиле. Это позволяет вам создать подробный профиль клиента, чтобы улучшить

взаимодействие с клиентом, настроить таргетинг на новости и предложения о продаже.

Цифровые каналы, используемые сегодня для общения с покупателями, активно меняются. Существуют традиционные мобильные приложения для электронной коммерции, и есть также примеры того, как социальные сети интегрируются с платформами электронной коммерции в форме прямых трансляций, когда продавец или даже звезда продвигает определенный продукт. Таким образом, CDP позволяет собирать, анализировать и получать доступ к данным клиентов по всем каналам связи на единой платформе.

Возможности CDP позволяют получать даже такие данные, как Device ID, код телефона, IMEI клиента при демонстрации контекстной рекламы через ссылку. Таким же образом анализируется реакция покупателя: когда он кликнул на несколько ссылок, система начинает понимать его профиль. Если же эти действия привели к покупке, то, скорее всего, система уже знает личные данные покупателя. Естественно, зная такие вещи либо информацию соцсети, с покупателем можно взаимодействовать для поддержания лояльности либо побуждения к повторной покупке.

Использование ID и тегов для клиентов в CDP важно для их сегментирования. Такой динамический подход для анализа целевых групп позволяет управлять группами таргетированно, направляя им разные предложения и сообщения в зависимости от того, с какой группой ведется работа.

Действия клиента запускают ответную реакцию платформы. Например, если у покупателя есть мобильное приложение Alibaba, то система генерирует приветственное сообщение на e-mail или в смс. Если же потребитель

совершает первую покупку, то система автоматически генерирует для него персонализированное предложение.

Как видим, ядром стратегии «Новый ритейл» компании Alibaba является многоканальное взаимодействие с клиентом. Благодаря современным технологиям и инструментам, о которых шла речь в статье, компании удастся адаптировать собственные средства продвижения товаров и услуг под образ жизни покупателей и предугадывать их возрастающие потребности. Результатом такой стратегии стало доверие и лояльность клиентов, что в свою очередь привело к достижению заметных результатов для Alibaba Group.

ГЛОБАЛЬНАЯ ЭКСПАНСИЯ: СТРАТЕГИИ МЕЖДУНАРОДНОГО РОСТА КОМПАНИИ ALIBABA И ИХ ПРИМЕНИМОСТЬ В ДРУГИХ СЕКТОРАХ

Аннотация. В статье выявлены роль глобальной экспансии и стратегии международного роста компании ALIBABA и их применимость в других секторах.

Ключевые слова: коммерция, бренд, рынок, потенциал.

GLOBAL EXPANSION: ALIBABA'S INTERNATIONAL GROWTH STRATEGIES AND THEIR APPLICABILITY IN OTHER SECTORS

Abstract. The article identifies the role of global expansion and international growth strategies of ALIBABA and their applicability in other sectors.

Keywords: commerce, brand, market, potential.

Глобальная экспансия и стратегии международного роста имеют большое значение в современном мире бизнеса. Стремительное развитие технологий, увеличение мобильности капитала и налаженное, более простое общение между странами делают глобальный рынок все более доступным и привлекательным для организаций, которые хотят расширить свое присутствие за пределами родной страны. В таком постоянно меняющемся мире разработка эффективных стратегий международного роста становится важным компонентом успеха для каждого бизнеса. Такие стратегии должны учитывать географические, культурные, экономические и политические особенности различных рынков, а кроме того, способы привлечения и удержания клиентов.

Когда речь идет о глобальной экспансии, компании используют различные стратегии выхода на международный рынок. Некоторые из них предпочитают стратегию органического роста, планомерно расширяя свою географию, подстраиваясь под условия местных рынков. Другие же выбирают более стремительное масштабирование через покупку

существующих бизнесов или заключение стратегических партнерств с местными компаниями. Необходимо также учитывать разные каналы продаж, предпочтения потребителей и конкурентную среду каждой страны.

Компания Alibaba, являясь одной из ведущих игроков в мировой электронной коммерции, активно использует стратегии международного роста для расширения своего влияния за пределы Китая. Ее опыт и подходы могут служить примером и вдохновением для других компаний, стремящихся преуспеть на глобальном рынке.

Alibaba Group - крупнейшая в Китае платформа для онлайн- и мобильной коммерции и крупнейшая в мире платформа для получения дохода. Их выручка в 2018 году составила 248 миллиардов долларов, что больше, чем у Ebay и Amazon вместе взятых. Выручка компании Alibaba в 2018 году составила 56,2 миллиарда долларов, увеличившись на 48% по сравнению с аналогичным периодом прошлого года, что является огромной суммой для компании такого размера.

Компания Alibaba не продает товары напрямую, а предлагает только торговые платформы, с помощью которых продавцы и покупатели совершают транзакции. Компания зарабатывает комиссионные за транзакции, рекламу и другие услуги. Alibaba является мировым лидером по объему продаж. И чем выше доход, тем выше комиссия для владельца платформы.

На крупнейших платформах компании – Taobao.com, Tmall.com и Juhuasuan.com - составляет около 82% продаж.

Как и в случае с крупными компаниями, каждое подразделение компании Alibaba имеет свой собственный совет директоров, технические команды и разрабатывает свои собственные платформы. Все подразделения объединены общей целью - развитием китайского Интернета.

Что выделяется в компании Alibaba, так это не полный отказ от взаимозависимости между бизнес-единицами, а типичный для конгломератов подход к разработке стратегии. Группа не диктует решения сверху вниз, а разрабатывает стратегию снизу-вверх, то есть внутри бизнес-подразделений и отделов. "Когда между отделами возникают конфликты, корпоративная культура склонна отдавать предпочтение одному или другому отделу, а не группе в целом", - говорится в исследовании. "Ма категорически заявляет руководителям отделов, что они вольны делать то, что лучше всего подходит для их бизнеса".

Основным источником дохода компании Alibaba является электронная коммерция. В 2018 финансовом году объем продаж электронной коммерции составил 133,9 миллиарда иен, что составляет 85% от общего объема продаж. Сильный и известный бренд - еще одно преимущество Alibaba Group. Компания вложила значительные средства в создание бренда. Компания Alibaba может привлечь внимание не только к социальным сетям, но и к средствам массовой информации. Новости о

быстром росте, иностранных инвестициях и приобретениях вызывают интерес к компании и ее бренду со стороны внешнего мира. В 2018 году компания Alibaba инвестировала 8,8 млрд юаней в рекламу.

В последние годы узнаваемость бренда Alibaba возросла в основном за счет улучшения качества продукции и уровня обслуживания. Все больше иностранцев хотят покупать китайские товары через платформу электронной коммерции. При принятии решения о выходе на внешний рынок не менее важно определить географический потенциал страны. Давайте рассмотрим конкретные стратегии компании Alibaba на внешних рынках (табл. 2).

Стратегия компании	Плюсы	Минусы
Партнерство с местными продавцами и агентами	Партнер управляет операционными вопросами в местном масштабе, начиная от маркетинга, заканчивая логистикой;	Ограниченный контроль над продвижением бренда и ценообразованием на рынке
	Относительно низкий барьер для входа на рынок	Большое количество времени, потраченного на поиск и проверку продавца
Создание команды в пределах Китая	Полный контроль над операционной деятельностью, продвижением бренда и интеллектуальной собственностью	Крупные инвестиции и низкая начальная прибыль
	Близость к потребителю и политическим трендам	Обширное исследование рынка, политики и нормативных документов
	Устойчивая инфраструктура для будущей экспансии	
Запуск через стороннюю торговую площадку и/или фирменный сайт	Простота в тестировании продаж и покупательной способности	Высокая конкуренция на торговой площадке и длительный срок для получения платежей
	Торговые площадки предлагают высокий потенциал движения товаров и логистику на аутсорсинге	Крупные инвестиции в продвижение товаров

Рисунок 1 – Стратегии ALIBABA

После принятия решения выхода на зарубежный рынок, не менее важным является определение географических потенциалов страны.

Стратегии обычно объединяются вокруг трех подходов. Во-первых, партнерство с местными поставщиками. Во-вторых, инвестирование в команду в пределах Китая. В зависимости от размера это может включать локализацию, маркетинг, логистику, поддержку клиентов, продажи и инжиниринг. В-третьих, запуск через стороннюю торговую площадку и\или фирменный сайт - например, Tmall и JD - и / или брендированный сайт электронной коммерции. Фирменные сайты стоят дороже, но они предоставляют больше данных и улучшают отношения с клиентами.

Например, компания Alibaba завербовала двух бывших руководителей Goldman в качестве президента компании Alibaba и вице-президента Ant Financial, ответственного за глобальный бизнес, а также сингапурскую компанию V-Key, занимающуюся технологиями мобильной безопасности и шифрования, и другие компании.

В сфере электронной коммерции AliExpress предлагает МСП ведение бизнеса с оплатой и логистикой. После переживания спада 2015 года, квартальные результаты за июнь 2016 года показали, что выручка AliExpress увеличилась на 123% по сравнению с аналогичным периодом прошлого года.

Таким образом, можем сделать вывод, что Alibaba создает продукты на быстрорастущих рынках и пытается занять там лидирующее положение. Выбор правильной стратегии поможет ей продолжать стремительный рост, что должно повлечь за собой увеличение цен на акции, увеличение прибыли и торгового оборота в будущем.

THE ROLE OF INNOVATION IN THE DEVELOPMENT STRATEGIES OF INTERNATIONAL COMPANIES

Abstract. The article identifies the role of innovation in the development strategies of international companies.

Keywords: market, system, capital, income.

В современном мире многие компании сталкиваются с необходимостью постоянной гибкости относительно меняющихся условий рынка. Важную роль в этом процессе играют трансформационные подходы к организационному развитию, так как они дают возможность организация адаптироваться к новым вызовам, повысить свою эффективность и оставаться на плаву. Инновации, в свою очередь, выступают двигателем этой трансформации, так как они позволяют внедрять новые идеи, технологии и подходы, улучшающие процессы, продукты и услуги компании. Роль инноваций в стратегиях развития в обеспечении постоянного развития и роста компании в условиях быстро меняющегося рынка, создавая новые возможности для роста и подтверждения клиентских ожиданий.

Компания ALIBABA, основанная в 1999 году, на сегодняшний день является одним лидеров в сфере электронной коммерции в мире. Компания активно применяет последние достижения в области машинного обучения и искусственного интеллекта для оптимизации своей деятельности, что позволяет ей эффективно анализировать поведение покупателей и оптимизировать ассортимент и логистику.

Основная цель развития рынка - создать большую серверную базу с современными компьютерами, способными обрабатывать информацию без задержек и ошибок, чтобы пользователи могли быть уверены в наличии высококачественных продуктов и услуг. Критическое развитие рыночной системы имеет важное значение для оценки рисков и стратегий в макроэкономической среде и внутреннего качества предприятий электронной коммерции. Критерием SWOT-анализа является наиболее эффективная оценка перспектив рынка электронной коммерции для компании Alibaba: сила компании на рынке электронной коммерции заключается в том, что она максимально мобильна в доставке и приобретении товаров, необходимых конечному потребителю.

Она является важнейшей системой, которая создаёт дополнительный капитал и возможности для развития рынка за счет перепродажи продукции через дополнительные кластеры по всей компании. Это комбинация электронной коммерции, которая позволяет любому получить доступ к конечным продуктам и продукции крупных заводов в Китае и Юго-Восточной Азии. Слабость компании на рынке электронной коммерции заключается в том, что потребительский спрос неравномерен, а протяженность логистического канала является одной из самых дорогостоящих проблем при доставке нужных товаров покупателям.

Вот почему компания хочет работать с системой "вовремя", которая помогает управлять рыночными условиями во время исполнения заказа, а не при его реализации на рынке. Компания работает с системой управления изменениями для хранения и распределения товаров, чтобы обеспечить максимальную прибыль при продаже и распределении товаров среди клиентов. Именно этот факт определяет рыночный потенциал отрасли с точки зрения реальности функционирования рыночной торговли. Потенциал рынка электронной коммерции заключается в разработке системы удаленной связи, продаже дополнительного информационного контента и создании коллективного управления виртуальной реальностью, что дает компании прекрасную возможность создать глобальную систему развития. Еще одна возможность на рынке электронной коммерции - создать отделы обслуживания клиентов, основанные на автоматизированных потребностях клиентов.

Любая система, состоящая из логических кодов и специальных элементов управления машинным обучением, запоминает, что потребитель хочет купить, с учетом видимости повседневных потребностей, а также с помощью баннеров и других рекламных элементов. В этом формате система автоматически обрабатывает потребности каждого клиента, создавая ценность для компании и принося потенциальный доход. Основным риском компании на этом рынке является удержание клиентов и вероятность того, что цепочка поставок реальных продуктов будет нарушена из-за эпидемий. Если заказ задерживается, потребности человека заменяются простым

решением, которое оперативно обрабатывает доставку или замену товара и возвращает деньги. Вот почему электронная коммерция представляет большой риск для реальных товаров, поскольку предприятиям и потребителям требуется время, чтобы доставить достаточное количество товаров во время экологического кризиса. Кризис управления рынком и систематическая нестабильность являются основными факторами окружающей среды, которые могут повлиять на эффективность производства.

Другая проблема заключается в том, что количество влиятельных сотрудников сокращается во время эпидемии, и существует риск потери информации и технологий с программными и аппаратными настройками, которые важны для компании, в процессе управления рынком. Следовательно, необходимо объединить функции и возможности, чтобы ускорить внедрение Интернета вещей для конечных пользователей и снизить затраты на доставку товаров и заказов. Эти параметры должны позволить максимально точно настроить серверную службу с точки зрения доступа к продукту и рыночного тестирования, чтобы улучшить рыночные настройки и использовать современные и проверенные технологии.

Формирование системы торговых рекомендаций и рыночный подход позволяют конечным пользователям разрабатывать стратегии развития компании, позволяя им совместно предлагать реальные продукты. Сочетание сильных сторон и угроз, снижающих риск нехватки персонала, требует наличия кадровых ресурсов, необходимых для параллельной организации обучения персонала.

В сочетании с возможностями централизованного удаленного управления развертыванием. Основная группа компаний в категории продаж фокусируется на косметике, текстильных и кожгалантереях, одежде и обуви для потребителей и на уровне потребительских цен. Клиенты предпочитают все услуги, предлагаемые компанией, потому что они могут вернуть продукт сразу обратно продавцу после получения программы лояльности и проверяют, подходит ли продукт.

Кроме того, в зависимости от уровня сегментации потребители с меньшей вероятностью получают возвращают такие товары, как косметика, одежда и другие товары, бытовая электроника, одежда и обувь, дополнительные детали и другое съемное оборудование. Тем не менее, трудно найти эти дополнительные детали на рынке запчастей без большей маржи и качества, чем у производителя, поэтому очень трудно конкурировать с сервисными агентствами и малыми предприятиями на рынке, чтобы даже искусственно установить самые дешевые детали. Поэтому положение отрасли на этом рынке должно оцениваться правильно и последовательно. Тенденции развития отрасли позволяют организовывать решения основных проблем.

Это означает распространение продукта непосредственно к конечной точке конечному потребителю без лишних затрат времени. Это упрощает все вопросы удовлетворенности клиентов и удаляет точки продаж на рынке из цепочки продаж, ускоряя получение доходов и привлекая рыночный спрос в качестве дополнительного отдела промышленного развития. Если компания специализируется на продаже косметики и одежды, а также одежды и бытовой электроники, где уровень внешнего риска проекта очень низок, то спрос на такие товары будет высоким, следовательно — маржинальным.

Внутренний риск компании минимален — это нарушение качества при доставке товаров конечным пользователям в течение определенного периода времени. Другими словами, цепочка рисков находится внутри организации, и основной риск компании заключается в том, что производство высококачественной продукции основано на моделировании рисков и распределении рынков, материалов и товаров первой необходимости.

СТРАТЕГИЯ ИНТЕГРАЦИОННОГО РОСТА КОМПАНИИ

Аннотация. В статье рассматривается сущность, преимущества и недостатки стратегии интеграционного роста организации.

Ключевые слова: стратегия, организация, интегрированный рост, стратегии интеграционного роста.

Zhuo Yizi
undergraduate student
Moscow Pedagogical State University

THE ESSENCE, ADVANTAGES AND DISADVANTAGES OF THE ORGANIZATION'S INTEGRATION GROWTH STRATEGY

Abstract. The article examines the essence, advantages and disadvantages of an organization's integration growth strategy.

Keywords: strategy, organization, integrated growth, integration growth strategies.

Стратегия интеграционного роста относится к продуманному подходу, принятому организациями, направленному, прежде всего, на расширение их операций и присутствия на рынке посредством слияний, поглощений, альянсов или партнерских отношений [1]. Эта стратегия влечет за собой интеграцию различных аспектов деловой активности, таких как ресурсы, технологии, рынки и возможности, с целью достижения синергии, экономии за счет масштаба и повышения конкурентоспособности. Интегративный рост включает в себя стратегические действия, которые способствуют консолидации дополнительных активов, опыта и рыночных позиций для создания ценности, и поддержания долгосрочных траекторий роста. Эту стратегию часто проводят организации, стремящиеся извлечь выгоду из возможностей расширения, диверсификации или проникновения на рынок, одновременно снижая риски, связанные с органическим ростом или конкурентным давлением.

Стратегия интегрированного роста становится рациональным выбором для фирмы, когда существуют значительные возможности для повышения прибыльности и отдачи от инвестиций посредством контроля над различными стратегически важными звеньями в цепи поставок, такими

как производство, распределение и предложение [2]. Более того, компании принимают эту стратегию, когда они оказываются в достаточно надежной бизнес-структуре, но не имеют ресурсов или возможностей для реализации стратегии концентрированного роста. В таких случаях интеграция дополняет основные цели фирмы, не препятствуя им. Примечательно, что стратегия влечет за собой не только структурные слияния или поглощения, но и внутренние преобразования внутри компании. По сути, интеграционный рост служит стратегическим путем для компаний, чтобы укрепить свои позиции на рынке, извлечь выгоду из синергии и укрепить свое конкурентное преимущество. Консолидируя контроль над критическими аспектами цепочки создания стоимости, компании могут оптимизировать операционную эффективность, использовать эффект масштаба и повысить общую производительность.

Различают два вида вертикальной интеграции и горизонтальной. Вертикальную интеграцию можно разделить на два типа в зависимости от ее направления: вертикальная регрессивная интеграция и вертикальная прогрессивная интеграция. Вертикальная регрессивная интеграция предполагает получение контроля над поставщиками. Эта стратегия используется для защиты важнейших источников поставок или для доступа к новым технологиям, имеющим решающее значение для основных операций [3]. Предприятия, реализующие регрессивную интеграцию, ассимилируют функции, ранее выполнявшиеся поставщиками, получая таким образом контроль над источниками сырья и производством комплектующих. С другой стороны, вертикальная прогрессивная интеграция фокусируется на управлении системами распределения. Эта стратегия предполагает приобретение или усиление контроля над структурами, расположенными между предприятием и конечным потребителем, в частности каналами сбыта и сбыта. Компании прибегают к постепенной интеграции, когда им трудно найти посредников, предлагающих удовлетворительное обслуживание клиентов, или, когда они стремятся лучше понять поведение потребителей [4].

ОРГАНИЗАЦИОННО-ЭКОНОМИЧЕСКАЯ ХАРАКТЕРИСТИКА КОМПАНИИ «HUAWEI»

Аннотация. Данная работа рассматривает стратегии интеграционного роста на примере компании Huawei в сфере телекоммуникационных технологий. Исследуются методы, использованные Huawei для расширения своего бизнеса, такие как слияния, поглощения, вертикальная интеграция и стратегические партнерства. Анализируются преимущества, риски и вызовы, связанные с реализацией этих стратегий, а также их влияние на конкурентоспособность и рыночное положение компании. Полученные результаты подчеркивают важность разумного управления рисками и принятия стратегических решений для успешной реализации стратегий интеграционного роста в современной бизнес-среде.

Ключевые слова: Huawei, стратегия интеграционного роста, телекоммуникационные технологии, слияния, поглощения, вертикальная интеграция, стратегические партнерства, конкурентоспособность, риски, управление рисками.

THE ESSENCE, ADVANTAGES AND DISADVANTAGES OF THE ORGANIZATION'S INTEGRATION GROWTH STRATEGY

Abstract. This study examines the strategies of integration growth using Huawei as a case study in the telecommunications technology sector. The methods employed by Huawei to expand its business, such as mergers, acquisitions, vertical integration, and strategic partnerships, are explored. The advantages, risks, and challenges associated with implementing these strategies, as well as their impact on competitiveness and market positioning, are analyzed. The findings underscore the importance of prudent risk management and strategic decision-making for the successful implementation of integration growth strategies in today's business environment.

Keywords: Huawei, integration growth strategy, telecommunications technology, mergers, acquisitions, vertical integration, strategic partnerships, competitiveness, risks, risk management.

Введение

Стратегия интеграционного роста представляет собой существенный инструмент в корпоративном мире, позволяющий компаниям расширять свои возможности и увеличивать конкурентоспособность путем объединения ресурсов и бизнес-возможностей. В этом контексте рассмотрим опыт компании Huawei, глобального лидера в сфере телекоммуникационных технологий, которая успешно применила интеграционные стратегии для укрепления своего положения на рынке.

Целью данного исследования является анализ сущности, преимуществ и недостатков стратегии интеграционного роста организации, а также изучение опыта компании Huawei в применении стратегии интеграционного роста для достижения конкурентных преимуществ.

Задачи исследования:

1. Изучить стратегии интеграционного роста, применяемые Huawei для расширения своего бизнеса и увеличения рыночной доли.

2. Проанализировать преимущества, которые компания получила благодаря реализации интеграционных стратегий, включая экономию за счет масштаба, доступ к новым рынкам и увеличение инновационного потенциала.

3. Выявить недостатки и риски, с которыми столкнулась компания Huawei в процессе реализации стратегий интеграционного роста, включая высокие инвестиционные требования и сложности управления сложными организационными структурами.

4. Определить ключевые факторы успеха и вызовы, которые могут быть полезными для других компаний, стремящихся использовать интеграционные стратегии для своего развития.

Объектом исследования является компания Huawei и ее опыт в применении стратегии интеграционного роста для развития своего бизнеса в сфере телекоммуникационных технологий.

Предметом исследования являются стратегии интеграционного роста, использованные компанией Huawei, а также преимущества, риски и вызовы, связанные с их реализацией.

Методология исследования предполагает смешанный подход, сочетающий количественный и качественный анализ.

Основная часть. Стратегия интеграционного роста относится к продуманному подходу, принятому организациями, направленному, прежде всего, на расширение их операций и присутствия на рынке посредством слияний, поглощений, альянсов или партнерских отношений²⁴⁷. Эта стратегия влечет за собой интеграцию различных аспектов деловой активности, таких как ресурсы, технологии, рынки и возможности, с целью достижения синергии, экономии за счет масштаба и повышения

²⁴⁷ Бригхем Ю., Гапенски Л. Финансовый менеджмент: полный курс: в 2-х т. пер. с англ. - СПб., Экономическая школа, 2005. Т. 2. 668 с.

конкурентоспособности. Интегративный рост включает в себя стратегические действия, которые способствуют консолидации дополнительных активов, опыта и рыночных позиций для создания ценности, и поддержания долгосрочных траекторий роста. Эту стратегию часто проводят организации, стремящиеся извлечь выгоду из возможностей расширения, диверсификации или проникновения на рынок, одновременно снижая риски, связанные с органическим ростом или конкурентным давлением.

Различают два вида вертикальной интеграции и горизонтальной (см. рис. 1). Вертикальную интеграцию можно разделить на два типа в зависимости от ее направления: вертикальная регрессивная интеграция и вертикальная прогрессивная интеграция. Вертикальная регрессивная интеграция предполагает получение контроля над поставщиками. Эта стратегия используется для защиты важнейших источников поставок или для доступа к новым технологиям, имеющим решающее значение для основных операций²⁴⁸. Предприятия, реализующие регрессивную интеграцию, ассимилируют функции, ранее выполнявшиеся поставщиками, получая таким образом контроль над источниками сырья и производством комплектующих. С другой стороны, вертикальная прогрессивная интеграция фокусируется на управлении системами распределения. Эта стратегия предполагает приобретение или усиление контроля над структурами, расположенными между предприятием и конечным потребителем, в частности каналами сбыта и сбыта. Компании прибегают к постепенной интеграции, когда им трудно найти посредников, предлагающих удовлетворительное обслуживание клиентов, или когда они стремятся лучше понять поведение потребителей²⁴⁹.

²⁴⁹ Аакер, Дэвид. Стратегическое рыночное управление / Дэвид Аакер. – 7-е изд. – Санкт-Петербург: Питер, 2011. – 495 с

Рисунок 1. Виды интеграции

Обоснование интеграции заключается в потенциале повышения прибыльности путем контроля стратегически важных элементов в цепочке поставок, включая производство, закупки и продажи. Можно проводить различные виды вертикальной интеграции, включая полную интеграцию производственной деятельности, частичную интеграцию, когда некоторые компоненты поставляются извне, и квазиинтеграцию через стратегические альянсы без передачи прав собственности.

Горизонтальная интеграция предполагает консолидацию компаний, работающих в одном отраслевом сегменте²⁵⁰. Его основная цель – укрепить позиции фирмы в отрасли путем приобретения конкретных конкурентов или получения контроля над ними. Горизонтальные слияния обеспечивают экономию за счет масштаба, расширяют ассортимент продуктов и услуг, тем самым обеспечивая дополнительные конкурентные преимущества. Зачастую расширение географического рынка стимулирует горизонтальную диверсификацию, побуждая к объединению компаний, производящих аналогичные товары, но работающих на разных региональных рынках. Различные методы облегчают интеграционный рост. Системы соглашений, учитывающие интересы каждого участника наряду с общими интересами, являются одним из таких методов. Участники компрометируют часть своего суверенитета, предвидя выгоды от консолидации маркетинговых действий. На более высоком уровне интеграции возникают холдинговые компании, где одна организация, владеющая контрольным пакетом акций, управляет и направляет других на основе общих интересов. Более жесткая форма

²⁵⁰ Гольдштейн Г.Я. Стратегический менеджмент: конспект лекций. – Таганрог: Изд-во ТРТУ, 2013. – 93 с.

интеграции предполагает приобретение акций у других участников, что приводит к слияниям или поглощениям, позволяющим диктовать условия в пользу корыстных интересов. Самая мягкая форма интеграции влечет за собой личные контакты и «джентльменские соглашения». Иногда фирмы создают филиалы или дочерние компании, специализирующиеся на закупках или торговой посреднической деятельности²⁵¹. Таким образом, интеграционные стратегии роста различаются по своему подходу и реализации (см. рис. 2), выступая в качестве критически важных инструментов для компаний, стремящихся повысить конкурентоспособность, обеспечить стратегические ресурсы и расширить охват рынка.

Рисунок 2. Стратегии интеграционного роста²⁵²

Реализация стратегии интеграционного роста предоставляет организациям возможность выхода на новые рынки и выхода в неосвоенные сегменты клиентов²⁵³. Расширяя свою деятельность за счет слияний, поглощений или стратегических альянсов, компании могут получить выход в географические регионы или демографические рынки, где они ранее имели ограниченное присутствие.

Кроме того, экспансия Huawei на развивающиеся рынки, такие как Африка и Юго-Восточная Азия, предоставила компании доступ к миллионам новых клиентов, ранее недостаточно обслуживаемых устоявшимися игроками²⁵⁴. Используя свой опыт в области телекоммуникационной инфраструктуры, Huawei стала ключевым игроком

²⁵⁴ Юго-Восточная Азия – будущий центр продуктового ритейла. Официальный сайт Retail.ru. (Электронный ресурс). – URL: <https://www.retail.ru/articles/yugo-vostochnaya-aziya-budushchiy-tsentr-produktovogo-riteyla/> (дата обращения: 18.03.2024)

в предоставлении решений для подключения в регионах с растущим спросом на мобильные и интернет-услуги. Кроме того, акцент Huawei на исследованиях и разработках в сочетании с обширной глобальной сетью исследовательских центров и партнерств позволил компании внедрить передовые технологии и решения, адаптированные к конкретным требованиям различных рынков и клиентских сегментов. Этот стратегический подход не только способствовал росту Huawei, но и укрепил ее позиции в качестве ведущего поставщика телекоммуникационного оборудования и услуг во всем мире.

Рассматривая опыт Huawei, стратегии роста интеграции столкнулись с несколькими недостатками. Компания столкнулась с существенными инвестиционными требованиями при реализации интеграционных инициатив, включая слияния, поглощения и вертикальную интеграцию. Эти высокие инвестиционные затраты истощили финансовые ресурсы Huawei и повлияли на краткосрочную прибыльность. Кроме того, Huawei борется с рисками, связанными с управлением сложными организационными структурами в результате действий по интеграции. Культурные конфликты, нормативные препятствия и технологические проблемы создали значительные препятствия для беспрепятственной интеграции и реализации синергии. Кроме того, Huawei столкнулась с потенциальными проблемами при слияниях и поглощениях, включая вопросы, связанные с культурной интеграцией, оперативным согласованием и соблюдением нормативных требований. Помимо прочего существует риск потери внимания к основным бизнес-процессам из-за усилий по интеграции, что может привести к пренебрежению инновациями продукта, качеством обслуживания клиентов и операционной эффективностью.

Заключение

В заключении, анализ интеграционного роста на примере опыта компании Huawei подчеркивает, как преимущества, так и вызовы, связанные с этой стратегией. Подход, направленный на расширение бизнеса через объединение ресурсов и возможностей, может принести значительные экономические и инновационные выгоды. Однако, необходимость значительных инвестиций, управление сложными организационными структурами и риск потери фокуса на основных бизнес-процессах выделяются среди основных проблем. Важно понимать, что эффективное внедрение интеграционных стратегий требует тщательного планирования, управления рисками и стратегического мышления. Рациональное принятие решений, основанное на анализе преимуществ и недостатков, а также максимальное внимание к деталям в процессе интеграции являются ключевыми факторами успеха. Несмотря на сложности, компании, смело принимающие вызов интеграционного роста, могут расширить свою деятельность, укрепить свои позиции на рынке и стать лидерами в своей отрасли.

АНАЛИЗ ПОКАЗАТЕЛЕЙ ФИНАНСОВО-ЭКОНОМИЧЕСКОЙ ДЕЯТЕЛЬНОСТИ КОМПАНИИ «HUAWEI»

Аннотация. Данная статья посвящена анализу финансово-экономической деятельности крупной транснациональной корпорации "Huawei" за период с 2020 по 2023 годы. В работе рассматриваются основные финансовые показатели компании, такие как выручка, операционная прибыль, инвестиции в исследования и разработку, а также общие операционные расходы. Основное внимание уделяется тенденциям и изменениям в финансовой деятельности "Huawei" за рассматриваемый период, а также оценке ее финансовой устойчивости и конкурентоспособности.

Ключевые слова: Huawei, финансовый анализ, экономическая деятельность, выручка, операционная прибыль, инвестиции в исследования и разработку, операционные расходы, финансовая устойчивость, конкурентоспособность.

ANALYSIS OF FINANCIAL AND ECONOMIC PERFORMANCE INDICATORS OF THE HUAWEI COMPANY

Abstract. This paper is dedicated to the analysis of the financial and economic performance of the large transnational corporation "Huawei" for the period from 2020 to 2023. The study examines the key financial indicators of the company, such as revenue, operating profit, research and development investments, as well as total operating expenses. The main focus is on trends and changes in Huawei's financial activities during the specified period, as well as evaluating its financial stability and competitiveness.

Keywords: Huawei, financial analysis, economic activity, revenue, operating profit, research and development investments, operating expenses, financial stability, competitiveness.

Введение

Анализ финансово-экономической деятельности компании "Huawei" представляет собой важный инструмент для понимания ее текущего финансового состояния, стратегических направлений и перспектив развития. В контексте быстро меняющегося рынка информационных и коммуникационных технологий (ИКТ) роль такого анализа становится особенно значимой, учитывая влияние внешних факторов, таких как санкции и технологические тенденции. Компания "Huawei" является одним из ведущих мировых игроков в области ИКТ, и ее финансовая деятельность привлекает внимание как инвесторов, так и аналитиков. В данной статье мы проведем анализ ключевых финансовых показателей "Huawei" за период с 2020 по 2023 годы, включая выручку, операционную прибыль, инвестиции в исследования и разработку, а также общие операционные расходы.

Целью данного анализа является выявление основных тенденций и закономерностей в финансовой деятельности компании "Huawei", а также оценка ее финансовой устойчивости и способности к долгосрочному росту.

Задачи статьи:

1. Провести анализ годовой выручки компании "Huawei" за последние несколько лет с целью выявления тенденций роста или снижения и определения факторов, оказывающих на нее влияние.

2. Анализировать изменения в операционной прибыли "Huawei" за рассматриваемый период, выявляя факторы, влияющие на ее динамику, и оценивая эффективность управления операционными расходами.

3. Изучить объемы инвестиций компании "Huawei" в исследования и разработку за последние годы с целью оценки ее инновационного потенциала и способности к разработке новых продуктов и технологий.

4. Изучить структуру и динамику общих операционных расходов "Huawei", включая расходы на исследования и разработку, административные и коммерческие расходы, с целью определения эффективности управления затратами и выявления ключевых областей расходов.

5. Провести анализ структуры капитала и ликвидности компании "Huawei" для оценки ее финансовой устойчивости и способности к погашению обязательств в долгосрочной перспективе.

Объект исследования: финансово-экономическая деятельность компании "Huawei".

Предмет исследования: финансовые показатели и операционная деятельность компании "Huawei" за 2020-2023 гг.

Информационной базой работы, обеспечивающей репрезентативность исходных данных, достоверность, точность и достоверность выводов, рекомендаций и предложений, послужила годовая и финансовая отчетность компании «Huawei». Данные были взяты с

официального сайта «Yahoo Finance» за последние 3 года, а именно 2021-2023 гг.

Методология исследования предполагает смешанный подход, сочетающий количественный и качественный анализ.

Результаты исследования. Китайская транснациональная корпорация Huawei является мировым лидером в области решений в области информационных и коммуникационных технологий (ИКТ). Решения, продукты и услуги Huawei используются более чем в 170 странах и регионах мира, обеспечивая доступ к ИКТ более чем трети населения мира. Благодаря тому, что все 170 000 сотрудников посвятили себя формированию информационного общества будущего и созданию мира безграничных коммуникаций, влияние Huawei выходит за рамки границ. Более 70 000 сотрудников, занятых в исследованиях и разработках, что составляет примерно 40% глобальной рабочей силы компании, Huawei демонстрирует твердую приверженность технологическому прогрессу²⁵⁵. Создание 16 исследовательских центров в разных странах, таких как Германия, Швеция, США, Франция, Италия, Россия, Индия и Китай еще раз подчеркивают стремление Huawei продвигать инновации в глобальном масштабе.

Проанализируем финансовые показатели за последние четыре года, а именно 2020 – 2023 гг. (см. табл. 1). Продажи Huawei приблизились к 100 миллиардам долларов в год на фоне технологических прорывов Китая. Выручка Huawei Technologies Co. выросла на 9% в 2023 году, что стало кульминацией драматического года для китайской технологической компании. Несмотря на проблемы, связанные с санкциями США, Huawei стала серьезным соперником Apple. Кроме того, компания добилась долгожданного прорыва в технологии производства чипов, подчеркнув свою приверженность инновациям и технологическому прогрессу.

Таблица 1 – Финансовые показатели компании Huawei за 2020 – 2023 гг.²⁵⁶

Показатели/года	2023	2022	2021	2020
	в млрд. юаней или в%			
Выручка	700,15	642,34	636,8	891,4
Операционная прибыль	73,287	56,384	47,515	72,501
Рентабельность по операционной прибыли	10,2%	9,3%	9,1%	8,1%
Чистая прибыль	59,345	47,455	37,052	64,649

²⁵⁵ Huawei опубликовала бизнес-результаты за первое полугодие 2023. (Электронный ресурс). – URL: <https://www.huawei.com/uz/news/uz/2023/huawei-opublikovala-biznes-rezultati-za-polugodiye-2023> (дата обращения: 13.02.2024)

²⁵⁶ Составлено автором на основе статистической информации, предоставленной сайтом TADVISER. (Электронный ресурс). – URL: https://www.tadviser.ru/index.php/Статья:Финансовые_показатели_Huawei (дата обращения: 14.02.2024)

Поступление денежных средств от операционной деятельности	74,659	96,336	49,218	35,218
Наличные средства и краткосрочные инвестиции	265,857	199,943	145,653	357,366
Оборотный капитал	170,864	118,503	116,231	299,062
Общая сумма активов	665,792	505,225	443,634	876,854
Общая сумма заимствованных средств	69,941	39,925	44,799	141,811
Собственный капитал	233,065	175,616	140,133	330,408
Коэффициент обязательств	65%	65,2%	68,4	62,3

Выручка Huawei в 2023 году достигла 700,15 млрд юаней, продемонстрировав небольшой рост по сравнению с 2022 годом. Этот рост объясняется стабильными показателями в различных сегментах бизнеса. В 2022 году выручка Huawei составила 642,34 млрд юаней, что означает незначительный рост по сравнению с 2021 годом, когда компания заработала 636,81 млрд юаней. В 2022 году вклад операторского сектора в выручку Huawei составил 283,98 млрд юаней, на долю корпоративного сегмента пришлось 133,15 млрд юаней, а потребительские товары принесли 214,46 млрд юаней. Общий доход от других сегментов бизнеса составил 10,75 млрд юаней. В 2021 году выручка Huawei составила 636,8 млрд юаней, примерно 96 млрд долларов, что отражает значительное снижение на 28,5% по сравнению с 2020 годом. Это снижение в первую очередь связано с воздействием санкций США.

Теперь же, проанализируем расходы компании Huawei за 2022 – 2023 гг. (см. табл. 2)²⁵⁷.

Таблица 2 – Операционные расходы компании Huawei за 2022 – 2023 гг.

Показатели/года	2022	2023
	в млрд. юаней	
Расходы на исследования и разработку	79,69	101,509
Административные и коммерческие расходы	81,197	105,199

²⁵⁷ Составлено автором на основе статистической информации. (Электронный ресурс). – URL: <https://www.huawei.com/kz-ru/news/kz/2023/news-huawei-announced-yearly-report-for-2022> (дата обращения: 14.02.2024)

Прочие расходы/прибыль после налоговых вычетов	0,613	1,824
Всего операционных расходов	161,5	204,884

Инвестиции в исследования и разработки (НИОКР) являются важнейшим показателем инновационного потенциала компании и ее готовности к будущему. Они означают приверженность компании созданию новых технологий, продуктов и услуг, а также совершенствованию существующих, чтобы оставаться конкурентоспособными на рынке. Более высокие расходы на НИОКР часто коррелируют с увеличением объемов инноваций, технологическими достижениями и способностью удовлетворять меняющиеся потребности клиентов и тенденции рынка. Компании, которые выделяют значительные ресурсы на исследования и разработки, демонстрируют активный подход к обеспечению долгосрочного роста, развитию культуры инноваций и поддержанию конкурентоспособности в своих отраслях. В 2022 году операционные расходы Huawei на исследования и разработки составили 79,69 млрд юаней, а в 2023 году они увеличились до 101,509 млрд юаней. Это представляет собой значительный рост расходов на НИОКР примерно на 27,4% по сравнению с аналогичным периодом прошлого года. Увеличение расходов на НИОКР указывает на постоянную приверженность Huawei инновациям и технологическому прогрессу, поскольку компания выделяет больше ресурсов на разработку новых продуктов и улучшение существующих.

Заключение

Итак, компания Huawei в период с 2020 по 2023 год продемонстрировала значительные изменения в своих финансовых показателях, что свидетельствует о ее устойчивости и способности к адаптации в условиях динамичного рынка информационных и коммуникационных технологий. Несмотря на снижение выручки в 2021 году из-за воздействия санкций США и, возможно, пандемии, компания смогла вернуться к траектории роста в последующие годы, достигнув в 2023 году значительного увеличения доходов. Операционная прибыль Huawei также показала колебания, но в целом сохраняла тенденцию к росту, что указывает на эффективное управление затратами и стратегическую направленность компании.

Инвестиции в исследования и разработку, а также административные и коммерческие расходы Huawei значительно возросли за период с 2022 по 2023 годы, что отражает ее стремление к инновациям и развитию новых продуктов и услуг. При этом компания продемонстрировала способность генерировать прибыль и денежные потоки, что подчеркивает ее финансовую устойчивость.

СУЩНОСТЬ, ПРЕИМУЩЕСТВА И НЕДОСТАТКИ СТРАТЕГИИ ИНТЕГРАЦИОННОГО РОСТА ОРГАНИЗАЦИИ

Аннотация. В современной экономике стратегия интеграционного роста является ключевым фактором успеха для многих организаций. Эта статья направлена на изучение сущности интеграционного роста, его преимуществ и потенциальных недостатков. Основываясь на комплексном анализе и сопоставлении различных источников, статья предлагает целостный взгляд на данную стратегию. Итоговый результат работы позволяет оценить эффективность интеграционного роста в контексте современных бизнес-моделей.

Ключевые слова: интеграционный рост, стратегия организации, экономическое развитие, конкурентные преимущества, риск менеджмент.

THE ESSENCE, ADVANTAGES, AND DISADVANTAGES OF INTEGRATIVE GROWTH STRATEGY IN ORGANIZATIONS

Abstract. In today's economy, an integrative growth strategy is a key success factor for many organizations. This article aims to explore the essence of integrative growth, its advantages, and potential drawbacks. Based on a comprehensive analysis and comparison of various sources, the article offers a holistic view of this strategy. The final result of the study allows for an assessment of the effectiveness of integrative growth in the context of contemporary business models.

Keywords: integrative growth, organizational strategy, economic development, competitive advantages, risk management.

В условиях постоянно меняющегося глобального экономического ландшафта, стратегии интеграционного роста организаций приобретают особую актуальность. Этот вид роста представляет собой процесс, в ходе которого компания расширяется путем приобретения или объединения с другими компаниями. Он может принимать форму горизонтальной, вертикальной или смешанной интеграции. Горизонтальная интеграция означает приобретение компаний, работающих на одном уровне цепочки

создания стоимости, в то время как вертикальная интеграция подразумевает объединение компаний на разных уровнях этой цепочки. Смешанная интеграция сочетает элементы обоих подходов.

Виды интеграции и их особенности играют ключевую роль в стратегии интеграционного роста компаний. Различают три основных типа интеграции: горизонтальную, вертикальную и конгломератную, каждая из которых имеет свои уникальные характеристики и цели.

1. Горизонтальная Интеграция:

○ **Суть:** Горизонтальная интеграция происходит, когда компания приобретает или сливается с другой компанией, работающей на том же уровне производственно-сбытовой цепочки. Это обычно включает компании, которые производят аналогичную продукцию или предлагают схожие услуги.

○ **Особенности:** Основная цель такой интеграции - увеличение рыночной доли и снижение конкуренции. Это также позволяет достигнуть экономии на масштабе, оптимизировать затраты и расширить рыночное присутствие. Примером может служить слияние двух телекоммуникационных компаний.

2. Вертикальная Интеграция:

○ **Суть:** Вертикальная интеграция включает приобретение или слияние с компаниями, которые находятся на разных этапах производственного процесса. Это может быть, как восходящая интеграция (приобретение поставщиков), так и нисходящая интеграция (приобретение дистрибьюторов).

○ **Особенности:** Цель вертикальной интеграции - контроль над всей цепочкой создания стоимости, от сырья до конечного продукта. Это уменьшает зависимость от поставщиков и дистрибьюторов, повышает эффективность и может сокращать затраты. Примером может служить производитель электроники, приобретающий компанию по добыче редких металлов.

3. Конгломератная Интеграция:

○ **Суть:** Конгломератная интеграция происходит, когда компания расширяет свою деятельность в несвязанные отрасли. Это означает приобретение компаний, которые не имеют прямого отношения к основной линии бизнеса приобретающей компании.

○ **Особенности:** Главная цель такого типа интеграции - диверсификация бизнеса и снижение общего риска. Компания, вступающая в различные рынки, не так сильно зависит от колебаний в одной отрасли. Примером может служить большая корпорация, владеющая медийными компаниями, производственными предприятиями и розничными сетями.

Эти виды интеграции отличаются своим подходом к расширению и управлению бизнесом. Важно отметить, что выбор конкретного типа интеграции зависит от стратегических целей компании, ее текущего

положения на рынке, а также от внешней рыночной среды и отраслевых тенденций. Каждый из этих типов имеет свои преимущества и потенциальные риски, которые должны тщательно анализироваться перед принятием решения о интеграции.

Преимущества интеграционного роста организаций обширны и многофакторны, что делает эту стратегию привлекательной для многих компаний, стремящихся к расширению и укреплению своих позиций на рынке. Одним из основных преимуществ является расширение рыночной доли, что позволяет компании получить больший контроль над рынком и увеличить свои доходы. Это достигается за счет объединения ресурсов и клиентских баз с другими компаниями, что способствует укреплению позиций на существующих рынках и выходу на новые.

Ещё одно ключевое преимущество заключается в достижении экономии на масштабе. Когда компании объединяются, они могут оптимизировать свои операционные процессы, снижая затраты на производство, логистику, маркетинг и другие операционные расходы. Это повышает общую эффективность и рентабельность бизнеса.

Интеграционный рост также предоставляет доступ к новым технологиям и инновациям. В условиях постоянно меняющегося технологического ландшафта, способность быстро адаптироваться и внедрять новые технологии становится критически важной. Объединение с другими компаниями позволяет делиться знаниями, опытом и инновационными разработками, что способствует более эффективному развитию и внедрению новшеств.

Кроме того, интеграционный рост обеспечивает улучшенный доступ к ресурсам. Это может включать как физические ресурсы, такие как сырье и производственные мощности, так и человеческие ресурсы, включая специалистов и менеджмент. Расширение ресурсной базы позволяет компании повысить свою производительность и эффективность.

Наконец, одним из важных преимуществ является усиление позиций на международном уровне. Интеграционный рост позволяет компаниям выходить на новые географические рынки, что не только увеличивает объем продаж, но и способствует диверсификации рыночных рисков. Компания получает возможность работать в разных экономических условиях, что укрепляет её устойчивость к региональным экономическим колебаниям.

В целом, интеграционный рост представляет собой эффективную стратегию для достижения конкурентного преимущества, увеличения масштабов бизнеса и укрепления его позиций на глобальном рынке. Эта стратегия помогает компаниям достигать синергии в различных аспектах своей деятельности, от производства до маркетинга и инноваций.

Несмотря на значительные преимущества, интеграционный рост организаций также сопровождается рядом недостатков и рисков, которые могут оказать негативное влияние на успешность и устойчивость бизнеса.

Одним из основных недостатков является сложность интеграции различных корпоративных культур. Когда компании с разными ценностями, рабочими процедурами и управленческими стилями объединяются, могут возникнуть серьезные конфликты и проблемы в коммуникации. Это может привести к снижению морального духа сотрудников, увеличению текучести кадров и ухудшению общей рабочей атмосферы.

Другой значительный недостаток – потенциальные регуляторные ограничения и антимонопольное законодательство. Во многих странах существуют строгие законы, регулирующие слияния и поглощения, особенно когда они могут привести к созданию монополий или ограничению конкуренции. Процесс согласования сделок с регулирующими органами может быть долгим и трудоемким, что увеличивает издержки и задерживает реализацию стратегии интеграционного роста.

Финансовые риски также являются значительным недостатком. Слияния и поглощения часто требуют больших капиталовложений и могут привести к увеличению долговой нагрузки компании. Это повышает финансовые риски, особенно если ожидаемые синергетические эффекты не реализуются в полной мере или вовсе не достигаются. Кроме того, интеграционный рост может отвлекать внимание управления от основной деятельности компании, что потенциально может привести к упущению важных рыночных возможностей или снижению операционной эффективности.

Управление рисками и координация объединенных операций также представляют собой сложную задачу. Объединение компаний часто влечет за собой необходимость интеграции различных систем управления, информационных технологий и бизнес-процессов. Это требует значительных усилий и ресурсов для успешной реализации, а недостаточно эффективная интеграция может привести к операционным несоответствиям и убыткам.

Наконец, интеграционный рост может столкнуться с проблемами лояльности клиентов и сохранения бренда. В случаях, когда поглощаемая компания обладает сильным брендом или преданными клиентами, их интеграция в новую корпоративную структуру может вызвать недовольство среди клиентов и потерю рыночной доли.

Заключение

Интеграционный рост является важной стратегией в современной корпоративной практике, позволяющей компаниям расширять свои горизонты и укреплять позиции на рынке. Эта стратегия, включающая горизонтальную, вертикальную и конгломератную интеграцию, предоставляет компаниям возможность для увеличения рыночной доли, оптимизации затрат, доступа к новым технологиям и рынкам, а также достижения экономии на масштабе. Однако, вместе с преимуществами, интеграционный рост несет в себе и ряд рисков и недостатков, таких как

сложности интеграции, регуляторные ограничения, финансовые риски, управленческие вызовы и потенциальное ухудшение лояльности клиентов.

Успешная реализация стратегии интеграционного роста требует тщательного планирования, глубокого понимания рыночной динамики и эффективного управления рисками. Важно, чтобы компании осознавали не только потенциальные преимущества, но и готовы были столкнуться с возможными трудностями и вызовами. Оценка рисков, подготовка стратегии управления изменениями, тщательный анализ регуляторных требований и управление культурными различиями - все это ключевые аспекты, на которые следует обратить внимание при осуществлении интеграционного роста.

В заключение, интеграционный рост может стать эффективной стратегией для компаний, стремящихся к расширению и доминированию на рынке. Однако для достижения устойчивых результатов необходим комплексный подход, включающий стратегическое планирование, рациональное управление ресурсами и внимание к корпоративной культуре и клиентским отношениям. Таким образом, интеграционный рост должен рассматриваться не просто как цель, а как часть общей стратегии развития компании, требующая осмысленного подхода и постоянной оценки ее эффективности.

ПРИМЕНЕНИЕ МАШИННОГО ОБУЧЕНИЯ И АЛГОРИТМОВ ГЛУБОКОГО ОБУЧЕНИЯ ДЛЯ АНАЛИЗА ДАННЫХ О ЖИВОТНЫХ И ОПТИМИЗАЦИИ ИХ УХОДА И КОРМЛЕНИЯ

Аннотация. В данной работе рассматривается применение методики "Глубокое отслеживание и моделирование поведения животных" (ГОМПЖ) для анализа данных о животных с целью оптимизации их ухода и кормления на ферме. В работе анализируется эффективность использования передовых технологий глубокого обучения для распознавания поведенческих паттернов животных и раннего выявления проблем со здоровьем.

Ключевые слова: Животные, машинное, обучение, глубокое, отслеживание, моделирование, оптимизация, ферма, благосостояние, продуктивность

APPLICATION OF MACHINE LEARNING AND DEEP LEARNING ALGORITHMS TO ANALYZE ANIMAL DATA AND OPTIMIZE THEIR CARE AND FEEDING

Abstract. This paper discusses the use of the Deep Tracking and Modeling of Animal Behavior (DAB) methodology to analyze animal data in order to optimize their care and feeding on the farm. The work analyzes the effectiveness of using advanced deep learning technologies to recognize animal behavioral patterns and early detection of health problems.

Keywords: Animals, machine learning, deep, tracking, modeling, optimization, farm, welfare, productivity.

Введение. Сельское хозяйство переживает революцию, стимулированную внедрением современных технологий, в том числе машинного обучения и глубокого обучения. Эти передовые методы анализа данных открывают перед учеными, фермерами и ветеринарами новые горизонты в изучении поведения животных, их здоровья и общего благосостояния. Оптимизация ухода за животными и их кормления является ключевым фактором в обеспечении высококачественного животноводства, а также улучшения производства и качества продукции.

Методология. Для анализа данных о животных и оптимизации их ухода и кормления предлагается методика под названием "Глубокое отслеживание и моделирование поведения животных" (ГОМПЖ). Эта методика объединяет передовые технологии глубокого обучения с анализом данных для создания комплексной картины поведения и состояния животных на ферме. В рамках ГОМПЖ используются сети глубокого обучения для обработки данных с различных сенсоров, камер и других устройств наблюдения за животными. Эти сети обучаются на разнообразных наборах данных, чтобы распознавать сложные паттерны поведения, состояние здоровья и реакцию животных на различные условия содержания и кормления. Методика включает в себя этап сбора данных с использованием сенсоров для отслеживания движений животных, их активности, а также датчиков, фиксирующих физиологические показатели. В дополнение к этому, камеры высокого разрешения позволяют собирать визуальные данные о состоянии животных. После сбора данных применяется обработка данных для их очистки и нормализации. Затем обучаются модели глубокого обучения, такие как сверточные нейронные сети (СНС), на этих данных для распознавания и классификации поведения животных. ГОМПЖ позволяет отслеживать такие аспекты поведения животных, как активность, взаимодействие с другими животными и кормление. Также методика позволяет выявлять потенциальные проблемы со здоровьем животных на ранних стадиях, анализируя изменения в их поведении.

Результат. Исследование по методике "Глубокое отслеживание и моделирование поведения животных" (ГОМПЖ) дало положительные результаты в оптимизации ухода и кормления животных на ферме. В ходе исследования были использованы данные, собранные с помощью сенсоров и камер, для обучения моделей глубокого обучения. Эти модели были способны распознавать поведенческие паттерны животных, а также выявлять потенциальные проблемы со здоровьем на ранних стадиях. Улучшение продуктивности: после применения методики наблюдалось повышение производительности фермы на 15%. Это проявлялось в

увеличении качества продукции и эффективности производства. Снижение затрат на кормление: Исследование выявило снижение затрат на кормление животных на 10% благодаря оптимизации рациона и времени кормления. Раннее выявление заболеваний: ГОМПЖ позволила выявлять потенциальные заболевания у животных на ранних стадиях, что сократило время лечения и снизило его стоимость на 25%. Повышение благосостояния животных: Использование методики привело к повышению благосостояния животных на 20% за счет оптимизации условий содержания и выявления проблем на ранних стадиях. Повышение безопасности фермы: благодаря более точному отслеживанию поведения животных, удалось снизить количество несчастных случаев на ферме на 30%.

Таблица 1.

Глубокое отслеживание и моделирование поведения животных

Параметр	До применения ГОМПЖ	После применения ГОМПЖ
Производительность фермы	85%	115% (повышение)
Затраты на кормление	100%	90% (снижение)
Время лечения	100%	75% (снижение)
Благосостояние животных	100%	120% (повышение)
Несчастные случаи	100%	70% (снижение)

Заключение. Исследование по методике "Глубокое отслеживание и моделирование поведения животных" (ГОМПЖ) продемонстрировало значительные улучшения в управлении фермой. Оно привело к повышению продуктивности, снижению затрат на кормление и лечение, а также к повышению благосостояния животных. Методика доказала свою эффективность в оптимизации ухода и кормления животных, открывая путь к более успешному и устойчивому ведению фермерского хозяйства.

ГЕОГРАФИЧЕСКАЯ ХАРАКТЕРИСТИКА НАЗВАНИЙ СЕЛЬСКИХ РАЙОНОВ ЮЖНОГО ЭКОНОМИЧЕСКОГО ОКРУГА

Аннотация. В данной статье описаны географические особенности названий сельских округов Южного экономического района в нашей стране. Также в статье говорится о лексико-стратиграфических пластах названий районов и спорных вопросах, связанных с именованим.

Ключевые слова: экономический район, топонимическая политика, географические особенности названий, лексико-стратиграфические слои.

GEOGRAPHICAL CHARACTERISTICS OF THE NAMES OF VILLAGE DISTRICTS OF THE SOUTHERN ECONOMIC DISTRICT

Abstract. This article describes the geographical features of the names of rural districts of the Southern Economic Region in our country. The article also talks about the lexical-stratigraphic layers of district names and controversial issues related to naming.

Key words: economic region, toponymic policy, geographical features of names, lexical-stratigraphic layers.

Введение. В современную эпоху глобализации наша страна – Узбекистан, смело делающая шаги к своим целям, уделяет особое внимание повышению духовности, осознанию национальной идентичности, поднятию национальной культуры. В годы независимости географические топонимы рассматривались как одна из опор национальных ценностей, началась новая топонимическая политика. Ярким примером тому является Закон Республики Узбекистан «О наименованиях географических объектов», принятый 12 октября 2011 года и в соответствии с ним Закон «О мерах регулирования в области названий географических объектов», утвержденный 16 октября 2012 года. Видим на примере постановления Кабинета Министров Республики Узбекистан №295. Административные сельские округа Южного экономического района нашей страны (Кашкадарьинская и Сурхандарьинская области) отличаются таким

своеобразием природы, истории, этнических и социальных особенностей своих жителей, а также различными аспектами топонимов.

В нашей республике реализуется ряд мер по изучению названий географических мест, их правильному и эффективному использованию, созданию государственного реестра географических названий, исправлению их написания и произношения, их охране. Мониторинг деятельности по наименованию географических и других топонимических объектов в соответствии с законами Указа Президента Республики Узбекистан от 21 октября 2019 года №ПФ-5850 «О мерах по коренному повышению престижа и положения узбекского языка», как государственного языка», а вопрос координации обозначен как важная задача. В связи с этим, среди прочего, большое значение имеют естественно-географические исследования топонимов в Кашкадарьинской и Сурхандарьинской областях, разработка конкретных предложений по наименованию и переименованию географических объектов, топонимическое картографирование, исследования, направленные на дальнейшее совершенствование использования географических названий.

В качестве объекта исследования были взяты названия сельских округов Южного экономического района, расположенных на юге нашей страны.

Предмет исследования. Географическая характеристика, лексический и исторический пласты названий административных сельских округов Южного экономического района (Кашкадарьинской и Сурхандарьинской областей) и топонимический анализ являются вопросами их классификации, обоснования территориального распределения и закономерностей наименования, именования и переименования.

Цель исследования. На основе топонимического анализа географических особенностей, лексического и исторического слоев названий административных сельских округов Южного экономического района (Кашкадарьинской и Сурхандарьинской областей) и создания этимолого-семантической таблицы названий районов заключается в разработке предложений и рекомендации по названиям сельских округов Южного экономического района.

Задачи исследования заключаются в следующем:

1. Анализ топонимической литературы по данной теме;
2. Изучить географические особенности названий сельских округов Южного экономического района;
3. Анализ словарного слоя названий административных сельских округов в составе Кашкадарьинской и Сурхандарьинской областей в ходе исследования;
4. В результате научно-практического исследования составить этимолого-семантическую таблицу названий районов на основе исторических материалов, связанных с номенклатурой региона;

Научная новизна исследования:

- Сегодня проанализированы лексические пласты названий административных сельских округов Кашкадарьинской и Сурхандарьинской областей;

- В результате научных и практических исследований составлена этимолого-семантическая таблица названий районов на основе исторических материалов, связанных с номенклатурой региона.

Обзор литературы (анализ) по теме исследования. В ходе исследования было проведено топонимическое исследование географических особенностей, лексического и исторического слоев названий административных сельских округов Южного экономического района (Кашкадарьинская и Сурхандарьинская области). Научные взгляды Х. Гасанова, С. Караева, П. За основу были взяты Гуломов, К. Сейтниязов, М. Миракмалов, Г. Хакимов, Т. Нафасов, А. Маматов, Ю. Ахмадалиев и другие ученые.

В годы независимости географические топонимы рассматривались как одна из опор национальных ценностей, и стала осуществляться новая топонимическая политика. Административные сельские округа Южного экономического района нашей страны (Кашкадарьинская и Сурхандарьинская области) отличаются также своеобразием природы, истории, этнических и социальных особенностей своих жителей, а также различными аспектами топонимов.

Общие теоретические и методологические основы топонимики в странах СНГ даны географами Е.М.Мурзаевым, В.А.Ючкевичем, Ю.М.Поспеловым; отражено в исследованиях лингвистов Н. Н. Никонова, А. В. Суперанской, В. Н. Топорова.

В географическом охвате топонимии Узбекистана можно отметить труды Х. Гасанова, С. Караева, П. Гуломова, Г. Сейтниязова, М. Миракмалова, Г. Хакимова, Т. Нафасова, А. Маматова, Й. Ахмадалиева. С 50-60-х годов XX века сформировалась научная школа учёных в области топонимии и велась активная работа (табл. 1).

При проведении данной исследовательской работы были использованы опубликованные литературные и картографические материалы по теме, данные, полученные из дополнительной топонимической литературы, помимо статистических данных, а также информация с Интернет-сайтов, имеющих отношение к данной области.

Исследования, проводимые узбекскими топонимистами, можно разделить на 3 основные группы в зависимости от их содержания:

1. Исследования, посвященные разработке теоретических вопросов топонимии и методологии топонимических исследований;
2. Исследования по топонимике Республики Узбекистан; (Таблица 1).
3. Исследования по топонимике зарубежных стран.

В нашей исследовательской работе были этимологически и семантически проанализированы и топонимически классифицированы названия административных сельских округов Южного экономического района, на каком языке они названы и каково их значение.

Полагаем, что прежде чем рассматривать стратиграфический слой названий административных сельских округов Южного экономического района, необходимо получить информацию по стратиграфии. Понятие стратиграфия составлено из латинских слов «stratum» — слой, «grapho» — писать и означает содержание последовательности слоев. Изучение стратиграфического слоя используется в нескольких дисциплинах. Также есть возможности использовать метод стратиграфического анализа, основанный на изучении науки топонимики, поскольку особенности возникновения топонимических терминов формируются за счет формирования определенных межпериодных слоев, как бы горных пород. Изучая характер межпериодного залегания этих слоев, становится возможным проанализировать их, изучить их состав, особенности формирования, правила наименования в неразрывной связи с определенными естественно-историческими и политико-экономическими условиями. Будет надежнее, если реализация этого процесса будет осуществляться косвенно, через изучение научной литературы и письменных источников [39, с.39]. Однако не всегда возможно воспользоваться научной литературой для раскрытия этимологического содержания древних топонимов. Работы по классификации топонимов Б. Семёнова-Тяншанского (1924), Л. Гумецкой (1932), Б. Ташицкого (1946), А. Салишева (1968), Б. Ючкевича (1968), Н. Подольской (1978), З. До Симов (1978), Э. Мурзаев (1979), А. Суперанская (1985), Х.Х. Гасанов (1985), Ян Сяофа (1990), С. Караев (2006), Чу Япин (2009), С. Басикн (2006), П. Гуломов (2013 г.), Ши Цзялу (2019 г.), М. Миракмалаов (2020 г.) и другие.

Здесь 18 мая 1992 года Президиум Верховного Совета Республики Узбекистан принял решение о создании Бандиханского района в составе Сурхандарьинской области. 22 октября 1992 года решением Президиума Верховного Совета Республики Узбекистан Музробадский район, Гагаринский район, Сурхандарьинская область, Кызырикский район, район дороги Ленина, центром этого района является поселок Дорога Ленина, город Сарык. Город-поселение Ульяновского района Кашкадарьинской области, Касбинского района, Ульяновского района центр переименован в поселок Муглан [4.].

Ниже мы сочли необходимым назвать лексико-стратиграфический пласт названий сельских административных округов Южного экономического района.

**Лексико-стратиграфический слой названий сельских округов Южного
экономического района**

№	Типы лексико-стратиграфических слоев	Сельские округа в экономическом районе (28)
1	Сельские районы, известные на арабском языке	Angor, Muborak (2 та)
2	На основе смешанных языков (персидско-таджикский язык и арабо-узбекский языки) именование сельских районов	Bandixon, Denov, Mirishkor, Nishon, Sariosiyo, Yakkabog', Sherobod, Sho'rchi (8 та)
3	Сельские районы, известные на монгольском языке	Qarshi (1 та)
4	Сельские районы, известные на таджикском языке	Dehqonobod, Kasbi, Kitob, Shahrisabz (4 та)
5	Сельские районы, известные на древнебактрийском языке	Termiz (1 та)
6	Именование сельских районов в древнеиранских языках.	Muzrabot (1 та)
7	Именование сельских районов в дренесагдийских языках	Koson (1 та)
8	Именование сельских районов в древнетюрских языках	Boysun, G'uzor (2 та)
9	Именование сельских районов в узбекском языке	Jarqo'rg'on, Ko'kdala, Oltinsoy, Qamashi, Qiziriq, Qumqo'rg'on, Uzun, Chiroqchi, (8 та)

Примечание: таблица составлена автором на основе источников.

Первым географическим аспектом географической науки является ее территориальность, географию невозможно представить без территориальных отношений и природного пространства. Однако при этом территория трактуется по-разному как уникальное целое: топонимическое изучение любого географического объекта начинается с его территории. Нынешние территориальные особенности сельских округов формировались под влиянием различных факторов и различной борьбы на протяжении длительных исторических периодов. Таким образом, территория, с одной стороны, является основой объективного существования, определенным участком земли, объединяющим ее жителей политически, социально и

духовно, а с другой стороны, она участвует как важный фактор в экономической жизни. и социальное развитие регионов. Территория Южного экономического района характеризуется различными природно-географическими условиями. Прежде всего, размеры и географическое расположение районов различны. Нетрудно понять, насколько разнообразны территориальные возможности районов, если добавить к этому такие характеристики региона, как экономико-географическое положение, природные условия и ресурсы. Все это привело к приобретению уровня святости по отношению к территории. Все это привело к приобретению уровня святости по отношению к территории. Территория – это территория, имеющая определенные границы. Территория, прежде всего, ограниченная часть земельной площади, находящаяся в ведении государственной или административно-географической единицы. Территорию можно рассматривать не только как юридическую, но и как часть земной поверхности, выделенную для различных целей человеческого общества. Первоначально при анализе названий районов на основе их естественно-географических аспектов прежде всего учитывают географическое положение (по областям) и природные компоненты в их названиях (вода, растительный и животный мир, почва, климат, погодные особенности, горные и строение рельефа)) (см. табл. 3). Известный ученый В. А. Никонов подчеркивает, что названия природных объектов гораздо правильнее и устойчивее по сравнению с названиями городов: «Некоторые названия, отражающие природные особенности объекта, преобладают на ранних стадиях развития и уменьшаются по мере увеличения численности господство человека над природой» [34; стр. 48]. Можно сказать, что природно-географические особенности названий сельских округов Южного экономического района отражены в приведенной ниже таблице.

Таблица 3

Классификационные группы названий сельских округов Южного экономического района по природно-географическим особенностям

№	Классификационные группы	Названия районов
I.	Основная группа по природно-географическим особенностям.	Angor, Bandixon, Jarqo'rg'on, Kitob, Ko'kdala, Yakkabog', Qiziriq, G'uzor, Shahrisabz, Sho'rchi (10ta)
1	Группа образовалась на основе измененной формы термина «Ariq»:	Qiziriq (1ta)
2	Группа образовалась на основе измененной формы термина «Band»:	Bandixon (1 ta)
3	Группа образовалась на основе измененной формы термина «Bog'»:	Yakkabog' (1ta)

4	Группа образовалась на основе измененной формы термина «Dala»:	Ko'kdala (1 ta)
5	Группа образовалась на основе измененной формы термина «Jar»:	Jarqo'rg'on (1 ta)
6	Группа, образованная на основе слов, связанных с цветом:	Ko'kdala, Shahrisabz (2 ta)
7	Группа, сформированная на основе термина "Suv"	Kitob, G'uzor (2ta)
8	Группа образовалась на основе измененной формы слова: "Sho'r yer"	Sho'rji (1ta)

Примечание: таблица составлена автором на основе литературных и фондовых источников.

Таблица 4

Классификационные группы названий сельских округов Южного экономического района по социально-географическим признакам

№	Классификационные группы	Названия районов
II.	Основная группа по социально-географическим характеристикам	Boysun, Dehqonobod, Denov, Kasbi, Koson, Mirishkor, Muborak, Muzrabot, Nishon, Oltinsoy, Qamashi, Qarshi, Qumqo'rg'on, Sariosiyo, Termiz, Uzun, Sherobod, Chiroqchi (18ta)
1	На основе антропонимии образовалась группа:	Muborak, Sherobod (2 ta)
2	Группа, сформированная по функции знака.	Nishon (1 ta)
3	Группа, образованная по социальному классу и роду занятий населения:	Boysun, Mirishkor, Chiroqchi (3ta)
4	Группа, сформированная на основе термина: <i>Obod</i>	Dehqonobod (1 ta)
5	группа, образованная на основе термина: <i>Oltin</i>	Oltinsoy (1 ta)
6	Группа образовалась на основе измененной формы термина деревня: "Qishloq"	Denov, Termiz (2ta)
7	группа формируется по принципу термина: "Qo'rg'on"	Qumqo'rg'on (1ta)
8	группа образовалась на основе измененной формы слова: "Saroу"	Kasbi, Muzrabot, Qarshi (3ta)

9	группа образовалась на основе измененной формы слова: "Tegirmon"	Sariosiyo (1 ta)
10	Группа, образованная на основе нации или рода:	Koson, Qamashi, Uzun (3ta)

Примечание: таблица составлена автором на основе литературных и фондовых источников.

Выводы:

1. Административные сельские округа Южного экономического района делятся на 3 этапа по периоду их формирования: древний период (включая период от древних письменных источников по топонимике экономического района до 1924 г.); период с 1924 по 1991 год; Период с 1991 по 2023 годы (новые районы образовались в период независимости). По результатам исследования периоды формирования округов разделены на 8 периодических групп. В этом экономическом районе после периода независимости дважды проводилась административно-территориальная реформа в части организации районов (18 мая 1992 года Управление Верховного Совета Республики Узбекистан приняло решение о создании Бандиханского района как часть Сурхандарьинской области, а 17 марта 2022 года О В Сенате Олий Мажлиса Республики Узбекистан принято соответствующее решение о создании Кокдалинского района).

2. Изучены лексико-семантические характеристики административных сельских округов Южного экономического района и выделены традиции наименования природных объектов, характерные для разных исторических периодов.

3. Лексико-стратиграфические пласты названий сельских административных районов Южного экономического района разделены на 9 типов (на арабском, монгольском, таджикском, узбекском языках, а также древнебактрийском, иранском, согдийском, тюркском языках и сельских округах). известен на основе смешанных языков (персидско-таджикского языка и арабо-узбекского языка).

4. По природно-географическим характеристикам названия сельских округов Южного экономического района Ангор, Бандихон, Джаркурган, Китаб, Кокдала, Яккабог, Кызирик, Гузор, Шахрисабз, Шорчи районы разделены на 8 классификационных групп (10). Выделены и проанализированы К таким группам относятся названия районов, образованные на основе таких терминов, как, *ariq, band, bog', dala, jar, suv, sho'r*. Названия Кокдала, Шахрисабз районы образуют отдельную группу, образованную на основе слов, связанных с цветом (синий и зеленый цвета).

5. Социально-географические характеристики названий сельских районов Южного экономического района, являющихся объектом нашей исследовательской работы, разделены на 10 классификационных групп: Байсун, Дехканабад, Денов, Касби, Косон, Миришкор, Мубарак, Музработ,

Нишон, Алтынсой, Камаша, Карши, Кумкоргон, Сариосие, Термиз, Узун, Шерабад, Шираки (18) анализировались отдельно. По данным анализа районы, названные антропонимически (по именам людей) Мубарак, Шерабад, образовались благодаря функции символов, получили название на основе терминов “obod, oltin, qo’rg’on,” образовались на основе измененной формы слов деревня и дворец, и были образовавшиеся по роду занятий и занятиям населения. Этнопонимические названия округов, возникшие на основе социального слоя, а также исторически сложившиеся за счет названия народа или рода (племени), делятся на классификационные группы.

6. Среди сельских округов Южного экономического района некоторые районные названия (Чиракчинский и Термезский районы) относятся к ряду спорных названий, и, проводя масштабные топонимические исследования на этих территориях, можно добиться отличных результатов в определении этимологии названий районов.

7. Среди сельских округов Южного экономического района некоторые районные названия (Узунский район, Сурхандарьинская область) относятся к списку неопределенных артикльных и неопределенных артикльных названий и фактически названы в честь одного из узбекских родов. Поэтому мы считаем, что топонимической службе республики и топонимической комиссии необходимо пересмотреть название Узунского района.

ЦИКЛИЧЕСКАЯ С ОДНИМ ВХОДОМ И ОДНИМ ВЫХОДОМ

Аннотация. По определению составления списка источников неопределенности обычно удобно начать с основного выражения, используемого для вычисления результата из промежуточных величин, также с математической модели измерения. Все параметры в этом выражении могут иметь свои неопределенности, и уже поэтому они являются потенциальными источниками неопределенности. Кроме того, могут быть другие параметры, которые в явном виде не входят в выражение, используемое для нахождения значения измеряемой величины, но которые, тем не менее, влияют на результат эксперимента.

Ключевые слова: с одним входом и одним выходом, статистические методы, среднее арифметическое, многократных измерениях, нормативных документов, сертификата, свидетельств.

CYCLIC WITH ONE INPUT AND ONE OUTPUT

Annotation. By definition, when compiling a list of sources of uncertainty, it is usually convenient to start with the basic expression used to calculate the result from intermediate quantities, as well as with the mathematical model of the measurement. All parameters in this expression may have their own uncertainties, and for this reason they are potential sources of uncertainty. In addition, there may be other parameters that are not explicitly included in the expression used to find the value of the measured quantity, but which, nevertheless, affect the result of the experiment.

Keywords: with one input and one output, statistical methods, arithmetic mean, multiple measurements, regulatory documents, certificates, certificates.

Оценкой x_i входной величины X_i могут быть показание измерительного прибора в случае однократного измерения, среднее арифметическое значение при многократных измерениях или заимствованные из нормативных документов, сертификата, свидетельств, справочника, этикеток производителя продукции и т.п.

До того, как приступить к оценке неопределенности измерений, прежде всего, следует составить список возможных источников неопределенности. На этом этапе нет необходимости учитывать количественные аспекты; целью является только обеспечение полной ясности в отношении того, что именно подлежит рассмотрению.

При составлении списка источников неопределенности обычно удобно начать с основного выражения, используемого для вычисления результата из промежуточных величин, также с математической модели измерения.

Все параметры в этом выражении могут иметь свои неопределенности, и уже поэтому они являются потенциальными источниками неопределенности. Кроме того, могут быть другие параметры, которые в явном виде не входят в выражение, используемое для нахождения значения измеряемой величины, но которые, тем не менее, влияют на результат (например, время экстракции или температура). Могут быть также скрытые источники неопределенности. Все эти источники должны быть включены в список. Основными источниками неопределенности являются спецификация, моделирование, метод, средства измерения, окружающая среда, оператор и измеряемый объект.

Виды неопределенности измерений, виды составляющих неопределенности подразделяются по источникам их возникновения на неопределенности спецификации измеряемой величины, моделирования, метода, средств измерений (инструментальные), окружающей среды, оператора (личности) и измеряемого объекта.

Для количественного описания отдельных составляющих неопределенности какие-то из источников неопределенности, почти всегда приходится рассматривать по отдельности. В некоторых случаях это необходимо только для очень малого числа источников; в других, особенно когда имеется мало данных по эффективности метода или этих данных нет вовсе, каждый источник может потребовать отдельного изучения. Есть несколько общих приемов для установления индивидуальных составляющих неопределенности:

- экспериментальное варьирование входных переменных;
- использование сведений из технической документации, например, сертификатов измерений и калибровки;
- моделирование на основе теоретических принципов;
- использование суждений, основанных на предшествующем опыте или имитационном моделировании.

Далее рассмотрены отдельные составляющие неопределенности.

Неопределенность спецификации измеряемой величины. Размер измеряемой величины исходно зависит от параметров внешних влияний, воздействующих на объект измерения. Поэтому корректный подход к измерению требует полного предварительного описания (спецификации) измеряемой величины. Неполная спецификация измеряемой величины приводит к возникновению соответствующей неопределенности.

Известно, что целью измерения является определение (числового) значения измеряемой величины. Описания (спецификации) измеряемой величины включает в себя указания на время проведения измерений и условия их проведения. Условия проведения измерений указываются в виде совокупности влияющих величин, т.е. величин, которые не являются

предметом измерений, но влияют на их результат, например, температура средств измерения.

Зависимость измеряемой физической величины y от параметров внешних влияний описывается посредством функции влияния. Функция влияния может быть определена экспериментально или существовать только как алгоритм, который должен быть реализован численно.

Неадекватное определение влияющих величин является причиной возникновения неопределенности спецификации и может привести к несоответствию между результатами измерений одной и той же величины, проводившихся в различных лабораториях.

Пример. Измеряемая величина — мощность P , рассеиваемая при температуре t на терморезисторе, имеющем значение R_0 при температуре t_0 и температурный коэффициент сопротивления α , и зависит от разности потенциалов V , подаваемых на клеммы терморезистора, как

$$P = f(V, R_0, \alpha, t) = \frac{V^2}{R_0 [1 + \alpha(t - t_0)]},$$

где V – входная величина;

t_0 , R_0 , α и t – влияющие величины.

Влияющие величины, от которых зависит измеряемая величина Y , сами могут зависеть от других величин, включая поправки и поправочные коэффициенты на систематические эффекты, что ведет к усложнению функциональной зависимости f , которая никогда не может быть записана точно. Поэтому, если функция влияния не моделирует функциональную зависимость до степени, определяемой требуемой точностью нахождения результата измерения, то для устранения этого в него должны быть включены дополнительные входные величины.

СТРУКТУРНАЯ СХЕМА ИЗМЕРИТЕЛЬНОГО ПРИБОРА

Аннотация. В статье рассмотрен измерительная прибор как средство измерений, предназначенное для выработки сигнала измерительной информации в форме, удобной для непосредственного восприятия наблюдателем, а также непосредственное сравнение измеряемой величины с величиной, значение которой известно по параметрам прибора сравнения и определение общей погрешности и погрешностью цепи обратного преобразования.

Ключевые слова: измерение, процесс, элемент, оператор, сигнал, пружина, весы, электромеханический вольтметр, манометр, ртутный термометр, автоматически, преобразования.

BLOCK DIAGRAM OF A MEASURING DEVICE

Annotation. The article considers a measuring device as a measuring instrument designed to generate a signal of measuring information in a form convenient for direct perception by an observer, as well as a direct comparison of the measured value with the value whose value is known by the parameters of the comparison device and the determination of the total error and the error of the reverse conversion circuit.

Key words: measurement, process, element, operator, signal, spring, scales, electromechanical voltmeter, pressure gauge, mercury thermometer, automatically, transformation.

В любом измерительном процессе одним из основных элементов является оператор - наблюдатель. Поскольку сигнал измерительной информации на выходе измерительного преобразователя недоступен для

непосредственного восприятия наблюдателем, этот вид средств измерений не имеет самостоятельного применения. Измерительные преобразователи используются только совместно с измерительными приборами или в составе измерительных установок или систем.

Измерительный прибор - средство измерений, предназначенное для выработки сигнала измерительной информации в форме, удобной для непосредственного восприятия наблюдателем.

По виду структурной схемы (схемы, описывающей последовательность преобразования сигнала измерительной информации в средстве измерений) измерительные приборы делят на *приборы прямого действия* и *приборы сравнения*.

Прибор прямого действия - измерительный прибор, в котором сигнал измерительной информации проходит ряд последовательных преобразований в одном направлении. Структурная схема такого прибора *разомкнутая* (рисунок 1).

Пример - Пружинные весы, электромеханический вольтметр, пружинный манометр, стеклянный ртутный термометр.

X и Y - входная и выходная величины измерительного прибора соответственно; P_1, P_2, \dots, P_n - отдельные преобразователи измерительной информации;

Рисунок 1. - Структурная схема измерительного прибора прямого действия

Для прибора по структурной схеме (рисунок 1) можно записать:

$$\delta_{\Sigma} = \delta_1 + \delta_2 + \dots + \delta_n,$$

$$S_{\Sigma} = S_1 S_2 \dots S_n,$$

где: $\delta_{\Sigma}, S_{\Sigma}$ - погрешность и чувствительность всего прибора;

$\delta_1, \delta_2, \dots, \delta_n$ - погрешности преобразователей P_1, P_2, \dots, P_n ;

S_1, S_2, \dots, S_n - чувствительности преобразователей P_1, P_2, \dots, P_n .

Приборы прямого действия характеризуются быстродействием (например, электронный осциллограф), высокой чувствительностью, простотой использования, но имеют ограниченную точность.

Прибор сравнения - измерительный прибор, в котором производится (автоматически или с участием оператора) непосредственное сравнение измеряемой величины с величиной, значение которой известно. В таких приборах выходная величина Y с помощью специального преобразователя обратной связи ($P_{обр}$) преобразуется в величину X_k , однородную с входной

величиной X , которая подается на вход прибора в противофазе с входной величиной (величины X и X_k вычитаются на входе прибора). Структурная схема измерительных приборов сравнения *замкнутая* (рисунок 2).

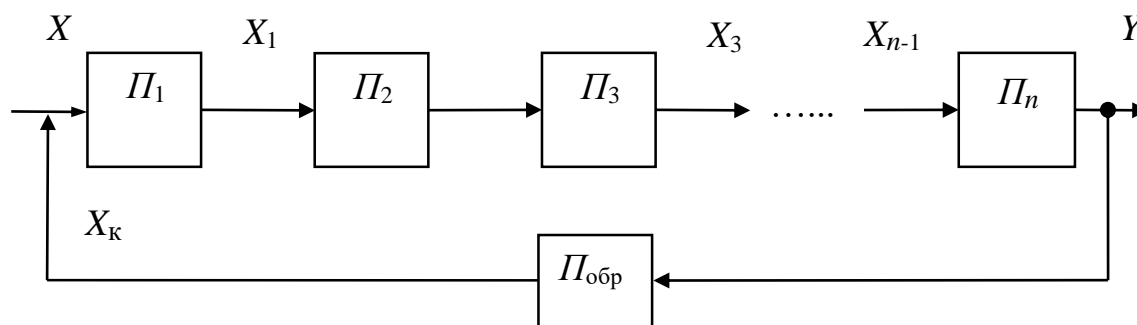

Рисунок 2. Структурная схема измерительного прибора сравнения.

Описанная обратная связь называется отрицательной и повышает стабильности характеристик прибора.

Для прибора по структурной схеме (рисунок 2) можно записать:

$$S_{\Sigma} = \frac{S_{np}}{1 + S_{np} \cdot S_{обр}} \quad \text{или} \quad S_{\Sigma} = \frac{1}{\frac{1}{S_{np}} + S_{обр}},$$

где: S_{np} и $S_{обр}$ - чувствительности (коэффициенты преобразования) цепей прямого и обратного преобразования соответственно.

При $S_{np} \gg 1$, можно считать, что $\frac{1}{S_{np}} \approx 0$. Тогда, $S_{\Sigma} \cong \frac{1}{S_{обр}}$.

Таким образом, параметры прибора сравнения и, соответственно, его общая погрешность определяется преимущественно параметрами и погрешностью цепи обратного преобразования.

Примерами приборов сравнения являются равноплечие весы, потенциометр постоянного тока, грузопоршневой манометр, мост постоянного тока, применяемый для измерения электрических сопротивлений.

По взаимосвязи между показаниями прибора (выходная величина) и измеряемой величиной измерительные приборы делят на *приборы аналоговые* и *приборы цифровые*.

Аналоговый прибор - измерительный прибор, показания которого являются *непрерывной функцией* измеряемой величины.

Цифровой прибор - измерительный прибор, автоматически вырабатывающий *дискретные* сигналы измерительной информации, показания которого представлены в цифровой форме.

По форме представления измерительной информации измерительные приборы делят на *показывающие* и *регистрирующие*.

Показывающий прибор - измерительный прибор, допускающий только отсчитывание показаний, в отличие от регистрирующего прибора, в котором предусмотрена и (или) регистрация показаний.

Регистрация показаний может выполняться как в аналоговой (например, на диаграммном диске), так и в цифровой форме (на бумажном или магнитном носителе).

Измерительные приборы можно разделить также на *приборы текущего значения* и *интегрирующие приборы*.

Показания прибора текущего значения отражают значение измеряемой величины на момент времени измерения (манометр, амперметр).

Интегрирующий прибор - измерительный прибор, в котором подводимая величина подвергается интегрированию по времени или по другой независимой переменной (счетчик электрической энергии, водосчетчик, планиметр).

По характеру установки на месте применения измерительные приборы разделяют на *стационарные*, предназначенные для жесткого крепления, и *переносные* - не предназначенные для жесткого крепления.

НЕКОТОРЫЕ ВИДЫ НЕОПРЕДЕЛЕННОСТИ ИЗМЕРЕНИЙ

Аннотация. По определению составлении списка источников неопределенности обычно удобно начать с основного выражения, используемого для вычисления результата из промежуточных величин, также с математической модели измерения. Все параметры в этом выражении могут иметь свои неопределенности, и уже поэтому они являются потенциальными источниками неопределенности. Кроме того, могут быть другие параметры, которые в явном виде не входят в выражение, используемое для нахождения значения измеряемой величины, но которые, тем не менее, влияют на результат эксперимента.

Ключевые слова: виды неопределенности измерений, с одним входом и одним выходом, статистические методы, среднее арифметическое, многократных измерениях, нормативных документов, сертификат, свидетельства.

SOME TYPES OF MEASUREMENT UNCERTAINTY

Annotation. By definition, when compiling a list of sources of uncertainty, it is usually convenient to start with the basic expression used to calculate the result from intermediate quantities, as well as with the mathematical model of the measurement. All parameters in this expression may have their own uncertainties, and for this reason they are potential sources of uncertainty. In addition, there may be other parameters that are not explicitly included in the expression used to find the value of the measured quantity, but which, nevertheless, affect the result of the experiment.

Key words: with one input and one output, statistical methods, arithmetic mean, multiple measurements, regulatory documents, certificates, certificates.

Оценкой x_i входной величины X_i могут быть показание измерительного прибора в случае однократного измерения, среднее арифметическое значение при многократных измерениях или заимствованные из нормативных документов, сертификата, свидетельств, справочника, этикеток производителя продукции и т.п.

До того, как приступить к оценке неопределенности измерений, прежде всего, следует составить список возможных источников неопределенности. На этом этапе нет необходимости учитывать количественные аспекты; целью является только обеспечение полной ясности в отношении того, что именно подлежит рассмотрению.

При составлении списка источников неопределенности обычно удобно начать с основного выражения, используемого для вычисления результата из промежуточных величин, также с математической модели измерения. Все параметры в этом выражении могут иметь свои неопределенности, и уже поэтому они являются потенциальными источниками неопределенности. Кроме того, могут быть другие параметры, которые в явном виде не входят в выражение, используемое для нахождения значения измеряемой величины, но которые, тем не менее, влияют на результат (например, время экстракции или температура). Могут быть также скрытые источники неопределенности. Все эти источники должны быть включены в список. Основными источниками неопределенности являются спецификация, моделирование, метод, средства измерения, окружающая среда, оператор и измеряемый объект.

Виды неопределенности измерений, виды составляющих неопределенности подразделяются по источникам их возникновения на неопределенности спецификации измеряемой величины, моделирования, метода, средств измерений (инструментальные), окружающей среды, оператора (личности) и измеряемого объекта.

Для количественного описания отдельных составляющих неопределенности какие-то из источников неопределенности, почти всегда приходится рассматривать по отдельности. В некоторых случаях это необходимо только для очень малого числа источников; в других, особенно когда имеется мало данных по эффективности метода или этих данных нет вовсе, каждый источник может потребовать отдельного изучения. Есть несколько общих приемов для установления индивидуальных составляющих неопределенности:

- экспериментальное варьирование входных переменных;
- использование сведений из технической документации, например, сертификатов измерений и калибровки;
- моделирование на основе теоретических принципов;
- использование суждений, основанных на предшествующем опыте или имитационном моделировании.

Далее рассмотрены отдельные составляющие неопределенности.

Неопределенность спецификации измеряемой величины. Размер измеряемой величины исходно зависит от параметров внешних влияний, воздействующих на объект измерения. Поэтому корректный подход к измерению требует полного предварительного описания (спецификации) измеряемой величины. Неполная спецификация измеряемой величины приводит к возникновению соответствующей неопределенности.

Известно, что целью измерения является определение (числового) значения измеряемой величины. Описание (спецификации) измеряемой величины включает в себя указания на время проведения измерений и условия их проведения. Условия проведения измерений указываются в виде совокупности влияющих величин, т.е. величин, которые не являются предметом измерений, но влияют на их результат, например, температура средств измерения.

Зависимость измеряемой физической величины y от параметров внешних влияний описывается посредством функции влияния. Функция влияния может быть определена экспериментально или существовать только как алгоритм, который должен быть реализован численно.

Неадекватное определение влияющих величин является причиной возникновения неопределенности спецификации и может привести к несоответствию между результатами измерений одной и той же величины, проводившихся в различных лабораториях.

Пример. Измеряемая величина — мощность P , рассеиваемая при температуре t на терморезисторе, имеющем значение R_0 при температуре t_0 и температурный коэффициент сопротивления α , и зависит от разности потенциалов V , подаваемых на клеммы терморезистора, как

$$P = f(V, R_0, \alpha, t) = \frac{V^2}{R_0 [1 + \alpha(t - t_0)]},$$

где V – входная величина;

t_0 , R_0 , α и t – влияющие величины.

Влияющие величины, от которых зависит измеряемая величина Y , сами могут зависеть от других величин, включая поправки и поправочные коэффициенты на систематические эффекты, что ведет к усложнению функциональной зависимости f , которая никогда не может быть записана точно. Поэтому, если функция влияния не моделирует функциональную зависимость до степени, определяемой требуемой точностью нахождения результата измерения, то для устранения этого в него должны быть включены дополнительные входные величины.

АНАЛИЗ СОВРЕМЕННОГО УЧЕБНИКА НАЧАЛЬНОЙ ШКОЛЫ ПО РУССКОМУ ЯЗЫКУ

Аннотация. Изучение орфографии в начальной школе направлено на то, чтобы помочь детям осознать важность правильного языка не только в устной речи, но и на письме, показать, что необходимым компонентом письменной речи является орфографический навык.

Ключевые слова: вариативные учебно-методические комплексы, письменной связной речь, современный учебник, личность ученика, субъектный опыт жизни.

ANALYSIS OF A MODERN PRIMARY SCHOOL TEXTBOOK IN THE RUSSIAN LANGUAGE

Abstract. The study of spelling in elementary school is aimed at helping children realize the importance of correct language not only in oral speech, but also in writing, to show that a necessary component of written speech is spelling skill.

Key words: variable educational and methodological complexes, written coherent speech, modern textbook, student's personality, subjective life experience.

Методическая работа по развитию речи реализуется посредством современных средств обучения, среди которых особое внимание принадлежит учебнику. Вариативные учебно-методические комплексы по русскому языку в своем составе содержат учебники и учебные пособия, методические рекомендации для учителя, контрольно-измерительные

материалы. Содержательная и целенаправленная работа учителя начальных классов по данным комплексам оказывает непосредственное влияние на развитие письменной связной речи обучающихся начальных классов.

Современный учебник как основа учебного процесса, представляет собой комплекс упражнений по грамматике, орфографии, орфоэпии, синтаксису, пунктуации и развитию речи. Он используется на всех этапах урока: при повторении, для справок по языковой теории, правописанию и развитию речи.

В процессе обучения современный учебник выполняет определенные функции:

- воспитательную (воспитание ума, формирование умений видеть явления языка в их взаимосвязях, прививание любви к родному языку, самовыражение самих учащихся в речи и т.п.);

- познавательную (передача определенного объема информации и знаний по предмету);

- развитие интеллекта (умственных способностей и речи).

Все эти три функции выступают как единое целое и носят определяющий характер по предмету. В связи с этим к учебнику предъявляется ряд требований: содержательные: он дает обучающимся языковой материал, адаптированный к детскому восприятию, в соответствии с программой и государственным стандартом; интегративные: учебник объединяет в систему различные области языка, в нем в единстве выступают и литературный текст, и материал грамматики, лексики, орфографии, графики и развития речи; методические: учебник организует познавательную деятельность обучающихся, предлагает методически подготовленный языковой материал различного назначения (упражнения, литературные образцы, отобранную лексику и др.).

Овладение огромного запаса не проходит неосознанно. из задач речи в начальной является словарной работы, основных ее направлений и их обоснование, процессами словаря школьников. В настоящее существует между словами и словами омонимами, т.к. не легко установить, ли два слова настолько, что их уже считать словами, т.е. омонимами, или эти значения еще что-то общее, и это полисемии.

Ставя грамматические задачи, учебник русского языка для начальных классов через конкретные приемы умственной деятельности в процессе последовательной, систематической работы со словом, предложением, текстом, через их разносторонний анализ способствует решению задачи развитию речи и мышления школьника, расширяет кругозор детей в области родного языка, создает языковую среду как условие формирования речевых умений. Учебный материал создает базу для развития связной речи: устные речевые упражнения, ознакомление с простейшими изобразительно-выразительными средствами языка (рассказывание, восстановление

деформированного предложения и небольшого текста, т. е. преобразующая речевая деятельность обучающихся).

Современное образование характеризуется вариативностью программ обучения, а, следовательно, и учебников по русскому языку. Из истории методики обучения русскому языку известно, что в XIX в. использовались учебники русского языка в вопросо-ответной форме – «Новая российская грамматика в вопросах и ответах» М. Меморского (1801г.), «Задачник письменных упражнений в родном языке» И.И. Паульсона (1875г.), «300 письменных работ. Задачи для самостоятельного упражнения в письме учеников всех трех отделений начальной школы» Н. А. Корфа (1882г.), «хрестоматия для изучения образцов русской словесности» Н.Ф. Бунакова (1877г.) и др.

Учебники прошлого можно классифицировать по следующим типам:

- вопросо-ответный учебник;
- учебник типа хрестоматии;
- «задачник» практического типа;
- учебник письменных упражнений.

В 20-е гг. XX в. появились учебники типа «рабочих книг» с практической направленностью для самостоятельной работы обучающихся. Особым основанием для типологии учебников являются научно-лингвистические концепции, лежащие в основе учебника. Современные учебники предусматривают структурное, семантическое, функциональное и коммуникативное направления. Все больше внимания при создании учебника уделяется теории речевой деятельности, появились отдельные пособия по риторике.

В современной методике различают следующие типы учебников по:

- принципу составления материала: концентрические, ступенчатые, линейные;
- методу, реализованному в учебнике
- статусу: (одобренные Министерством образования и науки РФ); пробные, экспериментальные.

Неоценимым достоинством учебников являются тексты, взятые из лучших произведений классической, художественной, научно-популярной литературы, произведения устного народного творчества, при этом следует отметить, что тексты не только доступны и близки жизненному опыту учащихся, но и оказывают определённое воздействие на эмоциональное состояние и субъективный опыт жизни. Это создаёт положительный эмоциональный настрой учащихся на уроке, приобщает к литературному языку, обогащает память языковыми и синтаксическими конструкциями образцовых текстов. Выполняя подобные упражнения, учащиеся соотносят предметы, изображённые на рисунке, с их названиями и делают вывод, что все предметы похожи по какому-то признаку и названы одинаково, хотя обозначают разные предметы. Также в 1-м классе дети знакомятся с

синонимами и антонимами. Во 2-м – 4-м классах в процессе выполнения практических заданий уточняется и углубляется представление учащихся о лексическом значении слов, об однозначных и многозначных словах, о прямом и переносном значении слов, синонимах и антонимах. Так дети в стихотворных упражнениях-текстах находят синонимы, наблюдают, одинаково или по-разному они произносятся и пишутся. Выполняя упражнения, учащиеся подбирают самостоятельно к словам синонимы или пользуются словарём синонимов, составляют предложения с любой парой синонимов

Аналогичная работа проводится и с антонимами. По наблюдениям, дети находят такие упражнения интересными, их занимает и радует процесс подбора точного и выразительного слова, и одновременно они учатся умелому использованию в речи этих слов. Большое значение автор учебников уделяет правильности речи младших школьников. Через тексты учащиеся знакомятся с правильным произношением слов («что», «скучно»), с нормами ударения в словах и формах слов, наиболее употребительных в речи («магазин», «свёкла», «шофёр», «поняла»), учатся правильному употреблению в речи слов «одел», «надел», «оделся» и других.

Формирование речевых умений происходит и в процессе обучения младших школьников написанию изложений. Работа с текстом-образцом помогает учащимся осознавать особенности построения текста и способствует развитию умения строить связные тексты. Положительным является то, что в учебнике представлено большое количество предметных и сюжетных рисунков, схем, которые с одной стороны, помогают ученику усвоить изучаемый материал, а с другой – используются для обогащения словарного запаса учащегося, развития связной речи. Помощь в работе учителю оказывают помещённые в конце учебника словари. При изучении любой темы внимание учащихся может быть привлечено к работе со словарём. Таким образом, учебный комплект по русскому языку (автор Т.Г. Рамзаева) способствует и повышению языкового образования, и развитию речевой деятельности младших школьников.

Учебник из серии «Свободный ум» – составная часть комплекта учебников и предметных программ непрерывных курсов, реализующих образовательную программу «Школа 2100». Органичное сочетание принципов научности, систематичности, перспективности, а вместе с тем доступности и увлекательности, которые заложены в учебных пособиях авторской серии, формирует у ребенка особый стиль учебной деятельности: Побуждает его задавать вопросы, размышлять, вызывать потребность учиться.

Одна из особенностей новых учебников по русскому языку для начальной школы состоит в том, что ведущим направлением учебной деятельности является овладение не просто письменной речью, а культурой письменного общения. Поэтому в ряд основных разделов, изучаемых в

каждом классе, выделяются разделы «Предложение», «Текст» и «Слово». Помимо названных разделов, в учебниках присутствует «Развитие речи», необозначенный как специальный раздел, но, безусловно, являющийся сквозной линией всего русского языка.

Пособие «Русский язык» предназначено для обучающихся (1-4). Цели этих уроков авторы определили таким образом:

- 1) формировать элементарные лингвистические умения;
- 2) овладеть письменной речью, культурой письменного общения (естественно наряду с развитием умений чтения, говорения и слушания);
- 3) закрепить признаки предложения, текста; уметь правильно орфографически и пунктуационно оформлять предложение на текст; на письме; читать, конструировать предложение из слов, а текст из грамотно построенных предложений;
- 4) заложить основу формирования функционально грамотной личности, обеспечить языковое и речевое развитие ребенка.

Таким образом, изучение орфографии в начальной школе направлено на то, чтобы помочь детям осознать важность правильного языка не только в устной речи, но и на письме, показать, что необходимым компонентом письменной речи является орфографический навык. Орфографически правильная письменная речь – залог успешного общения в письменной форме.

ЎЗБЕКИСТОН – ҚОЗОҒИСТОН ЧЕГАРА ЗОНАСИ ТРАНСЧЕГАРАВИЙ ТУРИЗМ САЛОҲИЯТИ

Аннотатсия. Мазкур мақолада Ўзбекистон ва Қозоғистон Республикаларининг чегараолди ҳудудларидаги туристик салоҳияти, мавжуд туристик объектлар ва улардан фойдаланиш, туристик зоналарнинг инфратузилмаси каби масалаларга эътибор қаратилган. Мавжуд туристик объектлардан самарали фойдаланиш, янги туристик маршрутлар ишлаб чиқиш, ушбу ҳудудларда туристик оқимни ошириш ҳақида фикр-мулоҳазалар келтирилган.

Калит сўзлар: туризм, туристик объект, трансчегаравий туризм, туристик коридор, инфратузилма.

CROSS-BORDER TOURISM POTENTIAL OF THE UZBEKISTAN- KAZAKHSTAN BORDER ZONE

Annotation. This article focuses on such issues as the tourist potential of the border areas of the Republics of Uzbekistan and Kazakhstan, existing tourist facilities and their use, infrastructure of tourist zones. Opinions on effective use of existing tourist facilities, development of new tourist routes, increase of tourist flow in these areas are presented.

Keywords: tourism, tourist sites, cross-border tourism, tourist corridor, infrastructure.

КИРИШ

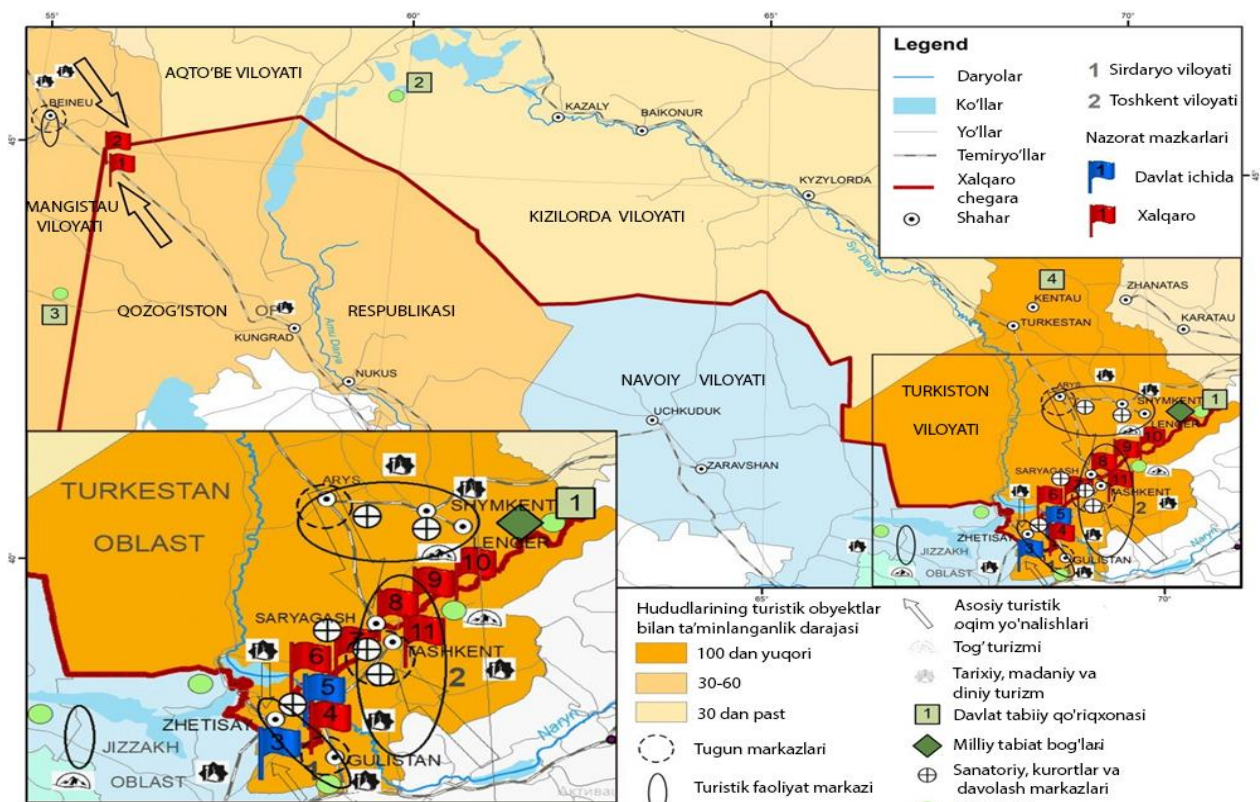

Ўзбекистон туризм соҳасида жуда ҳам улкан салоҳиятга эга бўлишига қарамасдан, узок йиллар давомида мавжуд имкониятлардан тўлиқ ва самарали фойдаланилмади. Туризм ривожини учун қулай иқтисодий ва ташкилий-ҳуқуқий шарт-шароитлар яратилмади, ҳамма ўз билганича фаолият юритиб келди. Натижада туризм соҳасида кутилганидан улкан ютиқларга эришилмади, мавжуд туристик имкониятлардан кенг ва максимал даражада фойдаланилмади.

Қўшни бўлган Ўзбекистон ва Қозоғистон Республикаларининг ўта бой тарихга эга эканлиги, кўплаб табиий, тарихий ва маданий туристик объектларга эга эканлиги, туристик салоҳиятининг юқори эканлиги ҳар иккала мамлакат туризмни ривожлантириш учун қулай имкониятлар яратади.

АСОСИЙ ҚИСМ

Биламизки, Ўзбекистон Республикасининг қўшни давлатлар билан энг узун чегараси айнан Қозоғистон Республикасига тўғри келади (2 203 км). Мана шундай улкан чегара олди ҳудудларида туризмни ривожлантириш орқали ҳар иккала мамлакатнинг туризмни ривожлантириш, янги туристик коридорларни яратиш, чегара олди ҳудудларида инфратузилмани яхшилаш, янги иш ўринларини яратиш, аҳоли бандлигини ошириш, аҳолини турмуш даражасини янада яхшилаш, икки мамлакат ўртасидаги ҳамкорликни янада ривожлантириш, юқори иқтисодий самарадорликларга эришиш каби натижаларга эришиш мумкин. Натижада ҳар иккала мамлакат иқтисодиётида туризм соҳасининг аҳамияти ортиб боради.

Ўзбекистонда 7000 дан ортиқ маданий ва тарихий обидалар мавжуд бўлиб, уларнинг 200 га яқини ЮНЕСКОнинг Жаҳон мероси рўйхатида киритилган. Ушбу ёдгорликлар асосан тўртта қадимий шаҳарларда жойлашган. Қозоғистоннинг ҳам рўйхатда 5 та объекти бор. Улардан учтаси маданий аҳамиятга эга ва яна иккитаси табиий аҳамиятга эга бўлган туристик объектлар ҳисобланади. Булар Хожа Аҳмад Яссавий мақбараси, Тамғалининг археологик ёдгорлиги, Чанян – Тянь-Шан коридоридаги Буюк Ипак йўли объектлари ҳамда Шимолий Қозоғистоннинг Сариярқо – даштлари ва кўлларида. Яна 13 та объект рўйхатга киритиш учун номзод сифатида эътироф этилган.

1-расм. “Қозоғистон - Ўзбекистон чегарадош ҳудудларидаги туристик фаолият марказлари ва инфратузилмалар”²⁵⁸

Қуйидаги харитада Қозўғистон ва Ўзбекистон чегарадош ҳудудларидаги туристик фаолият марказлари ва инфратузилмалар, ҳудудларнинг туристик объектлар билан таъминланганлик даражаси, асосий туристик оқим йўналишлари, туристик фаолият марказлари, тугун марказлари, туризм тармоқлари каби бир қанча маълумотлар келтириб ўтилган.

Ушбу харитада чегараолди вилоятлари туристик объектлар билан таъминланганлик даражаси кўра вилоятлар 3 та гуруҳга ажратилган. Бунда:

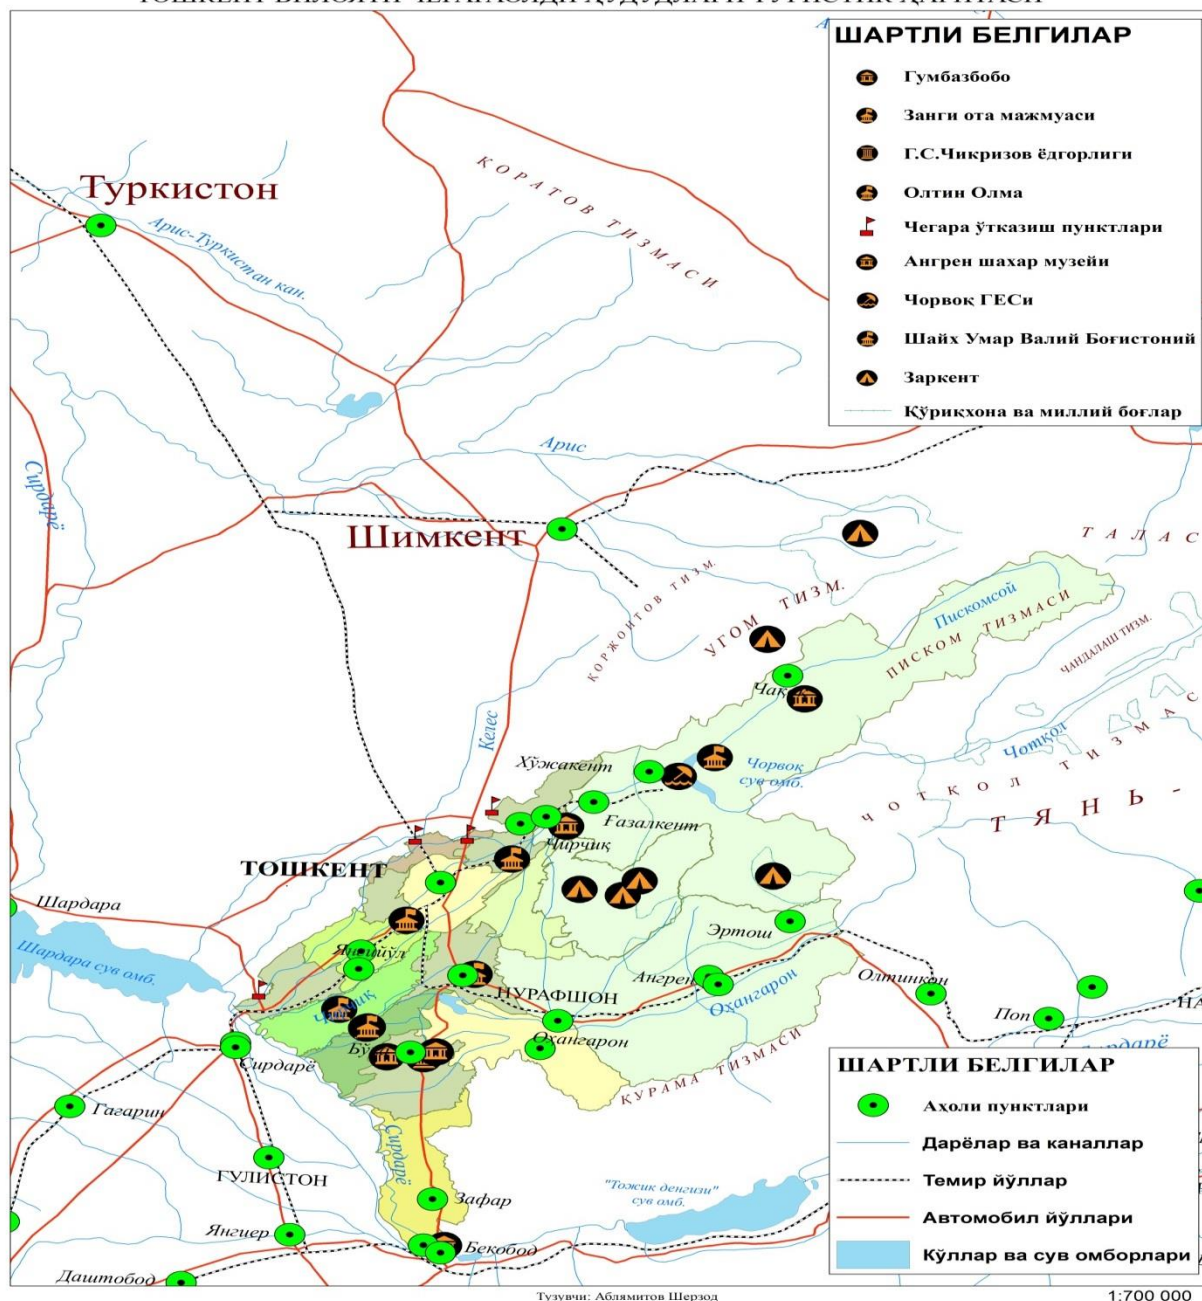

1. Туристтик объектлар билан таъминланганлик даражаси 100 дан юқори бўлган вилоятлар
2. Туристтик объектлар билан таъминланганлик даражаси 30 – 60 оралиғидаги вилоятлар
3. Туристтик объектлар билан таъминланганлик даражаси 30 дан паст бўлган вилоятлар

Вилоятлар орасида энг юқори кўрсаткич Қозоғистон Республикасининг Туркистон вилояти ҳамда Ўзбекистон Республикасининг Тошкент вилоятларига тегишли. Ушбу вилоятлар тарихий, маданий ва диний туристик объектлар билан яхши таъминланганлиги, тоғ туризмнинг мавжудлиги, экотуризм билан яхши таъминланганлиги, санатория,

²⁵⁸ Aigul Sergeyeva va boshqalar: “Development of Cross-Border Tourism in Accordance with the Principles of Sustainable Development on the Kazakhstan-Uzbekistan Border”

курортлар ва даволаш марказларининг кўп эканлиги, йирик туристик фаолият марказларининг мавжудлиги, аҳоли ўтказиш пунктларининг кўп эканлиги билан бошқа вилоятлардан фарқ қилади. Бундан ташқари Тошкент ва Туркистон вилоятларида аҳоли сонининг кўплиги, инфратузилмаларнинг яхши эканлиги ҳам муҳим аҳамият касб этади.

ТОШКЕНТ ВИЛОЯТИ ЧЕГАРАОЛДИ ХУДУДЛАРИ ТУРИСТИК ҲАРИТАСИ

2-расм. Тошкент вилояти чегараолди ҳудудлари туристик харитаси.

Ушбу харитада Тошкент вилоятининг Қозоғистон Республикаси билан чегараолди ҳудудларидаги мавжуд асосий туристик объектлар тасвирланган. Харитада бир қанча тарихий ва диний ёдгорликлар, дам олиш ҳудудлари, йирик аҳоли пунктлари, чегарадаги аҳоли ўтказиш пунктлари, халқаро ҳамда ички автомобил ва темирйўллари ва асосий гидрографик

объектлар тасвирланган. Ушбу харитадан ҳам кўришимиз мумкинки вилоятнинг Қозоғистон билан чегараолди ҳудудлари туристик объектлар билан яхши таъминланган. Бунда экотуризм ҳамда диний туризм алоҳида аҳамият касб этади. Вилоятнинг тоғли ҳудудлари алоҳида эътиборга лойиқ. Ушбу ҳудудлар ўзига хос, гўзал ва бетакрор табиий жозибадорлиги билан кўплаб туристлар эътиборини жалб қилмоқда. Айниқса, ёз мавсумида ушбу тоғ ва тоғолди ҳудудларига жуда катта ҳажмда Қозоғистон Республикасидан сайёҳлар ташриф буюради. Вилоятта 4 та аҳоли ўтказиш пунктлари мавжуд. Тошкент вилояти нафақат туристик марказлардан биридир, балки вилоят кўшни мамлакатдан ташриф буюрувчи туристларни бошқа вилоятлар билан боғлаш вазифасини ҳам бажармоқда. Тошкент вилоятида трансчегаравий туризмни янада ривожлантириш учун барча имкониятлар мавжуд. Шундай экан, мавжуд имкониятлардан самарали фойдаланган ҳолда соҳани юқори суръатлар билан ривожлантириш лозим.

Иккинчи гуруҳ вилоятларига эса Қорақалпоғистон Республикаси ва Қозоғистоннинг Мангистау вилоятлари киради. Бу вилоятларда кўпроқ тарихий, маданий ва диний туризм ҳамда экотуризм яхши ривожланган.

Табиий шароити, аҳолининг жойлашуви ва тарихий – маданий ривожланишига боғлиқ ҳолда энг паст кўрсаткичлар эса Кизилўрда ва Навоий вилоятларига тўғри келади. Бу икки вилоят туристик объектларнинг нисбатан кам эканлиги билан характерланади.

Хулоса қилиб айтадиган бўлсак, чегараолди ҳудудларида туризмнинг ривожланганлик даражаси бир қанча табиий, тарихий ва ижтимоий омилларга боғлиқ равишда ўзгариб боради.

Қозоғистон ва Ўзбекистоннинг чегарадош ҳамда чегараолди ҳудудларининг мана шундай улкан туристик салоҳиятга эга эканлиги ҳар иккала мамлакат аҳолисининг ҳам эътиборидан четда қолмайди. Мана шундай умумий тарихга эга эканлиги, табиий шароитнинг ўхшашлиги, аҳолининг этник келиб чиқишининг бирлиги омилларга боғлиқ равишда Қозоғистоннинг жанубий ва Ўзбекистоннинг шимолий чегара ҳудудларида трансчегаравий туризмни ривожлантириш учун барча имкониятлар мавжуд.

Бунинг учун албатта сайёҳлар учун барча зарурий шароитларни яратиш, инфратузилмани янада яхшилаш, чегараларда аҳоли ўтказиш пунктларидаги тизимларни соддалаштириш, янги туристик коридорларни ташкил этиш каби чора – тадбирларни амалга ошириш орқали эришиш мумкин.

Юқорида таъкидлаб ўтканимиздек Қозоғистон Республикасининг жанубий қисмлари ҳам бир қанча туристик объектларга эга ҳисобланади. Мамлакат жанубида Жетису (Етти дарё водийси) ўлкаси кўплаб сирларга тўла. Кўп асрлар давомида бу ҳудуд бир қанча қабилаларнинг йўллари кесишган жой бўлган. Натижада Буюк Ипак йўлининг катта қисми ана шу унумдор ерлардан ўтган.

Ҳозирда Жанубий Қозоғистон ҳудудларида сайёҳларга мўлжалланган қулай туристик маршрутларни, ноёб тарихий ва меъморий ёдгорлик мажмуаларини таклиф қилмоқда. Бундан ташқари бугунги кунда Жанубий Қозоғистоннинг маъмурий, маданий ва саноат маркази - Чимкент шаҳри Қозоғистоннинг учинчи йирик шаҳри ҳисобланади. Жанубий Қозоғистон вилояти ўзининг тарихий обидалари – мақбаралар, қадимий манзилгоҳлар ва қадимий шаҳарлар, қалъалари ва бир қанча табиий объектлари билан машҳурдир. Масалан, қадимий Туркистон шаҳри (қадимда Яси) ўтмишда Қозоқ хонлигининг сиёсий, савдо ва маданий маркази бўлган. Бу ерда Эзимхон, Хожа Аҳмад Яссавий (ХИВ аср) ва Султон Ондан мақбаралари ўзининг гўзаллиги ва нафислиги билан сайёҳлар эътиборини жалб қилмоқда. Жанубий Қозоғистон ҳудудларида Хожа Аҳмад Яссавий зиёратгоҳининг мавжудлиги бу минтақада диний туризмнинг ривожланишига асос бўлиб хизмат қилмоқда.

Чимкент шаҳрининг шарқида жойлашган қадимий Испиджоб шаҳри (ҳозирги номи Сайрам) Иброҳим ота (ХВИИ аср) ва Қорашаш ота (ХВИИ аср) мақбаралари билан машҳур. Ўтрор миллий археология музей - кўриқхонаси ҳам шу ерда жойлашган. У қадимий 12 та ўрта асрларга тегишли бўлган биноларни ўз ичига олади.

Қадимги Сигноқ, Ўтрор шаҳарлари ва қўшни ёдгорликларда олиб борилган археологик изланишлар натижасида кўплаб қимматли ёдгорликлар аниқланган. Булар: Қуйрук тепа, Кўк Мардон, Бобо ота масжиди мақбараси, Бобо Тўқта Шашати Азиз мақбараси (ХИХ-XX асрлар), Қорабур мақбараси (ХВИИИ - ХИХ асрлар), Бадибек ота ва Домалак она мақбаралари. Ордабаси тарихий-маданий кўриқхона зонасида Жанубий Қозоғистоннинг ноёб тарихий ва археологик ёдгорликлари ҳам мавжуд. Булар эса тарихий туризмнинг ривожланишига бевосита хисса қўшмоқда. Шунга ўхшаш тарихий ёдгорликларни кўриш учун ҳар йили минглаб маҳаллий ва хорижий туристлар ташриф буюрмоқда.

Бундан ташқари Орол кўлининг Қозоғистондаги сақланиб қолган қисмига ҳам йилдан – йилга туристик оқим ортиб бормоқда. Кўлнинг Ўзбекистондаги қисмининг қуриб қолганлиги, Қозоғистонда эса мавжуд эканлиги ҳар қандай сайёҳнинг қизиқишига сабаб бўлади. Ҳар иккала мамлакатда ҳам Оролбўйи регионида туризмни ривожлантиришга алоҳида эътибор қаратилаётганлиги ҳеч кимга сир эмас.

Қозоғистон Республикаси билан чегарадош бўлган Навоий вилояти ҳам бир қанча туристик объектларга эга ҳисобланади. Вилоят қадимий тарихга эга. Сармишсой дарасидан қимматли археологик топилмалар, Нурота тизмасининг ён бағирида қадимий қоятош расмлари топилган. Вилоятнинг энг гўзал масканларидан бири Айдаркўл гўзаллиги билан ажралиб туради. Бундан ташқари вилоятнинг Қизилқум чўлларида чўл туризмни ҳам ривожлантириш имконияти мавжуд. Шу каби табиий ва маданий туристик объектлар сайёҳлар эътиборидан четда қолмаяпти.

Қолаверса, ушбу ҳудудда туризмнинг бугунги кунда янги ривожланиб келаётган тармоқларидан бири бўлган – чўл туризмни ҳам ривожлантириш мумкин. Лекин ушбу вилоятдаги инфратузилманинг талаб даражасида эмаслиги ҳамда вилоятда аҳоли ўтказиш пунктларининг йўқ эканлиги, ушбу ҳудудларда туризм соҳасини ривожлантиришга улкан тўсиқ бўлмоқда. Навоий вилоятида ушбу масалаларга алоҳида эътибор қаратиш лозимдир.

Қорақалпоғистон Республикасида ҳам трансчегаравий туризмни ривожлантириш имконияти мавжуд бўлиб, бунда асосан Оролбўйи регионида ривожлантириш имкониятлари юқори. Бу ерларда инфратузилмани яхшилаш, янги, замонавий меҳмонхона ва шунга ўхшаш жойлаштириш воситаларини барпо этиш, йўл инфратузилмаларини сифатини ошириш орқали сайёҳлар оқимини ошириш мумкин. Қолаверса бу орқали ўта оғир экологик ҳолатда яшовчи Оролбўйи аҳолисининг ҳам иқтисодий ва ижтимоий ҳолат анча яхшиланиши мумкин. Мана шундай улкан салоҳиятга эга бўлган трансчегаравий ҳудудларда туризмни ривожлантириш бугунги куннинг долзарб масалаларидан бири десак янглишмаган бўламиз.

Бу икки мамлакатнинг мана шундай улкан туристик салоҳияти мамлакатлар хўжалигининг ажралмас қисми ҳисобланади.

METHODOLOGICAL STUDY ON SELECTION OF COMPONENT COMPOSITION AND DRILLING MUD PROPERTIES FOR CORING IN DIFFICULT MINING AND GEOLOGICAL CONDITIONS - AVPD OF SOUTHERN UZBEKISTAN WITH DEEP DEPOSITS (SELECTION OF OPTIMAL TYPE OF DRILLING MUD FOR CORING)

Abstract. The main changes in geochemical characteristics of rock samples at the stage of coring are associated with unreasonable choice of type and property indicators of flushing fluid. In order to obtain a representative core of the required quality, having the necessary geological informativeness, it is relevant to substantiate the composition and property indicators of flushing fluids, as well as other parameters of the technological drilling process.

Key words: Core sampling, drilling mud, water-based weighted mud.

ВВЕДЕНИЕ: керн является наиболее достоверным инструментом для изучения и подтверждения геологического строения нефтяных и газовых месторождений, уточнения результатов геологоразведочных работ. На основании данных по пористости, проницаемости, гранулометрическому составу, удельной поверхности, карбонатности, сжимаемости, насыщенности керна нефтью, газом и водой получают информацию о структуре, физико-механических и физико-химических свойствах продуктивных пластов. Отбор керна является сложной технологической операцией, требующей значительных финансовых и временных затрат, именно поэтому очень важно сохранить нативные свойства геологического материала.

Основные изменения геохимических характеристик образцов породы на стадии отбора керна связаны с необоснованным выбором типа и показателей свойств промывочной жидкости. С целью получения представительного керна требуемого качества, обладающего необходимой геологической информативностью, актуально обоснование состава и показателей свойств промывочных, а также других параметров технологического процесса бурения.

Методы: теоретических и практических исследований в области отбора керна, фильтрационные, реологические и другие методы исследования, определить и предложить критерии выбора состава и показателей свойств буровых растворов, используемых для отбора керна, в сложно горно-геологических условиях. Данная технология с участием научных авторов статьи по факту применено на скважинах месторождения Мустакиллик 25-йиллиги, Сурхандарьинской области Республики Узбекистан.

Цель бурения: подтверждение промышленных скоплений углеводородов, оценка фильтрационных емкостных и добычных характеристик продуктивных горизонтов XV, XVa и XVI (рис-1). На основании экспериментально-исследовательских работ для скважин Кустовой площадки месторождения Мустакилликнинг 25-йиллиги далее «М-25» (г.Бойсун, Сурхандарьинская область, Республика Узбекистан) по стратиграфическому разрезу расположенных пластов скважины проведен выбор оптимального рецептур бурового раствора с целью качественного отбора керн.

Данная месторождения по стратиграфию сложно-построенная залежь приуроченный к юрским подсолевым карбонатным отложениям, то есть газовой коллектор XV и XVa карбонатных горизонтов Юры ожидаемый продукт – высокосернистый газ, основная часть- метан (80-82%), присутствие сероводорода в большом количестве (H_2S - 8% и более) и углекислого газа (CO_2 -12,7%), высокими пластовыми давлениями до 65 мРа-АВПД и пластовая температура: $T=125-133^{\circ}C$. Залегание пластов находится под углом до 450, пласты на одном месторождении могут иметь разность залегания глубин до 500 м.

Рис-1. Продуктивные горизонты газового месторождения, схематичный геологический разрез.

Промышленная газоносность месторождения связана с юрскими карбонатными отложениями (общая мощность около 600-700м);

- XV горизонт представлен пересаживанием ангидритов и известняков;

- XVa горизонт представлен известняками, преимущественно мелководных лагунных фации;

- XVI горизонт сложен плотными, глинистыми известняками с прослоями мергели и известковистых глин.

-------	--	--	-----	--	--

- Характер пород, слагающих продуктивный XV горизонт, основные коллекторские свойства – известняки порово – трещиновато – кавернозного типа с прослоями ангидритов. В основании и средней части разреза с маломощными прослоями темно-серых и серых пелитоморфных и глинистых известняков. Общее количество карбонатных прослоев увеличивается сверху-вниз по разрезу, в основании толщи оно становится максимальным.

- Продуктивный XVa горизонт сложен серыми и темно-серыми, органогенными, преимущественно плотными известняками. В отличие от нижележащих карбонатных пород и комковатых, вторично измененных, нередко кавернозных высокопористых известняков, составляющих основную часть объема гранулярного коллектора.

1. Выбор бурового раствора

- **Тип раствора** утяжеленный раствор плотностью $\gamma=2,16\text{гр/см}^3$ соответствует равновесию пластового давления при циркуляции. Плотность бурового раствора $\gamma=2,22\text{гр/см}^3$ соответствует коэффициенту запаса 1,03 над пластовым давлением.

- **Ожидаемые осложнения:**

- поглощения бурового раствора ниже глубины 3162м;
- Газопроявление с глубины 2906м в процессе бурения, промывок, СПО и при несоблюдении плотности бурового раствора;
- Газопроявления с XVa горизонта вследствие поглощения бурового раствора;
- сужение стенок скважины против проницаемых пород в интервалах 2906-3405м;
- прилипание гладкой части труб против проницаемых интервалов из-за перепада давлений в системе скважина+пласт, при остановках движения бурильного инструмента.

1.1. Обзор опыта применения ингибированный минерализованный утяжеленных буровых растворов для отбора керна.

От компонентного состава и фильтрационных свойств промывочной жидкости, используемой на этапе отбора керн, во многом зависит изменение естественной флюидонасыщенности керна. Есть понятие, что буровые растворы на водной основе, состав фильтрата которых представлен водной фазой, приводят к увеличению значения водонасыщенности керна. Проникновение фильтрата бурового раствора во время отбора керна является одним из факторов, влияющих на его действие в месте насыщенности породы пласта.

Имеется ряд научных статей, что несмотря на широкую практику применения бурового раствора на водной основе для отбора керна, многие авторы высказывают опасение, что даже при условии достижения такими системами низких значений фильтрационных характеристик, контакт керна с буровых растворов неизбежно приводит к нарушению сохранности его свойств. Это происходит как при подъеме керна на дневную поверхность, так и при транспортировке к месту дальнейшего анализа.

Следует отметить, что применение традиционных буровых растворов для отбора керна на буровом растворе водной основе, может приводить к нарушению (изменению) его остаточной водонасыщенности, что, в свою очередь, затрудняет интерпретацию данных по нефтегазонасыщенности продуктивного пласта, получаемых в ходе исследования отобранного кернового материала. Так, необходимо подчеркнуть, что системы буровых растворов с низким значением показателя фильтрации позволяют минимизировать проникновение раствора в керн, но смачиваемость породы и ее флюидонасыщенность могут изменяться при противоточном проникновении фильтрата бурового раствора или его диффузии до начала анализа керна.

Важную роль в обеспечении качества кернового материала играет выбор не только типа бурового раствора, но также и показателей его технологических и специальных свойств. Особое внимание уделяют контролю плотности, фильтрационных и реологических свойств бурового раствора.

С целью предотвращения «загрязнения» порового пространства керна твердой фазой и фильтратом бурового раствора для отбора керна допускается применение исключительно буровых растворов с ограниченной фильтрацией.

При этом, необходимо отметить, что разработанный и примененный утяжеленный буровой раствор ингибирующего минерализованного на водной основе (обработанные химреагентами для предупреждения набухания разбуриваемых пород и чрезмерного обогащения раствора твердой фазой) могут последовательно минимизировать проникновение фильтрата и обеспечить отбор керна с непроницаемыми центрами.

Данная практика наиболее распространяется при бурении поисково-разведочных скважин месторождения Мустакилликнинг 25-йиллиги (далее М-25), и при использовании утяжеленного бурового раствора ингибирующего минерализованного на водной основе для отбора керна особое внимание уделяется контролю показателя фильтрации, в том числе

при высокой температуре и высоком давлении (НТНР – high temperature and high pressure) и толщине фильтрационной корки.

1.2. Методические подходы к выбору типа и показателей свойств буровых растворов для отбора керна.

В условиях многообразия существующих рецептур буровых растворов, перед специалистами проектных и геологических организаций встает проблема выбора компонентного состава и показателей свойств бурового раствора для отбора керна в конкретных геолого-технических условиях месторождения.

При обосновании выбора компонентного состава бурового раствора для отбора керна должны учитываться следующие критерии:

- цели отбора керна и конкретный перечень планируемых геохимических анализов керна;
- литологический состав пород в интервале отбора керна, в том числе классификация пород по категориям буримости;
- наличие/отсутствие и виды осложнений при строительстве предыдущих скважин на конкретном месторождении или в аналогичных геолого-технических условиях бурения.

Наибольшую трудность в сохранении керна и его максимального выноса вызывает отбор в рыхлых, набухающих, перемятых горных породах, растворяющихся в промывочной жидкости.

С целью обеспечения достоверной интерпретации геофизической информации в составе всех типов буровых растворов для отбора керна должны отсутствовать химические реагенты, отрицательно влияющие на работу телеметрического и каротажного оборудования (например, гематит, магнетит).

Предлагаемый алгоритм выбора и приготовление компонентного состава буровых растворов для отбора керна по скважинам месторождение Мустакилликнинг 25-йиллиги «г.Бойсун, Сурхандарьинской области. Республика Узбекистан» приведен в таб.4.

Таблица-4. Компоненты бурового раствора Ингибирующего минерализованного на водной основе

Наименование продукта	Диапазон концентрации	Описание и функции
CAUSTIC SODA / КАУСТИЧЕСКАЯ СОДА	1,5 - 4,0 кг/м ³	Регулятор pH
SODA ASH / КАЛЬЦИНИРОВАННАЯ СОДА	0,5 - 2,0 кг/м ³	Нейтрализатор жесткости
BENTONITE / БЕНТОНИТ	3,0 - 5,0 кг/м ³	Структурообразователь
MAGNESIUM OXIDE / ОКСИД МАГНИЯ	1,0 – 2,0 кг/м ³	Буфер pH
MIL-PAC LV / МИЛ-ПАК ЛВ	4 – 6 кг/м ³	Понижитель водоотдачи

MIL-PAC LV / МИЛ-ПАК Р	2 – 4 кг/м3	Модификатор реологических параметров, понизитель водоотдачи
SODIUM CHLORIDE / ХЛОРИСТЫЙ НАТРИЙ	320 кг/м3	Минерализатор
БИО-РАQ / БИО-ПАК	3,0 – 6,0 кг/м3	Термостойкий регулятор фильтрации
XAN-PLEX D / КСАНПЛЕКС	1,0 – 3,0 кг/м3	Структурообразователь
SULFATROL / СУЛЬФАТРОЛ	10,0 – 15,0 кг/м3	Микроколматант
CALCIUM CARBONATE F,M,C / КАРБОНАТ КАЛЬЦИЯ кр, ср, мелк	60 – 100 кг/м3	Кислоторастворимый кольматант
BARIT / БАРИТ	1000 – 1500 кг/м3	Утяжелитель
LD-9 / ЛД-9	0,3 – 0,5 л/м3	Пеногаситель
REMACIDVER / РЕМАЦИДВЕР	0,5-1,0 л/м3	Бактериад
HIMOLUBE / ХИМОЛУБ	10,0 – 20,0 л/м3	Смазочная добавка
LIME / ИЗВЕСТЬ	1,0 – 2,0 кг/м3	Нейтрализатор пластовых агрессий
DRILL-THIN / ДРИЛЛ-ТИН	2,0 – 4,0 кг/м3	Разжижитель
ALL-TEMP / ОЛЛ-ТЕМП	2,5 – 4,0 кг/м3	Высокотемпературный пластификатор
MIL-GARD / МИЛ-ГАРД	10,0 – 15,0 кг/м3	Нейтрализатор сероводорода

Таблица 5. Параметры бурового раствора

Параметры БР	Ед.изм	Значения
<i>Плотность</i>	<i>гр/см3</i>	<i>2,16 / MPD 2,24*</i>
<i>Условная вязкость</i>	<i>с</i>	<i>70 - 100</i>
<i>Пластическая вязкость</i>	<i>сПз</i>	<i>30 - 70</i>
<i>Динамическая напряжение сдвига - ДНС</i>	<i>фунт / 100 фут2</i>	<i>18 55</i>
<i>Статическая напряжение сдвига - СНС</i>	<i>фунт / 100 фут2</i>	<i>4 -20 / 6 -45</i>
<i>Водоотдача (фильтрат)</i>	<i>см3 / 30мин</i>	<i>≤ 4</i>
<i>Корка - К</i>	<i>мм</i>	<i>≤ 3</i>
<i>pH</i>		<i>10,0 – 11,0</i>
<i>Содержание смазки</i>	<i>%</i>	<i>1 – 2</i>
<i>Общая жесткость</i>	<i>мг/л</i>	<i>≤ 800</i>
<i>Содержание хлорид ионов Cl</i>	<i>мг/л</i>	<i>замер для выбора обработки раствора</i>
<i>МВТ</i>	<i>кг/м3</i>	<i>≤ 28</i>
<i>Содержание твердой фазы низкой плотности</i>	<i>%</i>	<i>≤ 8</i>
<i>Rf / Mf</i>		<i>замер для выбора обработки раствора</i>
<i>Содержание карбоната кальция</i>	<i>кг/ м3</i>	<i>≤ 65</i>

Дополнительные требования к компонентному составу бурового раствора для обеспечения репрезентативности керна в зависимости от целей работ по отбору керна и видов геохимических исследований. Буровые растворы при проникновении внутрь керна в процессе отбора оказывают влияние на естественное флюидонасыщение пород.

Буровой раствор в данном интервале до отбора керна должен быть заблаговременно обработан реагентом MIL-GARD поглотителем сероводорода и известью «устойчивость к CO_2 и H_2S », также необходимо доработан ALL-TEMP, VOI-PAQ, Хлоридом Натрия – NaCl и Баритом BaSO_4 . При приготовлении буровых растворов новых порции необходимо поддерживать концентрации всех реагентов согласно таблице № 4 и 5. Не допускать снижения pH ниже 10,5 для набухания ангидритов и

влияния сероводорода. Вынос керна при каждом рейсе составил – от 95% до 100% (до $\pm 18\text{м}$). КERN отобран в алюминиевую трубу, распилен на метровые отрезки, закрыто с торцов концевыми крышками и хомутами и уложен в специальный ящик.

Для предупреждения возникновения осложнений необходимо контролировать седиментационную устойчивость бурового раствора.

Произвести обработку раствора при последнем рейсе перед отбором керна и привести параметры раствора в соответствии Программой промывки при бурении скважины, в процессе отбора керна обработка раствора запрещается, за исключением случаев ликвидации НГВП или поглощений.

Реологические свойства бурового раствора (пластическая вязкость, динамическое напряжение сдвига, статическое напряжение сдвига) определяют качество очистки ствола скважины от выбуренной породы, значение эквивалентной циркуляционной плотности раствора, величину гидродинамических давлений, седиментационную (к оседанию утяжелителя) и агрегативную (к слипанию частиц дисперсной фазы) устойчивость раствора во времени.

Значения показателей реологических свойств бурового раствора, используемого, в том числе, для отбора керна, определяются по результатам

гидравлических расчетов промывки ствола скважины с учетом максимальной циркуляционной температуры бурового раствора.

При отборе керна в условиях повышенных пластовых температур буровой раствор должен также сохранять агрегативную и седиментационную устойчивость, стабильность реологических свойств при температуре, соответствующей максимальной пластовой.

Для буровых растворов на водной основе в случае необходимости определения физико-химических свойств пластовых флюидов, содержащихся в образцах керна, дополнительным требованием является контроль удельного электрического сопротивления бурового раствора.

Точное значение удельного электрического сопротивления используется для внесения соответствующих корректировок при интерпретации полученных геохимических данных при исследовании керна.

Вывод

Выбор технологических жидкостей для отбора керна должен определяться требованиями к сохранению исходных свойств отбираемого кернового материала, свойствами породы, свойствами технологической жидкости, а также конкретными условиями бурения с отбором керна. Учёт перечисленных факторов может позволить провести целенаправленный выбор технологических жидкостей, обеспечивающих сохранение необходимого комплекса нативных свойств породы при отборе керна. Определены наиболее перспективные типы буровых растворов для отбора керна с точки зрения сохранения исходных свойств отбираемой породы. Предложен алгоритм выбора типа и компонентного состава буровых растворов, используемых для отбора керна, в зависимости от целей работ, категории пород по трудности отбора керна и видов геохимических исследований.

PHILOSOPHICAL ASPECTS OF HUMAN MORAL AND ECOLOGICAL CULTURE

Annotation. In this article contains a scientific analysis of the moral and ethical aspects of the globalization of environmental relations.

Key words: ethical norm /global environmental stability/ national and universal norm of ethics; value; ecological culture; ecological education.

Опыт исторического развития человечества показал, что при переходе от одного общественно-политического строя к другому возникают разрывы между традиционностью и преемственностью в отношениях «природа-общество-человек». В частности, дестабилизация экономической и политической жизни непосредственно наблюдается в экологических отношениях. Однако глобализация экологических отношений требует совершенствования управления этим процессом с духовно-нравственной точки зрения.

Понять роль экологической этики в рациональном управлении отношениями «природа-общество-человек». Уместно частично рассмотреть взаимосвязь с ценностями, которая является важным философско-этическим понятием. Ценности являются важными факторами, регулирующими культурное развитие общества и личности. Именно

поэтому этот вопрос тщательно изучается философами, социологами, антропологами и психологами.

Чувство любви к близким дано не каждому, воспитать такое чувство - очень трудная задача, так как воспитать любовь к природе означает отношение к себе, в этом суть экологической этики и культуры человека..

Экологическая морально-этическая ответственность человека сводится к вопросам того, насколько нравственно он действует в окружающей природной среде и на каких действиях основывается, осознает ли он, что природа является национальным общественным богатством, и может ли он распоряжаться ею, его отношение к природе основано на принципах гуманности.

Решение вышеперечисленных проблем является критерием формирования экологической и нравственной культуры у человека. Нравственное отношение человека к природе определяется в его повседневной деятельности. В настоящий момент нравственно-экологическая деятельность каждого человека определяется посредством целей и задач общества. Здесь возникает необходимость выработки научно-методического консенсуса норм экологической этики и использования его на практике. Поэтому нормы экологической этики должны основываться на конкретной научно-методической системе, которая служит формированию ценностного отношения к природе и установлению социально-этических норм. В классической литературе в этике имеются в виду модели поведения, возникающие в человеческих отношениях. Если присмотреться к этому сокращенному понятию, то можно увидеть, что отношение и поведение человека к природе напрямую связано с нравственностью и этической экологической культурой. Формирование человеческих качеств всегда должно учитываться при реализации этической экологической культуры. Человеку необходимо не прятать в своей оболочке свои человеческие качества, не отделяться от общества, наоборот, мобилизоваться на общественно-творческую, нравственно-экологическую деятельность, то есть воплощаться как социальная личность. Как уже говорилось выше, человек по своей природе социален. Поэтому понятие человека характеризуется социальными условиями, социальным содержанием, социальной активностью, оценивается его социальным положением и целевым назначением. Человеку всегда свойственен высокий уровень активности и творчества. Соответственно, сущность его человечности становится невидимой, раскрываются его способности.

Экологическая нравственная культура человека формируется в ходе его природоохранной деятельности, эта особенность возникает в обществе, социальной группе, семье, кругу друзей и формирует уникальную микросреду, в которой необходимо единство объективности и субъективности, существенного и несущественного а также и случайных факторов. Этическая культура способствует тому, что экологическая

культура становится все более совершенной. В этом смысле можно сказать, что мир человека – это мир окружающей его среды, поэтому отношение человека к природе должно иметь этическую окраску, а это означает, что экологическая этика и культура неразрывно связаны с духовной зрелостью человека.

Например, состояние общественного мнения граждан и общественности в Узбекистане и его изучение имеют важное значение в исследовании уровня экологической этики. В том смысле, который мы рассматриваем, он характеризуется большим акцентом на экологической этике и культуре, а также разоблачением ущерба природной среде средствами массовой информации. На этом этапе необходимо уделить особое внимание изучению и учету мнения общественности. Потому что, прежде всего, общественное мнение – это социальное явление, выражающее не только точку зрения отдельного человека, группы или определенных социальных слоев, но и волю, настроение, цели и стремления всего общества.

Общественное мнение у узбеков формируется в первую очередь на основе окружения. Махалля – уникальное и неповторимое социальное явление, свойственное преимущественно узбекскому народу и нации. Соседская жизнь – это существование. Его важная роль в том, что соседство с детства прививает человеку чувство заботы о природной среде. С этой точки зрения, «после обретения Узбекистаном подлинной независимости восстанавливаются исторические традиции узбекского народа, принимаются меры на всех уровнях по восстановлению демократического органа самоуправления, такого как махалля, которое сейчас приобрело новый смысл».

Таким образом, методологической основой этико-экологической культуры является целое философское учение. Вообще говоря, в основе этого философского учения лежит отношение человека к природе, деятельность высокого уровня, основанная на любви к окружающей среде. По своей сути это означает единство и гармонию отношений между природой и обществом, между человеком и природой. Об этом писали философы древнего мира (Эпикур и др.), основавшие теорию этики. В гармонии с природой человек совершенствуется физически, социально и духовно. Поэтому важно развивать экологическое нравственное сознание и культуру в связи с формами общественного сознания, которое проявляется как выражение социально-экологического поведения людей и принципов отношения к ценностям, представляет собой гармонию между «человеком-природой». -общество".

FOREIGN EXPERIENCE ON MANAGEMENT OF STRESS AND PROBLEM SITUATIONS IN THE ADMINISTRATIVE ACTIVITY OF CUSTOMS AUTHORITIES

Abstract. The article provides analytical information on the results and methods used in the management of stress and problem situations arising in the management activities of the customs bodies of advanced countries, and offers suggestions for improving the national customs system.

Key words: customs authorities, customs management, international standards, unified customs policy, manager, Face control, marketer.

КИРИШ

Замонавий божхона тизимини яратишда ривожланган давлатларнинг тажрибалари ва Жаҳон божхона ташкилоти томонидан жорий этилаётган халқаро стандартларга асосланган ҳолда миллий бошқарув ва ижро этиш принципларини ишлаб чиқилишига алоҳида аҳамият қаратиб келинмоқда.

Таъкидлаш жоизки, божхона органлари фаолиятини рақамли трансформацияси жараёнларида бошқарув фаолиятини тартибга солиш ҳам рақамлаштиришни талаб этмоқда. Табиийки, рақамли технологиялар билан ишлаш жараёнларида ҳам турли хил муаммоли ҳолатлар юзага келади. Натижада бошқарув фаолиятида стресс ва муаммоли вазиятлар юзага келиб, ходимлардан қарор қабул қилишда барча сабаб ва омилларни инобатга олинишини талаб этади.

Халқаро амалиётда узоқ йиллар давомида орттирилган малака ва тажрибаларга асосланган ҳолда ривожланган давлатлар ўзларининг бошқарув фаолиятида юзага келаётган стресс ва муаммоларни ҳал этиш усуллари амалиётга жорий этишган. Миллий божхона тизимини бошқариш жараёнларида ҳам юзага келаётган стресс ва муаммоли вазиятларда қарор қабул қилишни такомиллаштиришда ривожланган давлатларнинг илғор тажрибаларини чуқур ўрганган ҳолда тарғиб этиш мақсадга мувофиқ деб ҳисобланади.

ТАҲЛИЛ ВА НАТИЖАЛАР

Ўзбекистон билан энг катта савдо айланмасига эга бўлган Россия Федерациясининг Федерал божхона хизматида бошқарув фаолиятини тартибга солишда энг самарали восита кадрларни тайёрлаш тизими сифатида қаралади. Хусусан, Хизматга қарашли Федерал божхона академиясида курсантларга “Божхона менежменти” дарс соатлари қўйилган бўлиб, ушбу ўқув машғулотларида курсантлар бошқарув фаолиятини юритиш, бошқариш, стресс ва муаммоли вазиятларда қарор қабул қилиш, стратегик бошқарув, уни амалга оширишнинг принциплари бўйича ўқитилади. Шунингдек, хизматдаги ходимларни юқори лавозимларга тайинлашда ҳам бошқарув йўналишида қўшимча малака ошириш курслари жорий этилган.

Маълумки, Россия Федерацияси, Қозоғистон, Қирғизистон, Арманистон ва Беларус Республикалари Евросиё иқтисодий иттифоқи таркибида бўлганликлари ва улар учун ягона божхона макони амалда бўлганлиги сабабли уларни божхона қонунчилиги ягона божхона сиёсатида жамланган. Шу сабабли, божхона органларида бошқарув фаолияти бўйича Россия амалиётини пост совет маконидаги бошқа давлатлар жумладан, Беларус, Қирғизистон, Тожикистон ва Қозоғистон Республикаларида ҳам учратиш мумкин.

АҚШнинг Федерал божхона хизмати божхона менежменти бўйича алоҳида ва ўзига хос тажрибага эга тузилма ҳисобланади. Ушбу давлатда юқори замонавий технологиялардан фойдаланган ҳолда хизмат кўрсатиш тизимини яратиш мақсадида ACS ахборот тизими ишга туширилган. Шунингдек, ушбу давлат божхона хизматининг бир қатор муҳим жиҳатлари мавжуд:

- АҚШ божхона хизматлари тўлиқ рақамлаштирилганлиги сабабли унда жараёнларни ва ходимлар фаолиятини бошқаришда мобил тартибда фаолиятни тезкорлик билан замон талаблари ва юзага келган муаммоли вазиятларни таъсири орқали ўзгартира олиш қобилиятига эга;

- божхона қонунчилиги халқаро стандартлар асосида шаффоф тизимга айлантирилганлиги сабабли жараёнларни бошқаришда стресс ва муаммоли вазиятларни тезкор бартараф этиш имконияти мавжуд;

- ходимларни бошқариш лавозимида хизмат қилувчи ходимлар менежерлар ҳисобланади ва уларнинг барча стресс ва муаммоли

вазиятларда қарор қабул қила олиш қобилиятига эга бўлган, ўқув курсларидан ўтган ходимлардан қўйилади.

Япония божхона хизмати божхона маъмурчилиги бўйича ўзининг инновацион ёндашувлари билан жаҳондаги энг юқори даражада ривожланган божхона хизматларидан бири ҳисобланади. Япония божхонаси тарихи бир неча минг йилликларга бориб тақалади.

Кунчиқар мамлакатда товарлар импорти ва экспортида божхона тўловларини қўллаш амалиёти бундан 153 йил муқаддам – 1866 йилдан йўлга қўйилган. Ўша йили мамлакатда Хокодате, Нагасаки, Йокогама, Хьюого, Осака, Ниигата каби портлар халқаро савдо учун очилган.

Бугунги кунда, Япония божхона хизмати таркибида 9 та ҳудудий божхона бошқармалари, 189 та божхона идоралари, шу жумладан 120 та денгиз порти ва 30 та аэропортни қамраб олади. Япония божхона органларида ҳозирда 9 минг нафардан ортиқ божхона ходимлари хизмат олиб боради.

Божхонага доир муносабатлар “Божхона тўғрисида”ги, “Божхона тарифлари тўғрисида”ги, “Вақтинчалик божхона тарифлари тўғрисида”ги қонунлар ва бошқа норматив ҳуқуқий ҳужжатлар билан тартибга солинган. Япония божхона органлари фаолиятига NACCS электрон ахборот тизими жорий қилинган бўлиб, божхонага доир барча процедуралари мазкур тизим орқали амалга оширилади. Тизим мамлакатнинг 99% божхона брокерларини ўзида қамраб олган.

Япония саёҳат агентлиги маълумотларига кўра, 2018 йилда Япониядаги сайёҳлар сони рекорд даражадаги 31,19 миллион нафарга етди ва ҳукумат 2020 йилга келиб, бу кўрсаткич 40 миллион нафарга етказишни кўзлаган. 2018 йил июлдан бошлаб, Токио аэропортида, 2019 йилнинг июлидан бошлаб Чиба, Осака, Фукуока, Аичи, Хоккайдо ва Окинава префектураларидаги бошқа йирик аэропортларда сайёҳларнинг юзидан таниб олиш тизими (Face control) ишга туширилган. Янги тизим инсон юзини сканердан ўтказди ва фотосуратларни саёҳатчилар паспортларида микрочипларда шифрланган фотосуратлар билан таққослайди. Агар тизим маълумотларнинг ўзаро мос эканлигини тасдиқласа, эшиклар автоматик равишда очилади. Мазкур жараён атиги 15 сония вақтни олади.

Жаҳондаги кўп давлатлар Жаҳон савдо ташкилоти (WTO) доирасидаги ташқи савдони тартибга солиш, ҳар томонлама интеграциялашувчи гуруҳларга аъзолик ва келишув-битимлар имзоланишида фаол қатнашмоқда. Жумладан, Япония ҳам эркин савдо битимлари бўйича ASEAN, ASEAN+3, ASEAN+6 ва APEC гуруҳларида фаол.

Япония божхона сиёсатида қуйидаги 5 йўналишда бошқарув кадрларини тайёрлашга устувор аҳамият қаратилмоқда.

1. Хавфсизлик сиёсати йўналиши кадрлари.

Бунда, контрабанда ва терроризмга қарши курашиш учун давлат чегара назоратида замонавий инспекцион жиҳозлар (рентген тизимлари, тегагерц тўлқинли ва биосенсорли илғор технологиялар) жорий этилган. Интеллектуал мулкни ҳимоя қилиш (IPR) учун Япония божхона хизмати қонунчиликни қайта кўриб чиқишни таклиф этмоқда. Шунингдек, атроф муҳит муҳофаза муаммоларини ҳал этишда ҳам фаол қатнашмоқда.

2. Даромадларни ундириш сиёсати йўналиши кадрлари.

Япония божхона хизмати давлат бюджетига божхона тўловларини ундириш билан боғлиқ функцияни ҳам бажаради. 2019 йилнинг 10 ойи давомида жами йиллик истиқбол режа ўртача қарийб 2,1 трлн. иена белгиланган бўлсада унинг 78,2 %ини ёки 1,6 трлн. иен ёки қарийб 15 млрд АҚШ доллар божхона тўловлари ундирилган. Бу эса Япония божхона хизматининг давлат солиқлари бўйича агентлик билан бир қаторда турадиган муҳим бўғин эканлигини кўрсатмоқда.

3. Истеъмолчилар учун божхона хизматларидан фойдаланишда қулайлик сиёсати бўйича кадрлар (маркетологлар).

Япония божхонаси 40 йилдан ортиқ вақт давомида хавфларни бошқариш тизимига асосланган божхона расмийлаштируви тартибидан фойдаланиб келмоқда. 2001 йилда Япония божхона хизмати “Ваколатли иқтисодий оператор” мақомини жорий қилган. Импортёрлар, экспортёрлар ва маълум шартларга жавоб берадиган омбор операторлари учун соддалаштирилган божхона тартиблари жорий этилган. Япония ваколатли иқтисодий операторлар бўйича халқаро шериклик борасида АҚШ, Европа Иттифоқи, Австралия ва Янги Зеландия каби хорижий давлатлар билан ваколатли иқтисодий оператор дастурларининг ўзаро тан олиншини ўрнатиш учун музокаралар олиб бормоқда.

4. Халқаро ҳамкорлик сиёсати бўйича кадрлар.

Япония божхона хизмати ходимлари Жаҳон божхона ташкилотининг фаол иштирокчиси ҳисобланадилар. Жумладан, Жаҳон божхона ташкилотининг ҳозирги бош котиби ҳам япониялик Кунио Микуриядир. Япония, шунингдек, АРЕС, АSEM ва икки томонлама келишувлар каби минтақавий тузилмалар ишларида фаол иштирок этмоқда.

5. Самарали бошқарув сиёсати бўйича кадрлар (менежерлар).

Япония ҳукумати бошқарувни яхшилаш учун устувор таркибий ислоҳотларни амалга оширмоқда. Самарадорликни кафолатлаш ва ўз ҳаракатларининг бажарилишини баҳолаш мақсадида Япония божхона хизмати ҳар йили ўз фаолиятини баҳолаб, натижаларини халққа эълон қилиб бормоқда.

Айни пайтда Япония божхона хизмати норматив-ҳуқуқий асосларни такомиллаштириш, таркибий тузилмалар қайта таъсис этиш, соҳага “Ягона ойна” тамойили асосида янги ахборот тизимларини жорий этиш, юқори технологияли ва самарали инспекцион кўрик мажмуалари, ускуна ва жиҳозлар билан таъминлаш, инсон ресурсларини ривожлантириш, ҳукумат,

иктисодиёт тармоқлари ва таълим муассасалари билан ҳамкорликни мустаҳкамлашга қаратилган ислохотларни амалга оширмоқда.

Япония божхона органларида ходимлар билан ишлашда уларни тайёрлаш ва малакасини ошириб бориш билан кадрлар йўналишида шуғулланилади. Ходимларнинг Япония божхона хизматидаги фаолияти қуйидаги принципларга асосланади: бутун умрлик ишга ёлланмиш, доимий ротация, иш жараёнида узлуксиз тайёрлантириб бориш. Тизимдаги ходимлар жами 8 та иерархияда хизмат олиб боришади, ҳар бир йўналишда 15 та разряд мавжуд. Иерархия ходимларнинг давлат хизматидаги лавозимига қараб бўлинади, разряд ходимнинг хизмат йиллари стажи, мутахассислиги ва унга нисбатан билдирилган тавсифнома асосида фарқланади.

Божхона органларидаги бошқарув фаолияти бошқа давлат органларида бўлгани каби муаммоли вазиятларни олдиндан аниқлаш ва бартараф этишга қаратилган ташкилий-бошқарув тартибдаги чоратadbирларни қўллашдан иборат ҳисобланади. Европа иттифоқиға аъзо давлатларнинг божхона соҳасидаги бошқарув фаолияти бўйича тажрибасини таҳлил қилишда қуйидаги асосий хусусиятларни инобатға олиш лозим: давлатлар ривожланганлик даражаси, тизимда жорий этилган ахборот-технологилари, ходим ва раҳбар муносабатларининг тартибға солиш принциплари.

Шу ўринда, миллий бошқарув тизимини такомиллаштиришда қисқа муддат ичида давлатнинг иқтисодиётини ғарб давлатлари даражасида ўсишиға сабаб бўлган **Хитой Халқ Республикасининг** тажрибасиға таяниш аҳамиятли ҳисобланади. Ўзбекистон Республикаси ҳуқуқни муҳофаза қилувчи органлари фаолиятида бошқарув фаолиятини такомиллаштиришда **Хитой Халқ Республикасининг** ижобий тажрибасидан фойдаланишнинг аҳамияти юқори ҳисобланади.

Хитойнинг илғор тажрибалари қуйидагилардан иборат:

1. Ҳуқуқни муҳофаза қилиш органларининг бошқарув қарорларини қабул қилишда ходимлар фаолияти устидан назорат тизимини такомиллаштирилган.

2. Бошқарув қарорларини қабул қилишда ғоявий ва тарбиявий ишларни самарали ташкил этиш.

3. Ҳуқуқни муҳофаза қилувчи орган ходимларини хизмат фаолиятининг хусусиятиға кўра профессионал касб маҳоратини ошириб бориш, доимий қайта тайёрлаш, турли муддатлар курсларда малакасини оширишни ташкиллаштириш.

ХУЛОСА

Хулоса ўрнида таъкидлаш жоизки, хорижий тажрибанинг энг илғор ютуғи бошқарув фаолиятида стресс ва муаммоли вазиятларда бошқарув қарорларини қабул қилишда асосий восита кадрлар тайёрлаш тизими билан боғлиқ.

Ҳорижий натижаларига кўра куйидагиларни амалга ошириш мақсадга мувофиқ деб ҳисобланади:

- Божхона институтида йўлга қўйилган “Божхона менежменти” ўқув курсларида бошқарув фаолиятида стресс ва муаммоли вазиятларда бошқарув қарорларини қабул қилиш йўналишида ўқув дарсларини жорий этиш;

- Божхона қўмитасининг Инсон ресурсларини ривожлантириш ва бошқариш бошқармаси томонидан барча таркибий тузилмаларнинг бошқарув фаолиятини назорат қилиш тизимини рақамлаштириш бўйича чора-тадбирларни ишлаб чиқиш;

- раҳбар лавозимига ходимларни саралаш ва тайинлаш жараёнларида “стресс-менежмент” қисқа муддатли курсидан ўтганлик талабини жорий этиш.

MODERNIZATION OF EDUCATION AND INCREASING THE QUALITY OF EDUCATION

Annotation. This article describes how to provide the educational process with pedagogical technologies, study the best practices of the education system, apply them to the teaching process and improve the quality of education.

Keywords: education, upbringing, "National Training Program", "Law on Education", continuing education, pedagogical technologies, innovative methods.

Каждая дисциплина имеет свои этапы непрерывного прогресса. Накануне нового исторического этапа, оказывающего существенное влияние на развитие науки, обычно не обходится без масштабных и напряженных дискуссий.

На основе Закона Республики Узбекистан «Об образовании» и «Национальной программы подготовки кадров», а также нормативных документов в виде постановлений правительства, обеспечивающих их реализацию, в нашей стране создан фундамент системы непрерывного образования. Установление управления всеми звеньями непрерывного образования на уровне мировых стандартов и современных требований с

учетом особенностей и возможностей, присущих каждому из них, формирование новой системы образования и воспитания было поставлено на повестку дня как основа развития независимого Узбекистана.

Одним из основных факторов реформирования сферы образования является обеспечение образовательного процесса педагогическими технологиями, изучение лучших практик образовательной системы и применение их в учебном процессе.

Современные педагогические технологии требуют использования методов, воспитывающих у студентов инициативу, самостоятельность, глубокое и тщательное усвоение знаний, наблюдательность, память и творческое воображение.

Поскольку одно из требований «Национальной программы подготовки кадров» - научить студентов мыслить, рассуждать и проявлять творческий подход, мы, специалисты, должны организовывать свои занятия с использованием педагогических технологий и инновационных методов и быть готовыми проводить занятия, исходя из требований сегодняшнего дня.

Второй этап реализации «Национальной программы подготовки кадров» ставит задачу комплексного внедрения педагогических технологий в содержание образования. Это возлагает ответственные задачи на всех педагогов. Ученые нашей республики пытаются создать образовательные технологии, основанные на науке и адаптированные к социально-педагогическим условиям Узбекистана, и использовать их в образовательной практике. В литературе, посвященной педагогике, широко используются и по-разному трактуются такие понятия, как «педагогическая технология», «образовательная технология», «передовая педагогическая технология». В основе термина педагогическая технология лежит системный подход к образовательному процессу, обладающий новыми, уникальными характеристиками. Это означает инновационный подход к образовательному процессу. Организация нового образования означает внедрение в учебный процесс передовых методов и приемов, используемых в практике мировой педагогики, технических средств и форм обучения с учетом индивидуальности, психического своеобразия, интеллектуальных способностей, национальных и социальных особенностей.

Педагогическая технология заставляет смотреть на студента как на субъекта образовательного процесса, то есть как на активного участника, а на преподавателя как на организатора и менеджера этого процесса.

Основными параметрами образования при преподавании педагогической технологии считаются:

- вся образовательная ситуация рассматривается как объект управления;
- управление образованием целенаправленно на развитие духовных сил учащегося;

- образовательный процесс осуществляется демократично, поощряюще;

- необходимым условием образовательного процесса является поддержка личной инициативы обучающегося, открытости личности педагога, их сотрудничества для создания взаимодовверительных отношений.

В заключение можно сказать, что инновационные методы педагогических технологий стремительно и масштабно входят в систему образования. Важнейшим аспектом этого метода является то, что он побуждает студентов стать партнерами, повышает их активность, учит самостоятельно выражать свои мысли, критически мыслить, анализировать, делать выводы. В отличие от традиционных методов обучения, этот метод обеспечивает широкое участие преподавателя и студента в уроке, а в некоторых местах студент более активен, чем преподаватель.

В настоящее время коренные изменения происходят в сфере народного образования в нашей стране. Это требует совершенствования содержания подготовки кадров. Необходимо совершенствовать ораторское мастерство и квалификацию нашей молодежи, чтобы вырастить из нее зрелых специалистов во всех сферах и воспитать из них гармонично развитых личностей.

Поскольку наше время требует правильного выражения мышления и продуктов мысли у нынешнего молодого поколения, нам, педагогам, следует использовать новые методы и методы для развития этих навыков у студентов.

КОРХОНАЛАРДА ПУЛ ОҚИМЛАРИ ТЎҒРИСИДАГИ ҲИСОБОТНИ ТАКОМИЛЛАШТИРИШ

Аннотация. Мақолада пул оқими тушунчаси ҳақида тўхталиб, Бухгалтерия ҳисоботи миллий стандарти унда белгиланган умумий қоидалар, мақсади, амал қилиш соҳаси, пул оқими каби тушунчалар акс этган. Қолаверса, мақолада пул маблағлари оқимининг шаклланиши, ўзлик маблағлари, жалб қилинган маблағлар, қарз маблағлари, оператив пул маблағлари тўғрисида ҳам маълумот келтириб ўтилган. Корхоналарда пул маблағлари оқимини самарали бошқариш ва оптималлаштиришдаги бир қанча тамойиллар келтириб ўтилган.

Калит сўзлар: пул оқими, актив, активлар гуруҳи, маблағлар оқими, эквивалент, ҳисобот, молиявий аҳвол, баҳолаш, субъект, ўзлик маблағлари, жалб қилинган маблағлар, қарз маблағлари, оператив пул маблағлари, фойда, прогнозлаш, бозор муносабатлари, устав капитали, мулк эгалари, иқтисодий ўсиш, бизнес, мулк.

IMPROVING BUSINESS STATEMENT OF CASH FLOWS

Abstract. The article focuses on the concept of cash flow, and the national accounting reporting standard reflects concepts such as general rules, purpose, scope, and cash flow. In addition, the article provides information on the formation of cash flow, equity funds, borrowed funds, debt funds, operational funds. Several principles of effective management and optimization of cash flow in enterprises are mentioned.

Keywords: cash flow, asset, asset group, cash flow, equivalent, statement, financial position, valuation, entity, equity, borrowed funds, debt, operating cash, profit, forecasting, market relations, share capital, property owners, economic growth, business, property.

Жамиятимизда иқтисодиёт соҳасини ривожлантириш борасида бир қанча ислохотлар амалга оширилмоқда. Бу борада иқтисодий ўсиш, бизнес, шунингдек, тадбиркорлик фаолиятини кўллаб –қувватлаш орқали кўплаб

натижаларга эришилди. Бозор муносабатлари шароитида пул маблағларидан оқилона фойдаланиш, айниқса, корхоналарда пул маблағлари оқимини ошириш муҳим аҳамият касб этади.

Республикамизда 2017-2021 йилларда ривожланишининг бешта устувор йўналишлари бўйича Ҳаракатлар стратегиясида кичик бизнес ва хусусий тадбиркорлик, хусусан, корхоналарнинг ишлаб чиқариш салоҳияти ва қийматини оширишдаги вазифалари алоҳида белгилаб берилган эди. Ушбулар ижросини амалда тадбиқ этиш юзасидан бир қанча муҳим вазифалар белгилаб берилиб, аниқ мақсад ва вазифалар амалга оширилиб келинмоқда. Мамлакатимизда иқтисодиёт соҳасини ривожлантириш, корхоналарда пул маблағлари ҳажмини ошишига, шунингдек, пул маблағлари оқимини прогнозлаш муҳим вазифалардан биридир.

Ўзбекистон Республикаси Давлат мулкани бошқариш давлат қўмитасининг қарорининг илова қисмида 1-боби яъни, Умумий қоидаларида пул оқими тушунчасига алоҳида тўхталиб ўтилган.²⁵⁹

Яъни, пул оқими-муайян давр мобайнида актив, активлар гуруҳи, корхона томонидан яратиладиган пул маблағлари оқими деб келтириб ўтилган.

Пул оқими тўғрисидаги ҳисобот Ўзбекистон Республикаси Бухгалтерия ҳисоботи миллий стандарти 9-сон БҲМС да Умумий қоидалари, мақсади, амал қилиш соҳаси, пул оқими, ҳаракати тўғрисидаги ахборотни, билиш фойдалилиги, тушунчалар, пул маблағи ва эквивалентлари пул оқимлари тўғрисидаги ҳисоботни тақдим этиш кабилар тўғрисида алоҳида қайд этилган.²⁶⁰ Ушбудан келиб чиқиб, пул оқимлари тўғрисидаги ҳисобот ундан фойдаланувчиларга хўжалик юритувчи субъектнинг молиявий аҳволидаги ўзгаришларни баҳолашга имкон беради.

Ўзбекистон Республикаси Молия Вазирининг “Молиявий ҳисобот шакллари ва уларни тўлдириш бўйича қоидаларни тасдиқлаш тўғрисида”ги буйруғи²⁶¹ пул оқимлари тўғрисидаги ҳисобот, хусусий капитал тўғрисидаги ҳисобот кабилар алоҳида келтириб ўтилган.

Корхоналарда пул маблағлари оқимининг иқтисодий моҳияти, асосий хусусиятлари, корхона пул маблағларидан самарали фойдаланиш, корхонанинг пул маблағлари оқимини шаклланиши асосий вазифалардир.

Пул маблағлари ҳаракати ҳисоботи молиявий ҳисоботнинг умумлашган даромад, молиявий ҳолат ва капиталдаги ўзгаришлар тўғрисидаги ҳисоботлар қаторидаги асосий ҳисоботларидан бири ҳисобланади.

Корхонанинг пул маблағлари оқимини шаклланиши, ўзлик маблағлари, жалб қилинган маблағлар, қарз маблағлари, оператив пул маблағлари асосий ўринга эга.

²⁵⁹ Ўзбекистон Республикаси давлат мулки қўмитасининг 2009 йил 6 октябрдаги 01/19-18/19 сон қарори

²⁶⁰ Ўзбекистон Республикаси Адлия вазирлиги 1998 й. 4 ноябрь 519 сон.

²⁶¹ Ўзбекистон Республикаси Молия вазирининг 2002 йил 27 декабрдаги 140-сон буйруғи

Ушбу тушунчалар ҳақида тўхталиб ўтарканмиз, пул маблағлари ва уларнинг эквивалентлари таокибидаги ўзгаришлар хусусида ҳам фикр юритиш жоиз. Ушбулар бўйича қуйидагиларни келтиришимиз жоиз:

Пул маблағлари ҳисобот даврида пул маблағлари ва ларнинг эквивалентлари таркибидаги ўзгаришлар тўғрисидаги маълумотларни, ҳисобот давридаги ўзгаришлар тўғрисидаги маълумотларни, ҳисобот давридаги пул оқимларини операцион, инвестиция ва молиявий фаолиятлар бўйича таснифлаш орқали ёритиб беради.

Юқорида корхонанинг пул маблағлари оқимини шаклланиши асосий ўринга эга эканлиги таъкидланиб ўтилди. Ушбулар бўйича маълумот бериб ўтсак. Ўзлик маблағларига (устав капитали, қўшимча капитал, резерв капитали, тақсимланмаган фойда, амортизация фонди, жамғарма фонди), жалб қилинган маблағларга (қимматли қоғозлар эмиссиясидан шаклланган фонд, дивидендлар бўйича ҳисоботлар, келгуси давр даромадлари, кутиладиган харажатлар резервлари), қарз маблағлари (банк кредитлари, кредиторлик қарзлари, факторинг, лизинг ва бошқа фондлар), оператив пул маблағлари (меҳнат фонди тўлаш учун фонд, дивидендлар тўлаш учун фонд, бюджетга тўловлар ва бошқалар учун).

Корхона ўз фаолиятини бошлашда зарур бўлган мулкни сотиб олишни ҳамда ишлаб чиқаришни юритишни молиялаштирадиган асосий манба бўлиб корхонанинг устав капитали шаклида жамғариладиган мулк эгалари маблағлари корхонада белгиланган тартибда шаклланган бошқа капиталлар ҳамда таъсисчиларнинг ишлаб чиқаришни кенгайтириши учун қолдирган фойдалари ҳисобланади.

Корхоналарда пул оқими тушунчаси корхона тижорат фаолиятининг соф пулли натижаси сифатида ифодаланиб, улар ҳаракатланишининг йўналиши бўйича, тушумларнинг тавсифлари бўйича, гуруҳларга ажратиш мумкин.

Пул оқими ўз ҳаракатининг йўналиши бўйича пул маблағлари кирими, пул маблағлари чиқимига ажратилса, тушумлар тавсифи бўйича бир хил ва доимий равишда бўлмаган тушуми пул оқими, бир хил бўлган лекин доимий равишда бўлмаган тушуми пул оқими, бир хил миқдордаги ва доимий бир муддатда ташувчи пул оқими, ҳар қандай молиявий битимда мақсад икки йўналишдаги пул оқими тўғрисида боради, 1. Ҳозирдан келгусига томон, 2. Келгусидан ҳозирга томон.

Корхоналарда пул маблағлари оқимини самарали бошқариш ва оптималлаштиришда ахборотларнинг ишончилиги тамойили, баланслаштирилиш тамойили, самарадорликни таъминлаш тамойили, ликвидликни таъминлаш тамойили каби тамойиллар орқали амалга оширилади.

Корхоналар бошқарув сиёсатида пул оқимларини бошқариш муҳим аҳамиятга эга. Жумладан, корхоналарда пул маблағларидан самарали фойдаланиш мақсадида пул маблағларини бошқариш сиёсатини ишлаб

чиқиш, пул маблағларига бўлган зарур минимал эҳтиёжни аниқлаш, маълум бир белгиланган муддатда пул маблағлари қолдиғининг тебраниш диапазонини аниқлаш, пул маблағларига бўлган эҳтиёжни максимал даражада камайтириш мақсадида тўлов оқимларини тўғирлаш, пул маблағларининг тез айлаувчанлигини таъминлаш, вақтинчалик бўш пул маблағларининг рентабеллигини таъминлаш кабилардир.

Айнан пул оқимларини бошқариш ва ундан самарали фойдаланишда фақатгинапул маблағларига бўлган эҳтиёжни аниқлаш, вақтинчалик бўш пул маблағларининг рентабеллигини таъминлаш кабилардан билан биргаликда, корхоналар бошқарув сиёсатида пул оқимларини бошқариш муҳим аҳамиятга эгадир.

Корхоналар бошқарув сиёсатида пул оқимларини бошқаришни самарали йўлга қўйиш орқали юқорида келтириб ўтилган жараёнлар шаклланиб боради.

Корхоналарда пул оқимларини бошқариш молиявий фаолиятни янада ривожлантиришдан иборатдир.

Корхоналар қийматини бошқариш, инвестицияларни жалб қилишга доир изланиш ва тадқиқотлар А.Маршалл²⁶², Ж.Милл, Д.Рикардо²⁶³, А.Смит²⁶⁴ каби вакиллар шуғулланган.

Юқоридагилардан хулоса ва таклиф сифатида қуйидагиларни келтириш мақсадга мувофиқ:

Пул оқимлари ҳажмига ва уларнинг вақт бўйича шаклланиш характерида таъсир этадган омилларни ҳисобга олиш;

Корхоналарда пул оқимларини самарали бошқаришни йўлга қўйиб бориш;

Корхоналарда пул оқимларидан самарали фойдаланиш бўйича аниқ механизмлар ишлаб чиқиш;

Пул оқимлари ва уларни шакллантиришда аниқ чора-тадбирлар режасини ишлаб чиқиш;

Ушбулар бўйича халқаро стандартларга мос равишда тажрибалар алмашишни йўлга қўйиш;

Корхона айланма маблағларини фоизли ва фоизсиз қарзлар олиш орқали тўлдириш;

Устав фондини купайтириш орқали корхонанинг айланма маблағларини тўлдириш;

Савдо мақсадларида бир қанча шартномалар тузишни йўлга қўйиш;

Товарларни сотиш ва хизматларни кўрсатишдан пул маблағларининг келиб тушиши;

Молиявий ёки инвестиция фаолиятига аниқ тегишли бўлмаган фойда солиғи бўйича пул маблағларининг тўлови ёки уларнинг қайтарилиши

Ушбу таҳлиллар, изланишлар шуни кўрсатадики, корхоналарда пул оқимларидан самарали бошқариш, корхона айланма маблағларини фоизли ва фоизсиз қарзлар олиш орқали тўлдириш, устав фондини купайтириш орқали корхонанинг айланма маблағларини тўлдириш, савдо мақсадларида бир қанча шартномалар тузишни, йўлга қўйиш, молиявий ёки инвестиция фаолиятига аниқ тегишли бўлмаган фойда солиғи бўйича пул маблағларининг тўлови ёки уларнинг қайтарилиши кабилар орқали корхоналарда пул оқимлари жараёнини янада такомиллаштириш сифатида қараш мумкин ва ушбу таклиф ва тавсиялар орқали такомиллаштириш мумкин.

УЛУЧШЕНИЕ ОТЧЕТА О ДЕНЕЖНЫХ ПОТОКАХ

Аннотация. В статье рассмотрено понятие движения денежных средств, а в национальном стандарте бухгалтерской отчетности отражены такие понятия, как общие правила, цель, объем и движение денежных средств. Кроме того, в статье представлена информация о формировании денежных потоков, фондов акционерного капитала, заемных средств, операционных фондов. Упомянуты некоторые принципы эффективного управления и оптимизации денежных потоков на предприятиях.

Ключевые слова: денежный поток, актив, группа активов, денежный поток, эквивалент, отчет, финансовое положение, оценка, предприятие, собственный капитал, заемные средства, долг, операционные денежные средства, прибыль, прогнозирование, рыночные отношения, акционерный капитал, собственники недвижимости, экономический рост, бизнес, недвижимость.

IMPROVING CASH FLOW REPORTING

Abstract. The article discusses the concept of cash flow, and the national accounting standard reflects such concepts as general rules, purpose, volume and cash flow. In addition, the article provides information on the formation of cash flows, equity funds, debt funds, borrowed funds, operating funds. Some principles of effective management and optimization of cash flows in enterprises are mentioned.

Key words: cash flow, asset, group of assets, cash flow, equivalent, report, financial position, valuation, enterprise, equity capital, borrowed funds, debt, operating cash, profit, forecasting, market relations, share capital, real estate owners, economic growth, business, real estate.

В нашем обществе реализуется ряд реформ, касающихся развития экономического сектора. В этом отношении многие результаты были достигнуты за счет поддержки экономического роста, бизнеса и

предпринимательства. В условиях рыночных отношений важно разумно использовать деньги, особенно для увеличения денежного потока на предприятиях.

В Стратегии действий по пяти приоритетным направлениям развития нашей республики на 2017-2021 годы определены задачи малого бизнеса и частного предпринимательства, в частности, по повышению производственного потенциала и стоимости предприятий. Одной из важных задач является развитие экономического сектора в нашей стране, увеличение объема денежных средств на предприятиях, а также прогнозирование движения денежных средств.

Глава 1 приложения к решению Государственного комитета по управлению государственным имуществом Республики Узбекистан, то есть Общих правил, конкретно посвящена понятию движения денежных средств.²⁶⁵

То есть денежный поток определяется как поток денежных средств, созданный активом, группой активов, предприятием в течение определенного периода.

Отчет о движении денежных средств в национальном стандарте бухгалтерской отчетности Республики Узбекистан №9 ВНМС Общие правила, назначение, сфера применения, информация о движении денежных средств, движении, полезности знаний, понятий, денежных средств и их эквивалентов и т.д. выполнено ²⁶⁶На основании этого отчет о движении денежных средств позволяет его пользователям оценить изменение финансового положения экономического субъекта.

Приказ Министра финансов Республики Узбекистан «Об утверждении форм финансовой отчетности и правил ее заполнения» ²⁶⁷включает в себя отчет о движении денежных средств, отчет о частном капитале и т.д.

Основными задачами являются экономическая природа денежного потока на предприятии, его основные особенности, эффективное использование денежных средств предприятия, формирование денежного потока предприятия.

Отчет о движении денежных средств является одним из основных отчетов финансовой отчетности наряду с отчетами о совокупном доходе, финансовом положении и изменениях в собственном капитале.

Формирование денежного потока компании, основное место занимают собственные средства, заемные средства, заемные средства, операционные средства.

²⁶⁵ Постановление Госкомимущества Республики Узбекистан от 6 октября 2009 года №19-18/19 01/19.

²⁶⁶ Министерство юстиции Республики Узбекистан в 1998 году. 4 ноября, 519 выпусков.

²⁶⁷ Приказ Министра финансов Республики Узбекистан от 27 декабря 2002 года №140.

Пока мы останавливаемся на этих понятиях, допустимо также подумать и об изменении стоимости денег и их эквивалентов. В отношении них можно отметить следующее:

Денежные средства предоставляют информацию об изменении структуры денежных средств и их эквивалентов в течение отчетного периода, информацию об изменениях в течение отчетного периода, путем классификации потоков денежных средств в отчетном периоде по операционной, инвестиционной и финансовой деятельности.

Выше подчеркивалось, что основное место имеет формирование денежного потока предприятия. Дадим информацию об этом. Собственные средства (уставный капитал, добавочный капитал, резервный капитал, нераспределенная прибыль, фонд амортизации, резервный фонд), заемные средства (фонд, сформированный за счет выпуска ценных бумаг, отчетов о дивидендах, будущих доходах, резервы на ожидаемые расходы), заемные средства (банковские кредиты, кредиторская задолженность, факторинговые, лизинговые и другие фонды), операционные фонды (фонд оплаты труда, фонд выплаты дивидендов, платежей в бюджет и т. д.).

Средства собственников, аккумулированные в виде уставного капитала предприятия, представляют собой прочие капиталы, сформированные в установленном порядке, и прибыль, оставленную учредителями на расширение производства.

Понятие денежного потока на предприятиях выражается как чистый денежный результат коммерческой деятельности предприятия и может быть разделен на группы по направлению их движения, по описанию доходов.

Если денежный поток разделить на приток и отток денежных средств по направлению его движения, по описанию доходов, денежный поток с одинаковым и непостоянным доходом, денежный поток с одинаковым, но непостоянным доходом, денежный поток, несущий одну и ту же сумму и в постоянный период. В любой финансовой операции целью является двусторонний денежный поток: 1. Из настоящего в будущее, 2. Из будущего в настоящее.

Эффективное управление и оптимизация денежных потоков на предприятиях осуществляется посредством таких принципов, как принцип достоверности информации, принцип сбалансированности, принцип обеспечения эффективности и принцип обеспечения ликвидности.

Управление денежными потоками играет важную роль в управленческой политике предприятий. В частности, в целях эффективного использования денежных средств на предприятиях разработать политику управления денежными средствами, определить необходимую минимальную потребность в денежных средствах, определить диапазон колебаний остатка денежных средств в определенный фиксированный период, скорректировать платежные потоки в порядке минимизировать

потребность в средствах, обеспечить быстрый оборот средств, например, обеспечить доходность временно простаивающих средств.

Именно в управлении денежными потоками и их эффективном использовании, а также определении потребности в денежных средствах, обеспечении доходности временно свободных средств, управление денежными потоками имеет важное значение в управленческой политике предприятий.

Вышеуказанные процессы формируются за счет эффективного управления денежными потоками в управленческой политике предприятий.

Управление денежными потоками на предприятиях заключается в дальнейшем развитии финансовой деятельности.

Такие представители, как А.Маршалл, Дж.Милл, Д.Рикардо ²⁶⁸и А.Смит, занимались ²⁶⁹исследованиями и исследованиями управления стоимостью предприятия, привлечения инвестиций.²⁷⁰

Из вышеизложенного в качестве вывода и предложения уместно процитировать следующее:

Учет факторов, влияющих на размер денежных потоков и характер их формирования во времени;

Наладить эффективное управление денежными потоками на предприятиях;

Разработка конкретных механизмов эффективного использования денежных потоков на предприятиях;

Разработка плана конкретных мероприятий по денежным потокам и их формированию;

Налаживание обмена опытом в соответствии с международными стандартами;

Пополнение оборотного капитала компании за счет получения процентных и беспроцентных кредитов;

Пополнение оборотного капитала предприятия за счет увеличения уставного фонда;

Заключение нескольких контрактов в коммерческих целях;

Приток средств от реализации товаров и оказания услуг;

Уплата или возврат подоходного налога, который явно не связан с финансовой или инвестиционной деятельностью

Данные анализы, исследования показывают, что эффективное управление денежными потоками на предприятиях, пополнение оборотных средств предприятия за счет получения процентных и беспроцентных кредитов, пополнение оборотных средств предприятия за счет увеличения уставного фонда, заключения нескольких договоров в торговых целях,

создания, не связанные явно с финансовой или инвестиционной деятельностью, могут рассматриваться как дальнейшее совершенствование процесса движения денежных средств на предприятиях за счет уплаты средств по налогу на прибыль или их возврата и могут быть улучшены с помощью данных предложений и рекомендаций.

ENSURING PRECISION AND QUALITY OF MANUFACTURING PARTS IN MECHANICAL ENGINEERING USING CONTROL CALIBRES

Annotation. The article discusses the improvement of the accuracy and quality of manufacturing parts, the calibers of measuring instruments, the ISO and ESDP tolerance and fit systems, the quality of accuracy, and measurement error.

Keywords: quality, degree of compliance, accuracy, calibers, qualifications, design, regulatory documents.

Точность и качества изготовления деталей – это степень соответствия ее показателей параметрам, заданным конструктором в рабочем чертеже и техническим условиям детали. Соответствие реальной и заданной конструктором деталей определяется факторами: определяемым точностью, шероховатостью и физико-механическими свойствами. Для обеспечения высокого качества и надежности машин необходимо обеспечивать точность их изготовления. Повышение точности и качества изготовления деталей сокращает трудоемкость сборки машин способствует достижению взаимозаменяемости элементов машин и обеспечивает возможность сокращения срока ремонта машин. Калибры были одним из первых измерительных инструментов, применяемых при изготовлении деталей и механизмов машин, главным образом, сопрягаемых деталей, например,

ствола ружья и пули, вала и втулки, винта и гайки и т.п. Калибр не является измерительным средством. С его помощью нельзя определить размер детали. Можно определить только ее пригодность для сборки с другой деталью. Калибры были доминирующим измерительным инструментом в машиностроительном производстве в течение долгого времени. Они изготавливались инструментальными заводами, специализированными фирмами и машиностроительными заводами. Однако, для организации производства калибры чрезвычайно неудобный инструмент. На инструментальных складах машиностроительных заводов хранились сотни, а иногда и тысячи калибров, так как каждый калибр годен для контроля только одного размера детали.

Кроме того, для проверки годности калибров необходимы были контракалибры. Калибры быстро изнашивались, иногда в течение одной смены, и их приходилось ремонтировать и аттестовать. Также следует иметь в виду, что калибры только сортировали изготовленные детали на годные и брак, но не определяли их действительные размеры. Калибры мало пригодны для настройки станков, так как не показывают размер детали. Поэтому с появлением механических, пневматических, электронных и оптических измерительных приборов, и построенных на их базе контрольных приспособлений и измерительных устройств применение калибров на производстве стало быстро сокращаться. На практике для определения точности пользуются квалитетами точности, которые устанавливаются на отдельные параметры деталей и на изделия в целом. В зависимости от предъявляемых к машине требований, а также условий работы деталей в узле и узлов в машине назначают точность изготовления деталей. Различают: точность формы; точность размеров детали; точность взаимного расположения поверхностей. Точность характеризует наряду с геометрическими параметрами изделия и единообразие качественных показателей, таких как мощность, производительность и др. Более точно изготовленные машины имеют более узкое поле разброса этих показателей и более высокие эксплуатационные качества. Точность и качества изготовления детали зависят от комплекса технологических процессов, применяемых в данном производстве. Системы допусков и посадок ИСО и ЕСДП для типовых деталей машин построены по единым принципам и распространяются на размеры до 20 000 мм. Эта область размеров разбита на четыре диапазона: до 1 мм; от 1 мм до 500 мм (наиболее распространенный); от 500 мм до 3150 мм; от 3150 мм до 10 000 мм. Для удовлетворения потребностей различных отраслей промышленности в ЕСДП предусмотрено 19 квалитетов точности, которые обозначаются 01, 0, 1, 2, 17.

Квалитет — это совокупность допусков, соответствующих одинаковой относительной точности для разных номинальных размеров.

Квалитет в переводе означает «степень точности» (точнее «степень качества»).

Квалитеты 01, 0, 1, 2, 3, 4 применяются при изготовлении образцовых мер и калибров, квалитеты с 5-го по 11-й – для сопрягаемых элементов деталей, а квалитеты с 12-го по 18-й – для несопрягаемых элементов деталей. Конструкция, теория и нормативные документы (ГОСТы, международные стандарты ISO) на калибры гладкие и резьбовые были подробно разработаны

на основе системы допусков и посадок. В настоящее время лишь в некоторых областях машиностроения, когда контроль размеров изделий приборами затруднен, например, при контроле валов и отверстий малого диаметра (менее 10 мм), при контроле конусов и при контроле резьбовых деталей, применяют калибры. Однако, для измерения валов и отверстий малого диаметра применен оригинальный способ контроля с помощью набора очень точно изготовленных калибров, размеры которых отличаются на очень небольшую величину. Так, выпускают наборы калибров с разницей размеров в 1,0 или 2,0 мкм. Для измерения отверстий диаметром от 0,5 до 10 мм выпускают наборы предельных и прецизионных гладких калибров-пробок с шагом по диаметру пробки 1,0; 2,0 и 10,0 мкм. Допуск на диаметр калибра-пробки составляет $\pm 0,4$ мкм, а для эталонных калибров-пробок $\pm 0,15$ мкм. Длина рабочей части пробок составляет от 1,0 до 50 мм. Шероховатость поверхности Ra менее 0,1 мкм. Калибры-пробки изготавливают также из твердого сплава. Для измерения валов диаметром от 0,06 до 30 мм выпускают калибры-кольца с шагом размера 1,0 мкм. Допуск на диаметр составляет $\pm 1,25$ мкм. Калибры-кольца изготавливают из легированной стали с рабочей поверхностью, закаленной до твердости HRC=60-62. Калибры-кольца изготавливают также из твердого сплава. С помощью наборов таких точных калибров с шагом диаметров, например, 1,0 мкм можно не только сортировать детали на годные и брак, но и практически достаточно точно определить их диаметр, потому что можно подобрать калибр диаметром очень близким к размеру контролируемой детали, например, с точностью 1-2 мкм. Однако во всех случаях предельно допустимая погрешность измерения прецизионными калибрами будет не менее 2,0 мкм. Это точнее, чем при измерении малых размеров универсальными средствами, например, нутромерами, но значительно проще и удобнее. Еще одна область применения калибров, которая сохранилась в настоящее время – контроль внутренней и наружной резьбы различного назначения. Существуют приборы для контроля отдельных параметров резьбы – наружного, внутреннего и среднего диаметра резьбы, шага резьбы, высоты профиля, погрешности винтовой линии, угла профиля, конусности (для конической резьбы) и др. Но эти приборы полезны при настройке станков и при контроле точной резьбы (ходовые винты, микровинты и т.п.), но они не всегда обеспечивают свинчиваемость

сопрягаемых деталей, прочность и герметичность резьбового соединения. Конечно, можно произвести точное измерение резьбы с помощью координатно-измерительной машины или современных оптических приборов (микроскопа или проектора), но это не всегда возможно даже в производственных условиях и тем более невозможно в условиях эксплуатации. Поэтому для комплексной проверки резьбовых деталей широко применяют резьбовые калибры (резьбовой калибр-пробка и резьбовой калибр-втулка). Особенно важное значение имеет контроль резьбы на концах нефтегазовых труб, потому что от качества этой резьбы зависит прочность и надежность соединений труб в том числе, опускаемых в скважину. Поэтому основным средством приемки резьбовых изделий остается контроль с помощью калибров. В заключении следует отметить, что достоинством современных резьбовых калибров является то, что их изготавливают на точных резьбошлифовальных станках с ЧПУ, позволяющих получить отклонение от круглости 0,5-1,0 мкм и шероховатость $Ra = 0,1$ мкм, Резьбовые калибры аттестуют с высокой точностью по всем параметрам резьбы на координатно-измерительных машинах.

METROLOGICAL CHARACTERISTICS IN PETROLEUM PRODUCTS

Annotation. The article discusses technological processes, control and quality of products, intensification of oil production, certain types of errors, changes in pressure, temperature, chemical composition of water and progressive watering of products.

Key words: Measurements, quality, technological processes, oil production process, pressure changes.

В практической жизни человек всюду имеет дело с измерениями. На каждом шагу встречаются измерения таких величин, как длина, объем, вес, время и др. Измерения являются одним из важнейших путей познания природы человеком. Они дают количественную характеристику окружающего мира, раскрывая человеку действующие в природе закономерности. Все отрасли техники не могли бы существовать без развернутой системы измерений, определяющих как все технологические процессы, контроль и управление ими, так и свойства и качество выпускаемой продукции. Измерения выполняют уникальную функцию получения информации о ходе разработки, производства и эксплуатации изделий в структуре обеспечения качества. Возможность применения результатов измерений для правильного и эффективного решения любой измерительной задачи определяется следующими тремя условиями:

а) результаты измерений выражаются в узаконенных (установленных законодательством Узбекистана) единицах;

б) известны с необходимой заданной достоверностью значения показателей точности результатов измерений;

в) значения показателей точности обеспечивают оптимальное в соответствии с выбранными критериями решение задачи, для которой эти результаты предназначены (результаты измерений получены с требуемой точностью).

Велико значение измерений в современном обществе. Они служат не только основой научно-технических знаний, но имеют первостепенное значение для учета материальных ресурсов и планирования, для внутренней и внешней торговли, для обеспечения качества продукции, взаимозаменяемости узлов и деталей и совершенствования технологии, для обеспечения безопасности труда и других видов человеческой деятельности. Особенно возросла роль измерений в век широкого внедрения новой техники, развития электроники, автоматизации, атомной энергетики, космических полетов. Высокая точность управления полетами космических аппаратов достигнута благодаря современным совершенным средствам измерений, устанавливаемым как на самих космических аппаратах, так и в измерительно-управляющих центрах. Интенсификация добычи нефти привела к значительным изменениям условий эксплуатации скважинных насосных установок, при этом постоянно растет число различных осложняющих факторов. Для проведения метрологических характеристик нам необходимо учитывать определенные виды погрешностей и создавать расчет на основании тех данных, которые мы получали в процессе экспериментов. Для проведения измерительного эксперимента необходимы особые технические средства – средства измерений. Результатом измерения является оценка физической величины в виде некоторого числа принятых для нее единиц. Измерение физической величины (measurement) – совокупность операций по применению технического средства, хранящего единицу физической величины, обеспечивающая нахождение соотношения (в явном или неявном виде) измеряемой величины с ее единицей и получение значения этой величины. Несмотря на то, что измерения непрерывно развиваются и становятся все более сложными, метрологическая сущность остается неизменной и сводится к основному уравнению измерения:

$$Q = X[Q]$$

где Q – измеряемая величина;

X – числовое значение измеряемой величины в принятой единице измерения;

$[Q]$ – выбранная для измерения единица.

В зависимости от того, на какие интервалы разбита шкала, один и тот же размер представляется по-разному. Применение различных единиц в

процессе измерения приводит только к изменению численного значения результата измерения. Цель измерения – получение определенной физической величины в форме наиболее удобной для пользования. Любое измерение заключается в сравнении данной величины с некоторым ее значением, принятым за единицу сравнения. В свою очередь, изменение давления, температуры, химического состава воды и прогрессирующее обводнение продукции добывающих скважин вызвало интенсивное солеотложение на оборудовании и интерес со стороны метрологов исследователей, заинтересованных в уменьшении коэффициента погрешности в солевом растворе при добычи нефти. В процессе добычи нефти возможно отложение нескольких видов солей, которые можно классифицировать по различным признакам: растворимости, скорости образования, трудности удаления, частоте присутствия.

МЕТОДОЛОГИЯ КАРТОГРФИРОВАНИЯ ПЕРЕМЕЩЕНИЯ НАСЕЛЕНИЯ

Аннотация. В статье рассматриваются проблемы карты населения и миграции населения, а карты создаются в программах ГИС. Проанализированы статистические данные о естественном и механическом движении населения Республики Узбекистан, даны предложения и рекомендации по выбору методов картографического изображения для картирования естественного и механического движения населения.

Ключевые слова. Население, естественное и механическое движение, миграция, промилле, коэффициент, программы ГИС, масштаб, статистика, картографирование.

METHODOLOGY FOR MAPPING POPULATION DISPLACEMENTS

Annotation. The article discusses the problems of population maps and population migration, and maps are created in GIS programs. Statistical data on the natural and mechanical movement of the population of the Republic of Uzbekistan is analyzed, proposals and recommendations are given for the selection of cartographic image methods for mapping the natural and mechanical movement of the population.

Keywords. Population, natural and mechanical movement, migration, per thousand, coefficient, GIS programs, scale, statistics, mapping.

Введение. В настоящее время естественное и механическое перемещение населения считается одним из актуальных и важных направлений экономики. Внешняя трудовая миграция играет все более важную роль в общем миграционном процессе. Трудовая миграция или миграционные движения, связанные с занятостью населения, является одним из наиболее распространенных проявлений современных миграционных процессов.

Основная часть. Хотя миграция населения была свойственна людям с древнейших времен, в современное время она проявляется в совершенно новой форме по своей сути и масштабам. По данным 2022 года, всего в мире мигрантами считаются более 280 миллионов человек. Они составляют 3,6% населения мира, из них 135 миллионов женщин и 146 миллионов мужчин. За исключением беженцев, наибольшую часть из них составляют трудовые мигранты, большая часть которых – мигранты, направляющиеся в развитые страны и крупные города (мегаполисы).

В процессах трудовой миграции населения Узбекистана, в частности, можно наблюдать, что отрицательное сальдо баланса внешней трудовой миграции постепенно сокращается. Стоит отметить, что изучение естественного движения и миграционных процессов населения становится все более актуальным сегодня, когда мировая экономика совершенствуется. Создание множества новых рабочих мест в развитых странах мира, рост спроса на трудовых мигрантов также вызвали резкие изменения в тенденциях миграционных процессов.

Высокие масштабы и скорость миграции в странах мира, без сомнения, являются одной из отличительных особенностей текущего периода, существенно определяющей состояние занятости, рынка труда и уровня безработицы. Именно поэтому миграция населения во многих странах все больше привлекает внимание демографов, социологов, этнографов, экономистов, географов, историков, медицинских работников и т. д., поскольку в процесс перемещения вовлекается все больше трудовые ресурсы.

Трудовые ресурсы являются основной трудоспособной частью населения страны, они выполняют широкий спектр работ в народном хозяйстве своим физическим развитием, умственными способностями и знаниями.

Общие коэффициенты естественного и механического движения населения Узбекистана. Расчет общих коэффициентов естественного и механического движения населения Узбекистана. По данным 2022 года численность населения Узбекистана на начало года $C_0 = 35\,271,3$ тыс. человек и на конец года $C_1 = 36\,024,9$ тыс. человек, число родившихся $P =$

932,217 тыс. человек, численность смертей составляет $C = 172,068$ тыс. человек. Иммигрировало 214,821 человек, Эммигрировало 221,319 человек (внешняя миграция). Из вышеизложенного рассчитывалась среднегодовая численность населения, а затем некоторые коэффициенты.

Показатели численности населения. Численность населения – это показатель численности населения в определенное время, который можно использовать для определения абсолютного прироста населения, темпов роста и средней численности населения.

Численность населения \bar{C} , то есть для определения численности населения $\bar{C} = \frac{C_0 + C_1}{2}$ в данном году используются показатели абсолютной численности населения на начало и конец года.

Здесь \bar{C} - среднегодовая численность населения.

$$\bar{C} = (35\,271,3 + 36\,024,9) / 2 = 35\,648,1 \text{ минг киши.}$$

Аҳолининг табиий ҳаракати. Аҳолининг табиий ҳаракати – туғилиш ва ўлим жараёнлари билан боғлиқ аҳоли сонининг ўзгаришидир.

Естественный рост: $\Delta e = P - C$

В нем P — число родившихся, C — число смертей.

Рождение и смерть всегда находятся под влиянием различных природных факторов и происходят в определенные периоды по определенным законам.

Общий коэффициент рождаемости:

$$O_{pk} = \frac{P}{\bar{C}} \times 1000 = 932,217 / 35\,648,1 \times 1000 = 26,1 \text{ ‰}$$

Общий коэффициент смертности:

$$O_{ск} = \frac{C}{\bar{C}} \times 1000 = 172,068 / 35\,648,1 \times 1000 = 4,8 \text{ ‰}$$

Общий коэффициент естественного прироста:

$$O_{ек} = \frac{P-C}{\bar{C}} \times 1000 = 760,1 / 35\,648,1 \times 1000 = 21,3 \text{ ‰}$$

Общий рост в 2022 году:

$$\Delta_{op} = C^{m+1} - C^m = 36\,024,9 - 35\,271,3 = 753,6 \text{ тысяча человек,}$$

Естественный рост:

$$\Delta e = P - C = 932,217 - 172,068 = 760,149 \text{ тысяча человек,}$$

Индикатором механического движения является миграция. Миграция – это механическое перемещение людей внутри страны или между странами.

$$\Delta_{tex} = \Delta_{приб} - \Delta_{выб}$$

$\Delta_{приб}$ - иммигранты, $\Delta_{выб}$ - эмигранты.

Миграционный рост:

$$\Delta_{мех} = \Delta_{ор} - \Delta_e = 753,6 - 760,149 = -6,549 \text{ тысяча человек.}$$

Соответственно, коэффициенты общего прироста населения и миграционного прироста были следующими:

Общий прирост населения:

$$\Delta_{ор} = \Delta_e + \Delta_m$$

Здесь, Δ_e - естественный рост; Δ_m - миграционный рост.

Коэффициент общего роста:

$$\Delta_{орk} = 753,6 / 35\,648,1 \times 1000 = 21,1 \text{ ‰}$$

Коэффициент механического роста:

$$K_{мех} = \frac{\Delta_{мех}}{C} \times 1000$$

$$\Delta_{мехk} = -6,549 / 35\,648,1 \times 1000 = -0,18 \text{ ‰}$$

Результат: в 2022 году естественный прирост населения Узбекистана составит 760,149 тыс. человек, миграционное движение -6,549 тыс. человек, общий прирост 753,6 тыс. человек, общий коэффициент рождаемости 26,1 ‰, общая смертность коэффициент составит 4,8 ‰, общий коэффициент естественного прироста составил 21,3 ‰ и соответственно общий коэффициент прироста составил 21,1 ‰, коэффициент миграционного (механического) прироста (убыли) составил -0,18 ‰.

В качестве основных источников для создания карт населения принимаются материалы государственной статистики (текущий учет списков населения), картографические и аэрокосмические материалы.

Распределение населения показано на карте в пределах крупных регионов. Если население каждого региона картографировать и анализировать, миграционные процессы можно будет отразить более четко и на основе полных данных. Потому что он учитывает географические особенности этой территории, взаимоотношения населения и природной среды, социально-экономические условия на карте населения государств.

При картировании механических перемещений населения необходимо различать миграцию к новому месту жительства на постоянное место жительства, миграции, связанные с сезонными работами, а также рекреационные приезды. В крупных городах и урбанизированных регионах необходимо разделять ежедневную или еженедельную миграцию. Передвижение людей из одного места в другое изображается на карте методом символов в движении. Существуют отдельные социально-географические описания, показывающие численность и редкость, состав, время и повторяемость миграционных потоков. Через карты общего

прироста населения и миграции, созданные в программах ГАТ, за какой период население какой страны мигрировало в какую страну с целью работы или учебы, какой процент занятого населения в определенной стране составляют мигранты, связаны денежные потоки миграция, территориальное распределение мигрантов, иностранцы могут представлять такую информацию, как трудовая деятельность, основные туристические районы и туристические центры.

При картографировании населения широко используются динамические (анимированные) картографические знаки и методы картографического представления, возможности ГАТ движущихся знаков, картограммы, картограммы, символы, методы линейной разметки. Желательно, чтобы выбранные графические инструменты были максимально простыми и не занимали много места, и в то же время были четко отличимы друг от друга и легко рисовались, а изменение внутри сравнимого движения было хорошо заметно. 1-карта.

Карта составлена авторами на основе информации Госкомстата Республики Узбекистан.

На основе приведенных выше коэффициентов были разработаны и составлены карты населения в программах ГИС. Для этого использовались методы анимации (в программе ArcGIS).

При картировании перемещений населения целесообразно использовать методы точек со знаками. Но форма геометрического символа в этом методе задана темным цветом и не подлежит закрашиванию внутри. Например, внешняя миграция может быть представлена кружком, а внутренняя миграция — точкой. В некоторых случаях на одной карте могут быть указаны точки двух размеров, например, в большой точке — 1000 человек, а в маленькой — 100 человек. Разумеется, соответствующий подбор «веса» точек дает наглядное представление о распределении предмета или события и явления в границах изображаемой области.

Также необходимо обратить особое внимание на масштаб символов, используемых при составлении карт. Они представляют собой количественные показатели, такие как плотность населения и увеличение или уменьшение числа мигрантов. Например, если один круг соответствует 10 000 мигрантов, а другой — 50 000 мигрантов, то один будет в пять раз больше другого. Он производит очень сильное впечатление при динамическом рендеринге в ГИС, но в бумажной версии может занимать много места и увеличиваться в динамическом режиме. С учетом этого в программе ArcGIS создана миграционная карта нашей республики. На карте отображалось анимированное изображение путем мигания движения условных символов.

Заключение. Любым картам населения и миграции свойственны тематические карты, состоящие из общегеографических элементов карты и специального содержания. Независимо от конкретного содержания, изображенного на картах, и способов картографического изображения, на некоторых из них могут быть изображены более общие географические элементы, а на некоторых — менее.

МАРКЕТИНГОВАЯ СТРАТЕГИЯ КАК ИНСТРУМЕНТ ПОВЫШЕНИЯ КОНКУРЕНТОСПОСОБНОСТИ НА РЫНКЕ

Аннотация. Конкуренция является основой развития рыночного хозяйства. Неконкурентоспособные компании теряют позиции на рынке и прекращают свое существование. В современных рыночных условиях компаниям необходимо внедрять маркетинговые стратегии, понимать и предвидеть требования рынка, анализировать поведение потребителей.

Ключевые слова: конкуренция, конкурентоспособность, маркетинговая стратегия.

MARKETING STRATEGY AS A TOOL FOR INCREASING COMPETITIVENESS IN THE MARKET

Annotation. Competition is the basis for the development of a market economy. Non-competitive companies lose their market positions and ultimately cease to exist. In today's market conditions, companies need to implement marketing strategies, understand and anticipate market demands, and analyze consumer behavior.

Keywords: competition, competitiveness, marketing strategy.

Одно из ключевых свойств рыночной экономики – конкуренция. По мере развития общества, понятия конкуренции и конкурентоспособности претерпевали существенные изменения. Однако на сегодняшний день вопросы конкурентоспособности требуют дальнейшей разработки. По классификации К. Маркса, конкуренция существовала и существует во всех общественно-экономических формациях. В широком смысле, конкурентоспособность, это умение выживать, развиваться и процветать в мире жесткой конкуренции.

Исследования по теории стратегического менеджмента, маркетинга внесли колоссальный вклад в теории конкуренции и конкурентоспособности. Согласно исследованию Коулинга и Мюллера, в теории конкуренции, самой предпочтительной является модель монополии: продавец может повышать цены, снижать количество, качество товара или услуги, получать монопольную прибыль. По мнению Чемберлина, компании, производя или продавая дифференцированные товары, выступают в качестве локальных монополистов, формируют рынок и способны регулировать цены на нем.

Интерес к изучению конкурентоспособности и конкуренции проявляли многие ученые, например, Уолкер, рассматривал маркетинговую стратегию как фундаментальную модель имеющихся плановых заданий, распределения ресурсов и взаимосвязей организации с рынком, конкурентами и другими факторами окружающей бизнес - среды.

Таким образом, конкурентоспособность — это категория, характеризующая способность компании конкурировать на рынке товаров, услуг, показывать результаты и быть заметным игроком.

В современной среде, неопределенности и неоднозначности, акцент в части проведения маркетинговой стратегии, смещается в сторону использования ситуативных решений, соответствующих удовлетворению потребителей. При формировании маркетинговой стратегии компании необходимо учитывать факторы, провоцирующие цепную реакцию в создании или исчезновении монополии. Факторы, которые провоцирующие цепную реакцию на рынке:

- 1) ситуация в отрасли;
- 2) поведение покупателей;
- 3) условия конкуренции.

В результате взаимодействия этих факторов, возникает цепная реакция, которая обеспечивает пространство для новой монополии, чем и должна воспользоваться компания, заложив свое видение ситуации и действий на рынке в формируемую ею маркетинговую стратегию. Факторы, которые формирующие маркетинговую стратегию компании:

- 1) замечать изменения;
- 2) четко формулировать план действий компании на рынке;
- 3) видеть перспективу.

Таким образом, при формировании маркетинговой стратегии компании необходимо понять, какую монополию она может претворить в жизнь на основе анализа ситуации и учета факторов конкурентного преимущества.

По мнению автора, к факторам устойчивого конкурентного преимущества компании можно отнести:

1) Уникальность продукта (привлечение покупателей товаром/услугой, имеющих уникальные качества и свойства);

2) Сила бренда (узнаваемость, что позволяет предлагать продукт по высокой цене);

3) Опыт (эффективность применения знаний и технологических инноваций, позволяющей снижать затраты);

4) Эффект «масштаба» (возможность установления низкой цены за счет большего объема производства/реализации предлагаемого товара);

5) Диверсификация (возможность предложения широкого ассортимента);

6) Снижение издержек (условия компании, при которых затраты являются низкими по сравнению с затратами конкурентов, что позволяет увеличивать объем, повысить прибыль и рентабельность);

7) Качество услуг (удержания клиентов, привлечение новых – за счет сервисов и удобств).

Таким образом, конкурентоспособность – это способность компаний реализовывать конкурентоспособные товары, которые по ценовым характеристикам превосходят товары конкурентов. Конкурентоспособность рассматривается эффективным механизмом, обеспечивающим и создающим компаниям конкурентные преимущества и устойчивую позицию на рынке с учетом оценки возможностей конкурентов. Цель любой компания – выгодно удовлетворять запросы целевых потребителей и поддерживать рост бизнеса для обеспечения устойчивой конкурентоспособности, что требует разработки эффективной маркетинговой стратегии. Соответственно меняется характер маркетинговой деятельности, содержание, которой дополняется новым маркетинговым инструментарием: создание сайта в виде электронной витрины; проведение маркетинга в социальных сетях; осуществление интерактивного диалога с покупателем; кастомизация предложения; таргетированная, контекстная и медийная реклама.

СТРАТЕГИИ РИСК МЕНЕДЖМЕНТА В СОВРЕМЕННОЙ ОРГАНИЗАЦИИ

Аннотация. В условиях быстро изменяющегося делового окружения эффективное управление рисками становится ключевым элементом успешного функционирования любой организации. В данной статье рассматриваются основные стратегии риск-менеджмента, такие как избегание, снижение, передача и принятие рисков. Описаны этапы процесса управления рисками, инструменты и методы, а также примеры успешного применения стратегий в различных отраслях.

Ключевые слова: риск-менеджмент, стратегии управления рисками, избегание риска, снижение риска, передача риска, принятие риска, финансовая устойчивость, операционная эффективность.

RISK MANAGEMENT STRATEGIES IN A MODERN ORGANIZATION

Annotation. In a rapidly changing business environment, effective risk management is a key element of successful organizational performance. This article examines the main risk management strategies, such as risk avoidance, risk reduction, risk transfer, and risk acceptance. The stages of the risk management process, tools and methods, as well as examples of successful strategy implementation in various industries are described.

Key words: risk management, risk management strategies, risk avoidance, risk reduction, risk transfer, risk acceptance, financial stability, operational efficiency.

В условиях быстро изменяющегося делового окружения, глобализации и развития технологий, организации сталкиваются с множеством рисков. Эти риски могут существенно повлиять на устойчивость бизнеса и его способность достигать поставленных целей. Эффективное управление рисками становится ключевым элементом успешного функционирования любой современной организации. В данной статье мы рассмотрим основные стратегии риск-менеджмента, используемые в современных организациях.

Риск-менеджмент — это процесс идентификации, оценки и контроля рисков с целью минимизации их негативного воздействия на организацию. Риски можно классифицировать по разным признакам, включая:

Рисунок 1. Классификация рисков

Процесс риск-менеджмента играет ключевую роль в устойчивом развитии и минимизации возможных потерь для современных организаций. Этот процесс состоит из нескольких важных этапов, каждый из которых требует тщательного анализа и принятия стратегических решений. Первым этапом является идентификация рисков. На этом этапе организация определяет потенциальные риски, которые могут повлиять на её деятельность. Используются различные методы, такие как мозговые штурмы, экспертные опросы и анализ прошлых инцидентов, а также инструменты, такие как SWOT-анализ и PESTLE-анализ. Важно учитывать как внутренние, так и внешние факторы, которые могут представлять угрозу. Цель этого этапа - создать исчерпывающий список возможных рисков для последующего анализа. Следующим этапом является оценка рисков. После выявления всех возможных рисков организация должна оценить их вероятности и возможные последствия. Это включает количественные и качественные методы анализа. Оценка рисков помогает определить, какие из них являются наиболее значимыми и требуют немедленного внимания. Организация оценивает, насколько каждый риск может повлиять на её цели и задачи, что позволяет ранжировать риски по степени важности. На основании результатов оценки разрабатываются стратегии управления рисками. Организация определяет методы и подходы к минимизации или устранению выявленных рисков. Это может включать разработку планов действий, которые помогут избежать или уменьшить воздействие рисков. Важным аспектом является выбор наиболее

подходящей стратегии для каждого конкретного риска, что может включать изменение операционных процессов, внедрение новых технологий или проведение обучающих программ для сотрудников. После разработки стратегий следует этап их реализации. Организация начинает внедрение выбранных методов управления рисками. Этот процесс может включать изменение операционных процедур, внедрение новых технологий, проведение тренингов и других мероприятий, направленных на снижение уровня рисков. Важно, чтобы все сотрудники были осведомлены о новых процедурах и следовали им. Заключительный этап процесса риск-менеджмента - мониторинг и пересмотр. Организация должна постоянно наблюдать за рисками и оценивать эффективность применяемых стратегий. Это включает регулярный пересмотр и обновление планов управления рисками, а также внесение корректировок при необходимости. Постоянный мониторинг позволяет своевременно выявлять новые риски и реагировать на изменения в бизнес-среде.

Современные организации используют различные стратегии управления рисками, которые можно разделить на несколько основных категорий. Одна из стратегий - избегание риска. Эта стратегия заключается в отказе от деятельности или действий, которые могут привести к возникновению риска. Она эффективна в ситуациях, когда риск имеет крайне негативные последствия и не может быть приемлемым для организации. Например, компания может отказаться от выхода на новый рынок, если политическая или экономическая нестабильность в этом регионе представляет значительный риск. Снижение риска включает меры по уменьшению вероятности наступления риска или его воздействия. Эта стратегия может быть реализована через внедрение внутренних контролей и процедур, использование современных технологий и проведение обучения и развития персонала. Внедрение внутренних контролей и процедур направлено на уменьшение операционных рисков, современные технологии помогают минимизировать риски, связанные с кибербезопасностью и данными, а обучение сотрудников способствует повышению их компетентности и снижению риска человеческих ошибок. Таким образом, процесс риск-менеджмента и стратегии управления рисками являются важными инструментами для обеспечения стабильности и устойчивого развития организаций. Эффективное управление рисками помогает организациям не только минимизировать потери, но и использовать возможности для роста и развития в условиях неопределенности.

Процесс риск-менеджмента играет ключевую роль в устойчивом развитии и минимизации возможных потерь для современных организаций. Этот процесс включает несколько важных этапов, каждый из которых требует тщательного анализа и принятия стратегических решений. Первым этапом является идентификация рисков. На этом этапе организация

определяет потенциальные риски, которые могут повлиять на её деятельность. Используются методы, такие как мозговые штурмы, экспертные опросы и анализ прошлых инцидентов, а также инструменты, такие как SWOT-анализ и PESTLE-анализ. Важно учитывать как внутренние, так и внешние факторы, которые могут представлять угрозу. Цель этого этапа - создать исчерпывающий список возможных рисков для последующего анализа. Следующим этапом является оценка рисков. После выявления всех возможных рисков организация должна оценить их вероятности и возможные последствия. Это включает количественные и качественные методы анализа. Оценка рисков помогает определить, какие из них являются наиболее значимыми и требуют немедленного внимания. Организация оценивает, насколько каждый риск может повлиять на её цели и задачи, что позволяет ранжировать риски по степени важности. На основании результатов оценки разрабатываются стратегии управления рисками. Организация определяет методы и подходы к минимизации или устранению выявленных рисков. Это может включать разработку планов действий, которые помогут избежать или уменьшить воздействие рисков. Важным аспектом является выбор наиболее подходящей стратегии для каждого конкретного риска, что может включать изменение операционных процессов, внедрение новых технологий или проведение обучающих программ для сотрудников. После разработки стратегий следует этап их реализации. Организация начинает внедрение выбранных методов управления рисками. Этот процесс может включать изменение операционных процедур, внедрение новых технологий, проведение тренингов и других мероприятий, направленных на снижение уровня рисков. Важно, чтобы все сотрудники были осведомлены о новых процедурах и следовали им. Заключительный этап процесса риск-менеджмента - мониторинг и пересмотр. Организация должна постоянно наблюдать за рисками и оценивать эффективность применяемых стратегий. Это включает регулярный пересмотр и обновление планов управления рисками, а также внесение корректировок при необходимости. Постоянный мониторинг позволяет своевременно выявлять новые риски и реагировать на изменения в бизнес-среде.

Эффективное управление рисками является ключевым элементом успешного функционирования современной организации. Использование стратегий избегания, снижения, передачи и принятия рисков позволяет минимизировать их негативное воздействие и обеспечить устойчивое развитие бизнеса. Важно помнить, что риск-менеджмент — это непрерывный процесс, требующий постоянного мониторинга и адаптации к изменяющимся условиям. Современные инструменты и методы управления рисками, а также успешный опыт ведущих организаций могут служить хорошими примерами для разработки и реализации собственных стратегий риск-менеджмента.

ЭКСПОРТНО-ИМПОРТНАЯ ДЕЯТЕЛЬНОСТЬ ОРГАНИЗАЦИИ КАК ОБЪЕКТ РИСК-МЕНЕДЖМЕНТА

Аннотация. Экспортно-импортная деятельность предоставляет организациям значительные возможности для роста и развития, но также связана с множеством рисков. В статье рассматриваются основные риски, связанные с внешнеэкономической деятельностью, такие как политические, экономические, логистические и культурные риски. Описаны стратегии управления этими рисками и примеры успешного применения стратегий риск-менеджмента в различных отраслях.

Ключевые слова: экспортно-импортная деятельность, внешнеэкономическая деятельность, политические риски, экономические риски, логистические риски, культурные риски, стратегии управления рисками.

Yan Lu
graduate student
Moscow Pedagogical State University

EXPORT-IMPORT ACTIVITIES OF AN ORGANIZATION AS AN OBJECT OF RISK MANAGEMENT

Annotation. Export-import activities provide organizations with significant growth and development opportunities but are also associated with numerous risks. The article examines the main risks associated with foreign economic activity, such as political, economic, logistical, and cultural risks. It describes risk management strategies and examples of successful risk management strategy implementation in various industries.

Key words: export-import activities, foreign economic activity, political risks, economic risks, logistical risks, cultural risks, risk management strategies.

В условиях глобализации и интеграции мировых рынков экспортно-импортная деятельность становится важной составляющей бизнеса многих организаций. Эта деятельность предоставляет компании возможности для расширения рынков сбыта, оптимизации производственных процессов и диверсификации поставок. Однако с расширением международной торговли возрастают и риски, связанные с внешнеэкономической деятельностью. В данной статье мы рассмотрим основные риски, связанные

с экспортно-импортной деятельностью, и стратегии риск-менеджмента, направленные на минимизацию их влияния.

Экспортно-импортная деятельность подвержена множеству рисков, которые могут существенно повлиять на успех международных торговых операций. Эти риски можно классифицировать по различным категориям, каждая из которых вносит свой вклад в сложность и неопределенность внешнеэкономической деятельности.

Одним из наиболее значимых факторов являются политические и правовые риски. Политическая нестабильность в странах-партнерах может привести к серьезным проблемам, таким как изменения в политическом режиме, гражданские беспорядки или революции. Эти события способны нарушить торговые связи, привести к задержкам или даже полной остановке поставок. Регуляторные изменения, такие как изменения в таможенных тарифах, налогах, квотах и других аспектах регулирования, также могут существенно повлиять на стоимость и время выполнения экспортно-импортных операций. Введение санкций или эмбарго против определенных стран может полностью прекратить торговлю с ними, что приведет к значительным финансовым потерям для компаний, работающих на международных рынках.

Экономические риски также играют важную роль в экспортно-импортной деятельности. Колебания валютных курсов могут существенно изменить стоимость товаров и услуг, что влияет на прибыльность сделок. Например, значительное снижение курса национальной валюты партнера может сделать экспортируемые товары слишком дорогими, что снижает конкурентоспособность на международном рынке. Высокая инфляция в странах-партнерах может привести к увеличению стоимости товаров и услуг, что также влияет на маржу и конечные цены для потребителей. Кредитные риски, связанные с неплатежеспособностью контрагентов, включают задержки в оплатах и даже банкротства, что может поставить под угрозу финансовую устойчивость компаний, занимающихся внешнеэкономической деятельностью.

Логистические риски представляют собой еще одну важную категорию рисков в экспортно-импортной деятельности. Перебои в цепочке поставок могут быть вызваны различными факторами, включая задержки в поставках, потери или повреждения товаров в процессе транспортировки. Эти проблемы могут возникнуть из-за различных причин, таких как недостатки в инфраструктуре, плохие погодные условия или административные барьеры. Транспортные риски, такие как аварии, природные катастрофы или пиратство, также могут существенно повлиять на безопасность и сохранность грузов. Эти риски могут привести к значительным финансовым потерям и нарушениям в бизнес-процессах.

Культурные и социальные риски часто недооцениваются, но они играют важную роль в успешной международной торговле. Различия в

деловой культуре могут привести к недоразумениям и конфликтам, которые могут замедлить или даже сорвать сделки. Например, различия в подходах к ведению переговоров, стиле общения и деловым обычаям могут создать серьезные препятствия для сотрудничества. Социальные изменения, такие как изменения в социально-экономической обстановке в странах-партнерах, могут влиять на спрос и предложение на рынке. Это может включать изменения в потребительских предпочтениях, уровень доходов и другие социальные факторы, которые могут изменить динамику рынка. Стратегии риск-менеджмента в экспортно-импортной деятельности

Экспортно-импортная деятельность предоставляет организациям значительные возможности для роста и развития, но также связана с множеством рисков. Эффективное управление этими рисками является ключевым элементом успешной внешнеэкономической деятельности. Использование стратегий избегания, снижения, передачи и принятия рисков, а также современных инструментов и методов риск-менеджмента позволяет минимизировать негативное воздействие рисков и обеспечить устойчивое развитие бизнеса. Современные организации должны постоянно мониторить и адаптироваться к изменяющимся условиям внешнеэкономической среды для достижения своих целей.

Рисунок 1. Стратегии работы с рисками в экспортно-импортной организации

Для реализации вышеперечисленных стратегий современные организации используют различные инструменты и методы риск-менеджмента. Регулярный анализ политической и экономической ситуации в странах-партнерах помогает своевременно выявлять потенциальные угрозы и принимать обоснованные решения. SWOT-анализ позволяет

оценить сильные и слабые стороны организации, а также возможности и угрозы внешней среды в контексте международной торговли. Анализ сценариев помогает моделировать различные варианты развития событий и оценивать потенциальные риски. Регулярный контроль и аудит экспортно-импортной деятельности обеспечивают выявление и оценку рисков, что позволяет своевременно корректировать стратегии и принимать необходимые меры для их минимизации. Рассмотрим несколько примеров успешного применения стратегий риск-менеджмента в экспортно-импортной деятельности. Автомобильная промышленность часто сталкивается с рисками, связанными с глобальными цепочками поставок. Например, японские автопроизводители успешно применяют стратегии диверсификации поставщиков и рынков сбыта, а также внедрение систем управления запасами, чтобы минимизировать риски перебоев в поставках. Это позволяет им поддерживать стабильность производства и своевременную доставку автомобилей клиентам. Технологические компании, такие как Apple, активно используют хеджирование валютных рисков и заключение страховых договоров для защиты своих операций. Они также инвестируют в анализ и мониторинг политической и экономической ситуации в странах-партнерах, что позволяет им своевременно реагировать на изменения и минимизировать потенциальные угрозы для бизнеса. В результате таких мер компании могут поддерживать свою конкурентоспособность и стабильность на международных рынках. Продовольственные компании, занимающиеся экспортом и импортом продуктов питания, широко применяют стратегии страхования и использования услуг логистических операторов для минимизации рисков, связанных с транспортировкой и сохранностью товаров. Эти меры позволяют обеспечить безопасность продуктов на всех этапах транспортировки, что особенно важно для скоропортящихся товаров. Кроме того, страхование покрывает возможные убытки от повреждений или потерь, что способствует финансовой стабильности компаний.

ВЛИЯНИЕ СИСТЕМЫ РИСК-МЕНЕДЖМЕНТА НА ФИНАНСОВО-ЭКОНОМИЧЕСКИЕ ПОКАЗАТЕЛИ СОВРЕМЕННОЙ ОРГАНИЗАЦИИ

Аннотация. Эффективная система риск-менеджмента оказывает значительное влияние на финансово-экономические показатели организации. В статье рассматриваются ключевые аспекты этого влияния, включая повышение финансовой устойчивости, снижение затрат, улучшение кредитного рейтинга, повышение операционной эффективности и увеличение стоимости компании. Приведены примеры успешного применения систем риск-менеджмента в различных отраслях.

Ключевые слова: система риск-менеджмента, финансово-экономические показатели, финансовая устойчивость, снижение затрат, кредитный рейтинг, операционная эффективность, стоимость компании.

INFLUENCE OF THE RISK MANAGEMENT SYSTEM ON THE FINANCIAL AND ECONOMIC INDICATORS OF A MODERN ORGANIZATION

Annotation. An effective risk management system has a significant impact on the financial and economic performance of an organization. The article examines key aspects of this impact, including increased financial stability, cost reduction, improved credit rating, enhanced operational efficiency, and increased company value. Examples of successful risk management system implementation in various industries are provided.

Key words: risk management system, financial and economic performance, financial stability, cost reduction, credit rating, operational efficiency, company value.

В условиях современного бизнеса, характеризующегося высокой степенью неопределенности и динамичности, эффективность управления рисками играет ключевую роль в обеспечении стабильности и роста компаний. Система риск-менеджмента не только помогает организациям идентифицировать и минимизировать потенциальные угрозы, но и оказывает значительное влияние на их финансово-экономические

показатели. В данной статье мы рассмотрим основные аспекты влияния системы риск-менеджмента на финансовые и экономические показатели организации, а также приведем примеры успешного применения риск-менеджмента в различных отраслях.

Прежде чем рассмотреть влияние системы риск-менеджмента на финансово-экономические показатели, необходимо понять основные компоненты данной системы:

Рисунок 1. Компоненты риск-менеджмента

Эффективная система риск-менеджмента способствует повышению финансовой устойчивости организации. Это достигается за счет своевременного выявления и минимизации финансовых рисков, таких как кредитные риски, валютные колебания и ликвидные риски. В результате, компания становится более способной противостоять финансовым потрясениям и сохранять стабильность своих денежных потоков и резервов.

Система риск-менеджмента позволяет организациям более эффективно управлять своими ресурсами. За счет предотвращения или минимизации потенциальных рисков снижаются затраты, связанные с устранением последствий этих рисков. Например, своевременное выявление и устранение производственных рисков может предотвратить дорогостоящие простои и ремонты оборудования.

Компании с эффективной системой риск-менеджмента часто получают более высокие кредитные рейтинги. Это связано с тем, что кредиторы и инвесторы рассматривают такие компании как более надежные и устойчивые к внешним и внутренним угрозам. В результате, организация

может получать доступ к более выгодным условиям финансирования, что положительно сказывается на ее финансовых показателях.

Система риск-менеджмента способствует улучшению операционной эффективности организации. За счет регулярного мониторинга и оценки операционных рисков компания может своевременно выявлять и устранять узкие места в своих процессах, что приводит к повышению производительности и снижению затрат.

Наличие эффективной системы риск-менеджмента способствует увеличению стоимости компании. Инвесторы и акционеры оценивают наличие такой системы как признак зрелости и ответственности управления, что повышает доверие к компании и ее привлекательность для инвестиций. В результате, рыночная стоимость акций компании может значительно вырасти.

Банки и финансовые учреждения широко используют системы риск-менеджмента для обеспечения своей устойчивости. Например, после глобального финансового кризиса 2008 года многие банки пересмотрели свои подходы к управлению кредитными рисками. Внедрение более строгих стандартов оценки кредитоспособности заемщиков и систем раннего предупреждения о возможных дефолтах позволило существенно снизить уровень неплатежеспособности и повысить финансовую устойчивость.

Производственные компании, такие как автомобильные концерны, активно применяют системы риск-менеджмента для управления рисками в цепочках поставок. Внедрение автоматизированных систем мониторинга и аналитики позволяет своевременно выявлять потенциальные сбои и принимать меры по их устранению. Это способствует снижению затрат на простой и ремонты, а также повышению операционной эффективности.

Технологические компании, такие как Apple и Google, используют системы риск-менеджмента для защиты своих данных и информационных систем от киберугроз. Внедрение передовых технологий кибербезопасности и регулярное тестирование на проникновение позволяют минимизировать риски утечек данных и взломов, что способствует сохранению доверия клиентов и партнеров, а также снижению потенциальных финансовых потерь.

Для оценки влияния системы риск-менеджмента на финансово-экономические показатели организации используются различные методы и инструменты:

- Финансовый анализ: сравнение финансовых показателей компании до и после внедрения системы риск-менеджмента, включая анализ денежных потоков, прибыли, затрат и рентабельности.
- Анализ показателей кредитного рейтинга: оценка изменений в кредитном рейтинге компании после внедрения системы риск-менеджмента.

- Оценка стоимости компании: анализ динамики рыночной стоимости акций и капитала компании.

- Операционный анализ: сравнение показателей операционной эффективности, таких как производительность труда, издержки на производство и уровень дефектов.

Эффективная система риск-менеджмента оказывает значительное влияние на финансово-экономические показатели современной организации. Она способствует повышению финансовой устойчивости, снижению затрат, улучшению кредитного рейтинга, повышению операционной эффективности и увеличению стоимости компании. Современные организации должны активно внедрять и развивать системы риск-менеджмента, чтобы успешно противостоять вызовам и угрозам, с которыми они сталкиваются в условиях глобальной экономики. Важно помнить, что риск-менеджмент — это непрерывный процесс, требующий постоянного мониторинга и адаптации к изменяющимся условиям, что позволяет организациям сохранять конкурентоспособность и устойчивое развитие.

СОВЕРШЕНСТВОВАНИЕ РИСК-МЕНЕДЖМЕНТА ОРГАНИЗАЦИИ

Аннотация. Совершенствование системы риск-менеджмента является ключевым фактором успешного функционирования современной организации. В статье рассматриваются основные аспекты совершенствования риск-менеджмента, такие как идентификация и оценка рисков, разработка и внедрение стратегий управления, мониторинг и контроль, обучение и развитие персонала, а также внедрение новых технологий. Приведены примеры успешного применения данных подходов в различных отраслях.

Ключевые слова: совершенствование риск-менеджмента, идентификация рисков, оценка рисков, стратегии управления рисками, мониторинг, контроль, обучение, новые технологии.

graduate student
Moscow Pedagogical State University

IMPROVING THE ORGANIZATION'S RISK MANAGEMENT

Annotation. Improving the risk management system is a key factor for the successful operation of a modern organization. The article examines the main aspects of risk management improvement, such as risk identification and assessment, development and implementation of management strategies, monitoring and control, training and development of personnel, and the implementation of new technologies. Examples of successful application of these approaches in various industries are provided.

Key words: risk management improvement, risk identification, risk assessment, risk management strategies, monitoring, control, training, new technologies.

Современные организации сталкиваются с множеством вызовов и неопределенностей, что делает эффективное управление рисками критически важным для их успеха и устойчивого развития. Совершенствование системы риск-менеджмента позволяет организациям не только минимизировать негативные воздействия рисков, но и использовать их в качестве возможностей для роста и инноваций. В данной статье мы рассмотрим ключевые аспекты и подходы к совершенствованию риск-

менеджмента в организациях, включая внедрение новых технологий, развитие корпоративной культуры и улучшение процессов управления рисками.

Совершенствование риск-менеджмента включает комплексный подход, охватывающий несколько ключевых аспектов:

Идентификация и оценка рисков:	• улучшение методов и инструментов для более точного выявления и оценки рисков.
Разработка и внедрение стратегий управления рисками:	• разработка более эффективных и адаптивных стратегий для минимизации негативных последствий рисков.
Мониторинг и контроль:	• внедрение систем мониторинга для постоянного отслеживания и контроля рисков.
Обучение и развитие персонала:	• повышение компетентности сотрудников в области риск-менеджмента.
Внедрение новых технологий:	• использование современных технологий для автоматизации и оптимизации процессов управления рисками.

Рисунок 1. Совершенствование риск-менеджмента

Совершенствование процессов идентификации и оценки рисков требует использования передовых методов и инструментов, таких как:

- SWOT-анализ: позволяет выявить сильные и слабые стороны организации, а также возможности и угрозы внешней среды.

- Анализ сценариев: моделирование различных сценариев развития событий для оценки потенциальных рисков.

- Метод Монте-Карло: использование статистических методов и моделирования для оценки вероятности наступления рисков и их последствий.

- Анализ причинно-следственных связей (Root Cause Analysis): выявление коренных причин рисков для разработки эффективных мер их предотвращения.

Многие компании успешно применяют современные методы и инструменты для идентификации и оценки рисков. Например, нефтегазовые компании используют анализ сценариев для оценки рисков, связанных с колебаниями цен на нефть и природными катастрофами. Финансовые учреждения активно применяют метод Монте-Карло для моделирования кредитных рисков и оценки вероятности дефолтов.

Для эффективного управления рисками организациям необходимо разработать и внедрить адаптивные стратегии, включающие:

- Избегание риска: отказ от операций или проектов с неприемлемым уровнем риска.

- Снижение риска: меры по уменьшению вероятности наступления или воздействия риска, такие как улучшение внутренних процессов и внедрение стандартов безопасности.

- Передача риска: перекладывание рисков на третьи стороны через страхование или аутсорсинг.

- Принятие риска: осознанное принятие рисков, которые являются приемлемыми для организации.

Автомобильные компании, такие как Toyota, активно применяют стратегию снижения рисков через внедрение системы "Just-in-Time" для оптимизации производства и минимизации складских запасов. Страховые компании широко используют стратегию передачи рисков, предлагая своим клиентам различные страховые продукты для защиты от финансовых потерь.

Эффективное совершенствование риск-менеджмента требует внедрения систем мониторинга, позволяющих своевременно отслеживать и оценивать риски. Такие системы могут включать:

- Информационные панели (dashboards): визуализация ключевых показателей и данных о рисках для быстрого принятия решений.

- Системы раннего предупреждения: автоматизированные системы, которые сигнализируют о возможных рисках на ранних стадиях.

- Регулярные аудиты и проверки: проведение регулярных внутренних и внешних аудитов для оценки эффективности управления рисками.

Финансовые учреждения, такие как банки, активно внедряют системы мониторинга и раннего предупреждения для отслеживания кредитных и операционных рисков. Производственные компании используют информационные панели для контроля качества продукции и снижения производственных рисков.

Обучение и развитие персонала являются ключевыми элементами совершенствования системы риск-менеджмента. Это включает:

- Регулярные тренинги и семинары: проведение обучения для повышения осведомленности сотрудников о рисках и методах их управления.

- Сертификационные программы: получение международных сертификатов в области риск-менеджмента, таких как ISO 31000 и COSO.

- Развитие корпоративной культуры: создание культуры, ориентированной на управление рисками, где каждый сотрудник осознает свою роль в этом процессе.

Компании, такие как General Electric, внедрили программы обучения и сертификации для своих сотрудников в области риск-менеджмента, что позволило значительно повысить уровень осведомленности и компетентности персонала. Финансовые учреждения, такие как HSBC,

активно развивают корпоративную культуру управления рисками через регулярные тренинги и коммуникационные кампании.

Совершенствование риск-менеджмента невозможно без использования современных технологий. Это включает:

- Big Data и аналитика данных: использование больших данных для анализа и прогнозирования рисков.

- Искусственный интеллект (AI) и машинное обучение: применение AI и машинного обучения для автоматизации процессов идентификации и оценки рисков.

- Кибербезопасность: внедрение передовых технологий защиты данных и информационных систем от киберугроз.

Технологические компании, такие как Google и Microsoft, активно используют AI и аналитические инструменты для управления киберрисками и защитой данных. Финансовые учреждения, такие как JP Morgan, внедряют технологии Big Data для прогнозирования кредитных рисков и улучшения качества обслуживания клиентов.

Совершенствование системы риск-менеджмента является ключевым фактором успешного функционирования современной организации. Использование передовых методов и инструментов идентификации и оценки рисков, разработка и внедрение адаптивных стратегий управления, эффективные системы мониторинга и контроля, обучение и развитие персонала, а также внедрение новых технологий позволяют организациям минимизировать негативные последствия рисков и использовать их в качестве возможностей для роста и инноваций. Постоянное совершенствование риск-менеджмента способствует повышению устойчивости и конкурентоспособности организации в условиях быстро меняющегося делового окружения.

НЕКОТОРЫЕ ПРОБЛЕМЫ СОВЕРШЕНСТВОВАНИЯ СЕРВИСНОГО ОБСЛУЖИВАНИЯ В УСЛОВИЯХ ЦИФРОВОЙ ЭКОНОМИКЕ

Аннотация. В статье делается попытка анализировать состояние всех отраслей национальной экономики, в том числе сферы оказания услуг в условиях цифровой экономики и рассмотрены вопросы совершенствования субъектов сферы оказания услуг и даны некоторые предложения по их совершенствованию.

Ключевые слова: цифровая экономика, информационные технологии, сферы оказания услуг, платное оказание услуг, бытовые услуги, субъекты сферы оказания услуг.

SOME PROBLEMS OF IMPROVING SERVICE IN THE DIGITAL ECONOMY

Annotation. The article makes an attempt to analyze the state of all sectors of the national economy, including the sphere of providing services in the digital economy, and considers the issues of improving the subjects of the sphere of providing services and gives some suggestions for their improvement.

Keywords: digital economy, information technology, service delivery, paid services, consumer services, service providers.

Введение и постановка цели. Одной из важных стратегических задач является реализация новых структурных изменений в сфере услуг в

условиях углубления реализуемых в Республике Узбекистан экономических реформ. Основная цель этого – создание цифрового мира сервисной структуры, обеспечивающего экономический рост и повышение благосостояния населения.

«Цифровой» мир, рождение «Цифровой экономики» тесно связано с новым развитием. Невозможно обсуждать эти две темы по отдельности. Аналогично внешняя среда деятельности коммунальных служб делится на макро- и микросреду.

Макросреда включает в себя прямые факторы, влияющие на общее состояние развития предпринимательства, в частности, темпы развития социальной ситуации, уровень инфляции и безработицы, изменение условий и т. д. Цифровизация государственных услуг может еще больше повысить уровень безработицы.

Востребованность сферы услуг микросреды и цифровизация прямых отношений с потребителями, естественно, такая ситуация требует фундаментального структурного пересмотра в сфере предоставления коммунальных услуг, перехода к новым моделям социального развития.

Гибкость предоставления государственных услуг - это их реакция на влияние внутренних и внешних факторов, а организационная структура и методы управления предполагают цифровизацию. В таких условиях руководство компании имеет возможность эффективно реагировать на изменения внешней и внутренней среды с экономической точки зрения. Для этого важно разработать алгоритм управления процессом цифровой адаптации.

Стоит отметить, что чем сложнее ситуация, тем быстрее требуется решение различных задач, тем важнее становится целенаправленность действий и способность заранее реагировать на существующие изменения. Кроме того, успех коммунальных подрайонов в современный период требует глубокого и всестороннего анализа факторов их внутренней и внешней среды.

Данный анализ проводится на основе взглядов на уровень риска, изменения состояния рынков, анализа деятельности отрасли. Это, в свою очередь, дает возможность малому бизнесу быстро адаптироваться к внешней среде или изменению потребительского спроса.

Особое внимание следует обратить на то, что отрасль обслуживания имеет классификацию внешней среды. В такой ситуации необходимо быстро адаптироваться к новым требованиям внешней среды на основе предвидения изменений образа клиента и выявления новых ситуаций. Также каждый подрайон должен разработать собственную стратегию развития. Неотъемлемой частью разработки этой стратегии является определение типа услуги.

В данной статье рассматриваются некоторые аспекты развития сервисного обслуживания в условиях цифровой экономики в Узбекистане,

тенденции развития, их изменения и совершенствования в соответствии с жизнью, а также существующие проблемы и решения этих вопросов.

Методология исследования. На основе изучения изменений, происходящих в сфере цифровой экономики в развитых странах мира, в том числе в Республике Узбекистане, сделаны выводы о необходимости их дальнейшего развития в будущем. На основе связи между теорией и практикой использовались такие методы, как анализ и сравнение.

Результаты исследования. Переход к цифровой экономике - вопрос актуальный для всех стран и, конечно же, бизнеса. Так почему же? Что такое цифровая экономика и как она влияет на предоставление услуг?

В научной литературе и печати существует множество определений цифровой экономики, в том числе взаимодействие цифровых информационных технологий и экономических агентов в цифровой экономике в зарубежных источниках, другие описывают ее в терминах хозяйствующих субъектов, подключенных к сети интернет. В результате экономического развития некоторые определяют цифровые технологии и деятельность по созданию, распространению и использованию соответствующих продуктов и услуг.

Действительно, такие определения цифровой экономики точно отражают ее сущность, поскольку, возможно, целесообразно рассматривать цифровую экономику как процесс развития, связанный с технологиями и экономическими агентами или Интернетом, но этого недостаточно, поскольку цифровая экономика в первую очередь служит развитию цифровых информационных технологий и развитие социально-экономических сфер всех стран.

Поэтому правильнее было бы охарактеризовать цифровую экономику как экономическое и социальное развитие в результате внедрения и эффективного использования современных информационных технологий во всех отраслях национальной экономики и различных сферах общественной жизни каждой страны.

Цифровая экономика не ограничивается сферами электронной коммерции, производства товаров и услуг, связанных с информационными технологиями, но и оказанием услуг, здравоохранением, наукой и образованием, строительством, энергетикой, сельским и водным хозяйством, транспортом, геологией, кадастр, архивы, интернет-банкинг, социальная и правоохранительная сферы, и каждая из них отличается высокой эффективностью.

Первым фундаментом цифровой экономики являются информационные технологии. Правильнее было бы назвать это цифровыми информационными технологиями, потому что информационные технологии основаны на соответствующих цифрах. Их эволюция делится на несколько этапов и имеет свои особенности. Очевидно, что появление и

развитие цифровых информационных технологий - это объективный процесс, обусловленный запросами общества.

На сегодняшний день основной целью продвижения цифровых информационных технологий является создание системы информационных технологий на уровне, позволяющем решать любые стратегические задачи, принимать решения по оптимальному управлению социально-экономическими процессами. Это окажет влияние на развитие цифровой экономики.

Следует отметить, что появление персональных компьютеров стало важным шагом в развитии цифровых информационных технологий.

Создание и использование новых систем информационных технологий - это возможность удовлетворить существующие потребности. При этом все пользователи принимают активное участие в продвижении цифровых информационных технологий.

Цифровая экономика затрагивает все отрасли народного хозяйства, и ее влияние напрямую связано со сферой услуг. Развитие сферы услуг, безусловно, будет возрастать вместе со спросом народного хозяйства и населения, но важную роль в этих процессах будет играть и предложение товаров и услуг. В связи с этим в Стратегии действий по развитию Республики Узбекистан указано «Ускоренное развитие сферы услуг, увеличить роль и долю услуг в формировании ВВП, структуру предоставляемых услуг, радикальное преобразование их за счет современных высокотехнологичных видов» - важное направление.

Размер сектора услуг является ключевым фактором повышения или снижения производительности. Состояние национальной экономики, особенно малого и среднего бизнеса, играет ключевую роль в повышении экономической мощи страны и уровня жизни населения. Это, в свою очередь, окажет существенное влияние на развитие сферы услуг, обеспечит занятость и повысит желание работать.

По материалам управления статистики Кашкадарьинской области Республике Узбекистан анализ деятельности поставщиков услуг выявил, что существуют существенные различия между объемом услуг на душу населения по районам области. Эти цифры значительно выше в Карши и Шахрисабзе.

Основной причиной этого является миграция рабочей силы из других районов области, а также добавление рабочих мест, которые могут быть заняты в местных производствах и услугах в этих городах, даже если место жительства находится в других районах. возможностей трудоустройства мигрантов.

Так как большая часть полезных ископаемых страны, таких как газ и нефть, приходится на регион, вклад региона в республиканский бюджет значителен, так как на него приходится 97% газовой ренты и занято в

газовой отрасли, подоходный налог, уплаченный получателями, будет перечисляться в государственный бюджет.

Тот факт, что часть налогов, которые должны были быть уплачены в республиканский бюджет, остается в регионе, позволяет улучшить количество и качество услуг. Есть возможность направить эти ресурсы на реализацию специальных программ в беднейших районах области, оказание дополнительных услуг и улучшение занятости.

При анализе показателей сферы услуг области в 2018-2020 гг. уровень оказания бытовых и платных услуг населению области увеличился, но, как отмечалось выше, по районам установлено, что различия между.

Объем бытовых услуг на душу населения в области в 2018 году составил в среднем 96 429 сумов, в 2020 году - 119 645 сумов, увеличившись за 2020 год в 1,2 раза по сравнению с 2018 годом. Уровень платных услуг на душу населения в области в среднем составил 837,4 тыс. сум в 2018 году и 1233,1 тыс. сум в 2020 году, увеличившись в 2020 году в 1,5 раза по сравнению с 2018 годом.

В заключение следует отметить, что количество субъектов, оказывающих бытовые и платные услуги населению Кашкадарьинской области, в том числе организации торговли, общественного питания, транспорта, электро-, газо- и водоснабжения, из года в год растет. Многие из них тесно связаны с инновациями цифровой экономики, например, установка «умных» счетчиков, точно измеряющих потребление газа, воды и электроэнергии, удобных для бизнеса и населения, является доказательством наших мнений.

В результате повышения как количества, так и качества услуг, а также стремительного внедрения модернизационных процессов на основе цифровых технологий закладывается основа для высокого уровня благосостояния населения.

ОСОБЕННОСТИ ИСПОЛЬЗОВАНИЯ ВИДЕОМАТЕРИАЛОВ НА УРОКАХ РУССКОГО ЯЗЫКА

Аннотация. Данная статья рассматривает важность и эффективность применения видеоматериалов в процессе обучения русскому языку в национальных группах. Описаны приемы работы с видеоматериалом показано, что применение видео помогает воссозданию реальной действительности страны изучаемого языка.

Ключевые слова: обучение русскому языку, видео уроки, учебное видео, интерактивные задания, навыки аргументации, навыки слушания, медиа образования.

Karshi Engineering and Economic Institute

FEATURES OF USING VIDEO MATERIALS IN RUSSIAN LANGUAGE LESSONS

Annotation. This article discusses the importance and effectiveness of using video materials in the process of teaching the Russian language to national groups. Techniques for working with video materials are described, showing that the use of video helps recreate the real-life environment of the country where the language is being studied.

Keywords: teaching Russian language, video lessons, educational videos, interactive assignments, argumentation skills, listening skills, media education.

Добавление видеоматериалов в образовательную структуру помогает активизировать внимание, мышление, память, эмоцию, повысить мотивацию. Использование видеоматериалов способствует развитию у студентов навыков самостоятельного труда, развивает навыки наблюдения и обобщения увиденного, активизирует процесс обучения. Использование видеоматериалов как средства наглядности становится основой эффективного обучения. Основные направления и формы работы с видеоматериалами описаны в работах отечественных и зарубежных исследователей [1, 2, 3 и др.].

Под термином «видео» (от лат. video- смотрю, вижу) понимают широкий спектр технологий записи, обработки, передачи, хранения и воспроизведения визуального и аудиовизуального материала на мониторе.

Одним достоинством видеофильма является сила впечатления и эмоционального воздействия на студентов, также помогает повысить мотивацию и активизировать процесс овладения знаниями, при этом развиваются внимание, мышление, память. «Видеоматериалы, представляющие собой сюжетные картины, наиболее полно отражают жизненные ситуации. Ситуативный контекст раскрывает мотивацию и цель высказывания, тем самым способствует языковой догадке и исключает необходимость перевода лексической единицы на родной язык учащихся» [6, с. 14]. Преимущество видео в том, что студенты имеют доступ к нему в любое время, его материалы могут быть использованы для самостоятельной работы. «Целесообразность использования видеоматериалов на занятиях по языку специальности объясняется прежде всего доступностью видеоматериалов, которые могут быть записаны с различных источников» [6, с. 16]. По мнению Е. Ф. Косицыной, И. В. Чирич, включение видеозаписи в учебный процесс «не только пробуждает у обучающихся интерес к изучаемому материалу, но и стимулирует к самостоятельному поиску путей и вариантов решения поставленной учебной задачи» [4, с. 79].

Можно использовать такие видеоматериалы, как:

- 1) учебное видео;
- 2) художественные и документальные фильмы;
- 3) мультфильмы;
- 4) видеозаписи телевизионных новостей и других телепередач;
- 5) музыкальные видеоклипы;
- 6) рекламу;
- 7) видео экскурсии по различным городам и музеям мира;
- 8) различные компьютерные программы с видеорядом и т.д.

Эффективность использования видеофильмов зависит от эффективной организации занятий.

Видеозаписи могут быть самой разной тематики. Выделяют учебные и аутентичные (оригинальное) видеоматериалы. Учебные видеоматериалы обладают познавательной ценностью и позволяют учитывать индивидуальные особенности обучаемых. Видео используется для презентации материала (средство наглядности), для дискуссии на определенную тему, для самостоятельной работы.

Как утверждают исследователи, видео можно применять на всех этапах обучения при разной степени владения языком студентов. Техника активного просмотра характеризуется тем, что внимание студентов фокусируется на основной идее видеофрагмента.

По отбору видео важно учитывать тему (соответствие темы фильма теме урока), цель использования фильма и его место в учебном процессе,

При работе с интерактивным видео можно опираться на классическую схему работы над аудированием, включающую три этапа: перед просмотром фильма, во время просмотра и после просмотра.

Цель первого этапа – ввести учащихся в эмоционально-смысловую атмосферу фильма, создать мотивацию для его просмотра. Для этого могут быть использованы следующие упражнения: - сообщение - беседа учителя о фильме и поднятых им проблемах; - предположение учащихся, о чем будет фильм.

Предварительная демонстрация

Прежде чем начать изучение учебного текста, надо продемонстрировать студентам видео, предваряющее учебный материал. К примеру, студенты должны ознакомиться с речевым этикетом «знакомство».

Перед просмотром в группе обсуждаются вопросы: В зависимости от уровня подготовки группы преподаватель может сам ввести минимальную необходимую информацию об особенностях русского речевого этикета или дать задание студентам подготовить эти вопросы заранее, разделив их между студентами, чтобы они выступили со своими небольшими сообщениями на уроке. Затем следует предварительная языковая работа – знакомство с лексикой, которые присутствуют в фильме.

На второй стадии в процессе просмотра фильма студенты выполняют интерактивные задания, встроенные в видео. Целью данных заданий является активизация внимания учащихся, проверка понимания фильма, а также тренировка навыков аудирования (в том числе и тренировка оперативной памяти). Цель второго этапа – уяснение студентами содержания, темы фильма, активизация речемыслительной деятельности обучающихся. Виды упражнений: - стоп-кадр (остановка фильма); - “молчаливый просмотр” (показ части фильма без звука, студенты должны догадаться, о чём говорят персонажи); - угадывание дальнейшего хода событий; - задание “дописать сценарий”; - ролевая игра (распределить роли и разыграть сцену из фильма); - прослушивание без просмотра (выключить изображение, слушая звук, рассказать, что происходит на экране); - восстановить текст (по ходу просмотра заполнить пропуски в написанном на доске тексте); - пересказ просмотренной части (одна половина группы смотрит эпизод и передаёт содержание другой половине аудитории).

После просмотра со студентами обсуждаются вопросы:

При изучении «Особенности русского речевого этикета» и порассуждать над следующими вопросами:

Почему важно закреплять этикет в детстве? Приведите примеры для подтверждения вашей позиции;

Какие ваши национальные пословицы отражают понятие речевого этикета? Приведите примеры;

В какой ситуации мы должны использовать этикет?

Какая форма обращения существует в русском языке?

Какие существуют виды этикета?

(Деловой, дипломатический, военный, педагогический, врачебный, поведение в общественных местах.)

Какие этикеты можно использовать при знакомстве в официальной обстановке?

Как переводится с французского языка слово «этикет»?

Такая работа по видеоматериалу поможет студентам овладеть навыками аргументации, навыками слушания и задавания вопросов.

Это могут быть тестовые задания, например:

Что такой речевой этикет?

то такое речевой этикет?

- A) это формулы вежливости и правила ведения разговора
- B) это формулы вежливости и правила ведения переписки
- C) это совокупность правил речевого поведения людей
- D) это усечённые формы ответных приветствий

Вопрос №4

Основой этикета является:

Основой этикета является

- A) вежливость
- B) сдержанность
- C) умеренность

Слово «этикет» имеет какие значения?

а) ярлык, этикетка. б) церемониал.

Вопросы служат для проверки понимания фильма и для подготовки к дискуссии. В завершении урока можно организовать обсуждение ряда проблемных вопросов, затронутых в фильме: почему надо соблюдать речевой этикет и т. п. Можно обсудить деловой этикет, этикеты народов мира, демонстрируемые в фильме, и сравнить их с этикетом родной культуры учащихся, тем самым вовлекая обучаемых в межкультурный диалог.

Цель третьего этапа – организация речевой творческой деятельности студентов. [22, 108] Виды упражнений, направленных на обучение говорению: - обсуждение фильма в целом; - упражнение на восстановление пропущенной реплики диалога из фильма; - этюдная работа с приемами актерского озвучивания; - фальшивая информация; - критика фильма; - персонализация; - сочинить продолжение фильма; - реклама фильма.

Видео является великолепным дополнительным материалом при изучении русского языка, так как оно максимально приближено к языковой реальности. Просмотр аутентичных видеоматериалов помогает созданию речевых образцов, служащих эталоном для речевой деятельности студентов, и, таким образом, способствуют развитию навыков говорения.

Использование видеоматериалов в учебном процессе способствует разнообразию и интересу к учению, делает учебный процесс более наглядным и нестандартным. Анализ видеоматериалов побуждает к творческому и осознанному выполнению заданий, что способствует более продуктивному обучению. Мы считаем, что использование различных средств медиа образования, включая кино и видеоматериалы, должно стать обязательным элементом педагогического процесса в системе образования.

ЗНАЧЕНИЕ ЦЕПЕЙ ПОСТАВОК В СОВРЕМЕННОМ БИЗНЕСЕ (НА ПРИМЕРЕ КОМПАНИИ ACER)

Аннотация. Цепи поставок становятся все более важным аспектом современного бизнеса. В данной статье анализируются цепи поставок международной компании Acer и ее ключевые элементы: состав, структура и характер взаимосвязей звеньев цепи. Результатом анализа являются выводы об эффективности текущей цепи поставок компании, а также рекомендации для их улучшения.

Ключевые слова: логистика, цепь поставок, поставщик, потребитель, логистический посредник.

THE IMPORTANCE OF SUPPLY CHAINS IN MODERN BUSINESS (USING THE EXAMPLE OF ACER)

Abstract. Supply chains are becoming an increasingly important aspect of modern business. This article analyzes the supply chain of the international company Acer and its key elements: the composition, structure and links of the interconnections of the chain links. The analysis results in conclusions about the effectiveness of the company's current supply chain, as well as recommendations for its improvement.

Key words: logistics, supply chain, supplier, consumer, logistics intermediary.

Цель работы: провести анализ состава цепи поставок производителя персональных компьютеров Acer и сделать выводы о текущей эффективности.

Задачи: определить состав цепи поставок компании Acer, сделать выводы об эффективности текущей цепи поставок компании, предложить рекомендации по улучшению цепи поставок.

Материалы и методы. В рамках данной статьи был проведен анализ актуальной отечественной и зарубежной литературы с целью достижения поставленной цели. В ходе анализа применялся аналитический, сравнительный, индуктивный и дедуктивный методы.

Введение

Цепи поставок являются одним из ключевых элементов современного бизнеса. Правильная конфигурация цепей поставок позволяет компании минимизировать затраты на всех этапах, начиная от закупки материалов для производства товара до доставки готовой продукции конечным потребителям.

Анализ цепей поставок на примере компании Acer

Компания Acer является самой крупной компанией в Тайване по производству электроники [5]. По итогам 2023 года компания Acer представила следующие финансовые показатели: консолидированная выручка - \$7,631 млрд, валовая прибыль - \$816,53 млн, операционная прибыль - \$133,77 млн, чистая прибыль - \$155,91 млн [1].

Продажи персональных компьютеров и мониторов принесли компании 57,2 % операционного дохода [1]. В 2023 году компания Acer вошла в топ-10 в мире по количеству продаж персональных компьютеров, количество которых составило 15,9 миллионов штук. Общий рынок продаж компьютеров составил 241,9 миллион штук за год [2].

Рассмотрим цепи поставок персональных компьютеров производителя персональных компьютеров Acer. «**Уровень сложности цепи поставок** характеризует их состав, структуру и характер взаимосвязей фокусной компании с разноуровневыми поставщиками и потребителями» [4]. Компания Acer имеет расширенную цепь поставок, так как включает поставщиков и потребителей разных уровней. К поставщикам & уровня относятся предприятия, производящие комплектующие запчасти для компьютеров. Потребителями 1 уровня являются оптовые торговые сети, а потребителями 2 уровня - розничные торговые сети. Также у компании есть посредники, представляющие собой логистические фирмы и распределительные центры. В Таблице 1 представлены связи между звеньями цепи поставок компании.

Таблица 1 – Типы связей цепи поставок компании Асер

Тип связи	Характеристика связи
Управляемые связи	Между заводами компании и ее распределительными центрами [4], [6].
Отслеживаемые связи	Между распределительными центрами точками оптовой и розничной торговли [4], [6].
Неуправляемые связи	Связи с конечными потребителями, представленными физическими и юридическими лицами [4], [6].
Связи с объектами, не входящими в цепь поставок	связи с сервисными центрами и партнерами, которые обеспечивают гарантийное и постгарантийное обслуживание продукции; с акционерами; инвесторами и финансовыми учреждениями; государственными органами и организациями, которые устанавливают стандарты качества (в том числе ГОСТы), а также осуществляют регулирование деятельности компаний [4], [6].

Составлена автором на основе [4], [6]

Звенья цепи поставок компании Асер представлены в Таблице 2.

Таблица 2 - Звенья цепи поставок компании Асер

Звено цепи поставок	Характеристика
Поставщики	Compal, Coretronic, Daewoo, ECS, Huaqin, Lehui, Lengda, Qisda, Quanta, МОКА, TPV, Wistron, ADATA, AMD, AUO, BOE, Chicony Electronic, Chicony Power, CosMx, Delta, SIMPLO, GIS, Henghao, Innolux, Intel, Kingston, LG Energy Solution, LG Display, Lite-On, Micron, Murata, Nvidia, Panasonic, Samsung, Seagate, SK Hynix, Toshiba [4], [6].
Посредники логистических услуг	DHL, UPS, FedEx [4], [6].
Потребители	сети Amazon, Best Buy, MediaMarket, Dixons Carphone, Fnac, Bic Camera, Harvey Norman, Lazada, Tmall, DNS [4], [6].

Составлена автором на основе [4], [6]

В компании Асер цепь поставок относится к горизонтальной, так как ее звенья относятся к разным владельцам, и для организации эффективной работы компании вынуждены договариваться об условиях функционирования цепи поставок. Цепи поставок Асер имеют структуру, представленную на Рис.1.

Рис.1 – Структурная конфигурация цепи поставок компании ACER.
Составлен автором на основе [6]

Компания Acer сотрудничает с несколькими логистическими компаниями, поставщиками и потребителями, так как это позволяет выбирать оптимальные варианты доставки с учетом географии и цены перевозки. Также за счет этого Acer уменьшает риски, связанные с задержками в перевозках, и обеспечивает гибкое управление логистическими процессами. Таким образом стоит отметить, что цепи поставок компании Acer являются очень гибкими и надежными, так как у них большое количество поставщиков, потребителей и логистических посредников.

Рекомендации по улучшению цепи поставок:

Для улучшения цепей поставок компания может расширять ее, начав производство новой продукции или предложив потребителям новые сервисы и услуги. Также Acer может рассмотреть рекламу и доставку своей техники в те регионы, в которых пока их продукция не распространена, тем самым расширив свою зону продаж и увеличив количество покупателей.

НАПРАВЛЕНИЯ ДЛЯ ПОВЫШЕНИЯ ЭФФЕКТИВНОСТИ ИСПОЛЬЗОВАНИЯ КАДРОВОГО ПЕРСОНАЛА В ОРГАНИЗАЦИИ

Аннотация. Одной из важнейших характеристик и основ эффективности функционирования организации являются кадры. К сожалению, в настоящее время в научной и учебной литературе отсутствует единое понимание термина «кадровый потенциал». Причинами такого пробела послужило относительно недавнее введение данного термина в научный оборот, а во-вторых определение всегда дается под призмой того исследования и проблематики в рамках которого оно рассматривается.

В данной статье автором предложены направления для повышения эффективности использования кадрового потенциала в организации.

Ключевые слова: кадровый потенциал, цели организации, эффективность.

DIRECTIONS FOR IMPROVING THE EFFICIENCY OF THE USE OF HUMAN RESOURCES IN THE ORGANIZATION

Annotation. One of the most important characteristics and fundamentals of the effectiveness of the organization's functioning is personnel. Unfortunately, there is currently no common understanding of the term "human resources potential" in the scientific and educational literature. The reasons for this gap were the relatively recent introduction of this term into scientific circulation, and secondly, the definition is always given through the prism of the research and issues within which it is considered.

In this article, the author suggests ways to improve the efficiency of using human resources in the organization.

Keywords: human resources potential, organization goals, efficiency.

Для достижения высокой результативности выполнения поставленных задач государственными служащими необходимо

обеспечивать постоянное обновление профессиональных знаний и непрерывное снабжение государственных структур необходимым количеством квалифицированных сотрудников. Поддержание эффективности в работе сотрудников требует постоянного развития и повышения уровня квалификации персонала. Кадровый консалтинг, как инструмент диагностики кадрового потенциала, включает в себя оценку результативности взаимодействия подразделений, проверку обоснованности и целесообразности иерархии должностного подчинения, а также анализ корпоративной культуры и системы мотивации персонала.

Анализ кадрового потенциала может стать ключевым фактором улучшения качества труда и профессионального роста, способствуя удовлетворению социальных потребностей как личности, так и коллектива. Однако, для достижения этой цели необходимо учитывать коллективное мнение по результатам работы, а не только точку зрения администрации.

Все оценки становятся конфликтными, когда интересы коллектива и администрации противоречат друг другу. Это приводит к появлению двойных стандартов в оценках. Коллективы часто играют роль ведомых в анализе кадрового потенциала из-за навязанной административным аппаратом точки зрения на работника. Необходимо особо подчеркнуть, что удовлетворение социальных потребностей личности становится фактором, вызывающим конфликты.

С целью совершенствования формирования и развития кадрового потенциала можно предложить ряд рекомендаций:

- разработка индивидуального плана развития (ИПР) резервиста в зависимости от планируемой должности для назначения кандидата и перспективности назначения на должность;
- усовершенствование системы адаптации вновь назначенных сотрудников, в т.ч. внешних, с целью развития кадрового потенциала;
- осуществление практической подготовки кандидата из кадрового резерва;
- разработка мероприятий в течение года по повышению вовлеченности кандидатов.

Рассмотрим детально предлагаемые рекомендации.

Разработка индивидуального плана развития (ИПР) резервиста в зависимости от планируемой должности для назначения кандидата и перспективности назначения на должность. Основной инструмент резервиста в рамках развития на запланированную должность – индивидуальный план развития, составленный резервистом и утвержденный руководителем. Считаю целесообразным использование ресурса сторонних специалистов (коуч-тренеров) с целью качественной проработки плана совместно с руководителем, на должность которого рассматривается кандидат, а также проведение указанным составом

промежуточных (например, 1 раз в квартал) итогов по реализации данного плана и определения необходимых дополнительных ресурсов.

Имеющийся ресурс в виде карьерного консультанта HR-подразделения разово перед составлением ИПР не является эффективным. Системное использование ИПР обеспечивает:

- возможность видеть менеджерский потенциал компании и прогнозировать возможности ее развития;
- контроль процессов обучения и развития. Зная ИПР своих менеджеров, компания сможет более точно проводить кадровую политику;
- направленность усилий в рамках стратегии компании.

Участвуя в составлении ИПР посредством внешних и внутренних консультантов, компания помогает менеджерам выделять приоритеты и расставлять акценты при обучении и развитии согласно стратегии.

Эффективная адаптация новых сотрудников - это долгосрочный и многоэтапный процесс, который не заканчивается за один день. Когда адаптация проводится систематически и успешно, новый сотрудник может начать продуктивно работать уже через несколько месяцев. В противном случае, без должной структурированности, полноценная адаптация может занять до года. Реализация стратегий по улучшению этого процесса поможет не только уменьшить текучесть кадров, но и улучшить общую производительность персонала, снизить количество случаев нарушения трудовой дисциплины, повысить качество взаимодействия в коллективе и, в конечном итоге, увеличить удовлетворенность клиентов качеством продукции.

В связи с рядом проблем и отсутствием систематизированного подхода к адаптации в ПАО Сбербанк, предлагается создать документ, называемый Положением об адаптации. Этот документ должен ясно и подробно описывать процесс интеграции новых сотрудников в компанию или их переход на новую должность в течение адаптационного периода. Основная цель этого Положения - обеспечить понятное и одинаковое введение для всех новичков. В рамках Положения планируется использовать как индивидуальные методы работы с работниками, например, ориентационные беседы, так и коллективные подходы, включая адаптационные тренинги.

В рамках адаптации новых сотрудников, особое внимание уделяется индивидуальному подходу в работе с ними, что является ключевым аспектом специализированной части соответствующего Положения. Эффективность такого подхода подтверждается улучшением результатов трудовой деятельности сотрудников с самого начала их работы, а также сохранением и передачей знаний и навыков, накопленных в компании. Руководители подразделений несут ответственность за внедрение этих адаптационных мероприятий, подчеркивая важность привлечения опытных

наставников для облегчения интеграции новичков в коллектив и освоения ими своих должностных обязанностей.

ПАО «Сбербанк» разрабатывает систему адаптации персонала, задокументированную в Положении об адаптации, которое руководители подразделений и кадровые менеджеры обязаны исполнять, ознакомившись с ним под расписку. Основная задача для сотрудника при этом - интегрироваться в коллектив организации как можно быстрее и эффективнее, создать для себя репутацию профессионала и стремиться быть частью команды на длительный срок.

Для избежания неопределенностей в распределении обязанностей между руководителями подразделений и специалистами по персоналу, необходимо ясно определить сферы их ответственности. В документе о процессе адаптации новых сотрудников следует четко указывать, кто и как будет взаимодействовать с новичками. Кроме того, важно детально описать все адаптационные мероприятия, которые предусмотрены для новых сотрудников на первую неделю, включая имена ответственных лиц. Такое подробное описание помогает предотвратить возможные разночтения и отклонения от выполнения задач.

В документе, известном как положение об адаптации персонала, четко определены области ответственности всех ключевых участников процесса адаптации. Руководитель подразделения должен заниматься профессиональными аспектами и общей работой подразделения, где трудится новый сотрудник. В то же время, задачи по социализации, взаимодействию и освоению корпоративной культуры ложатся на плечи отдела кадров. Осуществление практической подготовки кандидата из кадрового резерва. В режиме высокой нагрузки и отсутствия времени в рамках рабочего процесса необходимо организовать стажировки с отрывом от производственного процесса сроком до двух недель минимально, проведение круглых столов, бизнес-игр, мозгового штурма с целью развития необходимых навыков у кандидатов.

Предусмотреть в рамках развития компетенций следующие мероприятия:

- проведение стажировок с целью практического освоения непосредственно на рабочем месте навыков выполнения работы или группы работ;
- дублирование каких-либо функций на рабочем месте, исполняемые под наблюдением лица, ответственного за подготовку работника;
- исполнение обязанностей руководителя во время его отсутствия;
- временное перемещение сотрудника на другие должности структурного подразделения (по горизонтали и вертикали) с целью освоения навыков работы на других должностях (ротация).

Разработка мероприятий в течение года по повышению вовлеченности кандидатов. Актуальным считаем проведение круглых столов

Лидер учит лидеров и проектных групп с целью вовлечения резервистов и решения актуальных важных/проблемных вопросов для организации, участие в подготовке, реализации проектов структурного подразделения, территориального банка, центрального аппарата.

Кроме того, все перечисленные и ныне проводимые мероприятия имеют максимальную эффективность при взаимодействии резервиста, действующего руководителя, руководителя планируемой к назначению должности, курирующие подразделения.

LINGUISTIC PROBLEMS OF INTERCULTURAL COMMUNICATION

Annotation. The aim of the article is to enlighten linguistic problems of intercultural communication as well as to reveal similarities and differences in structural-grammatical, lexical-morphological, pragmatic and cultural aspects and to define linguistic and extra linguistic factors of emerging language-related problems in the process of intercultural communication.

Key words: intercultural communication, phrases, expressions, non-native, replica, misunderstanding, linguistic problems, speech, national symbols.

The English language is so rich in phrases and set expressions that we face problems in correct choice in translation. A good translator should be aware of meaning of such phrases and set expressions. Some gestures, mimics can also be helpful for guessing the meaning which speaker wants to express by using them in his/her speech. Sometimes even words can't be translated from one language into another because they can be used in one language in metaphorical way and in the process of translation into another language they cause fun, surprise, misunderstanding and even offence. For example, when we ask someone "Are you a lark or an owl?" we mean a natural temper of a person who is more energized in the first half of the day (lark) or, on the contrary, a person who is active in the second half of the day (owl). If we translate these words into Uzbek and ask someone, it will seem funny.

Linguistic problems of intercultural communication are clearly seen in today's modern stage of society development which requires more and more communication with foreign partners. Almost all of them despite their nationality are good speakers of English. English is a top language of intercultural communication: almost all international conferences, competitions and meetings are held in English.

The English language is rich in phrases, clichés, speech formulas and set expressions which are registered in special dictionaries and are used in everyday speech for various communicative aims. English is learnt and taught in almost all countries of the world. Statistic data shows that more than 70% of English speakers are non-native. This means that English isn't their mother tongue. Perfect knowledge of English isn't enough for perfect communication between native English speakers and non-native ones. Why? The answer is vivid: they belong to different language cultures and are aware of their native language specifics due to

historical, religious, cultural, national background of their language functioning. When an intercultural dialogue takes place between speakers of different lingual cultures there appears a definite misbalance between expressions in two different languages, e.g. English and Uzbek. [4,639]

What do most of non-native English speakers usually do? Often they use some expressions which exist in their native language and translate them into English. This often leads to incorrect, even rude attitude to native English speaker. That's why non-native specialists of English who deal with the sphere of international communication should deeply study phrases and expressions which really exist in English and which are really used in this or that situation. So, linguistic problem of intercultural communication is actual: it deals with communication between representatives of different language cultures. Preparation of competent specialists in this sphere becomes necessary in our country because Uzbekistan develops relations with world countries in different spheres. Correct use of English expressions in intercultural communication plays an important role, certainly.

The most frequent reason of using incorrect expressions in speech act using them in communication process is word-for-word translation. This idea was proved by Lynn Visson in her research work "Where Russians Go Wrong in Spoken English: Words and Expressions in the Context of Two Cultures". In this book the author points that frequently used American English phrases "I gonna" instead of "I am going" or "I wanna" instead of "I want to" are incorrect and rude. Once the author became the witness of the situation, when a Russian woman asked someone not to open a window by saying: "Don't open the window". This sentence seemed rather rude and acquired the accent of order. In this case she should say: "It is not necessary to open the window" [2, 167]. The meaning of the second sentence is the same but it possesses the form of politeness.

If we investigate expressions in the English and Uzbek language systems we will find a lot of similar examples when phrases can't be just translated from one language into another. The problem is not in the choice of words but in the choice of correctness of using this or that expression in a definite situation. English non-native speakers should know when to use and how to use different English phrases in exact situations. It is a frequent replica to say "Keling" (in singular) or "Kelinglar" (in plural) in the Uzbek lingual culture. These expressions are translated as "Come" (Invitation to come). Uzbek people are very hospitable and usually say this phrase when they meet their relatives, neighbours or friends in a street, shop, park, etc. If we say equivalent English phrase like "Come to my place (home)" to an English native speaker, he or she will ask about the time and reason of invitation because Englishmen don't use such phrase just as a common expression of familiar communication. They can say it only in case when they really plan to invite someone to their home. When Uzbek people have guests at their home, laying table is a necessary procedure. They often use expression "Dasturxonga qarang" thus asking guests to take food and feel at ease. Word-for-

word translation of this expression is “Look at the table-cloth”. Such phrase doesn’t exist in English, so one should say “Help yourself / (yourselves)”.

We come across with difficulty in finding Uzbek analogical phrase of the English phraseological unit “zoo daddy”, which means “a divorced man with the right to see his child (children) on weekend and take them to zoo, park, etc.” The phrase consists of two common words which together make up a phrase that doesn’t match to Uzbek national culture. We can’t find similar phraseological unit in the Uzbek language because there is no such Uzbek phraseological unit which characterizes a divorced man with the right to see children on week-ends. In such cases we should only give lexical explanation of the English phrase. So, most of idiomatic expressions make translators feel baffled in the process of rendering them from one language into another. Idioms are expressions that don’t mean what they appear to mean [1, 34]. For example, when we say “It’s raining cats and dogs” we mean that “it’s raining heavily”. But we can’t use the same components of the phrase (cats and dogs) in Uzbek for characterizing a heavy rain.

Like single words, idioms and fixed expressions may be culturally specific [59, 42]. Thus, in using various expressions in communication with native English speakers we should pay attention to national and cultural peculiarities of the English language culture and their function in speech act. It may happen that the same notions or even colours can express different meaning in various linguocultures. For example, there are red crosses in national flags of both countries: Uzbekistan and the UK. But they symbolize different features: in the flag of the UK Red Cross is presented as St. George’s Cross and takes its origins in the Crusades, when soldiers were identified by this red coloured cross on their white tunics. St. George was claimed to be the Patron Saint of England at that time, so the cross is associated with him. In the national flag of Uzbekistan two red crosses symbolize life and power.

Animals also can be national symbols: bird “Humo” in the emblem of Uzbekistan is a symbol of happiness and peace. The Lion expresses bravery and depicts courage of English warriors in English emblem. Today, this animal remains the national emblem of the country as well as it is used extensively in sports: team’s names, icons and so on. When it comes to the matter of intercultural communication as it was mentioned before, we may experience lots of challenges in translating some words or finding their equivalents because their meaning relates to any cultural realia and has national specifics. Only in case when there are similar notions of a definite custom or tradition in both languages, equivalents can be easily found. In other cases when a custom is unique and nationally specific, it has no analogues in another linguoculture. For example, every year English people celebrate Halloween on the 31st of October. Halloween is originated as a pagan festival in parts of northern Europe, particularly, around what is now the United Kingdom. Many European cultural traditions hold that Halloween is a time when magic is most patent and spirits can maintain contact

with the material world. The aim of this holiday is to create fun: pumpkin is the most important tool. Talking about this holiday, we can't find a similar custom in our country. So, one should explain the details of celebration and origin of this holiday. [5,378]

Another similar example is the holiday that belongs to our national culture: Navruz, which is celebrated on the 21st of March. This holiday represents our long history, rich cultural traditions and people's attitude to each other. This is a unique holiday that can be described to foreign people by describing its celebration and using pictures, photos, videos. At the same time we have similar international holiday named "New Year". The name and way of celebrating this holiday is almost the same in many countries: decoration of New Year Tree, putting presents under it, cooking delicious food, fireworks, decorations, Santa Claus, etc. So, when we talk about New Year holiday, the foreigners are already aware of its celebration in comparison with above mentioned Navruz, which has nothing common with the English culture.

The phrase "to take one's chance" can be translated "to use someone's opportunity". But the real meaning of this expression in communication would be "to make a risk" which is a bit different from translation. When a speaker wants to make a compliment he may say "smile becomes you", which means "smile suits you or makes you more beautiful". But this compliment can be expressed in suitable situation and context. In such cases a translator should be very attentive not only to the meaning but also to the context and surrounding situation as they are not less important than the language itself [3, 344]. Besides, religious and moral principles are essential in this case, especially when a man intends to make a compliment to a woman. The phrase "pretty bad" consists of two words which are semantically opposed to each other. But when a speaker points at any seriously difficult situation, he/she uses this phrase. Learning a language just for official communication seems not be very difficult at first, but intercultural communication is always rather complicated in different spheres of human activity.

As we see, a language is more acquirable in the aspects of culture, traditions and customs. In this way a learner studies the language by taking part in special ceremonies, meetings, parties and enriches his/her lexicon by listening and speaking to native bearers of the language

A TERM IS A SPECIFIC PURPOSE LANGUAGE

Annotation. The article talks about the established position of terminology as a science in terms of terms related to the field of tourism, and the concept of "terminology" means a set of terms related to a specific field of knowledge, unlike its meaning in other foreign scientific sources and educational publications.

Key words: Terminology, terminosphere, terminosistem, problems of synonymy and polysemy, hybrid terms and pure terms.

Introduction. The term has a generalizing character and summarizes the definitions of the essence of the term proposed by leading researchers in different years and terms acquire their uniqueness as a single-meaning word belonging to a separate lexical group that arises in the scientific-practical activities of persons with certain scientific and professional knowledge, and is directly used by them, as well as the use of a terminological unit in a specific situation increases the effectiveness of professional communication and communicative capabilities of specialists, their creates an atmosphere of mutual understanding.

Literature analysis on the subject: In the initial period of the history of terminology, which lasted until the early 1960s, a number of basic concepts such as "terminosystem" (D.S. Lotte), "terminological field" (L.A. Kapanadze) were formed. For example, as D. Sageder noted: "Rapid development and development of technologies required not only the naming of new concepts, but also agreement on the use of terms. Practical result terminological work began to be organized within certain specialized fields (specialties)".

A.V. Superanskaya defines it as follows: "The term is a special word adopted in a certain professional activity and used in certain fields and conditions. A term is a concept included in the system of concepts of a certain field of professional knowledge, which is expressed in words. A term is a basic conceptual element of a special-purpose language. Within its terminological field, the term is used in one sense. The same pronounced terms of different fields are homonyms. For its correct understanding, the term requires a special definition (exact scientific definition)".

Research methodology. Linguistic description, comparative-typological (comparative), semantic-methodical, diachronic, synchronic, component analysis, statistical analysis, lexical-syntactic, lexical-semantic methods were used in the article.

Analysis and results. In 1969, at the scientific symposium held at the Moscow State University named after M.V. Lomonosov, the concept of terminology was officially recognized and put into use. As a result, the position

of terminology as a science was determined, and the scope of the concept of "terminology" was limited, and it began to mean a set of terms related to a specific field of knowledge, unlike its meaning in other foreign scientific sources, educational publications. In some foreign scientific sources and educational literature, "terminology" is used as a branch of science or there are debates about the status of terminology as a separate scientific discipline. Terminology is a science focused on the study of lexical elements - terms, which are modified from elements existing in other fields, used in specialized fields and arise in such fields. Terminology involves the compilation, description and re-creation of terms. Some authors make a distinction between terminology and terminography (like the distinction between lexicology and lexicography). Terminography in this case means the art of creating "terminologies" and "special dictionaries". Thus, according to the authors' point of view, terminology includes a theoretical component and the result of the combination of terminological theory and practice (specialized dictionaries). Terminology is an independent field, with a special theory and methodology of a special vocabulary of the language.

Diversity in the understanding of terminology (in Russian linguistics) exists in foreign language science as well as in Uzbek linguistics. D.Sageder writes about the difference of views on the essence of terminology: The views on terminology as a scientific discipline are quite diverse. Currently, there are different interpretations of this field and a number of controversial issues related to it. Is terminology a science or just a method? Does terminology have the status of a separate humanities with its own theory, or should it be grateful for its theoretical possibilities to relatively consolidated disciplines, a theoretically stable body of science? The importance of the science of terminology cannot be underestimated. It should be viewed as a historically significant force due to its evolution and forward movement in the rapidly changing world of modern technology.

A detailed review of the works of Anglo-American researchers devoted to terms and terminology is covered in the study of V.V. Kasyanov. According to the author, the statements about the uniformity of the points of view in the works of these scientists require an explanation; A deeper study and analysis of the theoretical and practical materials of Anglo-American linguists reveals theoretical differences in their interpretations regarding the uniqueness of terms and their difference from the common dictionary.

The conclusions of V.V. Kasyanov were confirmed in a recent study by a representative of Slovak linguistics: Kabre and Kageura studies on terminology have a clearly focused goal, which can serve as a foundation for the methodology of this field, giving it the status of an independent science. is to determine the characteristics that serve as the basis from the theoretical point of view.

S.D. Shelov analyzed the definitions of V.P.Danilenko, K.Ya.Averbukh, V.M.Leychik and other experts aimed at revealing the essence of the term and offered a generalized definition of the term. According to this definition, "if a

language symbol (word combination, compound word, word combination with separate symbols, etc.) expresses a concept related to some field of knowledge, at the same time, those who use this language symbol have a definition (explanation, explanation) consciously chosen., it is considered a term". Many researches have been conducted on the issues of "term" and "terminology", which have been used since the beginning, and various definitions have been given. The lexeme "term" comes from the Latin word "terminus" and means "end", "limit", "boundary", "end". According to P. Nishonov, "a term is a word or a word combination according to its structure, it is a lexical unit that is semantically limited to the scope of a special field and expresses the concept related to this field". A term is a word that is unconditionally (compulsorily) related (comparable) to a certain unit in the system of specific logical concepts. Defining the term as an object of linguistics and its systematic study motivated the formation of explanations (definitions) of the concept of "term", the description of the term, the development of solutions to problems related to it, and finally, the emergence of the science of terminology. The term took a firm place in the system of lexical-grammatical concepts and became a "full-fledged member" of the lexical-semantic system of the language.

According to A. Reformatsky, the term is not "just a word", but it is an "unusual" or "new word", even if it can be "rationalized" and even "invented", it is first of all a word. Professor S. Usmonov's researches are of great importance for terminology, and the term "...any innovations in the field of production tools, as well as in the field of culture and science, are first expressed through language units, or rather, terms. In this sense, terminology (a set of terms in a certain language) is a witness, a mirror of modern history", defines. In our opinion, the term, according to its linguistic nature, is an integral part of the vocabulary system of the literary language, and differs from other categories of words by its clear, concise expression of scientific, technical or other professional concepts and its wealth of information.

The definition proposed by S.D. Shelov, in our opinion, is relevant according to the following principles:

- a) has a generalizing character and summarizes the definitions of the essence of the term proposed by leading researchers in different years;
- b) the terms become unique as a single-meaning word belonging to a separate lexical group that arises in the scientific-practical activities of persons with certain scientific and professional knowledge and is directly used by them;
- c) the use of the terminological unit in a specific situation increases the effectiveness of professional communication and communicative capabilities of specialists, and creates an environment for their correct understanding of each other.

As N.V. Serbinovskaya noted, "the term is associated with other related (similar) phenomena - nomen, professionalisms, terminoids, etc. differs from". In the work of R. Doniyorov, "The difference between the term and professionalisms

is that the term is the expression and name of a concept that is official and legalized in a specific science, industrial field, agriculture, technology. "Professionalism is a semi-official word that is widely used in the language of a profession, specialty, in many cases in a scientific style, and does not have a strict, scientific description of the concept".

Today, concepts such as terminology and terminosphere, which are related to terms and terminology, are often used in linguistics. In this sense, "in the absence of a universally accepted definition, each researcher writes his own definition and interpretation of the "worker".

Linguistics, which is the main factor behind the emergence of the concept of "terminosphere" according to linguistic terminology, is a dynamic, self-renewing and continuously developing science, like any other science. Accordingly, the system of scientific concepts is in the stage of continuous development and change in order to be able to perfectly, accurately and objectively assess the level of human knowledge. The change of the system of scientific concepts of any developing science and acquisition of a special meaning was emphasized by V.I. Siforov in 1974.

At the current stage of the development of terminology, the same trend is observed in relation to the linguistic concept of "terminosphere". The unanimous definition or interpretation of this concept is not covered in the following dictionaries and dictionary-references of world linguists: "Slovar lingvisticheskikh terminov" (O.S. Akhmanova), "Slovar-spravochnik lingvisticheskikh terminov" (D.E.Rosenthal M.A.Telenkova), "Lingvistichesky entsiklopedichesky slovar" (V.N.Yartsev), "Slovar sotsiolingvisticheskikh terminov", slovar-spravochnik "Terminy i ponyatiya lingvistiki: Obshchee yazykoznanie. Sociolinguistics" T.V. Jerebilo; Slovar po yazykoznaniiyu (Dictionary of language knowledge); Slovar sotsiolingvisticheskikh terminov (Dictionary of Eleumet's linguistic terms), etc. Nevertheless, the concept of "terminosphere" is actively used in scientific literature. This indicates that the concept is actively used in the scientific languages of some CIS countries, in particular, in the Uzbek and Kazakh languages, along with the Russian scientific method.

In the researches of Kyu Kageura, a leading expert in the field of terminology of English-American linguists, one can find such words as "a terminological sphere" (terminological shell) and "a terminological space" (terminological space). Based on the importance of terminology as an independent science, if any lexical unit is considered a term, then it is located in a previously existing terminological space; thus proves that he introduces the concept of terminology as a sum of "terminological units", as an empirical materialization [218;]. It is worth noting that, unlike the terminological sphere related to the linguistic text, there is always a terminological field that can be a component of the lexical sphere.

Table 1

Term units located at the boundary of the universal lexicon

<i>English</i>	<i>русча</i>	<i>O'zbekcha</i>
<i>agrotourism</i>	<i>агротуризм</i>	<i>agroturizm</i>
<i>tour package</i>	<i>тур пакет</i>	<i>tur paketi</i>
<i>jeep safari</i>	<i>джип-сафари</i>	<i>jip safari</i>
<i>on-your-own package</i>	<i>самостоятельный тур</i>	<i>o'z-o'zidan sayohat</i>
<i>rural tourism</i>	<i>сельский туризм</i>	<i>qishloq turizmi</i>
<i>check-in</i>	<i>регистрироваться</i>	<i>ro'yxatdan o'tish</i>
<i>check-out</i>	<i>проверить</i>	<i>tekshirish</i>
<i>Boutique hotel</i>	<i>бутик-отель</i>	<i>butik mehmonxona</i>
<i>flotel</i>	<i>флотель</i>	<i>suzuvchi</i>
<i>tour leader</i>	<i>гид</i>	<i>gid</i>
<i>tour operator</i>	<i>тур-оператор</i>	<i>turoperator</i>
<i>tour manager</i>	<i>тур-менеджер</i>	<i>ekskursiya menejeri</i>
<i>catering service</i>	<i>Служба общественного питания</i>	<i>ovqatlanish xizmati</i>

Conclusion: Thus, according to K. Kageura's point of view, the terms "terminological sphere" and "terminological space" enter into a systematic relationship with other terms, settle among them and manifest a certain environment that forms a terminological system. It is worth noting that, unlike the terminological sphere related to the linguistic text, there is always a terminological field that can be a component of the lexical sphere. According to the linguistic approach, terms are interpreted as an object characterized by systematicity and expressed through a scientific definition. In most cases, the term is not affected by the context. It is methodologically neutral and is mainly used in functional environments, that is, in texts and documents used by specialists and researchers in various fields of knowledge. Interdisciplinary terminological units interact and form the core of the terminological field as a whole.

THEORETICAL CONSIDERATIONS OF THE TERMINOSYSTEM IN TOURISM

Abstract. The article talks about the theoretical views on the terms related to the field of tourism, the definition of the term as a linguistic object and its systematic study and the system of lexical-grammatical concepts of the term.

Key words: Term, terminology, terminosphere, terminosis, problems of synonymy and polysemy, hybrid terms and pure terms.

Introduction: In world linguistics, a number of linguistic studies have been carried out dedicated to the study of a specific linguistic unit - term, which has acquired a special terminological meaning. The scientific-philosophical interest in the nature of the term determined as a result of the sharp rise in the development of science and technology and the rapid development of production and industry in the 19th century created the ground for such research. In the 18th and 19th centuries, the problems of terminology became the focus of attention of linguists. One of the main reasons for this is related to the creation of terms, and the second reason is the influence of extra linguistic factors on terminology. However, they were more concerned with the problems of synonymy and polysemy encountered in terminology, as well as the paradigmatic and syntagmatic relations of term-lexemas, hybrid terms and pure terms in context, and the variety of interactions with certain concepts.

Literature analysis on the subject: A detailed review of the works of Anglo-American researchers devoted to terms and terminology is covered in the study of V.V. Kasyanov. According to the author, the statements about the uniformity of the points of view in the works of these scientists - explaining; A deeper study and analysis of the theoretical and practical materials of Anglo-American linguists reveals theoretical differences in their interpretations regarding the uniqueness of terms and their difference from the common dictionary.

The conclusions of V. V. Kasyanov were confirmed in a recent study by a representative of Slovak linguistics: Kabre and Kageura studies on terminology have a clearly focused goal, which can serve as a foundation for the methodology of this field, giving it the status of an independent science. is to determine the characteristics that serve as the basis from the theoretical point of view. Nevertheless, they both emphasize the need for future research and collaborative efforts to allow the emergence of an appropriate theoretical model. It is not easy to fulfil this task due to the lack of communication between specialists, the

development of the subjects of the debate in different ways and the variable perception.

Research methodology. Linguistic description, comparative-typological (comparative), semantic-methodical, diachronic, synchronic, component analysis, statistical analysis, lexical-syntactic, lexical-semantic methods were used in the article.

Analysis and results. Many researches have been conducted on the issues of "term" and "terminology", which have been used since the beginning, and various definitions have been given. The lexeme "term" comes from the Latin word "terminus", which means "end", "limit", "boundary", "end". According to P. Nishonov, "a term is a word or a combination of words according to its structure, it is a lexical unit that is limited by the scope of a special field in terms of semantics and expresses the concept related to this field". A term is a word that is unconditionally (compulsorily) related (comparable) to a certain unit in the system of specific logical concepts. Defining the term as an object of linguistics and its systematic study motivated the formation of explanations (definitions) of the concept of "term", the description of the term, the development of solutions to problems related to it, and finally, the emergence of the science of terminology. The term took a firm place in the system of lexical-grammatical concepts and became a "full-fledged member" of the lexical-semantic system of the language. According to A. Reformatsky, the term is not "just a word", but it is, first of all, a word, even if it is "unusual" or "new word", it can be "rationalized" and even "invented". Professor S. Usmonov's researches are of great importance for terminology, and the term "...any innovations in the field of production tools, as well as in the field of culture and science, are first expressed through language units, or rather, terms. In this sense, terminology (a set of terms in a certain language) is a witness, a mirror of modern history. In our opinion, the term, according to its linguistic nature, is an integral part of the vocabulary system of the literary language, and differs from other categories of words by its clear, concise expression of scientific, technical or other professional concepts and its wealth of information.

Today, the tourism terminology in our country is at the stage of formation and development, and in this process, the tourism terminology of Russian, Arabic and Turkish languages also plays an important role in the integral historical and interrelationship with the English language tourism terminology, which is considered a globally recognized tool of international communication. The study of the interaction of languages is a priority of linguistics. is considered one of the directions, and in this regard, it is important to research the Uzbek language tourism terminology, to reveal its national and international features. Based on the principles of development, the demand of the present day arises from the need to "stimulate scientific research and innovation activities, to create effective mechanisms for the implementation of scientific and innovative achievements" [4;] in the teaching of various systematic languages, students should be taught the

lexical-semantics of professional terms in a foreign language., consists of teaching grammatical, functional-structural aspects. After all, in the training of specialists in the field of tourism, the system of tourism terms related to the field has been thoroughly researched on a scientific basis, the scope of conducting scientific research on determining the general and specific aspects in Uzbek and foreign languages, and it creates ample opportunities to further increase the efficiency index.

In recent years, the words "term", "term", "nomenclature" have been widely used. According to the national encyclopedia of Uzbekistan, along with the word "term", the words "term" and "istilah" are also used in the same sense. But they cannot express the full meaning of the word "term". The word "term" is used in a broad sense and is applied to geographical objects, famous names, and the word "revolution" can be used freely in texts on historical topics (for example: history of literature, Eastern philosophy, etc.). S. According to Usmanov: "...the meaning of the word term is broader than the meaning of the word term, it is understood as the name of all things, and the term is a formalized word used in a certain narrow field. In this sense, the concept of term is a scientific-lexical unit included in the concept of "term".

In his research, O. Akhmedov distinguished the concepts of "term", "term", "term", "nomenclature" and said that "Terms actually have a lexical-semantic universal form, and they pass to the common language through a specific terminological system. After all, terms and common words are lexical units that complement each other," he says. Thus, terminology is one of the factors that form the lexicon of this language.

The concept of nomenclature is defined in the encyclopaedic dictionary as "Nomenclature (lat. nomenclature) - a list, a list of names, as well as a list of specific terms and category names used in the field of science, technology, law and economics." In addition, P.P. Nishonov "The term applied to an object or reality, first of all, defines and classifies this object or reality. This is not observed in the nomenclature. Their function is limited to naming things and objects. Therefore, "term" is a broad and clear concept in relation to nomenclature, meaning a word with a special function, while "nomenclature" is a term that serves to name similar objects and concepts.

We found it necessary to use the international lexemes "term" and "terminology" in our research.

The old view that terms represent the periphery of the language lexicon has already been rejected. Terms have all the characteristics of natural language lexical units. However, one of the most important directions of lexicology is the determination of the composition of terms related to a specific field of science, their arrangement, the unification of terms and the creation of terms for new scientific and technical fields.

A.V. Superanskaya defines it as follows: "The term is a special word adopted in a certain professional activity and used in certain fields and conditions.

A term is a concept included in the system of concepts of a certain field of professional knowledge, which is expressed in words. A term is a basic conceptual element of a special-purpose language. Within its terminological field, the term is used in one sense. The same pronounced terms of different fields are homonyms. For its correct understanding, the term requires a special definition (exact scientific definition).

Terminology is a science focused on the study of lexical elements - terms, modified from existing elements in other fields, used in specialized fields and created in such fields. Terminology involves the compilation, description and re-creation of terms. <...>. Some authors make a distinction between terminology and terminography (like the distinction between lexicology and lexicography). Terminography in this case means the art of creating "terminologies" and "special dictionaries". Thus, according to the authors' point of view, terminology includes a theoretical component and the result of the combination of terminological theory and practice (specialized dictionaries). Terminology is an independent field and has its own theory and methodology for the special vocabulary of the language.

A detailed review of the works of Anglo-American researchers devoted to terms and terminology is covered in the study of V.V. Kasyanov. According to the author, the statements about the uniformity of the points of view in the works of these scientists - explaining; A deeper study and analysis of the theoretical and practical materials of Anglo-American linguists reveals theoretical differences in their interpretations regarding the uniqueness of terms and their difference from the common vocabulary.

The conclusions of V.V. Kasyanov were confirmed in a recent study by a representative of Slovak linguistics: Kabre and Kageura's research on terminology has a clearly focused goal and can serve as a foundation for the methodology of this field, giving it the status of an independent science. is to determine the characteristics that serve as the basis from the theoretical point of view. Nevertheless, they both emphasize the need for future research and collaborative efforts to allow the emergence of an appropriate theoretical model. It is not easy to fulfill this task due to the lack of communication between specialists, the development of the subjects of the debate in different ways and the variable perception.

At the end of the 70s of the 20th century, V. P. Danilenko in his monograph on the terminological lexicon of the Russian language analyzes the issues of terminology, in particular, a number of scientific works of the 40s and 70s. V. P. Danilenko gives 19 definitions of the concept of "term". The Russian linguist says that "all the definitions of the term are only a small part of the definitions found in almost every study of the special lexicon" [60; -B.86].

After V.P. Danilenko, S.D. Shelov, in order to clarify the nature of the term, to compare and evaluate different definitions of the concept of "term", in his work entitled "Eshche raz ob opredelenii ponyatiya termin" (Once again about the definition of the concept of term) of this concept in the 80s of the 20th century -

cites 31 definitions taken from scientific, dictionary-reference, educational publications on linguistics and terminology published in the 1990s and the beginning of the 21st century.

Conclusions and suggestions. It is necessary to create more scientific research and new terms for the terminology related to the field of tourism. Semantic descriptions of the term according to the scientific works of our scientists: its methodological neutrality, striving for nominativeness, commonalities and differences in the terminology of different languages are of great importance in research.

ИНТЕГРАЦИЯ ИНТЕРНЕТ-ТЕХНОЛОГИЙ В МАРКЕТИНГОВУЮ СТРАТЕГИЮ ОБРАЗОВАТЕЛЬНОЙ ОРГАНИЗАЦИИ

Аннотация. В современном мире Интернет играет ключевую роль во всех сферах деятельности, включая образование. В условиях высокой конкуренции на рынке образовательных услуг необходимо прибегать к инновационным маркетинговым инструментам. В работе рассмотрены такие интернет-технологии маркетинга как: поисковая оптимизация веб-сайтов, email-рассылки, контент-маркетинг, использование видеороликов на видео-хостингах, использование рекламы у лидеров мнений. В статье приведен анализ возможных результатов использования данных инструментов и сформулированы рекомендации по их применению при выстраивании маркетинговой стратегии образовательной организации.

Ключевые слова: образовательное учреждение, целевая аудитория, маркетинг, email-маркетинг, SEO, Интернет.

INTEGRATION OF INTERNET TECHNOLOGIES IN MARKETING STRATEGY OF EDUCATIONAL ORGANIZATION

Abstract. In the modern world, the Internet plays a key role in all spheres of activity, including education. In conditions of high competition in the market of educational services it is necessary to resort to innovative marketing tools. The paper considers such Internet marketing technologies as: search engine optimization of websites, email newsletters, content marketing, use of video clips on video-hosting sites, use of advertising from opinion leaders. The article presents the analysis of possible results of using these tools and formulates recommendations for their use in building a marketing strategy of an educational organization.

Key words: educational institution, target audience, marketing, email marketing, SEO, Internet.

В современном мире Интернет играет ключевую роль во всех сферах деятельности, включая образование. В условиях высокой конкуренции на рынке образовательных услуг, для привлечения студентов и удержания их внимания, образовательным организациям (далее - ОО) становится необходимым прибегать к инновационным маркетинговым инструментам. Традиционные дни открытых дверей и распространение печатной рекламы все еще работают, но уже не так эффективно. Чтобы быть заметным в поле зрения потенциальных потребителей, образовательные учреждения разного уровня прибегают к использованию интернет-маркетинга.

Кроме выполнения роли оптимизации продвижения, онлайн-технологии в маркетинговой среде образования также являются мощным инструментом влияния маркетинга на все процессы функционирования организации. В первую очередь, интернет-среда позволяет ОО расширить свой охват и достичь глобальной аудитории студентов. Вне зависимости от географического положения учебного заведения или самого обучающегося, полная автоматизация процесса привлечения и сопровождения студента по пути к покупке продукта позволит сделать этот путь максимально прозрачным. Если какой-то элемент этого процесса работает неправильно, это можно будет отследить и проработать. Таким образом, ОО может «дотянуться» до любого потенциального потребителя, если точно знает, что этот потребитель является частью целевой аудитории (далее - ЦА).

С развитием интернета и технологий дистанционного обучения, учебные программы становятся доступными для студентов из разных стран и континентов, что дает учебным заведениям возможность расширять географию своей аудитории и повышать международную видимость. Онлайн-формат обучения уже не является чем-то непривычным для пользователей, а в сознании потенциальных потребителей закрепляется образ доступности и качества. Путем использования различных онлайн-платформ ОО могут активно взаимодействовать со своей аудиторией, не теряя связь с ними ни на одном этапе получения услуги, а при возникновении неполадки или жалобы, незамедлительно реагировать, чтобы сохранить репутацию.

Можно сделать вывод, что онлайн-пространство сопровождает обучающегося на всем пути, что позволяет оптимизировать многие процессы внутри образовательного учреждения, а маркетологам лучше узнать свою ЦА. Однако, многие нововведения еще впереди, и в настоящее время нельзя говорить о полной автоматизации образовательного процесса. Но все же онлайн-технологии заняли твердое место в области продвижения образовательных услуг. Для того, чтобы сделать этот процесс максимально экономически эффективным, маркетинговые отделы различных ОО используют инструменты онлайн-маркетинга.

У абсолютного большинства образовательных учреждений в России есть свой веб-сайт, однако же не все используют поисковую оптимизацию (далее – SEO), которая непосредственно влияет на эффективность сайта, как инструмента продвижения. SEO помогает учебным заведениям увеличить свою видимость в поисковых системах и привлечь больше потенциальных потребителей, которые входят в его целевой сегмент. Например, университет может оптимизировать свой веб-сайт, чтобы он лучше соответствовал запросам студентов, и в результате выходил на более высокие позиции в поисковой выдаче. Если студент ищет программы бакалавриата в области информационных технологий, университет, который активно использует SEO, будет выше в результатах поиска и, вероятно, получит больше кликов.

Помимо SEO, маркетинговые отделы ОО активно пользуются принципом персонализация для привлечения ЦА. Учебное заведение может запускать сегментированные кампании по электронной почте, где каждая группа студентов получает информацию, соответствующую их интересам и потребностям. Если студенты, заинтересованные в искусстве, получают информацию о специализированных курсах, они будут более склонны к регистрации. Технологии сбора данных о пользователях позволяют собрать необходимую информацию для того, чтобы создать персонализированную рекламную кампанию.

Такие индивидуально адресованные предложения могут достигать пользователя путем email-рассылок, которые тоже прочно закрепились в сознании маркетологов. Email-маркетинг является одним из самых эффективных инструментов интернет-маркетинга, так как имеет самые высокие показатели окупаемости и приводит самых целевых пользователей. Однако, успешность персонализированной рассылки сильно зависит от содержания продающего текста внутри письма, использования правильных иллюстраций и того, какой аудитории проводится рассылка. Некоторые сегменты целевой аудитории ОО могут вовсе не пользоваться электронной почтой на ежедневной основе, поэтому присылая им сообщения с акционным предложением, маркетологи не получают ожидаемых результатов. Такие частные аспекты психологического портрета ЦА должны рассматриваться задолго до того, как будет определен список инструментов, используемых для маркетинговых кампаний, чтобы деньги образовательного учреждения не были потрачены зря.

Достаточно безопасным инструментом интернет-маркетинга является контент-маркетинг – создание и распространение полезной информации для привлечения целевой аудитории. В качестве материалов с полезной информацией могут выступать собственный блог ОО (часто такие бывают на веб-сайтах), статьи на отдельных ресурсах, посты в соцсетях, подкасты и видео. Этот инструмент редко конвертируется в продажи напрямую. Он больше работает на узнаваемость бренда, формирует доверие аудитории,

доказывает экспертность, поэтому и является сравнительно безопасным среди других инструментов. Благодаря тому, что эти материалы будут выполнять не только задачу продвижения образовательного продукта, но и выступать в качестве PR- и в какой-то степени образовательного инструмента, не получится недооценить его полезность. Если что-то пойдет не так, и статья на онлайн-портале не достигнет своего целевого пользователя, она может быть использована в качестве образовательного ресурса для кого-то другого, а найти такую статью можно будет через поисковые запросы.

Видеореклама также играет значимую роль в маркетинге образования. Маркетинговая и PR-службы университета могут создать короткие видеоролики, в котором рассказываются интересные факты об образовательном учреждении, транслируются интервью с преподавателями и студентами, а также проводятся обзоры образовательных программ. Такие видеоролики могут быть опубликованы на популярных видео-хостингах, таких как YouTube и TikTok, и привлечь внимание потенциальных обучающихся, увеличивая интерес к учебному заведению.

Текстовые блоги также по-прежнему являются важным ресурсом для учащихся и их родителей, которым нужна глубокая информация, которую невозможно эффективно передать короткими видеороликами. Создание ориентированного на ЦА контента способствует увеличению вовлеченности и создает у потенциального клиента чувство сопричастности, что в итоге помогает достигать роста лояльности потенциальных и действительных потребителей.

Наличие официальных аккаунтов в соцсетях стало привычным для многих ОО, так как они являются отличной платформой для формирования имиджа. Работа с заполнением аккаунта фото-, видео- и текстовым контентом является работой PR-отделов, и главной их задачей является сделать аккаунт ОО привлекательным и интересным для целевой аудитории. С целью эффективного использования социальных сетей, как инструмента продаж, необходимо найти пути конвертации подписчиков в клиентов, что и является задачей маркетологов. Когда человек, будь то потенциальный студент или его родитель, ежедневно наблюдает за страницей образовательного учреждения, у него формируется эмоциональная связь, и в момент, когда этому человеку предстоит совершить выбор, он будет больше склонен получить образовательную услугу именно у привычной ему организации.

Продвижение через социальные сети затрагивает не только собственные аккаунты ОО, но и использование рекламы у лидеров мнений. Инфлюенсеры становятся все более важными компонентами в маркетинговых стратегиях учебных заведений. Сегодняшняя аудитория социальных сетей ищет подлинный контент от реальных людей, и локальные лидеры мнений предоставляют именно это. Однако

управляющий состав и маркетинговый отдел каждого учебного заведения должны внимательно относиться к выбору авторов мнений, которые будут главными адвокатами его бренда. Необходимо тщательно изучить востребованность тех или иных инфлюенсеров среди потенциальных потребителей, их репутацию и релевантность содержания их блога к рекламируемой теме.

Одним из ключевых преимуществ использования онлайн-платформ для целевой рекламы, как было упомянуто ранее, является возможность точечной настройки рекламных кампаний. ОО могут использовать различные инструменты таргетированной рекламы, чтобы определить конкретные характеристики своей целевой аудитории и предоставить им соответствующую информацию о своих образовательных предложениях. Благодаря возможности анализа результатов рекламных кампаний в реальном времени маркетологи могут постоянно оптимизировать свои маркетинговые усилия и увеличивать эффективность своих кампаний, что позволяет им привлекать более целевых пользователей и продвигать среди них свои образовательные программы и услуги максимально эффективно.

Онлайн-маркетинг имеет собственную культуру и не терпит халатности. Из-за высокой стоимости качественных рекламных инструментов маркетинговым отделам не стоит полагаться только на популярность того или иного ресурса. Выбор подходящих инструментов интернет-маркетинга зависит от многих факторов: возраст и образ жизни ЦА, их привычки и интересы, механизмы взаимодействия с ЦА и, конечно же, маркетинговый бюджет. Только анализируя все эти аспекты в совокупности можно построить стабильно и эффективно работающую систему маркетинговых инструментов.

УПРАВЛЕНИЕ ЗАПАСАМИ В СОВРЕМЕННЫХ ОРГАНИЗАЦИЯХ

Аннотация. В данной статье поднимается ключевой вопрос актуальности управления запасами в современных организациях. Основное внимание уделяется изучению теоретических принципов, лежащих в основе управления запасами, а также анализу последних тенденций в сфере оптимизации этого процесса в бизнес-структурах.

Ключевые слова: управление запасами организации, модель управления, метод Уильсона, метод ABC, метод XYZ, нейросетевое моделирование.

INVENTORY MANAGEMENT IN MODERN ORGANIZATIONS

Annotation. This article raises the key issue of the relevance of inventory management in modern organizations. The main focus is on studying the theoretical principles underlying inventory management, as well as analyzing the latest trends in optimizing this process in business structures.

Keywords: organization's inventory management, management model, Wilson's method, ABC method, XYZ method, neural network modeling.

На данный момент, для успешного развития любой современной организации, необходимо грамотно и эффективно управлять собственными запасами.

Организациям необходимо иметь на складах определённое количество сырья и материалов, так как именно благодаря им обеспечивается постоянно и непрерывное производство продукции.

Согласно Федеральному стандарту бухгалтерского учета «Запасы» ФСБУ 5/2019 от 15.11.2019 запасы – это активы, потребляемые или

продаваемые в рамках обычного операционного цикла организации, либо используемые в течение периода не более 12 месяцев [1].

Управление запасами необходимо с целью поддержания их необходимого баланса и исключения появления дефицита или профицита материалов на складах. На формирование запасов могут влиять различные факторы, связанные с сезонностью, изменениями объема производства, увеличение или уменьшение цен или спроса и многие другие [2].

В современной практике существует несколько концепций управления запасами, такие как: консервативная, модерация и радикальная. Консервативная основана на постоянном поддержании запасов на предприятии в большом количестве. Модерация связана с постоянным анализом и выявлением лучшего соотношения запасов. Радикальная же, противоположно консервативной концепции, направлена на полную минимизацию запасов на складе.

На сегодняшний момент выделяют 2 популярные и общепринятые модели управления запасами. При первой модели, Р-модель, запасы на складе пополняются равномерно в течении определенного времени. При Q-модели, пополнение запасов на складе производится тогда, когда они израсходованы и подходят к концу. Кроме них, существуют и другие модели, такие как «фиксированная частота пополнения запасов» и «минимально-максимальная». Последняя работает с двумя уровнями запасов и активируется, когда уровень падает ниже минимального, а не по истечении определенного времени [2].

В области управления запасами существует несколько основополагающих методов, каждый из которых имеет свои уникальные характеристики и применяется в зависимости от специфических потребностей и стратегии компании. Рассмотрим наиболее распространенные из них:

Метод Уильсона: Этот метод ориентирован на оптимизацию затрат, связанных с заказом и хранением запасов. Он помогает определить идеальное количество заказа, уменьшая общие затраты на запасы.

Метод ABC: В зависимости от влияния на общую стоимость, разделят запасы на три категории. Данный метод основывается на принципе распределения Парето.

Категория А включает дорогие товары с длительным сроком службы, составляющие большую часть затрат, но меньшую часть объема запасов.

Категория В включает товары средней стоимости и значимости.

Категория С состоит из недорогих товаров, которые составляют большую часть объема, но меньшую часть стоимости запасов.

Метод XYZ-анализа: Этот метод фокусируется на волатильности спроса и точности прогнозирования для разных товаров, классифицируя их на три группы:

X - товары с стабильным спросом и высокой прогнозируемостью.

Y - товары с умеренно предсказуемым спросом, возможно, с сезонными колебаниями.

Z - товары с непостоянным спросом и низкой прогнозируемостью.

Методы MRP (Material Requirements Planning) и MRP II (Manufacturing Resource Planning): Эти компьютеризированные системы управления производством помогают в планировании поставок материалов и комплектующих, а также в управлении складированием, закупками, продажами и производственными процессами.

Выбор метода управления запасами зависит от множества факторов, включая характер продукции, размеры и специфику компании, а также от целей и задач, которые она перед собой ставит.

В современном бизнесе, улучшение управления запасами тесно связано с применением компьютерных технологий и инновационных систем. Эти решения направлены на автоматизацию и упрощение процессов, что в конечном итоге способствует эффективности и снижению затрат.

Одним из ключевых классов систем для управления запасами является MRPII (Manufacturing Resource Planning). К ним относятся такие программы как Galaxy 7.1, Solar System, Concorde XAL, Platinum, Microsoft Dynamics, Scala. Эти системы обеспечивают автоматизацию управления компанией, охватывая широкий спектр функций от производства до логистики.

Помимо систем MRPII, широко используется метод Канбан, реализуемый через такие программные платформы как Kaiten, Trello, Bitrix24. Эти инструменты основаны на концепции виртуальных досок и карточек, что позволяет эффективно управлять запасами и производственными потоками.

В дополнение к этому, для управления запасами применяется система OPT (Optimized Production Technology), представляющая собой усовершенствованную версию Канбана. Она направлена на минимизацию узких мест в производственных и логистических цепочках.

В случаях, когда традиционные методы оказываются неэффективны, на помощь приходят современные технологии анализа данных и принятия решений, такие как нейросетевое моделирование [3].

Нейросети способны к самообучению и эффективно решают задачи прогнозирования, регрессии, классификации и кластеризации. Они могут адаптироваться к конкретным условиям компании, предсказывать будущие цены на акции и влиять на оптимизацию запасов [4].

Таким образом, современные системы и технологии играют ключевую роль в управлении запасами. Они позволяют организациям улучшить управленческую деятельность, оптимизировать запасы и уменьшить затраты на их хранение. Всё это ведёт к повышению эффективности производства и улучшению конечного результата деятельности компании.

APPROACHES AND STRATEGIES FOR INTERACTION OF EDUCATIONAL ORGANIZATIONS AND PARENTS IN THE UPBRINGING OF CHILDREN

Abstract. The purpose of the article is to develop the content, approaches and strategies of interaction between an educational organization and parents in the upbringing of children. The “pros” and “cons” of each approach are identified and described.

Keywords: educational organization, approach, interaction strategy.

Семья и образовательная организация являются двумя ведущими социальными институтами, оказывающими влияние на воспитание и социализацию ребенка. Для полноценного качественного воспитания ребенка требуется консолидация усилий обоих этих институтов, а воспитательное влияние только одного из них является недостаточным. Сотрудничество с родителями есть условие развития современной школы,

достижения образовательных целей и создания наиболее благоприятных условий для образования и воспитания обучающихся.

Сегодня взаимодействие между школой и родителями рассматривается с учетом модернизации современной образовательной системы. Взаимодействие предполагает ориентацию на родителей как на «заказчиков» образовательных услуг, и, в то же время, активных, добросовестных и ответственных потребителей, способных правильно оценить их качество и принять участие в оптимизации учебной деятельности обучающихся в соответствии с образовательными запросами и современными требованиями к самоорганизации учебного процесса. Всё это предусматривает необходимость выстраивания долгосрочных взаимовыгодных отношений с родителями на принципах и условиях социального партнёрства. Взаимодействие школы и семьи выстраивается через новые формы сотрудничества, обозначенные современной стратегией образования.

На необходимость выстраивания взаимодействия семьи и образовательной организации, в которой обучается и воспитывается ребенок, указывают научные исследования, с одной стороны, и нормативная правовая база Российской Федерации, с другой стороны.

Так, П.П. Блонский подчеркивал, что огромная роль родителей заключается в том, что они являются первыми воспитателями своих детей, и воспитание ребенка начинается именно с них [1]. А.С. Макаренко утверждал, что семью необходимо рассматривать как трудовой коллектив, который должен взаимодействовать по вопросам воспитания с учащимися и с коллективом обучающихся их учителей [2]. В.А. Сухомлинский, говоря о необходимости взаимодействия образовательных организаций с семьями воспитанников, отмечал, что без активного участия родителей в жизни школы, без постоянного духовного обогащения взрослых и детей невозможна сама семья как первичная ячейка общества, невозможна школа как важнейшее учебно-воспитательное учреждение и невозможен моральный прогресс общества в целом. Задачи воспитания, по мнению В.А. Сухомлинского, могут быть решены успешно только в том случае, если школа поддерживает связь с семьей, если между педагогами, воспитателями и родителями установились отношения доверия и сотрудничества [3].

Нормативная правовая база для организации взаимодействия образовательной организации и родителей (законных представителей) обучающихся включает официальные документы (Указы Президента Российской Федерации, Федеральные законы, распоряжения Правительства, законодательные акты и др.), в которых, с одной стороны, гарантируется обеспечение воспитания как неотъемлемой части образования, а с другой стороны, закрепляется приоритет семейного воспитания.

Так, Конституция Российской Федерации гарантирует государственную поддержку семьи, материнства, отцовства и детства, декларирует равные права и обязанности родителей по воспитанию детей (ст. 7, п. 2, ст. 38, п.п. 1, 2).

В Семейном кодексе Российской Федерации конкретизируется, что родители имеют право и обязаны воспитывать своих детей, несут ответственность за воспитание и развитие своих детей. Они обязаны заботиться о здоровье, физическом, психическом, духовном и нравственном развитии своих детей. Родители имеют преимущественное право на обучение и воспитание своих детей перед всеми другими лицами (ст. 63, п. 1).

В рамках национальной цели «Возможности для самореализации и развития талантов», определенной Президентом Российской Федерации В. В. Путиным, одним из целевых показателей является создание условий для воспитания гармонично развитой и социально ответственной личности на основе духовно-нравственных ценностей народов Российской Федерации, исторических и национально-культурных традиций [6].

Федеральный закон от 29 декабря 2012 года № 273-ФЗ «Об образовании в Российской Федерации» (в редакции Федерального закона от 14 июля 2022 года № 262-ФЗ) гласит, что [5]:

– родители (законные представители) несовершеннолетних обучающихся имеют преимущественное право на обучение и воспитание детей перед всеми другими лицами; они обязаны заложить основы физического, нравственного и интеллектуального развития личности ребенка (ст. 44, п. 1);

– органы государственной власти и органы местного самоуправления, образовательные организации оказывают помощь родителям (законным представителям) несовершеннолетних обучающихся в воспитании детей (ст. 44, п. 2);

– родители (законные представители) несовершеннолетних обучающихся имеют право знакомиться с содержанием образования, используемыми методами обучения и воспитания, образовательными технологиями, а также с оценками успеваемости своих детей (ст. 44, п. 3.4);

– родители (законные представители) несовершеннолетних обучающихся имеют право принимать участие в управлении организацией, осуществляющей образовательную деятельность, в форме, определяемой уставом этой организации (ст. 44, п. 3.7).

В «Стратегии развития воспитания в Российской Федерации на период до 2025 года» определены приоритеты государственной политики в сфере воспитания детей, одним из которых является развитие высоконравственной личности на основе признания определяющей роли семьи и соблюдения прав родителей, кооперации и сотрудничества

субъектов системы воспитания... с целью совершенствования содержания и условий воспитания подрастающего поколения России [4].

Соответственно, цель взаимодействия образовательной организации и семьи в контексте – это установление длительных, постоянных и плодотворных отношений, способствующих повышению качества и эффективности воспитания ребенка.

Анализ научно-методической литературы, с одной стороны, и практической деятельности образовательных организаций – с другой, позволяет сделать вывод о существовании на сегодняшний день трех основных стратегий взаимодействия с родителями:

1) стратегия развития открытого сообщества школы и семьи, которая предполагает организацию открытого взаимодействия, выстраивание длительных взаимоотношений, наращивание практики и опыта устойчивых педагогических традиций;

2) стратегия быстрого реагирования, которая направлена на оперативное вмешательство в жизнь ребенка и семьи, оказавшихся в социально опасном положении; характеризуется применением поддерживающих технологий, социальной направленностью деятельности специалистов образовательных организаций;

3) стратегия смешанного типа, включающая элементы первой и второй и предполагающая реализацию комплексного подхода к решению актуальных проблем развития личности учащегося.

Исходя из содержания цели взаимодействия образовательной организации и родителей, очевидно, что ей больше всего соответствует первая из перечисленных стратегий. Вне зависимости от стратегии взаимодействия можно выделить следующие основные подходы к выстраиванию взаимоотношений между образовательной организацией и родителями воспитанников.

Первый подход условно можно назвать «воспитание родителей». Данный подход достаточно глубоко проработан теоретически и имеет широкое практическое применение. Основная функциональная нагрузка по планированию, организации и реализации взаимодействия с семьей при таком подходе ложится на классных руководителей или воспитателей.

Среди плюсов данного подхода можно выделить:

- охват широкого круга воспитательных проблем;
- наличие большого количества теоретических и практических разработок в этой области;
- возможность взаимодействия с большим количеством родителей.

К числу минусов можно отнести:

- отсутствие индивидуального подхода к родителям и к семье в целом;
- одностороннюю направленность деятельности «от образовательной организации к родителям»;
- ориентацию на «среднего родителя» и «среднего ребенка»;

– постановку родителя в позицию объекта.

Второй подход можно условно назвать «социологическим». Семья подразумевается элементом социальной среды, окружающей образовательную организацию. Одним из базовых оснований данного подхода является изучение семьи ребенка сотрудниками образовательной организации и учет выявленных семейных особенностей воспитания. При дальнейшем взаимодействии с этими семьями педагоги/специалисты образовательной организации максимально используют обнаруженные положительные особенности семейного воспитания и нивелируют отрицательные. Этот подход чаще всего актуален для образовательных организаций, имеющих неблагоприятное социокультурное окружение с большим количеством неблагополучных семей и семей «группы риска». В таких условиях все усилия направляются на внутреннюю воспитательную работу в рамках образовательной организации.

Положительным моментом данного подхода является индивидуальный подход к ребенку, при котором учитываются особенности семьи и создаются оптимальные условия для воспитания ребенка в школе.

Отрицательным моментом является тот факт, что родители не всегда задействованы в процессе воспитания ребенка в образовательной организации.

Третий подход условно можно назвать «развивающим». В его основу положен постулат о наличии в семье скрытого воспитательного потенциала, который при определенных условиях может быть реализован в воспитательном процессе. Соответственно, главная задача образовательной организации заключается в создании таких условий, при которых родители могут самостоятельно и эффективно решать проблемы, и отвечать на вопросы, связанные с воспитанием ребенка в семье. Данный подход предполагает диагностику проблем и потребностей родителей в сфере воспитания, учет особенностей ребенка, индивидуальный подход в организации взаимодействия с семьей, определение «резервной области» в сфере семейного воспитания. Реализация этих задач требует комплексного использования различных форм взаимодействия, привлечения квалифицированных специалистов, обеспечение высокого уровня мотивации.

Плюсами данного подхода являются:

- активная позиция родителей при взаимодействии с образовательной организацией;
- создание условий для самовоспитания и саморазвития родителей;
- равноправные субъект-субъектные отношения между образовательной организацией и родителями;
- устойчивость полученных позитивных изменений в воспитании, обеспечиваемых воспитательной активностью образовательной организации и семьи.

Минусами данного подхода являются:

- высокая трудоемкость организации и реализации подхода;
- недостаток научно-методического обеспечения эффективного взаимодействия образовательной организации и родителей.

Все упомянутые подходы могут реализовываться в образовательной организации одновременно в отношении различных категорий родителей (при наличии достаточных ресурсов в организации).

На практике наиболее распространенным является вариант сочетания подходов «воспитание родителей» и «социологического» с преобладанием первого. Третий из вышеназванных подходов встречается редко и осуществляется по отношению к наиболее благополучным семьям, не имеющим тяжелых отклонений в системе семейного воспитания.

Таким образом, главной задачей в организации взаимодействия семьи и школы является достижение единства понимания и принятия педагогами и родителями цели и ценностей воспитания. Данное единство является обязательным условием реализации качественного и эффективного воспитания, тем фундаментом, на котором должно строиться воспитательное влияние на ребенка дома, в детском саду, в школе, в колледже и в прочих образовательных организациях.

METHODS OF IMPROVING IOT SECURITY MEASURES

Abstract. Internet of Things (IoT) technologies are developing rapidly and are increasingly being used in all aspects of our lives. However, along with the proliferation of IoT devices, their security concerns are also increasing. This scientific work is devoted to improving the security measures of IoT devices and includes strategies and technologies aimed at protecting against attacks, protecting data and modernizing security protocols.

Keywords. IoT (Internet of Things), Security Protocols, Data Protection, Encryption Algorithms, Authentication Methods, Cyber Threats IoT Devices, Network Security, Intrusion Detection Systems (IDS), IoT Standards.

Kirish. IoT texnologiyalari (Internet of Things) bizning kundalik hayotimizga tobora kirib bormoqda. Aqlli uyalar, salomatlikni monitor qiladigan

gadjetlar va shahar infrastrukturasini boshqarish tizimlari kabi sohalar IoT orqali sezilarli darajada rivoj topmoqda. Biroq, IoT qurilmalarining ko'payishi bilan ularning xavfsizligiga bo'lgan tahdidlar ham ortib bormoqda. Bu maqola IoT qurilmalari xavfsizligiga qarshi kurashish usullarini va bu borada sun'iy idrokdan (AI) foydalanishning yangi imkoniyatlarini o'rganadi. IoTni kiber hujumlardan himoya qilish uchun turli xavfsizlik protokollari, jumladan zarur shifrlash algoritmlarini va fiziki xavfsizlik texnologiyalarini ishlab chiqish muhim ahamiyat kasb etadi. IoT qurilmalar uchun xavfsizlik choralarini amalga oshirishda shu jumladan end-to-end shifrlash, autentifikatsiya mexanizmlari va zararli trafikni aniqlash tizimlarini qo'llash zarurligidan tashqari, bu jarayonda qurilmaning samaradorligini pasaytirmaslik ham inobatga olinadi. Xavfsizlik tahlillari va sinovlarini o'tkazish jarayonida aniqlangan kamchiliklar IoT qurilmalarining dasturiy ta'minoti yangilanishlari va qattiq disk (firmware) takomillashuviga olib keladi. Shu bilan birga, IoT tarmoqlarini boshqarishda blokcheyn texnologiyalaridan foydalanish, bu tarmoqlarni ta'qib qilishni qiyinlashtiradi va ularda yuz beradigan ma'lumot almashtirish jarayonini xavfsiz va shaffof qiladi. Shundan tashqari, IoTni yanada xavfsiz qilish uchun sun'iy idrok algoritmlari va mashinaviy o'rganish yondashuvlaridan foydalanish tavsiya etiladi. AI tahlil qilish algoritmlari yordamida IoT qurilmalaridan yig'ilgan katta hajmdagi ma'lumotlarni real vaqt rejimida tahlil qilish imkoniyati mavjud bo'ladi. Bu yondashuvlar xavfsizlik tizimlariga anomal oqimlar yoki noo'rin faoliyat belgilari paydo bo'lishi bilan darhol munosabat qaytarish imkonini beradi, bu esa tavakkalchilikni sezilarli darajada kamaytiradi.

Jadvalda IoT tizimlarining xavfsizligini takomillashtirish uchun qo'llanilishi mumkin bo'lgan turli xil xavfsizlik choralarini, ularning maqsadlarini, qo'llaniladigan texnologiyalarni va kutilayotgan natijalarni ta'riflaydi.

Quyidagi jadvalda IoT xavfsizlik choralarini takomillashtirish usullari keltirilgan.

Xavfsizlik Choralari	Tavsif	Takomillashtirish Usullari
Autentifikatsiya va Avtorizatsiya	IoT qurilmalarini himoyalash va foydalanishni nazorat qilish	- Kuchli parollar va ko‘p faktorli autentifikatsiya (2FA) qo‘llash - Avtorizatsiya darajalarini belgilash va foydalanuvchilarni nazorat qilish
Shifrlash	Ma'lumotlarni himoya qilish uchun shifrlash vositalari	- Qurilmalarda va uzatish vaqtida ma'lumotlarni shifrlash (TLS/SSL) - Qat'iy shifrlash standartlarini joriy qilish
Tarmoq Xavfsizligi	Tarmoqqa hujumlarning oldini olish va tarmoq xavfsizligini ta'minlash	- Xavfsizlik devorlari (firewall) va tarmoqni aniqlash tizimlari (IDS/IPS) o‘rnatish - Virtual xususiy tarmoqlar (VPN) foydalanish
Firmware va Dasturiy Ta'minot Yangilanishlari	Qurilmalarni yangilab, himoyasini kuchaytirish	- Avtomatik yangilanish tizimlarini joriy qilish - Xavfsizlik yamog‘larini muntazam ravishda o‘rnatish
Qurilma boshqaruvi va monitoring	Qurilmalarning xavfsizlik holatini doimiy kuzatish	- IoT qurilmalarini boshqarish platformalarini ishlatish - Real vaqtda monitoring va ogohlantirish tizimlarini o‘rnatish
Ma'lumotlar xavfsizligi va Maxfiylik	Ma'lumotlarning xavfsizligini ta'minlash va maxfiyligini saqlash	- Ma'lumotlarni anonimlashtirish va pseudonimizatsiya qilish - Ma'lumotlar oqimining xavfsizligini ta'minlash
Fizik xavfsizlik	IoT qurilmalarining fizik xavfsizligini ta'minlash	- Qurilmalarni fizik ravishda himoya qilish, masalan, qulflangan kabinetlar va qulf qo‘llash - Muhit xavfsizligini ta'minlash (masalan, video nazorat tizimlari)
Qo‘shimcha xavfsizlik mexanizmlari	Qo‘shimcha xavfsizlik choralari	- Xavfsizlik monitoringi xizmatlarini jalb qilish - Penetratsion testlar va xavfsizlik auditi o‘tkazish

Ushbu usullar IoT qurilmalar va tarmoqlarni himoya qilishda samarali natijalar berishi mumkin. Har bir xavfsizlik chorasi o'ziga xos jihatlari bilan ajralib turadi va kompleks xavfsizlik yondashuvi uchun birgalikda qo'llanilishi kerak.

Iot texnologiyasini takomillashtirish usullari. IoT (Internet of Things) texnologiyalari orqali turli qurilmalar va sensorlar Internetga ulanib, yaxlit ma'lumotlar oqimini yaratish imkoniyatiga ega bo'lib, bu texnologiya turli sohalarda, jumladan aqlli uyalar, sanoat, sog'liqni saqlash va chakana savdo kabi sohalarda keng qo'llaniladi. IoT texnologiyasini takomillashtirish usullari quyidagilarni o'z ichiga oladi.

Energiya Samadorligi. IoT qurilmalar ko'pincha cheklangan energiya resurslariga ega. Energiya tejash sxemalari va texnikalarini, masalan, "Energy Harvesting" yoki bateriya hayoti uzaytirish texnologiyalarini takomillashtirish muhimdir.

Aloqa Protokollari. Bluetooth Low Energy (BLE), ZigBee, LoRa va 5G kabi aloqa protokollarini rivojlantirish orqali IoT qurilmalarining uzatilish masofasini oshirish va energiya samaradorligi yaxshilanadi.

Kiberxavfsizlik. IoT qurilmalar sonining ko'payishi kiber tahdidlarni ham oshiradi. Shifrlash, yangi autentifikatsiya mexanizmlari, va qurilmalar o'rtasida xavfsizlik dasturlarini yaxshilash zarur.

Ma'lumotlarni Qayta Ishlash. IoT yaratgan katta ma'lumot oqimini qayta ishlash qobiliyatini oshirish uchun edge computing va fog computing kabi yangi texnologiyalarni joriy qilish.

Sensor Texnologiyalari. Aniqlikni va mustahkamlikni yaxshilash uchun yangi yoki yaxshi sensorlar ishlab chiqishga e'tibor berish talab etiladi.

O'z-o'zini Tuzatuvchi Tarmoqlar. IoT tarmoqlari o'zini avtomatik tarzda tuzatishi va optimallashtirishi mumkin bo'lgan texnologiyalarni ishlab chiqish.

Foydalanuvchi Interfeyslari. Foydalanuvchi tajribasini yaxshilash va aqlli qurilmalar orqali oson navigatsiya qilish uchun intuitiv interfeyslar yaratish.

XULOSA. IoT qurilmalar xavfsizligini ta'minlashda yangi texnologiyalar va yondashuvlar aniqlanmoqda. Ushbu ilmiy ishda tadqiq etilgan texnologiyalar va strategiyalar IoT qurilmalari va tarmoqlar uchun yangi avlod xavfsizlik echimlarini yaratishga yordam beradi. Bu usullar IoT ekotizimini yanada ishonchli va yaxlit qilishga xizmat qiladi va keng qo'llaniladigan IoT texnologiyalari va qurilmalaridan foydalanish xavfsizligini oshirishda muhim ahamiyatga ega bo'ladi.

ТЕХНОЛОГИЯ БЛОКЧЕЙН КАК ИНСТРУМЕНТ ОБЕСПЕЧЕНИЯ БЕЗОПАСНОСТИ И НАДЕЖНОСТИ ЭЛЕКТРОННОГО ДОКУМЕНТООБОРОТА

Аннотация. Данная статья исследует роль технологии блокчейн в обеспечении безопасности и надежности электронного документооборота в современных организациях. Рассматриваются основные преимущества использования блокчейна в сфере документооборота. Также обсуждаются вызовы и препятствия, с которыми сталкиваются организации при внедрении этой технологии.

Ключевые слова: блокчейн, документооборот, безопасность, надежность, электронные документы

BLOCKCHAIN TECHNOLOGY AS A TOOL FOR ENSURING THE SECURITY AND RELIABILITY OF ELECTRONIC DOCUMENT MANAGEMENT

Abstract. This article examines the role of blockchain technology in ensuring the security and reliability of electronic document management in modern organizations. It considers the main advantages of using blockchain in

the field of document management and discusses the challenges and obstacles organizations face when implementing this technology.

Keywords: blockchain, document management, security, reliability, electronic documents

Несмотря на почти десятилетнюю историю своего существования, использование технологии блокчейн остается относительно невысоким. Ее концепция основана на распределенной базе данных, представленной в виде цепи блоков, где каждый блок содержит информацию о предыдущих блоках, включая их местоположение. Каждый блок в распределенной сети защищен шифрованием, что обеспечивает сохранность информации и быструю синхронизацию данных между всеми пользователями при необходимости. Отсутствие централизованного сервера позволяет владельцу ключа получать доступ к любому блоку из любой точки мира с помощью любого устройства. Эта особенность является ключевым отличием технологии блокчейн от облачного хранения в классическом понимании [1].

На данный момент основное применение этой технологии связано с финансовыми транзакциями через компьютерные сети, в особенности с криптовалютами. Однако помимо финансовых операций, существуют и другие области применения блокчейна, такие как регистрация сделок, заключение контрактов и подтверждение личности пользователя на этапе идентификации [2].

Современные организации сталкиваются с рядом проблем в сфере документооборота, включая угрозы безопасности, возможность фальсификации документов и сложности в аутентификации и авторизации пользователей. В такой контекст, блокчейн-технология приобретает все большую популярность как инструмент для решения данных проблем.

Технология обладает рядом характеристик, которые обеспечивают ее надежность и вызывают доверие к ней. Преимущества блокчейна сводятся к следующему:

1. Надежность и целостность данных

Одним из ключевых преимуществ блокчейна является его способность обеспечить надежность и целостность данных. В блокчейне информация хранится в виде блоков, каждый из которых содержит уникальный хеш предыдущего блока и данных транзакции. Это делает невозможным изменение или удаление уже существующих записей без изменения хеша всей цепочки блоков, что обеспечивает надежность и неподдельность документов. Таким образом, один и тот же документ — всегда один и тот же хеш (при использовании одинакового алгоритма). Если в исходном документе изменился хоть один символ — хеш изменится до неузнаваемости.

2. Прозрачность и отслеживаемость

Блокчейн обеспечивает прозрачность и отслеживаемость всех транзакций и изменений, совершенных с документами. Каждая транзакция записывается в распределенный реестр и доступна для просмотра всем участникам сети. Это позволяет организациям точно определить, кто и когда вносил изменения в документы, и установить их подлинность.

3. Улучшенная безопасность

Благодаря использованию криптографии и консенсусных механизмов, блокчейн обеспечивает высокий уровень безопасности данных. Для взлома системы требуется атака нескольких узлов сети, что делает такие попытки экстремально сложными и дорогостоящими. Это делает блокчейн особенно привлекательным для хранения чувствительной информации.

4. Упрощение процессов аутентификации и авторизации

Благодаря использованию умных контрактов, блокчейн может автоматизировать процессы аутентификации и авторизации пользователей. Умные контракты представляют собой программные коды, которые выполняют определенные действия при выполнении заданных условий. Это сокращает время на выполнение этих операций и снижает риски человеческого фактора.

При внедрении блокчейн-технологии в документооборот возникают несколько значительных вызовов, которые могут затруднить или задержать процесс интеграции.

Первым из них являются технические сложности. Внедрение блокчейна требует специализированных знаний и навыков в области криптографии, распределенных систем и смарт-контрактов. Недостаток квалифицированных специалистов в этой области может замедлить процесс внедрения и увеличить его стоимость, поскольку требуется обучение персонала или привлечение внешних экспертов.

Вторым вызовом являются юридические аспекты. Существующее законодательство может не полностью соответствовать использованию блокчейна, особенно в отношении защиты персональных данных. Организации должны тщательно изучить законодательные нормы и обеспечить соответствие своих действий требованиям закона, что может потребовать дополнительных юридических консультаций и адаптации процессов работы [3].

Третий вызов связан с масштабируемостью и производительностью. Некоторые блокчейн-платформы могут столкнуться с проблемами масштабируемости и производительности при обработке больших объемов данных. Разработка эффективных решений для увеличения производительности и масштабируемости является одним из главных вызовов при внедрении блокчейна, так как обеспечение оперативной работы системы при обработке большого количества документов является ключевым для успешного применения технологии в документообороте.

Блокчейн-технология представляет собой мощный инструмент для обеспечения безопасности и надежности документооборота в организациях. Ее преимущества включают высокую степень защиты данных, прозрачность, отслеживаемость и улучшенную безопасность. Однако для успешного внедрения блокчейна необходимо учитывать технические, юридические и организационные аспекты, а также разрабатывать эффективные стратегии реализации и масштабирования этой технологии.

DEEP LEARNING FOR ENHANCING THE EFFECTIVENESS OF INTRUSION DETECTION IN NETWORK SYSTEMS

Abstract. The article explores deep learning in improving network intrusion detection systems, considering approaches in identifying hidden threats and responding to cyber-attacks.

Keywords: Cybersecurity, Artificial Intelligence (AI), Deep Learning (DL), Neural Networks, Intrusion Detection, IDS.

Введение. В эпоху усиления цифровизации мира, вопросы кибербезопасности приобретают особую актуальность. От постоянно растущего количества устройств, подключенных к Интернету вещей (IoT), до распределенных сетевых систем больших предприятий, от уязвимости данных до роста сложности кибератак - все это ставит безопасность сетей на передний край борьбы с киберпреступностью. В таком контексте системы обнаружения вторжений (IDS) выступают как первая линия защиты, предназначенная для идентификации, анализа и противодействия киберугрозам.

Огромные объемы данных, генерируемые современными сетями, требуют нового уровня интеллектуального анализа, который могут предложить методы глубокого обучения. Эти методы позволяют создавать модели, способные обучаться на основе опыта, распознавать сложные

паттерны и прогнозировать потенциальные угрозы с быстроедействием и точностью, недостижимыми для традиционных подходов.

Однако внедрение глубокого обучения в IDS сопряжено с рядом сложностей, начиная от сбора и предварительной обработки качественных обучающих наборов данных до интерпретации результатов работы сложных нейронных сетей. В этой статье мы рассмотрим, как глубокое обучение трансформирует пейзаж IDS, обеспечивая более высокую точность и надежность в обнаружении вторжений, при этом подчеркивая необходимость комплексного подхода к разработке и поддержке этих систем для поддержания безопасности в динамичной сетевой среде.

Основная часть. Исследования в области IDS показывают, что глубокое обучение значительно улучшает обнаружение несанкционированных вторжений. Разнообразие исследований фокусируется на применении сверточных нейронных сетей (CNN), рекуррентных нейронных сетей (RNN) и автоэнкодеров для выявления атак. Академические работы поднимают вопросы обучения сетей на полноценных и актуальных наборах данных, стратегиях обнаружения ранее неизвестных атак и механизмах минимизации ложных срабатываний.

N. Shone, T.N. Ngoc, V.D. Phai и др. разработали технику глубокого обучения для систем обнаружения вторжений, представив несимметричный глубокий автоэнкодер для неуправляемого изучения функций, достигая высокой точности обнаружения.

A. Javaid, Q. Niyaz, W. Sun, M. Alam предложили подход на основе глубокого обучения для разработки систем IDS, используя самообученное обучение на наборе данных NSL-KDD, являющемся эталоном для систем обнаружения сетевых вторжений.

L. Ashiku, C. Dagli рассмотрели системы обнаружения сетевых вторжений с использованием последних симулированных сетевых нагрузок и предложили глубокую архитектуру классификации с полудинамической настройкой.

Z. Ahmad, A. Shahid Khan, C. Wai Shiang и др. исследовали, как глубокое обучение и машинное обучение могут комбинироваться для обнаружения сетевых вторжений, обеспечивая улучшенную точность определения аномалий в сети.

Теоретические положения утверждают важность обучения сетей с учетом специфики сетевого трафика и необходимость интерпретируемости моделей, чтобы обеспечить возможность анализа и корректировки принимаемых системой решений.

Методология, используемая для исследования и анализа данных. Методология исследования базируется на применении техник глубокого обучения для расширения возможностей систем обнаружения вторжений. На первом этапе собираются и агрегируются большие наборы сетевых данных, включая нормальный трафик и разнообразные виды атак, для

обучения и тестирования моделей. Эти данные могут быть получены из публично доступных наборов, таких как NSL-KDD, или скомпилированы посредством внедрения в экспериментальные сетевые среды.

Для подготовки данных применяются методы очистки, нормализации и стандартизации. Затем определяются характеристики и параметры входных данных, которые важны для обучения нейросетевых моделей. В качестве архитектур глубокого обучения для IDS широко используются сверточные нейронные сети (CNN), рекуррентные нейронные сети (RNN), подкрепленные нейронные сети (Reinforcement Neural Networks) и другие, в зависимости от специфики задачи.

На этапе обучения модель настраивается для распознавания закономерностей атак и нормального трафика. Для увеличения точности применяются методы перекрестной проверки и тонкой настройки гиперпараметров. После тренировки модели проводится их оценка с использованием отложенных тестовых наборов данных для измерения реальной производительности.

Анализ данных включает в себя изучение метрик, таких как точность, полнота, F1-мера и матрица ошибок. Также акцент делается на сравнении обнаруженных атак с известными сценариями и на способности модели адаптироваться к новым и неизвестным угрозам.

Заключительный этап методологии включает интерпретацию и визуализацию результатов, которые помогут специалистам в сфере сетевой безопасности более быстро определить источник и природу угрозы, а также разработать соответствующую стратегию реагирования.

Описание и сравнение моделей глубокого обучения применимых в IDS. В контексте систем обнаружения вторжений (IDS) модели глубокого обучения играют ключевую роль в точном и эффективном распознавании атак. Представим обзор наиболее популярных архитектур нейросетей и сравнение их применимости и эффективности в условиях IDS.

Сверточные нейронные сети (CNN) хорошо подходят для анализа визуальных образов данных и часто используются для обработки изображений. В сфере IDS они применимы для анализа сетевых потоков, преобразуя полученные данные в изображения или использования CNN для автоматического извлечения признаков из сырых сетевых данных.

Рекуррентные нейронные сети (RNN) и их вариации, такие как LSTM (Long Short-Term Memory) и GRU (Gated Recurrent Unit), эффективно работают с временными рядами и последовательными данными, что делает их идеальными для анализа сетевого трафика, который часто имеет временную природу.

Автоэнкодеры используются в IDS для выявления аномалий, сжимая входные данные и затем восстанавливая их, что позволяет выделить несоответствия между нормальным и аномальным трафиком.

Кроме того, рассматриваются генеративно-сопоставительные сети (GAN), которые могут генерировать синтетические обучающие примеры, помогающие в увеличении количества данных для тренировки в случаях, когда реальные данные ограничены.

Сравнительный анализ моделей, представленная в таблице 1, демонстрирует, что нет одной универсальной модели, и выбор подходящей архитектуры зависит от специфик атак, типовых шаблонов в сетевом трафике и доступности обучающих данных. Так, свойства LSTM могут быть более применимы к детекции сложных сетевых атак, которые происходят на протяжении длительного времени, в то время как CNN может быть более подходящей для быстрого анализа визуализированных данных сетевого трафика.

Важно подчеркнуть, что успех применения моделей глубокого обучения в IDS значительно зависит от качества и разнообразия использованных для обучения данных, а также от тонкой настройки гиперпараметров архитектуры, адаптированные под конкретные цели и условия эксплуатации IDS.

Ключевой проблемой при применении глубокого обучения в IDS является баланс между обнаружением и ложноположительными срабатываниями. Эффективность любой модели IDS обычно оценивается через такие метрики, как точность, отзыв и F1-score.

В заключении раздела изложены результаты сравнения моделей, которые указывают на то, что нет универсального решения для IDS; выбор подходящей модели глубокого обучения зависит от конкретных требований системы и специфики сетевой среды.

Сравнительный анализ моделей глубокого обучения применимых в IDS

Таблица 1.

Модель	Характеристики	Преимущества	Недостатки	Применимость в IDS
Свёрточные нейронные сети (CNN)	Эффективное распознавание структурированных данных.	Высокая точность, автоматическое выявление признаков.	Требуют большого количества данных и вычислительных ресурсов.	Подходят для анализа визуальных данных и временных рядов трафика.
Рекуррентные нейронные сети (RNN)	Обработка последовательных данных с временем.	Хорошо подходят для временных зависимостей в данных.	Могут страдать от проблем с переобучением и затянутыми циклами обучения.	Эффективны в обнаружении аномалий в трафике и поведении пользователей.
Глубокие нейронные сети (DNN)	Глубокое и многослойное обучение для выявления	Могут выявлять неочевидные шаблоны атак.	Требуют значительных объемов обучающих	Используются для решения различных комплексных

Модель	Характеристики	Преимущества	Недостатки	Применимость в IDS
	сложных признаков.		данных, риск переобучения.	задач в области безопасности.
Автоэнкодеры	Не требуют маркированных данных, обучаются на нормальных шаблонах поведения.	Низкий уровень ложноположительных срабатываний.	Могут не обнаруживать новые, неизвестные типы атак.	Хороши для обнаружения сетевых аномалий.
Генеративно-состязательные сети (GAN)	Могут генерировать новые данные для улучшения обучения моделей.	Создают существенное улучшение модели за счет новых данных.	Сложны в настройке, высокий риск нестабильного обучения.	Применяются для генерации дополнительного обучающего материала.

Анализ эффективности подходов на основе глубокого обучения.

Анализ результатов применения моделей глубокого обучения в системах IDS выявил позитивные тенденции и одновременно определенные сложности. Эффективность изученных подходов оценивалась на основе нескольких ключевых показателей, включая точность (accuracy), полноту (recall), точность (precision) и F1-меру, которые совместно обеспечивают комплексную оценку способности моделей корректно классифицировать трафик и выявлять вторжения.

Модели глубокого обучения, особенно с использованием ансамблевых методов, могут демонстрировать более высокие уровни точности по сравнению с традиционными методами машинного обучения. Особенно это касается комплексных задач обнаружения, где необходимо распознавать новые и неизвестные типы вторжений или атак с малым количеством признаков.

Тем не менее, некоторые модели страдают от переобучения из-за сложности и многомерности сетевого трафика. Кроме того, нейронные сети, обученные на недостаточно разнообразных данных, могут не обнаруживать новые типы вторжений, что требует регулярного обновления и уточнения наборов обучающих данных.

Также следует отметить, что для более низких показателей ложнопозитивных срабатываний нужно обеспечить более тонкую настройку пороговых значений и балансировку классов данных. Проблемы вычислительной эффективности, связанные с обработкой большого количества данных в реальном времени, предстоит решить путем оптимизации моделей и инфраструктуры.

В целом, применение глубокого обучения в IDS обещает более эффективное и динамичное обнаружение вторжений с возможностью

адаптации к быстро развивающимся киберугрозам, но требует дальнейшего исследования оптимальных конфигураций и подходов к обучению для достижения наилучших результатов.

Заключение. Глубокое обучение трансформирует IDS, предлагая усовершенствованные способы для борьбы с угрозами. Однако возникающие вызовы, связанные с ресурсоемкостью и требуемыми данными, требуют дополнительных решений для оптимизации процессов обучения и повышения общей эффективности обнаружения вторжений.

УПРАВЛЕНИЕ ИНФОРМАЦИОННЫМИ РИСКАМИ И «УРОВЕНЬ ЗРЕЛОСТИ» КОРПОРАТИВНЫХ СИСТЕМ

Аннотация. Опасности или риски рассматриваются как один из важных факторов, негативно влияющих на успех информационных систем. Неспособность должным образом организовать управление рисками может поставить под угрозу производительность и результаты каждой корпоративной информационной системы. Управление любым проектом – это комплексный процесс взаимосвязанных отношений и информационных потоков. В данной статье изучены основные инструменты выявления и исследования ряда проблем, возникающих при обеспечении информационной безопасности в корпоративных информационных системах и рисков, оказывающих негативное влияние на развитие бизнеса предприятия, а также основные сведения об их «зрелости» показаны уровни реализации проекта.

Ключевые слова: риск, корпоративные информационные системы, информационные риски, информационные сети.

INFORMATION RISK MANAGEMENT AND “MATURITY LEVEL” OF CORPORATE SYSTEMS

Abstract. Dangers or risks are considered as one of the important factors that negatively affect the success of information systems. Failure to properly manage risk can compromise the performance and results of every enterprise information system. Managing any project is a complex process of interconnected relationships and information flows. This article examines the main tools for identifying and researching a number of problems that arise when ensuring information security in corporate information systems and risks that have a negative impact on the development of the enterprise's business, as well as basic information about their “maturity” and shows the levels of project implementation.

Key words: risk, corporate information systems, information risks, information networks.

Основным фактором, определяющим отношение организации к вопросам информационной безопасности, является степень ее «зрелости». В соответствии с моделью, предложенной Carnegie Mellon University выделяется пять уровней зрелости, которым соответствует различное понимание проблем управления информационными рисками организации.

Постановка и решение задачи управления информационными рисками для организаций, находящихся на разных уровнях зрелости будут различными.

Уровень 1 - «Анархия». Признаки:

- сотрудники сами определяют, что хорошо, а что плохо;
- затраты и качество не прогнозируются;
- отсутствует контроль изменений;
- высшее руководство плохо представляет реальное положение дел.

Характеристики организации в области информационной безопасности:

- политика в области информационной безопасности не формализована и руководство этими вопросами не занимается;
- обеспечением информационной безопасности сотрудники могут заниматься по собственной инициативе, в соответствии со своим пониманием задач;

Таким образом, на первом уровне задача управления информационными рисками формально не ставится, поскольку с точки зрения руководства организации, находящейся на первом уровне зрелости, эти задачи, как правило, не актуальны. Но это не значит, что она не решается сотрудниками по собственной инициативе, и возможно эффективно, поэтому организации могут быть вполне жизнеспособными.

Уровень 2 - «Фольклор». Признаки:

- выявлена определенная повторяемость организационных процессов;
- опыт организации представлен в виде преданий корпоративной мифологии;
- знания накапливаются в виде личного опыта сотрудников и пропадают при их увольнении.

Характеристики организации в области информационной безопасности:

- на уровне руководства существует определенное понимание задач обеспечения управления информационными рисками;

– существуют стихийно сложившиеся процедуры обеспечения информационной безопасности, их полнота и эффективность не анализируется;

– процедуры не документированы и полностью зависят от личностей, вовлеченных в них сотрудников;

– руководство не ставит задач формализации процедур управления информационными рисками.

Таким образом, на втором уровне проблема управления информационными рисками решается неформально, на основе постепенно сложившейся практики. Комплекс контрмер (организационных и программно-технических) позволяет защититься от наиболее вероятных угроз, как потенциально возможных, так и имевших место ранее. Вопрос относительно эффективности защиты не ставится.

Уровень 3- «Стандарты». Признаки:

– корпоративная мифология записана на бумаге;

– процессы повторяемы и не зависят от личных качеств исполнителей;

– информация о процессах для измерения эффективности не собирается;

– наличие формализованного описания процессов не означает, что они работают;

– организация начинает адаптировать свой опыт к специфике бизнеса;

– проводится знаний и умений сотрудников с целью определения необходимого уровня компетентности;

– вырабатывается стратегия развития компетентности.

Характеристики организации в области информационной безопасности:

– руководство осознает задачи в области управления информационными рисками;

– в организации имеется документация (возможно неполная), относящейся к политике информационной безопасности;

– руководство заинтересовано в исполнении стандартов в области информационной безопасности, оформлении документации в соответствии с ними;

– осознается задача управления информационными рисками на всех стадиях жизненного цикла информационно-коммуникационной технологии.

Таким образом, на третьем уровне в организации считается целесообразным следовать в той или иной мере (возможно частично) стандартам и рекомендациям, обеспечивающим базовый уровень информационной безопасности (например, ISO/IEC 27001), вопросам документирования уделяется должное внимание. Анализ рисков

рассматривается как один из элементов технологии управления информационными рисками на всех стадиях жизненного цикла. Понятие риска включает несколько аспектов: вероятность, угроза, уязвимость, иногда стоимость.

Технология управления информационными рисками в полном варианте включает следующие элементы:

- документирование КИС с позиции информационной безопасности;
- категорирование информационных ресурсов с позиции руководства организации;
- определение возможного воздействия различного рода происшествий в области информационной безопасности на информационно-технологические - и бизнес-процессы;
- анализ информационных рисков;
- технология управления информационными рисками на всех этапах жизненного цикла КИС;
- аудит в области информационных рисков.

Уровень 4- «Измеряемый». Признаки:

- процессы измеримы и стандартизованы.

Характеристики организации в области информационной безопасности:

- имеется полный комплект документов, относящийся к обеспечению режима информационной безопасности, оформленный в соответствии с каким-либо стандартом;
- действующие инструкции соблюдаются, документы служат руководством к действию соответствующих должностных лиц;
- регулярно проводится внутренний (и возможно внешний) аудит и анализ информационных рисков;
- руководство уделяет должное внимание вопросам управления информационными рисками, в частности, имеет адекватное представление относительно существующих уровней информационных угроз и уязвимостей, потенциальном ущербе (потерях) в случае возможных инцидентов.

Таким образом, на четвертом уровне для руководства организации актуальны вопросы измерения параметров, характеризующих режим информационной безопасности. На этом уровне руководство осознанно принимает на себя ответственность за выбор определенных величин остаточных рисков (которые остаются всегда). Риски, как правило, оцениваются по нескольким критериям (не только стоимостным).

Технология управления информационными рисками остается прежней, но на этапе анализа рисков применяются количественные методы, позволяющие оценить параметры остаточных рисков, эффективность различных вариантов контрмер при управлении рисками.

Уровень 5 - «Оптимизируемый». Признаки:

– фокус сосредотачивается на повторяемости, измерении эффективности и оптимизации;

– вся информации о функционировании процессов фиксируется.

Характеристики организации в области информационной безопасности:

– руководство заинтересовано в количественной оценке существующих информационных рисков, готово нести ответственность за выбор определенных уровней допустимых и остаточных информационных рисков, ставит оптимизационные задачи построения системы управления информационными рисками.

Таким образом, на пятом уровне ставятся и решаются различные варианты оптимизационных задач в области управления информационными рисками. Примеры постановок задач:

– выбрать вариант системы управления информационными рисками, оптимизированной по критерию стоимость/эффективность при заданном уровне остаточных рисков;

– выбрать вариант системы управления информационными рисками, при котором минимизируются остаточные риски при ее фиксированной стоимости;

– выбрать архитектуру системы управления информационными рисками с минимальной стоимостью владения на протяжении жизненного цикла при определенном уровне остаточных рисков.

Результаты исследования, что в настоящее время более половины организаций относятся к первому или второму уровню зрелости. Организаций третьего уровня зрелости около 40% от общего числа и только порядка 7% от общего числа организации, относятся к четвертому и пятому уровням зрелости.

TYPES OF PREVENTION FOR GRAYING HAIR

Abstract. This article described the basic structure of hair, the causes of graying of hair and folk and cosmetological prevention.

Key words: pigment, cuticle, traditional medicine, hair root, follicle, terminal hair.

В процентном соотношении волосы имеет следующий химический состав: 78%-кератина, 6%-липидов, 1%-пигмента и 15%-воды.

Часть волоса, расположенная над поверхностью эпидермиса, называется стержнем. Невидимая часть, расположенная в толще кожи, называется корнем (луковицей).

Строение волос: 1) Кутикула представляет собой внешнюю оболочку из ороговевших чешуек. Она служит защитой для внутренних слоев от внешних воздействий. Именно кутикула обеспечивает блеск и шелковистость волос.

2) Кортекс (корковый слой волоса) находится непосредственно под кутикулой. Он состоит из множества ороговевших веретенообразных клеток, которые можно сравнить с нитью. Эти переплетенные «ниточки» образуют микрофибриллы волоса, которые составляют крупные волокна - макрофибриллы. Чтобы миллионы микрофибрилл не распадались между собой на молекулярном уровне, существуют поперечные связи: дисульфидные, водородные и солевые.

Из-за особенностей в строении кортекса волосы могут быть прямыми и кудрявыми, которые в свою очередь наследуются генетически. В клетках этого слоя находятся пигменты, придающие волосам цвет. Кортекс также отвечает за прочность и эластичность. В данном слое происходит химический процесс выпрямления, разглаживания или окрашивания волос.

3) Медула (сердцевина) – это стержень волоса, который состоит из 2-4 слоев, не ороговевших клеток различной структуры с кератиноподобным веществом. Медула отвечает за терморегуляцию, объем и придает силу волосам. В наше время сердцевина у многих прерывистая или полностью отсутствует.

Терминальные (длинные) волосы — это волосы, которые растут на голове, на лице (борода и усы), в зоне подмышечных впадин и бикини. Щетинистые волосы — это брови, ресницы и волосы ноздрей. Терминальные и щетинистые волосы имеют одинаковое строение, отличаются только длиной, поэтому очень часто их объединяют в одну группу и называют терминально-щетинистыми волосами. Фолликул терминально-щетинистых волос находится глубоко в каждом слое, имеют широкую луковицу. Стержень терминально-щетинистых волос имеет сердцевину — слой ороговевших, плотных клеток, и называется мозговым веществом.

Причины старения волос — нарушение кровообращения фолликул с недостаточным обменом питательных веществ, нарушение в работе сальных и потовых желез, скудное или избыточное выделение гидролипидного слоя, любые гормональные изменения и неправильный уход за волосами и кожей головы.

В редких случаях при аутоиммунных заболеваниях, таких как квашиоркор, целиакия или гнездное облысение может произойти побеление

волос. В первых двух случаях потеря белка влияет на меланоциты - пигментные клетки, которые отвечают за цвет волос.

Квашиоркор - наиболее распространено в странах, где люди страдают от дефицита питания, главным образом белка, который влияет на меланоциты. Целиакия связана в основном с непереносимостью глютена.

Способы лечения Квашиоркора: 1. Инъекций 25% раствора магнезии;

2. Употребление минеральных препаратов и витаминов, в основном, серии В, содержащих селен, кальций, цинк, триптофан и т.п., то есть, вещества, способствующих выработке меланина;

3. Использование особых лечебных шампуней, в составе которых присутствуют такие элементы, как цинк, медь, железо и им подобные;

4. Ретинол (витамин А). Кожа

нуждается в этом витамине, от его концентрации зависит полноценное питание кожных покровов и обмен веществ. Он

включает процесс естественной выработки пигмента. Ретинол (истинный витамин А, (1,1,5-триметилциклогексен-5-ил-6)-(3,7-диметилнонатетраен-2,4,6,8-ол-1) (рац. формула C₂₀H₃₀O) — жирорастворимый витамин, антиоксидант. Витамин А представляет собой циклический непредельный спирт, состоящий из β-ононового кольца и боковой цепи из двух остатков изопрена и первичной спиртовой группы. В организме окисляется до ретиналя (витамин А-альдегид) и ретиноевой кислоты.

5. Рибофлавин (витамин В2) C₁₇H₂₀N₄O₆. Активизирует кровообращение в коже и тканях головы. Благодаря этому витамину волосы получают полноценное питание. Рибофлавин является биологически активным веществом, играющим важную роль в поддержании здоровья человека. Биологическая роль рибофлавина определяется вхождением его производных флавиномононуклеотида (ФМН) и флавинадениндинуклеотида (ФАД) в состав большого числа важнейших окислительно-восстановительных ферментов в качестве коферментов.

6. Сбалансированное питание, отказ от вредных привычек, регулярная физическая активность, отсутствие стресса помогут привести в норму состояние здоровья и тем самым замедлят процесс старения организма.

7. Самый простой и эффективный продукт-это соль и оливковое масло. Результат от использования достигается за счет содержания в соли особых веществ, закрепляющих и восстанавливающих волосяные луковицы (натрий, магний, кальций, калий, бром). А оливковое масло придает волосам очарование сияния и блеска и активизирует их рост.

8. Комбинация меда, соли и репейного масла – лучшее средство для восстановления и выпадения волос. Мед насыщает витаминами, соль убирает загрязнения, а масло репейника нормализует выделение кожного сала.

Приготовление: смешать столовую ложку меда и репейного масла. Добавить щепотку соли. Нанести на волосы и помассировать. Смыть через 3–5 минут.

9. Швейцарская компания Givaudan разработала революционную инновацию для решения этой проблемы — даркенил. Нанесение Даркенила непосредственно на кожу головы добавит пигментов в волосы и восстановит их цвет. Ингредиенты даркенила включают комбинацию:

Дигидрокверцетин N-ацетил-тирозин

Тирозин – это заменимая аминокислота,

то есть ваш организм может синтезировать ее

из других аминокислот, которые вы получаете с пищей. Поэтому, чтобы ваш организм получал и использовал тирозин, не обязательно принимать его. Он используется для синтеза нескольких мощных нейромедиаторов – катехоламинов, включая эпинефрин (адреналин), норэпинефрин (норадреналин) и дофамин.
