Эл № ФС77 - 80454 от 01 марта 2021г.

Журнал включен в систему НЭБ (e-library) [№ 594-09/2013 от 26.09.2013](#)

Тематика журнала: актуальные вопросы современной экономики и социологии - от теоретических и экспериментальных исследований до непосредственных результатов управленческой и производственной деятельности. Публикации в журнале учитываются как опубликованные работы при защите диссертаций на соискание ученых степеней России и зарубежья.

РАЗДЕЛЫ НОМЕРА:

- Основной раздел: социально-экономические аспекты развития современного государства;
- Современные технологии управления организацией;
- Актуальные вопросы политики и права;
- Современные науки и образование;
- Информационные и коммуникативные технологии;
- Здоровоохранение в обществе.

Выпуск №5(120) 1 часть (май, 2024). Сайт: <http://www.iupr.ru>

HARNESSING THE POWER OF MILITARY VOCABULARIES IN WRITING: STRATEGIES FOR TEACHING

Abstract. In the realm of language and communication, the integration of military terminology into writing serves as a potent tool, imbuing narratives with vivid imagery, precision, and authority. Whether crafting fiction, persuasive essays, or technical documents, the strategic incorporation of military lexicon can elevate prose to new heights, effectively engaging readers and commanding attention. Let's delve into the art of utilizing military words in writing, exploring techniques that empower writers to wield this specialized vocabulary with finesse and impact.

Keywords: tactical disarray, discipline, courage, urgency, tension, anticipation, dynamism, authoritative sources, veterans, strategy, progression, and climax, multimedia integration, real-world relevance.

Harnessing military terminology in writing offers a plethora of opportunities to enhance expression, evoke imagery, and engage readers on multiple levels. By employing precision, authenticity, and strategic integration, writers can leverage this specialized lexicon to craft compelling narratives that resonate with power and resonance. Whether employed sparingly for emphasis or woven seamlessly into dialogue and description, military words serve as formidable allies in the writer's arsenal, enriching storytelling with depth, intensity, and authenticity.

Precision and Clarity: Military terminology often embodies precise and concise language, essential for conveying complex concepts efficiently. Embrace this clarity in your writing by selecting terms that succinctly express ideas. Replace vague descriptors with specific military jargon to enhance the reader's understanding and create a more immersive experience. For instance, instead of describing a chaotic situation as “confused,” opt for “tactical disarray” to evoke a clearer image.

Evoke Atmosphere and Tone: Military vocabulary carries connotations of discipline, courage, and urgency, making it instrumental in setting the tone and atmosphere of a piece. Tailor your choice of words to evoke desired emotions and establish the desired ambiance. Deploy terms like “barrage,” “siege,” or “maneuver” to infuse scenes with tension, anticipation, or dynamism, effectively immersing readers in the narrative's mood.

Character Development and Dialogue: Integrate military terminology into character dialogue to deepen characterization and authenticity, particularly for characters with military backgrounds or occupations. Use terminology reflective of rank, branch, or specialization to enrich dialogue, providing insights into characters' personalities, experiences, and motivations. Dialogue peppered with military slang and acronyms can foster realism and credibility, enhancing reader engagement and immersion.

Symbolism and Metaphor: Beyond literal usage, military terminology lends itself to powerful symbolism and metaphorical interpretation. Harness the symbolism inherent in military ranks, insignia, or operational maneuvers to imbue your writing with layers of meaning and allegory. Analogize strategic principles to interpersonal dynamics or societal structures, drawing parallels that resonate with readers on multiple levels and deepen thematic exploration.

Narrative Structure and Pacing: Adopting military terminology can invigorate narrative structure and pacing, infusing storytelling with elements of strategy, progression, and climax. Frame narrative arcs as missions or campaigns, employing terminology such as “deployment,” “assault,” and “retreat” to delineate plot phases and enhance narrative momentum. Strategically deploy terminology associated with tactical planning and execution to structure scenes, heighten suspense, and drive the story forward with precision.

Research and Authenticity: Authenticity is paramount when incorporating military terminology into writing. Conduct thorough research to ensure accurate usage of terminology, including proper context, definitions, and nuances. Consult authoritative sources, veterans, or subject matter experts to validate terminology usage and gain insights into military culture and protocols. Accuracy enhances credibility, fostering trust and respect among readers familiar with military conventions.

Balanced Integration: While military terminology can enrich writing, avoid overreliance or gratuitous use that may alienate or confuse readers. Strike a balance between familiarity and novelty, integrating military lexicon seamlessly into the narrative without overshadowing other elements or compromising readability. Employ strategic restraint, reserving specialized terminology for contexts where its impact is most potent and relevant.

Teaching military vocabularies in writing presents a unique opportunity to engage students with real-world contexts while honing their language skills. By employing effective teaching techniques and integrating relevant references, educators can foster a comprehensive grasp of military terminology among their students. This article explores several techniques for teaching military vocabularies in writing, supported by references to academic literature and educational resources. Teaching military vocabularies in writing is not merely about imparting words; it's about instilling an understanding of historical contexts, strategic thinking, and effective communication. Such instruction requires a multifaceted approach that engages students intellectually while fostering their

linguistic skills. In this article, we delve into various approaches to teaching military vocabularies in writing, offering educators practical strategies to enhance student learning and comprehension.

Historical Contextualization: Understanding military terminology necessitates an appreciation of historical contexts. Incorporating historical narratives, primary sources, and archival materials immerses students in the circumstances surrounding military terminology usage (Black, 2005). By exploring pivotal events such as World War II or the Cold War, students gain insights into the evolution and significance of military vocabulary, enriching their understanding beyond mere definitions.

Interactive Learning: Interactive learning activities provide students with hands-on experiences that deepen their engagement with military vocabularies. Simulations, role-playing exercises, and group discussions allow students to apply terminology in realistic scenarios (West, 2018). Whether strategizing military campaigns or analyzing historical documents, interactive activities encourage active participation and critical thinking while reinforcing vocabulary retention.

Multimedia Integration: Multimedia resources offer dynamic platforms for teaching military vocabularies. Documentaries, virtual tours, and multimedia presentations provide visual and auditory reinforcement of military concepts (Reid, 2012). Additionally, incorporating interactive online platforms or educational games allows students to explore military terminology in an engaging and immersive manner, catering to diverse learning preferences and styles.

Cross-disciplinary Connections: Integrating military terminology across various disciplines facilitates interdisciplinary learning and enhances students' understanding of its broader implications. Whether exploring geopolitical conflicts in social studies, examining technological innovations in science, or analyzing propaganda techniques in language arts, cross-disciplinary connections deepen students' appreciation for the multifaceted nature of military vocabulary (Lampert, 2011).

Real-world Relevance: Emphasizing the practical applications of military terminology fosters students' awareness of its significance in real-world contexts. Guest speakers from military backgrounds, field trips to historical sites, or collaborative projects with local veterans' organizations provide firsthand insights into the use and impact of military vocabulary (Mackay & Barney, 2016). Moreover, exploring career pathways that require proficiency in military terminology, such as journalism or defense analysis, inspires students to recognize the relevance of their learning beyond the classroom.

Reflective Practice: Encouraging students to reflect on their learning journey promotes metacognitive awareness and facilitates deeper comprehension of military vocabularies. Journaling, peer feedback sessions, or self-assessment exercises allow students to articulate their understanding, identify areas for improvement, and set personal learning goals (Schön, 1983). By fostering

reflective practice, educators empower students to take ownership of their learning and continuously strive for mastery of military terminology.

Conclusion. Teaching military vocabularies in writing requires a comprehensive approach that integrates historical contextualization, interactive learning, multimedia integration, cross-disciplinary connections, real-world relevance, and reflective practice. By adopting these approaches, educators can create enriching learning experiences that not only enhance students' linguistic proficiency but also deepen their understanding of military history, strategy, and communication. Ultimately, by equipping students with the tools to engage critically with military terminology, educators prepare them to navigate and contribute meaningfully to complex socio-historical discourses.

DEVELOPMENT OF PERFORMANCE STYLES IN TRADITIONAL SINGING

Abstract. The traditional singing direction, which was formed on the basis of historical experiences and embodies the most perfect traditions, is of particular importance with its performance style, form, way of performance, complexity of speech and folkliness. This article talks about popularizing the art of traditional singing performance among the population, especially their wide scope in terms of singing genres, the breadth of performance styles, and the manifestation of local traditions of place and space.

Key words: traditional singing, musical heritage, song, classical singing, singing, performance art, performance styles, folk sayings, way of saying, melody.

In the performance of the history of Uzbek music art, the art of singing passed from the teacher to the student based on tradition, was formed, developed, adapted to different conditions and has reached us. Folklore sayings in folk art, professional music in the oral tradition - statuses, academic vocals and modern music as an art form that has fully manifested its national characteristics, traditional singing is in the main place. Musicologist S. Bekmatov mentioned in his research that each of the above-mentioned trends has its own style, rules, and characteristics from the point of view of form and performance. Among them, the direction of traditional singing, which was formed on the basis of historical experiences and embodies the most perfect tradition, is of special importance with its performance style, form, way of performance, complexity of saying and folkliness. Since time immemorial, this direction has been bringing out the most beautiful customs, traditions, values and national spirit of the Uzbek people, showing the originality and originality of the rich spirituality of our people in front of the peoples of the world. that is why the tradition of singing and its directions and styles are being formed and developing. The art of performing traditional singing has become widely popular among the population. It is especially significant in terms of the wide scope of the singing genre, the breadth of performance styles, and the manifestation of local traditions of the place and space. Indeed, as a result, performance styles characterized by local elements, and later schools of performance, emerged. Andijan, Khorezm, Margylan, Kokand khofiz schools or Ota Jalal Nazirov, Khamrokul Qori, Usta shodi Azizov, Khojikhon Boltaev, Madrakhim Sherozi (Yakubov), Mamadbuva Sattrov, Rasulqori Mamadaliyev, Murodjon Akhmedov, Khoji Abdulaziz Abdurasulov, Mamatbuva Sattorov, Jurakhan Sultanov, Ma'murjon Uzokov, Komiljon

Otaniyozov, Fattahkhan Mamadaliyev, Komuna Ismailova, Nazira Akhmedova, Saodat Qabulova, Berta Dovudova, Fakhriddin Umarov, Otajon Khudoyshukurov, Tavakkal Kadirov, Khairulla Lutfiillayev, Kamodiddin Rakhimov, Sherali Joraev, Artik Otajonov, Makhmudjon Tojiboev, Munojaat Yolchieva and hundreds of other singers have appeared.

Knowledge and practical elements occupy a special place in traditional singing, as in other areas of the art of singing. One such element and the primary process is undoubtedly sound. Everyone has their own tone of voice. We distinguish and separate from each other based on the color of the voice of the *ulama*. The color of the singer's voice depends on the performance skills of the singer, the pronunciation of words, the way of saying, the melody and melody, and the experience of creative skills.

These specific stages, which exist at the core of the singing practice, have literally created their own level, which among the people are *singer*, *laparchi*, *yallachi*, *dostan*, *termachi*, *ashulachi*, *interpreter*, *savthkhan*, *nasrkhan*, was brought to be called by names such as *zikir*, *jahrchi*, *goyandachi*, *etymchi*, *singer* and finally *hafiz*. And these are formed in practice as types of singing art. It has become a tradition to consider each of my performances to be perfect in every way and to reach the highest level as "*hafiz*". For example, *hafiz* is a term given to a singer who has achieved a comprehensive and high level of performance skills and is an expert in his field. The melodies and, most importantly, the spirit of Uzbek music are reflected especially in *hafiz*. Is it possible to reach a high level in singing and acquire classicism, that is, to call the masters of classical music, along with the names "*singer*" and "*maqomchi*", "*hafiz*" from the 30s of the XIX century has already become an image in our language.

In each of the above-mentioned terms, the features of the musical genre are fully expressed, while "*hafiz*" also shows some of its aspects in connection with a number of structural features. "*Hafiz*" is derived from the Arabic word "*khifz*", which actually means "*keeper*", "*rememberer*". That is probably why, in the past, those who had professions related to performance interpretation and those who embodied the aspect of interpretation were considered important in their actions, i.e., *kifz*.

By the 30s of the 20th century, it was officially popular to call the performers of large-scale songs belonging to the heritage of classical music and folk songs - skilled singers and famous singers. In 1939, the government established an honorary title called "*Khalq hafizi*". Famous singers *Jorakhan Sultanov*, *Mamurjon Uzokov* and *Artikkhoja Imamkhojayev* were among the first to receive it.

It is known that in the process of historical formation, the peoples on earth have embodied the most beautiful qualities of humanity and have passed down a number of traditions from generation to generation as a legacy. Especially those who paid great attention to the preservation of important events, factors and events in social life, as well as traditions, values, customs and ceremonies related to daily

life. Under the influence of social, economic and political events, the formation and development of features related to the language, spirituality, and essence of the people, and the emergence of new trends and directions based on them, was considered one of the main laws of culture. Since time immemorial, ceremonies, events and actions related to certain conditions, realities, and spiritual needs have been formed in various forms in various spheres of life. In the course of generations following one or another event over the centuries, the need for them has gradually become a pattern, to carry out and regularly continue the ritual when the circumstances require it.

A number of unique performance styles of singing have been created in the musical creativity of the Uzbek people. one of these styles is the sudden singing of a song created in an instant without special preparation, based on one's own performance capabilities, and it is considered *badikhagoy* among the population. In the science of musicology, *badikhagoy* is a poem (music or song) created instantly without special preparation, or a musical piece suddenly sung in connection with an event or event. In music, there are examples of genres such as sayings, *terma*, *lapar*, based on special *badikhaguy*, which are characteristic of the art of great singing and *bakhshi*. In the performance of traditional singers, the song samples are formed in a unique *Badikhagoy* style. The singer performed the song in his own way using all his capabilities.

In traditional singing, the voice plays the main role in bringing the music to the listeners at a high level. In Uzbek musicology, when talking about sound, sound is interpreted as an appearance. It can be achieved by various means and actions. A sound with a certain pitch *m* is considered a musical sound. It is the human voice that is capable of perfectly singing through musical sounds and emotions. The singer's voice has *timbre*, which is formed by the harmony of sound power, height, hardness and all of them. In the art of traditional Uzbek singing, there is a unique freshness, pain, beauty, beauty of the voice, which does not have its own appearance, but is always felt and understood. these consonants constitute a sound with a complete meaning. In the same traditional singing practice, these aspects have been positively evaluated as passionate features of performance. Like other types of singing, the main task of the main singer is to be able to influence the listener's heart by making extensive use of all internal and external features of the human voice. Every singer who has *awalam* has the ability to breathe, his juicy voice, can fully and fluently express the text of the work, and pays full attention to the length of vowels and consonants. it should show its effect when they get food.

**CALCULATION AND ASSESSMENT OF ECOLOGICAL-ECONOMIC
BALANCE IN THE GEOINFORMATION SYSTEM (ON THE
EXAMPLE OF FERGHANA REGIONS)**

Abstract. The article discusses the main issues of the ecological-economic balance of the territory. A comprehensive assessment of the ecological-economic balance of the Fergana region was carried out by the ratio of the main land use categories characterized by varying degrees of anthropogenic pressure. The coefficient of natural security of the territory is determined and the typification of the municipal regions and urban districts of the region is carried out according to the degree of tension of the ecological-economic condition of the territory.

Keywords: ecological-economic balance, anthropogenic pressures, environmental assessment, spatial typology, GIS, natural security of the territory, ecological nets.

Assessing the ecological and economic state of the territory helps to develop the most effective land use options and link socio-economic development with the protection and improvement of the environment, thereby contributing to the sustainable development of the region. To successfully apply the concept of ecological-economic balance, it is necessary to first determine the structure of the territory under study, i.e. way of organizing it. The purpose of applying this methodology is to organize rational land use, which is carried out by improving the management of human economic activities [3, 4].

The concept of sustainable development has found wide application in the economic, social and environmental sphere of public activity. An environmental and economic assessment of the territory is aimed at identifying the most favorable land plots for the goals set by the company or production, as well as, if necessary, monitoring the process of restoration of depleted zones. For the successful creation of programs and their implementation within the framework of the concept of sustainable development, new approaches are needed aimed at

organizing an environmentally compatible society. One of such approaches is the concept of ecological-economic balance (EEB) of the territory, which establishes and maintains harmonious relations between nature and human economic activity [1].

The concept of the ecological-economic balance of the territory includes the following conditions: organization, arrangement and arrangement of territories of different administrative levels on a landscape-ecological basis; preservation and maintenance of natural and slightly modified landscapes that perform important environmental and resource-forming functions in full; rational use and maintenance of the natural potential of the territory, a reasonable distribution of natural resource rents; governance, self-government and territorial justice; achieving an acceptable quality of life and products and maintaining a healthy lifestyle; development of innovative processes [2].

In the process of studying the existing experience in assessing EEB, it was noted that, depending on the chosen research unit, its physical and geographical features and economic development, the components used for the assessment are different, and the development of geographic information technologies allows you to create cartographic products, which reflects each stage of the assessment, as well as the synthesis of the results. Against the background of the successful application of the EEB assessment, the completion of which is the creation of recommendations on the sustainable development of territories, the problem of uniformity and themes of the used and obtained cartographic material is relevant. Modern cartographic works, the purpose of which is an analysis of the ecological-economic condition and its assessment, are based on the techniques proposed by B.I. Kochurov and V.A.Lobkovsky. Today there are two concepts that overlap with each other and complement this ecological-economic condition (EEC) and the ecological-economic balance (EEB). Methodological approaches to the analysis of the EEC and balance of the territory were developed by B.I. Kochurov, Yu.G.Ivanov, V.A.Lobkovsky, and were first tested on example of the territories of the Moscow region and the Republic of Altai. B.I. Kochurov devoted his work to the concept of EEB [3, 5, 7].

It is also important to note the role of GIS in assessing the environmental and economic balance, as a promising tool that makes it possible to analyze calculated indicators and identify spatial patterns. GIS makes it possible to conduct queries on the values of the coefficients (K_a , K_r , K_{ns}), visualize them for comparison and analysis of dynamics, as well as build thematic cartograms that allow you to identify areas with both favorable and unfavorable nature management structures that need more in-depth research.

The assessment of the EEC of the Ferghana region was based on the National Report of the State Committee on Land Resources, Geodesy, Cartography and State Cadastre of the Republic of Uzbekistan on the state of land resources and the data on land balance of cities and districts of the Ferghana region. To assess the current geocological situation caused by the use of natural

and natural resources of the Fergana region, the level of environmental and economic stresses of urban and district territories is studied. For this purpose, anthropogenic load (AL) indicator by city and county is analyzed.

The grouping of lands by the degree of anthropogenic load makes it possible to evaluate the anthropogenic transformation of the territory in comparable terms. They are the coefficients of absolute (K_a) and relative (K_r) tension of the EEC of the territory, calculated by the formulas (1)–(2): coefficient of absolute tension of the EEB of the territory (K_a); coefficient of relative strength of the EEB of the territory (K_r); coefficient of natural security of the land fund (K_{ns}); ecological fund of the territory (P_{ef}); the area of the study area (P_t) (table 1).

Table-1

Coefficients evaluate the ecological-economic balance of the territory (B.I. Kochurov, 1999, 2003).

Name of coefficient	Formula	Used data	Change characteristic values
Absolute ecological tension coefficient	$K_a \frac{AL6}{AL1}$	Areas with high and low anthropogenic loads are taken into account	K_a - the higher the coefficient value, the tighter the situation
Relative environmental stress ratio	$K_r \frac{AL4 + AL5 + AL6}{AL1 + AL2 + AL3}$	Areas of various types of anthropogenic load are taken into account.	$K_r \leq 1$ - tension of the EES of the territory of the balance is balanced To - the higher the value of the coefficient, the tense the situation
The coefficient of natural security of the territory	$K_{ns} \frac{P_{ef}}{P_t}$	Is used $P_{ef} = AL1 + 0,8AL2 + 0,6AL3 + 0,4AL4$ and P_t – the area of the studied territory	K_{ns} – the higher the coefficient value, the better the situation $K_{ns} < 0,5$ – critical level of territory security

The concept of the EEB allows the inclusion of criteria for assessing anthropogenic load in a particular order across specific regions, ie administrative units. Calculation of computers for administrative units of Fergana region is carried out in several stages. The first phase of the calculation focused on the anthropogenic load for all land categories and types, and the appropriate score (Table 2). At the initial stage of the study, the coefficient of absolute tension of the EEB of the territory (K_a) for cities and districts of Ferghana region was calculated. The ratio of land categories and types of AL1 and AL6 categories was determined. The absolute environmental load is 10.2 in the Fergana region. The lower the coefficient values, the more favorable the geocological state and EEB

of the area under study. In terms of administrative and territorial units, the most favorable EEB by K_a is observed in the Dangara (1.5), Yazyavan (2.2), Besharik (3.4), Furkat (6.2), and Soh (16.6) districts. lower than that of the province. These areas are characterized by large areas of protected areas, underwater (rivers, streams and lakes), protected forests and reserve lands. Indicator of K_a is most critical in Rishtan (154.3), Oltiariq (199.3), Uchkuprik (388.6) and Baghdad (493.6) districts (Table 3).

Table -2

The structure of the land fund of the Ferghana region, taking into account the anthropogenic load index (AL).

№	Administrative districts	Overall area, thousand, km ²	The degree of anthropogenic transformation, point of AL*					
			1	2	3	4	5	6
1	Besharik	0.78	1572	36010	4332	7292	24019	5309

15	Furqat	0.30	539	5860	459	3478	16772	3324
	Total:	7.0	7752	209868	61106	54153	288614	78965

*1–AL1, ha (Very low); 2–AL2, ha (Low); 3–AL3, ha(Average); 4–AL4, ha (Very High); 5–AL5, ha (Higher); 6– AL6, ha (Highest).

In the Fergana region, the number and categories of protected areas (PA), which constitute the main elements of the ecological nets, are insufficient for both elevation zones and administrative and territorial units. To optimize the overall environmental stresses in these areas, it can be achieved by expanding the protected areas categories of the I-IV or creating new ones.

Table-3

Indicators of the main coefficients of the ecological-economic state of the territory of the Ferghana region (2019)

№	Administrative districts	K_r	K_{ns}	At the expense of P_{ef} %
	In the Fergana region			
	Besharik	0,9	0,5	45,7
	Baghdad	2,4	0,2	25,0
	Buvayda	3,8	0,2	18,8
	Dangara	1,7	0,3	33,1
	Yozyavon	2,4	0,3	27,1
	Quva	1,8	0,3	28,8
	Oltiariq	2,3	0,2	25,4
	Qoshtepa	5,3	0,2	17,0
	Rishtan	2,4	0,2	25,5
	Soh	0,2	0,6	63,5
	Toshloq	3,6	0,2	18,5
	Uzbekistan	0,5	0,5	53,0
	Uchkuprik	2,2	0,3	26,2
	Ferghana	0,9	0,4	40,8
	Furqat	3,4	0,2	22,6
	Total:	1,5	0,3	33,4

Relative coefficient of relative strength of the EEB of the territory (K_r) for each administrative district of Fergana region were calculated. In the analysis of the results, the districts with a value of one K_r are selected. This is an indication of the optimal environmental and economic balance in the districts. If the value of K_r exceeds one, it indicates an increase in the ecological stress in the area. In areas with such an index, sustainable environmental balance can be achieved by expanding protected areas or the areas of ecological reserve lands.

Due to the presence of K_r 1 in Soh (0.2), Uzbekistan (0.5), Besharik (0.9) and Ferghana (0.9) districts of Fergana region, the relative environmental stresses are the best. In all other districts, K_r is greater than 1, indicating an increase in voltage. The highest value of K_r was found in Furkat (3.4), Tashlak (3.6), Buvaida (3.8) and Kushtepa (5.3) districts.

The value of the K_r coefficient exceeds 1 in the regions where urbanization and high agro-landscape are high. For example, over the last 10 years, the process of fragmentation in landscapes has increased due to the expansion of settlements in almost all districts, especially in the areas adjacent to regional and district centers. Therefore, in practice, it is not possible to form a district or territory with an ideal EEB. Most of the region's major industrial and transport infrastructure is concentrated in cities and district centers. We can see that the changes in EEB in the Fergana region are negative. For example, this indicator is related to changes in the composition of the natural landscape, which is the highest in the districts of Baghdad, Uchkuprik, Tashlak, Furkat, and Buvaida.

Also, due to the construction of new housing and industrial facilities, the anthropogenic load in the cities is significantly higher than in the administrative districts. Taking into account the recreational needs of the urban population and their role in optimizing the ecological situation, special attention should be paid to the establishment of recreational zones, micro reserves and shelter forests in the areas adjacent to the cities. Biodiversity forests between recreational areas and other land users may serve as buffer zone.

Each anthropogenic impact or their combination corresponds to its own limit of stability of natural and natural-anthropogenic landscapes. The more diverse the landscape, the more resilient it is. At the same time, the level of K_{ns} of a territory also depends on the distribution of lands according to the degree of anthropogenic load. Lands characterized by a high degree of anthropogenic load, as a rule, have low natural protection.

In the Fergana region, the areas with the natural protective coefficient (K_{ns}) above the standard range ($K_{ns} \leq 0.5$) may include Soh, Uzbekistan and Besharyk districts. Regions with relatively high K_{ns} (0.4) are Ferghana regions. In all other districts, the degree of natural protection of landscapes was found to be the most critical, ie K_{ns} 0.1 to 0.3. In some districts, the value of K_{ns} is higher than the regional average, which is explained by the size of the reserve lands, forest resources and protected areas.

As studies have shown, the ecological-economic condition of the territory of the region is unsatisfactory. In connection with the development of agricultural production, industrialization, urbanization, it continues to deteriorate. Agricultural lands are exposed to erosion, deflation, salinization. The transition to an adaptive landscape farming system should be carried out taking into account the ecological-economic condition of the territory. Planned activities should not lead to an increase in the values of the coefficient of its relative intensity of the EES above 1.0. To recommend to the design organizations when assessing the EES of the territory to use our proposed methodology, taking into account the level of land reclamation arrangement of the territory. To carry out the general anti-erosion organization of small land holdings simultaneously on the entire catchment, regardless of the boundaries of the allotment owners.

In some districts of Fergana region, by 2019 we can see a sharp decline in the value of K_{ns} . This is due to the different development of ecological reserve lands in the districts. It can be seen that the landscape and biodiversity indicators and their sustainability are not optimal within administrative and territorial units. Therefore, it is suggested to expand the PA area and to improve the ecological nets for the conservation of natural landscapes and biodiversity conservation, and the preservation of optimal environmental conditions. These activities will enhance the region's natural defenses and provide an opportunity for optimization of the EEB.

Conclusions

One of the main tools for reducing the anthropogenic load on the natural environment is rational land use and environmental management with the regulation of areas allocated for arable land, hayfields and pasture lands for grazing in areas where livestock farming has recently become increasingly developed. To prevent the adverse consequences of the tense ecological and economic balance of the territory, state and municipal control over the state and dynamics of land use should be strengthened.

When analyzing the data obtained, it is clear that natural landscapes, which provide natural protection of the territory, do not occupy a sufficiently large area. The territory of all administrative-territorial units (with the exception of the regions of Sokh, Besharik and Uzbekistan) is dominated by anthropogenic landscapes. Prirodnye landscapes predstavlyayut soboy obshirnye territorii v pystynyakh Tsentralnoy Fergany, na kholmakh yuzhnoy Fergany, v Shakhimardanskom rayone i v Gornom rayone Sokhskogo rayon.

The values of the coefficient (K_a) make it possible to objectively assess the degree of compliance of the intensity of anthropogenic impacts with the restoration potential of natural landscapes and justify the need to create protected natural areas (PNA) in the region with the required size of their area. The lower the coefficient value, the more favorable the geo-ecological situation in the study area.

THE EFFECT OF LIPSTICK ON HUMAN HEALTH

Annotation. Lipstick is the favorite makeup product of women. Almost every woman owns this type of cosmetic. However, lipstick has very dangerous side effects that not everyone knows.

Ancient Sumerian and Indus Valley men and women were possibly the first to invent and wear lipstick, about 5000 years ago. The Sumerians crushed gemstones and used them to decorate their faces, mainly on the lips and around the eyes. Egyptians like Cleopatra crushed bugs to create the color red on their lips. Women in the ancient Indus Valley civilization used rectangular pieces of ochre with beveled ends as lipstick.

Lip coloring started to gain some popularity in 16th-century England. During the time of Queen Elizabeth I, bright red lips and a stark white face became fashionable. At that time, lipstick was made from a blend of beeswax and red stains from plants. Only upper-class women and male actors wore makeup. Throughout most of the 19th century, the obvious use of cosmetics was not considered acceptable in Britain for respectable women, and it was associated with marginalized groups such as actors and prostitutes. It was considered brazen and uncouth to wear makeup. In the 1850s, reports were being published warning women of the dangers of using lead and vermilion in cosmetics applied to the face. The first lipstick was created by the Parisian maison Guerlain in 1870. By the end of the 19th century, Guerlain began to manufacture lipstick on a larger scale. The first commercial lipstick was invented in 1884 by them in Paris, France. It was covered in silk paper and made from deer tallow, castor oil, and beeswax. Prior to this, lipstick had been created at home. In the 19th century, lipstick was colored with carmine dye. Carmine dye was extracted from cochineal scale insects native to Mexico and Central America that live on cactus plants. Cochineal insects produce carminic acid to deter predation by other insects. Carminic acid, which forms 17% to 24% of the weight of the dried insects, can be extracted from the insect's body and eggs. Mixed with aluminum or calcium salts, it makes carmine dye (also known as cochineal).

Lipstick contains wax, oils, antioxidants, and emollients. Wax provides the structure for the solid lipstick. Lipsticks may be made from several waxes such as beeswax, ozokerite, and candelilla wax. Because of its high melting point, carnauba wax is a key ingredient in terms of strengthening lipstick. Various oils

and fats are used in lipsticks, such as olive oil, mineral oil, cocoa butter, lanolin, and petrolatum. Lipsticks get their colors from a variety of pigments and lake dyes, including, but not limited to bromo acid, D&C Red No. 21, Calcium Lake such as D&C Red 7 and D&C Red 34, and D&C Orange No. 17. Pink lipsticks are made by mixing white titanium dioxide and red shades. Both organic and inorganic pigments are employed.

Table 1. Essential saponifiable lipids of lipstick

№	Substance	General information	Advantages	Disadvantages
1	Beeswax	Beeswax is a natural wax produced by honey bees. The wax is formed into scales by eight wax-producing glands in the abdominal segments of worker bees, which discard it in or at the hive. Beeswax consists mainly of esters of fatty acids and various long-chain alcohols.	Used cosmetically, beeswax hydrates, conditions, soothes, and calms the skin. It exfoliates, repairs damage, promotes the skin's regeneration, diminishes the appearance of the signs of aging, soothes itchiness and irritation, and creates a hydrating, long-lasting protective barrier against environmental pollutants.	While rare, some people may have an allergic reaction to beeswax.
2	Candelilla wax	Candelilla wax is a wax derived from the leaves of the small candelilla shrub. It consists of mainly hydrocarbons, esters of higher molecular weight(20-29%), free acids, and resins(12-14%, mainly triterpenoid esters).	It is a popular choice for vegan and cruelty-free cosmetics due to its plant-based origin. Candelilla wax is often used as a rheology modifier in cosmetic formulas. It controls the texture, consistency, and spreadability of products, ensuring a smooth and easy application.	Allergic contact dermatitis can be caused by candelilla wax, a natural vegetable wax found in various cosmetic products.
3	Carnauba wax	Carnauba is a wax of the leaves of the carnauba palm Copernicia prunifera. It is obtained by collecting and drying the leaves, beating them to loosen the wax,	All of the natural waxes, carnauba wax is the toughest and has a high melting point. Both of these are critical to creating an effective and durable coating that needs to resist scratches and withstand	Carnauba wax must never be used near the inner nose and ears or on any other particularly sensitive areas of skin. Potential side effects of Carnauba wax include dry skin, acne, rashes, inflammation, dermatitis, dizziness, nausea, blurry

		then refining and bleaching it. As a food additive, its E number is E903.	temperatures up to 160 degrees.	vision, and dryness, irritation, or burning of the eyes.
4	Ozokerite	Historically referred to as earth wax, Ozokerite is a chemically neutralized hydrocarbon wax (petroleum) with admixtures of isoparaffins and aromatics derived from coal and shale. It consists of a mixture of various hydrocarbons containing 85-87% by weight of carbon and 14-13% hydrogen.	Mineral waxes like ozokerite have film-forming and hydrophobic properties in cosmetic products. They contribute shine, protect the skin against moisture loss, and serve as consistency enhancers. Waxes used in cosmetics are highly purified not to cause skin irritation.	According to the combined chronic toxicity and carcinogenicity studies of ozokerite, long-term exposure causes systemic chronic inflammation due to a foreign body response.
5	Olive oil	Olive oil is a liquid fat obtained by pressing whole olives, the fruit of <i>Olea europaea</i>	Olive oil helps in improving cardiovascular system, preventing stroke, reduction of depression risk, reducing breast cancer risk, maintaining healthy cholesterol levels.	Regular consumption of unprocessed olive oil can increase the risks of lethal diseases like atherosclerosis, obesity, heart attack, stroke, breast cancer, and colon cancer.
6	Mineral oil	Mineral oil is any of various colorless, odorless, light mixtures of higher alkanes from a mineral source, particularly a distillate of petroleum, as distinct from usually edible vegetable oils.	Mineral oil has health benefits, such as: softening dry skin, easing constipation, soothing eczema, treating cradle cap, treating dandruff, removing ear wax buildup.	Mineral oil-based enemas can cause skin rash, itching or hives, swelling of the face, lips, or tongue; severe diarrhea; or difficulty breathing or shortness of breath. Other side effects include: oil leakage from rectum, rectal skin irritation, loose stools, lower stomach discomfort or cramps, nausea.

Matte lipsticks contain more filling agents, like silica, but do not have many emollients. Creme lipsticks contain more waxes than oils. Sheer and long-lasting lipsticks contain more oil, while long-lasting lipsticks also contain silicone oil,

which seals the colors to the wearer's lips. Glossy lipstick contains more oil to give a shiny finish to the lips.

Shimmery or frosty lipstick may contain mica, silica, and synthetic pearl particles, such as bismuth oxychloride, to give them a glittery or shimmering shine. The use of lipstick can potentially have some side effects, although they are not common for most people. These may include allergic reactions, dryness, chapping, and irritation of the lips.

Bisphenol-A (BPA) in lipstick can cause infertility and cancer. Nearly 95% of lipstick containers, including those that are claimed to be organic and chemical-free, were found to contain BPA, and this chemical is easily absorbed into lipstick applied to the lips.

BPA is an endocrine disruptor that has been found to cause reproductive problems, birth defects, and cancer.

Heavy metals in lipstick are the cause of kidney failure. Lipstick contains harmful heavy metals such as cadmium, magnesium and chromium. All these metals can cause dangerous diseases and organ damage. Too much cadmium can increase the risk of kidney failure. Regularly applying lipstick can cause serious stomach tumors.

Lead is bad for the nervous system. Lead is a common ingredient in most lipsticks. Lead is a poison that has a harmful effect on the nervous system. It can also cause brain damage, hormonal imbalances, and infertility.

Petrochemicals can affect the brain. Many lipsticks have common petrochemical ingredients, which have harmful side effects. Petrochemicals are by-products of crude oil and natural gas. It can cause endocrine disruption that acts as an obstacle to growth, development, reproduction, and intelligence.

Preservatives used in lipstick cause cancer. The preservatives used in lipsticks are formaldehyde and parabens, which are known carcinogens. Lipsticks that use these preservatives cause eye irritation, coughing, wheezing, and skin irritation. The mineral oils used in lipsticks clog the pores of the skin and are the cause of much long-term damage.

Chemicals in lipstick are harmful to the body. Although bismuth oxychloride is a chemical used to preserve lipstick, it is extremely harmful to the body. The harmful effects of lipstick are due to the carcinogenic properties of this ingredient. Propylparaben acts as a preservative, just like formaldehyde. Daily use of lipstick increases the amount of toxins.

Conclusion. Lipstick is used most of the day. Women inadvertently absorb harmful substances while eating. This increases the impact of toxins found in lipsticks. Lipsticks or lip glosses that cause women to exceed the allowable daily intake for aluminum, cadmium, chromium, and manganese. They build up in the body over time and cause toxicity. The intake of these metals is more than 20% of their accepted daily intake (ADI) limit (ADI is the maximum amount of toxins a person can be exposed to without any health risk).

THE ROLE OF LITERATURE IN TEACHING AND LEARNING A FOREIGN LANGUAGE

Annotation. This article talks about the important aspects of students' learning foreign languages, as well as increasing their interest in studying foreign literature, and acquiring sufficient practice and skills in this regard. We all know very well that language is a means of communication, but in the process of learning a language, acquiring deep and wide information about foreign literature will lead to a mature and correct formation of our view not only on literature, but also on the world community.

Key words: literature, language learning, role and technique, teaching methods, literary text.

Literature and language are closely related and this is a fact that no one can deny. Literature is made up of language and represents one of the most common uses of language. Language and linguistic analysis can also be used to access literature from a learner's perspective. This method is by no means new as literature is widely used in various language teaching methods. However, here the point of view changes, giving the literary text greater significance as a work of art. Let us first look at the changing role of literature in the second language teaching tradition and conclude with a consideration of its contemporary position within the communicative approach. In the method of grammatical translation, literature was a central component.

One of the priorities of modern education is the development of the student as an individual, ensuring his competence in all areas so that he can take his place in society. According to N.D. Galskova, the main and modern strategic goal of teaching a foreign language is to direct students to equal and independent participation in the process of intercultural communication, in the process of forming bilingual or multilingual and cultural personality traits. Of particular importance is the fact that the implementation of the above principles of teaching foreign languages orients the process of learning foreign languages to the student's personality as a whole.

The main thing is to develop in him (the student) not only the skills and abilities of foreign language speech, but also the entire complex of his cognitive and affective abilities, which are often not linguistic, but create the prerequisites for the successful functioning of foreign language speech. This means that in the modern model of teaching foreign languages, built on the principles of interconnected communicative, sociocultural and cognitive development of the student, the latter plays the role of a subject of the educational process and a

subject of intercultural interaction. The current socio-political situation in our society shows the need to form a new national and cultural worldview. This requires sufficient changes in the form and content of education in our increasingly changing social life, because it is the education system that is capable of purposefully shaping the ethnocultural and social processes of the state. Modern methods of teaching a foreign language suggest paying special attention to the issue of organizing education based on a competency-based approach at all stages of the lifelong education system, especially in higher education. Today, preparing students for national and intercultural relations, relations of international cooperation is set as an important priority task, which requires the development of knowledge, skills and abilities in students in the foreign language being studied.

The value of literature essentially lies in its ability to develop students' sociolinguistic knowledge of the target language by exposing them to a wide range of linguistic varieties. Language changes from one social group and profession to another. Likewise, a person speaks differently in more than one social context, using a formal or informal style of speech. In light of the above, literature introduces students to other languages and cultures. Moreover, the connection between literature and language could be seen through the expression of ideas. It shows how people from different cultures can share their ideas simply through language. In addition, a subsequent benefit of studying literature will be the enrichment of students' vocabulary and reading skills. Additionally, literature can be used in teaching because non-English speaking students translate poetic terms directly without understanding the context, which will not help their language development. In essence, the study of literary material can act as a catalyst to promote the intellectual growth of a student through interaction, exchange of views and opinions among his classmates.

Literature as an academic subject is typically included in the curricula of college arts and humanities departments, while none of the science departments devote much attention to literary texts. As a result, students often have difficulty understanding and mastering components of a foreign language. Moreover, if both subjects (language combined with literature) are taught together, they can enhance the level of understanding of other subjects.

Another problem which teaching literature poses is the employment of impractical strategies of teaching by the teaching staff. Most of the teachers use whatever methods they have under their disposal; whereas literature should be related to real-life experiences as much as possible. Teaching by itself is an art which aims at conveying information in such a way as to make the recipients understand, accept and think logically of the material he is being taught. If nothing of this happens, then there must be some error in the whole educational process.

Because studying literary texts helps test how well students have learned the rules of grammar and sentence structure, as well as new vocabulary in language courses, it should help these students think better about the subject they are

writing about. Thus, learning one language skill, namely writing, is done so systematically and safely that the best results can be expected. Accordingly, the inclusion of literary material in language course programs is not without advantages. Instead of playing a negative role in the learning process, it can play a supporting role, not only exposing students to how native speakers use the target language in various situations, but also accelerating language acquisition, since all language skills are practically practiced in literature.

MECHANISMS OF ADEQUATE ADAPTATION OF STUDENTS TO THE CHANGING EDUCATIONAL ENVIRONMENT

Annotation. In this article, to date, in the process of education and training, in order to increase the social activity of young people, it is necessary to fully democratize and liberate the relationship between the teacher and the student. the vision, the internal form of education, the introduction of a series of new, innovative approaches to its content and technologies, in general, the creation of an institutional system based on the cooperation of the educational system and state bodies.

Key words: Education, students, changing educational environment, adaptation, social, psychological, pedagogical.

To date, in increasing social activity in the educational process of young people, democratizing and liberating the relationship between the teacher and the receiving students is necessary to look at the position of the teacher himself, The internal form of education requires the introduction of a series of new, innovative approaches to its content and technologies, and in general, the creation of an institutional system based on the cooperation of the educational system and state bodies. Such a defined new approach requires a radical change in the consistent relationship between the teacher and the learner today. Integration of the educational resources of the higher educational institution and the socio-cultural environment is the main direction of the accompanying activities, and it allows the comprehensive use of a wide range of social-psychological-pedagogical work methods and forms.

The process of pedagogical support of the student's adaptation in the study group includes several stages: 1st stage - propaedeutic - diagnostic. It refers to the preparation and entry into the process of adaptation of all participants of pedagogical accompaniment: both those who accompany and those who are accompanied. The duration of this stage is 6-8 weeks. At this stage, the step-by-step algorithm of actions is as follows: training of teachers and tutors of first-year study groups, development of a one-year adaptation program by group tutors, tutor familiarization with students' personal work, organization of acquaintance with students in the study group, every to determine the adaptation potential of a group participant, to determine the factors that help students to adapt successfully in this study group. Stage 2 - constructive interaction. It is a field of social experiments where students have the opportunity to try different options of self-realization in the system of relationships within the group under the guidance of teachers and senior students (who participate as tutors). The stage lasts 6 months.

The algorithm of step-by-step actions is as follows: organization of training of constructive communication methods in the group by the tutor, regular work on the formation of the team in the group, creation of interaction situations that require the manifestation of the individual's different personal characteristics in the group and his communicative potential, analyzing the results of interaction within the group, then the algorithm can be repeated: organizing the training of new groups of skills and abilities, in particular, the student demonstrates these skills, analyzes and re-understands his activity and communication in the group create possible realistic situations. 3rd stage - analytical activity. Summarizing the results of the student's adaptation in the group, independent and expert evaluation, connecting these achievements with the results of educational activities, joining activities outside the auditorium, identifying difficulties, developing individual trajectories of the further development of the student and the member of this educational group. output is expected.

The stage lasts 4-6 weeks. Algorithm of step-by-step actions - self-analysis, analysis in microgroups, general group analysis and reflection (re-understanding), organization of individual reflection meetings with the tutor. In order to achieve the goal of pedagogical support for the adaptation of students in the study group, the main forms of traditional information giving (social-psychological, pedagogical support, organization of joint activities), methods (educational situations, actualization, strengthening and enrichment, assistance and design of creativity) and used on a wide scale (individual and group conversations, discussions, team-creative works, situational games, etc.) within the framework of the implementation of the pedagogical accompaniment model, it is suggested to use the interactive adaptive teaching methods listed in Table 3 [85]. In order to effectively implement the adaptation process, active and interactive forms of training are used depending on the complexity of the educational process: elementary level - normative-logical and communicative; innovative projects; application and implementation of methods of modeling life situations.

Game methods, naming complexity, role-playing, business game, project communication technology, social-psychological situation of the student in the study group, formation and development of ideas about the student's overcoming difficulties, his success in his educational activities and the chosen profession expands its potential for The strategic, tactical and operational monitoring of units is as follows: - strategic monitoring includes a set of diagnostic tools that allow studying the conditions for adapting students, determining the goals and tasks of accompaniment. In this study, strategic monitoring was carried out with the help of a priori ranking of factors influencing the process of adaptation in the student's study group. - tactical monitoring with the help of a set of diagnostic tools that allow monitoring the level of adaptation of students, their orientation to group interaction, the need for standardized test methods, as well as quantitative and qualitative monitoring of the dynamics of changes, students' provided through the analysis of the mastery. Rapid monitoring performed the function of step-by-step

monitoring of the effectiveness of passing the stages of pedagogical accompaniment to the adaptation of students in the study group.

TIL VA NUTQ HAQIDA OLIMLARNING FIKRLARI

Annotatsiya. Ushbu maqolada til va nutqning farqli tomonlari. Til va nutqning rivojlanish davrlari hamda til va nutq to‘g‘risida Alisher Navoiy, Yusuf xos Hojib, Abu Nasr Farobiy, Ibn Sino, Amir Temur kabi buyuk mutaffakkirlarning til va nutq haqidagi fikrlari haqida ma‘lumotlar berilgan.

Kalit so‘zlar: ma‘naviy kamolot, til, nutq, tafakkur, barqarorlik, o‘zgaruvchanlik, nutq ma‘daniyati.

OPINIONS OF SCIENTISTS ON LANGUAGE AND SPEECH

Annotation. This article discusses the different aspects of language and speech. Information about the development periods of language and speech and about the language and speech of great thinkers such as Alisher Navoi, Yusuf Khos Hajib, Abu Nasr Farabi, Ibn Sina, Amir Timur about language and speech is given.

Key words: spiritual maturity, language, speech, thinking, stability, variability, speech culture.

“Inson ma‘naviy kamolotga erishuvda, jamiyatning madaniy – ma‘rifiy rivojida ona tilining o‘rni favqulodda muhimdir. Til milliy ma‘naviyat, ma‘rifat va madaniyatning eng holis va xira tortmas ko‘zgusidir. Hadisi shariflarda “Kishining zebu ziynati, go‘zalligi uning tilidadir” deyiladi [Maxmudov, 2007: 3].

Inson aqliy faoliyatining eng oliy mahsullari, tafakkur “mevalari” til va nutq orqali yuzaga chiqadi. Biz nutq haqida ma‘lumot berishdan avval til va nutqni bir-biridan farqlab olishimiz lozimdir. Sababi “til” va “nutq” degan terminlar ko‘pincha bir xil ma‘noda ishlatiladi.

“Til va nutq hodisalarini o‘zaro farqlab yondashish dastlab VIII-IX asrlarda shakllangan arab tilshunosligining til o‘rganish usullarida, keyinchlik esa V.Glumboldtning tildagi “energio” (harakat, jarayon, kuch) va “ergon” (mahsulot), A.Shteyntalning tildagi “barqaror mohiyat” va “harakatdagi kuchlar”, Boduen de Kurtenening “tildagi barqarorlik va o‘zgaruvchanlik” haqidagi ta‘limotlarida uchramiz. Lekin til bilan nutq hodisalarini va ularga hos birliklarni tom ma‘noda ilmiy – nazariy hamda amaliy farqlash; til va nutq

birliklarining mohiyatini ochish yo'llari, "til" va "nutq" tushunchalariga batamom yangi mazmun berilishi F. de Sosyur va uning izdoshlari yaratgan ta'limot bilan bog'liqdir" deb o'rganamiz[Ne'matov, Bozorov, 1993: 7].

Lekin "til va nutq odobi, nutqiy ma'daniyat, nutq san'ati haqidagi fikrlar, ayniqsa, Alisher Navoiy ijodida yuqori darajada aks etgan"[Omonturdiyev, Abduraimova, 2016: 14] ini ko'rishimiz mumkin. Masalan, A.Navoiyning muhtasham "Hamsa" sining barcha dostonlari (alohida-alohida boblar) da, "Mahbub ul-qulub", "Muhokamat ul-lug'atayn", "Nazm ul-javohir" va boshqa ko'plab asarlarida so'zning buyuk qudrati va nutq mahoratining xosiyatiga oid betakror fikrlarni bayon qilgan[Maxmudov, 2007: 8]. Ayniqsa, "Muhokamat ul – lug'atayn" asarini o'qib o'rganib chiqsak. Bu asar o'zbek tilining bitmas tunganmas fikr bayon qilish imkoniyatlariga ega ekanligini, uning har qanday fikrni ham nazmda to'la va chiroyli ifoda etishga qodirligini ilmiy va amaliy dalillar asosida isbot qilib beradi. Ushbu asarda A.Navoiy ko'ngilni dengizga, so'zni durga, so'zlovchini esa g'avvosga qiyoslaganini ko'rishimiz mumkin. Demak bu fikrlardan bilinadiki til – umumiylikka, nutq esa xususiylikka egadir.

Bundan tashqari A.Navoiy o'zining "Mahbub ul-qulub" asarida shunday deydi: "Til muncha sharaf bila nutqning olatidur va ham nutqdirki, gar nopisand zohir bo'lsa, tilning ofatidur..."[Navoiy, 1998: 94] ya'ni, tilning shunchalik sharafi bo'lgani bilan u nutqning qurolidir, agar u o'rinsiz ishlatilsa, tilning ofatidir deya ta'rif berganliklarini ham ko'rishimiz mumkin. Shunday ekan bola nutqini rivojlantirish, eng avvalo, til qobiliyatini shakllantirishni talab qiluvchi muloqot shakllarini rivojlantiruvchi demakdir (A.A.Leont'ev)[Babayeva, 2018: 432]

Olam ahlini hayrat barmog'ini tishlashga majbur qilgan Abu Nasr forobiy, Abu Rayhon Beruniy, Ibn Sino, Mahmud Zamaxshariy kabi ulug' allomalarimiz nutqning inson hayotidagi o'rni haqida ko'plab fikrlarni bayon qilganlar[Maxmudov, 2007: 7]. Masalan, Abu Nasr Forobiy "Fozil odamlar shahri" asarida inson fozilligining muhim belgilaridan biri sifatida quvvai notiqqa (nutq quvvatini) ajratadi. Uning fikricha, inson dunyoga kelishi bilan so'zni boqadigan quvvatga ega bo'ladi. Bu g'izolantiruvchi quvvat sanaladi. Undan so'ng inson o'z takomili yo'lida turli quvvatlarni qo'lga kiritadi. Masalan, mutoxayyila quvvati (hayol qilish, umumlashgan obrazlar yaratish), aql quvvati va boshqalar. Insonning olamni bilish jarayonida notiqqa quvvatining xizmati katta ekanligini ta'limda ta'kidlaydi [Maxmudov, 2007: 8].

Nafaqat Sharq, balki butun dunyo tib ilmida o'ziga munosib taxt yaratgan buyuk bobomiz Ibn Sino inson hayvondan aqli va tili bilan farq qilishini, shuning uchun insonning eng barkamoli - oqil va so'zga chechani ekanligini aytadi[Aliybek, 2003: 12].

Ulug' bobokalonimiz Amir Temur nutqiy ifodaning aniqligi va rostligini yuksak qadrlagan, boshqalardan ham shuni talab qilgan[Nurmonov, Mahmudov, 2000: 8].

Yusuf Xos Hojib o'zining "Qutadg'u bilig" (Saodatga eltuvchi bilim) asarida tilga quyidagicha ta'rif beradi: "uquv va bilimning tilmochi, tarjimoni tildir. Kishiga ro'shnolik, yaxshilik va ezguliklar til tufayli keladi, buni yaxshi bilib olish kerak. Qut-izzatni ham, obro'-e'tiborni ham kishi til orqali topadi. Agar tilga e'tibor bermasa, uni noo'rin qo'llasa, odam boshining yorilishi hech gap emas"[To'xliyev, 2017: 16].

Asrimizning 20-30-yillaridan boshlab nutq, nutq madaniyati ilmiy problema sifatida jamoatchilik e'tiborini torta boshladi. 50-yillarning oxirlaridan boshlab esa nutq madaniyati tilshunoslikning o'z tekshirish ob'yektiga ega bo'lgan maxsus sohasi sifatida shakllana boshladi. Nutq madaniyatiga oid problemalarni tekshirish bo'yicha rus olimlaridan V.V.Vinogradov, E.D.Polivanov, B.A.Larin, S.I.Ojegov, V.G.Kostamarov va ayniqsa G.O.Vinokurlarning xizmatlari nihoyatda katta.

Nutq so'zining ma'nosi (arabcha) fikrni so'z orqali ifodalash deganidir.

Nutq – kishi faoliyatining bir turi bo'lib, o'zaro aloqa va xabar almashinish, hamda o'z fikrini his – hayajon bilan ifodalash va boshqalarga ta'sir etish kabi vazifalarni bajaradi.

"Nutqning shakllanishi bolaning umumiy rivojlanishining ehtimol eng muhim shartidir. Nutq – bosh miya tomonidan ta'minlanadigan muhim oliy ruhiy vazifadir va uning rivojlanishida kuzatiluvchi har qanday og'ishlarga vaqtida e'tibor berilishi lozim"[Nazarova, 2017: 66]. Haqiqatdan ham nutq bolaligimizdan sekin astalik bilan rivojlanib boradi. Kimdadir tez, kimdadir esa sekin astalik bilan shakllanadi. Bu ayniqsa, boshlang'ich sinf o'quvchilarida yaqqol namoyon bo'ladi. Shu sababli ham boshlang'ich sinfda o'tiladigan barcha darslarning tag zaminida nutq o'stirish jarayoni muhim o'rin egallaydi. Chunki, o'quvchilarning o'qishi, yozishi, o'z fikr mulohazalarini, tasavvur va tushunchalarini boshqalarga yetkaza olishligi ularning nutqini qay darajada rivojlanganligi bilan bog'liqdir.

Xulosa qilib shuni aytishimiz mumkinki ushbu maqola orqali biz til va nutqning farqli tomonlarini, qaysi olim qanday ta'riflaganligini, til va nutq tushunchalari nechanchi arslarda rivojlanganligini bilib olishimiz mumkin. Biz ushbu tushunchalarning farqli tomonlarini o'rganishimizning sababi shundaki, boshlang'ich sinfda o'quvchilarning o'qishi, yozishi, o'z fikr mulohazalarini, tasavvur va tushunchalarini boshqalarga yetkaza olishlik jarayonida nutq muhim ahamiyatga egadir.

DETERMINATION OF ECONOMICLY USEFUL CHARACTERISTICS OF NEW COTTON SYSTEMS

Annotation. In this article, cotton plant species 16, 111, 114, which have profitable household marks between newly created cotton plant species, are selected and they are recommended to test as testing species.

Key words: cotton, yield, experiment, selection, soil, water, boll, fiber, nurseries.

Creation of new cotton varieties is very important in the development of cotton production in our republic. Therefore, it is an urgent task to create new varieties and suitable agro-technologies that provide a competitive, early, high-yielding, high-quality cotton crop that meets the requirements of world standards, not only in Andijan region, but also in all regions of the Republic.

Taking this into account, scientists: Saydaliev H., Tojiboev A., Haliqova M. (1). those who have succeeded in creating new varieties by studying the beneficial characteristics of the lines created by individual selection.

It is necessary to create new cotton varieties with 10-15 percent advantages over the previous ones and introduce them into production using the continuous process of selection. Taking this into account, we studied the speed of ripening, productivity and fiber quality of the existing ridges in the years 2021-2023. The experiment was conducted at PSUEAITI Andijan scientific experimental station.

The soil of the experimental field is light gray, the mechanical composition is medium old, irrigated, not saline. Sizot waters are located 4-5 m below the surface of the earth. The experiment consisted of 4 returns, 90x20x1 order, 8 options and was systematically placed in one layer in the field. Each option was planted in 4 rows. The following results were obtained from the experiment.

It is known that productivity is one of the main results of the experiment. The data obtained on the productivity of the studied ridges are presented in Table 1. According to the data, the 114th ridge (42.6ts/ha) and 11th ridge (41.4ts/ha) gave the highest yield among the ridges, and the sample yielded 3-4ts/ha more than the variety

Among the ridges, Ridge 16 (37.0 t/ha) and Ridge 18 (36.1 t/ha) showed low yields compared to the model and compared to other ridges.

The rest of the ridges yielded a little more than the model and showed their productivity. According to the conclusions of a number of scientists who have studied the productivity of ridges, the appearance of fertile ridges in the next stages depends on the characteristics of the parent forms that participated in the crossbreeding. Similar results were obtained in our experience. Table 2 provides information on the benefits of the study to the economy.

Table 1

Productivity of ridges according to returns, ts/ha.

Variant	Template and ridges	Returns				
		I	II	III	IV	Average
1	Andijan-35 (template)	36,4	38,0	36,9	36,4	37,2
2	11	40,4	42,3	40,9	42,0	41,4
3	13	39,0	38,3	40,4	38,3	39,0
4	16	35,9	38,2	37,8	36,1	37,0
5	18	37,0	35,8	36,3	35,3	36,1
6	111	39,4	38,1	38,9	39,2	38,9
7	114	43,0	41,6	40,9	44,9	42,6
8	117	39,2	37,9	39,1	37,8	38,5

$$HCP_{05}=1.73\Omega/\Gamma a$$

Based on the data, the 114-Tizma (7.4 g) and 13-Tizma (7.0 g) lines were singled out for having a high index in terms of the weight of one bag of cotton. The 18th Ridge (4.9 g) gave a lower indicator. It was determined that the highest indicator of fiber output was in 16-Tizma (39.2%). A relatively lower rate was in the 13th Ridge (34.9%).

It is known that the length of the fiber is an important feature in the division of fiber into industrial types.

Table-2

Useful signs of ridges to the farm

Variant	Template and ridges	Weight of 1 cotton bag, g	Fiber output, percentage	Fiber length, mm
1	Andijan-35 (template)	6,6	36,1	32,7
2	11	6,2	38,8	34,0
3	13	7,0	34,9	32,9
4	16	7,0	39,2	33,6
5	18	4,9	37,5	32,9
6	111	5,8	36,7	34,2
7	114	7,4	37,9	35,3
8	117	6,1	38,2	32,8

When determining the fiber length of the ridges, the longest fiber was the 114th Ridge (35.3 mm). It was found that the 117th Line (32.8 mm) has a lower indicator on this mark.

We analyzed the fiber quality of the ridges. The obtained data are presented in Table 3. Analyzing the technological properties of Tizma fibers, it was found that 111-Tizma, 16-Tizma and 114-Tizma have high fiber quality.

In the future, the 16-Tizma, 111-Tizma and 114-Tizma, which have embodied signs of useful traits for the farm, were selected for study in the field of variety testing because of their special importance. Those who have studied for three years at the selection variety testing nursery and have a high indicator of useful characteristics for the economy compared to the model variety are submitted to the State variety test. It was found that 16-Tizma (4.1) and 18-Tizma (4.2) have high fiber quality according to the microneur index.

Table-3

Technological characteristics of the fibers of the ridges

Variant	Template and ridges	Metric number	Fiber cooked gi g/force	Fiber maturity, coefficient	Толани нисбий узулиш узунлиги, г.к/текс	Fiber type	Microw ave
1	Андижон-35 (андоза)	5620	4,7	214	26,9	V	4,6
2	11	5860	4,6	212	27,6	IV	4,4
3	13	5600	4,5	206	25,8	V	4,5
4	16	5920	4,7	216	28,5	IV	4,1
5	18	5590	4,5	215	25,8	V	4,2
6	111	6010	4,4	211	27,1	IV	4,4
7	114	6000	4,6	213	28,3	IV	4,3
8	117	5590	4,5	206	25,7	V	4,2

IQTISODIYOTDA MATEMATIK MODELLASHTIRISHNING O'RNI

Annotatsiya. Ushbu maqola iqtisodiyotdagi matematik modellashtirishning o'rni, u nima ekanligi va jamiyatimizga qanday foyda keltirishi, matematik modellashtirish modellashtirishning boshqa turlaridan qanday farqlanishi haqidadir. Iqtisodiy vaziyatni qayta ko'rib chiqishni talab qilgan global inqiroz bilim va tegishli iqtisodiy va matematik modellar bizni iqtisodiy fan va iqtisodiyotdagi matematik modellashtirishning kelib chiqishiga qaytishga majbur qiladi. Maqolada tarmoqlararo muvozanatning dinamik modeli tamoyillari haqida asosiy ma'lumotlar keltirilgan.

Kalit so'zlar: modellashtirish, model, iqtisodiy-matematik modellar, optimal dasturlar, modeli iqtisodiy muvozanat.

THE ROLE OF MATHEMATICAL MODELING IN THE ECONOMY

Abstract. This article is about the role of mathematical modeling in the economy, what it is and how it benefits our society, how mathematical modeling differs from other types of modeling. The global crisis, which demanded a review of the economic situation, forces us to return to the origins of economic science and mathematical modeling in economics, knowledge and relevant economic and mathematical models. The article provides basic information about the principles of the dynamic model of intersectoral balance.

Key words: modeling, model, economic-mathematical models, optimal programs, model economic equilibrium.

KIRISH

Matematik modellashtirish iqtisodning aniq sohasi emas, balki bu iqtisodiy tahlil uchun yondashuv bo'lib, unda tahlilchi muammoni bayon qilishda matematik belgilardan foydalanadi va shuningdek, fikr yuritish uchun ishlatiladigan ma'lum matematik teoremalarga asoslanadi. Iqtisodiy tahlilda prognoz diagramma yordamida tuziladi. Masalan, raqobatbardosh bozorda taklif

ko'paysa, tovarning narxi tushadi. Biroq, uning ortida har qanday bozor ishtirokchisi tahlil qilishi mumkin bo'lgan juda keng tarqalgan iqtisodiy sezgi bor. Iqtisodchi, shuningdek, iqtisodiy bashorat qilish, matematikadan foydalanish zarur bo'lgan miqdor haqida bashorat qilishi kerak. Ba'zida tabiatan matematik bo'lmagan iqtisodiy tahlil kutilayotgan o'zgarishlar yo'nalishini va tabiatan miqdoriy bo'lmagan o'zgarishlarni bashorat qilish uchun ham foydali bo'lishi mumkin. Asosiy iqtisodiy-matematik usullar:

- Matematik statistika usullari
- Ekonometrik usullar
- Optimal dasturlash
- Bozor iqtisodiyotiga taalluqli usullar.

Matematik statistika usullariga: dispersion tahlil, korrelyatsiya tahlili, regressiya tahlili, omilli tahlil va indekslar nazariyasi.

Ekonometrik usullarga: iqtisodiy o'sish nazariyasi, ishlab chiqarish funksiyasi nazariyasi, talab va taklif tahlili, bir va ko'p omilli tahlil, eng kichik kvadratlar.

Optimal dasturlashga: chiziqli dasturlash, kasr-chiziqli dasturlash, butun sonli dasturlash, dinamik dasturlash, stoxastik dasturlash.

Bozor iqtisodiyotiga taalluqli usullarga: erkin raqobat modellari, firmalarga taalluqli modellar, o'yinlar nazariyasi kabilar kiradi. Matematik iqtisod - bu nazariyalarni ifodalash va iqtisodiyotdagi muammolarni tahlil qilish uchun matematik usullarni qo'llashdir. Ko'pincha, bu qo'llaniladigan usullar oddiy geometriyadan tashqarida bo'lib, differensial va integral hisoblar, farq va differensial tenglamalar, matritsalar algebrasi, matematik dasturlash yoki boshqa hisoblash usullarini o'z ichiga olishi mumkin. Bu yondashuv tarafdorlarining ta'kidlashicha, u nazariy munosabatlarni qat'iylik, umumiylik va soddalik bilan shakllantirish imkonini beradi.

ADABIYOTLAR TAHLILI

Matematika iqtisodchilarga keng ko'lamlil va murakkab mavzular bo'yicha mazmunli, sinovdan o'tkaziladigan takliflarni shakllantirish imkonini beradi, ularni norasmiy tarzda ifodalash oson emas. Bundan tashqari, matematika tili iqtisodchilarga matematikasiz imkonsiz bo'ladigan bahsli yoki bahsli mavzular haqida aniq, ijobiy da'volar qilish imkonini beradi. Iqtisodiyot nazariyasining aksariyati hozirgi vaqtda matematik iqtisodiy modellar, taxminlar va natijalarni aniqlashtirish uchun tasdiqlangan va soddalashtirilgan matematik munosabatlar to'plami nuqtai nazaridan taqdim etilgan.

Maqsad muvozanatini optimallashtirish muammolari, xoh uy xo'jaligi, xoh biznes firmasi yoki siyosatchi statik (yoki muvozanat) tahlil, unda iqtisodiy birlik (masalan, uy xo'jaligi) yoki iqtisodiy tizim (masalan, bozor yoki iqtisodiyot) o'zgarmas tarzda modellashtiriladi. Rasmiy iqtisodiy modellashtirish 19-asrda iqtisodiy xatti-harakatlarni ifodalash va tushuntirish uchun differensial hisob-kitoblardan foydalanish bilan boshlandi, masalan, foydalilikni maksimallashtirish, matematik optimallashtirishning dastlabki iqtisodiy

qo'llanilishi. Iqtisodiyot 20-asrning birinchi yarmida intizom sifatida ko'proq matematik bo'lib qoldi, lekin Ikkinchi jahon urushi atrofidagi davrda, o'yin nazariyasidagi kabi yangi va umumlashtirilgan metodlarni joriy etish iqtisodiyotda matematik formulalardan foydalanishni ancha kengaytiradi.

Jon Meynard Keyns, Robert Xaylbroner, Fridrix Xayek va boshqalar insonning xulq-atvori uchun matematik modellardan keng foydalanishni tanqid qilib, insonning ba'zi tanlovlarini matematikaga qisqartirib bo'lmaydi, deb ta'kidladilar. Model so'zi lotincha modulus so'zidan olingan bo'lib, o'lchov, me'yor degan ma'noni anglatadi. Bu so'z tor ma'noda: o'rganilayotgan obyekt, jarayon yoki hodisaning muhim xususiyatlari, xossalari aks ettiruvchi yordamchi obyekt ma'nosida; keng ma'noda esa: biror obyekt yoki obyektlar tizimining namunasi ma'nosida qo'llaniladi.

Modelning haqiqiyliги to'plangan ma'lumotlar hajmi, aniqlik darajasi, tadqiqotchining malakasi va modellashtirish jarayoni, aniqlanadigan masalaning xarakteriga bog'liq. Shuni ham unutmaslik kerakki, juda soddalashtirilgan model qo'yilgan talablarga to'liq javob bermaydi va aksincha, murakkab model esa uni yechish jarayonida qiyinchiliklar tug'diradi. Iqtisodiyotdagi obyektlarni matematik modellar yordamida kuzatish mumkin. Bu tushuncha modellashtirish deyiladi. Oxirgi yillarda L. Valras tomonidan ishlab chiqilgan umumiy iqtisodiy muvozanat modeli aslida uni tasvirlagan birinchi matematik model edi.

Mikroiqtisodiy ko'rsatkichlar yordamida makroiqtisodiy tizimning xatti-harakatini tavsiflovchi har bir element uchun alohida tenglama ajratiladi. Uning iqtisodiy matematik modellarga qo'shgan hissi uni qo'llashda bo'ldi. Ishlab chiqarishdagi tannarxning tarkibini tavsiflovchi texnologik koeffitsientlar algebraik tenglamalar tizimi orqali iqtisodiyotni tavsiflash uchun birliklar. Bu yondashuv hali ham zamonaviy iqtisodiy matematik modellashtirishning asosidir. Modellashtirishni chuqurroq o'rganish uchun obyekt sifatida biror bir korxonani olsak, maqsadimiz ushbu obyektни ishlab chiqarish jarayonini o'rganish bo'lsa, bu holda model parametrlariga korxonani quvvati, ishlab chiqarish omillari, xomashyo, ishchilar soni, asosiy fondlar, ishlab chiqarish dasturi va hokazolar kiradi va model ishlab chiqarish funksiyasi ko'rinishida ifodalanadi.

NATIJARLAR

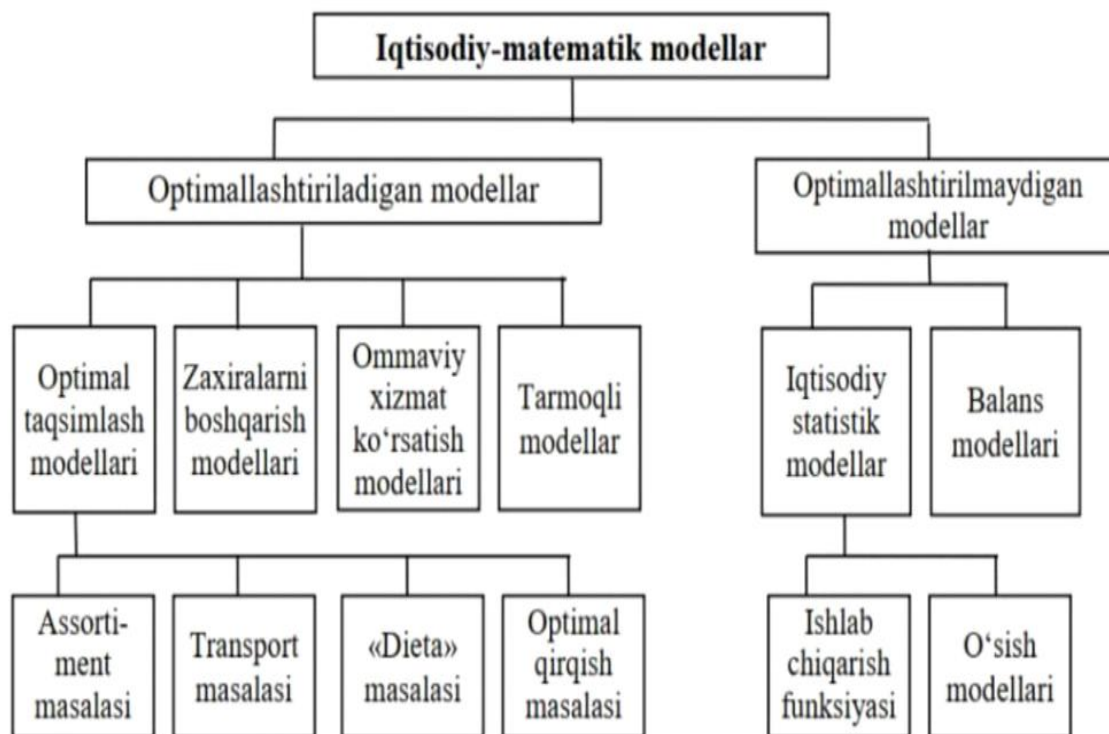

Parametrlar sifatida ishchilarning soni, turmush darajasi, oladigan daromadi, ish sharoitlari, demografik tarkibi va boshqa parametrlar qo'llaniladi. Modellashtirishning universal usul sifatida boshqa usullarga qaraganda afzalliklari mavjud. Masalan: modellashtirish katta va murakkab tizimni oddiy model yordamida ifodalashga imkoniyat beradi. Lekin shuni unutmaslik kerakki o'ta soddalashtirilgan model qo'yilgan talablarga javob bermasligi va uning yordamida qilingan hisob-kitoblar noto'g'ri chiqishi mumkin.

O'ta murakkab model esa, o'z navbatida masalani yechish jarayonida ko'p qiyinchiliklar tug'diradi. Shuning uchun modelga faqat obyektни eng asosiy xarakterli, muhim omillarini kiritish zarur. Iqtisodiy-matematik modellashtirishda matematik statistika usullaridan keng foydalaniladi. Bu usullardan tahlil

qilinayotgan ko'rsatkichlarning o'zgarishi tasodifiy jarayon sifatida qabul qilinganda foydalaniladi. Statistika usullar ommaviy takrorlanib turuvchi hodisalarni o'rganishda asosiy vosita hisoblanadi hamda iqtisodiy ko'rsatkichlarni prognoz qilishda katta o'rin egallaydi. Iqtisodiy tahlilda matematik-statistika usullaridan eng keng tarqalgani - juft va ko'p omilli korrelyatsiya va regressiya tahlili usullaridir. Ekonometrik usullar iqtisodiyot, matematika va statistikaga taalluqli bo'lgan bilimlar sinteziga asosan tashkil topadi.

TAHLIL VA MUHOKAMA

Iqtisodiyotda matritsa ko'rinishidagi model bo'lib, u xarajatlar va ishlab chiqarish o'rtasidagi bog'lanishni eng sodda holda ifodalaydi. Zarur hisobkitoblarni amalga oshirishni qulayligi, iqtisodiy asoslashlarni aniqligi - matritsaviy modellarni asosiy xususiyatlaridir. Iqtisodiyotda eng keng qo'llaniladigan modellardan biri - bu iqtisodiy matematik modellardir. Matematik modellashtirish - iqtisodiy jarayonlarni tenglamalar, tengsizliklar, funksional, mantiqiy sxemalar orqali ifodalash deb tushuniladi.

Matematik modellashtirish keng ma'noda o'z tabiatiga ko'ra turli, lekin o'xshash matematik bog'lanishlar bilan tasvirlanuvchi jarayonlarni o'rganuvchi tekshirish va izlanishlar usulidir. Zamonaviy fan-texnika taraqqiyoti sharoitida matematik modellashtirish va uning muhim iqtisodiy usullari rejalashtirish va boshqaruv tajribasida eng asosiy o'rinni egallaydi. Iqtisodiy-matematik modellar funksional va strukturali bo'lishi mumkin.

Funksional modellar kirish va chiqish parametrlarini bog'lanish funksiyalarini aks ettiradilar. Strukturali modellar murakkabroq bo'lib, tizimni

ichki strukturasi ifodalab, ichki aloqalarni aks ettiradi. Funktsional va strukturaviy modellar bir-birini to'ldiradi. Bir tomondan funktsional modellarni o'rganishda obyekt ichki strukturasi haqida gipotezalar yuzaga keladi va strukturali modellashtirishga yo'l ochadi.

Funksional (yoki kibernetik) modellarning asosiy vazifasi obyekt mohiyatini namoyon bo'lishining muhim ko'rinishlari bo'lgan faoliyat, ishlash jarayoni, xatti-harakati orqali aniqlashdir. Bunda ichki struktura o'rganilmaydi, ichki struktura haqidagi axborotda esa foydalanilmaydi. Funktsional model obrazi qilib "qora quti"ni olish mumkin. Bunda "kirish" x qiymatini berib, "chiqish" y qiymatini olish mumkin. Funktsional model tuzish - x va y ni bog'lovchi D operatorni topish hisoblanadi: $Y=D(x)$. Xuddi shu kabi turli matematik modellar iqtisodiyotda keng qo'llaniladi. Matematik modellashtirishsiz iqtisodiyot tushunarsiz va murakkab ko'rinishga kelib qoladi. Shuning uchun iqtisodiyotni modellashtirishsiz tasavvur qila olmaymiz. Ekonometrika iqtisodiy ma'lumotlarni o'lchash bilan shug'ullanadi. Iqtisodiy o'zgaruvchilar o'rtasidagi bog'liqlikni isbotlash uchun statistik usullardan foydalangan holda empirik kuzatish bilan shug'ullanadi. Statistik usullar asosan faraz va farazlarni tekshirishdan iborat.

Matematik iqtisod esa matematikani iqtisodiy tahlilning nazariy jihatlariga tatbiq etishdir. Biroq, biz ikkalasi o'rtasidagi munosabatni ko'rib chiqsak, empirik tadqiqotlar va nazariy tahlillar yonma-yon boradi, chunki ular ko'pincha bir-birini to'ldiradi va mustahkamlaydi. Shuningdek, u nazariyalarni qo'llashdan oldin haqiqiylikni empirik ma'lumotlarga qarshi sinovdan o'tkazish imkonini beradi.

XULOSA

Bozor munosabatlari sharoitida iqtisodiy jarayonlar ham mikro darajada ham makro darajada o'zaro bir-biri bilan uzviy bog'lanishda bo'lganligi sababli, ularning bog'lanishlari iqtisodiy jarayonlarni aks ettiruvchi ko'rsatkichlarning bog'lanishlari yordamida tahlil etiladi. Bog'lanishlarning tahlili esa jarayonlarni aks ettiruvchi u yoki bu ekonometrik modellar yordamida amalga oshiriladi. Buning uchun yuqorida aytib o'tilgan modellashtirishning barcha bosqichlari amalga oshiriladi va ekonometrik model tuziladi. Ekonometrik modelda iqtisodiy jarayonga ta'sir etuvchi omillar, ularning muhimligi, jarayonning rivojlanish tendensiyalari aniqlaniladi. Tuzilgan va o'tgan davrdagi jarayonlarni aks ettiruvchi ekonometrik modellar endi prognozlash masalalarini hal etishda foydalaniladi, ya'ni omil belgilarning kelajakda qabul qilishi mumkin bo'lgan qiymatlarida jarayonda qanday o'zgarishlar bo'lishi mumkinligi masalasi yechiladi.

IMPORTANCE OF IRRIGATION IN STRAWBERRY GROWING IN UZBEKISTAN AND ITS PROSPECTS

Abstract. This article provides information on the history of strawberry plant development in Uzbekistan, status of strawberry production worldwide, cultivation technology of local and introduced varieties, productivity, and classification of promising varieties.

Key words: Strawberry, variety, seedling, state register, variety classification, fruit.

Introduction. There are more than 50 types of strawberries in the world, of which the forest, mountain, plain, Sakhalin species are found in Russia, and the eastern Bukhara species are found in Central Asia. The indicated species are not of great industrial value, but the inhabitants of these regions eat their fruits. Types of strawberries called forest, Sakhalin and kulubnika are used in selection works to create immune, winter-resistant, and disease-resistant varieties. These species are widespread in the European part of Russia, the Far East, Yakutia, Sakhalin. Flowers and fruits are small.

Bukhara strawberry can be found along streams and ditches in the Pamirs. The bush is 6-15 cm low, the leaves are broad-backed, egg-shaped, short-ribbed, and the edges are large-toothed. The inflorescence has few flowers (1-5 pieces), the inflorescence is thin, hairy, and the flowers and fruits are small.

The large-fruited strawberry was created mainly by crossing the Chilean type with the Virginia type, and is widespread. It is distinguished by its high yield and taste.

From 2012 to 2016, the production volume of strawberries in the world increased by 23.5%, or the average yield increased from 21.4 t/ha to 22.7 t/ha.

China (41.8%), the USA (15.4%), Mexico and Egypt (5.5%) are the leading countries in strawberry cultivation.

№	States	Productivity, mln.t
1	China	3,8
2	USA	1,4
3.	Mexico	0,5
4	Egypt	0,5
5	Turkey	0,4

6	Spain	0,4
7	The rest of the countries	2,1

FAOSTAT information

Cultivated strawberries were cultivated in Uzbekistan from the end of the 19th century to the beginning of the 20th century. Since 1932, N.N. Balashov has been carrying out scientific research on the biology, selection and agrotechnics of the strawberry plant at the Agricultural Experimental Station of Uzbekistan.

During the years 1947-1976, on the basis of the expanded plan, scientific research works were carried out on the selection and agrotechnics of strawberry varieties under the leadership of S.I. Yagudina.

In Tashkent, Namangan, Andijan, Fergana and Samarkand regions of the republic, the areas of large-scale planting of strawberries are expanding. Strawberry grows well even in the Republic of Karakalpakstan and gives a high yield.

According to the information of the State Statistics Committee of the Republic of Uzbekistan in 2020, the total area planted with strawberries was 1040 hectares, of which the yielding area is 967 hectares. Productivity is 5318.5 tons, the average per hectare is 52 s/ha.

Currently, the State Register of agricultural crops recommended for planting in the territory of the Republic of Uzbekistan includes Uzbekistanskaya, Kulver, Tashkentskaya, Muto (Krimskaya), Zenga-Zengana varieties of strawberries. In 2018, Bountiful, Redgauntlet, Cobra varieties were included in the State Register.

Years	Total area		Productivity	
	Planted area, hectares	Production area, ha	Total productivity, tons	Average hectare to s/ha
2012	500	460	1610,00	35
2013	550	500	1800,0	36
2014	600	550	2090,0	38
2015	620	600	2400,0	40
2016	680	620	2604,0	42
2017	750	680	3060,0	45
2018	840	750	3750,0	50
2019	967	809	4368,0	52
2020	1040	967	5318,5	55

One of the main conditions affecting the growth, development and productivity of strawberries is the correct selection and placement of varieties in plantations.

Choosing a good variety when establishing a new strawberry orchard is one of the main conditions for obtaining a high yield. It is important that the new variety is productive, resistant to cold, free from diseases and pests, its fruit is large, beautiful, tasty, suitable for consumption and processing when freshly

picked, its ripening period is clear, as well as the content of vitamins and other biological substances. It is also appreciated for its preservation.

According to the results of the inspection and selection of varieties, the following varieties are recommended: fairy tale and medium fairy tale - Miss Uzbekistan, Pamyat Shredera, Uzbekistanskaya, medium evening - Bountiful, Redgauntlet, Cobra, Zenga-Zengana, etc. Below is a classification of common varieties.

Uzbekistanskaya-Uzbekistan variety. The bush is large, spreading, with many leaves. The leaves are green, round-oblong, not swollen, self-pollinating variety. The flowers are bisexual, 95% of them have finished fruiting. The flower is multi-flowered. The first fruit is very large (up to 50 grams), wide oval, the later ones are conical, ribbed. The fruit is red, sour-sweet, aromatic and delicious, the flesh is medium dense. It contains 1.5-8.0% sugar, 0.3-0.805% acids, 55-87 mg % vitamin "C". The average weight of the fruit is 8-10 g. High-yielding variety (80-160 kg per 100 m² of land). The fruits ripen in the first ten days of May. Transportable. The fruit picking period lasts 25-30 days. Dessert variety, suitable for processing. It is mainly distributed in Uzbekistan and the south of Kazakhstan.

The main condition for growing strawberries in the conditions of the republic is to supply the crop with water. Frequent rainfall cannot satisfy the plant's demand for moisture during the growing season. Strawberries are irrigated 13-24 times during the growing season, with each irrigation consuming 300-800 m³/ha of water per hectare. In the gravelly lands of the Fergana Valley and Bukhara, Kashkadarya and Surkhandarya regions, irrigation should be carried out frequently, but in small quantities, and in the heavy soil lands of the Tashkent region, less often, but until the crop is full. Watering time depends on air temperature and soil moisture. The first watering is in April, when the fruit begins to ripen, but when spring comes early and dry, it is watered once in March, 3-4 times in May, 2-3 times in June, 3 times in July, 2 times in August. During the ripening period, the furrow is irrigated.

In September and early October, the soil with the plant should be moistened at least twice a week.

Clean water should be used to moisten the soil. As a means for irrigation, you can use various devices. Its main disadvantage is the need to spend additional time and effort on watering. Alternatively, a hose can be used, but then gardeners face the problem of wasting water. It is forbidden to water strawberries with ice water from a well or a well in autumn, the risk of death of the plant is high.

Drip irrigation. This method allows water to be delivered directly to the strawberry roots, which allows the tool to be used throughout the growing season.

Advantages of drip irrigation: low water consumption; the ability to independently determine the dose of water for irrigation; save physical effort and time.

Often, gardeners organize a drip irrigation system, in their plots there is not a single garden bed, but an entire strawberry plantation.

The sprinkler method can be used to care for autumn strawberries. It consists of a mobile or stationary device - equipment on the site of a sprinkler for irrigation. Sprinklers are available in round, rotary, oscillating or fan types. The amount of irrigated area depends on the selected device. In expensive models, timers and sensors are installed for ease of use.

Conclusion. The strawberry plant is the first among berries consumed by the population. It is highly valued for its rapid onset of harvest, early harvest, productivity, growth in any terrain, unique fruit taste, pleasant smell, attractive appearance, nutritional value and nutritional value. Strawberry has a number of biological properties, it has the characteristic of good growth and development. The necessary complex biologically active substances contained in its fruit help to prolong the life of the human body by maintaining its ability to work at a high level.

Currently, our government has adopted several decisions and orders on the development of horticulture and viticulture in the republic for the period of 2012-2026. This makes it possible to expand fruit, berry and grape fields.

DRIP IRRIGATION IN ORCHARDS AND ESTABLISHMENT OF HEDGEROWS TO PREVENT WATER WASTAGE

Abstract. In this article, promising methods of irrigation in order to plant and care for seedlings of fruit plants, to prevent and eliminate unfavorable conditions and to create favorable conditions for their growth and development. Information is provided on the importance of tillage and planting of surrounding trees.

Key words: hydrocyclone, drip irrigation, intensive apple orchards, perennial trees, cultivation works, irrigation quantity and norm periods, infiltration furrow, ditch water.

Introduction. The role and importance of the agricultural sector in ensuring the food security of the population on a global scale is increasing day by day. In particular, in our country, it is an urgent issue to use the available resources and opportunities to provide the population with guaranteed agricultural products, to further increase productivity and interest, and to introduce scientific achievements and modern approaches to the field.

In this process, it was made a priority to increase the income per hectare of land from the current average of 2,000 dollars to at least 5,000 dollars. It was determined that we should widely introduce achievements in the field.

The growth, development and productivity of fruit plants largely depend on external environmental factors. In particular, climatic and soil factors have a great influence on the growth and development of fruit crops. This requirement is different during the year (spring, summer, winter, autumn) during growth and rest phases in different periods of plant age (seedling, yielding and senescence).

Light is considered the main factor of photosynthesis, it helps the growth and formation of plant organs, affects transpiration, direction of growing organs, etc. With the change of light, the plant soil and air temperature, humidity, chemical composition of the soil and microbiological environment change.

Table 1**Intensive apple orchard system**

№	Apple varieties	The number of planted seedlings	Planting schemes			
			4x0,8	4x1,2	4x2	4x3
1.	Golden delishes	1100	4x0,8	4x1,2	4x2	4x3
2.	Pink Ledi	193	4x0,8	4x1,2	4x2	4x3
3.	Gala	1640	4x0,8	4x1,2	4x2	4x3
4.	Argus	750	4x0,8	4x1,2	4x2	4x3
5.	Fuji	1875	4x0,8	4x1,2	4x2	4x3
6.	Krimpson Kreps	440	4x0,8	4x1,2	4x2	4x3
7.	Saltanat	192	4x0,8	4x1,2	4x2	4x3

Apple varieties are planted in 4 different planting schemes

Table 2**System of intensive plum orchard**

№	Varieties of plums	The number of planted seedlings	Planting scheme
1.	Ispolinskiy	550	4x3
2.	Чыorny bagira	780	4x3
3.	Samarkandskiy chyornosliv	340	4x3
4.	Leto	340	4x3

Plums are planted in the same planting scheme

When perennial trees that grow quickly and tall are planted around gardens and along highways between neighborhoods, they protect fruit trees from wind, heat and cold, spillage of crops in the wind, breakage of branches, autumn, in the winter and spring seasons, it protects them from frostbite, evaporation of soil moisture, soil salinity, and prevents the rise of the water level.

In order for hedgerows to withstand the wind, they must have the following characteristics:

- a) the orchard should be suitable for the soil and climatic conditions of the region where it will be established;
- b) it should be fast-growing, not branching widely and strong with high growth;
- c) should have sufficient density to protect against wind;
- g) the root should have a small size;
- d) it should not be infected with diseases and pests.

To protect the newly established gardens from animals and to mark the boundaries of the garden, it is advisable to fence the garden.

The number and frequency of irrigation in fruit trees depends on the depth of the ground water. The deeper the ground water, the better the fruit trees will drink fresh water and grow and develop better. Harvested apple trees are extremely intolerant of harmful salts, so it is recommended to irrigate such orchards once every two years with a floor of 5-10 hectares at a height of 50-60 cm. After 24 hours of infiltration furrow irrigation, salt rises as a result of water breaking up through capillaries. Therefore, it is necessary to carry out salt washing every year during the irrigation of fruit trees with water or during the growing season.

Summary. In order to plant and care for seedlings of fruit plants, to prevent and eliminate unfavorable conditions and to create favorable conditions for their growth and development, when a garden is established on large areas, ditches between gardens should be made in order to reduce the force of the wind. It is stated that planting poplars in two rows per year is good, that it is necessary to fight against diseases and pests in these orchards every year, otherwise they can become a source of diseases and pests, and the number of times of watering fruit trees, terms, it is very important to pay attention to the quality and maintenance of water.

HISTORICAL LANGUAGE TEACHING METHODS: GTM, DM, AND ALM

Abstract. This article provides an overview of three historical language teaching methods: the Grammar-Translation Method (GTM), the Direct Method (DM), and the Audio-Lingual Method (ALM). The GTM, developed in the 19th century, focuses on grammar and vocabulary through translation exercises. The DM, emerging in the late 19th and early 20th centuries, emphasizes immersion in the target language for speaking and listening skills. The ALM, developed in the mid-20th century, emphasizes habit formation through repetition and reinforcement. While each method has strengths and weaknesses, contemporary language teaching approaches often combine elements from these historical methods to create a more effective learning experience.

Keywords: Historical Language Teaching Methods, Grammar-Translation Method (GTM), Direct Method (DM), Audio-Lingual Method (ALM).

Language teaching methods have evolved over the years, with various approaches being developed to help learners acquire a new language. Three prominent historical language teaching methods are Grammar Translation Method (GTM), Direct Method (DM), and Audio-Lingual Method (ALM). Each of these methods has its own unique characteristics and principles that have influenced language teaching practices.

The Grammar Translation Method, dating back to the 19th century, focuses on the translation of texts from the target language to the native language. It emphasizes grammar rules, vocabulary memorization, and translation exercises to help students understand and produce the target language. This method is often criticized for its lack of emphasis on communication skills and real-life language use.

The Direct Method, developed in the late 19th and early 20th centuries, aims to immerse students in the target language through the use of only that language in the classroom. It emphasizes oral communication, vocabulary acquisition through context, and real-life situations to help learners develop their language skills naturally. This method is known for its focus on speaking and listening skills, as well as its rejection of translation and grammar-based instruction.

The Audio-Lingual Method, popular in the mid-20th century, emphasizes the use of drills, repetition, and audio materials to help students acquire the target language. It focuses on developing habits through constant practice and reinforcement of language patterns. This method is often associated with

behaviorist theories of learning and is known for its structured and repetitive nature.

Despite their differences, these historical language teaching methods have all contributed to the development of modern language teaching approaches. Educators today draw on a variety of methods and techniques to create engaging and effective language learning experiences for students. Understanding the historical context and principles of these methods can provide valuable insights into the evolution of language teaching practices.

Historical language teaching methods have evolved over time, with various approaches emerging to address different aspects of language learning. Three prominent methods from the past include the Grammar-Translation Method (GTM), the Direct Method (DM), and the Audio-Lingual Method (ALM).

1. Grammar-Translation Method (GTM):

- Developed in the 19th century, the GTM focuses on teaching students grammar rules and vocabulary through translation exercises.
- Emphasizes reading and writing skills over speaking and listening.
- Involves memorization of vocabulary lists and grammatical structures.
- Critics argue that the GTM does not effectively develop communicative skills or fluency in a language, as it primarily focuses on translation and rote learning.

2. Direct Method (DM):

- Emerged in the late 19th and early 20th centuries as a reaction against the GTM.
- Advocates for teaching language directly through immersion in the target language, emphasizing speaking and listening skills.
- Encourages the use of real-life situations and context to facilitate language learning.
- Places importance on communication and interaction in the target language.
- Critics argue that the DM may lack structure and systematic grammar instruction, leading to potential gaps in learners' understanding of language rules.

3. Audio-Lingual Method (ALM):

- Developed in the mid-20th century, the ALM draws on principles of behaviorism and focuses on habit formation through repetition and reinforcement.
- Utilizes drills, pattern practice, and audio materials to reinforce language learning.
- Emphasizes accuracy in pronunciation and grammar.
- Advocates for the gradual introduction of new vocabulary and structures in a controlled manner.
- Critics argue that the ALM may lead to mechanical and rote learning, limiting students' ability to communicate creatively in the target language.

While these historical language teaching methods have played a role in shaping language education practices, contemporary approaches often incorporate elements from multiple methods to create a more dynamic and effective learning

experience. The shift towards communicative language teaching, task-based learning, and technology-enhanced instruction reflects a broader recognition of the importance of integrating various methodologies to meet the diverse needs of language learners.

THE SIGNIFICANCE OF PODCASTS IN ENHANCING THE LISTENING SKILLS OF INTERMEDIATE LEVEL STUDENTS

Abstract. The emergence of podcasting platforms at the beginning of the 21st century has led to an easy access to authentic audio materials to be used in foreign language classrooms. Due to their real-life context and exposure to native speakers' accents, podcasts can be a potent tool for fostering language learners' listening proficiency. This quasi-experimental study investigates the efficacy of podcasts in enhancing the listening skills of intermediate level students. Employing the independent samples t-test, this research compares a control group with an experimental group, both subjected to pre-tests and post-tests. The findings of the study reveal a significant improvement in listening proficiency among the experimental group exposed to podcasts compared to the control group. These results underscore the importance of integrating podcasts into language learning curricula, particularly for intermediate learners. Current research contributes to the growing body of literature on the technology-enhanced language learning methods and offers practical insights for educators aiming to optimize listening skill acquisition in language classrooms.

Keywords: podcast, listening skills, educational technology, listening proficiency, language acquisition, authentic audio materials.

INTRODUCTION

Listening skills are undoubtedly fundamental in the language learning process as they facilitate comprehension, allowing learners to understand spoken language in real-life situations. According to Rost, the main distinction between high-achieving and low-achieving language learners is “their ability to use listening as a means of acquisition” (Rost, 2001:94). Listening comprehension can be improved with the help of a large amount of comprehensible aural input, called ‘extensive listening’. Extensive listening, which can be conducted outside the classroom learners using their own audio materials, provides opportunities to apply three important principles for effective listening practice: variety, frequency and repetition. One of the extensive listening materials that can support those principles are podcasts (a digital audio series that can be streamed or downloaded

online). Podcasts as authentic, culturally-rich and easily-accessible materials have been a significant source for improving listening comprehension, pronunciation and fluency of foreign language learners. However, integrating podcasts into curriculum may require additional time, appropriate content selection and necessary technologies such as smartphones or computers with a stable internet connection to listen to podcasts regularly. Due to above-mentioned challenges, podcasting is rarely incorporated as a foreign language teaching material in Uzbek schools and beneficial effects of podcasts on listening comprehension have been underexplored by applied linguistics researchers in Uzbekistan. To address those issues, this research examines the impact of podcasts on enhancing listening skills among intermediate-level language learners and its findings contribute to the ongoing discourse on innovative approaches to language education.

LITERATURE REVIEW

The use of educational podcasts to improve foreign language learners' listening skills has attracted much attention in several previous studies done by foreign researchers. Podcasting, which was initially created for entertainment by Adam Curry and Dave Winer at the end of the 20th century (Bottomley, 2015:3), started to be implemented into education as lectures in North Carolina, USA. Etymologically, the word consists of "pod" derived from iPod and "casting" as from broadcasting (Sičová, 2022:5). More than 850,000 podcasts are available on the internet (Winn, 2020:6) as for January 2020 and approximately 115,000 of them are English-teaching podcasts. In his publication called *Using social media in the classroom*, Poore recognizes podcasts as an effective teaching tool that educators can take as an advantage along with blogs, wikis and social networking. (Poore, 2015:34). According to Dale, there are 3 types of podcasts that can be employed by educators: 1) archives of lectures; 2) pre-recorded educational podcasts created by others; 3) podcasts produced by students. (Dale, 2007:12). Additionally, there are numerous podcasts specifically designed for ESL and EFL learners (Stanley, 2006:7). The potential of podcasts to enhance foreign language acquisition, specifically listening skills, has been investigated by several researchers in recent years. In their notable study, Faramarzi et.al. examined the effectiveness of vodcasts (podcasts with video content) in improving EFL learners' listening comprehension in a pre-test/post-test research design. They worked with 120 college-level learners providing them with 20 vodcasts belonging to different genres over a period of 12 weeks. The findings indicated a significant increase in learners' listening comprehension scores at the end of the treatment (Faramarzi et.al.,2019). Similarly, Ukrainian researchers Naidionova and Ponomarenko tried to study the impact of podcasts on developing listening skills and their final results proved their hypothesis regarding the positive effect of this type of audio materials on listening comprehension to be true (Naidionova & Ponomarenko, 2018). Another listening study conducted by Alm explored the role of podcasting in foreign language teaching: 28 German-learning students were exposed to German podcasts as well as wrote reflective blogs on their

podcast listening processes during one semester. The results demonstrated that students improved their listening skills with the help of authentic German input and freely selecting the theme of the podcasts brought students enjoyment in their language journey (Alm, 2013). From the most recent works, in her diploma thesis called *Using podcasts to develop students' listening comprehension skills*, Sičová detected an improvement in both listening skills and listening strategies of the B1 level language learners after her treatment which lasted 7 weeks and included 8 podcasts and self-assessment sheets (Sičová, 2022:97). Different aspects of podcasting as a powerful teaching tool were highlighted in the studies, theories and methodologies of various researchers: Yoestra and Putri investigated the influence of podcast exposure on the level of language learners' confidence (Yoestra & Putri, 2019); Alfian and Lio analyzed the potential of podcasting to boost motivation of the foreign language students. Due to their flexibility and convenience, podcasts enable learners to take control of their learning process and it keeps them engaged and motivated (Alfian & Lio, 2019). Hasan and Hoon carried out a meta-analysis of 20 scientific articles devoted to language learning podcasts and their findings suggested that podcasts are efficient media tool for achieving high-level listening proficiency (Hasan & Hoon, 2013). Dale (2007) concluded in his research study that podcasts should be used to enhance the interaction between teachers and students rather than being used as an alternative tool for this type of collaboration.

METHODS

Participants

Participants in this study were 30 second-year students of the Department of Integrated Course of English#3 of the Uzbekistan State World Languages University. They were selected from 2 existing groups: 22/02 and 22/30. The group 22-30 was taken as a control group while the group 22-02 was chosen as an experimental group. There were 15 students in the control and 15 in the experimental group. All of them met the selecting criteria of the research since all of them have obtained B2 level of English language proficiency. The research was conducted over a period of 4 weeks.

Instruments

The study utilized a comprehensive assessment protocol consisting of pre-tests, weekly podcast-based assessments, and post-tests to evaluate the impact of podcasts on the improvement of listening skills of intermediate level EFL students. Over a period of four weeks, participants were exposed to a series of eight podcasts as part of the experimental treatment. Weekly assessments were administered every Tuesday to gauge the comprehension and retention of the podcast content among participants.

Procedures

The study followed a structured procedure to investigate the effectiveness of podcasts in enhancing EFL learners' listening skills:

1. Pre-test Administration: Prior to the intervention, all participants completed a pre-test comprising 35 items, including matching, true/false, and multiple-choice questions, aimed at assessing baseline proficiency in listening comprehension and vocabulary.

2. Intervention Implementation: Over the course of four weeks, participants in the experimental group were assigned two podcasts per week to listen to repetitively. Each week, following podcast exposure, participants completed a test consisting of 15 items based on the content of the assigned podcasts. These assessments incorporated various question types, including matching, true/false, and multiple-choice questions, to evaluate comprehension and retention of the podcast material.

3. Control Group Procedures: Participants in the control group did not receive the podcast intervention but engaged in regular classroom activities during the intervention period.

4. Post-test Administration: At the conclusion of the intervention, both control and experimental groups underwent a post-test comprising 35 items, including matching, true/false, fill-in-the-gaps, and multiple-choice questions, mirroring the format of the pre-test. The post-test aimed to assess the overall impact of the podcast-based instruction on participants' listening comprehension skills and vocabulary acquisition, comparing outcomes between the control and experimental groups.

Scoring

Scoring for the assessments employed a binary system, with participants receiving a score of 1 for each correct answer and 0 for each incorrect response.

Data Analysis

Quantitative analysis of pre-test, post-test, and weekly assessment scores was conducted to examine the effectiveness of podcast-based instruction in EFL learning outcomes. Statistical analysis of pre-test and post-test results which were employed to compare performance between the control and experimental groups and assess the significance of any observed differences was conducted using a software program for statistical analysis called JASP.

RESULTS

The data from listening tests (pre-test and post-test) was analyzed using the JASP software program. Table 1 and Table 2 show the results of statistical analysis from pre-test:

Group Descriptives

Group	N	Mean	SD	SE	Coefficient of variation
pre-test comparison	15	18.800	2.366	0.611	0.126
treatment	15	20.467	2.774	0.716	0.136

Table 1. Group descriptive statistics (pre-test)

As we can see from Table 1, the mean score for the control group's listening pre-test was 18.800, while the experimental group's mean was 20.647, indicating no significant difference between the two groups in regard to listening proficiency.

Independent Samples T-Test

	t	df	p
pre-test	-1.770	28	0.088

Note. Student's t-test.

Table 2. Independent Samples t-test (pre-test)

Additionally, p-value obtained from analyzing pre-test using independent samples t-test also indicates that the means are homogeneous since it is greater than a predetermined threshold ($0.088 > 0.05$). Therefore, it can be claimed that the participants in both groups were similar in their listening comprehension at the start of the experiment.

After the treatment, the post-test was taken from both groups. Table 3 illustrates the difference in the mean scores of both control and experimental group:

Group Descriptives

	Group	N	Mean	SD	SE	Coefficient of variation
L2 Listening Comparison	Treatment	15	20.200	4.212	1.088	0.209
	Control	15	29.000	2.000	0.516	0.069

Table 3. Group descriptive statistics (post-test)

From Table 3, it is evident that there is a significant difference between the mean scores of the control group ($M=20.200$) and the experimental group ($M=29.000$). It can be claimed by the results of the independent samples t-test that are given in Table 4:

Independent Samples T-Test

	t	df	p
L2 Listening	-7.309	20.007	<.001

Note. Student's t-test.

Table 4. Independent Samples t-test (post-test)

The independent samples t-test revealed a significant difference between the results of post-test since the p-value which is <.001 according to the table 4 is less than 0.05.

In order to measure the strength of the relationship between the variables (podcast exposure and listening skills of the language learners), effect size was also measured:

Independent Samples T-Test					
	t	df	p	Cohen's d	SE Cohen's d
L2 Listening	-7.309	20.007	<.001	-2.669	0.609

Note. Student's t-test.

Table 5. Effect size (Cohen's d)

The data in the table illustrates a Cohen's d of -2,699 indicating a large effect size.

DISCUSSION

The results from Table 1 demonstrate that at the outset of the experiment, there was no significant difference between the control group's mean listening pre-test score ($M = 18.800$) and that of the experimental group ($M = 20.647$), as evidenced by a p-value of 0.088 from the independent samples t-test. This suggests that participants in both groups had similar listening comprehension abilities prior to the intervention.

Moving to Table 3, a notable contrast emerges between the mean scores of the control group ($M = 20.200$) and the experimental group ($M = 29.000$) post-intervention. The independent samples t-test results in Table 4 affirm this difference as statistically significant ($p < .001$), indicating that the experimental intervention had a substantial impact on improving listening proficiency compared to the control condition.

Moreover, the effect size, reflected by a Cohen's d of -2.699, underscores the magnitude of this difference, pointing to a large effect attributable to the intervention.

These findings suggest that the experimental intervention led to significant improvements in listening comprehension skills among participants, highlighting the effectiveness of the intervention in enhancing language learning outcomes.

CONCLUSION

In conclusion, the results of this study provide compelling evidence regarding the effectiveness of utilizing podcasts as an intervention for enhancing listening skills among intermediate level students. Initially, there was no significant disparity in listening proficiency between the control and experimental groups, indicating comparability in abilities prior to the intervention. However, following exposure to podcasts, the experimental group exhibited a remarkable improvement in listening comprehension, as evidenced by significantly higher post-test scores compared to the control group.

The statistical analyses, including the independent samples t-test and the calculation of effect size, consistently demonstrated the substantial impact of the podcast intervention. The large effect size (Cohen's $d = -2.699$) further

underscores the magnitude of the observed improvement, affirming the potency of podcasts in fostering language learning outcomes.

Overall, the results support the efficacy of integrating podcasts as a supplementary instructional tool in EFL pedagogy, highlighting its potential for enhancing listening skills and fostering autonomous learning. Therefore, in response to the research question, "Is there any significant difference in the intermediate level students' listening skills development between the experimental group exposed to podcasts and the control group?" the findings unequivocally support the hypothesis that exposure to podcasts leads to significant enhancements in listening skills development among intermediate level students. These results not only contribute to the existing literature on language learning methodologies but also offer practical implications for educators seeking innovative approaches to optimize language learning experiences.

MUXTOR AUEZOV VA DIN MUAMMOSI

Annotatsiya. Buyuk adib, olim, jamoat arbobi M.Auezovning badiiy merosi nafaqat asl adabiyotimiz, balki butun insoniyat madaniyatining yutug'idir. Uning ijodiy faoliyati keng va boy. Romanchi, dramaturg, olim, ssenariynavis, tarjimon - bu buyuk yozuvchi iste'dodining to'liq bo'lmagan ro'yxati. Muxtor Auezov – o'zining qomusiy bilimi va buyuk iste'dodi bilan ma'naviy hayotning ko'plab sohalarida porladi va butun qozoq madaniyatiga ta'sir ko'rsatdi.

Kalit so'zlar: zabardast allomalar, ta'limi sohasi, buyuk iste'dod, munosib davomchisi, tafakkuri, muloqot qobiliyati, iymon-e'tiqodni.

*Abdurakhmanova A.E.
student
Chirchik State Pedagogical University*

MUKHTAR AUEZOV AND THE PROBLEM OF RELIGION

Abstract. The artistic legacy of the great writer, scientist, public figure M. Auezov is not only the original literature, but also the achievement of the entire human culture. His creative activity is wide and rich. Novelist, playwright, scientist, screenwriter, translator - this is an incomplete list of the great writer's talent. Mukhtar Auezov - with his encyclopedic knowledge and great talent, shone in many areas of spiritual life and influenced the entire Kazakh culture.

Key words: outstanding scholars, field of education, great talent, worthy successor, thinking, communication skills, faith.

Har bir xalqning ma'naviy hayotida “yuzdan – chopar, mingdan – ot chiqaradigan” asriy shaxslar, betakror iste'dod sohiblari, zabardast allomalar, “Mehr-shafqatini qon to'kkan” daholar bo'lishi shubhasiz. odamlar (A. Baytursinov). Ularning hayotiy taqdiri, ibrat namunasi, qadr-qimmatini bir-biriga nur sohib, bir-birini o'rinbosar, avvalgi xayrli ishlarini davom ettirib, to'ldiradigandek tuyuladi. Bunday asr farzandlari – xalqimizning buyuk iste'dod sohiblari har bir davrda yashab, o'z insoniy burchini a'lo darajada bajargan. Agar 19-asrda mamlakat tarixida Ibyray Oltinsarin xalq ta'limi sohasida, Abay Kunanboyev milliy ma'naviyatda alohida o'rin tutgan bo'lsa, 20-asrda, ayniqsa, ta'lim-tarbiya sohasida Axmet Baytursinovning beqiyos asarlari va xalq ta'limoti, xalq ta'limi, xalq ta'limi, xalq ta'limi, Abay Kunanboyev alohida o'rin tutgan. Muxtor Auezov adabiy-madaniy hayotda ana shunday fikrlarni keltirib chiqaradi. Xalq tarixiga sekin nazar tashlasangiz, har bir davrdan bunday misollarni uchratish qiyin emas. Ma'lumki, biz so'z yuritmoqchi bo'lgan buyuk iste'dod

sohibi M.Auezov bu uch devning hayotiy maqsadlariga alohida e'tibor qaratgan. Binobarin, Muxonning g'oyat serhosil ijodiy merosi o'tmishdagi buyuk donishmandlarning qonuniy davomi, ular bilan chambarchas bog'liq bo'lgan ibratli jarayon, deyish mumkin. Shunday qilib, u o'zidan oldingi sherlar qila olmagan ezgu ishlarni amalga oshirdi, "Abay yo'li" roman-epopeyasi orqali o'z ona xalqining ma'naviy salohiyatini butun dunyoga ko'rsatib, qozoq xalqini butun dunyoga ko'rsatdi. uzoq tor yo'llar va sirpanchiq yo'llar davrida ham er yuzida yashash.

Universitetdagi ustoz haqida: "Agar qozoq xalqining ma'naviyat tarixida Abaydan keyin o'zgacha farzand bo'lgan bo'lsa, bu Muxtor Auezovdir. Bu orada Abay og'zimizda yo'q. Auezov iste'dodining ma'naviy rivojlanishi Abay ijodidan boshlanadi. Abayning adabiyotimizdagi yagona munosib davomchisi esa Auezovdir", - deydi yozuvchi Abish Kekilboyev ("Qozoq adabiyoti", 1987 yil 25 sentyabr). Bu yil buyuk adib tavalludining 115 yilligi nishonlanadi. Bugungi kunga qadar adib ijodi tadqiqotchilar tomonidan turli tomonlardan ko'rib chiqiladi. Ammo din mavzusi adib ijodining hozirgacha ko'p tadqiqotchilar e'tiboridan chetda qolayotgan, ba'zilar e'tiborga ham ololmaydigan o'ta mazmunli jihati va o'ta sermahsul kanali desak, yanglishmagan bo'lamiz.

Har qanday davrda dinga ijtimoiy ongning muhim shakli, umuminsoniy sivilizatsiyaning tarkibiy qismi va chuqur ildizlarga ega ma'naviy ne'matlar sifatida qaraladi. Shuning uchun u har bir mamlakat, har bir xalqning kundalik hayotida muhim o'rin tutadi. Zero, din orqali insoniyat qadim zamonlardan buyon atrof-muhitni bilish, uni ma'naviy jihatdan o'zlashtirish yo'llarini ko'rib keladi. Iste'dodli rassom buni butun qalbi bilan his qildi. Demak, adibning boshqa asarlari va tadqiqot ishlarini bir chetga surib qo'yadigan bo'lsak, faqat "Abay yo'li" roman-epopeyasigina fikrimizni isbotlay oladi. Sababi, Abayning betakror taqdiri – tabiati, xulq-atvori, tafakkuri, bilimi, dahosi uning butun borlig'ini ochib berish, shu orqali qozoq adibi Abaydayning urf-odatlarini, urf-odatlarini, turmush tarzini tasvirlashi kabi olim, mutafakkir bo'lishni taqozo etadi. Abay, diniy jihatdan Abay kabi malakali. Muxan esa o'zida ana shunday xislatlar, muloqot qobiliyati borligini ko'rsata oldi. U daho Abayning nafaqat she'riy san'atini, balki uning ilmiy tafakkuri, diniy bilimi, yuksak dunyoqarashi, jahon miqyosidagi ezgu maqsadlarini ham zamonning voqea-hodisalari, davr holatlari orqali keng nafas bilan taqdim eta oldi.

"Burgut uyada nimani ko'rsa, uchganda uni oladi", deydi xalq hikmati. Buni Muxonning o'sish yo'lidan, voyaga yetganlik hikoyasidan yaqqol ko'rishimiz mumkin. Zero, u ta'lim olgan maktab adib chiqqan muhit – Auez Xo'ja oilasi, bilim va bilim olgan Kunanboy hoji ibratini ko'rgan donishmand Abay muhiti, ilg'or Sharq mumtoz adabiyoti mutafakkirlari, rus va Yevropa ma'naviyati namoyandalari boy adabiy-madaniy merosga ega edilar. Bo'lajak adibning diniy qarashlari, ma'naviy fikrlari bolalikdan shakllana boshlagan. Yozuvchining amakivachchasi Razzoq u haqida shunday deydi: "Men Muxtordan o'n ikki yosh kattaman. U 1897 yilda Burli yaqinidagi Akakaranga shahrida norka

mo'ynasini olayotganda tug'ilgan. Bola sutdan ajratilgach, Auez bobo va Dinasil buvilar qorniga kirib, to'liq ulg'aygan. Ko'mirdek qora sochlarini, qora to'rini, yoqimtoy nabirasini chin yurakdan sevardilar. Uni doimo erkalab, tarbiyalagan. Olti yoshida bobosi unga arabcha xat ko'rsatdi. Uning o'ychanligiga misol: Bir guruh bolalar bobomizdan arab tilini o'rganganlarida, iymon-e'tiqodni yod olib, shukr qilishgan edi....Bobosidan qolishmagan Muxtor Abay ham duo oldi.

Ulug' shoir vafot etgach, uning qabrida Qur'on tilovat qilgan bobomiz Auezxo'ja edi. Shunda Muxtor bobosi bilan g'amgin yurt o'rtasida ketgan qarg'aga o'xshab qabrga tuproq solibdi. Bunday axloqiy tarbiya samaralarini uning kattalar ijodida, adabiy asarlarida yaqqol ko'rishimiz mumkin. Yozuvchining g'oyaviy-siyosiy, tarixiy-kognitiv tahlil yoki ilmiy izlanish maqolalarida bo'lsin, diniy mavzu haqida gapirish erkinligining yakuniy siri ham shunda bo'lsa kerak.

Binobarin, M.Auezovning "Abay yo'li" roman-epopeyasidagi barcha gumanistik g'oyalarning ildizi, strategik va konseptual asoslarini uning diniy qarashlari, diniy tamoyillaridan izlagan ma'qul. Zero, barchamizga ma'lumki, barcha jahon fundamental dinlari ezgu fikr, yuksak axloqiy fazilatlar, insonparvarlik qadriyatlarini targ'ib qiladi.

Asardagi ezgulik, insonparvarlik maqsadlari nuri esa uni tasvirlashda personajlarning axloqiy qarashlari va muallifning ma'naviy-axloqiy pozitsiyasini farqlash jarayonida namoyon bo'lishi kerak. Aytilganidek, axloq muammosi "Abay yo'li" roman-epopeyasining asosiy g'oyaviy kanalidir. Ma'lumki, bu, avvalo, "islom chashmasidan suv ichgan, turkiylik bilan tarbiyalangan" (J. Aymautov). Shu o'rinda atoqli adib Taken Alimqulovning M.Auezovning islomiy bilimi, umuman, chuqur diniy bilimlari haqidagi quyidagi xotirasini e'tiborga olish o'rinlidir: "Men buni o'zim ko'rmadim. I.B.dan eshitdim. SSSR Yozuvchilar uyushmasi qabulxonasida Muxtor Auezov allaqachon Nozim Hikmet bilan din haqida bahslashgan edi. "Muxtor Nozimning og'zini ochmadi. Muxtorlar musulmonga tez, deb kim o'ylabdi?! - deydi I.B. hayron. Taken Alimqulov o'sha yillarda Moskvada SSSR Yozuvchilar uyushmasida adabiy maslahatchi bo'lib ishlagan. Darhaqiqat, Turkiyada tug'ilib, musulmon ta'limini olgan, sovet qizil mafkurasi ta'sirida ulg'aygan Muxtor Auezovning dunyoga mashhur turk adibi Nozim Hikmatning og'zini ochmagani mo'jizadir.

"Abay yo'li" romanidan mohir adibning din-islom ta'limotiga bo'lgan chaqqonligi, buyuk bilimdonligini adibga cheksiz minnatdorchilik bilan kuzatishimiz mumkin. Rassom asardagi har bir fikr va mulohazalarini o'z qahramonlarining so'zlari yoki muallif matnlari bilan tasdiqlaydi. Bu buyuk adibning buyuk ijodkorga yuksak ma'naviy e'tiqodi, diniy bilimi, islom ilmidagi tele-gey-dengiz savodxonligini ko'rsatadi.

Xalqimizning chinakam shoiri Abdilda Tojiboyevning quyidagi hikoyasi Muxonning shaxs sifatidagi diniy qarashlari va e'tiqodlarini ochib bergandek bo'ladi:

“...Aymanquldi, M.Auezov onamni “Ayeke” der edi. Bir kuni Muxon uyimizga keldi. Rangi buzilgan.

Sheshem buni ko'rib, Muxaga dedi.

-Muxtor, qara, qoshlaring to'g'ri kelmaydi, bilaman, birovdan xafa bo'lganga o'xshaysan? - u aytdi. Shunda Muxon ma'yus, qovog'ini burishtirgan ifodasini o'zgartirmadi:

- Hoy, nima so'rayapsiz? Ular taniqli joylar, dedi u.

Shunda Aymanqul:

— Balki, Xudo uyning tomini xalqi buzsa, qutulolmas, — dedi.

Muxon o'sha yerda silkinib, xursand bo'lib ketdi.

“Yaxshi so'z – yarim yolg'on” parchasidan atoqli she'riyat shoiri, atoqli Aytis shoirning suyukli onasi qudratli Yaratganga: “Xudoning uyning tomini uydan olib tashlashga qodir bo'lmasa kerak. uy.” qilganini ko'rish mumkin.

Romandagi asosiy fikr kanali, insonparvarlik namunalari va axloqi buyuk Abayning

“Qur'on ezgu amallarga to'la” degan fikridan kelib chiqqandek.

Buni asardagi quyidagi tematik kanallar orqali, ularga aql nigohi bilan e'tibor qaratgan holda ko'rish mumkin:

“Abay yo'li” roman-epopeyasida ta'lim-tarbiya bilan bog'liq islomiy munosabatlar;

Asardagi dindorlar obrazi;

Roman dostonidagi diniy tushunchalar, e'tiqodlar, diniy marosimlar;

Asarda dinga oid maqollar, iboralar, atamalar, frazeologik birliklar.

Bu mavzularning har biri asarga yangicha nuqtai nazardan baho berish, ma'naviy qadriyatlarimizni bugungi davr talablari asosida qadrlash va e'zozlash, insonparvarlik fikrlarini shakllantirish va rivojlantirishga xizmat qiladi.

M.Auezov: “Abay Sharqdan olgan qadriyatlarning boshlanishi islom dinidir....Abay aniq diniy shoirdir. Din-islom yo'li asoslariga sig'inib, doimo Alloh, Payg'ambarimiz, Islom iymon-e'tiqodi haqida gapirganligi din ustozining tushuncha va e'tiqodini ko'rsatadi. Har bir dindor musulmonning og'zida, tilida ham, she'riy lug'atda ham duo va sajda so'zlari bor, deb bejiz aytmagan. Buni roman-epopeyaning uzunligi, mazmuni, g'oyaviy-badiiy xarakteridan bilish qiyin emas. Endi romandagi tarbiya masalasiga e'tibor qaratsak. “Qiyoda” bobida: “Abay kechki payt Zeredan chiqqach, buvisining to'shagiga o'tirib, Qur'onni tarjima qila boshladi. Onasining ruhiga bag'ishlagan “Qur'on-xatmi”sini mullaga o'rgatmay, o'qib berardi. Bir juma kuni bir Qur'onning ikki tarjimasi chop etildi. Shu kunlarda Kunanboy kechki ovqat paytida Abayga dedi: — Tarjima qilyapsan, — dedi, Abay javob bermadi. Kunanboy shunday holatda uch-to'rttasini taqillatib yuboradigan mullalarni esladi. Abay ichki sababni aytmadi. U tez o'qiydigan ham edi.

Abay Qur'onni o'zgacha qiziqish bilan, shoshmasdan, singlisining savobini olishini shunday jimgina, duo qilib o'qiydi. U uzoq vaqt Qur'onning qaysidir qismida o'tiradi va yolg'iz, yashirin fikrlarni o'ylaydi. Bu buvisining insoniy va

onalik fazilatlariga motam tutish edi. O'zining samimiy minnatdorchiligini bag'ishlash ham ibodatli tilak sifatida ko'rilishi mumkin ", deydi u. Bu parchadan Abayning chinakam ma'naviy e'tiqodi kuchli, diniy bilimi chuqur ekanligini ko'rish mumkin. Bu yerda uning Qur'on qiroatidan, ayniqsa, "Kalom-sharip"dan (Muqaddas kalom yoki Allohning kalomi) mullaga, Islom shariatiga ko'ra yozishidan, avlodlari va yaqinlari. vafot etgan kishi, "Alloh rozi bo'lsin", "Yolg'onchilik Biz bilamizki, u o'z yurtini obod qilish niyatidadir", "Iymon keltirgin", "Allohning nuri va shifoati bilan bo'lsin. Payg'ambarimiz". Ulug' san'atkor Islom dinida marhumning ruhiga maktub-Qur'on tilovat qilib, duo o'qisang, marhumga ham Alloh taolo ulug' ajr yozib qo'yishini e'tiborga olganini anglashimiz mumkin. o'qib, ibodat qildilar.

DEVELOPMENT OF INTELLECTUAL ABILITIES OF PRESCHOOL CHILDREN BASED ON A PERSON-ORIENTED APPROACH

Annotation. In this article, we can learn how to develop intellectual abilities in person-centered learning in preschool children, and what to look for when teaching learners in a person-centered learning process.

Keywords: person-centered, intellectual, emotional, environment, ethical, educator, foster.

The intellectual development of preschool children is very important, because it creates skills for successfully mastering educational activities. The collection of information of preschool age takes place at a rapid pace, knowledge processes are being improved, and speech is being formed. Schoolchildren with developed intelligence quickly learn and memorize new materials, are more confident in their abilities, and have a greater desire to learn, as shown in practice.

Children's didactic games play a special role in the development of the intellectual abilities of preschoolers, which are a means of teaching and help children to acquire and consolidate knowledge, as well as to learn methods of knowledge activity. Schoolchildren learn to classify, compare and generalize thanks to the didactic game, which increases children's interest in educational activities.

Mental development of young children should help not only to acquire and consolidate knowledge, but also to activate the thinking activity of preschool children.

Education of preschool children on the basis of person-oriented education is manifested in the following: - the content, environment, style of interaction in the process of preschool education, assimilation of all human qualities, awareness of oneself as a person, respect it should help to educate the feeling of doing. - the pedagogical process should help to feel the feelings of others, to follow moral standards, and also to understand the social importance of education. - the pedagogical process should educate such qualities as creativity, intelligence, independence and social activity in the students. In this regard, it is important to model the pedagogical process taking into account the unique characteristics of the students

In this case, it is appropriate to choose teaching technologies taking into account the maturity of the students and their "I". It is also necessary to comply with the following conditions: It is important for children in preschool education to have a sense of free choice. This does not mean that they can do whatever they want, on the contrary, it is necessary to organize educational activities in the educational process on the basis of democratic principles, to achieve the personal significance of educational materials for them, to have a desire for conscious learning of knowledge. need to wake up. It is important not to deliver knowledge to learners ready-made, but to encourage them to think, draw conclusions, and freely express their personal views by involving them in various activities. will come. Pedagogical process should lead to the awakening of certain emotions in the student. After all, the purpose of education is not limited to providing students with scientific knowledge, forming practical skills and competencies, but also to develop the feelings of each student, to understand their inner experiences, to evaluate their desires and needs. develops acquisition skills.

Such a process is of special importance in the development of the student as a person. L.V. Zan'kov, V.V. Davidov, A.N. Leontev confirm this idea. The result of upbringing in relation to education is not immediately apparent. In some cases, the negative effects have the opposite effect on the positive qualities of the student. So, the educational process has a changing nature and it is considered long-term.

Education has a two-way nature, it is from the student ↔ to the teacher; it is directed from the teacher ↔ to the student. A technological approach to education helps to fully satisfy this demand. In modern conditions, the concept of "technology" is gaining a new meaning in the theory and practice of pedagogy.

Summarizing the definitions of U.N.Nishonaliev, B.L.Farberman, V.P.Bespalko, M.Ochilov, N.N.Azizkhodzhaeva, N.Saidahmedov, M.V.Klarin, V.A.Slastenin, S.K.Ismagulova, O'.Tolipov, and others, pedagogical technology is "a technology that can guarantee the success of pedagogical activity and We agree with the definition "process project aimed at forming the personality of the student" from the point of view of the problem.

An exercise aimed at developing children's intellectual abilities Draw a story or a story through pictures. The child is shown 4 pictures, which depict fairy tales or events known to him. The task of the child is to arrange the pictures in the correct sequence and create a small story with the help of illustration. 2. Recognition of objects for a number of reasons. The child is called an epithet, it is necessary to determine what topic you are talking about. For example, yellow, sour, oval (lemon). Comparing two or more things. The child is invited to say what the words are similar to. For example, a cat, a book, a roof. You can tell the child how to name a cat and a dog, a table and a chair. Next, you need to find the differences in the objects: a pencil and a pen, a tree and a bush. 4. Choosing a suitable pair that logically connects the topic.

For example, an arrow - a clock, a wheel -? (an axle is part of a clock, so the correct answer is about a car, because a wheel is part of a car). Sincina gap, the bear is exactly the hunter, the fisherman in the forest trees, in the field? In person-oriented education on the basis of modern educational technologies, attention is paid to the following situations: - influencing the consciousness, feelings, and behavior of the student; - self-realization of the student based on external influences education; - interaction of all areas related to personality education; - achieving harmony of intellectual, moral, aesthetic and other components of education in personality formation; - systematicity of the personality formation process; - determining the education level of the student.

ISPAN VA O'ZBEK TILLARIDA "EDAD" TUSHUNCHASI BILAN BOG'LIQ BO'LGAN KO'CHMA MA'NOLARNI IDROK ETISHNING MILLIY O'ZIGA XOS XUSUSIYATLARI

Mazkur ilmiy maqola ispan va o'zbek tillarda "Edad" tushunchasi bilan bog'liq bo'lgan ko'chma ma'nolarni o'rganishga bag'ishlanadi. Unda turlicha tizimdagi tillarda "Edad" so'zi bilan mavjud bo'lgan barqaror iboralar qo'llanilishining o'xshash va farqli stilistik xususiyatlari aniqlanadi, shuningdek ikki halq muqobil barqaror birikmalarining leksik, semantik xususiyatlari tahlil qilinadi. Tadqiqot ispan tilidagi "Edad" konseptini nominatsiyalarining semantik jixatlarini tarkibiy qismlarini aniqlashga, ular o'rtasidagi tizimli munosabatlarni o'rganishga, shuningdek, ispan va o'zbek tilida so'zlashuvchilar tomonidan inson yoshi davrlarini idrok etish bilan birga keladigan lingvistik ongning stereotiplarini aniqlashga qaratilgan.

Tayanch so'zlar: yosh, ko'chma ma'nolar, to'plam iboralari, ispan va o'zbek tillaridagi leksik-semantik xususiyatlar, yosh davrlari, lingvistik ong, stereotiplar.

NATIONAL PECULIARITIES OF PERCEPTION OF FIGURATIVE MEANINGS RELATED TO THE CONCEPT OF "EDAD" IN SPANISH AND UZBEK LANGUAGES

This scientific article is devoted to the study of figurative meanings related to the concept of "Edad" in Spanish and Uzbek languages. It identifies the similar and different stylistic features of the use of stable expressions with the word "Edad" in languages of different systems, as well as analyzes the lexical and semantic features of alternative stable combinations of the two languages. The research aims to determine the components of the semantic aspects of the nominations of the concept of "Edad" in Spanish, to study the structural relations between them, as well as to determine the stereotypes of the linguistic consciousness that accompany the perception of human age periods by Spanish and Uzbek speakers.

Key words: edad - age, figurative meanings, stable expressions, lexical and semantic features, in Spanish and Uzbek, age periods, linguistic consciousness, stereotypes.

Kirish. Mazkur ilmiy maqola ispan va o‘zbek tillarda “Edad” tushunchasi bilan bog‘liq bo‘lgan ko‘chma ma’nomlarni o‘rganishga bag‘ishlanadi. Unda turlicha tizimdagi tillarda “Edad” so‘zi bilan mavjud bo‘lgan barqaror iboralar qo‘llanilishining o‘xshash va farqli stilistik xususiyatlari aniqlanadi, shuningdek ikki halq muqobil barqaror birikmalarining leksik, semantik xususiyatlari tahlil qilinadi. Tadqiqot ispan tilidagi “Edad” konseptini nominatsiyalarining semantik jixatlarini tarkibiy qismlarini aniqlashga, ular o‘rtasidagi tizimli munosabatlarni o‘rganishga, shuningdek, ispan va o‘zbek tilida so‘zlashuvchilar tomonidan inson yoshi davrlarini idrok etish bilan birga keladigan lingvistik ongning stereotiplarini aniqlashga qaratilgan.

“Edad” konsepti inson mavjud bo‘lgan lingvomadaniy muhitning eng muhim elementlaridan biridir. Yosh - jismoniy, psixologik va xulq-atvor rivojlanishining sifat jihatidan o‘ziga xos davri bo‘lib, unga xos xususiyatlar bilan tavsiflanadi. Shaxsning yoshi kognitiv jarayonlarda, uning idrokida, xotirasida, tafakkurida, nutqida, shaxsiyat xususiyatlarida, qiziqishlarida, mulohazalari, qarashlari, xulq-atvor motivlarida namoyon bo‘ladi. Yosh tushunchasi bolalarning intellektual va shaxsiy rivojlanishida yosh normalarini o‘rnatish uchun asos bo‘lib xizmat qiladi.

“Edad” konseptining sanab o‘tilgan ma’nomlari bizga ispan tilida bo‘lgani kabi, o‘zbek tilida xam "yosh" tushunchasi vaqt va rivojlanish tushunchalari bilan uzviy bog‘liq degan xulosaga kelishimizga imkon beradi. O‘zbek tilida “yosh” leksemasi birovning yoki biror narsaning rivojlanishi, o‘sishi, ulg‘ayish davri, yashash vaqti, yillari, yer tarixidagi davrlar, asr, yil, oy, soat, soniya va dakikalar ma’nomlarini ham bildiradi. Biroq, ispan va o‘zbek tillarining leksikografik manbalari ma’lumotlarini taqqoslash “Edad” konseptini yosh leksemalarining talqinida ba’zi nomuvofiqliklar mavjudligini aniqlashga imkon berdi.

Konsept zamonaviy tilshunoslikning yadrosi sifatida takomillashib borayotgan tadqiqot sohasidir. U bevosita inson ongi, idroki bilan bog‘liq bo‘lgan jarayon bo‘lib, oliy tafakkur mahsuli sifatida namoyon bo‘ladi. Bu tushunchaga juda ko‘plab olimlar o‘zlarining ta’riflarini berishgan. Birmuncha yangi hisoblangan bu yo‘nalish bo‘yicha o‘zbek tilshunosligida ham tadqiqot ishlari ko‘lami ortmoqda. Shu o‘rinda Sh. Safarov, N.Mahmudov, T. Mardiyev, E.Mamatov, M. Rahmatova, O‘.Yusupov, G. Hoshimov kabi olimlarning tadqiqotlarini alohida ta’kidlash joiz.

Bundan tashqari T.Mardiyev “Do‘st/friend”, “baxtsizlik”, “mehr-muhabbat”, “yurak” konseptlari bo‘yicha ham ilmiy izlanishlar olib borib, tadqiqotlari jarayonida o‘zbek va ingliz tili materiallarini o‘zaro solishtirgan holatda lingvomadaniy ko‘rinishda leksik-semantik, etnik jihatdan tahlil qilib bergan. Xuddi shu yo‘nalishda M.M.Rahmatovanning ham filologiya fanlari bo‘yicha falsafa doktori (PhD) dissertatsiya mavzusi “Ingliz, o‘zbek va tojik milliy madaniyatida “Go‘zallik” konseptining lisoniy xususiyatlari” deb nomlanib, olim bu tadqiqot ishida ingliz, o‘zbek va tojik tillari maqollarida aks etgan “go‘zallik konsepti doirasida go‘zallik prototip ma’nomlarining botiniy

go‘zallik, zohiriy go‘zallik, muhit, hodisa, predmet go‘zalliklari kabi aksiologik xususiyatlari asoslab berilgan.

Tilshunos olim O‘.Q. Yusupov konsept haqida fikr yuritir ekan, uni shunday ta‘riflaydi: konseptni “tashqi yoki ichki dunyodagi biror bir narsa yoki hodisa haqidagi ongimizdagi bilimlar majmuasi, u haqidagi obrazlar va unga bo‘lgan ijobiy, salbiy, neytral munosabatlar, ya’ni baholashlardir. Konsept bilan tushunchani aysbergga o‘xshatish mumkin. Agar konsept aysberg bo‘lsa, uning suvdan chiqib turgan qismi tushunchadir”[13, 49]. Bu fikrga ham qo‘shilish mumkin, chunki aysbergning suvdan chiqib turgan qismi uning suvostidagi qismiga nisbatan anchayin kichik. Demak, biror so‘zni konseptual tahlilga tortishda, dastlab, uning lisonida paydo bo‘lgan voqelanishi tushuncha deb qaraladigan bo‘lsa, chuqurroq kognitiv talqin qilinganda uning yanda ko‘proq mazmuni namoyon bo‘laveradi. Konsept so‘zni shunchaki anglatgan ma’nosiga qarab emas, uning borliqda ifodalanadigan barcha tushunchalarini, inson idroki bilan bog‘liq jihatlarni, lingvumadaniy ko‘rinishlarini kognitiv talqinda tahlil etadi.

Tilshunoslarning insonning til qobiliyatini modellashtirish masalalariga bo‘lgan e’tibori ortib borayotgan va xususan, lisoniy tasvirga ega bo‘lgan aqliy makon birliklari sifatida tushunchalarni modellashtirish bilan belgilanadi. Ishda ispan va o‘zbek tillarida “Edad” konseptni ifodalovchi ko‘p darajali birliklarning (leksik, frazeologik va semantik funksional) semantikasini tahlil qilib, ispan va o‘zbek tillarida “Edad” konseptiga xos bo‘lgan konseptual xususiyatlar aniqlanadi, ular asosida, o‘z navbatida, asosli shakil tuzilishi belgilab olinadi. Semantikani tahlil qilish va til birliklarini aktuallashtirish misollari ispan va o‘zbek madaniyatiga xos bo‘lgan yosh tushunchasini idrok etishning milliy o‘ziga xos xususiyatlarini aniqlashga imkon beradi. Til birliklarining semantikasini tahlil qilish, usulidan foydalanish ispan va o‘zbek madaniyatida shaxsning yoshga bog‘liq holatlarini konsepsiyalashning o‘ziga xos xususiyatlarini ko‘rsatadi.

Yuqoridagi tadqiqotlarning aksariyati tegishli tillarning leksikografik manbalaridan “Edad” konseptini uzluksiz tanlab olish yo‘li bilan tanlangan til birliklari materiallari bo‘yicha izlanishlar olib borgan. Leksemalarning semantikasini tahlil qilish asosida tadqiqotchilar “Edad” konseptining leksik-semantik sohasini qurdilar. Shu bilan birga, ba’zi tadqiqotchilar (masalan, Babarykina T.S. (2010)) ma’lum mualliflarning badiiy asarlari materialida asosida “Edad” konseptini so‘zlashuv xususiyatlarini o‘rgandilar. Ba’zi ishlarda (Kalyujnaya (2007), Kryuchkova (2003), Pintova (2009) va boshqalar) yosh tushunchasini o‘rganishni bir necha tillar materialida amalga oshiradi, bu ularning mualliflarning turli til jamoalari a’zolari tomonidan yosh holatlarini konsepsiyalashdagi farqlari va o‘xshashliklarni ko‘rsatishga imkon berdi.

Ushbu ilmiy izlanishlardan farq o‘laroq bizning ilmiy izlanishlarimiz “Edad” konseptining ispan va o‘zbek tillaridagi leksik-semantik xususiyatlarini o‘rganishga bag‘ishlanar ekan, ilmiy izlanishlarimiz davomida ikki til ispan va o‘zbek tillarida “Edad” konseptni ifodalovchi ko‘p darajali birliklarning (leksik, frazeologik va semantik funksional) semantikasini tahlil qilib, ispan va o‘zbek

tillarida “Edad” konseptiga xos bo‘lgan konseptual xususiyatlar aniqlanadi, ular asosida, o‘z navbatida, asosli shakil tuzilishi belgilab olinadi.

Tadqiqotda adekvat holatda o‘rganishni ta‘minlashga qaratilgan metodlar majmui: nazariy taxlil, chog‘ishtirma tahlil, leksik, stilistik taxlil qo‘llanildi. Mazkur ilmiy izlanish ispan va o‘zbek tillarda “Edad” so‘zi bilan bog‘liq bo‘lgan ko‘chma ma‘nolarni o‘rganishga bag‘ishlanadi. Unda turlicha tizimdagi tillarda “Edad” so‘zi bilan mavjud bo‘lgan barqaror iboralar qo‘llanilishining o‘xshash va farqli stilistik xususiyatlari aniqlanadi, shuningdek ikki halq muqobil barqaror birikmalarining semantik funksional xususiyatlari tahlil qilinadi.

Qolaversa, ishda chog‘ishtirilayotgan ispan va o‘zbek tillarda “Edad” konseptiga tushunchalarning paydo bo‘lishi, va o‘zgarishi jarayonlarida milliy qadriyatlar ta‘sirining so‘z yasalishidagi derivatsion jihati dalillab beriladi. Bundan tashqari, ushbu konseptning tilda voqelanishida har ikkala xalqning “Edad” konseptni ifodalovchi ko‘p darajali birliklarning (leksik, frazeologik va semantik funksional) semantikasini tahlil qilib, tushunchaga xos bo‘lgan konseptual xususiyatlar aniqlanadi, ular asosida, o‘z navbatida, asosli shakil tuzilishi belgilab olinadi. Semantikasi tahlil qilish va til birliklarini aktuallashtirish misollari ispan madaniyatiga xos bo‘lgan “Edad” tushunchasini idrok etishning milliy o‘ziga xos xususiyatlarini aniqlashga imkon berdi, bu dunyoning ispan va o‘zbek tilidagi portretini chuqurroq o‘rganishga va aniqroq tassavur qilishga yordam beradi. Til birliklarining semantikasini tahlil qilish, usulidan foydalanish ispan va o‘zbek madaniyatida shaxsning yoshga bog‘liq holatlarini konsepsiyalashning o‘ziga xos xususiyatlarini ko‘rsatadigan jihatlari yoritib beriladi.

Semantikasi tahlil qilish jarayonida va til birliklarini aktuallashtirish misollari ispan va o‘zbek madaniyatiga xos bo‘lgan “Edad” konseptini idrok etishning milliy o‘ziga xos xususiyatlarini aniqlashga e‘tibor qaratiladi. Til birliklarining semantikasini tahlil qilish, usulidan foydalanish jarayonida esa ispan va o‘zbek madaniyatida shaxsning yoshga bog‘liq holatlarini konsepsiyalashning o‘ziga xos xususiyatlarini o‘rganiladi.

Xullas, keyingi yillarda tilshunoslik sohasida paydo bo‘layotgan va shakllanayotgan yangi yo‘nalishlarning mavjudligi bu sohadagi modernizatsiyalanishning keskin sur‘atlarda ekanligidan dalolat beradi. Ana shunday yo‘nalishlardan biri bo‘lgan kognitiv tilshunoslikning asosiy tushunchalaridan biri bo‘lgan konsept atamasi, dastlab, rus tilshunosligida, so‘ngra jahonning boshqa tilshunoslik sohalariga kirib bordi. Aynan o‘zbek tilshunosligida 90- yillarga kelib shakllangan tushuncha bugungi kunda ham o‘z tadqiqotchilariga ega. Jahon tilshunosligiga nazar tashlasak, tilning konseptulan tabiatiga bo‘lgan talab va bu ko‘lamda qilingan ishlar, nazariyalar 80-yillarga kelib birmuncha tanqidlarga uchraydi. Yillar o‘tishi bilan esa tadqiqot maydoni kengayib konsept va konseptual sohaga talab va qiziqish qayta tiklandi.

“Edad” so‘zi lotincha *cevum* (abadiylik, doimiylik) so‘zidan kelib chiqan bo‘lib. *Tempus* so‘ziga nisbatan u uzoqroq vaqtni bildirish uchun ishlatilgan.

Leksemaning substantiv xususiyati u bildirayotgan hodisaning ham ma'lum xususiyat va holatlarga ega ekanligini ko'rsatadi. Aksariyat ispancha lug'atlarda leksemaning asosiy ma'nosi "kimdir tug'ilgandan yoki biror narsa boshlanganidan beri o'tgan vaqt" sifatida tan olingan. [Priberam]; [Infopédia]; [DLLP].

Eng keng tarqalgan ma'no – "ma'lum bir kuch darajasi bilan tavsiflangan hayot davri". Bu ma'no "inson hayotining ma'lum bir bosqichi" ma'nosi bilan o'xshashlikni ochib beradi.

"Edad" konsepti yuqoridagilardan tashqari quyidagi ma'nolarni ham bildiradi:

- ✓ hayot bosqichi; umr ko'rish davomiyligi
- ✓ davr, zamon; tarixiy davr;
- ✓ vaqt ko'rinishlari; cheklangan muddat;
- ✓ qarilik, keksalik;
- ✓ vaqt davomiyligi;
- ✓ geoxronologik masshtabning (geologik) birligi, bosqich.

"Edad" konseptining noaniqligi uning turli ma'nolarida bir vaqtning o'zida bir nechta sinonimik qatorlarning bir qismi bo'lishiga imkon beradi, ham semantik, ham stilistik sinonimlarni oladi:

✓ "birovning tug'ilishidan yoki biror narsaning paydo bo'lishidan, o'sib unishidan buyon o'tgan vaqt" ma'nosida "Edad" konsepti quyidagi sinonimlarga ega: año, años (yil, yillar), enero (yanvar), invierno (qish). (keksa odamlarga nisbatan), primavera (baxor) (yoshlarga nisbatan qo'llaniladi);

✓ "muayyan kuch darajasi bilan ajralib turadigan hayot davri" ma'nosida "Edad" konsepti quyidagi sinonimlarga ega: infancia (bolalik), juventud (yoshlik), viejez (keksalik);

✓ "hayot davri" ma'nosida; "umrning davomiyligi" – period (davr), generacion (avlod) degan ma'noni anglatadi;

✓ "keksalik, qarilik" ma'nosida – anciedad (juda qarilik; antiklik, qadimiylik), feliz edad (baxtli yosh), tercera edad (uchinchi yosh), edad de planeta (sayyora yoshi), otono de la vida (hayotning kuzi), invierno de la vida (hayot qishi), fase final de la vida (hayotning oxirgi bosqichi) ma'nolfrini anglatadi. Ko'rinib turibdiki, "Edad" konsepti o'zining turli integrallik xususiyati bilan xarakterlanadigan tushuncha mazmunini bildiradi. Leksema ko'plab konseptual sohalarni tushunish mumkin bo'lgan kontekst sifatida birlashtiradi.

Yoshga bog'liq "Edad" konsepti til sohasiga "bolalik, o'smirlik, yoshlik, o'rta yosh va qarilik" tushunchalari bilan bir qatorda kiritilgan muhim tushunchadir. Ushbu komponentlar o'rganilayotgan konsepsiya sohasining dinamik qiyofasini tashkil qiladi. Shunday qilib, o'rganilayotgan "yosh" tushunchasi markaziy va periferik qatlamlarni o'z ichiga olgan murakkab tuzilishga ega ekanligi aniqlandi.

Xulosa qilib aytganda "Edad" konseptini taxlili asosida dunyoning ispan va o'zbek tilidagi qiyofasini, yanada to'liqroq aks ettirishga hissa qo'shadi.

Tadqiqotning kognitiv va qiyosiy tilshunoslik doirasida olib borilishini hisobga olgan holda, uning natijalaridan ispan va o‘zbek tilida so‘zlashuvchi mamlakatlar tili va madaniyati o‘rtasidagi munosabatlarni tahlil qilishda foydalanish mumkin. Tadqiqot materiallaridan insonning dunyo haqidagi umuminsoniy va etnospesifik g‘oyalarini o‘rganuvchi tilshunoslik va psixologiya sohalarida foydalanish mumkin.

Ilmiy ishning natijalaridan ispan va o‘zbek tili leksikologiyasi, kognitiv va qiyosiy tilshunoslik bo‘yicha nazariy va amaliy mashg‘ulotlarda foydalanish imkoniyati bilan belgilanadi. Ishda qo‘llaniladigan taxliliy metodologiya boshqa tushunchalarning ispan va o‘zbek tilida ifodalanishini o‘rganishda qo‘llanilishi mumkin. Tadqiqot natijalari, shuningdek, ispan tilidagi amaliy mashg‘ulotlarda, shuningdek, yoshga bog‘liq semantikaga ega lug‘atni o‘z ichiga olgan matnlarni tarjima qilish jarayonida qo‘llanilishi mumkin.

1C «ПРЕДПРИЯТИЕ 8.3» DASTURLASH TILIDA PULLI TA'LIM XIZMATLARINING HISOBINI AVTOMATLASHTIRISH

Annotatsiya. Ushbu maqolada 1C dasturlash tili orqali ta'lim muassasalarida pulli ta'lim xizmatlarining hisobini avtomatlashtirishni tashkillash usullari ko'rilgan. O'quvchilarni qazdorligi, to'lovlari va davomati nazoratga olingan.

Kalit so'zlar: 1C dasturi, o'quv jarayonlari, pullik ta'lim, axborot-kommunikatsiyasi, Microsoft Excel, Microsoft Word, treningni rejalashtirish, kalendar rejalashtirish, o'quv mashg'ulotlarini tayyorlash, o'qishni tugatgan xodimlarni hisobga olish.

AUTOMATION OF CALCULATION OF PAID EDUCATIONAL SERVICES IN THE PROGRAMMING LANGUAGE 1C "ENTERPRISE 8.3"

Annotation. This article discusses methods for organizing automation of accounting for paid educational services in educational institutions using the 1C programming language. Debt, payment and attendance control of students.

Key words: 1C program, educational processes, paid training, information and communication, Microsoft Excel, Microsoft Word, training planning, calendar planning, preparation of training sessions, graduate registration.

Zamonaviy axborot texnologiyalari oliy ta'lim muassasalaridan ta'limga yangicha yondashuvlarni joriy etishni taqozo etadi. Hozirgi bosqichda ta'lim maqsadlariga erishishning yangi yondashuvlarini amalga oshirish uchun ta'lim asoslarini tubdan o'zgartirish zarur. Zamonaviy ta'lim texnologiyalari o'quv vaqtidan unumli foydalanish va ta'lim sifatini oshirish imkonini beradi. Yangi texnologiyalar individuallashtirish, axborot-kommunikatsiya texnologiyalaridan foydalanish, masofaviy ta'lim va ta'lim jarayonining o'zgaruvchanligi, ta'lim darajasi va yoshidan qat'i nazar, o'quvchilarning qiziqishini oshirishga qaratilgan. Ta'limga yangi yondashuvlarni joriy etish uchun hozirda pullik qo'shimcha ta'lim xizmatlaridan foydalanilmoqda.

O'quvchilarga umumiy ta'lim dasturlari va zamonaviy materiallardan foydalangan holda pullik qo'shimcha ta'lim xizmatlari ko'rsatiladi.

Loyihalash natijasida ishlar bajarildi va quyidagi natijalarga erishildi:

1. O'quv markazi faoliyatining loyihadan oldingi tahlili o'tkazildi. Ko'rib chiqilayotgan O'quv markazi quyidagi yo'nalishlar bo'yicha o'quv faoliyatini olib boradi:

- Til (ingliz, nemis, russ, koreys, xitoy, arab va x.k.);
- Matematika;
- Fizika;
- Tarix;
- Ona tili;
- Kimyo;
- Biologiya.

O'quv markazining o'qitilgan o'quvchilar soni bo'yicha asosiy ko'rsatkichlari ko'rib chiqildi.

2. Loyihalash uchun "Pullik ta'lim xizmatlarini boshqarish" quyi tizimi tanlangan.

"Pullik ta'lim xizmatlarini boshqarish" tizimini ishlab chiqish pullik ta'lim xizmatlarini hisobga olishni avtomatlashtirish orqali markaz xodimlarining ish sifati va samaradorligini oshirishga qaratilgan. Aksariyat hollarda bo'lgani kabi, avtomatlashtirish ishni soddalashtirish va muntazam operatsiyalarni minimallashtirish uchun amalga oshiriladi.

Bu vaqtni qisqartiradi va hisobot berish jarayonini osonlashtiradi, qo'lda qayta ishlanadigan ma'lumotlar hajmini kamaytiradi, hisob-kitoblarning aniqligini oshiradi va dolzarb axborot ta'minotini ta'minlaydi.

Tizimning vazifalari quyidagilardan iborat:

1. Treningni rejalashtirish - o'quv tadbirlarini o'tkazishning yillik rejasini tuzish.

2. Kalendar rejalashtirish - o'quvchilarning maqsadli guruhleri, sanalari, korxonalari bo'yicha ro'yxatlarini tuzish, dars jadvali jurnalini yuritish.

3. O'quv mashg'ulotlarini tayyorlash - uslubiy adabiyotlarni ishlab chiqish, uslubiy manbalarni kurslar o'rtasida taqsimlash.

4. O'quv markazining texnik tayyorgarligi - laboratoriya stendlarini, yangi qurilmalarni, o'lchash va sinov uskunalarni ishlab chiqish va qurish, texnik xizmat ko'rsatish bo'yicha so'rovlar jurnalini yuritish, bajarilgan so'rovlarni kuzatish, hisobotlarni shakllantirish.

5. O'qishni tugatgan xodimlarni hisobga olish - talabalarning davomat jurnalini yuritish, kurs jurnalini yuritish, hisobot tayyorlash.

6. Pullik ta'lim xizmatlarini hisobga olish - jismoniy va yuridik shaxslarga pullik ta'lim xizmatlari ko'rsatish hisobini yuritish, arizalarni ro'yxatga olish, shartnomalar tuzish va hisobotlarni shakllantirish.

7. Ta'lim sifatini tahlil qilish - o'qishni tugatgan xodimlar ro'yxatini tuzish, so'rovlar o'tkazish, hisobot berish.

8. O'quv markazining hisoboti - miqdoriy va sifat ko'rsatkichlari kontekstida o'tkazilgan kurslar bo'yicha hisobotlarni shakllantirish.

Quyi tizim muammolarini hal qilishning tashkiliy va mantiqiy mohiyati ishlab chiqilgan.

Ko'rib chiqilayotgan "Pullik ta'lim xizmatlarini boshqarish" quyi tizimida "Pullik ta'lim xizmatlarini hisobga olish" vazifasi ishlab chiqish uchun tanlangan, chunki u O'quv markazida avtomatlashtirilmagan. Vazifaning kirish va chiqish ma'lumotlarining tavsifi to'ldirildi. Muammoni hal qilish uchun obyekt modeli ishlab chiqilgan.

Konfiguratsiya yig'iladigan konstruktor qismlaridan foydalanish qobiliyati "Pullik ta'lim xizmatlarini hisobga olish" vazifasini ishlab chiqish uchun diplom loyihasida dasturlash muhitini tanlash uchun asosdir.

Ishlab chiqilgan vazifa avtomatlashtiradi:

- har xil turdagi o'qitish uchun arizalarni yozib olish;
- pullik ta'lim xizmatlarini ko'rsatish bo'yicha shartnomalar tuzish;
- Hisobotlarni tuzish: "Daromadlar", "Shartnomalar reestri".

Xizmatlarni ko'rsatish uchun qabul qilingan ariza asosida kontragentlar ma'lumotnomasi to'ldiriladi, bu erda mijoz to'g'risidagi ma'lumotlar kiritiladi. Ushbu ma'lumotnoma asosida "Ilova" hujjati yaratiladi, unda kontragentning tafsilotlari va ko'rsatilishi kerak bo'lgan xizmatlar ro'yxatga olinadi, xizmatlar to'g'risidagi ma'lumotlar "Xizmat" ma'lumotnomasida mavjud. Keyinchalik, "Ariza" hujjati asosida "Xizmatlarni ko'rsatish shartnomasi" tuziladi, xizmatlar, ularning miqdori, narxi to'g'risidagi ma'lumotlar hujjatga kiritiladi va umumiy miqdor hisoblanadi. Kontragentga xizmatlar ko'rsatilgandan so'ng, ilgari tuzilgan shartnoma asosida "Bajarilgan ish to'g'risida guvohnoma" hujjati tuziladi.

Barcha buxgalteriya ma'lumotlari "Xizmatlarni sotish" aylanmasining jamlanma registrida ro'yxatga olinadi, unga ko'ra "Daromadlar" hisobotlari tuziladi.

Ma'lumotlar bazasidan olingan ma'lumotlar asosida "Shartnomalar reestri" hisoboti tuziladi.

Batafsil foydalanuvchi qo'llanmasi ishlab chiqilgan bo'lib, unda ishlab chiqilgan vazifadan foydalanishning batafsil tavsifi mavjud. Xulosa qilib aytganda, "Pullik ta'lim xizmatlarini hisobga olish" vazifasini ishlab chiqishning iqtisodiy samaradorligini hisoblash amalga oshirildi.

Pullik qo'shimcha ta'lim xizmatlarini ko'rsatish bozor iqtisodiyoti va O'zbekiston ta'limini isloh qilish sharoitida davlat va munitsipal ta'lim muassasalarining tobora ommalashib borayotgan faoliyatiga aylanib bormoqda. Aholining ta'limga bo'lgan o'sib borayotgan ehtiyojlarini to'liq qondirishga yordam beradigan pullik qo'shimcha ta'lim xizmatlari. Qo'shimcha ta'limdan umumiy foydalanishning konstitutsiyaviy tamoyilini amalga oshirish bo'yicha amaldagi qonunchilik normalariga rioya qilish ayniqsa muhimdir.

IMPROVING THE SOCIAL PROTECTION SYSTEM

Annotation. This article explores the imperative need for enhancing social protection systems worldwide. It delves into the current state of social safety nets, examines existing literature on their efficacy, proposes methodologies for improvement, presents empirical results, and discusses the implications for policy formulation. Ultimately, it provides conclusions and actionable suggestions for policymakers aiming to bolster social protection measures.

Keywords: Social protection, welfare, policy reform, safety nets, poverty alleviation, inclusive growth.

Social protection systems are indispensable for fostering inclusive societies and mitigating the adverse impacts of economic instability, poverty, and inequality. However, many existing systems face challenges such as insufficient coverage, inadequacy of benefits, and administrative inefficiencies. This article underscores the importance of revamping social protection frameworks to ensure comprehensive coverage and effective support for vulnerable populations.

Numerous scholarly works have scrutinized the effectiveness of social protection programs in diverse contexts. Studies have highlighted the positive outcomes of well-designed systems, including poverty reduction, improved health and education outcomes, and enhanced economic resilience. However, gaps persist in coverage, targeting, and adequacy, posing barriers to achieving desired developmental outcomes.

This study employs a mixed-methods approach, combining quantitative analysis of existing social protection schemes with qualitative assessments of their implementation and impact. Data collection includes surveys, interviews, and secondary sources to provide a holistic understanding of the strengths and weaknesses of current systems.

Improving the social protection system involves several key steps:

- Comprehensive Assessment:

Conducting a comprehensive assessment of the existing social protection system requires a multifaceted approach involving various stakeholders. Here's a structured framework to guide the assessment:

Stakeholder Engagement and Consultation:

Policy and Legal Analysis:

Program Design and Implementation Analysis:

Financial Sustainability and Resource Allocation:

Coverage and Targeting Analysis:

Monitoring and Evaluation Mechanisms:

Cross-cutting Issues and Vulnerabilities:

International and Comparative Perspectives:

Synthesis and Recommendations:

Dissemination and Advocacy:

By following this comprehensive assessment framework, stakeholders can gain a holistic understanding of the social protection system and identify strategic priorities for improving its effectiveness, inclusiveness, and sustainability.

- Targeting Vulnerable Groups:
- Expanding Coverage:
- Enhancing Benefit Levels:
- Promoting Access and Delivery:
- Strengthening Institutional Capacity:
- Promoting Social Inclusion:
- Investing in Human Capital:
- Monitoring and Evaluation:

By implementing these strategies, governments can enhance the effectiveness, efficiency, and inclusiveness of their social protection systems, thereby contributing to improved well-being and social justice for all members of society.

The findings underscore the multifaceted nature of social protection challenges and the need for tailored interventions addressing specific contexts. Policy discussions should prioritize expanding coverage to marginalized populations, enhancing benefit adequacy, strengthening institutional capacity, and fostering community engagement. Moreover, integrating social protection with broader development agendas is crucial for achieving sustainable and inclusive growth.

Conclusions:

In conclusion, bolstering social protection systems requires a concerted effort from policymakers, stakeholders, and civil society actors. This necessitates comprehensive reforms aimed at enhancing coverage, adequacy, and efficiency while addressing governance and implementation challenges. By prioritizing social protection as a fundamental component of development strategies, societies can mitigate vulnerabilities and promote shared prosperity.

- Expand coverage through universal or targeted approaches, ensuring inclusivity and equity.
- Enhance benefit adequacy to meet the diverse needs of beneficiaries and mitigate poverty.
- Strengthen institutional capacity and governance structures to improve program delivery and accountability.
- Foster community participation and empowerment to ensure the relevance and effectiveness of social protection interventions.
- Integrate social protection into broader development frameworks, aligning policies with poverty reduction and inclusive growth objectives.

PROBLEMS OF PROVIDING EFFICIENT EMPLOYMENT IN THE LABOR MARKET

Abstract. In the article, the factors that negatively affect the effectiveness of employment in the labor market of Uzbekistan, as well as the possibilities and solutions for its development, are considered, and conclusions and proposals are developed on the topic.

Key words: Employment, labor market, labor resources, labor force, alternative employment, poverty reduction, market economy, standard of living of the population, employee capital.

Kirish

Bugungi kunda jahon bozori konyunkturasi keskin o'zgarib, globallashuv sharoitida xalqaro raqobat tobora kuchayib bormoqda. Bunday sharoitda O'zbekiston iqtisodiyotida ham shiddatli, sifat jihatidan butunlay yangi o'zgarishlar sodir bo'lmoqda. Iqtisodiyotda o'z salohiyatini yo'qotgan eski institut va vositalar o'rnini yangi innovatsion va samarali boshqaruv usullari egallamoqda. Ushbu strategik maqsadlarning barchasi O'zbekiston aholisining turmush darajasi va sifatini oshirishga yo'naltirilgan bo'lib, mamlakatimiz Prezidenti Shavkat Mirziyoyev ta'biri bilan aytganda, «Eng muhim vazifamiz – mamlakatimizda tinchlik va farovonlikni mustahkamlash, odamlarni, xalqimizni hayotdan rozi qilishdan iboratdir»¹.

Mamlakatni taraqqiy ettirish sur'atlarini oshirish, milliy iqtisodiyotni yuksaltirish, eng avvalo, har qanday davlatning boyligi hisoblangan ishlab chiqaruvchi kuchlarning tarkibiy qismi hisoblangan- inson mehnat faoliyatining samaradorligi bilan bog'liqdir. Unumli mehnat milliy iqtisodiyotni rivojlantirish sur'atlarini barqaror oshirishning bosh omili bo'libgina qolmasdan, u insonning farovon turmush kechirishini ta'minlash va ehtiyojlarini qondirish funksiyasini ham bajaradi.

Maqolaning dolzarbligi

Jahon tajribasi shuni ko'rsatadiki, bozor munosabatlari sharoitida mehnat resurslari bandligini ta'minlash muammosi har qachingidan kuchaymoqda. Bu, ayniqsa, ortiqcha ishchi kuchining chiqishi va faol ish qidirayotganlar sonining ko'payishi bilan birga tarkibiy o'zgarishlarni boshdan kechirayotgan o'tish davridagi iqtisodiga ega mamlakatlarda dolzarbdir.

O'zining demografik tuzilishi va aholi o'sish sur'atlari yuqori bo'lgan O'zbekistonda bandlik masalalari doimo eng dolzarb va ustuvor muammolardan biri bo'lib kelgan va shunday bo'lib qolaveradi.

¹ Prezident Shavkat Mirziyoyevning 2021-yil 1-sentyabrda Mustaqilligimizning 30 yilligi munosabati bilan so'zlagan nutqidan olindi.

Ishchi kuchining eng qimmatli manbalaridan ba'zilari oddiygina foydalanilmayotgan bo'lsa, o'sish haqida gapira olmaymiz. Bu yerda yana bir muhim iqtisodiy tamoyil aniq amal qilishni to'xtatadi, ya'ni mamlakatda mavjud bo'lgan barcha ishlab chiqarish resurslarining cheklanishi. Ishsizlik, shuningdek, odamlarning hayotiy manfaatlariga sezilarli darajada zarar yetkazadi, ularning o'z malakalarini inson o'zini eng yaxshi ko'rsatishi mumkin bo'lgan faoliyat turida qo'llashiga to'sqinlik qiladi. Yuqoridagilardan xulosa qilishimiz mumkinki, ishsizlik darajasi iqtisodiyotning umumiy holatini aniqlash va uning samaradorligini baholash uchun asosiy ko'rsatkichlardan biridir. Yurtimizda mehat bozorini huquqiy muhofaza qilish hamda uning subyektlari bo'lgan ishchilar qatlami saviyasini doimiy oshirib borish, pirovardida ishsizlik ko'rsatkichini tushirishga erishish mavzuning dolzarbligini belgilab beradi.

Tahlil va natijalar muhokamasi

Avvalambor, mehnat resurslarini taqsimlaydigan va ish bilan bandlik borasida qarorlar qabul qiladigan bozor mehnat bozori deb ataladi. Mehnat bozorining subyektlari bo'lib, mehnat taqsimoti muammolarini xal etishga ixtisoslashgan hukumat organlari va mehnat resurslari ya'ni insonlar, obyektlari bo'lib esa mehnat munosabatlari va ishchi o'rinlari kabilarni o'z ichiga oladi.

O'zbekistonda 2021-yil 1-yanvar holatiga mehnat resurslari 19,1 mln. kishi, iqtisodiy faol aholi 14,8 mln. kishi, jami ish bilan bandlar 13,2 mln. kishi, shundan iqtisodiyotning rasmiy sektorida 5,7 mln. kishi (43,3%), iqtisodiyotning norasmiy sektorida 5,6 mln. kishi (42,8%), ishga joylashtirishga muhtoj shaxslar 1,6 mln. kishi (10,5%) va chet elda ishlash uchun ketganlar 1,8 mln. kishini tashkil qildi.

Mehnat sohasidagi keng islohotlar natijasida 2016-2020 yillarda mehnat organlari tomonidan kasb-hunarga o'qitishga yo'naltirilgan fuqarolar soni 8,8 barobar oshgan. Ishsizlarni jamoat ishlariga jalb etish ko'rsatkichi 65 barobar ortgan.

Shu davrda oliy ta'limga qabul parametrlari 2016 yilga nisbatan 2,5 barobarga o'sdi, yoshlarimizni oliy ta'lim bilan qamrab olish darajasi 9 foizdan 25 foizga yetdi.

Hozirgi kunda o'zini o'zi band qiladigan shaxslar uchun 68 ta faoliyat (ishlar, xizmatlar) turlari tasdiqlangan bo'lib, ularni yanada kengaytirish bo'yicha ishlar olib borilmoqda. Natijada, 2021 yil 1 iyul holatiga 852,4 ming nafar fuqaro o'zini o'zi band qilgan shaxs sifatida ro'yxatdan o'tkazildi. Shundan 310,1 ming nafarini 30 yoshgacha bo'lgan o'g'il-qizlar tashkil etadi.

Bizning fikrimizcha, o'zini o'zi band qilishni inson resurslarini boshqarish va aholi bandligini ta'minlashning ustuvor yo'nalishi sifatida rivojlantirish lozim. O'zini o'zi band qilishning yollanma xodimga nisbatan afzalliklarini quyidagilarda ko'rish mumkin:

– o'ziga rahbar bo'lish va o'z ish faoliyatini to'liq nazorat qilish hamda yakuniy mahsulot uchun o'z ovozigacha ega bo'lish;

- ko'proq daromad olish imkoniyatiga ega bo'lish, frilanserlar yollanib ishlaydiganlarga nisbatan ko'proq pul topadilar va yo'l xarajatlarini tejagan holda uyda o'tirib, bola parvarishi bilan ham shug'ullanish imkoniyati paydo bo'lishi;
- ishning turli-tumanligi bilan bahramand bo'lish, doimiy ishga moslashish, o'z mahoratini oshirish va yangilash, har bir yangi mijoz bilan yangi chaqiriq, da'vat tufayli ijodkor bo'lishi va o'z biznesini ochishi;
- o'zi uchun kun tartibini o'rnatish, belgilangan ish jadvalining mavjud emasligi va ish soatlarining moslashuvchanligi;
- o'z mijozlarini tanlashi va kimga xizmat ko'rsatish huquqiga to'liq egalik qilishi.

Xalqaro Mehnat tashkiloti rasmiy sahifasida e'lon qilingan ma'lumotga ko'ra, ishsizlar soni 2024-yilda 3 millionga oshib, 2020-yildan beri birinchi marta jami 208 million kishiga yetishi kutilmoqda (jahon ishsizlik darajasi 5,8 foizga to'g'ri keladi). 2024-yilda jahon bandligining o'sishi 1,0 foizni tashkil etishini, bu 2023-yil darajasining yarmidan kam bo'lishini ko'rsatmoqda.

O'zbekistonning Taraqqiyot strategiyasida inson qadrini ulug'lashga yo'naltirilgan ijtimoiy himoya siyosati bo'yicha belgilangan vazifalar doirasida 2026-yilga qadar ehtiyojmand aholi ijtimoiy nafaqa va moddiy yordam bilan to'liq qamrab olinishini nazarda tutmoqda. Ijtimoiy himoyaga ajratilgan budjet xarajatlari deyarli ikki baravarga ko'paydi. «Temir daftari», «Ayollar daftari» va «Yoshlar daftari» tizimlari yo'lga qo'yildi. Ularda 595,6 ming kambag'al va moddiy yordamga muhtoj oilalar, 433,0 ming nafar ehtiyojmand va yordamga muhtoj xotin-qizlar, 591 ming ehtiyojmand va ko'makka muhtoj hamda ishsiz yoshlar ro'yxatga olindi. «Ijtimoiy himoya yagona reyestri» axborot tizimida yordamga muhtoj ayollar, yoshlar va nogironligi bo'lgan shaxslar bo'yicha alohida ma'lumotlar bazasini yaratish, jumladan «Temir daftari», «Yoshlar daftari» va «Ayollar daftari»ni «Ijtimoiy himoya yagona reyestri» bilan integratsiya qilish belgilangan.

Ijtimoiy jihatdan ehtiyojmand aholi muammolari yechimining asosiy qismi bandlikni ta'minlash orqali bo'ladi. Bugungi kunda yangi ish o'rinlari yaratish, o'zini-o'zi band qilish, kasanachilik, uy mehnati, tadbirkorlikni rivojlantirish kabi tizimli ishlar amalga oshirilmoqda.

Kambag'allikka barham berishning birinchi sharti – unga munosib ish topish. Biroq, yuqorida qayd etilgan ijobiy ishlar bilan birgalikda, ishsizlik, kambag'allik hamon bor va unga qarshi kurashish tizimli bo'lishi lozim. Davlat o'z fuqarolarini ish bilan ta'minlash, ularni kambag'allik botqog'idan chiqarish bilan birga professional kasb o'rgatish mas'uliyatini ham o'z zimmasiga oladi.

Taraqqiyot strategiyasining 37-maqsadini amalga oshirishda, fuqarolarga davlat hisobidan kasb-hunarga o'qish imkoniyatini yaratish, jami 1 million nafar ishsiz fuqaroni kasb-hunarlarga o'qitish va bu jarayonda nodavlat ta'lim muassasalarining ishtirokini 30 foizga yetkazish belgilangan.

Shu bilan birga, ishsiz fuqarolarni kasb-hunarga o'qitish ko'lamini ikki barobarga oshirish belgilangan va bunda:

- har yili kasb-hunarga o'qitiladigan fuqarolar soni, hududlar va tarmoqlar kesimida ishsiz va ish qidirayotgan shaxslarni kasb-hunarga tayyorlash, qayta tayyorlash va malakasini oshirishga oid davlat buyurtmasini ishlab chiqish;

- mahalla kasb-hunarga o'qitish maskanlari tarmog'ini kengaytirib, ularning sonini 1000 taga yetkazish;

- 16 ta «Ishga marhamat» monomarkazlari va 59 ta kasb-hunarga o'qitish markazlari quvvatlaridan samarali foydalangan holda ishsiz fuqarolarni professional kasblar, tadbirkorlik ko'nikmalari va xorijiy tillarga o'qitish;

- kasb-hunarga o'qitishda nodavlat ta'lim muassasalarining ishtirokini 30 foizga yetkazish maqsadida kasb-hunarga o'qitish bo'yicha grantlar e'lon qilish kabilar nazarda tutilgan.

Xulosa va takliflar

Xulosa o'rnida shuni aytishimiz mumkinki, O'zbekistonda amalga oshirilayotgan barcha islohotlarning tub maqsadi – bu inson farovonligi, uning munosib turmush darajasini ta'minlash hisoblanadi. Bu esa, o'z navbatida davlat tomonidan aholining samarali ish bilan band bo'lishiga barcha shart-sharoitlarni yaratib berishi, shu jumladan, tadbirkorlar uchun qulay biznes yuritish muhiti, investitsiya, soliq siyosati, shaffoflik, sud-huquq tizimining adolatli bo'lishi kabi omillarga bog'liq. Chunki mamlakatimizda yaratilayotgan ish o'rinlarining 90 foizi xususiy sektor hissasiga to'g'ri keladi va aynan iqtisodiyotning taraqqiyoti kichik va o'rta biznesning rivojlanishi bilan bog'liq.

Maqolani yozish mobaynida mehnat bozori tuzilmasini tubdan yaxshilash uchun quyidagi takliflar ishlab chiqildi.

- Ish izlovchilar hanuz ularga yordam beradigan mehnat bozori haqida ma'lumotga ega emaslar. Kasb tanlash to'g'risida qaror qabul qilish va tegishli ishlarni qidirishni soddalashtirish;

- Mehnat bozori axborot tizimlarining ko'pligi mehnat bozorini yanada samarali qilishga yordam beradi. Ish qidiruvchilar va ish beruvchilar o'rtasidagi axborot oqimini yaxshilash;

- Yoshlar ma'lum ish uchun ish haqi haqida aniq ma'lumotga ega bo'lsa, talab qilinadigan kasb va ko'nikmalar hamda muqobil kasblarni solishtirishlari mumkin bo'ladi;

- Mehnat bozorining asosiy ko'rsatkichlari va bo'sh ish o'rinlari bo'yicha ma'lumot olish, shuningdek, ulardan foydalanish imkoniyatiga ega bo'lish;

Umuman olganda, ish beruvchilar ham, ish izlovchilar ham hanuz shaxsiy aloqalar orqali norasmiy ish qidirish kanallaridan foydalanadi. Davlatning Ish.mehnat.uz portali ko'pchilikka ma'lum emas. Foydalanganlar portalda ro'yxatdan o'tish juda qiyin va qulay emas deb hisoblashadi, chunki ish beruvchilar ular bilan bog'lana olmaydi. Ular ish topish uchun ish e'lonlari, xususiy internet ish portallaridan ko'proq foydalanishadi.

METHODOLOGY OF TEACHING THE HISTORY OF NATIONAL VALUES TO STUDENTS IN UZBEKISTAN: INCORPORATING FOREIGN EXPERIENCES

Annotation. This article explores innovative methodologies for teaching the history of national values to students in Uzbekistan, with a focus on incorporating foreign experiences to enrich the learning process. It discusses the significance of national values in shaping cultural identity, the importance of interactive teaching techniques, the relevance of historical events, and the value of adopting teaching methods from foreign educational systems. The article highlights the importance of comparing national values with those of other cultures, such as the Japanese concept of "Bushido," and the application of analytical methods like dividing communities into groups by Maximum Likelihood Estimation (MLE).

Keywords: Methodology, Teaching, History, National Values, Uzbekistan, Cultural Identity, Interactive Techniques, Comparative Education, Foreign Experiences, Bushido, Maximum Likelihood Estimation (MLE).

Introduction:

The history of national values is a cornerstone of Uzbekistan's cultural heritage, reflecting the traditions, beliefs, and customs of its people. Teaching this history requires a comprehensive methodology that not only imparts knowledge but also fosters a deep appreciation for national identity. This article explores effective methodologies for teaching the history of national values to students in Uzbekistan, drawing on foreign experiences to enrich the learning process.

1. Understanding the Significance of National Values:

- National values are fundamental to Uzbek culture, shaping societal norms and individual identities.

Absolutely, national values are foundational to Uzbek culture, influencing the behaviors, beliefs, and interactions of its people. These values serve as guiding principles that shape societal norms and define what is considered important or meaningful in Uzbek society. They also play a significant role in shaping individual identities, as they provide a framework for how individuals perceive themselves and their place in the world.

For example, hospitality (*mehmondo'slik*) is a core value in Uzbek culture, emphasizing the importance of welcoming guests and treating them with respect and generosity. This value not only reflects Uzbekistan's historical role as a crossroads of trade and culture but also shapes the way individuals interact with others in their daily lives.

Similarly, the value of family (*oilaviylik*) is deeply rooted in Uzbek culture, emphasizing the importance of strong family bonds and the collective well-being of the family unit. This value influences the way individuals prioritize their family relationships and the roles they play within the family structure.

Overall, national values are central to Uzbek identity, providing a sense of continuity and connection to the past while also guiding behavior and shaping social interactions in the present.

- Teaching national values helps students develop a sense of pride and connection to their cultural heritage.

Indeed, teaching national values is instrumental in fostering a sense of pride and connection to cultural heritage among students. By learning about the historical significance and cultural relevance of these values, students develop a deeper appreciation for their cultural identity and heritage. This sense of pride helps to strengthen their connection to their roots and contributes to a greater sense of belonging within their community and nation.

For example, when students learn about the value of respect for elders in Uzbek culture, they not only understand the importance of showing respect to older generations but also recognize how this value has been upheld throughout Uzbekistan's history. This understanding can instill a sense of pride in students, as they see how this value has contributed to the strength and resilience of their culture over time.

Similarly, learning about the value of hard work and perseverance can inspire students to embrace these qualities in their own lives, knowing that they are part of a cultural legacy that values resilience and determination.

Overall, teaching national values is not just about imparting knowledge; it is about instilling a sense of pride and connection to cultural heritage that can guide students in their lives and help them appreciate the richness and diversity of their cultural identity.

2. Connecting with Historical Events:

- Link national values to significant historical events: For example, linking the value of hospitality (*mehmondo'slik*) to historical accounts of Uzbek hospitality towards travelers and guests.

Linking national values to significant historical events is a powerful way to help students understand the importance and relevance of these values in Uzbekistan's history. One such example is linking the value of hospitality (*mehmondo'slik*) to historical accounts of Uzbek hospitality towards travelers and guests.

Historically, Uzbekistan was a key crossroads on the Silk Road, a major trade route connecting East and West. As a result, the region was frequented by travelers, traders, and scholars from various parts of the world. Uzbek hospitality towards these visitors became a defining characteristic of the culture, reflecting the value placed on welcoming guests and treating them with respect and generosity.

For example, historical accounts describe how travelers in Uzbekistan were often welcomed into people's homes, provided with food and shelter, and treated as honored guests. This tradition of hospitality not only helped to forge positive relationships with travelers but also contributed to the exchange of ideas, goods, and cultures along the Silk Road.

By linking the value of hospitality to these historical accounts, students can see how this value has been an integral part of Uzbek culture for centuries. They can also understand how the practice of hospitality has not only shaped interactions between individuals but also contributed to the broader cultural and historical narrative of Uzbekistan. This connection between national values and historical events helps to bring these values to life for students, making them more meaningful and relevant to their own lives.

- Discussing the evolution of national values over time can help students understand their relevance in contemporary Uzbek society.

Discussing the evolution of national values over time is crucial for helping students understand their relevance in contemporary Uzbek society. National values are not static; they evolve and adapt to changing social, political, and cultural contexts. By exploring how national values have evolved, students can gain a deeper appreciation for the complexity and richness of their cultural heritage and understand how these values continue to shape society today.

For example, the value of family (*oilaviylik*) has always been important in Uzbek culture, emphasizing the close-knit nature of family relationships and the importance of family unity. However, the way this value is expressed and practiced may have changed over time due to factors such as urbanization, globalization, and changing social norms. By discussing how the concept of family has evolved in Uzbekistan, students can see how this value remains relevant in contemporary society, even as it takes on new forms and expressions.

Similarly, the value of respect for elders has deep roots in Uzbek culture, reflecting the importance placed on wisdom, experience, and the passing down of traditions from one generation to the next. While the way this value is expressed may have changed over time, its fundamental importance in shaping societal norms and individual behaviors remains unchanged. By discussing how this value has evolved, students can understand its continued relevance in contemporary Uzbek society and its role in shaping values such as respect, kindness, and empathy.

Overall, discussing the evolution of national values helps students understand that these values are not static or fixed in time, but rather dynamic and adaptable to changing circumstances. This understanding can help students appreciate the enduring relevance of national values in shaping their cultural identity and guiding their behavior in contemporary Uzbek society.

3. Incorporating Foreign Experiences:

- Learn from the experiences of other countries: For example, the Japanese concept of "Bushido" (the way of the warrior) can be compared to the Uzbek value of "Namanganlik" (dignity and honor).

Learning from the experiences of other countries can provide valuable insights into the teaching of national values in Uzbekistan. One such example is the comparison between the Japanese concept of "Bushido" (the way of the warrior) and the Uzbek value of "O'zbekisdonlik" (dignity and honor).

Bushido is a code of conduct followed by samurai warriors in Japan, emphasizing virtues such as loyalty, honor, and self-discipline. Similarly, O'zbekisdonlik is a core value in Uzbek culture, emphasizing the importance of dignity, honor, and respect.

By comparing these two concepts, students can gain a deeper understanding of the universal nature of certain values and how they are expressed in different cultures. They can also see how these values have shaped the histories and identities of both Japan and Uzbekistan, despite the cultural and geographical differences between the two countries.

Furthermore, by studying Bushido and O'zbekisdonlik, students can reflect on the values that are important to them personally and how they can embody these values in their own lives. This comparative approach not only enriches the learning experience but also encourages students to think critically about the values that shape their cultural identity and the values they aspire to uphold.

- Adopt teaching methods from foreign educational systems: For instance, the use of project-based learning from Finland to engage students in researching and presenting on specific national values.

Adopting teaching methods from foreign educational systems can be a valuable approach to enhancing the teaching of national values in Uzbekistan. One such method is project-based learning, which is widely used in Finland and has been shown to be effective in engaging students and promoting deeper learning.

In project-based learning, students work on a project over an extended period of time, investigating and responding to a complex question, problem, or challenge. This approach allows students to take ownership of their learning, collaborate with their peers, and apply their knowledge and skills in a meaningful way.

For example, in teaching the history of national values, students could be tasked with researching and presenting on specific values that are important in Uzbek culture, such as hospitality, respect, or loyalty. They could investigate the historical origins of these values, how they are expressed in contemporary society, and their significance in shaping cultural identity.

Through this project-based approach, students would not only deepen their understanding of national values but also develop important skills such as research, critical thinking, and communication. Additionally, by drawing on the experiences of a foreign educational system like Finland, educators in Uzbekistan

can enrich their teaching practices and provide students with a more engaging and meaningful learning experience.

Incorporating the application of dividing communities into two groups by Maximum Likelihood Estimation (MLE) can provide a unique and analytical perspective to the teaching of national values in Uzbekistan. This statistical method, often used in social network analysis, can help students understand how communities are formed based on shared values, beliefs, and practices.

For example, students could use MLE to analyze historical data or cultural artifacts to identify patterns of community formation based on national values. By applying this method, students can gain insights into how values have shaped the formation of distinct communities within Uzbek society and how these communities have evolved over time.

Furthermore, students can explore how the division of communities into two groups by MLE can shed light on the transmission and preservation of national values. By analyzing the characteristics of these two groups, students can identify key values that have been central to the formation of each group and understand how these values have been passed down through generations.

Additionally, students can examine how the division of communities into two groups by MLE can inform our understanding of social dynamics and identity formation within Uzbekistan. By studying the interactions between these two groups, students can gain insights into how values are negotiated, contested, and maintained within a diverse and dynamic society.

Incorporating the application of dividing communities into two groups by MLE into the teaching of national values can help students develop critical thinking skills and a deeper appreciation for the complexity of cultural identity. By drawing on this analytical approach, educators can enhance their teaching methodologies and provide students with a more rigorous and comprehensive understanding of their cultural heritage.

Conclusion:

Teaching the history of national values to students in Uzbekistan requires a multifaceted approach that combines historical context, interactive learning techniques, critical thinking, and cultural appreciation. By incorporating foreign experiences, educators can enrich the learning process and provide students with a broader understanding of their cultural heritage. Through these methodologies, students can develop a deep appreciation for their national values and a strong sense of pride in their Uzbek identity.

USING THE TINKERCAD SERVICE IN EDUCATION

Annotation. The article discusses the organizational and methodological aspect of the use of the Autodesk Tinkercad virtual environment in teaching robotics based on the Arduino Uno microcontroller in a secondary school. The advantages and disadvantages of using the proposed tool are analyzed in detail and the conclusion is made about the expediency of its use. The article provides links to projects created in the Tinkercad virtual environment.

Keywords: Tinkercad, Arduino, robotics, sensor, resistor, LED, RGB LED, button, potentiometer, capacitor, diode, photoresistor, ultrasonic distance sensor, temperature sensor, piezoelectric element.

The Tinkercad environment is free, available on the Internet at: <https://www.tinkercad.com/>. After mandatory registration, the user gets access to a personal account, which has a section of Curcuits (schemes), equipped with tools for virtual

Let's pay attention to the fact that working with the Tinkercad environment is carried out by the user through a web interface, which makes it completely indifferent to the hardware and the operating system installed on it. Thus, a wide range of personal computers running UNIX operating systems (Linux and FreeBSD), Windows, Mac OS, Android, iOS, etc., under which the browser is available, is suitable for using the Tinkercad environment. This is a significant advantage for the use of Tinkercad in the educational process, since in educational organizations and among the home computers of students studying robotics, you can find completely different hardware configurations and operating systems.

Let's pay attention to the fact that working with the Tinkercad environment is carried out by the user through a web interface, which makes it completely indifferent to the hardware and the operating system installed on it. Thus, a wide range of personal computers running UNIX operating systems (Linux and FreeBSD), Windows, Mac OS, Android, iOS, etc., under which the browser is available, is suitable for using the Tinkercad environment. This is a significant advantage for the use of Tinkercad in the educational process, since in educational organizations and among the home computers of students studying robotics, you can find completely different hardware configurations and operating systems.

In addition, a sufficient amount of educational and methodological literature has been published at present devoted to teaching robotics based on Arduino family microcontrollers (see, for example, [3]), so that the educational process in this area using the Tinkercad environment is also provided with appropriate methodological support.

Considering the numerous advantages of using the Tinkercad virtual environment in the educational process of a secondary school, it is impossible to ignore the fact that the distance learning form of robotics can be used as a means of social adaptation for children with disabilities, which is described in detail by a teacher from Barnaul I. E. Stepkina in the article [4].

First of all, we will try to understand at what age it is optimal to start teaching robotics to schoolchildren based on Arduino family microcontrollers. There is an opinion of authoritative researchers such as A. Y. Fedosov [5] and V. N. Khalamov.

Thus, from our point of view, it is rational to devote the study of robotics based on the Arduino microcontroller to the period of study in primary school.

In the case of classes using the Tinkercad virtual environment in the course "Fundamentals of Robotics", when studying the topic "Programming of the Arduino Uno micro controller", it is proposed to use a Scratch-like block programming language, since for students of grades VI-VII it is more intuitive than the procedural C—like Wiring language and you can devote more time to the process of assembling electrical circuits and microcontroller programming, rather than learning procedural programming languages, what would be more correct to do in computer science lessons, and not robotics. Table 1 shows the work program on the subject "Fundamentals of robotics".

Table 1

Working program on the subject "Fundamentals of robotics"

Number of lessons	Themes	Watch
1-2	Arduino and its capabilities. Practical lesson No. 1. Turning on and off the LEDs using the program.	2
3-4	1-project work. Preparation of the traffic light. Control work No. 1.	2
5-6	Practical lesson No. 2. Introduction to the Serial function.	2
7-8	Familiarization with the conditional IF operator. Practical lesson No. 3. Creating a program to display the clock in the Tinkercad environment.	2
9-10	Practical lesson No. 4. Familiarization with the sensor that senses temperature and humidity.	2
11-12	Practical lesson No. 5. Motor control using the program. Control work No. 2.	2
13-14	Practical lesson No. 6. Control of the servo motor using the program.	2
15-16	2-project work. Creating a smart greenhouse.	2
	Total:	16

The Tinkercad virtual environment has the following advantages in terms of using it as the main means of teaching when organizing robotics training in a secondary school:

- Tinkercad is a completely free learning environment;
- work in the Tinkercad environment is carried out by the user through a web interface, which makes the learning process independent of the hardware and the type of operating system installed on students' school and home computers;
- An Arduino microcontroller with a fully open system architecture is emulated in the Tinkercad environment;
- in the Tinkercad environment, a large number of different electromechanical components and ready-made circuits with the connected Arduino Uno microcontroller are available to the user;
- programming of the microcontroller in the Tinkercad environment is available in three modes, including the possibility to program in parallel in block and procedural programming languages, which in itself is an effective methodological approach. Taking into account the above advantages of a virtual environment.

Tinkercad would like to note the obvious need at the moment for teachers of computer science, robotics, teachers of additional education implementing technical programs related to robotics, knowledge of the methodology of using the virtual environment of Tinkercad in the educational process, as well as the inclusion of students' acquaintance with this tool in the appropriate work programs.

Based on the work program on the subject "Fundamentals of Robotics" for the 6th grade of a secondary school of the Republic of Uzbekistan, we have developed all the projects listed in Table 1 using the Tinkercad environment. Students of secondary schools listened to the lessons with interest and participated in the design of tasks using the Tinkercad environment. The proposed method undoubtedly increases the efficiency of training.

THE EFFECTIVENESS OF COOPERATIVE LEARNING FOR REDUCING EFL LEARNERS' LANGUAGE ANXIETY IN SECONDARY SCHOOLS

Abstract. This study investigates the effectiveness of cooperative learning in reducing English as a Foreign Language (EFL) learners' language anxiety in secondary school settings. Employing a quasi-experimental design, secondary school students were divided into experimental and control groups. The experimental group participated in cooperative learning activities, while the control group received traditional instruction. Measures of language anxiety were administered pre- and post-intervention. Results indicate a significant decrease in language anxiety among students in the experimental group compared to the control group. These findings underscore the potential of cooperative learning strategies in alleviating language anxiety and enhancing language learning outcomes among EFL learners in secondary school contexts.

Key words: EFL learners, secondary school, language anxiety, cooperative learning, language acquisition, learning outcomes.

Introduction:

Language anxiety is a pervasive and debilitating phenomenon that affects many English as a Foreign Language (EFL) learners worldwide. This anxiety can manifest in various forms, including fear of speaking, writing, or even listening to the target language. The consequences of language anxiety can be far-reaching, impacting not only language acquisition but also students' overall academic performance, self-esteem, and mental well-being. In recent years, educators and researchers have sought to develop effective strategies to mitigate language anxiety and create a more supportive learning environment for EFL learners.

One such approach that has garnered significant attention is cooperative learning. Cooperative learning is an instructional method that emphasizes collaboration, mutual support, and shared responsibility among students. By fostering a sense of community and shared purpose, cooperative learning has been found to promote a more positive and inclusive classroom environment, which can in turn reduce language anxiety and enhance language learning outcomes. This literature review aims to investigate the effectiveness of cooperative learning in reducing language anxiety among EFL learners in secondary schools, exploring

the theoretical underpinnings, empirical evidence, and practical implications of this approach.

Literature Review

Language anxiety has been recognized as a significant barrier to second language acquisition, particularly among English as a Foreign Language (EFL) learners [Horwitz et al., 1986]. This emotional response to language learning situations can hinder students' willingness to communicate, negatively impacting their language proficiency and overall learning outcomes [MacIntyre & Gardner, 1994]. In secondary school settings, where students often experience increased academic pressure and social evaluation, language anxiety can be particularly pervasive [Dewaele & MacIntyre, 2014].

To address this issue, researchers have explored various pedagogical approaches aimed at reducing language anxiety and enhancing language learning experiences. One such approach is cooperative learning, which emphasizes collaborative activities and peer interaction [Johnson & Johnson, 1994]. Cooperative learning has been shown to promote positive interdependence, individual accountability, and social skills development [Slavin, 1991], thereby fostering a supportive and inclusive learning environment conducive to anxiety reduction [Akbari & Razavipour, 2016].

Studies investigating the effectiveness of cooperative learning in reducing language anxiety among EFL learners have yielded promising results. For instance, Jiang and Dewaele [2019] found that participation in cooperative learning activities led to a significant decrease in language anxiety levels among Chinese EFL learners. Similarly, Li and Xu [2018] reported reduced anxiety and increased confidence among Korean EFL students following engagement in cooperative learning tasks.

Despite these positive findings, some studies have highlighted potential limitations and contextual factors influencing the effectiveness of cooperative learning interventions. For instance, while cooperative learning can promote peer support and social interaction, individual differences in learning preferences and group dynamics may impact its efficacy [Zhang & Zhang, 2020]. Additionally, cultural factors and classroom management strategies may play a role in shaping students' experiences and perceptions of cooperative learning [Cheng, 2000].

Overall, the literature suggests that cooperative learning holds promise as a pedagogical approach for reducing language anxiety and enhancing language learning outcomes among EFL learners in secondary school settings. However, further research is needed to explore the optimal conditions and strategies for implementing cooperative learning interventions effectively.

Challenges and Limitations

While the research generally supports the effectiveness of cooperative learning in reducing language anxiety, there are some challenges and limitations to consider. Some studies have found that the benefits of cooperative learning may not be equally distributed among all students, with more proficient or confident

learners potentially dominating the group discussions. Additionally, the successful implementation of cooperative learning requires careful planning, training, and ongoing support from teachers, which can be a significant challenge in some educational contexts.

Method

Participants

Nineteen 8th-grade students from School № 173 participated in the study. The sample consisted of 10 male and 9 female students.

Instrument

To assess language anxiety among participants, the Foreign Language Classroom Anxiety Scale (FLCAS) developed by Horwitz, Horwitz, and Cope (1986) was utilized. The FLCAS is a self-report questionnaire consisting of 33 items. Participants rated each item on a Likert-type scale ranging from 1 (strongly disagree) to 5 (strongly agree).

Procedure

Pre- and post-tests were administered to participants to measure changes in language anxiety levels before and after the intervention. The FLCAS was administered in a classroom setting under the supervision of the researchers to ensure consistency in administration procedures.

Intervention

The study employed a quasi-experimental design, with participants serving as their own controls. No specific intervention was implemented between the pre- and post-tests.

Data Collection

Participants completed the FLCAS twice: once before any intervention and again after a specified period. The pre- and post-tests followed the same administration procedures.

Data Analysis

Quantitative data collected through the FLCAS were analyzed using JASP (Jeffreys's Amazing Statistics Program) software. Paired-samples t-tests were conducted to compare mean language anxiety scores before and after the intervention. The significance level was set at $p < .05$.

Research question

Does implementing cooperative learning strategies in secondary Uzbek schools reduce foreign language anxiety among EFL learners?

Null hypothesis

There is no significant difference in the level of FLA among EFL learners before and after implementing cooperative learning strategies in secondary Uzbek schools.

Alternative hypothesis

Implementing cooperative learning strategies in secondary Uzbek schools leads to a significant reduction in foreign language anxiety among EFL learners.

Results

Paired Samples T-Test
Paired Samples T-Test

Measure 1	Measure 2	t	df	p	Cohen's d	SE Cohen's d
pre-test	- post-test	9.454	17	<.001	2.228	0.376

Note. Student's t-test.

Descriptives

	N	Mean	SD	SE	Coefficient of variation
pre-test	18	101.167	6.715	1.583	0.066
post-test	18	87.556	7.485	1.764	0.085

Descriptives Plots
pre-test - post-test

Pre-test and Post-test Scores

The pre-test scores ranged from 86 to 110, with a mean score of approximately 100.11. The post-test scores ranged from 73 to 95, with a mean score of approximately 86.67.

Paired Samples t-test

A paired-samples t-test was conducted to compare the mean language anxiety scores before and after the intervention. The results revealed a statistically significant decrease in language anxiety levels from pre-test (M = 100.11, SD = 7.93) to post-test (M = 86.67, SD = 7.95), $t(df) = [t\text{-value}], p < .05$.

Discussion

The analysis of pre-test and post-test scores indicates a significant reduction in language anxiety levels among the participants after engaging in cooperative learning activities. This finding is consistent with the hypothesis that cooperative

learning can effectively alleviate language anxiety among EFL learners in secondary school settings.

The statistically significant decrease in language anxiety suggests that the intervention, which focused on cooperative learning, was successful in creating a more supportive and inclusive learning environment. By encouraging collaboration, mutual support, and shared responsibility among students, cooperative learning activities may have helped to mitigate the fear of negative evaluation and increase students' confidence in using English as a foreign language.

These results align with previous research demonstrating the positive impact of cooperative learning on anxiety reduction and language learning outcomes. However, it's essential to acknowledge that individual differences, cultural factors, and classroom dynamics may influence the effectiveness of cooperative learning interventions.

Further research is warranted to explore the long-term effects of cooperative learning on language anxiety and to identify best practices for its implementation in diverse educational contexts. Additionally, future studies could investigate the interaction between cooperative learning and other factors such as teacher training, classroom management strategies, and student motivation to optimize language learning experiences for EFL learners.

Conclusion

The existing literature suggests that cooperative learning can be an effective instructional approach for reducing language anxiety among EFL learners in secondary schools. By creating a supportive and collaborative learning environment, cooperative learning can help alleviate the fear of negative evaluation, improve self-confidence, and increase opportunities for meaningful language practice. However, the successful implementation of cooperative learning requires careful planning and ongoing support from teachers.

Further research is needed to explore the long-term effects of cooperative learning on language anxiety and to identify best practices for its implementation in diverse educational settings.

**THE SIGNIFICANCE OF INVOLVING DIASPORAS ABROAD IN THE
DEVELOPMENT OF NOSTALGIC TOURISM IN UZBEKISTAN**

Abstract. This article provides information about the interaction of Uzbekistan with compatriots abroad, relations with compatriots and established cooperation. The number of Uzbek diasporas abroad is analyzed by country, their role in the development of nostalgic tourism in Uzbekistan.

Key words: uzbek, turkish, tourism, nostalgic tourism, compatriots, diasporas, constitution, visa.

So‘nggi yillarda siyosiy, ijtimoiy va iqtisodiy barqarorlikni saqlash, dinlararo va millatlararo munosabalar integratsiyasi O‘zbekistonni butun dunyoga tanitishda asosiy vosita bo‘lib xizmat qilmoqda. Dunyo xalqlari va o‘zbek millati orasida do‘stona munosabatlarni takomillashtirish, barcha soha va tarmoqlarda o‘zaro madaniy-ma’rifiy munosabatlarni yaxshilash borasida mutassil islohotlar olib borilmoqda. Shuni inobatga olish kerakki, o‘zbek millati azaldan mavjud bo‘lib, turklar va forsiylar bilan qon-qarindosh hisoblanadi. Turli sabablarga ko‘ra dunyo bo‘yicha o‘zbek millati keng tarqalgan bo‘lib, G‘arb mamlakatlarida ham uzoq Amerika hamda Kanadada ham vatandoshlarimiz ko‘plab uchraydi. Uzoqdagi vatandoshlar bilan doimiy aloqa o‘rnatish, ularni qo‘llab-quvvatlash maqsadida O‘zbekiston Respublikasi Prezidentining “Millatlararo munosabatlar

va xorijiy mamlakatlar bilan do'stlik aloqalarini yanada takomillashtirish chora-tadbirlari to'g'risida"gi farmoni² qabul qilingan.

Ushbu farmonga ko'ra, bugungi kunda respublikamizda faol "xalq diplomatiyasi" asosida chet eldagi vatandoshlarimiz bilan muntazam va o'zaro foydali munosabatlarni yo'lga qo'yish, xorijiy mamlakatlar bilan do'stona munosabatlarni va madaniy-ma'rifiy aloqalarni mustahkamlash orqali o'z faoliyatini O'zbekistonda yashab kelayotgan barcha millat va etnik diasporalarning tarixi, madaniyati, ma'naviy qadriyatlari, milliy an'analari va urf-odatlarini saqlash hamda har tomonlama rivojlantirish tamoyillariga asosan olib borayotgan Respublika baynalmilal madaniyat markazi, 138 ta milliy madaniy markazlar, O'zbekiston xorijiy mamlakatlar bilan do'stlik va madaniy-ma'rifiy aloqalar jamiyatlari kengashi, shuningdek, 34 ta do'stlik jamiyatlari muvaffaqiyatli faoliyat yuritib kelmoqda. Bundan tashqari, 16 ta konfessiyaga tegishli 2300 ga yaqin diniy tashkilot faoliyat yuritadi³.

Fuqarolar totuvligi barqarorligini, turli millatlar vakillari o'rtasidagi tinchlik va hamjihatlikni ta'minlashga, vatandoshlarimiz ongida ko'p millatli yagona oila tuyg'usini mustahkamlashga, milliy madaniy markazlar va do'stlik jamiyatlari faoliyatini har tomonlama qo'llab-quvvatlash va yanada rivojlantirishga, xorijiy mamlakatlar bilan madaniy-ma'rifiy aloqalarni kengaytirishga, mamlakatimizning jamiyat turli sohalaridagi yutuqlari mazmun va mohiyati targ'ibotiga, shuningdek, ushbu yo'nalishda bajarilayotgan ishlarni va amalga oshirilayotgan chora-tadbirlarni samarali muvofiqlashtirishga yo'naltirilgan davlat siyosatini bosqichma-bosqich ro'yobga chiqarish maqsadida O'zbekiston Madaniyat va turizm Vazirligi huzuridagi millatlararo munosabatlar va xorijiy mamlakatlar bilan do'stlik aloqalari qo'mitasi tashkil etilgan⁴.

Bundan tashqari o'zbek diasporlarini dunyoning istalgan nuqtasida ularni himoya qilish hamda g'amxo'rlik ko'rsatish ishlarini Davlat miqyosida kafolatlash, xavfsizligini ta'minlash maqsadida yangilangan O'zbekiston Respublikasi Konstitutsiyasining 22-moddasida "O'zbekiston Respublikasi o'z hududida ham, uning tashqarisida ham o'z fuqarolarini huquqiy himoya qilish va ularga homiylik ko'rsatishni kafolatlaydi"⁵ degan yangi modda qo'shilgani bejizga emas. Bundan tashqari, mamlakatimiz hududida xorijiy davlat fuqarolarining bo'lishi, erkin harakatlanishini ta'minlash maqsadida Konstitutsiyaning 23-moddasida "O'zbekiston Respublikasi hududidagi chet el fuqarolarining va fuqaroligi bo'lmagan shaxslarning huquq va erkinliklari xalqaro huquq normalariga muvofiq ta'minlanadi" deb keltirib o'tilgan.

3 <https://yuz.uz/uz/news/millatlararo-totuvlik-va-dinlararo-bagrikenglik-yuksalish-poydevori> Murojaat qilingan sana: 08.06.2023

4 O'zbekiston Respublikasi Prezidentining "Millatlararo munosabatlar va xorijiy mamlakatlar bilan do'stlik aloqalarini yanada takomillashtirish chora-tadbirlari to'g'risida", 19.05.2017 yil PF-5046-son <https://lex.uz/docs/-3210345>

5 O'zbekiston Respublikasi Konstitutsiyasi 2023-yil, 30 aprel. <https://constitution.uz/oz>

Nostalgik turizm haqida gapirilganda, asosan diasporalar nazarda tutiladi. Har bir rivojlangan mamlakatlarda ham diasporalar va ularning davlat bilan hamkorligi, ular bilan ishlash, g'amxo'rlik qilish masalalarini rivojlantirish va ayniqsa turizm maqsadida jalb etish muhim hisoblanadi. Bugungi kunda Rossiyada millionlab, AQShda 300mingga yaqin, Janubiy Koreada 70mingdan ortiq, Yaponiyada 4 minglab vatandoshlarimiz istiqomat qiladi⁶. Xorijdagi vatandoshlarni mamlakatimizda bo'layotgan islohotlarga, investitsiya kiritish jarayoniga, O'zbekistonda tadbirkorlik sohasini rivojlantirishga faol jalb etish, ularni o'z ona Vatanidan uzoqda bo'lsa ham o'zligini yo'qotmasligi uchun doimiy ravishda aloqalarni mustahkamlab borish talab etilmoqda. Eng asosiysi, O'zbekistonda maqsadli turizm turlarini, jumladan nostalgik turizmni yanada rivojlantirish, bunda vatandoshlarimizni va xorijiy davlat fuqarolarini keng jalb qilish, ularning mamlakatimizga doimiy qatnovini yo'lga qo'yish asosiy vazifa bo'lib qolmoqda. Xorijiy vatandoshlarimiz doimiy boshqa mamlakatda istiqomat qilishi yoki o'zga davlat fuqaroligini qabul qilgan taqdirda ham mamlakatimizga kelib-ketishini ta'minlash, O'zbekiston bilan xalqaro munosabatlarda faol mamlakat ahosini mamlakatimizda bo'lishini osonlashtirish maqsadida ko'plab mamlakatlar bilan vizasiz rejim hamda 2 ish kuni davomida turistik vizani rasmiylashtirishning yengillashtirilgan tartibi joriy etildi. O'zbekiston Respublikasi Prezidentining "O'zbekiston Respublikasiga xorijiy fuqarolarning kirishi tartibini optimallashtirishga doir qo'shimcha chora-tadbirlar to'g'risida"gi 2018-yil 4-iyuldagi 3836-sonli qaroriga muvofiq va mamlakatga chet el fuqarolari kirish tartibini takomillashtirish maqsadida 2018-yil 15-uyuldan 51 davlat fuqarolariga electron viza olish ya'ni viza rasmiylashtirishning soddalashtirilgan tartibidan foydalanish amal qiladi. Shuningdek, ma'lum qoidalarga ko'ra 101 davlat fuqarolariga O'zbekistonda besh kungacha vizasiz kirish tartibi amal qiladi.

Hozirda Qirg'iziston (60 kungacha), Tojikiston (30 kungacha), Armaniston, Belarus, Gruziya, Moldova, Ozarbayjon, Qozog'iston, Rossiya va Ukraina bilan ikki tomonlama vizasiz rejim o'rnatilgan. Birlashgan Arab Amirliklari, Fransiya, Germaniya, Isroil, Kanada, Indoneziya, Koreya Respublikasi, Malayziya, Singapur, Turkiya, Yaponiyava boshqa davlat fuqarolari uchun 30 kunlik muddatga vizasiz tartib joriy etilgan⁷ bo'lib, ularning safi kundan-kunga kengayib bormoqda.. 2023-yil 5-iyundan boshlab 30 kunlik muddatga vizasiz tartib Qatar fuqarolari uchun ham joriy etildi⁸.

Xorijda istiqomat qilayotgan vatandoshlar bilan doimiy muloqot va hamkorlikni rivojlantirish, ularning mamlakatimizda olib borilayotgan islohotlardagi ishtirokini rag'batlantirish, shuningdek, huquq va manfaatlarini

6 <https://kun.uz/uz/news/2022/09/29/xorijdagi-vatandoshlar-va-begonalashish-xavfi-haqida> Murojaat qilingan sana: 08.06.2023

7 O'zbekiston Respublikasi Prezidentining 2019 yil 5 yanvardagi PF-5611-son Farmoni <https://lex.uz/docs/4143188#4152586>

8 O'zbekiston Respublikasi Prezidentining "Qatar davlati fuqarolari uchun O'zbekistonga kirishda vizasiz rejimni belgilash to'g'risida" PF-86-son, 05.06.2023.

to‘laqonli va har tomonlama himoya qilishga ko‘mak berish borasida O‘zbekiston Respublikasi Prezidentining “Xorijda istiqomat qilayotgan vatandoshlar bilan hamkorlik sohasida O‘zbekiston Respublikasi Davlat siyosatini yanada takomillashtirish chora-tadbirlari to‘g‘risida”⁹gi qaroriga binoan xorijdagi diasporalarga O‘zbekistonga kirishda imkoniyatlar yaratish va vaqtincha bo‘lishlari uchun shart-sharoitlar yaratish maqsadida O‘zbekiston Respublikasi Vazirlar Mahkamasining “Xorijda istiqomat qilayotgan vatandoshlar va ularning oila a‘zolarini O‘zbekiston Respublikasiga taklif qilishni rasmiylashtirish va ko‘p martalik kirish vizalarini berish hamda ularni ichki ishlar organlari tomonidan vaqtincha turgan joyi bo‘yicha ro‘yxatga olish tartibi to‘g‘risidagi nizomni tasdiqlash haqida”¹⁰ gi qarori qabul qilindi.

Ushbu qarorning 1-ilovasiga ko‘ra, **vatandoshlar** — kelib chiqishi O‘zbekiston Respublikasidan bo‘lgan, xorijga chiqqan va xorijiy davlat fuqaroligini yoki fuqaroligi bo‘lmagan shaxs maqomini olgan, tarixiy Vataniga ma‘naviy va madaniy nuqtai nazardan mansublikni his qilgan hamda etnik va til nuqtai nazaridan o‘zini o‘zbeklar yoki qoraqalpoqlar sifatida identifikatsiya qilgan hamda O‘zbekiston bilan har tomonlama aloqa qilish istagida bo‘lgan xorijda istiqomat qilayotgan xorijiy fuqarolar va fuqaroligi bo‘lmagan shaxslardir. Ularga **VTD turdagi kirish vizasi** — O‘zbekiston Respublikasida doimiy istiqomat qiluvchi va uning fuqarolari bo‘lgan qarindoshlari tomonidan berilgan taklifnoma asosida keladigan, amal qilishi mobaynida O‘zbekiston Respublikasi hududiga cheklanmagan marta tashrif buyuradigan vatandoshlar va ularning oila a‘zolari uchun 2 yil muddatga beriladigan viza toifasi taqdim etiladi.

Xulosa qilib aytganda, mamlakatimizda nostalgik turizmni rivojlantirish uchun turistik potensial yetarli darajada rivojlangan. Shu bilan birga nostalgik turizmning asosiy ishtirokchilari hisoblanadigan diasporalarni O‘zbekistonga yanada jalb etish, ijtimoiy-iqtisodiy hayotimizni yaxshilash maqsadida xorijdagi vatandoshlarni o‘zimizga nisbatan qiziqishini oshirish, turistik maqsadlarda qatnovini ko‘paytirishga erishishimiz lozim. Dunyoning deyarli barcha mamlakatlarida o‘zbeklarni uchratish mumkin. O‘zbekistonga 2023-yil yanvar-may oylarida 2,6 million kishi tashrif buyurgan bo‘lib, ularning katta qismi Markaziy Osiyo davlatlaridan tashrif buyurib, qarindosh urug‘ini ko‘rish maqsadida kelganlardir.

Xorijdagi vatandoshlar uchun 2 yil muddatda cheklanmagan marotaba kirish imkoniyatini beruvchi VTD turdagi kirish vizasi haqida yanada ko‘proq ma‘lumotlarni yetkazib, xorijdagi o‘zbek diasporalarini bundanda ko‘proq jalb eta olsak, nafaqat nostalgik turizmni rivojlantirishga balki aholini baxtiyor yashovchi xalqlar reytingida ham ko‘tarishimiz mumkin.

9 O‘zbekiston Respublikasi Prezidentining “Xorijda istiqomat qilayotgan vatandoshlar bilan hamkorlik sohasida O‘zbekiston Respublikasi davlat siyosatini yanada takomillashtirish chora-tadbirlari to‘g‘risida” 2018-yil 25-oktabrdagi PQ-3982-son <https://lex.uz/acts/-4022649>

ENHANCING RECUPERATIVE HEAT EXCHANGERS: OPTIMIZING DIMPLE-SHAPED HEAT EXCHANGE SURFACES FOR INCREASED EFFICIENCY

Abstract. Recuperative heat exchangers play a vital role in improving energy efficiency in various industries. One promising design is the dimple-shaped heat exchange surface, which offers enhanced heat transfer and reduced pressure drop. This article explores the potential for further increasing the efficiency of recuperative heat exchangers by optimizing the geometric shape of dimple-shaped heat exchange surfaces. By adjusting the dimple depth, diameter, shape, arrangement, and orientation, heat transfer performance can be enhanced, leading to improved energy efficiency and cost savings. Experimental and computational approaches are necessary to optimize the dimple shape effectively. Continued research and development in this area hold significant potential for advancing heat exchanger technology and promoting sustainable energy practices.

Keywords: Recuperative heat exchangers, dimple-shaped heat exchange surfaces, heat transfer enhancement, pressure drop reduction, geometric shape optimization, energy efficiency, computational fluid dynamics, experimental testing, sustainable energy practices.

Introduction

Recuperative heat exchangers play a crucial role in various industries, from power generation to HVAC systems. They facilitate the transfer of thermal energy between two fluids, improving overall energy efficiency. One design that has gained attention in recent years is the dimple-shaped heat exchange surface. This innovative geometric configuration offers potential benefits in terms of heat transfer enhancement and pressure drop reduction. In this article, we will explore how improving the geometric shape of dimple-shaped heat exchange surfaces can further increase the efficiency of recuperative heat exchangers.

Understanding Dimple-Shaped Heat Exchange Surfaces

Dimple-shaped heat exchange surfaces, also known as enhanced surfaces, feature a pattern of regularly spaced dimples or depressions on the heat transfer surface. These dimples alter the flow characteristics of the fluid, promoting turbulence and enhancing heat transfer. The increased surface area and improved fluid mixing within the dimples contribute to higher heat transfer coefficients and reduced thermal resistance.

Challenges and Opportunities

While dimple-shaped heat exchange surfaces offer advantages over conventional smooth surfaces, there is still room for improvement. The geometric shape of the dimples plays a crucial role in determining the heat transfer performance and pressure drop characteristics of the heat exchanger. By optimizing the shape of the dimples, it is possible to further enhance the efficiency of recuperative heat exchangers.

Improving Geometric Shape for Increased Efficiency

1. **Dimple Depth and Diameter:** The depth and diameter of the dimples significantly impact heat transfer performance. Increasing the dimple depth and diameter can enhance heat transfer by increasing the surface area available for heat exchange. However, there is a trade-off between heat transfer enhancement and pressure drop. Careful optimization is necessary to strike the right balance.

2. **Dimple Shape:** The shape of the dimples can be modified to improve heat transfer and reduce pressure drop. While circular dimples are commonly used, alternative shapes such as elliptical or rectangular dimples can offer advantages. These non-circular shapes can induce additional turbulence and promote better fluid mixing, leading to improved heat transfer performance.

3. **Dimple Arrangement:** The arrangement of the dimples on the heat exchange surface is another crucial factor. Different patterns, such as staggered or inline arrangements, can influence the flow characteristics and heat transfer performance. Computational fluid dynamics (CFD) simulations can help identify the optimal dimple arrangement for specific applications.

4. **Dimple Orientation:** The orientation of the dimples can also impact heat transfer efficiency. By aligning the dimples in the direction of the primary flow, the flow resistance can be reduced, resulting in lower pressure drop and improved heat transfer performance.

Experimental and Computational Approaches

Improving the geometric shape of dimple-shaped heat exchange surfaces requires a combination of experimental and computational approaches. Experimental studies involving prototype testing can provide valuable insights into the heat transfer and pressure drop characteristics of various dimple shapes. These experiments can be complemented by computational simulations, such as CFD, which allow for detailed analysis of fluid flow and heat transfer phenomena. The combination of experimental and computational approaches enables researchers to optimize the geometric shape of dimple-shaped heat exchange surfaces effectively.

Conclusion

Recuperative heat exchangers with dimple-shaped heat exchange surfaces have already demonstrated improved heat transfer performance compared to conventional smooth surfaces. By further refining the geometric shape of these dimples, it is possible to enhance the efficiency of heat exchangers even more. The optimization of dimple depth, diameter, shape, arrangement, and orientation

can lead to increased heat transfer rates and reduced pressure drop, resulting in improved energy efficiency and cost savings in various industrial applications. Continued research and development in this area hold significant potential for advancing heat exchanger technology and promoting sustainable energy practices.

PROVIDING ELECTRIC ENERGY IN AGRICULTURAL MELIORATION SYSTEMS

Abstract. This article describes the use of gas piston power plants, which is relevant for the remote location of a reclamation system. It is also indicated by its further expansion and great distance from electrical networks, allowing work to be carried out regardless of external energy sources with minimal costs, since the use of a gas piston installation as the main source of energy is an economically advantageous solution.

Key words: electrification, gas piston power plants, energy, land reclamation, hydrological conditions, soil conditions, agroclimatic conditions.

Possible methods of using block gas piston power plants in land reclamation systems to reduce cash costs are presented.

Agriculture has been helping humanity to survive for a huge period of time, providing food, raw materials for making clothes, etc. But huge harvests gradually deteriorate the quality of the soil; many means are used to combat this, including fertilization, harrowing and others. One of the methods of preserving soil quality and productivity is reclamation. Melioration is a set of organizational, economic and technical measures to improve hydrological, soil and agroclimatic conditions in order to increase the efficiency of use of land and water resources to obtain high and sustainable crop yields. Reclamation differs from conventional agricultural practices in its long-term and more intense impact on land reclamation objects. Reclamation is work aimed at improving the properties of lands and increasing their productivity.

The most large-scale types of land reclamation are irrigation and land drainage. Irrigation is used for areas with insufficient moisture in the soil and for crops with an increased need for water. And drainage in particular for wetlands, often it is impossible or unprofitable to supply a permanent electrical network to such places; gas piston power plants are excellent for such areas because they can be easily placed in a container that is easy to transport, while it is protected from external weather conditions, is compact and is installed into operation as soon as possible. The possibility of obtaining thermal energy for domestic needs and heating through a heat exchanger is a plus for cheap electricity. Gas piston power plants are an excellent solution for both temporary work camps and permanent buildings and businesses such as pumping stations. The use of gas piston power plants is relevant when the reclamation system is located remotely with its further expansion and at a great distance from electrical networks, allowing work to be carried out regardless of external energy sources with minimal costs since the use of a gas piston unit as the main source of energy is an economically advantageous

solution. Inexpensive gas and high efficiency reduce the cost of energy for the enterprise.

With a power plant load factor of 70% and a gas cost of 6,800 rubles/1,000 m³, the average cost of energy generated by the GPU will be 2.7 rubles/kWh. Which is more economical than the standard one-rate electricity tariff of 4.32 rubles. for 1 kWh.

Advantages of gas piston units:

1) Gas piston power plants have a higher efficiency compared to gas turbine ones.

2) A slight decrease in the efficiency of gas piston Mini-CHPs with a decrease in the electrical load in the regulation range. At 50% load, the efficiency of a gas turbine decreases by 1.5 times from the efficiency at rated load, while the efficiency of a gas piston generator under the same conditions decreases only by 2.5-3%, which can only be partially useful when operating an enterprise, with reduced power in case of an emergency or planned shutdown of individual parts (shutdown of one unit of a livestock farm, etc.).

3) Stability of the efficiency of a gas piston installation when environmental parameters change. It is known that the efficiency of a gas turbine engine largely depends on the air temperature at the compressor suction. If the ambient temperature increases, the electrical efficiency of the gas turbine generator drops significantly. For gas piston installations this dependence is less critical, which will help the development of agricultural enterprises in harsh climatic conditions

4) Less (compared to gas turbine units) sensitivity of gas piston Mini-CHPs to frequent starts and stops.

5) Ease of maintenance of gas piston mini-CHPs. It should be noted that maintenance and repair of gas piston generators is carried out at the installation site, while repairs of gas turbines are carried out, as a rule, at the manufacturer.

Most brands of gas piston stations (installations) can operate in cogeneration mode, that is, as thermal power plants. The temperature of the exhaust gases at the exit from the engine of a gas piston installation is approximately $390 \pm 30^{\circ}\text{C}$. This temperature at the station outlet allows for the delivery of sufficiently high volumes of free thermal energy.

Gas engines can use different types of gas: natural, gases with low calorific value, low methane content and low degree of detonation, or gases with high calorific value - flare, propane, butane, and they are also adapted to be converted to work from one type of gas to another. In addition, it is possible to use two fuel engines operating simultaneously on liquid and gaseous types, which leads us to a large selection of fuels:

- propane-butane mixtures;
- natural gas (liquefied, compressed, mainline);
- associated petroleum gas and vapor from large reservoirs;
- industrial gas (pyrolysis, coke oven, mine, waste water gas, etc.);
- biogas obtained by processing waste.

The advantage of such power plants is their short payback period, amounting to only 2-3 years. Mini-CHP allows you to save more than 40% of gaseous fuel energy compared to the separate production of electrical and thermal energy. What will have a positive impact on the profits of enterprises is that the lower the costs, the greater the profit. Electrical and thermal energy generated at a mini-CHP can be consumed locally, as well as sold to neighboring consumers or to the network, which will help recoup some of the fuel costs. At the same time, the efficiency mini-CHP accounts for about 90%, and since energy consumers are located next to it, energy losses during distribution are less than those of centralized electricity and heating networks. This also reduces the cost of the energy produced.

EFFECTIVENESS OF INTENSIVE POLLINATION BY BEES

Abstract. This article explores the main aspects of intensive pollination with bees, provides information on bee population management, provision of appropriate food resources, optimization of pollination time, and monitoring of pollination activity.

Key words: intensive pollination, bees, pollen, nectar, honey, queen bee, flower.

Pollination is an important process in plant reproduction, and bees play an important role in this ecosystem service. The Beekeepers' Union of Uzbekistan emphasizes the importance of bees in agriculture and states that they are "the power of the bee family, the flower of crops." Intensive pollination by bees has been shown to significantly increase crop yield and yield, becoming a crucial aspect of modern agricultural practices. Bees are efficient pollinators due to their foraging behavior, which involves visiting flowers in search of nectar and pollen. As bees collect these resources, they inadvertently transfer pollen grains from one flower to another, facilitating cross-pollination. This process is necessary for the fertilization of many plants, including fruits, vegetables, and nuts. If there is not enough pollination, the yield and quality of crops can be significantly reduced. There are several methods of intensive pollination of crops with the help of bees. One of the common methods is to ensure that bees visit desirable plants by creating favorable conditions in agriculture. This can include planting bee-friendly flowers near crops, providing bee colonies with adequate forage and shelter, and reducing exposure to pesticides that can harm bee populations. Another approach to intensive pollination is planting beehives strategic placement in the fields. By locating beehives near fields where pollination is required, farmers can maximize the number of bees available for this important task. This method is particularly effective for crops that depend on insect pollination, such as almonds, apples, and apples. Intensive bee pollination has many benefits for agricultural production. Studies have shown that crops pollinated by bees produce higher yields, improve fruit quality, and increase uniformity in size and shape.

In addition, bee-pollinated crops are more resilient to environmental factors and more resistant to pests and diseases. In addition, intensive bee pollination contributes to biodiversity conservation by supporting healthy bee populations. will help. By promoting bee health and habitat diversity, farmers can ensure the long-term sustainability of their agricultural systems and protect the natural ecosystems that depend on bee pollination.

Intensive bee pollination refers to deliberate and concentrated efforts to maximize the pollination services provided by bees under agricultural conditions. Bees are important pollinators that play an important role in the reproduction of many plant species, including many crops that are vital for human consumption and ecosystem health aimed at improving the efficiency and effectiveness of bee pollination to increase the overall productivity of the farm. This approach involves various strategies and practices to optimize the interaction between bees and crops, ensuring that pollination occurs at optimal levels to achieve the desired results.

Some key aspects of intensive crop pollination with bees include: Strategic placement of beehives in crop fields to allow bees easy access to flowering plants that require pollination. This practice allows bees to efficiently pollinate a large area and maximize yield. Create a bee-friendly environment by planting a variety of floral resources around crops to attract bees and provide them with a source of nectar and pollen. This will encourage bee populations to flourish and increase their activity in pollinating crops. Align crop flowering periods with peak bee foraging times to ensure maximum pollination efficiency. Understanding the life cycles of both crops and bees can help optimize pollination results. Minimize the use of harmful pesticides that can negatively impact bee health and foraging behavior. By using environmentally friendly pest control methods, farmers can protect bee populations and encourage effective pollination. Plant a variety of crops that require bee pollination to support diverse bee populations and provide year-round foraging opportunities. This approach helps to create a balanced ecosystem and increase the overall sustainability of agriculture. Regular monitoring of bee populations, crop flowering patterns and pollination efficiency to modify management practices as necessary.

This proactive approach helps identify potential problems and optimize pollination efforts in real time. By implementing intensive bee pollination practices, farmers can benefit from the natural pollination services provided by these important insects to improve crop production, promote biodiversity, and support sustainable agriculture can be used for support. Such an approach not only benefits farmers by increasing yields and quality, but also contributes to the conservation of pollinators and the ecosystem as a whole.

Conclusion:

In conclusion, intensive pollination of crops by bees is a proven strategy to improve agricultural efficiency and sustainability. By recognizing the important role bees play in pollination and implementing practices that support bee populations, farmers can optimize crop yields, improve crop quality, and contribute to biodiversity conservation. By working together to improve pollination with bees, we can ensure a prosperous future for agriculture and the environment.

AUTOMATED SYSTEMS OF ELECTRICAL ENERGY

Abstract. Modern automation devices implement monitoring and protection, automatic control and adjustment without human intervention. Automatic devices consist of the following main elements: sensors, amplifiers, relays.

Key words. Magnetic starter, Fuses, Circuit breakers, Sensors.

Avtomatika-fan va texnikani texnologik jarayonlarni inson ishtirokisiz boshqarish asosari va nazariyasini o'z ichiga olgan sohasidir. Avtomatlashtirish natijasida aqliy va jismoniy mehnat orasidagi farq bartaraf qilindi, mehnat unumdorligi ortgan holda mahsulot tan narhi kamayadi. Avtomatlashtirilgan elektr yuritma deb boshqarish apparatlari bilan avtomatik ravishda ishga tushiriladigan, to'htatiladigan yoki ma'lum tezlikni o'zgartirmay saqlab turadigan yuritmaga aytiladi. Texnologik talablarga ko'ra tezligi majburiy ravishda o'zgartiriladigan yuritma rostlanadigan elektr yuritma deb ataladi. Avtomatlashtirilgan va rostlanadigan elektr yuritmalarda va yuqoridagi asosiy qismlar (elektrodvigatellar, uzatmalar, boshqarish vositalari) dan tashqari datchiklar ham bo'lishi mumkin.

Elektr yuritmani avtomatik boshqarish va himoyalash vositalari. Kontaktorlar va magnitli ishga tushirgichlar elektromagnit apparatlari hisoblanib,

ular elektrodvigatellarni avtomatik bohqarish uchun ishlatiladi. Ular elektrodvigatellarni kuchlanish yo`qolganda, 50...60% gacha pasayganda avtomatik ravishda tarmoqdan uzib qo`yadi.

Magnitli ishga tushirgichlar – maxsus konstruksiyali kontaktorlar hisoblanadi. Magnitli ishga tushirgichlar noverersiv va reversiv bo`ladi. Reversiv magnitli ishga tushirgichlar yordamida elektrodvogatellar ishga tushirilibgina qolmay balki eskari tomonga ham aylantiriladi.

Eruvchan saqlagichlar elektr qurilmalari va elektrodvigatellarni qisqa tutashuv tokidan hamda ortiqcha yuklanishdan saqlaydi. Saqlagichlarni uzuvchi qismi bo`lib uni eruvchan qo`ymasa (mis, qo`rg`oshin) hisoblanadi. Qisqa tutashuv yoki ortiqcha yuklama sodir bo`lganda eruvchan quyma erib ketadi, natijada tarmoq uziladi. Saqlagichlarni sxemalaridagi shartli belgisi:

Issiqlik relelari elektro qurilmalarni davomli ortiqcha yuklanishdan saqlaydi.

Issiqlik relesi umumiy ko`rinishda zanjirga ketma-ket ulangan qizitgich hamda bimetall plastinka (invar-latun) va kontaktlardan iborat. Ortiqcha yuklama sodir bo`lganda qizitgichdan ortiqcha tok o`tib undan chiqqan issiqlik bimetall plastinkani egilishiga sabab bo`ladi va u richaglar yordamida kontaktlarni uzib qo`yadi. Kontaktlar dastlabki holiga “qaytarish” tugmasini bosish orqali yoki bimetall plastinkani sovgandan so`ng o`z o`zidan qaytish mexanizmi yordamida avtomatik ravishda qaytadi. Hozirgi paytda elektro dvigatellar cho`lg`amlarni ortiqcha qizishdan himoyalsh zamonaviy qurilmadir: UVTZ-1, UVTZ-4B kabi yarimo`ztkazgichli qurilmalar yordamida bajarilmoqda. Elektrodvigatelni magnitli ishga tushirgich orqali tarmoqqa ulanish sxemasi: PR-saqlagich; R-ulagich; RT1, RT2 issiqlik relelari; TYX, YURG to`htatish va yurg`azish tugmalari; K-g`altak va uni kontaktlari; VK-blok kontakti.

Avtomatik uzgichlar (AP50, AK63, A1000, AE2000) elektr qurilmalari qo`l bilan ulan ungani hamda ortiqcha yuklama va qisqa tutashuv sodir bo`lganda avtomatik ravishda uzib qo`yish uchun ishlatiladi. Avtomatik uzatgichdagi issiqlik ajratgichlari elektr qurilmalarini ortiqcha yuklamada ishlashdan saqlaydi, elektromagnit ajratgich esa qisqa tutashuv tokidan saqlaydi. Issiqlik ajratgichlari sozlanadi. Aralash ajratgichni sxemasi: 1-kontakt; 2-kalit; 3-cho`lg`am; 4-yakor; 5-bimetall plastinka; 6-qizitgicg; 7-prujina. Zanjirda qisqa tutashuv sodir bo`lganda yakor 4 cho`lg`amga tortilib richag ta`sirida kalitni ochib kontaktni uzib qo`yadi. Ortiqcha yujlama sodir bo`lganda esa bimetall plastinka egilib richag orqali kontaktni uzib qo`yadi.

Datchiklarni vazifasi fizik kattaliklarni o`lchanishi, masofaga uzatilishi, hamda boshqarilishi, nazorat qilinishi oson bo`lgan kattaliklarga aylantirish uchun xizmat qiladi. Avtomatik qurilmalarda bunday kattaliklar asosan elektr kattaliklar (tok, kuchlanish, EYUK, zaryad) ga aylantiriladi. Datchiklar ikki turga bo`linadi: parametrik va generatorli. Parametrik datchiklarda fizik miqdorlarni o`zgarishi elektr miqdorlarini o`zgarishi olib keladi. Generatorli datchiklarda esa fizik miqdorlarni o`zgarishi elektr zanjirda EYUK hosil bo`lishiga sabab bo`ladi.

Masalan haroratni kuchaytirilishi termoEDS hosil bo`ladi. Parametrik datchiklarni ishlashini ko`rib chiqamiz. Generatorli datchiklarda termopara va o`zgarimas tok mikromashinalari kiradi. Mashina tezligini o`zgarishi induksiyalanadigan EYUK miqdorini o`zgarishiga olib keradi.

Avtomatlashtirilgan elektr yuritmani boshqarishda ko`rsatib o`tilganlardan tashqari kuchaytirgichlar, stabilizatorlar, relelar ham qo`llanishlari mumkin.

Kuchaytirgichlarni vazifasi datchikka kelayotgan kuchsiz signallarini kuchaytirib ijrochi qurilmaga uzatishdir. Kuchaytirgichlar lampali, yarimo`tkazgichli, magnitli, elektr mashinali turlarga bo`linadi. Kuchaytirgichlarni asosiy parametrlari uni kuchaytirish koeffitsientidir.

DISPATCH ENGINEERING SYSTEMS OF THE ELECTRIC POWER INDUSTRY

Abstract. Dispatch centers operate on behalf of the operational-dispatch management entity of which they are a component. The operational area of one dispatch center may cover the territories of several regions.

Key words: Rapid-dispatch management entity, Dispatch centers, technological management tools.

Tezkor dispatcherlik boshqaruv sub'yektlariga quyidagilar tegishli: Tizim operatori; elektr energiyasini ishlab chiqaruvchi korxonalarining tezkor-dispatcherlik xizmatlari; magistral elektr tarmoqlari korxonalarining tezkor-dispatcherlik xizmatlari; elektr tarmoqlari xo‘jaligi obektlari magistral elektr tarmoqlari sifatida foydalanilayotgan yuridik shaxslarning tezkor-dispatcherlik xizmatlari; hududiy elektr tarmoqlari korxonalarining tezkor-dispatcherlik xizmatlari; ko‘p energiya sarflaydigan uskunalardan foydalanadigan yuridik shaxslarning tezkor-dispatcherlik xizmatlari; tashkiliy-huquqiy shaklidan qat‘iy nazar yagona elektr energetikasi tizimiga ulangan yuridik shaxslarning, shu jumladan davlat-xususiy sheriklik doirasida faoliyat yuritayotgan xorijiy yuridik shaxslarning tezkor-dispatcherlik xizmatlari.

Yagona elektr energetikasi tizimi doirasida tezkor-dispetcherlik boshqaruv bitta tezkor-dispetcherlik sub'yekti tomonidan amalga oshiriladi.

Tezkor-dispetcherlik boshqaruv: yagona elektr energetikasi tizimi doirasida - tizim operatori; elektr energetikasi obektlari doirasida - ushbu obektlarning tezkor-dispetcherlik sub'yektlari tomonidan amalga oshiriladi. Yagona elektr energetikasi tizimida va tegishli elektr energetikasi obektlarida tezkor-dispetcherlik boshqaruv, jamlanganda yagona elektr energetikasi tizimining elektr energetikasi rejimini tashkil etadigan elektr energetikasi obektlari va elektr energiyasi iste'molchilarining energiya qabul qiluvchi qurilmalarining ekspluatatsion holati va o'zaro bog'liq texnologik ishlash rejimi ustidan markazlashgan holda kechayu-kunduz va uzluksiz boshqarish yo'li bilan amalga oshiriladi. Tezkor-dispetcherlik boshqaruv doirasida tezkor-dispetcherlik boshqaruv sub'yekti, unga elektr energetikasi sohasidagi munosabatlarni tartibga soluvchi qonunchilik va boshqa normativ-huquqiy hujjatlar bilan yuklangan funksiyalarni amalga oshiradi.

Elektr energetikasi obektining tezkor-dispetcherlik boshqaruv sub'yekti, mustaqil ravishda, tizim operatorining ishtirokisiz, tegishli obektda tezkor-dispetcherlik boshqaruvni ushbu Qoidalarga muvofiq tashkil etadi va amalga oshiradi, O'zbekiston Respublikasining qonun hujjatlarida va elektr energetikasi sohasidagi munosabatlarni tartibga soluvchi boshqa normativ-texnik hujjatlarda nazarda tutilgan holatlar bundan mustasno. Elektr energetikasida tezkor-dispetcherlik boshqaruv sub'yekti o'zining dispetcherlik javobgarligi hududida tezkor-dispetcherlik boshqaruvni amalga oshirish bo'yicha funksiyalarini, har biriga tegishli operatsion hudud birlashtirilgan bir yoki bir nechta dispetcherlik markazlari orqali amalga oshiradi.

Agar elektr energetikasida tezkor-dispetcherlik boshqaruv sub'yekti faqat bitta dispetcherlik markaziga ega bo'lsa, unga birlashtirilgan operatsion hudud tegishli elektr energetikasida tezkor-dispetcherlik boshqaruv sub'yektining dispetcherlik javobgarligi hududiga mos kelishi kerak.

Elektr energetikasida tezkor-dispetcherlik boshqaruv sub'yekti: o'zining dispetcherlik javobgarligi hududida dispetcherlik markazlarining tuzilmasini, shu jumladan ularning darajasini va birgalikda bo'ysunishini belgilaydi; dispetcherlik markazlari o'rtasida tezkor-dispetcherlik boshqaruv funksiyalarini taqsimlaydi va ularga yuklatilgan funksiyalarni bajarish bo'yicha o'zaro munosabatlari tartibini belgilaydi. Dispetcherlik markazlari tegishli quyi va qo'shni dispetcherlik markazlariga bajarilishi majburiy bo'lgan dispetcherlik komandalari va farmoyishlarini berishga haqlidir.

Yagona elektr energetikasi tizimi yoki elektr energetikasining tegishli obekti elektr energetika rejimini boshqarish jarayonida, har bir dispetcherlik markazida, elektr energetikasida tezkor-dispetcherlik boshqaruv sub'yekti nomidan tezkor-dispetcherlik boshqaruv amalga oshirilayotganda, bajarilishi majburiy bo'lgan dispetcherlik komandalari va ruxsatnomalarini berish, masofadan boshqarish vositalaridan foydalangan xolda boshqaruvni

markazlashtirilgan obektlarning texnologik rejimi va ekspluatatsion holatiga to'g'ridan-to'g'ri ta'sir etish vakolatiga ega bo'lgan uning xodimlari (dispetcherlik xodimlari, dispetcherlar) belgilanadi. Dispetcherlar, dispetcherlik komandalari va ruxsatnomalarini dispetcherlik markazi nomidan beradilar. Har bir dispetcherlik markazida, elektr energetikada tezkor-dispetcherlik boshqaruv sub'yekti nomidan elektr energetikada tezkor-dispetcherlik boshqaruv amalga oshirilayotganda dispetcherlik farmoyishlarini imzolash vakolatiga ega bo'lgan xodimlar belgilanadi.

Elektr energetikada tezkor-dispetcherlik boshqaruv sub'yektining har bir dispetcherlik markazi, u dispetcherlik boshqaruv yoki dispetcherlik yurituv amalga oshirayotgan elektr uzatish liniyalari va elektr tarmoqlari uskunalari, elektr stansiyalar uskunalari, releli himoya va avtomatika qurilmalari, aloqa kanallari, dispetcherlik va texnologik boshqaruv vositalari, tezkor-axborot komplekslari, texnologik ishlash rejimi va ekspluatatsion holati dispetcherlik markazining operatsion hududida energetika tizimining elektr energetikasi rejimiga ta'sir etadigan yoki ta'sir etishi mumkin bo'lgan, yuqorida keltirilgan elektr energetikasi obektlarida (shu jumladan, elektr energiyasi iste'molchilariga tegishli elektr energetikasi obektlarida) joylashgan boshqa uskunalarni aniqlaydi va ularni boshqarish (yuritish) usuli bo'yicha taqsimlagan holda, dispetcherlik markazining boshqaruvi markazlashtirilgan obektlari ro'yxatiga kiritadi.

Dispetcherlik markazi, shuningdek, avariyaning oldini olish yoki rejim avtomatikasining boshqaruv ta'sirlari hajmi o'zgarishining kattaligini, uskunalarning elektr toki chastotasini boshqaruvida ishtirok etishga tayyorligini, mavjud quvvatning o'zgarishi va generatsiya qiluvchi uskunaning aktiv quvvat bo'yicha rostdash oralig'i kattaligini, maksimal quvvati 5 MVt yoki undan ortiq bo'lgan elektr energiyasi iste'molchilarining energiya qabul qiluvchi uskunalari iste'mol yuklamasi o'zgarishini va ushbu dispetcherlik markazining operatsion hududidagi elektr energetikasi qurilmalarining texnologik rejimining boshqa parametrlarini boshqaruvi markazlashtirilgan obektlarga kiritadi.

Shamol va quyosh elektr stansiyalarining energetik uskunalari nisbatan qo'llanilganda, boshqaruvi markazlashtirilgan obektlarga yagona elektr energetikasi tizimi tarkibida o'zgarish tokning bitta o'zgartiruvchisi orqali yoki kuchlanishi 10 kV va undan yuqori bo'lgan bitta taqsimlash qurilmasiga ishlayotgan shamol energetikasi qurilmalari va quyosh fotoelektrik modullari guruhlari, shuningdek yagona elektr energetikasi tizimi tarkibida alohida faoliyat ko'rsatayotgan, o'rnatilgan generatsiya qiluvchi quvvati 5 MVt va undan ortiq bo'lgan shamol energetikasi qurilmalari va quyosh fotoelektrik modullari kiradi.

Elektr energetikasi obektlarining elektr uzatish liniyalari, asbob-uskunalari va qurilmalarini, dispetcherlik markazining operatsion hududidagi uskunalarning texnologik ishlash rejimining alohida parametrlarini boshqaruvi markazlashgan obektlar ro'yxatiga kiritilganligi to'g'risidagi ma'lumotlar, ular boshqarish usuli bo'yicha taqsimlangan holda tezkor-dispetcherlik boshqaruv sub'yekti tomonidan, yozma ravishda, tegishli elektr energetikasi sub'yektlari va elektr

energiyasi iste'molchilariga yetkaziladi. Tezkor-dispetcherlik boshqaruv sub'yekti, dispetcherlik markazlari tomonidan boshqarish (yuritish) usuli bo'yicha taqsimlangan boshqaruvi markazlashgan obektlar ro'yxati tuzilishini tashkil etadi. Dispetcherlik markazining operatsion hududidagi yagona elektr energetikasi tizimining elektr energetikasi rejimiga ta'sir qiluvchi va boshqa dispetcherlik markazining operatsion hududida joylashgan boshqaruvi markazlashgan obekt, ko'rsatilgan dispetcherlik markazlarini har birining boshqaruvi markazlashgan obektlari ro'yxatiga kiritilishi lozim.

ENERGY BASED ON NON-CONVENTIONAL RENEWABLE ENERGY SOURCES

Abstract. Energy resource means any natural or artificially activated energy source. One of the classifications of natural resources is the completion of this type of resource, according to which energy resources are divided into renewable and non-renewable.

Key words: Energy resources, Water energy, thermoelectric generators, thermoemission generators.

O‘z navbatida, tugallanadiganlar tiklanuvchi va tiklanmaydigan bo‘lishi mumkin. Tiklanuvchilarga tabiat (yer, o‘simliklar, hayvonlar va h.k.) tomonidan tiklanadigan resurslar kiradi, tiklanmaydiganlarga – tabiat tomonidan bir necha

asrlar davomida to'plangan lekin, yangi geologik sharoitlarda hosil bo'lmaydigan resurslar (neft, ko'mir va boshqa yer osti zaxiralari) kiradi. Tugallanmaydiganlariga quyosh, shamol, kosmik, iqlimiy va suv resurslari kiradi.

Energiya resurslarining barcha turlaridan quyosh energiyasi muhim ahamiyatga ega. Energiya resurslarining barcha turlari quyosh energiyasini tabiiy o'zgartirish natijasidir. Ko'mir, neft, tabiiy gaz, torf, yonuvchi tog' jinslari va o'tinlar – bu o'simliklar tomonidan olingan va o'zgartirilgan quyoshning nurli energiyasi zaxiralari. Surat sintezi (fotosintez) reaksiyasi jarayonida atrof-muhitning noorganik elementlaridan, ya'ni, suv (H₂O) va karbonot angidrit gazi SO₂ lardan quyosh nuri ta'sirida o'simliklarda asosiy elementi uglerod (S) bo'lgan organik modda hosil bo'ladi.

Suv energiyasi ham suvni bug'lantiradigan va bug'ni atmosferaning yuqori qatlamlariga ko'taradigan quyosh energiyasi hisobiga hosil bo'ladi.

Shamol, quyosh tomonidan bizning sayyoramizni turli nuqtalarini turli harorat hisobiga isitish natijasida hosil bo'ladi, ya'ni issiq va sovuq havo qatlamining siqilishi evaziga sodir bo'ladi. Bundan tashqari quyoshning yer sathiga to'g'ri keladigan bevosita nurlantirishi, katta energiya imkoniyatiga egadir.

Bizning iqlim sharoitimizda quyosh energiyasidan ko'proq foydalanish maqsadga muvofiqdir. SHu maqsadda quyosh energiyasidan foydalanish bo'yicha ilmiy tadqiqotlar olib borilmoqda. Muntazam takrorlanuvchi energiya manbalariga asosan ishlatilgan energiya o'rnini tabiiy ravishda qayta (takroran) to'ldirib boradigan energiya hosil bo'lish jarayonini ta'minlovchi tabiat resurslari kiradi. Masalan, suv, quyosh, shamol energiyalari va boshqalar. Suyultirilgan kompostdan ajralib chikuvchi gaz ham muntazam takrorlanuvchi energiya manbasi bo'lishi mumkin. Go'zaning poyasi ham muntazam takrorlanuvchi energiya resursi bo'la oladi. Har yili yangi ekilgan o'simlikdan poyani olish imkoni bor. Ammo bu energetik resursni xam oxirgi vaktlarda kurilish materiallari va kogoz tayyorlash uchun dalalardan yigib olinmokda.

Muntazam takrorlanuvchi energiya zaxiralarning afzalliklaridan biri va asosiysi ularning ekologiyaga zararli ta'sirining kamligidir. Bu energetik resurslar qayta tiklanishi bilan tavsiflanadi.

Ko'mir, neft va tabiiy gaz zaxiralari chegaralangan bo'lib, sarflangan zaxiraning o'rnini qoplanmaydi. Chunki yer osti yoqlarilgi zaxiralari millionlab yillar davomida o'tgan evolyutsion jarayon ta'sirida hosil bulgandir. Shuning uchun xam bu zaxiralarni tejab ishlatish zarur.

Muntazam takrorlanuvchi energiya manbalarini doimo tabiatning o'zi hosil qilib turadi. Faqat ulardan samarali foydalanishni tashkil etish zarur.

Hozirgi vaqtda issiqlikni to'g'ridan-to'g'ri, harakatlanuvchi mexanik detallarni qo'llamasdan, elektr energiyasiga aylantiruvchi qurilmalar tadqiq qilinmoqda.

Elektr energiyasi hosil qilishning quyidagi zamonaviy usullari mavjud:

- energiyani magnit gidrodinamikli o'zgartgichlar (o'zgaras magnitlar orasidan zaryadli zarrachalarni katta tezlikda oqib o'tishi natijasida elektr energiyasini hosil qilishga asoslangan);

- termoelektr generatorlar (1921 yilda kashf etilgan Zeebek samarasiga asoslanib, ya'ni bir uchlari issik kavsharlangan, ochiq qolgan uchlarida esa harorat ta'sirida E.Yu.K. hosil qiladigan turli xil metallardan tayyorlangan juftlikka asoslangan);

- radioizotopli energiya manbalari (yadro yemirilishida zarrachalar va kvantlarning kinetik energiyasi ajralishi bilan kechadi va bu harorat muxitga yutiladi hamda bu muxitni qizdiradi. Mazkur qizishni termoelektrik yo'l bilan elektr energiyasi hosil qilishda ishlatiladi);

- termoemission generatorlar (ushbu xodisaga 1883 yilda T.Edison asos solgan bo'lib, anod va katodlardagi harorat uzgarishi natijasida elektr energiyasi hosil qilishga asoslangan);

- elektrokimyoviy generatorlar (kimyoviy energiyani tugridan-tugri elektr energiyasiga aylantiruvchi kurilma);

- geotermal elektr stansiyalari (bu stansiyalar energiya manbai sifatida Yer qa'ridagi issiqlikni ishlatadi);

- muntazam takrorlanuvchi dengiz zaxiralariidan foydalanish. Dengiz zaxiralari uchga bo'linadi: 1) vertikal termogradyentlar va okean shamollari; 2) dengiz biomassalari va geotermal suvlar; 3) yuzadagi to'lqinlar va oqimlar. Eng katta energiya vertikal termogradyent ta'sirida, ya'ni suv satxidagi va tik o'q bo'yicha dengiz quvuridagi haroratlar farqi xisobiga suyuq ammiakni xarakatlantirib, turbina o'qini aylantirib elektr energiyasi ishlab chiqarishga asoslangan;

- quyosh elektr stansiyalari;

- termoyadro reaksiyasi va reaktor-ko'paytirgichlarning energiyasidan foydalanish va boshqa usullar kiradi. Energoresurslar bu insonlar o'z manfaati uchun foydalanishi mumkin bo'lgan energiya manbalaridir.

Ayni damda resurslarni tejash va ulardan oqilona foydalanish kun tartibining dolzarb masalalaridan biri hisoblanadi. Shuning uchun muqobil energiyadan foydalanish to'g'ri qaror hisoblanadi. AQSH va yevropa davlatlarida quyosh energiyasidan foydalangan holda suv isitish texnologiyasi uzoq vaqtdan beri qo'llanilmoqda.

Yevropa Ittifoqi davlatlarida quyosh energiyasidan foydalanish hajmi sezilarli darajada jadallashdi. Ayniqsa, iqlimi birmuncha issiq bo'lgan mamlakatlarda, xususan, Germaniya, Belgiya, Gretsiya, Italiya, Ispaniyada bu sohada ma'lum darajada tajriba ham to'plangan. Shuningdek, Xitoy, Turkiya, Lyuksemburg va Daniya kabi davlatlarda ham bu masalaga alohida e'tibor qaratilyapdi. Isroilda esa quyosh energiyasidan oqilona foydalaniladi. Mamlakatning istalgan hududidagi uylar tomilarida o'rnatilgan suv isitgichlari bunga yaqqol misoldir. Bunday maishiy ehtiyojdagi qurilmalar 150 litr sig'imga ega bo'lib, quyosh batareyasidan energiya olib, suvni isitadi. Shu tarzda bunday

qurilma sohibi yiliga taxminan 2000 kVt/soat elektr energiyasini tejash imkoniga ega bo'ladi.

Respublikamizdagi qayta tiklanadigan energiya manbasining imkoniyatlari 1.2-jadvalda ko'rsatilgan.

Ko'rsatkichlar	Jami (mln.t.n.e.)	Shu jumladan, energiya (mln.t.n.e.)			
		Gidro	Quyosh	Shamol	Biomassa
Yalpi ¹	50984,6	9,2	50973	2,2	–
Texnik ²	179	1,8	176,8	0,4	0,3
O'zlashtirilgan	0,6	0,6	–	–	–

1 –belgilangan hududga tushadigan yoki hosil qilinadigan nazariy energiya miqdori.
2– yalpi imkoniyatlarni amalga oshirib, foydalanish mumkin bo'lgan mavjud texnologiyaning bir qismi.

BOSH PASAYTIRUVCHI PODSTANSIYANING O'RNINI TOPISH. ELEKTR YUKLAMALAR KARTOGRAMMASI

Annotatsiya. Sanoat korxonalarining bosh pasaytiruvchi podstansiyalarida, elektr energetikasi tizimidan uzatilgan yuqori kuchlanishli (35, 110, 220 kV) elektr energiyasini 6 yoki 10 kV li kuchlanishga pasaytiradi. BPP ning o'rnatish joyini to'g'ri tanlash, sanoat korxonasining elektr ta'minoti tizimini optimal loyihalashdagi asosiy masalalaridan biri hisoblanadi.

Kalit so'zlar: Elektr yuklamalar kartogrammasi, Aktiv yuklamalarning ta'minoti, sexning umumiy hisobiy aktiv yuklamasi.

LOCATION OF THE HEAD REDUCTION SUBSTATION. CARTOGRAM OF ELECTRICAL LOADS

Abstract. Energy resource means any natural or artificially activated energy source. One of the classifications of natural resources is the completion of this type of resource, according to which energy resources are divided into renewable and non-renewable.

Key words: Energy resources, Water energy, thermoelectric generators, thermoemission generators.

Korxonaning elektr ta'minotini loyihalash jarayonida, uning bosh plani berilib, unda barcha sexlar va boshqa ob'ektlar ko'rsatilgan bo'ladi. Sexlarning

joylashish tartibi, korxonaning texnologik jarayonidan kelib chiqadi. Planda sex va boshqa ob'ektlardagi qurilmalarning o'rnatilgan quvvatlari ko'rsatiladi. Bulardan tashqari ayrim sex va korxonaning aktiv va reaktiv quvvatlarining yozgi va qishki fasllariga tegishli bo'lgan xarakterli kunlik grafiklari beriladi.

Korxonaning BPP sining joylashish o'rinlarini to'g'ri tanlash, elektr ta'minoti tizimiga ketadigan sarf-xarajatlarni kamaytiradi. BPP ni joylashish o'rnini to'g'ri tanlash uchun, korxonaning bosh planiga elektr yuklamalar kartogrammasi chiziladi.

Elektr yuklamalar kartogrammasi deb, har bir ob'ekt va sex maydonlarida chizilgan doiralar tushuniladi. Ularning markazlari sifatida, ob'ekt va sex bosh planlarining markazlari olinadi. Chizilgan doiralarning yuzalari, olingan masshtab bo'yicha sex yuklamalariga teng bo'ladi. Sex yoki korxonalar yuklamalarining markazlari, elektr energiyasini qabul qiluvchi iste'molchilarning simvolik markazi hisoblanadi. BPP va sex podstansiyalarini imkoniyat chegarasida ushbu markazga joylashtirish kerak. Bu esa, yuqori kuchlanishli elektr energiyasini iste'molchilarga yaqinlashtiradi, yuqori va past kuchlanishli tarqatuvchi elektr tarmoqlarining uzunligini qisqartiradi, sarflanadigan o'tkazgichlar uzunliklarini kamaytiradi va elektr energiyasini nobudgarchiligini kamayishiga olib keladi. Bulardan tashqari, elektr yuklamalar kartogrammasi asosida elektr yuklamalarni korxonalar hududida qanday taqsimlanganligini tasavvur qilish imkoniyati yaratiladi (*2-rasm*).

Elektr yuklamalar kartogrammasini aktiv va reaktiv yuklamalar uchun alohida-alohida qurish maqsadga muvofiqdir. Chunki aktiv va reaktiv quvvat iste'molchilarning korxonalar maydoni bo'yicha joylashishlari har xil bo'lib, ular ayrim-ayrim manbalarga ulanishlari mumkin.

Elektr yuklamalar kartogrammasi doiralarning radiuslari quyidagi formulalardan aniqlanadi:

$$r_{ai} = \sqrt{P_{hi}/\pi m}; \quad r_{ri} = \sqrt{Q_{hi}/\pi m},$$

bu yerda, P_{hi} ; Q_{hi} - i - chi sexning hisobiy aktiv va reaktiv quvvatlari;
 m - doira yuzini aniqlash uchun, tanlangan mashtab.

Aktiv yuklamalarning ta'minoti elektr tizimi tomonidan bajarilsa, reaktiv quvvat manbasi sifatida maxsus kondensator batareyalar, sinxron kompensatorlar va reaktiv quvvatning ventilli statik manbalarini ishlatish mumkin. Reaktiv quvvat manbalarini o'rnatish joyi, reaktiv quvvat kartogrammasi asosida yuklamalarning simvolik markazini aniqlash natijasida topiladi. Reaktiv quvvat kompensatorlari o'rinlarini noto'g'ri tanlash, reaktiv quvvat oqimlarini elektr ta'minoti tizimi elementlaridan keraksiz harakatlariga olib keladi va elektr energiyasining qo'shimcha nobudgarchiliklariga sabab bo'ladi.

Elektr yuklamalar kartogrammasining har bir doirasini sektorlarga ajratish mumkin. Bu sektorlarning yuzalari mos ravishda yuqori va past kuchlanishli, hamda yoritish yuklamalariga proporsional bo'ladi. Agar biror sexda yuqori va

past kuchlanishli iste'molchilar, shu bilan bir qatorda yoritish qurilmalari mavjud bo'lsa, hisobiy quvvat uch tashkil etuvchilardan iborat bo'ladi, ya'ni:

$$P_h = P_{yu.k} + P_{pk} + P_{yor} \quad (kVt),$$

bu yerda, P_h - sexning umumiy hisobiy aktiv yuklamasi, (kVt);

$P_{yu.k}$ - sexdagi yuqori kuchlanishli iste'molchilarning hisobiy quvvati, (kVt);

P_{pk} - past kuchlanishli iste'molchilarning hisobiy quvvati, (kVt);

P_{yor} - yoritish qurilmalarining hisobiy yuklamasi, (kVt).

Sektorlarning markaziy burchaklari quyidagicha aniqlanadi.

$$\alpha_1 = \frac{P_{yu.k} \cdot 360^0}{P_h}; \quad \alpha_2 = \frac{P_{yor} \cdot 360^0}{P_h}.$$

Elektr yuklamalar kartogrammasini qurishda, doiralarning markazlari sex shakllarining geometrik markazlariga joylashtiriladi. Qurilgan elektr yuklamalar kartogrammasi asosida, korxonalar yuklamalarining shartli markazi (YuShM) aniqlanadi. Sex yuklamalarining yuzasi, uning yuzasi bo'yicha tekis taqsimlangan deb faraz qilinsa, YuShM sex geometrik shaklining markazida deb qabul qilinadi. Korxonaning YuShM aniqlashda quyidagi formuladan foydalaniladi:

$$X_0 = \frac{\sum_{i=1}^n P_i x_i}{\sum_{i=1}^n P_i} \quad (sm), \quad Y_0 = \frac{\sum_{i=1}^n P_i y_i}{\sum_{i=1}^n P_i} \quad (sm),$$

bu yerda, P_i ; x_i ; y_i - i - chi sexning hisobiy aktiv quvvati va uning geometrik markazining koordinatlari hisoblanadi.

Agar har xil sabablarga (texnologik, arxitekturaviy, ekologik v h.k) ko'ra, BPP ni korxonaning YuShM aniqlangan nuqtada o'rnatishning iloji bo'lmasa, uni tashqi elektr manbasi tomonga siljitish tasviya etiladi.

Agar korxonalar sexlariga, elektr energiyasini tizimdan markaziy tarqatish punkti (MTP) orqali uzatiladigan bo'lsa, uni o'rnatish joyini aniqlashda YuShM ni hisoblash shart emas. MTP o'rnini tanlanganda elektr energiyasini teskari tomoniga uzatilishiga yo'l qo'ymaslik kerak. Bunday talab bajarilganda o'tkazgich materiallari tejaladi va elektr energiyasini nobudgarchiligi kamayadi.

Sex transformator podstansiyalarini iloji boricha iste'molchilar guruhiga yaqin joylashtirish zarur. Bundan tashqari podstansiyaning o'rnini tanlanganda, ishlab chiqarish binosining shaklini, texnologik qurilmalarini joylashishini, sovitish sharoitlarini, yong'indan xavfsizligini va ishlatiladigan elektr jihozlarining turlarini hisobga olish kerak bo'ladi. Ko'p hollarda, podstansiyalar sex ichida, sex binosiga ichki yoki tashqi tomonidan birlashtirilgan tarzda quriladi. Sanoat korxonalarini elektr ta'minotida komplekt transformator podstansiyalari (KTP) keng ishlatiladi. Bunday KTP lar zavod tomonidan to'la yig'ilgan holatda keltiriladi. Ular transformatorlar va komplekt taqsimlash qurilmalaridan (KTQ) tashkil topgan bo'lib, manzilga etkazish oson, kam joyni egallaydi, hamda ta'mirlash ishlarini tezkorlik bilan bajarish mumkin.

Misol tariqasida, Sement ombori uchun elektr yuklamalar kartogrammasini quramiz. Bunda, $m=10$ (kVt/sm²) ga teng deb qabul qilamiz.

Elektr yuklamalar kartogrammasini aktiv yuklamalar uchun quramiz va doira radiusini 2 chi jadval ma'lumotlari asosida aniqlaymiz.

$$r_{ai} = \sqrt{\frac{\sum P_h}{\pi \cdot m}} = \sqrt{\frac{P_h + P_{h,yor}}{\pi \cdot m}} = \sqrt{\frac{45 + 33,1}{3,14 \cdot 10}} = 1,6 \quad (sm).$$

Sex yoritishi uchun ketadigan quvvat sektorini aniqlaymiz:

$$\alpha_{yor} = \frac{P_{h,yor} \cdot 360^0}{\sum P_h} = \frac{33,1 \cdot 360^0}{45 + 33,1} = 152,6^0 \quad (grad).$$

Xuddi shu tartibda, qolgan sexlar uchun doira radiusi va quvvatlar sektorini aniqlab, natijalarini 4-jadvalga kiritamiz.

Yuklamalarning shartli markazini (YuShM) aniqlaymiz. YuShM ni aniqlash uchun, har bir sexni X va Y o'qidagi ko'rsatkichlarini $\sum P_h$ ga ko'paytirib, natijalarini 4 chi jadvalga kiritamiz va ularning summasini aniqlaymiz (masalan, *Sement omborida* $x_1=2,5$ (sm) va $y_1=3,5$ (sm) ga teng).

*Abstract. In this paper, a mapping of electrical loads has been constructed
and the location of the main step-down substation has been identified in order to
reduce energy losses and improve efficiency of the plant's in terms of needed
electricity.*

*Key words: active power, reactive power, electrical load cartogram, main
step-down substation.*

BPP joylanish o'rnini tanlash uchun korxonada bosh planiga yuklamalar kartogrammasi chiziladi. Kartogramma deganda har bir sex, ob'ektlar maydonlarida chizilgan doiralarda tushuniladi. Ularning markazlari qilib ob'ektlar, sexlar planlarining markazlari olinadi. Chizilgan doiralarning yuzalari, olingan masshtabda, sex yuklamalariga teng bo'ladi. Sex yoki korxonada yuklamalarining markazlari elektr energiya qabul qiluvchilarning simbolik markazi hisoblanadi. BPP va sex podstansiyalarini imkoniyat borigacha ushbu markazga joylashtirish kerak. Bu esa yuqori kuchlanishli elektr energiyasini iste'molchilarga yaqinlashtiradi, yukqori va past kuchlanishli tarqatuvchi elektr tarmoqlarining

uzunligini qisqartiradi, sarflanadigan o'tkazgichlar uzunliklarini kamaytiradi va elektr energiyasini nobudgarchiligini ozayishiga olib keladi. Bulardan tashqari kartogrammasi asosida elektr yuklamalarni korxonada hududida qanday taqsimlanganligini tassavvur qilish imkoniyati yaratiladi [1-8].

Kartogrammani aktiv va reaktiv yuklamalar uchun alohida-alohida qurish maqsadga muvofiqdir. Chunki aktiv va reaktiv quvvat iste'molchilarning korxonada maydoni bo'yicha joylashishlari har xil bo'lib, ular ayrim-ayrim manbalarga ulanishlari mumkin [9,10].

Kartogramma doiralarning radiuslari quyidagi formulalardan aniqlanadi [11,12]:

$$r_{ia} = \sqrt{P_{xi}/\pi m}; r_{ip} = \sqrt{Q_{xi}/\pi m};$$

Bu yerda, P_{xi} - i -sexning hisobiy aktiv quvvati;

Q_{xi} - i -sexning hisobiy reaktiv quvvati;

m - doira yuzini aniqlash uchun mashtab.

Aktiv yuklamalarning ta'minoti elektr sistemasidan bajarilsa, reaktiv quvvat man'basi sifatida mahsus kondensator batareyalarini, sinxron kompensatorlarni, reaktiv quvvatning ventilli statik manbalarini ishlatilishi mumkin. Reaktiv quvvat manbalarini o'rnatish joyi reaktiv quvvat kartogrammasi asosida yuklamalarning simvolik markazini aniqlash natijasida topiladi. Reaktiv quvvat kompensatorlari o'rinlarini noto'g'ri tanlash reaktiv quvvat oqimlarini elektr ta'minoti tizimi elementlaridan keraksiz xarakteriga olib keladi va elektroenergiyaning qo'shimcha nobudgarchiliklariga sabab bo'ladi [13].

Bosh pasaytiruvchi podstantsiya (BPP) - bu korxonada elektr ta'minotini amalga oshirishga mo'ljallangan bosh transformator podstansiyasidir. BPP dan barcha sex transformator podstansiyalari ta'minlanadi. Uning o'rnatish joyi yuklamalarning og'irlik markaziga to'g'ri keladi, ya'ni BPP katta quvvatli iste'molchilar hududida joylashadi [14-18].

Har bir sex koordinata qiymatlari va hisobiy yuklamalari yordamida korxonaning elektr yuklamalar markazi aniqlanadi:

$$x_0 = \frac{\sum_{i=1}^n P_i x_i}{\sum_{i=1}^n P_i}; y_0 = \frac{\sum_{i=1}^n P_i y_i}{\sum_{i=1}^n P_i};$$

bu yerda: P_i ; X_i ; Y_i - i -chi sexning hisobiy aktiv quvvati va uning geometrik markazining koordinatlari.

X_0 va Y_0 koordinata qiymatlar orqali korxonaning shartli elektr yuklamalar markazi aniqlanib, bosh planda ko'rsatib o'tiladi.

BPP o'rnatiladigan elektr yuklamalar markazi har doim ham hisob orqali aniqlangan nuqtada belgilanmaydi. Uni o'rnatish quyidagi faktorlar asosida amalga oshiriladi:

- BPPga yuqori kuchlanish tomondan keladigan havo liniyasini ishchilar harakati taqiqlangan yoki kam qatnov hududlardan olib o'tish zarur;

• BPPni imkon qadar katta quvvatli iste'molchilarga yaqinroq qilib joylashtirish kerak.

Hisob yordamida aniqlangan yuklamalar markazi yuqoridagi ikkita talabga javob bersagina, bu markaz korxonaning haqiqiy yuklama markazi hisoblanadi.

Elektr yuklamalar kartogrammasi bu – korxonada bosh planida yuklamalarning qanday taqsimlanganligini tasavvur qilish maqsadida sex quvvatiga bog'liq ravishda aniqlangan radius asosida chizilgan doiradir. Doira sex yuklamalarining katta kichikligini ifodalaydi [15].

Nazariy qismda berilgan ifodalar yordamida berilgan jadvaldagi iste'molchilar zavod hududida joylashgan mavjud sexlar. Ularning koordinata qiymatlari va hisobiy yuklamalari yordamida korxonaning elektr yuklamalar markazi aniqlanadi [16,17]:

№	Zavoddagi sexlar	X	Y	P _h , kVt
1	1chi sex	19,5	7	400
2	2chi sex	19,5	10,3	650
3	3chi sex	5	10,7	1500
4	4chi sex	9,5	17,9	250

$$x_0 = \frac{\sum_{i=1}^n P_i x_i}{\sum_{i=1}^n P_i} = \frac{400 \cdot 19,5 + 650 \cdot 19,5 + 1500 \cdot 5 + 250 \cdot 9,5}{400 + 650 + 1500 + 250} = 10,84$$

$$y_0 = \frac{\sum_{i=1}^n P_i y_i}{\sum_{i=1}^n P_i} = \frac{400 \cdot 7 + 650 \cdot 10,3 + 1500 \cdot 10,7 + 250 \cdot 17,9}{400 + 650 + 1500 + 250} = 10,72$$

Nazariy qismda berilgan ifodalar yordamida 1chi sex uchun elektr yuklamalar kartogrammasi aniqlaymiz [2,3]: $P_{\Sigma h}=400$ kVt, $P_{h,yo}=30$ kVt.

$$r_1 = \sqrt{\frac{\sum P_x}{\pi \cdot m}} = \sqrt{\frac{400}{3,14 \cdot 3}} = \sqrt{\frac{400}{9,42}} = 6,52 \text{ m}$$

m=3 deb qabul qilamiz.

$$\alpha = \frac{P_{h,yo} \cdot 360^0}{P_{h\Sigma}} = \frac{30}{400} \cdot 360 = 27^0$$

2chi sex uchun elektr yuklamalar kartogrammasi aniqlaymiz: $P_{\Sigma h}=650$ kVt, $P_{h,yo}=50$ kVt.

$$r_1 = \sqrt{\frac{\sum P_x}{\pi \cdot m}} = \sqrt{\frac{650}{3,14 \cdot 3}} = \sqrt{\frac{650}{9,42}} = 8,3 \text{ m}$$

m=3 deb qabul qilamiz [4,5,6].

$$\alpha = \frac{P_{h,yo} \cdot 360^0}{P_{h\Sigma}} = \frac{50}{650} * 360 = 28^0$$

3chi sex uchun elektr yuklamalar

kartogrammasi aniqlaymiz [18]:

$$P_{\Sigma h}=1500 \text{ kVt}, P_{h,yo}=80 \text{ kVt}.$$

$$r_1 = \sqrt{\frac{\sum P_x}{\pi * m}} = \sqrt{\frac{1500}{3,14 * 3}} = \sqrt{\frac{1500}{9,42}} = 12,6 \text{ m}$$

m=3 deb qabul qilamiz.

$$\alpha = \frac{P_{h,yo} \cdot 360^0}{P_{h\Sigma}} = \frac{80}{1500} * 360 = 19^0$$

4chi sex uchun elektr yuklamalar kartogrammasi aniqlaymiz: $P_{\Sigma h}=250 \text{ kVt}$, $P_{h,yo}=35 \text{ kVt}$.

$$r_1 = \sqrt{\frac{\sum P_x}{\pi * m}} = \sqrt{\frac{250}{3,14 * 3}} = \sqrt{\frac{250}{9,42}} = 5,2 \text{ m}$$

m=3 deb qabul qilamiz.

$$\alpha = \frac{P_{h,yo} \cdot 360^0}{P_{h\Sigma}} = \frac{35}{250} * 360 = 28^0$$

Taxlil va natijalar asosida shuni aytish joizki, zavodning x o'qda $x_o=10,84$ y o'qda $y_o=10,72$ kelib chiqdi. Bu natija korxonaning BPP ning o'rnatilish o'rnini belgilaydi. Yuklamalar kartogrammasi 1-sex uchun $\alpha=27^0$, 2-sex uchun $\alpha=28^0$, 3-sex uchun $\alpha=19^0$, 4-sex uchun $\alpha=28^0$ hosil bo'ldi.

DEVELOPMENT OF MUSIC LISTENING SKILLS DURING MUSIC EDUCATION

Abstract. This article talks about the main goal of music education, instilling love for music in the hearts of the young generation, and developing the child's musical abilities through musical training.

Key words: music, teacher, knowledge, skills, ability, development, art, pedagogy, technology, creativity.

Yosh avlodni har tomonlama yetuk qilib tarbiyalashda maktabda o'qitiladigan barcha fanlar qatori nafosat tarbiyasining tarkibiy qismi bo'lgan musiqqa madaniyati darslarini ahamiyati katta. Musiqqa inson his-tuyg'ularini, orzu-istaklarini o'ziga xos badiiy tilda ifoda etadi va bolaning hissiyotlariga faol ta'sir ko'rsatadi. Musiqqa fani maktabda boshqa fanlarni o'zlashtirishga ham bevosita ta'sir ko'rsatadi. Musiqqa jonli san'at turi sifatida davr, hayot, tabiat va inson his-tuyg'ularini, orzu-istaklarini aks ettiradi. Uni quvontiradi, o'ylantiradi va hayotdan ozuqa olishga xizmat qiladi. Milliy madaniyatimiz bobokaloni Abu Nasr Forobiy aytganlaridek, «Bu fan tana sog'ligiga foydalidir».

Maktabda musiqqa o'qitishning asosiy maqsadi o'quvchilarda musiqqa madaniyatini shakllantirish, ularni zamon talabiga javob bera oladigan barkamol inson qilib voyaga yetkazishdir.

Bolaning ijod doirasining keng doirasi bor. Bu bolaning tasavvurini faollashtiradi, mustaqil qo'yilgan maqsadga erishishni rag'batlantiradi, o'z g'oyalarini turli shakllarda amalga oshirishini izlaydi va o'rganishga yordam beradi. Musiqiy o'yin va mashg'ulotlar bolalarning uch yoshdan yetti yoshgacha tavsiya etiladi. Ritmik harakatlar bolalar bog'chasida boshlang'ich guruhlarda va musiqa maktablarida, uy sharoitida yanada chuqurroq o'rganilishi mumkin. Bolalarning aqliy, nafosat va jismoniy rivojida raqs, musiqali o'yinlar va musiqaga mos harakatlar bajarish quyidagi vazifalardan iborat:

- Bolalarning musiqiy uquvi, ayniqsa xotirasi, ritm tuyg'usi musiqaga mos harakatlar yordamida yaxshi rivojlanadi. Har qanday harakat turi musiqiy asarning sur'ati va ritmi ostida bajariladi, harakat bilan bog'liq bo'lgan musiqiy ohanglar bola xotirasida turg'un saqlanadi. Raqs va musiqiy harakatlar bolada harakatchanlik, chaqqonlikni rivojlantirib, qomatning tog'ri o'sishiga va badanning chiniqishga katta yordam beradi. Musiqiy asarlar bolalarga turlicha emotsional hislar uyg'otib, turlicha kayfiyatlar hosil etib, ularning ongida o'ziga xos obrazlar yaratadiki, bolalar asar mazmunini turli harakatlar va ishoralar bilan ifodalashga harakat qiladilar. Demak, musiqaga mos harakatlar o'quvchilarning aqliy va nafosat qobiliyati rivojlantirish bilan birgalikda irodasini ham rivojlantiradi.

Musiqiy asarlardan marsh, raqs va o'yinlar o'quvchilarga tez ta'sir etadi, shuning uchun ham quvnoq raqs, qiziqarli musiqali o'yinlar har bir bolaning e'tiborini o'ziga tortadi. Ritmika bolalarda musiqiy harakatlarni, estetik tarbiyani oshirishda katta rol o'ynaydi. Bog'cha yoshidagi bolalar ilk yoshdan boshlab sakraydi, o'ynaydi, lekin bu bolaning ritmik harakatlandi, degani emas. Bu davrda bolalar musiqa ostida emotsional harakatlanadi, eshitish qobiliyati o'sadi.

Musiqa ostida harakatlanib, tarbiyachilar bilan birgalikda kichik-kichik qo'shiqlar ham kuylanadi.

Harakat turlari uchga bo'linadi:

1. Asosiy harakatlar: yurish, yugurish, sakrash.
2. Gimnastik harakatlar: predmetlar bilan, ya'ni lenta, obruch, bayroqchalar va koptok bilan.
3. Raqs harakatlari: musiqa ostida ritmik harakatlar haqida nazariy bilimga ega bo'lish mumkin.

Maktabda va bog'chada o'tkaziladigan har bir ertalikni, turli tadbirlarni musiqasiz tasavvur etib bo'lmaydi. Jumladan, musiqali ritmik harakatlarning ham o'z o'rnini bor. Bunda bola ritmni his qiladi, qomatlari chiroyli bo'lib, to'g'ri yurushni, musiqa ostida harakat qilishni o'rganib boradilar. Hozirgi milliy qadriyatlarimiz, urf-odatlarimiz, o'zbekchiligimiz o'z o'rnini topayotgan bir vaqtda bolalarga o'zbek milliy musiqasi, qo'shiqlari, ritm harakatlarini o'rganish juda muhimdir. Musiqiy- ritmik harakatlar orqali bola musiqani his qilishi hamda uni obrazli tushinishi mumkin.

Tavsiya etiladigan musiqa orqali bolalarning ruhiy holatini hamda atroflicha o'rganish mumkin. Izlanishlar shuni ko'rsatadiki, bolalarga tavsiya

etiladigan obrazli harakatli o'yinlar, obrazsizlaridan ancha samaraliroq. Shuningdek, musiqiy-ritmik harakatlarni o'zlashtirish davomida bola milliy musiqa sadolarini ham ajratishni, ularni farqlay olishni o'rganadi. Bolaga beriladigan musiqali ritmik harakatlarni amalga oshirish jarayonida bola uni idrok qiladi, tushunadi hamda musiqa va unga mos raqs harakatlarini amalga oshiradi. Bu orqali ularda musiqani tushunish ko'nikmalarini shakllantirish mumkin.

Qachonki, bola musiqani tushunsagina, unga mos raqs harakatlarini amalga oshira oladi. Bola amalga oshirayotgan har bir ritmik harakatni to'g'ri idrok qila olishi bu muhim jihatlardan biridir. Aytish kerakki, ritmik harakatlarning noo'rin qo'llanishi ham salbiy omillarga olib kelishi mumkin. Bolaga raqs harakatlarni tushuntirish asnosida uning hislarini ham tarbiyalash bevosita muhim jihat sanaladi. Agar ularda his-tuyg'ular ishlamas ekan, siz sahnalashtirgan musiqani tushunmasdan, ko'r-ko'rona amalga oshiradi.

To'g'rirog'i, musiqa rahbari ko'rsatgan narsadan nariga o'tmaydi. Shu sabab, eng avvalo, bolada his qilish tuyg'usini shakllantirish shart. Bolaga raqs harakatlarini o'rgatish jarayonida gohida siz o'zingiz bilmagan holda bolaning qobiliyatlarini payqay boshlaysiz. Hattoki u siz o'rgatayotgan harakatlarga yanada o'zidan qo'shimchalar qo'shishi mumkin. Bu esa umumiy kompozitsiyani boyitishga xizmat qiladi.

Musiqiy-ritmik harakatlar bolaning fiziologik va ruhiy rivojlanishiga qay darajada hissa qo'shishini yuqorida ko'rib chiqdik. Ammo, mana shu ritmik harakatlar aslida nimaga asoslanishini, uning manbalarini nima ekanligini bilib olish fursati yetdi. Har qanday musiqa ham albatta chiroyli harakatlar bilan yaxlitlik kasb etadi. Shunchaki, musiqa insonni zeriktirishi mumkin. Unga hamohang go'zal xiromlarni tomosha qilish esa estetik zavq bag'ishlaydi. Shunday musiqalar va ularga monand raqslar bo'ladiki, ularni bir-biridan ayro tasavvur etib bo'lmaydi. Musiqiy-ritmik harakatlarni amalga oshirayotganda bolalarning uni o'zlashtirish potentsiali bevosita musiqaning ruhiyatiga ham bog'liq.

Biroz sokinroq, mahzunroq musiqaga bolalar harakatlarni amalga oshirishga qiynaladi. Chunki bolaning tabiatidagi quvnoqlikbunga xalaqit beradi. Sho'x, quvnoq musiqaga raqsga tushishga bola qiynalmaydi. Aksincha yana o'zidan nimalarnidir qo'shimcha qilishi ham mumkin. Shunindek, musiqiy-ritmik harakatlarni o'zlashtirishda bolalar qo'shimcha mayda detallarga ham ehtiyoj sezishi tabiiy. Musiqaga mos holda bolaning qo'liga shiqildoq, doira yoki boshqa bir kichikroq shakldagi predmetlarni berish kerak. Bular ritmik harakatlarning musiqaga hamohangligini yanada kuchaytiradi. Kerak bo'lsa, raqs harakatlariga jilo baxsh etadi.

USE OF FOLK'S ORAL CREATION IN THE FORMATION OF ECOLOGICAL CULTURE IN 5-6-YEAR-OLD CHILDREN IN PRE- SCHOOL EDUCATIONAL ORGANIZATIONS

Annotation. This article presents examples of examples of folklore in the formation of environmental culture among 5-6-year-old children in preschool educational organizations.

Key words: ecological culture, folklore, fairy tales, riddles, proverbs.

One of the current global problems is the environmental situation. One of the main reasons for the breakdown of the relationship between nature and man is the lack of ecological knowledge, lack of common sense in the relationship with nature. As a result of this, there are problems that lead to the destruction of humanity. The lack of clean water and drinking water, air pollution, a sharp decrease in food supply to the population, and a sharp decrease in natural resources.

Nature is so fair that it balances the environment. As mankind harms nature, so it harms mankind. In recent years, the cruel treatment of nature has caused various disasters. It is in the hands of our humanity not to cause these disasters, to prevent them and to preserve nature.

Since ancient times, our people have been saying that food is the strength of the body and the strength of the mind is a wise word. Hadiths are such words of wisdom and masterpieces of wisdom. The famous Central Asian scholars who were engaged in the science of hadiths, Abu Abdullah, Muhammad ibn Ismail al-Bukhari, Abu Isa Muhammad ibn Isa at-Tirmizi and Abu Muhammad Abdullah ibn Abu ar-Rahman ad Darami al-Samarkandi, are great at preserving the science of hadith from century to century. are great historical figures who contributed. The role of Hadith clauses in inculcating ecological education and upbringing is incomparable.

According to the hadith, the rosary recited by each planted tree is recorded in the deeds of the person who planted that tree, and the reward of charity is written in the deeds of the person who planted the tree, or if others sit in its shade. Here it is appropriate to mention the following story. A king and his minister were walking through a village and saw an old man working in his garden. Despite his old age, the old man was hard at work planting tree saplings. The king liked the

old man's hard work. The king came to the old man and said to the minister, "Let's have a little talk with this old man."

The king said: "Don't listen, father, what are you doing? What are you planting on the ground?", he said.

The old man said: "Be safe, my king." I am planting a fruit tree"

The king said: "Father, will you be lucky enough to eat these fruits, after all, if you are old, these trees will bear fruit after many years?"

The old man replied: "I must not be lucky enough to eat these." The king said: "Then why are you working so hard to plant this tree?" "Are you planting a tree knowing that you will not taste the fruit?" he asked.

The old man said: "My king, our ancestors before us sowed, we ate. Now we will also plant and let those who follow us eat."

This answer pleased the king and he gave the old man a purse of gold. The old man took the gold and said: "Thank God that our tree has given fruit today."

The king liked this answer and gave the old man another purse of gold.

The old man said: "Praise be to Allah that all trees bear fruit once a year, but the tree I planted bore fruit twice."

The king wanted to give him another purse of gold. Then the minister immediately stopped and said: "Oh my king, if you don't leave here soon, the gold in your treasury will run out." Then the King continued on his way.

The old man was very happy and opened his hand in prayer: "O Lord, you are great, I will plant a tree for your approval without wasting my time."

Nature is an inexhaustible source of spiritual enrichment. To protect and truly love nature, you need to know it. Ignorance of nature is often the cause of indifference and sometimes cruelty towards all living beings. Sometimes a child can break a branch, hit a frog with a stick, trample a beetle, destroy an anthill, without even suspecting that this is causing great harm to nature.

Proverbs play an important role in child education. Many proverbs have an internal rhyme. For example: "aman" and "straw", "sultan" and "shepherd" are mutually harmonious, i.e. rhyming. In this respect they are like riddles. A proverb can also be in poetic form. For example: There is gold in the earth, you will find it if you give it to Qazi. There is silver in the garden. In other words, the more you cultivate the land and make it fertile, the more you will get a good harvest from it and your income will increase. Our people expressed this poetic saying that the fruits and vegetables in the garden are very useful for people. By using proverbs, you will increase not only the outlook of children, but also their vocabulary, we will encourage them to think logically.

In addition, there are different views in folk proverbs about protecting nature, loving it, and that people are a part of it, proud of it, and perfected in it. For example: If you look at nature, it looks good, and it wears gold. That is, if a person has a right attitude towards nature, if he makes good use of natural resources, nature will not deny him its blessings. There are several such proverbs:

Proverbs:

- If you are a farmer, plow, if you are a Mullah, repeat.
- El lives with earth, Earth lives with water.
- If you plow the land, plow in the fall, if you don't plow in the fall, plow the hundred.

Ecological culture includes not only the perception of the beauty of nature, but also active work to know it and protect it. They observe and discuss the rules of behavior with children, help them gain practical experience in caring for plants and animals.

In educating the youth of our society in the spirit of our national values, we must not forget that the tasks of education are wide and multifaceted. Therefore, it is necessary to imagine in advance the questions of what kind of person should be educated, what kind of person should be as a result of education. In this case, formation of national values in 5-6-year-old children through the use of examples of folk art is of great importance. It should be in line with society's goal of educating a perfect human being. National values, which are widely interpreted in folklore - humanity, tolerance, patriotism, hospitality, harmony, honesty, love of nature, etc. are considered to be the delicate buds of the values of the Uzbek people. Our people have been taking care of them for centuries.

The source of our country's strength is its loyalty to national values. National values, by their essence, are a system of ideas that express the main goals and objectives of our nation, connect its past and future, and serve to realize centuries-old dreams.

The content of pre-school education is rich in materials of national values. Many manuals include folk tales, proverbs, narrations, hadiths, epics, short stories, legends, riddles, folklore, folk tunes and songs. According to the essence of their content, they serve to form the foundations of national moral culture in young children. In order to purposefully and effectively use the means of folk art, the educators of the preschool educational organization should have high pedagogical skills.

The great pedagogues also gave the products of folk art to the youth during the course of the science classes that they taught. Through this, they enriched the spiritual heritage of young people. Based on the spiritual need of the time, Uzbek pedagogues H.H. Niyozzi, S. Ayniy, Abdulla Avloniy founded this work. They paid special attention to the materials of children's oral creativity in the books they created.

If today's education and ideology of independence is nourished by this heritage, if it accepts its best pages and rules, it can honorably fulfill its goals and tasks. Because it is a testimony to the comprehensive education and maturation of a person, the priority of our spirituality, and the appreciation of our precious values.

From the Islamic point of view, the education of nature protection is the duty of the older members of the society. Older people should set an example for young people to protect the environment and maintain cleanliness. We should

always remember the words of our grandfathers and grandmothers: don't spit in the water, don't throw garbage on the streets, don't sweep the garbage in the ditches, don't kill the growing plants, and teach them to the youth.

BEFORE SCHOOL AGE THE CHILDREN METHODOLOGICAL GUIDELINES FOR THE USE OF INTERACTIVE METHODS IN INTRODUCING NATURE

Abstract. In this article, you can get enough information about the technology of using creative games in organizing the interactive educational process of preschool children.

Key words: preschool educational organization, educational process, creative games, making transactions, interactive games, green area, modern experiences, pedagogical technology, ecological education, nature games, innovative technology.

Current and emerging technological advances in information and communication technologies enable the development of interactive learning environments to support new ways of learning. Interactive learning environments have an increasing role in teaching and learning and may play an important role in the future. In particular, discovery, creativity encouraging and enhancer tools. thinking and to express very necessary Our research main point young students for complicated in the fields to learn support for Interactive education environments to design directed. We emphasize that children real life they learn and in the future real complicated problems solution to do are prepared, of the world complexity than usual according to much earlier and much earlier account taken need. In education developing trends more and more to the student directed approaches is passing In this learning the facts and the rules with passive to get acquainted not but self to encourage based on active discovery and participation reach to the process becomes Educator's role more coach or guidance as it will be seen in progress help will give and important role plays That's it point of view from the point of view than to learn children study activity with engaged in and dived without active respectively new dynamic that " builds " knowledge process as to look can Interactive education environments when designing our our approach constructive and instructive learning approaches in the middle right balance is storage. From this except, they that's it until now, for example, behaviorism computer using teaching and cognitive to psychology than less attention directed Children's complexity about concepts support for interactive study environment design. This of research from the goals one of children the environment sciences and ecology in the field concepts support for interactive

education environment is to create. Main guess from that is that the future in the century the environment problems more and more important and more complicated will be

Ecological of education again one important the question is this stability issues young students how our input is stable development goals United Nations The agenda of the organization until 2030 is many level education actions for, first in turn, the goals seeing exit through big leadership and inspiration will give. However, this in research of children stability for of education main element as nature games in the form of nature experience for opportunities attention is directed. Very young students for access and closeness the first hand experiences for very important aspects, mainly the game through. Ernst and Angle nature before school education institutions in learning stability for education conditions nature of games potential contribution they emphasized. And young students for stability indicators a lot Although we are in this in research nature to the games access and closeness idea through stability to work let's take it down.

It's a game children active respectively forming and pleasure and the selection own into received experience So so, nature games why take to come deeper seeing exit guaranteed. First, the idea of " nature ". quickly seeing exit Of nature wide and inclusive the idea of " ecosystem of processes most of them there is has been organic environment (eg birth, death, reproduction, species between relationships). This to the list desert from the regions farmer farms and to the gardens to live places spectrum enters ". This sure definition is useful mainly because it inhumane and heavy to the person has been external space spectrum cover takes this in research we nature city gardens basically not developed or uncontrollable parts as we use However, this research for more important thing this definition not but this places children for why have that it is places of nature physical and alive elements with how mutually effects provides. Children and nature of the network to work based on nature games imaginative, constructive, emotional and cooperative has been natural in the regions open in the air free of charge the game that is defined. From this besides, Natural Start organization nature games " sites ". stones, dirt, trees, insects, flowers, mud and water such as things with mutually effect to do for elementary nature provider as describes. Nature games sites are also this things manipulation to do possibility to give I need it, guys dig, collect, climb, build and Hide for free of charge to be need This research for nature games idea elements with mutually in touch to be possibility giving nature in places of children happy and himself himself manage experience unites Nature of the game definition recently conducted in research early of childhood nature with dependence to describe very looks like, for example, free selected personal selection in nature the body action, nature events study, places learning and free the game One different although not nature games and early of childhood nature with dependence between potential relationships important it seems

Children and nature network America Pediatrics Academy to the report based on nature the game of endurance important structural part as describes. Studies early childhood period nature experience by supported to himself special endurance factors is determined. An example for, nature children kindergarten settings young to the students roles discussion to do, cooperation to do, collective things perform and social skills development opportunities present reach with society develops. That's it similar in the environment of children durability support for green school yards role, WHO from stress avoid, focus development, competence formation and supportive social groups formation such as protection of factors development note did

Nature the game settings " loose parts " aspect children play, experience transfer, the problem solution to do and in hand natural materials with news to create with execution doer activity to develop possibility will give. From this except, the game children identity to build and autonomy and agency support help will give. Current of research main direction early childhood game though for natural to the environment effect to do big age children also for, for example, subjective and psychological prosperity for protection factor as described

Many studies green of the field importance relatively to nature rapprochement and endurance elements between dependence emphasized. For example, children vital to stress with a buffer against provide for near around to nature enter importance nature of children durability strengthens and to the children regularly access possible have to those who are not than difficulties better overcome for nature with more contact to do provides. Green to the field entry is 3-5 years old children for emotional endurance prophecy what he did determined. Natural neighborhood area from 4 to 6 years has been children for social, emotional and behavior difficulties decrease possible said to the conclusion came Recently conducted research childhood during and whole life during green of the field long time existence with depends the question seeing came out in studies health and demographic from the data used and green field nearby growth adulthood age spiritual health diseases 55 percent of the risk decrease with depends said to the conclusion came another known risk of factors effect burn manifestation being is standing

SPIRITUAL AND MORAL QUALITIES OF TIMURID PRINCESSES

Abstract. This article covers issues of spiritual and educational life, interpersonal relationships, social relations, as well as the level of influence of women on public affairs during the reign of the Timurids.

Qadimdan Sharqning ayollari o‘zining go‘zalligi, donoligi, hayosi, ibosi bilan boshqa xalq ayollaridan tubdan ajralib turishgan. Ayniqsa, bu o‘rinda Temuriy malikalar alohida ahamiyatga ega. O‘tmishimizga nazar tashlanganda Temuriylar va Boburiylar saltanatlarida ayollarga ko‘rsatilgan izzat-hurmat va e‘tibor boshqa Sharq sulolarida kuzatilmaydi.

Temuriylar va Boburiylar sulolasidan oldingi sulolalarda biror ayol haqida ma‘lumot olish uchun bir nechta kitobni varaqlash kerak bo‘lsa, birgina “Boburnoma”da 74 ta ayolning ismi 230 o‘rinda hurmat bilan keltirilgan.11 Bundan ajdodlarimizni yuksak ma‘naviyatli, keng dunyoqarash egalari bo‘lganliklarini bilish mumkin.

Chunki aynan ayollar, erkaklar urush safarlarida bo‘lgan paytlarida farzandlarga, shahzodalarga tarbiya berishgan va bunyodkorlik ishlariga boshchilik qilishgan.

Biz bu o‘rinda shunday Temuriy malikalardan ikki go‘zal xonim haqida so‘z yuritmoqchimiz. Ularning har biri tariximizda ulkan burilish yasab, o‘chmas iz qoldirishgan.

Bular: Amir Temurning suyakli ayoli Saroymulxonim hamda Husayn Boyqaroning go‘zal xonimi Xadichabegimdir.

11 Boburnoma Toshkent-2007

Dastlab Saroymulkxonim haqida. Saroymulkxonim Chig`atoy ulusiga mansub mo`g`ul xonlaridan Qozonxonning qizi bo`lib, 1341 yilda tug`ilganlar. 1355-yilda esa Movarounnahr hukmdori amir Qozog`onning nabirasi amir Husayn ularni nikohiga kiritgan. 1370 yildagi jangda Amir Temur Amir Husaynni yengib, uning haramidan 4 ayolni o`zi bilan olib qaytadi. Ular orasida Saroymulkxonim ham bor edi.

Amir Temur Saroymulkxonimni nikohiga olgach, “ko`ragon” unvonini oldi. Saroymulkxonim haramda katta xonim ya`ni Bibixonim nomini olganlar. Albatta bunday unvon haramdagi eng oqila, didli hamda keng dunyoqarash egasiga berilardi. Bundan tashqari Saroymulkxonim juda go`zal bo`lganlar.

Amir Temur harbiy yurishlarida Saroymulkxonimni ko`pincha birga olib yurgan. Hatto saroyda vujudga kelgan muammolarni hal qilishda Saroymulkxonim oqilona maslahatlarini ayamaganlar. Amir Temur Saroymulkxonim maslahatlariga oshkora bo`lmasada, pinhona ravishda ehtiyoj sezib turgan.

Aytishlaricha Amir Temurga Isfaxon qamali uzoqqa cho`zilgani tufayli qo`shinni ta`minlashga mablag` yetmay qoladi. Shunda u Saroymulkxonimga “Qo`shinning zahirasi tugadi, xazinadan zar yuboring”,- deb xat yuboradi. Saroymulkxonim esa “Zaringiz tugagan bo`lsa, siyosatingiz ham tugaydimu”, degan kinoyali javob yuboradi. Amir Temur kinoyani tushunib, so`yib yeyilgan qo`y-mollar suyaklariga muhr urdirib, Isfaxon qamali tugaguncha ulardan pul o`rnida foydalanadi. Keyinchalik ular tanga pullarga almashtiriladi.¹² Saroymulkxonim sharofati bilan xazinadan ortiqcha mablag` ishlatilmagan holda, ko`zlangan maqsadga erishiladi.

Sohibqiron Amir Temur Saroymulkxonimdan farzand ko`rmagan. Ammo sohibqiron o`z o`g`li Shohruh Mirzoni, suyuqli nabiralari Muhammad Sulton Mirzo, Xalil Sulton Mirzo, Ulug`bek Mirzo va boshqa mirzolarni bevosita zukko Saroymulkxonim tarbiyasiga topshirgan edi. Bundan shuni anglash mumkinki, Amir Temur Saroymulkxonimni juda hurmat qilgan va ardoqlagan.

Endi esa Xadichabegim to`g`risida.

Xadichabegim 1451-yilda Hirotda tug`ilib, 1457-yilda abu Sayyid Mirzoga hadya qilingan. 1469-yilda Abu Sayid Mirzo halokatga uchragach, Husayn Boyqaro Xadichabegimni ko`rib sevib qoladi va uni nikohiga oladi.

Xadichabegim makkorona hiylalarini ishlatib, haramda ulug` beka unvonini oladilar. Bu xonim doimo o`g`li Muzaffar mirzoni taxtga o`tqazish to`g`risida bosh qotiradi. Hamda buning uchun yo`ldagi deyarli barcha to`siqlarni olib tashlaydi. Juda ko`p insonlar bu yo`lda halok bo`ladi. Husayn Boyqaroni Xadichabegim Muzaffar Mirzodan boshqa o`g`illari bilan teskari qilib qo`yadi. Hatto ular o`z otalari bilan jang qilishgacha borishadi. Husayn Boyqaro saltanatining asosiy yemirilish sababi ham aynan shudir.

12Turg`un Fayziyev “Temuriy malikalar” 8-betToshkent-“O`zbekiston” - 2013

Ammo Alisher Navoiy Sab'ai Sayyorning X bobini Xadichabegimga bag'ishlagan. Navoiy Xadichabegimni Bilqisi soniy (Sulaymon payg'ambarning suyuqli xotinlarining nomi Bilqis bo'lgan), Sorai uzmo, Xadishai kubro deb atagan. Yana Xadichabegimning madhi ulyo (oliy yo'l boshchi), ismatut dunyo (dunyo pokizasi) kabi unvonlari bo'lgan¹³. Bundan tashqari Navoiy Xadichabegimga atab go'zal g'azal bitgan.¹⁴ Xurshid Davronning "Sirli olam" jurnalida e'lon qilgan "Navoiyning ichki armoni" nomli maqolasida "Navoiy Xadichabegimni sevgan, unga Husayn Boyqaro uylangach uylanmay o'tishga qaror qilgan" -degan fikrni aytadi. Ammo manbalarga ko'ra bu fikr to'g'ri emas. Chunki Xadichabegim go'zal bo'lsada, Navoiy sevadigan ayol bo'lmagan. Aksincha Xadichabegim boshqa saroy a'yonlari bilan birga Navoiy va Husayn Boyqaro o'rtasida ziddiyatlar keltirib chiqaradi.

"Boburnoma"da esa u haqida "O'zini oqila tutar, vale, beaql va purgo'y xotun erdi. Rofiziya (shialik mazhabi) ham ekandur", deb yoziladi.¹⁵

Demak, Xadichabegim Bobur nazarida ham o'ta hurmatli ayollar safida bo'lmagan.

"Yaxshidan bog' qolar, Yomondan dog'" deb bekorga aytilmagan albatta. Bu ikki xonim ham o'ta obro'li, hurmat- e'tiborga ega, go'zal ayollar bo'lishgan. Amir Temur va Husayn Boyqarodek buyuk insonlar ularni o'zlariga loyiq deb bilganlarmi demak, ular oddiy ayollardan farqlanib turishgan. Saroymulxonim har qanday vaziyatda o'zini boshqara oladigan ayol bo'lib, vaqti kelganda Amir Temurni ham boshqara olganlar. Ya'ni o'zgalar ongini o'zlariga qarata oladigan kuchga ega bo'lib, bu fan tilida *refleksiya* deyiladi.

Bibixonimning yana bir yutuqlari shundaki mol-dunyoga havasmand ayol bo'lmaganlar. Yoshliklaridan moddiy jihatdan to'laqonli hayot kechirganliklari tufayli, mol-dunyoga o'chlik hissi bo'lmagan.

Saroymulxonimning barcha go'zal fazilatlariga sabab *genetik* jihatdan xonlar avlodiga mansubliklaridir. Ma'lumki, saroy doimo ilm - ma'rifat o'chog'i sanalgan. Chunki xon va amirlar o'z atroflariga mamlakatning eng zakovatli insonlarini yig'ib, ba'zi qarorlar qabul qilish hamda yurtda islohotlar o'tkazish masalalarida ulardan maslahat so'rashgan. Buning yana bir sababi esa xonlar o'z farzandlarini ta'lim-tarbiyasini mana shunday buyuk aql-zakovat egalariga ishonib topshirganlaridir. Buning natijasida esa farzandlar ota-onalaridanda yuksakroq bilim tafakkurga ega bo'lgan bo'lsalar, keyinchalik bu qondan-qonga o'tib, nabiralarga, ham nasliy jihatdan ma'rifatlilik, ham saroydagi yuksak madaniy – ma'naviy muhit birgalikda o'z ta'sirni o'tkazib, komil insonni shakllantirgan. Saroymulxonim ham mana shunday muhitda tarbiya topganlar va saroy ayollariga xos barcha xususiyatlar xonimda mujassam bo'lgan.

Sangvinik temperamentga xos barcha xususiyatlar (bosiqlik, mulohazakorlik, sabrlilik va boshqalar) Bibixonimda mavjud bo'lganligi uchun

13 Navoiy "Asarlari" 15-jildligining 9-jildiga P.Shamsiyev tuzgan izohlardan

14 Navoiy mukammal asarlar to'plami 20 jildligi, 1-jild 59-bet 1987

15 Boburnoma 231-bet

ham u kishi har qanday vaziyatda o`zini Amir Temurga munosib ravishda tuta olganlar. Hech qachon o`z sha`niga gard yuqtirmaganlar.

Buning isbotini esa yuqorida keltirgan misollarimizda ko`rishingiz mumkin.

Xadichabegim esa xolerik (hukmronlikni yoqtiruvchi va shuhratparast, tanqidni qabul qila olmaydigan, jahldor...) temperament egasi bo`lgan. Insonlarni, go`zal xulq-odob muomala madaniyati bilan emas, aynan tashqi go`zallik bilan o`ziga rom eta olganlar. Hukmron bo`lish hissi boshqa har qanday mayldan ustunlik qilgan va shuning uchun ham Muzaffar Mirzoni taxtga o`tqazish yo`lidagi barcha to`siqlarni ustalik bilan olib tashlaganlar. Buning ortida esa o`z o`g`li nomidan mamlakatni boshqarish maqsadi yotgan albatta. Aynan Xadichabegimdagi *egoizm* Temuriylar saltanatining inqirozga yuz tutishida muhim omil bo`lib xizmat qilgan.

Yuqorida ikki go`zal Sharq ayollari to`g`risida so`z yuritdik. Biri Temuriylar saltanatining nozik ustunlaridan biri bo`lgan bo`lsa, ikkinchisi ushbu saltanat ildizlariga bolta urgan. Ularning saroydagi mavqei teng bo`lsada, ikkisi shu mavqedan turli yo`llarda foydalanganliklarini guvohi bo`lamiz.

Ayol nozik xilqat. Uning ummondek mehri yuksak tog`larni eritgudek qudratga ega bo`lsa, uning qahri dunyoni o`zgartirib yuborishga qodir!

Umuman har qanday ayol ichki dunyosida sirli bir kuch yashiringan bo`ladi. Biroq shu kuchni mustahkam iroda va sabr bilan to`g`ri yo`lga yo`naltirilgan insonlargina buyuklik martabasiga erisha oladilar.

Xadichabegimdagi ichki kuch ham to`g`ri yo`naltirilganda, balkim, mamlakatimiz tarixida Saroymulxonim kabi yorqin iz qoldirilgan bo`lar edi.

Dunyo yaralgandan buyon ezulik va yovuzlik kurashi davom etmoqda. Eng muhimi biz yoshlar, buyuklar o`tmishini o`rganish barobarida, ularning yutuq va kamchiliklaridan xulosa chiqargan holda, qalbimizda ezgulik saltanatini bunyod etishdek vazifani bajarishga kuch topa olaylik.

SHADOWING EDUCATIONAL TECHNOLOGY IN TEACHING ENGLISH

Abstract. This article provides information on the importance of shadowing educational technology in language teaching, as well as the opinions of scholars on English language teaching methods and educational technologies. The stages of Shadowing educational technology are explained.

Key words: teaching, foreign languages, English, educational technologies, shadowing, motivation, listening, speaking, learning activities.

President Of The Republic Of Uzbekistan Sh. M. Mirziyoyev said that it is necessary to popularize the study of foreign languages among the population and create the necessary conditions for their perfect assimilation, coordinate the introduction of internationally recognized programs and textbooks of teaching foreign languages at all stages of education, and develop modern teaching skills in teachers.

As N. N. Normatova states, "The process of developing the oral speech skills of foreign language for linguistic departments of Higher Education is different from the process of developing it for non-philological departments. The process has its own peculiarities. The quality of education, which is a bilateral process between the teacher and student, depends on the didactic perfection of teacher`s mastery, and on the other hand, the on the student's motivational activity".

Whether we are going to use the traditional or innovative methods we have to make sure that teaching goals should be established according to the needs, lacks, and necessities of the targeted student population and educational environment to strengthen motivations and ensure interactive participation in the learning process. [Nurutdinova et al., 2016]

Nowadays there are a lot of techniques and methods for teaching English.

People can frequently distinguish the finest language educators by their dedication to inventive and novel classroom teaching techniques. These language instructors know they can employ no quick fix to allow pupils to rapidly acquire fluency in their target language. However, things have changed over the years, and though it was one of the most effective methods of teaching English to young students, it no longer considered the same now. This is due to various reasons, maybe because: the present generation gets exposure to the world through social media their knowledge base is augmenting by the information available on the

internetthe students nowadays are more impatient and to grab their attention, teaching methods need to cater to their dynamic thinking process.

Shadowing educational technology is one of the useful educational technologies in the development of teaching English.

Shadowing helps you develop two skills at the same time: listening and speaking. Listening to a native speaker, you will learn to distinguish between individual sounds and the features of pronouncing whole phrases. Then you repeat behind it by copying the correct accent.

The Shadowing technique is suitable for students. In order to repeat correctly after the carrier, you need to know the rules of pronunciation. Only a few can learn the language by ear from scratch. Perhaps, without prior preparation, you will not hear the difference in pronunciation.

There are four main parts of classroom action research in the shadowing technology. They are; planning, action, observation, and reflection.

Part one is planning. At this stage, everything needed in the teaching and learning process that will be carried out includes what, who, where, and how. The planning stage can be described as follows; Determine the research schedule, design learning activities (lesson plan), prepare teaching materials and prepare observation sheets and student worksheets (tests).

Part two is action. The researcher, as well as the lecturer, will take the following steps; Students are given a clue about the material to be delivered, students are divided into small groups and given the task to predict the contents of the lecture to be listened to (pre-listening study), students are allowed to listen to listening material through audiovisual, and each student is given a worksheet about the material they will hear (While-listening task), the students are divided into small groups to brainstorm on perceptions and interpretations of what they have listened to through the audiovisual media (Post listening task), in the final stages of students individually instructed to make a summary based on the results of interpretation and brainstorming in small groups.

Part three is observation. At this stage, the researcher observes students' activeness in group discussions and the concentration and focus of students during listening activities with audiovisual media applied.

Part four is reflection. In the final stage of this cycle, the researcher collects student work in worksheets and summaries. Then analyze the observation checklist and video recorder data to conclude the activities that occur in cycle

The technique of data collection that are applied in this research are 1) Observation. The researcher had used an observation checklist and field notes. The purpose of the observation was to know the activities during the teaching and learning process, such as how the lecturer explained the materials, what the students would respond to, and how the students have been worked in doing the test. 2) Test. The researcher also used tests to know the students' improvement in listening by using the shadowing technique. The researcher analyzed data using a checklist/observation sheet and field notes to describe the process of teaching and

learning. Besides that, the researcher calculated the data of students' score listening skills by using a formula.

Conclusion. Today, the teaching and learning of foreign languages is becoming very popular. Various methods and educational technologies have been developed in teaching English. Shadowing educational technology is important in teaching English.

ANALYSIS OF PARAMETERS OF MICRO-HEDP HYDROPOWER

Abstract. In this article, recommendations for the development and research of devices selected for the power of microwaves are given.

Keywords. Micro hydro, power, water flow, energy parameters, nominal power, efficiency, energy consumption.

Zamonaviy sharoitda birinchi navbatdagi vazifalardan biri RES (qayta tiklanadigan energiya manbalari) negizida elektr stansiyalarining raqobatbardoshligini umuman oshirishga qaratilgan chora-tadbirlar majmuasini amalga oshirish, shuningdek, MikroGES va ularning kombinatsiyalaridan foydalanishning ilg'or texnologiyalarini aniqlashdan iborat. ulardan muayyan hududda foydalanish iqtisodiy, texnik va ijtimoiy jihatdan asoslanadi.

Shu bilan birga, qayta tiklanadigan energiya manbalaridan foydalanish hududning muhandislik infratuzilmasini rivojlantirish yo'nalishlarini belgilab

beruvchi va belgilangan vazifalarni hal etish yo'llarini ko'rsatuvchi hududni barqaror rivojlantirish dasturining organik va zarur elementi sifatida qaraladi. muammolar.

Shunday qilib, energetika muammosi va uni hal etish uchun muqobil energiya manbalarini jalb etish zarurligi O'zbekiston Respublikasi Prezidentining "Muqobil energiya manbalarini yanada rivojlantirish chora-tadbirlari to'g'risida"gi qarorida qayd etilgan. Olingan ifoda har qanday shakldagi energiya ekstensivlik va intensivlik omillari mahsulotiga mutanosib bo'lgan ma'lum fizik tamoyillarga mos keladi. Bunda H bosimi suyuqlikning intensivlik koeffitsienti yoki energiya intensivligining ko'rsatkichi, suv hajmi W kenglik omili yoki energiya iste'molining miqdoriy ko'rsatkichidir.

Suv oqimining energiya quvvati zichligi E_w

$$E_w = \rho_w * Q_w * V_w^2 / (2 * S) = \rho_w * V_w^3 / 2, \text{ kW/m}^2$$

ρ_w – suvning zichligi;

Q_w – suv iste'moli ($Q_w = S * V_w$);

V_w – suv tezligi;

S – suv oqimining ko'ndalang kesimi maydoni.

Suv energiya oqimining kuchi N_w ga teng

$$N_w = E_w * S = S * \rho_w * V_w^3 / 2 \quad (2.59)$$

GESlarning energiya parametrlari

Mikro GESning chiqish quvvati (iste'molchiga o'tkaziladigan quvvat) teng

$$N_{\text{МГЭС}} = N_T * \eta_{\text{П}} = N_w * \eta_T * \eta_{\text{П}} \quad (2.60)$$

bu erda N_T - turbina quvvati;

$\eta_{\text{П}}$ - samaradorlik energiyani turbinadan iste'molchiga o'tkazish (generatoridagi mexanik yo'qotishlar va yo'qotishlar hisobga olinadi)

Biroq, agar qayta tiklanadigan energiya manbalarini etkazib berish rejimlari va yuklanish jadvallari sezilarli darajada mos kelmasa, o'rta quvvatli Hidroelektrostansiyasi talab qilinishi mumkin va shunga mos ravishda ushbu qayta tiklanadigan energiyaga asoslangan elektr stantsiyasining nominal quvvati uchun katta zaxira bo'lishi kerak. energiya manbai. Shu munosabat bilan, qayta

tiklanadigan energiya manbalarining har bir turi uchun alohida elektr stansiyalaridan tashkil topgan bir nechta qayta tiklanadigan energiya manbalariga asoslangan MikroGES qurilmalar taklif etiladi. Ma'lumki, elektr stantsiyalarining parametrlarini tanlashning asosiy mezonlari energiya va ishlab chiqarilgan energiyaning narxidir. Xuddi shu mezonlar, pirovardida, belgilangan yuk sharoitlari ta'minlangan holda, MikroGES elektr stantsiyalari, shu jumladan kombinatsiyalanganlar uchun asosiy hisoblanadi

EFFECTIVE AUDIT STRATEGIES IN A CHANGING BUSINESS ENVIRONMENT

Abstract. This article examines the importance of effective audit strategies in a changing business environment. Particular attention is paid to the role of auditors in identifying and managing risks, as well as collecting information to optimize audit processes.

Key words: trends, economic environment, technological innovation, role of auditors, risk identification, analysis, audit optimization, overcoming obstacles, effective, strategies.

Introduction: The modern business environment is constantly changing under the influence of economic, technological and regulatory factors. An important tool in this process is audit – a process that helps assess the effectiveness of business processes, identify risks and ensure financial transparency.

The purpose of this article is to review the current challenges faced by companies in a rapidly changing business environment and propose effective audit strategies to successfully overcome these challenges. The article examines the role of audit in adapting to change and provides specific methods and approaches that audit firms and businesses can use to improve their performance and manage risk. Analysis and recommendations for businesses and audit firms are the main aspects discussed in the article.

Main part: An audit allows you to identify the strengths and weaknesses of an organization and create a basis for studying the financial position of an enterprise in order to solve problems of preventing administrative liability. A mature manager fully understands the need for reviews and usually insists on them being carried out without delay. The results of the inspection and the future activities of the company directly depend on the level of knowledge, professional skills and qualifications of the inspecting employees. This is because auditing standards give them wide discretion. Globalization and international competition: The expansion of international markets and the development of communication technologies are increasingly globalizing the business environment. Companies face increasing competitive pressure at global and regional levels. Financial risks and market volatility, economic crises, financial instability and political

instability create additional challenges for companies in managing financial risks and ensuring stability.

Auditors must be especially alert to these changes to adapt their audit strategies and techniques to the new challenges facing their clients in today's economic environment while assessing the overall monetary objectives necessary for the existence and successful development of the enterprise.

The role of auditors in identifying and managing risks:

➤ Auditors play an important role in identifying and managing risks for companies. Below are the main aspects of their work:

➤ Assessing internal control systems: Auditors evaluate companies' internal control systems to identify weaknesses and vulnerabilities that could lead to risk.

➤ Financial statement analysis: Auditors analyze companies' financial statements in detail to identify possible errors, fraud, or non-compliance with regulatory requirements.

➤ Developing a risk management strategy: Based on audit results, auditors help companies develop effective risk management strategies, including recommendations for improving internal control systems and procedures.

Currently, most financial scientists believe that the main monetary goal of an enterprise as an economic entity is to increase the value of capital or, in extreme cases, to maximize net profit, which is an integral part of the system that ensures reliability. financial reporting and helps them effectively manage their activities in a volatile business environment. Modern technology allows audit firms and companies to use data and analysis to perform audit procedures more efficiently and accurately.

A comparative analysis of the concepts and performance of accounting systems in different countries is presented by Harald Hungenberg, Ph.D., Head of the Institute of Enterprise Planning, Professor of Business Economics at the Justus Liebig University in Giessen and the Technical University of Berlin, and Harald Hungenberg, Professor of Business Economics at the Friedrich Alexander University of Erlangen -Nuremberg, made it possible to develop the concepts of modified cost-based planning, suitable for enterprises operating only in the domestic market or in international markets, and move to international accounting standards. newbies.

“Strategy” is given in the works of R. A. Fatkhutdinov, according to which “strategy is a program, plan, general course of a management entity to achieve strategic goals in any field of activity.”

The audit strategy is critical to the success of the audit engagement. According to ISA 300, a good audit strategy should have the following important values:

How to determine an audit strategy? In the audit strategy, the auditor must define the characteristics of the engagement and determine the scope of the audit. This is a very important point before starting the next job. For example, auditing

client financial statements based on international auditing standards and client financial statements prepared on a US GAAP basis. The auditor should also determine the reporting objectives of the audit engagement to determine the timing of the audit and the nature of the information required. For example, the audit report is required by the parent company and is not published online. Part of the audit strategy is for auditors to identify or define the key factors or key areas of the audit engagement.

Thus, the concept of strategy is multifaceted and includes the target component of the long-term development of the organization, a program and comprehensive plan, resource provision, sufficient structure, a system of relations within the organization and interaction with the external environment.

Use of analytical tools: Auditors can use analytical tools to further analyze companies' financial information and identify potential risks. Using big data: Collecting and analyzing large amounts of data allows auditors to gain a more complete picture of companies and their environment, which helps identify hidden risks and trends. Overall use of data and analysis. allows auditors to analyze companies' financial information more deeply and accurately, identify risks in advance and develop effective strategies for managing them, which helps improve the quality of the audit and improve risk management in the organization.

Summary: In today's dynamic business environment, effective auditing plays a critical role in ensuring sustainable development of companies and minimizing risks. This article explores the key aspects of using data and analytics to overcome barriers to audit optimization and implementing effective strategies.

In conclusion, successful implementation of effective audit strategies requires not only the use of modern technology and analytical tools, but also active management support, flexibility in approaches to changing company processes and culture, and continuous training and development of employees.

An important aspect of justifying the development strategy of a commercial organization for its implementation is the forecast of business prospects and an adequate assessment of the reality of the chosen development strategy. Despite the large amount of scientific and educational literature in the field of strategic development. management (management), strategic planning and even strategic accounting, strategic control and issues of organizing strategic audit remain poorly developed. The research conducted as part of this work allows us to draw the following main conclusions, which, in turn, may be important for the further development of the methodology for strategic control and audit of commercial organizations.

ERTAK JANRI VA UNDAGI TIL IMKONIYATLARI

Annotatsiya. Bugungi kunda tilshunoslik tarmoqlarining oldida turgan muhim vazifalardan biri til va madaniyatning kesishidan hosil bo'lgan lingvomadaniyatshunoslikning o'ziga xos jihatlarini tadqiq qilishdan, ilmiy xulosalar chiqarishdan iborat. Mana shunday tadqiqot ishlarini amalga oshirishda xalq og'zaki ijodiga murojaat qilish katta samara beradi. Ushbu maqolada ham xalq og'zaki ijodining ommabop janrlaridan biri ertaklarning til imkoniyatlari, lingvomadaniy jihatlarni ochib berishdagi o'rni haqida fikr yuritilgan.

Kalit so'zlar: folklor, ertak, ertak janri, dealektizm, tarixiy leksika, realiya, ekzotizm, stereotipik matn.

THE GENRE OF FAIRY TALES AND LANGUAGE POSSIBILITIES IN IT

Abstract. Today, one of the important tasks facing the branches of linguistics is to research the specific aspects of linguistics and culture, which are formed by the intersection of language and culture, and to draw scientific conclusions. In the implementation of such research works, it is very effective to turn to folklore. In this article, one of the popular genres of folklore, fairy tales, is discussed about the language possibilities, the role of revealing linguistic and cultural aspects.

Key words: folklore, fairy tale, fairy tale genre, dealectism, historical lexicon, reality, exoticism, stereotypical text.

Kirish. Har bir xalqning o'y-xayoli, yashash tarzi, o'ziga xos milli madaniyati, mentaliteti, urf-odat va an'alarini tarixiy ildizlarini ifodalay olish imkoniga ega folklor janrlariga murojaat qilishga undamoqda. O'tgan asrda G'arb tilshunoslarning e'tiborini tortgan lingvofolkloristika XXI asrning ilk yillaridanoq o'zbek tilshunoslarining ham diqqatini tortib kelmoqda. Folklor janrlari ichida ertak janri til imkoniyatlariga boyligi, lingvomadaniy jihatlarni o'ziga jamlaganligi bilan alohida ahamiyatga ega. Shu o'rinda o'zbek ertakchiligi tarixi haqida to'xtalib o'tsak, maqsadli bo'ladi. O'zbek ertakchiligi ham uzoq tarixga ega. "Dede qo'rqut" kitobidan buyon to XX asrning boshigacha vujudga kelgan

barcha adabiy va badiiy obidalarida, turli ko‘rinishda o‘zbek xalqining qadimiy ertakchiligi, dostonchiligi, qissalari, afsonalari o‘z izlarini qoldirgan. *Janriy xususiyatiga ko‘ra ertaklar adabiyotlarda quyidagicha bayon etiladi: “Ertak epik turga mansub qadimiy janrlardan biri bo‘lib, xalq orasida g‘oyat keng tarqalganligi, asrlar davomida shakllangan milliy-madaniy qadriyatlar, xalqning turmush-tarzi, an‘analari va urf-odatlarini o‘ziga xos tarzda epik talqin qiladigan, asosan, professional ijrochilar – ertakchilar tomonidan nasriy usulda, og‘zaki tarzda hikoya etish orqali ommalashishi, yaxlit poetik tizim sifatida shakllanganligi, o‘ziga xos badiiy struktura va motivlar tarkibiga egaligi, hayotiy voqelikni xayoliy uydirma, fantastik talqin orqali ifoda etishi bilan xarakterlanadi”*¹⁶.

Tadqiqot metodologiyasi. Turkiy xalqlar folklorida ertak dastlabki adabiy janrlaridan biri ekanligi ma‘lum. Ertak atamasiga O‘TILda quyidagicha izoh beriladi: “Ertak – xalq og‘zaki poetik ijodining asosiy janrlaridan biri; to‘qima va uydirmaga asoslangan, sehrli-sarguzasht va maishiy mazmundagi epik badiiy asardir” [O‘TIL.V.52].

“Ertak atamasi qadimgi turkiylar lahjasida *“hazillashmoq”, “so‘zlamog‘”, “hikoya qilmoq”, “kuylamoq”* ma‘nolarida qo‘llanilgan va muayyan darajada omonimik mohiyat kasb etgan *“ar//yer//ir//or”* arxaik o‘zak-leksemasiga «-ta» yasovchi qo‘shimchasini qo‘shish orqali fe‘lning buyruq maylidagi shakli – *“biror narsani hikoya qil”, “muayyan voqeani so‘zlab ber”* ma‘nosidagi *“arta//yerta//irta”* fe‘li hosil qilingan. Ana shu leksemaga proturkiylar tilidagi harakat nomi yasovchi “-q // -k” affiksini qo‘shish natijasida xayoliy uydirma va fantastik tasvir asosiga qurilgan folklor janri nomini bildiruvchi *“ertak”* atamasi yuzaga kelgan”¹⁷. O‘zbek tilining etimologik lug‘atida qadimgi turkiy tildagi “o‘t-“, “kech-” ma‘nosini anglatgan ert- fe‘lidan – (ä)k qo‘shimchasi bilan (ert+ äk= ertäk) yasalganligi hamda “o‘tmish”, “kechmish”¹⁸ ma‘nosini anglatganligi qayd etiladi.

M.Koshg‘ariyning “Devonu lug‘otit-turk” asarida bu atama *“etuk”* tarzida qayd etilgan: “*Этүк – hikoya, ertak; biror maqsadni shohga bildirish, hikoya qilish uchun ham bu so‘z qo‘llanadi. Asli bir narsani hikoya qilishdan olingan*”¹⁹. Bu atama *“ertak”, “ertaki”, “irtaki”* shaklida turkiy xalqlarda faol qo‘llaniladi. Jumladan, o‘zbeklar istiqomat qiladigan barcha hududlarda keng tarqalgan bu atama xalq og‘zaki badiiy ijodining to‘qima va xayoliy uydirmaga asoslangan, sehrli sarguzasht, fantastik talqin va maishiy mazmundagi epik turga mansub asar ma‘nosida qo‘llaniladi.

O‘zbekiston hududida ertak janrining syujet birligini saqlagan holda aynan shu ma‘no (ertak ma‘nosi)ni ifodalovchi bir qancha terminlar ham mavjud. Toshkent va uning atrofidagi hududlarda ertak so‘zi o‘rnida “cho‘pchak” so‘zi

16 Mirzayev T. va boshqalar. O‘zbek folklori. Darslik. – Toshkent: 2020. – B. 141.

17 Mirzayev T. va boshqalar. O‘zbek folklori. Darslik. – Toshkent: 2020. – B. 141.

18 Раҳматуллаев Ш. Ўзбек тилининг этимологик луғати. I жилд. – Тошкент: Университет, 2000. – Б. 469.

19 Махмуд Кошғарий. Девону луғотит-турк. I-том. – Тошкент: Фан, 1960. – Б. 98.

qo‘llanib kelingan. “Cho‘pchak” atamasi fonetik o‘zgarishlarga uchragan holda boshqa turkiy xalqlar tilida ham ishlatiladi. Masalan, oltoy tilida ertak ma’nosini anglatuvchi bu atama, asosan, “chörchök” (ya’ni “cho‘rchäk”) so‘zi “afsona”, “ertak”, “masal” kabi ma’nolarini ifodalasa, “*chörchöktö*” fe’li “ertak aytmok” ma’nosini bildiradi²⁰. Samarqand va Farg‘ona vodiysining ayrim joylarida, Surxondaryo va Qashqadaryo viloyatlarida “matal”, Buxoro va Navoiy viloyatlari va shu kabi ayrim “ikki tilli (o‘zbek va tojik tillarida) so‘zlashuvchi aholi o‘rtasida “shuk” yoki “ushuk”²¹, Xorazm viloyati aholisi shevasida “vorsoqi” so‘zi “ertak” ma’nosida ishlatiladi²². Ertak terminining yuqorida ta’kidlangan: matal, cho‘pchak, vorsoqi, ushuk ko‘rinishlaridan tashqari xalqimiz orasida *o‘tirik, tatal* kabi terminlar ham uchraydi.

Alisher Navoiy asarlarida bu so‘z “cho‘rchak” shaklida “afsona, ertak” ma’nolarda qo‘llanilgan. Buni folklorshunos olim O.Madayev shunday izohlaydi:

*Habibim husni vasfin uyla muhlik anglakim bo‘lg‘ay,
Qoshinda qissai Yusuf bir uyqu kelturur cho‘pchak.*

(Baytdagi “cho‘pchak” “Navodir ush-shabob”ning 1959-yilgi nashrida “cho‘rchak” shaklida yozilgan). Baytdagi “uyqu” so‘ziga e’tibor berib. Ma’lum bo‘ladiki, oqshom payti bolalarni uxlatishda ertakning sehrlil ta’sir kuchidan bugungi kunda foydalanar ekanmiz, bu an’ana ham bejiz paydo bo‘lmaganini qayd etamiz²³.

Folklorshunos olim, prof. D.O‘rayeva ertak terminining genezisi haqida fikr bildirar ekan, ushbu terminning davrlar o‘tishi bilan tilda bo‘ladigan o‘zgarishlarni inobatga olib, “ertak” atamasini yasama so‘z sifatida baholaydi. Olima fikrini quyidagicha izohlaydi: ertak so‘zi “er” aniqrog‘i, qadimgi turkcha “qo‘shiq” ma’nosini ifodalovchi “ir” (“yir”, “jir”) so‘ziga “-tak” yoki “-tek” qo‘shimchasini qo‘shilishidan hosil bo‘lgan”. Bunda olim ertaklarning qo‘shiqqa o‘xshash bir necha xususiyatlarini keltirib o‘tadi: ertaklar qo‘shiq kabi sajli boshlanmalarga ega hisoblanadi; ayrim ertaklar syujetini qo‘shiqlarsiz tasavvur etib bo‘lmaydi (masalan, “Yoriltosh”, “Musicha”); ertakda voqealar o‘zaro bog‘lanishga xizmat qiladigan “*shohning qahri keldi, ilonday zahri keldi*”, “*oy desa – og‘zi bor, kun desa – ko‘zi bor, shirindan shirin so‘zi bor*”, “*yo‘l yuribdi, yo‘l yursa ham mo‘l yuribdi...*” kabi qoliplashgan”²⁴ birliklar mavjudligi bilan fikrlarini dalillaydi.

S.Ro‘zimboyev va H.Ro‘zmetovlar “Folklor atamaları qisqacha izohli lug‘ati”da: “Ertak terminining ma’nosiga qaraydigan bo‘lsak, u “erta” so‘zi bilan

20 Mirzayev T. va boshqalar. Ko‘rsatilgan manba:– B. 141

aloqador bo‘lib, ertagi, ilgarigi bo‘lib o‘tgan voqealar ma’nosini beradi”, deb ko‘rsatadi²⁵.

Tahlil va natijalar. Ertak terminining izohi yuqorida turlicha talqin qilinganligi ko‘zga tashlanadi. Shuni unutmazlik kerakki, ushbu fikrlarni bog‘lab turuvchi *“bayon qilmoq”, “hikoya qilmoq”* birikmalari ertak terminini yuzaga kelishida muhim vosita hisoblanadi.

Xalq ertaklari tiliga e’tibor berar ekanmiz, unda o‘zbek tilining imkoniyati keng ekanligi ko‘zga tashlanadi. Ertaklarning lingvistik tadqiqi ertak tilida mavjud urf-odat, xalqimizga xos mentalitetni ifodalovchi unsurlarning ko‘pligi bilan ahamiyatlidir. Jumladan, o‘zbek xalq ertaklari tilida qo‘llangan gaplarning strukturasi e’tibor qaratilar ekan, unda aytuvchi (ertakchi)ning ham mahorati, nutqi, xalqning milliy-madaniyatidan xabardorligi talab etiladi. Xalq ertaklarimizning gap qurilishiga e’tibor qaratilsa, hayotiy-maishiy ertaklarda aksariyat hollarda qo‘shma gaplardan, aralash murakkab qo‘shma gaplardan ko‘proq foydalanish holatlari kuzatiladi. Hayvonlar haqidagi ertaklarda esa *sodda* va *uyushiq bo‘lakli gaplar* yetakchilik qiladi.

Ertak – xalq milliy-madaniyatini aks ettiruvchi o‘ziga xos folklor janri hisoblanib, lingvistik nuqtayi nazardan an’anaviy formulalarning ko‘pligi bilan ajralib turadi. Ertak janri asrlar davomida og‘izdan og‘izga o‘tish natijasida o‘zgaruvchanlik xususiyatlariga ham ega bo‘ladi. Ushbu janr asrlar davomida o‘zgarish xususiyatiga ega bo‘lsa-da, unda xalq mentaliteti bilan bog‘liq bo‘lgan qarashlarni epitetlar, metaforalar, giperbola, o‘xshatish va qiyoslar, takrorlar orqali ko‘rsatib beriladi. Xususan, ertaklar tilida mavjud *“oltindek o‘g‘il”, “boldek erimoq”, “toshday zirillamoq”, “uchar qushday pirillamoq”, “muzday qotmoq”, “shamday qotmoq”, “na’ra kabi o‘tinchlar”, “g‘ordek og‘iz”, “naqsh olmaday yuz”, “kalladay qulf”, “mumdek erimoq”, “ozod, hur, go‘zal hayot”, “qo‘lidagi hassasidan burni uzun”, “qorong‘i zulmat”, “yorug‘ nur”, “g‘am loyi”, “shodlik to‘yi”, “qora zulmat”, “umidsiz dovdirash”* kabi o‘ziga xos birliklar ertak janrining til imkoniyatlari kengligini ko‘rsatadi.

O‘zbek xalq ertaklarida badiiy uslubga xos xususiyatlar, shuningdek, ushbu janrning ko‘proq bolalar uchun xoslanganligi uchun so‘zlashuv uslubiga xos unsurlar yaqqol ko‘zga tashlanadi. Xususan, *hezlamoq, shoti, ena, govgum (govgun), sho‘x-sho‘tanoq, badar, kadi, bikach, keli, kelisop, qoqshov, bachcha* kabi dialektlar, *kosagul, chora* (yog‘och tovoq), *botmon* (ertak tilida sath o‘lchovi), *kamand* kabi ko‘plab tarixiy leksemalardan keng foydalanilgan. Bu esa ma’lum bir hududning koloritini ta’minlaydi. Bundan tashqari xalq ertaklarimizda o‘zbek xalqi milliy-madaniyatini namoyon qiluvchi *dasturxon, atlas, paranji, supa, xurjun, oftoba* kabi realiyalar, *yasovul, polov, atala, chopon, do‘ppi, navro‘z* kabi ekzotizmlar ko‘plab qo‘llanilgan²⁶. Bu esa yosh avlodni xalqimizga xos milliy-mental xususiyatlari bilan tanishtirish, o‘zbek xalqiga xos etnomadaniy

25 Рўзимбоев С., Рўзметов Х. Фольклор атамалари қисқача луғати. – Урганч, 2007. – Б. 52.

26 Bozorov H. O‘zbek xalq ertaklarining lingvomadaniy tadqiqi. Filol.fan.b.fals.dok. ...diss. – Termiz, 2023. – B. 43.

stereotiplarni singdirishda ertaklar asosiy manbalardan biri bo‘lib xizmat qiladi. Ertak boshlanmasidagi “*Bir bor ekan, bir yo‘q ekan*”, tugallanmasidagi “*murod maqsadiga yetibdi*” yoki “*oy desa og‘zi bor, kun desa ko‘zi bor*” kabi stereotipik matnlar asrlar osha xalqimiz lisoniy olamida yashab kelmoqda. Bundan tashqari, ertaklar tilida “o‘zbek xalqining milliy madaniyatini, ma’naviy qiyofasini, o‘ziga xos mentalitetini aks ettiruvchi leksik birliklar qo‘llanadi. Bunday birliklarda ifodalangan lug‘aviy ma’nodan tashqari faqat o‘zbek xalqiga tegishli bo‘lgan urfodat, marosim, an‘ana va qadriyatlar ham ifodalovchi so‘zlar”²⁷ – etnografizmlar ham talaygina. Etnogarfik xarakterga ega birliklarni tahlil qilish ham muhim ahamiyatga ega.

Xulosa va tavsiyalar. Xulosa o‘rnida shuni aytishimiz mumkinki, xalq hayoti haqida xabar beruvchi, milliy-madaniy xususiyatlarni o‘zida namoyon qilgan xalq ertaklarini tilshunoslik nuqtayi nazardan tadqiq qilish muhim. Chunki ertak janrida xalq hayotini hikoya qiluvchi lingvomadaniy unsurlar talaygina. Bu esa ertak matni tahlili asosida har bir xalqqa xos milliy-madaniy xususiyatlarning tarixini bilish imkonini beradi.

O‘ZBEKISTONDA NEFT-GAZ SANOATI RIVOJLANISHINING IMKONIYATLARI VA MUAMMOLARI

Annotatsiya. Ushbu maqolada O‘zbekistonda neft-gaz sanoati rivojlanishining imkoniyatlari hamda muammolari o‘rganilgan va tahlil qilingan. Bu sohani rivojlantirish bo‘yicha taklif va tavsiyalar ishlab chiqilgan.

Kalit so‘zlar: Neft- gaz, texnologiya, sanoat, energetika, korxonalar, eksport.

OPPORTUNITIES AND PROBLEMS OF OIL AND GAS INDUSTRY DEVELOPMENT IN UZBEKISTAN

Abstract. In this article, opportunities and problems of oil and gas industry development in Uzbekistan are studied and analyzed. Proposals and recommendations for the development of this area have been developed.

Key words: Oil and gas, technology, industry, energy, enterprise, export.

Iqtisodiyotni modernizatsiyalash sharoitida milliy iqtisodiyotda tarkibiy o‘zgarishlarni amalga oshirish, xususan, sanoat tarmoqlarini barqaror rivojlantirish, ishlab chiqarishni modernizatsiyalash, texnik-texnologik jihatdan yangilash va diversifikatsiya qilish, innovatsion texnologiyalarni keng ko‘lamda joriy etishga katta e‘tibor qaratilmoqda. Darhaqiqat, mamlakatning iqtisodiy taraqqiyoti va o‘sinh sur‘ati real sektor korxonalarini barqarorligiga, ularning rivojlanish darajasiga bevosita bog‘liq. Shu nuqtai-nazardan, har qanday davlat sanoat korxonalarini rivojlantirish va ularning barqarorligini ta‘minlashga asosiy e‘tiborni qaratadi.

Ma‘lumki, O‘zbekiston neft-gaz sanoati mamlakat energetika xavfsizligini ta‘minlash nuqtai-nazaridan iqtisodiyotning strategik sohalaridan biri hisoblanadi. O‘zbekistonda neft va gaz zaxiralari, ularni qidirish va o‘zlashtirish mamlakatning energetika xavfsizligini ta‘minlash imkonini berdi. Tabiiy gaz mamlakatning asosiy eksport resurslaridan hisoblansa, qazib olinayotgan neft ichki talabni to‘liq qondirmoqda.

1997 yilda Buxoro neftni qayta ishlash zavodi ishga tushirilgan bo‘lib, uning yillik qayta ishlash quvvati 2,5 million tonna uglevodorod xomashyosini tashkil qiladi. Ushbu korxonaning texnologik jarayoni to‘liq zamonaviy texnologiyalarga asoslanadi va u quyidagi mahsulotlarni ishlab chiqaradi: suyultirilgan neft gazi, yengil nafta, rivormat, reaktiv yoqilg‘i, dizel yoqilg‘i va

mazut.

Mamlakatimizda Yalpi ichki mahsulot uzoq davr mobaynida har yili kamida 8 foizga o'sishi sur'atlarini ta'minlash bo'yicha o'ta muhim vazifalar turgan pallada O'zbekiston neft-gaz tarmog'ining barqaror rivojlanishi ulkan ahamiyatga ega bo'lmoqda. Biz korxonalar faoliyati yo'nalishini shunday qayta tashkil qilishga urinyapmizki, eng asosiy e'tibor tabiiy gaz kabi strategik xom ashyo eksportini oshirishga emas, uni qayta ishlash va yuqori qo'shimcha qiymatga ega bo'lgan, sifati va ekologiya talablari bo'yicha jahon standartlariga javob beradigan, yuqori likvidli neft-gaz va kimyo mahsulotlarini ishlab chiqarish bo'yicha o'z quvvatlarimizni rivojlantirishga qaratilishi lozim.

O'zbekiston neft-gaz tarmog'ini rivojlantirishning har bir ustuvor yo'nalishini ko'rib chiqamiz. Uglevodorodlar zaxiralarini oshirish yo'li bilan resurslar bazasini yanada kengaytirish neft-gaz tarmog'i samarali faoliyatining asosini tashkil qiladi. Asosiy negizi neft va gazdan iborat bo'lgan bu zaxiralar mamlakat iqtisodiyotining yonilg'i-energetika resurslariga tobora oshib borayotgan ehtiyojini ta'minlaydi. Bunday sharoitlarda, neft va gaz konlarini izlash va respublikaning uglevodorod resurslarini yanada oshirish maqsadida, geologik qidiruv jarayoniga yangi hududlar va chuqur joylashtirilgan majmualarni jalb qilish masalasi ko'ndalang turibdi. Eng istiqbollilari sifatida o'rganish uchun quyidagi yo'nalishlarini ajratish mumkin: neft va gaz konlarini izlash maqsadida – paleozoy qatlamlari (Ustyurt, Buxoro-Xiva va Farg'ona mintaqalari); Surxondaryo viloyatida tuz ostidagi yura qatlamlari; Surxondaryo mitaqasidagi Uchqizil-Mirshodin zonasidagi tegishli qatlamlar; yangi hududlar (O'rta-Sirdaryo depressiyasi va Zarafshon chuquri). 2021 yilgacha bo'lgan davr ichida quyidagi hududlarda geologik qidiruv ishlarini o'tkazishga mo'ljallangan investitsion loyihalarni amalga oshirish belgilangan: Qo'ng'iro't uchastkasida; Boysun va Surxon investitsion bloklari; Xorazm va Meshekli-Tuzkoy investitsion neft-gaz uyumlari mavjud bloklar. Uglevodorodlar bazasini kengaytirish maqsadida respublikada neft va gaz uyumlarini qidirishning an'anaviy yo'nalishlariga zarar yetkazmagan holda noan'anaviy uglevodorodlar manbalarini izlash va o'rganishga qaratilgan tadqiqotlar miqyoslari asta-sekin ortib bormoqda. Belgilangan geologik qidiruv ishlarining amalga oshirilishi 2022 yilga qadar O'zbekiston Respublikasining uglevodorodlar borasidagi salohiyatini 2014 yilda berilgan baholarga nisbatan 1,5 baravarga oshirishga imkon beradi.

Uglevodorod xomashyosini qazib chiqarish tizimiga iqtisodiy jihatdan rentabelli va samarali energetik texnologiyalarni joriy qilish tarmoq faoliyatining o'ta muhim yo'nalishi hisoblanadi. Bunga turli yo'llar bilan erishiladi.

Qator ochilgan neft-gaz konlarini jadal ishga tushirish, noan'anaviy va qazib chiqarilishi murakkab bo'lgan xomashyolarni qazib chiqarish neft-gaz qazib chiqarish korxonalari faoliyatining ustuvor yo'nalishi hisoblanib, bu o'z navbatida konlarning o'ziga xos xususiyatlarini o'rganishni faollashtirish, unumli qatlamlarni ochish bo'yicha eng samarali texnologik vositalarni tanlash va uglevodorodlar ko'payishini jadallashtirishni talab qiladi. Hozirgi vaqtda, xorijiy

kompaniyalarni jalb qilgan holda, neft qazib chiqarish hajmini ko'paytirishni ta'minlovchi yangi texnologiyalardan keng foydalanish dasturi tayyorlanmoqda.

Respublikani bundan keyin ham gaz bilan barqaror ta'minlash va tabiiy gaz eksportini oshirish uchun yoqilg'ining muqobil turi sifatida suyultirilgan uglevodorod gazini ishlab chiqarish hajmlari o'sishini ta'minlash tarmoq faoliyatining alohida yo'nalishi hisoblanadi. Gazni qayta ishlash sohasi rivojlanishi istiqbollari ham suyultirilgan gaz, kondensat, oltingugurtni ishlab chiqarishni yanada kengaytirish, ham kimyoviy sintez uchun tabiiy gazning barcha resurslaridan chuqurroq foydalanish va yuqori likvidli mahsulotlarni olish bilan bog'liqdir.

Hozirgi vaqtda «O'zbekneftgaz» MXK tizimida tabiiy gazni qayta ishlash yo'nalishida quyidagi korxonalar faoliyat yuritadi: Muborak GQZ, SHo'rtan gaz-kimy o majmuasi va «SHo'rtanneftgaz» USHK. «SHo'rtanneftgaz» USHK propan-butan aralashmasini olishga mo'ljallangan beshta qurilmalarining suyultirilgan gaz bo'yicha bir yillik umumiy quvvati yiliga 250,0 ming tonna, kondensat bo'yicha – qariyb 100 ming tonna, oltingugurt bo'yicha – 5 ming tonnagacha bo'lgan miqdorni tashkil qiladi va bu oltingugurt tozalovchi aminli qurilmasi bilan oksidlangan gazning butun hajmini qayta ishlab, oltingugurtga aylantirishni ta'minlaydi. 2012-2013 yillarda «Muborak GQZ» USHKda gazni qayta ishlash yillik quvvati 4,0 mlrd. M³ ga teng suyultirilgan uglevodorodli gazni ishlab chiqarish bo'yicha uchta qurilma ishga tushirildi. Butun korxonaga bo'yicha esa bir yilda qariyb 240 ming tonna suyultirilgan uglevodorodli gaz va 110 ming tonna barqaror kondensat ishlab chiqariladi.

Tabiiy gaz tarkibidan qimmatbaho komponentlarni yanada chuqur ajratib olish ishlari 2001 yilda SHo'rtan gaz-kimy o majmuasi foydalanishga topshirilganligi bilan bog'liq bo'lib, u yerda ilk bor etan, propan, butan va gaz kondensati bir-biridan ajratilishini ta'minlaydigan tabiiy gazni qayta ishlashning kriogen texnologiyasi qo'llanilgan. Ushbu majmuada ajratib olinadigan etan asosida etilen ishlab chiqarish hamda polietilen mahsulotini ishlab chiqarish yo'lga qo'yilgan. «GTL loyihasini» xom ashyo gazi bilan barqaror ta'minlash maqsadida hozirgi vaqtda «SHo'rtan Bosh inshootlarining qurilmalarini modernizatsiyalash va SHo'rtan-SHGKM BI gaz quvurini qurish» yo'nalishida ishlar olib borilmoqda. SHo'rtan bosh inshootlarining mavjud qurilmalarini qayta ta'mirlash va modernizatsiyalash bo'yicha tashkiliy-texnik tadbirlar ishlab chiqilmoqda, korxonalar bo'yicha mahsulot ishlab chiqarilishining hisob-kitoblari qilindi va sarf-xarajatlar taxminiy baholanmoqda. Propan butan aralashmasini oluvchi qurilma (UPPBS) dan tozalangan gaz SHo'rtan GKMga uzatilishi hisobiga SHo'rtan bosh inshootlarini texnik qayta jihozlash borasidagi chora-tadbirlarning amalga oshirilishi bir yilda etilen ishlab chiqarish hajmini 152,0 ming tonnagacha va polietilen ishlab chiqarish hajmini – 138,0 ming tonnagacha oshirishga imkon yaratadi.

Bundan tashqari, 148 mln.m³ gacha bo'lgan hajmdagi siqilgan gazni sotish (45 ta avtomobil gaz quyish kompressor shaxobchalar (AGNKS)lar orqali) va har

yili avtotransport vositalariga 30 ming donagacha suyultirilgan gaz uskunalarini oʻrnatish (10 ta sertifikatsiyalangan markazlarda) koʻzda tutilgan. Loyihalarning amalga oshirilishi ishlab chiqarilayotgan neft mahsulotlari va 455,5 mln m³ oksidli gazning sifatini oshirish (Yevro 3 va undan yuqori) hamda 2,49 mlrd. dollarlik hajmda mahsulot va xizmatlar eksportini amalga oshirishga imkon beradi.

«2017-2021 yillarda tayyor mahsulot, butlovchi qismlar va materiallarni ishlab chiqarishni mahalliyashtirish dasturi»ni amalga oshirish tarmoq rivojlanishining eng muhim yoʻnalishi hisoblanib, unga muvofiq avval import hisobiga olib kelinadigan tarmoqlararo sanoat kooperatsiyasini kengaytirish mahsulotini ishlab chiqarishni har yili oshirib borib, 2020 yilda 14,7 foizdan 2021 yilgacha 35,5 foizgacha koʻpaytirish koʻzda tutilgan. Dasturga raqobatbardosh import oʻrnini bosuvchi mahsulotlarni ishlab chiqarishni nazarda tutadigan 32 ta loyiha kiritilgan. Ularning amaliyotga joriy etilishi butun tarmoq boʻyicha mahalliyashtiriladigan mahsulot ishlab chiqarish hajmini 2019 yilda 87,793 mlrd. soʻmdan 1042,022 mlrd. soʻmgacha oshirishga imkon yaratadi. Import oʻrnini bosish hisobiga olinadigan samara 200,0 mln. AQSH dollaridan ortadi hamda 1300 ta yangi ish oʻrinlari tashkil etiladi.

Ushbu ijobiy natijalarga erishish, Oʻzbekiston neft-gaz sanoatini barqaror rivojlantirishda, fikrimizcha, eʼtibor quyidagi muammolarni bartaraf etishga qaratilmogʻi lozim:

- ✓ xom-ashyo bazasi holati va uni oshirish;
- ✓ tarmoqning faoliyat turlarini kengaytirish;
- ✓ ishlab chiqarishning barcha boʻgʻinlarida xarajatlarni kamaytirish (qidiruv, qazib chiqarish, qayta ishlash, tashish, saqlash, sotish va boshqalar);
- ✓ ishlab chiqarishda ekologik xavfsizlikni taʼminlash.

Yuqoridagilarga mos ravishda, Oʻzbekiston neft-gaz sanoatini barqaror rivojlantirish quyidagi yoʻnalishlarda amalga oshirilishi maqsadga muvofiq:

- ✓ neft-gaz sanoatidagi operatsiyalarni amalga oshirishni tartibga solishning huquqiy bazasini takomillashtirish; neft va gaz ishlab chiqarishni yangilash va modernizatsiya qilish jarayonlariga investitsiyalar jalb qilishni jadallashtirish;

- ✓ mahalliy neft va gazdan turli xil sintetik mahsulotlar ishlab chiqarish imkonini beruvchi zamonaviy qayta ishlash tizimini rivojlantirish; neft va gaz konlarini aniqlash boʻyicha geografik tadqiqotlarni amalga oshirish;

- ✓ neft va gazdan tayyor mahsulotlar ishlab chiqarish va ularning assortimentini kengaytirish hisobiga eksportni diversifikatsiyalash;

- ✓ milliy tarmoqning jahon neft-gaz sanoatiga integratsiyalashuvini xalqaro darajada ragʻbatlantirish.

EFFICIENCY IN TRANSMISSION OF ELECTRICAL ENERGY METHODS OF INCREASE

Abstract. In the article, tasks and accuracy classes of high-voltage lines. Also, the problems of reducing the waste of electricity and increasing the efficiency of overhead lines by dividing the phase wires into several wires by reducing the inductive resistance of the power transmission lines are described.

Key words. high voltage lines, phase wires, electrical energy dissipation, power factor, phase separation, transposition, substations, inductive resistance.

Today, the world population's need for energy is increasing day by day. The main reason for this is the sharp increase in world population. Electrification is considered the basis of modern production forces, and accordingly, the high level of production and consumption of electricity in any country means its economic indicators are good and living conditions are good. The electric power transmission system includes substations and transmission lines used for various purposes. Such lines can be overhead lines suspended on special supports above the ground and underground lines buried in the ground. [1]

The voltage of 500-750 kV is transmitted from overhead power lines to the energy system from large power stations located at a great distance, and the energy systems are interconnected. Overhead lines with a voltage of 330 kV and 220 kV make it possible to establish a connection between separate energy systems or to supply large industrial regions located far away with electricity.

Overhead lines with a voltage of 110 kV usually serve to supply the regional substations of the energy system with electricity and to communicate between such substations within the energy system.

Overhead lines with a voltage of 110 kV and 35 kV are intended for providing electricity to remote enterprises or a small group of enterprises located in the same region. Rules for the construction of electrical installations (PUE). All of the above-mentioned power transmission lines are included in class I lines.

Class II lines include overhead lines with a voltage of up to 20 kV (usually 6-10 kV). These lines are used in electrical networks for supplying agricultural centers, settlements, small branches and similar places with electricity.

Class III lines include overhead lines with a voltage lower than 1000 V. [2]

As a result of increasing the voltage of power transmission lines (500-750 kV), their power transmission capacity increases. This requires increasing the cross-sectional area of the wires. Therefore, instead of one wire, several wires are

pulled in a phase. The reason why the phase wires consist of several wires is to reduce the inductive resistance of the power transmission lines, to reduce the waste of electricity, and to increase the efficiency of the air lines. All overhead lines with a voltage of 500 kV are used in several wire phases.

Thus, the phase is branched. For example, three wires are laid on each phase of a line with a nominal voltage of 500 kV as an equilateral triangle with sides of 400 mm. If $U=330$ kV, 2 horizontal wires are drawn from each phase; if $U=750$ kV, 4 wires are drawn. Sometimes 2-wire branched lines are used in lines with $U=220$ kV.

The equivalent radius of branched wires is determined by the following formula

$$R_e = \sqrt[n]{R \cdot a_{sr}^{n-1}}$$

Here:

R_e - is the equivalent radius.

R - is the radius of one wire.

a_{sr} - is the average between the wires located in one phase geometric distance.

n - is the number of branch wires in one phase.

Information on networked wiring is presented in Table 1.

Wiring diagram for each phase.	Number of wires per phase	Equivalent radius	Coefficient K
	2	$\sqrt{2a}$	$1 + 2 \cdot r/a$
	3	$\sqrt{r \cdot a^2}$	$1 + 2 + 2 \cdot \sqrt{3} \cdot r/a$
	4	$\sqrt[4]{r \cdot a^3 \sqrt{2}}$	$1 + 3 \cdot \sqrt{2} \cdot r/a$

In electrical engineering, transposition is a change in the relative position of individual phase wires along the length of an overhead power line in order to

reduce the unwanted effect of power lines on each other and on nearby communication lines. [3]

Transposition of power lines is to change the spatial position of the wires to ensure that their length is equal and, accordingly, the electromagnetic field is equal. When wrapping is done without transposition, the energy losses in the lines are significant.

Phase wiring of open-air power lines is used for voltages of 110 kV and above and line lengths of 100 km or more. This makes it possible to significantly reduce losses in power lines. One of the options for installing wires on the transposition support is shown in the figure.

MODERN CONSTRUCTION OF ELECTRICAL TRANSMISSION LINES EQUIPMENT WITH ELEMENTS

Annotation. This article deals with the task of sharply reducing energy losses in transmission, distribution and delivery of electric energy, as well as equipping high-voltage lines with modern structural elements.

Key words: power transmission lines, electricity, supports, current and voltage, overhead line, electric voltage, insulators, insulation.

Currently, along with the task of increasing the energy capacity of all energy sources, there is the task of sharply reducing energy losses in the transmission, distribution and delivery of the produced energy. Most of the currently operating power supply systems, including power transmission lines, which are an important part of the power forecasting system, do not work with high efficiency, the power losses in them are higher than the established norm, and frequent accidents occur. The main reason for this is that the power transmission line devices and equipment are outdated, their installation does not meet the requirements. One of the main tasks of the modern electric power sector is the formation of high-efficiency and energy-efficient power transmission lines. [1]

Electric energy is drawn in the open air, and the transmission and distribution facilities are called overhead power lines. Wires are fastened to supports, brackets, wire wood, etc., to insulators and fittings. Air lines are considered for all voltages and are divided into air lines up to 1000 V and air lines above 1000 V according to the characteristics of their construction. Bases and their foundations, insulators, wires, protective cables and line fittings are the main constructive elements of overhead lines.

Insulators. It includes electrical and mechanical stress in different atmospheric conditions. For overhead lines of 6-35 kV, rod or suspension insulators are used, and for overhead lines of 110 kV and above, only suspension insulators are used. The number of insulators depends on the voltage of the overhead line, the type of insulator, the function of the garlands and the type of support. For 110 kV overhead lines, glass PS type suspension insulators as shown in Fig. 1 are used 7 pieces. For normal conditions, the number of PS-type insulators in suspended girdles used on metal or reinforced concrete supports is as follows;

3 units on lines with a voltage of 35 kV.

7 pieces in lines with a voltage of 110 kV.
13 units in lines with a voltage of 220 kV.

Figure 1. General view of PF type insulator

The number of insulators used in such supports is reduced by one or two pieces compared to the number of insulators in the corresponding garlands used in metal supports.

Figure 2. General view of LK-70-110 SHULX type polymer insulator

In order to reconstruct the air line that is currently being designed, instead of the garland insulators of the PF type used in the air line, it is appropriate to choose polymer insulators of the LK-70-110 type, which meet the requirements of the present time, as shown in Figure 2. [3]

Advantages of polymer insulators compared to porcelain PF and glass PS insulators:

1. Good moisture release properties in polluted conditions due to hydrophobicity
2. Significantly lower cost compared to glass insulators in 110 kV overhead line
3. 7-10 times heavier than PF and PS insulators, and 3 times less complicated to install on power lines
4. Low transportation costs due to weight reduction for delivery to any distance
5. Resistance to mechanical effects
6. Ease of transportation
7. Low susceptibility to radio interference compared to PF and PS types.

Table 1. The data of the isolates compared are given below

<i>№</i>	<i>LK-70-110 SHULX type polymer insulator</i>	<i>PF – type garland insulator</i>
1	The price is one set 344598 soums	The price is one set 630,000 thousand soums
2	Works constantly	Permanent external insulation requires control
3	Test voltage 400 kV	Test voltage 400 kV
4	The mass is 12 kg	The mass is 22 kg

THE ROLE AND FEATURES OF THE USE OF INFORMATION TECHNOLOGY IN TEACHING A FOREIGN LANGUAGE

Abstract. the article reveals the role and place of information and communication technologies in teaching a foreign language. The importance in the development of students' communicative abilities is considered.

Key words: information technologies, digital technologies, teaching methods, multimedia technologies, development of competencies.

The capabilities of information technologies when used in teaching can be directly related to the processes of teaching a foreign language. Thanks to the use of computers, the involvement of Internet resources in the educational process, and the use of multimedia textbooks, the educational space of foreign language lessons at school is significantly expanded, the prerequisites are created for mastering a large amount of information, carrying out its high-quality analysis, sorting and assimilation.

One of the undoubted advantages of using information technology in the process of learning a foreign language is improving student motivation and creating a situation that promotes an increase in the level of cognitive activity.

In order for the use of information technologies in the learning process to be high-quality and effective, an integrated and comprehensive approach is required, the definition of methodological foundations and clear didactic principles for the use of information technologies in the process of learning a foreign language and, in particular, teaching speaking.

The competent use of information technology in the process of learning a foreign language allows you to create the most effective conditions for the formation and development of communicative competence skills, which is one of the most important prerequisites for the development of speaking skills. Thanks

to the use of computers, a foreign language teacher can create the conditions necessary for the development of communication skills, individualization and differentiation of education, the formation of a sufficient vocabulary, mastery of grammatical skills and assimilation of grammatical patterns and phenomena, increasing reserves for improving the quality of language training, transferring language material to other areas direct speech activity.

As a result of working with a computer, the child's interest in mastering knowledge increases, allowing the teacher to regulate the specifics of solving educational problems in accordance with the degree of complexity and individual capabilities of the child, and the pace of his assimilation of certain educational material. As a result of the use of information technologies, one of the most problematic aspects of organizing foreign language teaching is also being solved - the reaction of children to situations of failure: numerous computer programs not only check the level of development of certain knowledge and skills, but allow them to be trained, allowing the possibility of accessing reference materials included in the composition of such programs. As a result of accessing the relevant sections of the program, the student can fill gaps in knowledge, completing the task based on data from reference materials.

At the same time, the use of information technology makes it possible to combine various working methods, alternate the use of textbook materials and reference literature materials with audio and video materials, and display materials from dictionary entries on the computer screen. Students can also pronounce phrases and sentences in English by recording their voice and subsequently working with this recording in order to correct their pronunciation. Also, audio materials can be used to show students exemplary pronunciation options, reading texts, and organizing listening comprehension. In this way, children are introduced to new texts and examples of speech utterances. Dialogues can be organized in a foreign language, including to practice skills on new topics.

No less useful is the use of information technology as a way to broadcast information about the country of the language being studied: regional information about culture, economy, and characteristics of social development. The capabilities of the Internet make it possible to present children with real video materials about life in the country of the language being studied, and to form an idea of speech activity in the language being studied.

The use of information technology in the process of learning a foreign language is possible at several levels:

- 1) use of information technology in educational activities;
- 2) the use of information technology in the process of organizing extracurricular activities;
- 3) development by the teacher of his own electronic educational resources, which can be used in the process of explaining the material, forming and consolidating the necessary skills;
- 4) increasing the level of pedagogical skills of foreign language teachers;

5) organizing the exchange of experience with teachers in the district, city and region.

The use of information technologies in the process of organizing educational activities includes the following areas of their potential use:

- the use of ready-made computer programs and software solutions in the process of learning a foreign language aimed at developing lexical and grammatical skills and sociocultural competence;
- creation by the teacher of his own computer programs, tests, and other digital resources;
- use of Internet materials in lessons;
- conducting tests online;
- use of Internet materials and websites for holding competitions, olympiads, and seminars held remotely.

To organize the use of information technology in foreign language lessons, there is currently a significant amount of appropriate resources: domestic and authentic foreign language training programs.

The sequence of presentation of materials intended for the formation of certain skills and abilities and their consolidation corresponds to lesson and thematic planning, which makes it possible to include multimedia materials in the content of any of the lessons. Thus, as a result of this structure of applications, they can be used both in the process of organizing lesson activities, and directly as a basis for independent work of schoolchildren at home.

Multimedia technologies make it possible, using various technical hardware, to freely choose the logic of familiarization with information from the knowledge base, to combine information with sound, video and film fragments, with animation and animation. At the same time, they create the opportunity to create various didactic and educational games, computer games, educational and developmental programs. Consequently, the capabilities of information technologies are very diverse and the effectiveness of their use in teaching foreign languages depends on the teacher, his information and professional competence.

The systematic use of ICT opens up great opportunities for using various materials, techniques and teaching aids in foreign language classes, which allows you to intensify the learning process, become a participant in role-playing games, and group discussions.

Thus, a generalization of the features and possibilities of using ICT in the process of learning a foreign language in secondary school allows us to draw the following conclusions. One of the main tasks of studying a foreign language is, first of all, to create the conditions and prerequisites necessary for the development of the communicative culture of schoolchildren, their mastery of a foreign language at a practical level, and overcoming barriers that interfere with direct communication and communicative interaction with native speakers. It is the use of information technology that makes it possible to create appropriate conditions and activate the cognitive activity of each student.

THE MAIN ADVANTAGES, PROBLEMS AND DISADVANTAGES OF USING MULTIMEDIA IN TEACHING FOREIGN LANGUAGES

Annotation. Over the past twenty years, specialists in the field of intelligent systems have been conducting active research in the field of creating and using expert systems intended for the field of education. The article discusses the use of expert multimedia systems intended for the education sector.

Key words: education, learning systems, educational technology, multimedia educational information, increasing motivation.

Educational multimedia programs contribute to the integrated structuring of the content components of educational material, independent choice and completion by students of full or abbreviated training options.

Such learning tools contribute to the emergence of not only new opportunities for communication and information transfer, but also opportunities to generate new problems, solutions, new points of intersection, which have a different place in modern culture compared to traditional and well-known media.

The attention of pedagogical science and practice to the model of personality-oriented education is largely connected with the evolution of philosophical views, according to which a person is put at the center of the scientific picture of the world. Personally oriented education is education that:

- focused on the learner as the main value of the entire educational process;
- contributes to the creation of conditions for the formation and manifestation of the personal qualities of students, the development of their thinking, the formation of a creative, active, initiative personality, the satisfaction of the cognitive and spiritual needs of students, the development of their

intelligence, social and communication abilities, skills of self-education, self-development;

- focused on society's need for specialists capable of independently acquiring knowledge, retraining and adapting to new social conditions.

The use of multimedia in teaching allows you to:

- solve the problems of humanization of education;
- increase the efficiency of the educational process;
- develop the personal qualities of students (training, learnability, ability for self-education, self-education, self-training, self-development, creative abilities, ability to apply acquired knowledge in practice, cognitive interest, attitude to work);

- develop the communicative and social abilities of students;
- significantly expand the possibilities of individualization and differentiation of open and distance learning by providing each student with a personal teacher, whose role is played by a computer;

- identify the student as an active subject of cognition, recognize his self-worth;

- take into account the subjective experience of the student, his individual characteristics;

- carry out independent educational activities, during which the student learns and develops himself;

- to instill in the student the skills of working with modern technologies, which contributes to his adaptation to rapidly changing social conditions for the successful implementation of his professional tasks.

The practical implementation of a student-oriented approach using multimedia tools will require the creation and use of modern multifunctional subject-oriented multimedia teaching aids that contain extensive databases, knowledge bases for educational purposes, artificial intelligence systems, expert training systems, laboratory workshop with the ability to specify a mathematical model of the phenomena and processes being studied.

Multimedia is an extremely useful and fruitful educational technology due to its inherent qualities of interactivity, flexibility, and integration of various types of multimedia educational information, as well as its ability to take into account the individual characteristics of students and help increase their motivation.

Providing interactivity is one of the most significant advantages of digital multimedia compared to other means of presenting information. Interactivity refers to the process of providing information in response to user requests. Interactivity allows, within certain limits, to control the presentation of information: students can individually change settings, study the results, and also respond to program requests about specific user preferences. They can also set the delivery rate and number of repetitions to suit their individual academic needs, which is especially important in open education settings.

However, when using multimedia in education, many aspects must be taken into account. Even taking into account the ubiquity of multimedia in the modern world, it must be recognized that the availability of educational materials and hardware for students varies widely.

To fully realize the academic potential of multimedia technologies, students require the support of competent teachers. Among other responsibilities, teachers must be able to guide student learning and provide effective learning strategies.

Multimedia tools can be used in the context of a wide variety of learning styles and are perceived by people with different psychological and age-related characteristics of perception and learning: some students prefer to learn through reading, others through listening comprehension, and still others through watching videos. films.

The use of multimedia allows students to work on educational materials in different ways. In this case, the student has the opportunity to decide how to study the materials, how to use the interactive capabilities of the multimedia application, and how to implement joint work with his fellow students. Thus, students become active participants in the educational process.

The use of high-quality multimedia makes it possible to make the open learning process flexible in relation to social and cultural differences between students and their individual learning styles and paces, and their interests. Individual learning is the implementation of the principle of active, independent learning, in which students themselves choose which questions to answer and which topics to study.

The interactivity of multimedia technologies makes them extremely flexible, which can be very beneficial for students with special academic needs. In particular, people with hearing impairments experience significant improvements in phonological and reading skills when using multimedia in learning, and the visual presentation of information significantly increases the academic motivation of deaf people. People with significant speech impairments and physical disabilities benefit from the use of multimedia in the learning process because the tools can be customized to meet the individual needs of students.

Multimedia teaching aids are promising and highly effective tools that make it possible to provide the teacher with a larger volume of information than traditional sources of information; clearly, in an integrated form, include not only text, graphics, diagrams, but also sound, animation, video, etc.; select types of information in the sequence that corresponds to the logic of knowledge and the level of perception of a specific contingent of students.

USE OF ONLINE ELECTRONIC DICTIONARIES IN ENGLISH LANGUAGE LESSONS

Annotation. One of the ways to teach a foreign language to a future specialist is training based on training texts. The article discusses the possibilities and advantages of using electronic dictionaries in English lessons, as well as new teaching literature and online dictionaries, which greatly facilitate the learning process.

Key words: English language, online dictionary, lexicographic materials, communicative competence, information flow, mobility, flexibility.

The main goal of using new information technologies is to improve the quality of education. However, living in the age of scientific and technological progress, it is necessary to actively introduce ICT into the educational process, which will allow you to spend the least amount of time preparing a lesson and will facilitate the learning of educational material by students.

The use of electronic dictionaries not only simplifies the search for the necessary lexical units, but also deepens and diversifies English language learning.

Tasks in modern teaching a new language involve the use of various techniques for working with electronic dictionaries. Such tasks involve observing grammatical and lexical phenomena in corpora that interest students in order to immerse themselves in an authentic language environment.

In addition, teachers, when using electronic dictionaries, can check the learned material. For example, compose grammatical and lexical tasks and texts based on authentic materials from online dictionaries, develop projects.

Thus, a teacher or student himself, using online dictionaries, is able to find the equivalent of any lexical unit, translate idioms, terms, proper names and

geographical names, and find the intersections of certain stylistic and grammatical phenomena.

As you know, vocabulary plays an important role in mastering new languages. As the leading component of speech communication, vocabulary interacts with grammar and phonetics. Working with electronic dictionaries is aimed at enriching vocabulary. Working with a dictionary develops in them a desire to independently search for words that are needed for speech activity.

A modern electronic dictionary can be characterized as a flexible interactive system that provides access to arrays of a wide variety of information that goes far beyond the scope of familiar language knowledge.

The text of a computer dictionary gradually changes in the direction from ordinary to heterogeneous, containing the maximum amount of verbal and non-verbal information.

An article in a modern electronic dictionary often has the following content: the meaning of the word, three types of illustration - text, video and audio, two pronunciation options.

For example, in the article you can listen to the verb to ring landline phone ringing. With the help of such innovations, electronic dictionaries contain all sorts of models for their use by teachers and students. This allows you to include electronic dictionaries in the section of educational software.

Electronic dictionaries are an innovation in the field of English language teaching methods. In general, the development of the ability to competently use lexicographic materials is an integral part of learning a foreign language. The technical capabilities of electronic dictionaries make it possible to add new things to learning.

During the learning process, electronic dictionaries perform a number of tasks that are aimed at improving and optimizing the information flow:

- speed;
- efficiency;
- accuracy;
- mobility;
- availability;
- relevance;
- flexibility.

Electronic dictionaries combine large volume with convenience and speed of use. This is achieved thanks to the machine search mechanism

The efficiency of machine systems is the ability to constantly update the dictionary database and create new thematic dictionaries.

This can be used in a foreign language lesson, forming thematic vocabulary in accordance with modular training.

Flexibility is the functionality of the dictionary to adapt to a specific subject area (physics, finance, computer science, business, medicine, law, etc.)

Mobility (the ability to use dictionaries not only on personal computers, but also on other electronic devices (tablet, phone), which will allow you to use the dictionary in any convenient place, having installed software or Internet access.

Accuracy is a stylistically and grammatically correct adequate transfer of the meaning of the source text into the target language. For example, today the leaders in machine translation are two companies: Google and Promt. These programs translate text with high quality, with virtually no human intervention.

The lists of lexical units correspond to the lessons in the corresponding educational materials.

1. For example, the “Mosaic” exercise. Here the student selects a word-translation pair from several options.

2. After “Mosaic”, the “Options” exercise will start. A word is displayed at the top of the window, for which you need to select the correct translation from the options below.

3. After the “Options” exercise, the “Writing a word” exercise will start: you need to remember the translation of the word and write it without errors.

4. Final exercise “Self-test”. The student must try to independently remember the translation of the specified word and only then look for the correct answer.

Thus, the possibilities of using electronic dictionaries show that they are not only a source of high-quality reference material, but also a useful and indispensable modern tool in teaching a foreign language.

Unlike traditional learning, this kind of learning, built on the basis of electronic dictionaries and corpora, makes the learning process creative and interesting.

In conclusion, we note that information technologies are actively used in teaching foreign languages. At the moment, electronic corpora and dictionaries are assigned the place of a tool for the formation of foreign language communicative competence. They contribute to the implementation of a personal-activity approach, the essence of which is to take into account the personal characteristics of each student and focus on independent work.

Information technologies are inextricably linked with improving the quality of the educational process.

APPLICATION OF MODERN INFORMATION AND COMMUNICATION TECHNOLOGIES IN TEACHING ENGLISH

Annotation. The article discusses the need to use digital technologies in teaching a foreign language and increasing motivation among students.

Key words: modern digital technologies, foreign language, motivation, pedagogical technologies in teaching.

Information and communication technologies are increasingly penetrating various spheres of life in modern society. It becomes obvious that in connection with the introduction of information technology into the educational process, the use of a computer would help increase interest in learning English and help organize intercultural communication in the classroom.

The problem of motivation in learning remains relevant today. It is actively studied in such sciences as psychology and pedagogy. There are many factors that influence student motivation.

The current stage of development of society is characterized by the process of informatization, i.e. the use of information as a social product, ensuring the intensification and intellectualization of the main spheres of human activity, the acceleration of the scientific and technological process and the democratization of society. A person who skillfully and effectively masters technology and information has a different, new style of thinking, and has a different approach to assessing the problem that has arisen and to organizing his activities.

One of the directions of informatization of society is the process of informatization of education.

It should also be noted that the use of ICT in English lessons has its positive aspects:

- English lessons that use multimedia applications can motivate students to further learn the language.

- The use of ICT allows students to learn more independently, and thereby increases self-esteem and self-confidence.

- The use of ICT enhances student interaction, verbalization and engagement in collaborative group learning.

Thus, the learning process using information and communication technologies helps to increase motivation for language learning; ICT increases interest in the subject, as the teacher provides various presentations, video and audio materials, thereby increasing students' desire to learn and learn a foreign language.

It should also be noted that, thanks to ICT, it is possible to solve various problems in teaching all types of speech activities. Using various multimedia tools, you can improve the ability to listen to texts for educational purposes to train the perception and understanding of their content by ear.

The use of ICT along with other methods allows students to feel more confident in discussions, while they have the opportunity to expand their vocabulary and achieve good results in their ability to communicate in English.

Modern information technologies open up great opportunities to expand the educational framework in each school subject, and a foreign language is no exception. Learning English today is a creative process. In the study of English, the multimedia potential of new information technologies is used, which shows the high efficiency of using the didactic capabilities of computer technologies.

The use of ICT contributes to the effective solution of the following didactic tasks of teaching English:

- developing skills and abilities to read foreign texts;
- improving listening skills;
- improving reading skills;
- improving the skills of constructing monologue and dialogic statements;
- improving writing skills when preparing various kinds of essays, retellings, abstracts;

- replenishment of vocabulary with vocabulary of modern foreign languages;

- formation of sustainable motivation for foreign language activities with the help of operational materials on the Internet, e-mail, and search engine results.

The computer best influences the structure of the educational process, most fully satisfies didactic requirements and brings the process of teaching English as close as possible to real conditions. Computers can perceive new information, process it in a certain way and make decisions, can remember the necessary data, reproduce moving images, and control the operation of such technical teaching aids as speech synthesizers, video recorders, and tape recorders.

The computer also provides comprehensive control of the educational process. Control, as is known, is an integral part of the educational process and serves as feedback between the student and the teacher. When using a computer to control the quality of students' knowledge, greater objectivity in the assessment is achieved.

Thus, multimedia products can be a powerful motivational factor and attract people to learning. At the same time, the role of the teacher will not become less significant. No amount of the latest technology can replace a teacher in the classroom. The most important thing in a lesson is live communication. The role of the teacher in the educational process is leading, therefore the mechanism of using information technology in learning a foreign language will require increased efforts of the teacher. The effective use of ICT directly depends on the information culture and computer literacy of the teacher. The teacher cannot and should not lag behind the achievements of science and technology; he is called upon to ensure that technical capabilities serve the development of the human soul. Therefore, every teacher is simply obliged to constantly look for new options for conducting a lesson, strive to make each lesson more interesting and exciting so that the lesson material is retained in the students' memory for a long time. One of the ways to achieve this goal is the use of ICT at the stages of preparing and conducting lessons.

The use of ICT in English language learning and teaching is an area that has not yet been fully explored. Both students and teachers can gain a lot from using them. Every aspect of ICT, be it online reading, programs aimed at expanding vocabulary, or computer-assisted speech that improves literacy, provides invaluable knowledge to students of our time. Moreover, we should not lose sight of the motivational value of ICT for students, as well as the fact that ICT is flexible in its use. It is important that teachers know how to use ICT in their classrooms so that they regularly incorporate it into their teaching practices.

It should be noted that the use of ICT saves time. The teacher can plan more work during the lesson. Finally, we will always see ICT as a means by which our students will experience the world, broadening their horizons and understanding that since English is now seen as the language of international communication, they will be able to communicate not only with people from English-speaking countries, but and with the whole world.

The possibilities for using computer technology are endless. They make the teacher's work easier and arouse great interest among students, offer simple and convenient tools for solving a wide range of problems, and provide students with an additional incentive in learning a foreign language.

The use of information technology gives impetus to the development of new forms and content of traditional activities of students, which leads to their implementation at a higher level

The results of using ICT are: improved quality of education, high cognitive activity of students, individualization of learning, development of a creative

approach when performing educational tasks. Today, information and communication technologies can be considered a new way of transferring knowledge that corresponds to a qualitatively new content of child learning and development.

The use of new ICT helps to implement a person-centered approach to learning, promotes individualization and differentiation of learning, taking into account the abilities of children, their level of training, intensifying independent work of students, increasing cognitive activity and motivation, increasing the volume of completed tasks, and the opportunity to show creativity.

SOFTWARE TOOLS FOR CREATING MULTIMEDIA RESOURCES IN TEACHING ENGLISH

Annotation. Today, the creation of high-quality and effective electronic educational resources is one of the main tasks in the field of informatization of education. Graphic text is being replaced by highly interactive, multimedia-rich electronic educational resources.

Keywords: multimedia components, electronic educational resources, content, textbook, electronic textbook, multimedia application, programs.

After creating all the multimedia components, you need to combine them into a single multimedia application. This raises the problem of choosing a software tool for its development. Existing means of combining various multimedia components into a single product can be divided into three groups:

- algorithmic languages for direct development of control programs;
- specialized programs for creating presentations and publishing them on the Internet (quick preparation of multimedia applications);
- proprietary multimedia tools.

It is also especially important to take into account the interactivity and multimedia richness of electronic educational resources, since a student may have at his disposal a set of traditional textbooks, and a copy of these textbooks in an electronic version is unlikely to arouse his interest.

Unlike the classic “paper” version of the textbook, the electronic textbook is intended for a different learning style, in which there is no focus on sequential, linear learning of the material. The educational information text of the electronic textbook must be clearly hierarchically constructed in terms of content. The top level of the hierarchy reflects the main concepts and concepts of the subject area. Lower levels must consistently detail and specify these concepts. Definitions,

examples, objects, and statements must be clearly defined. Multi-level will allow you to study the subject with varying degrees of depth.

A textbook is the main teaching tool, “a book intended for teaching a specific academic subject, containing a systematic presentation of knowledge that is subject to mandatory mastery by students.”

An electronic textbook is more of a tool for teaching and learning, and its structure and content depend on the purposes of its use. He is a tutor, a simulator, and a self-teacher. It acquires particular significance when used in linear technologies and communication systems.

The chosen topic of the thesis “Creation of electronic educational resources for children with disabilities in the subject is relevant due to the fact that there is undoubtedly a need for such an electronic textbook, and there are either no electronic textbooks in this discipline at all, or their number is extremely not enough.

The modern educational process, taking place in the conditions of informatization, requires a significant expansion of the variety of teaching aids.

This division is quite arbitrary, because many tools have the ability to create program modules in a scripting language. As a rule, the choice of tool is based on the requirements for the efficiency of the multimedia application and the speed of its development. The degree of user interaction is also an essential requirement. Specialized presentation programs are primarily focused on transferring information from the computer to the user. Authoring tools enable a high degree of interaction and create a truly interactive application.

Developing a multimedia application in any algorithmic language requires knowledge of programming, although modern visual programming environments are supplemented with various wizards for creating individual interface elements that allow you to automatically obtain program code. In this case, the time spent on development will be significant, but the resulting application will be optimal in terms of use of computer resources and speed of operation.

Custom tools can significantly shorten the development process, but result in a loss in the efficiency of the application being created. In addition, development requires a good knowledge of the capabilities of this tool and effective methods of working with it.

Formula Graphics Multimedia System - provides the preparation of multimedia programs that work in interactive mode.

The simplest and fastest way is to use presentation creation programs, the capabilities of which in some cases are sufficient to create a simple multimedia application.

Presentation creation programs. Programs originally designed to create electronic slides to help illustrate a speaker's message are now becoming increasingly multimedia oriented. There are a large number of such programs, differing in the range of visual and animation effects.

Macromedia Director - used for creating presentations and multimedia products. This software product supports MMX technologies and allows you to work with buttons, slides, clips, animation, etc.

PowerPoint is a presentation program included in the Microsoft Office suite. In terms of the number of visual and animation effects, it is not inferior to many author's multimedia tools. Contains tools for creating a flexible presentation script and recording audio for each slide. The presence of a Russian version allows you to successfully work with texts in Russian. Built-in web support allows you to save presentations in HTML format, but animated components require the installation of the special PowerPoint Animation Player add-on. Allows you to create complex program add-ons in the Visual Basic for Application programming language, which significantly expands the capabilities of the program. The Custom Soundtracks Add-In complements your presentation with background music with a wide selection of melodies.

Macromedia Action - builds a presentation as a single sequence of elements or as an interactive show consisting of many individual scenes, which are called up using on-screen buttons. Tools are provided to set the appearance time and duration of each element's presence on the screen, as well as their animation. However, it does not have tools for creating images and video clips

Corel Presentations is a Corel program for creating slide shows. Allows you to create high-quality presentations of all types, including those with multimedia components. For image editing it includes a Graphics Editor. The updated Web Publishing Wizard takes just a few steps to transform your presentation into the format you need to post it on your Web site. Import-export tools allow you to convert your development to the format of presentation applications from other companies.

Teachers and students are not the developers of multimedia resources used in education. Most often, teachers and students act as users of such tools. However, practice shows that every year an increasing number of teachers cannot stay away from the development of, albeit simple, electronic teaching tools. In this regard, it is advisable for a modern teacher to have an idea of both the technologies for developing high-quality multimedia resources and the hardware and software tools for creating computer teaching aids.

1. Various HTML editors are widely used to create many simple multimedia resources.

2. Teachers and students can use other tools to create multimedia resources. There are many multimedia development tools available that allow you to create rich multimedia applications. Packages such as Auto Play Media Studio, Macromedia Director or Authware Professional are highly professional and expensive development tools, while FrontPage or HyperStudio are their simpler and cheaper counterparts. Tools such as PowerPoint, Publisher, and word processors (such as Word) can also be used to create simple multimedia resources.

Here it is also necessary to use tools for preparing multimedia objects (graphic and music editors, tools for creating animation objects, digitizing information).

ADVANTAGES OF USING MULTIMEDIA RESOURCES IN ENGLISH LANGUAGE LESSONS

Annotation. The article describes the possibilities of using multimedia technologies in teaching foreign languages and points out the advantages of using multimedia presentations.

Key words: multimedia presentations, multimedia technologies, educational process, software.

Modern communication-oriented education prepares students to use a foreign language in real life.

The use of multimedia interactive technologies in communicative teaching of a foreign language significantly improves the quality of presentation of lesson material and the effectiveness of students' learning of this material. As practice shows, the use and implementation of modern technologies and multimedia equipment enriches the content of the educational process and increases motivation to study English language skills on the part of the children and there is close cooperation between the teacher and students. Multimedia technologies involve the use of audiovisual and interactive teaching aids such as:

1) software (multimedia discs, presentations, video, audio clips, Internet resources);

2) equipment (PC, audio, video equipment, multimedia projector, interactive whiteboard).

Multimedia is data or content that is presented simultaneously in different forms: sound, animated computer graphics, video. For example, one container object may contain, in addition to text, audio, graphic and video information, and also, possibly, a method of interactive interaction with it. This is achieved using a specific set of hardware and software.

Multimedia Internet resource is a site in which basic information is presented in the form of multimedia. This is a modern and very convenient mechanism that does not replace classic functions, but complements and expands the range of services and news for visitors.

Multimedia Internet resources are characterized by:

- may contain various types of information (not only text, but also sound, graphic, animation, video, etc.);
- high degree of visibility of materials;
- support for various file types: text, graphics, audio and video;
- the possibility of using it to promote creative works in the field of various arts.

A resource of this type makes it possible to quickly report on events that are being organized, demonstrate an overview of an area, institution or creative team, establish feedback with your visitors, reveal goals and materials using modern mechanisms for presenting information and promote recognition of the presented object via the Internet.

Interactive learning based on multimedia programs allows you to more fully implement a whole range of methodological, didactic, pedagogical and psychological principles, makes the learning process more interesting and creative. The ability to take into account the levels of language proficiency of students is the basis for the implementation of the principles of individualization and a differentiated approach to learning.

At the same time, the principle of accessibility is observed and the individual pace of work of each student is taken into account.

The use of multimedia teaching aids is a natural stage in the development of pedagogical technologies. Nowadays, there are many multimedia teaching tools available. They are designed to teach speech activities: reading, writing, listening, speaking; explanation and repetition of various grammatical material with appropriate tasks and exercises, both for independent learning and work in a group.

Using multimedia presentations in lessons to develop communication skills has a number of advantages. One of the main advantages is the ability to provide students with the correct answers in writing after completing assignments. You can invite students to write down some facts, phrases, sentences, based on clarity, which makes the process easier for many students correct spelling. And in the future, these recordings can be used for discussions and monologues on the topic, as well as when doing homework.

Another positive result of using presentations is a faster pace of the lesson and student interest.

The teacher can use developments created independently, for example, presentations in PowerPoint. This program is also convenient for students performing creative design work with subsequent demonstration to an audience.

The advantages of project work have been known for a long time and are used in the teaching methods of various school subjects, including a foreign language.

Traditionally, studying a topic or section ends with repetition, consolidation and generalization. All these elements can be combined by inviting students to create a multimedia project at the final stage of each topic. By creating a presentation, students are given an excellent opportunity to systematize acquired knowledge and skills, their practical application, as well as the opportunity to realize their intellectual potential and abilities. It is very important for students to feel an interest in independent creative work, to feel the significance of the results of their work, because presentation is ready-made teaching material for the lesson, and also to feel your own success.

When developing lessons, teachers often face the problem lack of handouts with assignments. This problem can be solved using multimedia presentations. The content of presentations can be different: video hints, additional information, text tasks, diagrams, tables.

The most common way to create multimedia presentations is using the Microsoft Office Power Point application. This software is very popular and has become widespread among users. Its advantages, of course, include ease of use and the ability to create multimedia presentations of any degree of complexity. In the educational process, multimedia presentations allow you to conduct a lesson more efficiently. It should be noted that with the advent of presentations, the teacher's time to prepare for the lesson has been reduced, since there is no need to prepare visual aids.

Multimedia presentations are widely used when organizing and conducting extracurricular events, such as Olympiads and scientific and practical conferences in a foreign language. They allow you to clearly demonstrate creative performances and reports, attract the attention of listeners, and highlight certain points. Multimedia presentations allow you to develop monologue speech, since during his speech the speaker uses certain keywords and tables that he developed independently. Working on creating a presentation, first of all, develops reading skills, since when selecting the necessary material you have to read a large number of printed materials. Listening skills are also developed by listening to the speaker deliver a presentation. In this case, listening is combined with visual support. Creating a multimedia presentation also involves developing reading skills.

The use of multimedia presentations undoubtedly has many advantages, but we should not forget about their appropriateness and timeliness. The information presented may not be entirely in visual form. When supplying material, dosage is necessary. Simply reading information from the screen is not effective for perception and does not provide an understanding of the main thing. The effective use of multimedia technologies is possible with systematic application, high-quality selection of material and proper preparation.

Thus, the use of information and communication technologies makes learning fun, allows for a more interesting and visual presentation of educational material, and also motivates students to independently study this material.

USING COMPUTER PRESENTATIONS IN TEACHING FOREIGN LANGUAGES

Annotation. This article discusses the use of modern technologies for effective teaching of a foreign language. The advantages of using the PowerPoint program for teaching a foreign language are analyzed.

Key words: foreign language, learning, new opportunities, modern technologies, interactive learning, PowerPoint program.

The development of modern technologies provides new opportunities for effective teaching of foreign languages. A variety of computer programs make the process of mastering a foreign language fun and productive, as they help create a situation of high motivation. The variety of Internet resources provides the opportunity to widely use various services to develop the necessary linguistic skills. Living conditions in our time place special demands on university graduates. And this, in turn, increases the responsibility of higher educational institutions for the quality of training of specialists.

Using a computer in the classroom gives good results: it develops the creative and research abilities of students, increases their activity; contributes to the intensification of the educational process, helps the development of students' cognitive activity and interest in the subject; develops logical thinking in students, significantly increases the level of reflective actions with the material studied in class. The computer can be used at all stages of learning: when explaining new material, consolidating, repeating, monitoring knowledge, skills and abilities. ICT accelerates the learning process; contribute to a sharp increase in student interest in the subject; improves the quality of material absorption; allow you to individualize the learning process; make it possible to avoid subjective assessment.

The specificity of a computer as a teaching tool is associated with its characteristics such as complexity, versatility, and interactivity. Using a computer, you can organize individual, pair and group work in the lesson. However, it must be remembered that a computer cannot replace a teacher in the classroom. It is necessary to carefully plan your time working with a computer and use it exactly when it is really needed.

Today at the process of teaching, in particular foreign languages, requires changes not only in the content of the material taught, but also the use of modern technologies, methods and forms of teaching. In this article we consider the possibilities of using the Microsoft PowerPoint computer program when teaching foreign languages.

The MS PowerPoint program is a specialized automation tool for creating and designing presentations designed to visually present the artist's work to a group of other people. The program ensures the development of electronic documents of a special kind, characterized by complex multimedia content and special reproduction capabilities. MS PowerPoint allows you to develop the following documents:

Key features and tools of PowerPoint:

1. Creating new presentations using the auto content wizard, as well as the wizards for creating a title slide, slides, notes and handouts.
2. An extensive set of layouts and design templates for individual slides and presentations in general.
3. Possibility of arbitrarily changing the content and design of slides and presentations.
4. The ability to create your own presentations (without using templates and wizards), as well as your own slide and presentation templates.
5. A set of tools for managing presentation display
6. Possibility of including various animation and multimedia effects in the presentation demonstration.

MS PowerPoint documents are written in special format files with extensions.ppt,.pot and.pps. The.ppt extension is assigned to files containing a presentation under development, the.pot extension to files containing a presentation template, and the.pps resolution to files containing a completely finished presentation.

PowerPoint has become one of the most common teaching tools today.

The study allowed us to draw the following conclusions:

- 1) the use of the computer program PowerPoint when teaching foreign languages to engineering students at a university is possible and very successful, as it allows teachers to use visualization not only to increase motivation for the discipline being studied, but to build skills and develop abilities in the main types of speech activity in a foreign language language;
- 2) during the experiment and subsequent analysis of student questionnaires, it was revealed that a certain percentage of students do not know how to work

with the information presented on the slides, so we consider it advisable to teach students, and also, possibly, teachers who have difficulty organizing their classes when using the computer program PowerPoint;

3) the PowerPoint computer program is a tool for presenting information, stimulating and maintaining interest and motivation for the lesson, and not an element replacing the teacher, therefore, abandoning traditional forms (board and marker), in our opinion, is impossible, since the leading role in explaining the material is given to specifically the teacher.

The use of computer presentations makes the teacher's work easier in the classroom: it saves a lot of time, makes it possible to provide additional interesting material, and increases the effectiveness of the lesson, but creating a presentation also requires painstaking preparatory work.

As practice shows, having basic computer literacy, a teacher is able to create original educational materials that captivate, motivate and target students for successful results in the PowerPoint computer program.

There are a number of benefits to a PowerPoint presentation:

- combination of various text audio and video visualizations;
- the possibility of using the presentation as a kind of interactive, multimedia board, which allows you to more clearly semantize new lexical and grammatical (and possibly phonetic) material, as well as provide support for teaching all types of speech activity;
- the possibility of using individual slides as handouts (supports, tables, diagrams, graphs, diagrams, collages, printouts on paper, etc.);
- the ability to control students' attention through animation effects and hyperlinks;
- the ability to use various forms of organizing cognitive activity (frontal, group, individual);
- activating the attention of the whole class; maintaining the cognitive interest of students, enhancing learning motivation, as well as the effectiveness of perception and memorization of new educational material;
- monitoring new knowledge and systematizing the studied material;
- saving study time.

The purpose of a lesson presentation could be:

- updating knowledge;
- accompaniment of the teacher's explanation of new material;
- primary consolidation of knowledge;
- generalization and systematization of knowledge.

Presentation slides can be used during explanations, reinforcement, or to create a problematic situation in the lesson. The selection of material for a presentation must comply with the principles of science, accessibility, and clarity. The most productive presentations have proven to be those in which, after explaining or presenting the material, exercises for consolidation or control are

inserted. Students do these exercises directly from the screen individually or frontally. The ability to show the correct answer allows you to organize peer- or self-test quickly and efficiently.

Thus, a creative approach allows the teacher to make the most effective use of a very important tool in his work - the computer, represented by modern computer educational technologies. The use of computer educational programs in the process of teaching English does not interfere with the solution of a communicative task, but, on the contrary, increases its effectiveness, since the teacher can build a lesson that could most effectively achieve the set educational goal.

USING THE GOOGLE CLASSROOM WEB SERVICE AND PREPARING INTERACTIVE PRESENTATIONS

Annotation. Creating a distance learning course using the Google Classroom web service. Creating practical skills for preparing interactive presentations for electronic boards. It is thought that the IPBOARD interactive whiteboard has a special software, different from a regular school board, and has a number of conveniences under this software, and the interactive electronic whiteboard is considered as an additional device for personal computers.

Key words: Google Classroom, web service, distance learning course, electronic board, interactive presentation, information technologies, information and technology, learning process.

How to use Google Classroom. Using Google Classroom

- From a computer
- From smartphone and tablet

Google Classroom is a free platform developed by Google, available in the form of a web application (so it can be accessed by anyone using a browser and mobile phones that allows teachers and students to easily share, assign / give different types of learning materials and application for tablets).run online assignments and release / view received grades in real time.

G Suite for Education and it is only available to students belonging to institutions enrolled in the program mentioned above. Later, the service was opened to everyone, allowing any user with an account Gmail to create and participate in courses and lessons, although there are some restrictions: if the teacher You work in a real school and the students in your class you want to use Classroom to teach. This institution must be enrolled in G Suite for Education and have both Teacher and Student Gmail accounts associated with it.

Another feature of Google Classroom is its integration with other Google services integration: learning material can be created and distributed together with tasks and related solutions.

IPBOARD electronic board.

The IPBOARD electronic board was developed by Julong Educational Technology Co., Ltd (Julong) in 2008 and is now widely used in the field of education, business and military. This interactive whiteboard is one of the latest combinations of digital technologies. IPBOARD interactive whiteboard has a special software, unlike a regular school board, and under this software it has a number of conveniences. An interactive whiteboard is an additional device for personal computers. With its help, it is possible to edit, display, create and print presentations, texts and pictures using a computer and a projector. IPBOARD interactive whiteboard is an electromagnetic display. It works as part of a system together with a computer and a projector.

Figure 2. The principle of operation.

The interactive whiteboard works like a monitor and allows you to control the computer when additional hardware and software are activated. In this, electronic markers are used as an auxiliary tool.

An electronic marker is a computer accessory that acts as a mouse. (Figure 3). For example, to draw a straight line, it is enough to touch the marker to the surface of the interactive whiteboard. The function of the right mouse button is performed by a special button of the electronic marker.

Figure 3. Electronic marker.

Electronic markers are used for making presentations and using the board on the IPBOARD electronic board. The difference between these electronic markers and ordinary markers is that it is possible to create a context menu through it. Normal markers do not have this option. It is also possible to write printed notes in programs with the help of electronic markers. For this, —Ekrannaya keyboard is used. (Figure 4).

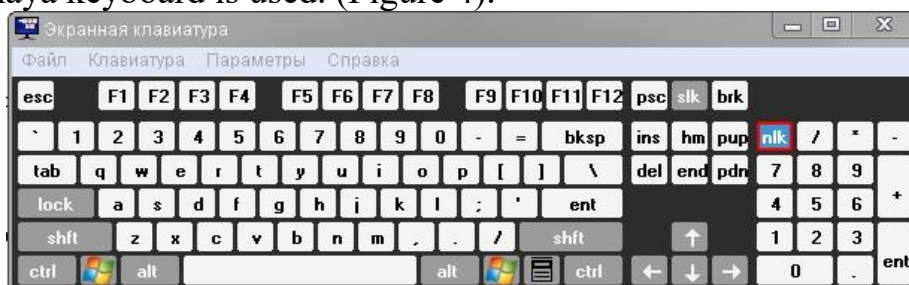

Figure 4. On-screen keyboard.

The electronic board is a very convenient tool to use, especially in the process of distance education. In this case, we can show our presentations in several auditoriums at the same time. We can see this process through the topological diagram below. (Figure 5). Topological diagram.

Figure 5

Topological diagram for working with remote IPBOARD circuit board.

With the help of this diagram, we can see that our presentations can be seen by a number of people who cannot fit in one audience. To use this feature, you must be connected to the Internet. With the help of analog and multimedia

devices, we will be able to show our presentations to everyone from one place at the same time, anywhere on the planet. In this case, we need the Internet to facilitate the switching process in the middle. Computers communicate with each other through the computer's IP address (IP-address - computer's address on the Internet). (For more information about this process, see the "Configuring remote access" section of the "Help" file.)

The main components of the IPBOARD electronic board are as follows.

Figure 6. The main components of the electronic board.

Installing IPBOARD software. Minimum requirements for computer hardware and software for installing IPBOARD electronic board software. - type of computer: computer - Pentium III, processor with a clock frequency of 800 MHz and higher, - working memory: 128 Mb and higher, - a minimum of 112 Mb of free space on the hard disk is required, - installed operating system: Windows 98, Windows 2000, Windows XP, Windows 2003, Windows Vista. If our computer meets the above requirements, we can start installing the software. The installation process is carried out in the following order. → To install IPBOARD software on a computer, insert the software disk into a DVD-ROM or CD-ROM device. The computer will automatically read the disc and the screen shown in Figure 7 will appear.

Figure 7. Installation home page.

To install the software, press "Install IPBOARD Software" button. Select the installation language and press the —Next> button. (Figure 8)

Figure 9. Select the installation language.

Specify the installation location of the IPBOARD program and click the "Next" button to start the installation. (Figure 3)

Based on the same sequence, the USB port driver and board drivers are installed. For this, it is necessary to select and install —Install IPBOARD driver> and —Install USB driver> items.

Instructions for using the electronic whiteboard are given in the User Guide section. After installing the software and board drivers, it will be possible to control the computer, work with pages, edit data, and print using the interactive control function keys on the right side of the electronic board.

Features of the electronic whiteboard function keys The teacher uses these function keys when teaching using the IPBOARD electronic whiteboard. These buttons allow you to perform several actions directly on the board itself during the lesson.

These are interactive control buttons and their main functions are as follows:

The button for specifying the working area is used to specify the working area of the electronic board. The more precise the marker used, the more accurate the movement of the marker.

The control mode button allows you to control the computer and perform the tasks performed by its peripheral device, the mouse. To do this, you need to go to the computer control mode.

Comment mode. It is sufficient to use the comment mode when creating new presentations. When the annotation mode is added, it will be possible to automatically edit the information on the screen. By starting the presentation in the IPBOARD program, the user goes to the control mode to perform actions on the data on the computer

pass is required.

When any equipment for applications (pen, marker) is started in the IPBOARD program panel, the program will automatically transfer the information on the screen to the first page of the presentation in the form of a picture. Applications on the computer screen (notes).

In the IPBOARD program, the electronic board can be displayed not only with an electronic marker, but also with a mouse.

Window mode. When this mode is selected, the working window of the IPBOARD software tool appears on the board. In this working window, it will be possible to work as a school board during lessons.

It will be possible to create a presentation, work with notes, work with images, delete and save written information, edit them, and print them. Another convenience of the working window is a variety of colored pencils for text editing and processing

in the availability of access.

The Create New Page button is used to create a new page on the board. In this case, the previous pages are not deleted, but are kept above. We can refer to the above pages at any time. The number of new pages that can be created is not limited, that is, we can create as many new pages as we want.

This is especially useful for large-scale presentation.

Clicking the function button to go to the top page will go to the top page from the current page. This is a function key to move from the current page to the previous page in the presentation

The next page event occurs when the page down or next page button is clicked.

This function button is also very useful in presentations.

The function of this function button is to perform the tasks performed by a regular pen. The pen allows you to draw notes, texts, pictures and graphic objects. The ability to write in the usual colors and thicknesses of the controllable function key

The Eraser tool is used to erase unwanted text, images, and objects from a window. The size of the eraser can be changed to any size

The refresh button will display the preset on the page again. Page slides did not show automatically when this button was activated. All completed tasks and actions are displayed in sequence.

A device that prints digital data onto a solid medium (usually paper). The printer control function button allows you to print the information on the page from the printer. In this case, a printer must be connected

to the computer. The IPBOARD software tool provides a number of functions that make working with the board more convenient.

Tez A scrolling panel. The moving panel is moved to the right and left parts of the page using an electronic marker. This is necessary in order not to destroy the data in the window. This floating panel will appear in the window after the software is launched. We can call this movable panel as toolbar. A panel contains a number of

devices and these devices can be added or removed from the panel at will by the user. For this panel

you need to select the desired equipment from the menu and add it to the equipment panel without releasing the mouse button. The menu item of the panel includes tools for drawing geometric figures, such as a ruler and a circle. This is another example of the fact that the electronic board is a useful tool in the course of the lesson.

Working with remote users.

IPBOARD electronic board also uses the function of working with remote users. In this case, the universal kit equipment helps to connect with the remote board. This is especially useful during conferences and distance education. After a brief setup and setup when working with a remote whiteboard, audio and video signals are also transmitted to users when multimedia tools are installed.

Color interface.

IPBOARD Software uses a different color interface. Users will have the opportunity to choose a color that is convenient for them when working with the board. In this, the user is given the opportunity to choose 3 different types of colors.

Multi-user interface.

When working with the IPBOARD electronic board, it is possible to create a personal name (login) and password for each user. In this case, the user creates his own user account, and all changes and restrictions are controlled by that user. In order to create a user account, click the IPBOARD of Julong Educational Software from the computer's "push" menu.

You need to start the User Manager application from the Software section. Page theme.

the same for all pages.

If it is required to put a subheading on all pages of our presentation, the page theme function "Topic pages" is used in the IPBOARD program. Various objects, images, text and applications can be used in a page theme. The page theme can be unique for each page, or

Ability to quickly export to other formats. Applications created in IPBOARD can be quickly exported to other software applications:

- in HTML.

- for graphic objects (tiff, jpeg, gif, bmp, png);
- for Microsoft Office programs (doc, ppt); - in PDF;

Also, after launching the whiteboard software, the whiteboard window appears when window mode is selected from the scroll bar. There are 10 menus at the top of the screen, which are as follows.

-File, Edit, View, Insert, Format, Draw, Tool, Network, Skin and Help menus.

These menus are designed to perform some of the same functions as the menus of Microsoft Office programs. At the bottom of the menu bar is the toolbar, which looks like this.

Among these devices, elements are placed in order to save time when performing data saving, copying, creating a new page, eraser, pen, text and a number of other actions.

It is possible to use the elements of this toolbar without switching to the window mode of the scrolling panel. For this, in the computer control mode of the electronic board, the desired item is selected by pressing the electronic marker once from the menu item on the panel, and the necessary equipment can be used.

In short, it can be said that the organization of the educational process with the help of the IPBOARD board and its software leads to effective results. Using its function keys and software toolbars, any subject can be efficiently organized in an interactive way.

In short, the development of science and technology today presents a number of new tasks to pedagogues: information technologies determine how the educational process should be, how information is presented, in what size and form.

Therefore, the most basic, even the first task, it is necessary to ensure that approaches to the educational system, technical tools, as well as new methods of educational technologies are accessible and understandable to teachers and technical specialists who provide the educational process.

USING DIGITAL TECHNOLOGIES IN FOREIGN LANGUAGE LESSONS

Annotation. The use of new information technologies in teaching English is one of the most important aspects of improving the educational process, enriching methodological tools that allow you to diversify the forms of work and make the lesson more interesting for students.

Key words: information technology, training, educational process, methodological tools, lesson, students.

Currently, modern digital technologies are penetrating all areas of human activity. The desire to actively use them in the educational sphere and, in particular, in teaching foreign languages is aimed at increasing the level and quality of training of future specialists.

The development of a modern digital educational environment, which today has enormous opportunities for improving the quality of education, has become very relevant.

The formation of a digital educational environment in schools is a necessity, because the task of the school is to prepare a comprehensively developed graduate with the necessary set of competencies and competencies, ready to continue his education in a highly developed information society.

Penetration of digital technologies into the educational process (use of modern computer and peripheral equipment, capabilities of the local and global Internet, multimedia network educational complexes, electronic learning tools and corresponding classes of information software systems) creates the prerequisites for a radical update of both content-target and technological aspects of training.

The goal of developing the school's digital educational environment is to ensure high quality education. It helps develop children's learning independence and responsibility, and provides students with various tools for productive activities. Gives you the opportunity to gain knowledge on your own, as well as navigate large amounts of information. When using interactive forms of learning, the student himself opens the way to the acquisition of knowledge, and the teacher is an assistant in this situation, and his main task is to organize and stimulate the educational process. The Internet provides a diverse array of software and communications capabilities. I will name some of them:

1. A good example of such a web service, which is quite competitive in the modern world, is an electronic whiteboard. The electronic board is designed for quick collaborative creation of an interactive lesson. Here you can attach notes, photos and videos (including from your device's camera), texts, links to external resources, etc.

2. Quizziz is a very simple and free web platform, a tool for quickly creating original electronic educational resources, which has a number of educational opportunities and advantages. The service interface is in English. The platform allows you to create interactive tasks of various types ("kahoots"): test - Quiz, discussion - Discussion, questionnaire - Survey or sequence - Jumble. You can embed videos and images into mini-exercises. To add a competitive effect, a timer is added to the questions, which allows students to form universal educational actions of self-regulation and self-control. After the teacher has created the test, a code is automatically generated to enter the survey, students open the downloaded application, enter the code, and answer the questions using a mobile phone, tablet or computer. However, students do not need to create their own accounts. The teacher can download the class results in the form of a table. Quizziz has an extensive library of public tests created by users of the platform and open to everyone. The service is completely free.

The use of digital educational resources in foreign language lessons allows you to:

- improve the efficiency and quality of education;
- focus on modern learning goals;
- increase students' motivation to learn;
- take into account the regional aspect;
- make lessons interesting and memorable;
- implement an individual approach;
- objectively assess students' knowledge.

It should be noted that the use of digital educational resources makes it possible to effectively organize independent work of students and contributes to the formation of a free, active and independent personality.

Foreign language lessons using digital educational resources are much more interesting and effective.

Numerous studies in the field of introducing IT into the educational environment confirm that their system integration develops students' communication skills of the 21st century, namely creativity and innovative thinking, multiple intelligences, developed thinking, information, visual, audio, technical literacy, effective communication (oral, written, digital), the ability to work in a team and coordinate joint activities, the ability to design, and also provides solid knowledge and developed skills, promotes the integration of communicative and meta-subject skills of students.

In conclusion, I would like to say that the combination of traditional teaching methods with new ones using digital technologies makes it possible to increase the level of achievement and quality of knowledge of students in foreign language lessons.

USE OF ELECTRONIC EDUCATIONAL RESOURCES IN THE PROCESS OF TEACHING A FOREIGN LANGUAGE

Annotation. The intensive development of information technologies and their introduction into the education system intensively influence the development of the personality of a modern child. One of the main parts of informatization of education is the use of information technologies in educational disciplines.

Keywords. modernization, educational process, information and communication technologies, electronic educational resources, programs, technical means.

Modernization of the educational process involves, first of all, updating and improving its content. Therefore, special attention is paid to creating conditions for the development of students' creative personal potential and expanding the opportunities for in-depth education, including language education.

At the moment, information technologies, for example, electronic educational resources (EER), significantly expand the capabilities of not only teachers and specialists in the field of education, but also all participants in the educational process.

The possibilities of using various electronic educational resources, in particular in English lessons, make it possible to most fully and successfully realize the development of the student's abilities. Unlike conventional technical teaching aids, electronic educational resources allow you to develop intellectual and creative abilities, as well as develop the ability to independently acquire new knowledge.

Electronic educational resources are becoming an integral part of the modern lesson. EERs provide assistance in learning English, since their use creates a unique opportunity for students in this subject to use authentic texts,

audio recordings, various tests and other game and interactive tasks, thus creating a natural language environment.

An electronic educational resource is a set of software, information, technical, regulatory and methodological materials, full-text electronic publications, including audio and video materials, illustrative materials and catalogs of electronic libraries, located on computer media and/or on the Internet.

The potential of electronic educational resources creates the prerequisites for its practical implementation adequate to the specifics of studying a specific discipline, in particular, the academic discipline "Foreign Language".

When selecting and including electronic educational resources for teaching English, I relied on the principles of the activity approach, which presupposes the need to provide conditions for active independent learning activities of students. So in the educational process I use the following types of electronic educational resources: demonstration materials (illustrations, photographs, posters, presentations, diagrams with text support), interactive tables, rules, educational dictionaries.

Building an educational process using electronic educational resources is a form of educationally productive activity for students who perform certain actions with ICT reference tools, interactive tables, and educational dictionaries. Forms of work using Microsoft Power Point presentations in foreign language lessons include: learning vocabulary, teaching dialogic and monologue speech, practicing grammatical phenomena. They allow you to train various types of speech activity and combine them in different combinations, help to understand linguistic phenomena, form linguistic abilities, create communicative situations, automate language and speech actions, and also provide the ability to take into account the leading representative system, implement an individual approach and intensify independent work. The introduction of the Microsoft Power Point program into the educational process does not at all exclude traditional teaching methods, but is harmoniously combined with them at all stages of training: familiarization, training, application, control.

Computer programs provide the introduction of educational material, modeling of communication situations, organization of game tasks, control and assessment of knowledge, allowing the use of all types of visualization. Exercises for classes on the local network (sound and text tasks) are offered for implementation, when working with which students use a computer as a tool for educational activities. Control of knowledge acquisition in thematic sections of the discipline is carried out when performing test tasks in testing programs.

When completing classroom assignments, students search for the necessary language information on the Internet, which helps to enhance the independent activity of students. The global Internet makes it possible to create conditions for obtaining any information necessary for participants in the educational process.

In conclusion, it must be said that electronic educational resources are an invariable component of the information and educational environment. The

introduction of electronic educational resources in English lessons contributes to the development of students' creative abilities, leads to business cooperation between teachers and students, and provides great opportunities and prospects for independent creative and research activities. Despite the listed advantages of electronic educational resources, we should not forget about the possible oversaturation of the educational process, which contributes to a decrease in the perception and assimilation of educational material. Thus, only the joint use of both traditional and electronic educational tools will help lead to maximum results in teaching a foreign language.

**SCIENTIFIC AND METHODOLOGICAL SUPPORT OF
EDUCATIONAL INFORMATION INTERACTION IN THE
EDUCATIONAL PROCESS BASED ON INTERACTIVE ELECTRONIC
EDUCATIONAL RESOURCES: USING THE EXAMPLE OF
TEACHING ENGLISH**

Annotation. Informatization of education, the tasks of which is to provide the education sector with the theory and practice of creating and optimal use of scientific, pedagogical, educational, methodological, software and technological developments focused on realizing the capabilities of information and communication technologies (ICT), makes its own adjustments to the educational process, creating conditions for interactive information interaction both between the teacher and students, and with the source of a distributed information resource for educational purposes.

Key words: innovative technologies, ICT, Internet technologies, interactivity, learning process, Internet resources, innovation.

In the educational process, a special place is given to the need to use ICT tools (educational complexes for conducting business games based on information technology, electronic textbooks and dictionaries, reference books and educational databases, presentation graphics programs, etc.) to develop language skills among future specialists in order to implement professional activity. However, they do not fully address the issues of developing these skills using electronic educational resources (EER).

In addition, research by scientists in the field of developing language skills in a foreign language, including those based on ICT, indicates the effectiveness of developing these skills in a group when performing game exercises. The use of ICT in the educational process leads to increased motivation to master language

skills, increased efficiency and strength of vocabulary memorization, achievement of a higher level of knowledge and skills, and expanded opportunities for mastering speech skills.

The most commonly used ICT tools in the educational process include: electronic textbooks and manuals demonstrated using a computer and a multimedia projector, electronic encyclopedias, reference books, simulators and testing programs, educational Internet resources, DVDs and CDs with pictures and illustrations, video and audio equipment.

Those who study and teach English as a foreign language have significant advantages over those who study other languages as a subject of study. The share of the English-language sector of the Internet has significantly exceeded the rest since the very beginning of the creation of the World Wide Web.

Internet resources can be defined as a means of teaching the new generation. Most of these resources are currently multimedia in nature. They can combine text materials with graphic, audio and video recordings. It is well known that modern education requires different approaches that are designed to increase its effectiveness. The use of various technical means and modern technologies in the English lesson allows us to reduce the time required to present the necessary information and facilitate the presentation of educational material.

Modern technologies and Internet resources make it possible to make the process of mastering the English language lively and vibrant, turning a lesson into a journey through the countries of the language being studied.

If we consider language competence, then the formation, respectively, of lexical and grammatical skills can be significantly helped by lexical and grammatical games (vocabulary and grammar games). Along with language games, speech games are also used, that is, games aimed at developing speech skills (listening, reading, writing and speaking). Particularly valuable are games whose goal is to develop skills in productive types of speech activity: speaking and writing. The so-called productive skills games are applicable at all stages of teaching English at school. As you know, game teaching methods are created and applied by a game teacher. This profession is now officially called the profession of the future.

Internet resources are able to satisfy the needs of users in various fields of activity, including education, and their use in the learning process as alternative, modern means of teaching will create an effective “fusion” of new pedagogical technologies with the latest information technologies, designed to increase the effectiveness of the educational process.

In addition, the widespread use of the Internet makes learning English more accessible and interesting. Internet resources allow you to create interactive tasks that help students work through the material effectively.

One new method of language acquisition is “teleconference,” which is remote video communication between several parties. Of course, it is impossible to implement this method of communication without the Internet. A live broadcast

is conducted between students from different countries, where they can easily communicate, thereby not only meeting new people, but also learning the language and culture of another country. This method also increases motivation to learn the language. Thus, the student will listen to foreign speech and learn new words.

Modern technologies optimize the process of teaching English and make it better. Currently, there is a huge selection of educational resources, the teacher can choose the method of presenting information, the process becomes more creative, and eliminates routine. With the help of ICT, it is possible to rationally use both classroom and extracurricular time, but do not forget that a computer cannot replace a teacher, therefore, when planning a lesson, it is necessary to clearly define the time and place of use of computer technology.

METHODOLOGICAL ASPECTS OF THE USE OF INTERACTIVE DIGITAL TECHNOLOGIES IN TEACHING A FOREIGN LANGUAGE

Annotation. To characterize the features of the use of information technologies in the process of teaching speaking in foreign language lessons, it is necessary, first of all, to define information technologies themselves. Within the framework of modern science, in particular, there are many theoretical approaches to defining this term. Due to the fact that it consists of two words, the term “information technology” (IT) is defined on the basis of two corresponding concepts: information and technology.

Key words: information technologies, theoretical approaches, information and technology, object and subject of education, learning process.

For each sphere of human activity and professional development, there are both general and special technologies that allow one to achieve a certain result and achieve the goals of the activity. In this regard, pedagogy defines educational technologies. Educational technologies are one of the varieties of human science technologies based on general concepts and features of the philosophical, psychological, pedagogical approach, concepts of management and didactics.

The term “technology” is defined as a word derived from two Greek roots “techne”, which means “art”, “skill”, and “logos” - “teaching”, “knowledge”, “concept”. Taking into account the above, the very concept of “technology” is defined as a body of knowledge about various means, methods and tools for implementing processes, as a result of which a qualitative change in the state of an object is carried out.

The concept of information comes from the Latin root “information”, translated into Russian as “presentation”, “explanation”). In the Big Encyclopedic Dictionary it is defined as follows: information is initially a set of information

transmitted from one person to another in oral or written form, as well as using elements of any sign system, conventional signs, understandable to both the sender and the recipient of information messages. Information can also be transmitted using any technical means, which is especially typical for the characteristics of the communication space of the modern world.

Within the framework of computer science as a science, information technology is considered as a specific process that uses a set of available means, tools and methods for collecting, processing, storing and transmitting information in order to organize the further process of obtaining information of a new quality and property about the state of processes or phenomena.” The immediate goal of information technology is the organization of the process of producing information for its subsequent analysis and assimilation by a person and making certain decisions or performing a certain action based on the information received.

Thanks to the use of computers, the involvement of Internet resources in the educational process, and the use of multimedia textbooks, the educational space of foreign language lessons at school is significantly expanded, the prerequisites are created for mastering a large amount of information, carrying out its high-quality analysis, sorting and assimilation.

One of the undoubted advantages of using information technology in the process of learning a foreign language is improving student motivation and creating a situation that promotes an increase in the level of cognitive activity.

In order for the use of information technologies in the learning process to be high-quality and effective, an integrated and comprehensive approach is required, the definition of methodological foundations and clear didactic principles for the use of information technologies in the process of learning a foreign language and, in particular, teaching speaking.

The competent use of information technology in the process of learning a foreign language allows you to create the most effective conditions for the formation and development of communicative competence skills, which is one of the most important prerequisites for the development of speaking skills. Thanks to the use of computers, a foreign language teacher can create the conditions necessary for the development of communication skills, individualization and differentiation of education, the formation of a sufficient vocabulary, mastery of grammatical skills and assimilation of grammatical patterns and phenomena, increasing reserves for improving the quality of language training, transferring language material to other areas direct speech activity.

As a result of working with a computer, the child’s interest in mastering knowledge increases, allowing the teacher to regulate the specifics of solving educational problems in accordance with the degree of complexity and individual capabilities of the child, and the pace of his assimilation of certain educational material. As a result of the use of information technologies, one of the most problematic aspects of organizing foreign language teaching is also being solved - the reaction of children to situations of failure: numerous computer programs

not only check the level of development of certain knowledge and skills, but allow them to be trained, allowing the possibility of accessing reference materials included in the composition of such programs. As a result of accessing the relevant sections of the program, the student can fill gaps in knowledge, completing the task based on data from reference materials.

At the same time, the use of information technology makes it possible to combine various working methods, alternate the use of textbook materials and reference literature materials with audio and video materials, and display materials from dictionary entries on the computer screen. Students can also pronounce phrases and sentences in English by recording their voice and subsequently working with this recording in order to correct their pronunciation. Also, audio materials can be used to show students exemplary pronunciation options, reading texts, and organizing listening comprehension. In this way, children are introduced to new texts and examples of speech utterances. Dialogues can be organized in a foreign language, including to practice skills on new topics.

Thus, a generalization of the features and possibilities of using ICT in the process of learning a foreign language in secondary school allows us to draw the following conclusions. One of the main tasks of studying a foreign language is, first of all, to create the conditions and prerequisites necessary for the development of the communicative culture of schoolchildren, their mastery of a foreign language at a practical level, and overcoming barriers that interfere with direct communication and communicative interaction with native speakers. It is the use of information technology that makes it possible to create appropriate conditions and activate the cognitive activity of each student.

Thus, modern information and communication technologies occupy an increasingly important place in the life of a modern person. This makes their application in various fields a natural process and does not raise questions. Education cannot bypass these processes either. The competent use of information technology in the process of learning a foreign language allows you to create the most effective conditions for the formation and development of communicative competence skills, which is one of the most important prerequisites for the development of speaking skills.

The competent use of information technology in the process of learning a foreign language allows you to create the most effective conditions for the formation and development of communicative competence skills, which is one of the most important prerequisites for the development of speaking skills. Thanks to the use of computers, a foreign language teacher can create the conditions necessary for the development of communication skills, individualization and differentiation of education, the formation of a sufficient vocabulary, mastery of grammatical skills and assimilation of grammatical patterns and phenomena, increasing reserves for improving the quality of language training, transferring language material to other areas direct speech activity.

USE OF INTERACTIVE METHODS IN TEACHING GEOGRAPHY

Annotation. this article reflects on the games and interactive techniques used in geography lessons for schoolchildren, as well as the correct education for them.

Keywords: interactive methods, intellectual potential, pedagogical technologies, methods «Carpenter», «Boomerang», «Chain Game», «positive, negative, interesting (MMQ)», «sail», «Location».

Mamlakatimizda zamon talabiga mos yuksak intellektual salohiyatli, zamonaviy bilim va malakaga ega, yangicha dunyoqarash va mustaqil fikrli mutaxassislar tayyorlash uchun beqiyos imkoniyatlar yaratilgan. Ta'lim jarayonini sifatli tashkil etish, o'quvchilarni zamon talablariga mos ravishda ta'lim-tarbiya berish uchun avvalo, o'qituvchi o'z kasbini etuk mutaxassisi, kuchli bilim, iste'dod, tajriba, hamda o'quv mashg'ulotlarida zamonga mos ta'lim usullaridan qanchalik to'g'ri foydalana olayotganligiga bog'liqdir. Hozirgi axborot makonining globallashuvi, ommaviy axborot vositalari kengayib borayotgan bir paytda o'qituvchilarimiz tinimsiz izlanishlari, o'z bilim, ko'nikma va malakalarini oshirib borishlari shart. Davrimiz taraqqiyotiga hamohang

ravishda ilm xazinasi yanada boyib, yoshlarning intellektual salohiyati ortib bormoqda. Endi o'qituvchi o'rganiladigan mavzu mazmunidan kelib chiqqan holda o'qitish vositalari va metodlar orqali pedagogik faoliyatini tashkil etib, o'quvchilarning o'quv-bilish faoliyatini tashkil etish xarakterini belgilaydi. Ayniqsa, geografiya fani o'qituvchilari o'quv jarayonida dars samaradorligini oshiradigan pedagogik texnologiyalardan foydalanish bilan birgalikda axborot kommunikatsion texnologiyalardan samarali foydalanishlari o'rinlidir. Zamonaviy ta'limni tashkil etishga qo'yiladigan muhim talablardan biri ortiqcha ruhiy va jismoniy kuch sarf etmay, qisqa vaqt ichida yuksak natijalarga erishishdir. Bugungi kunda bir qator rivojlangan mamlakatlarda o'quvchilarning o'quv va ijodiy faolliklarini oshiruvchi hamda ta'lim-tarbiya jarayonining samaradorligini kafolatlovchi pedagogik texnologiyalarni qo'llash borasida katta tajriba to'plangan bo'lib, ushbu tajriba asoslarini tashkil etuvchi metodlar interfaol metodlar nomi bilan yuritiladi.

Hozirda yangi metodlarni yoki innovatsiyalarni ta'lim jarayoniga tatbiq etish haqida gap borganda interfaol usullarining o'quv jarayoniga qo'llanishi tushuniladi. Interfaollik bu o'zaro ikki kishi faolligi, ya'ni o'quv-biluv jarayoni o'zaro suhbat tariqasida dialog shaklida yoki o'quvchi-o'qituvchining o'zaro muloqoti asosida kechadi. Interfaol ta'lim usullari o'quvchilarning nafaqat o'qituvchi bilan, balki bir-biri bilan ham keng aloqada bo'lishiga, o'quv jarayonida o'quvchilar faoliyati ustunligiga qaratilgan. Ta'lim-tarbiya tizimi orqali zamon talabiga javob beruvchi sog'lom va barkamol avlodni voyaga etkazish, ko'p jihatdan o'quv fani o'qituvchi va pedagoglarining kasbiy mahoratiga, ularning o'quv mashg'ulotlari jarayonida innovatsion pedagogik texnologiyalardan samarali foydalana olishlariga bog'liqdir. Ta'lim-tarbiya jarayonida pedagogik texnologiyalarni muvaffaqiyatli qo'llash uchun Geografiya o'qituvchilari maxsus metodik bilim va ko'nikmalarni egallashlari, pedagogik amaliyotda zarur bo'ladigan metodik tayyorgarlikka ega bo'lishlari lozim. Geografiya o'qituvchisi darsda o'rganiladigan mavzuning ta'limiy, tarbiyaviy va rivojlantiruvchi maqsadlari va pedagogik texnologiyalarning didaktik funksiyalarini hisobga olgan holda qaysi texnologiyadan foydalanishini ilmiy-metodik asosda tanlagandagina ko'zlangan maqsadga va samaradorlikka erishadi.

Interfaol usullar o'quv jarayonini faollashtirish va bilimlarni yanada qulayroq qilish, shuningdek, o'quv ma'lumotlarini tahlil qilish va o'quv materialini o'zlashtirishga ijodiy yondashishga yordam beradi. Hozirgi kunda geografiyani o'qitish metodlari o'qituvchi va o'quvchilarning o'zaro hamkorlik faoliyatini bir-biri bilan chambarchas bog'langan, tartibga solingan tizim sifatida qarashni talab etmoqda. Geografiyani o'qitishda samarali natijalarga erishishning asosiy yo'li - metod va usullardan ijodiy tarzda foydalanishdir. Geografiya darslarida interfaol va audiovizual o'qitish vositalaridan yangi narsalarni o'rganish va o'tilgan materialni mustahkamlashda foydalanish mumkin. Geografiya darslarini va sinfdan tashqari ishlarni qiziqarli va ijodiy tashkil etish geografiya o'qituvchisi

oldidagi asosiy vazifalardan biridir. Darsda geografik o'yinlardan foydalanish muhim o'rin egallaydi.

Geografiya ta'limi jarayonida «Charxpalak», «Bumerang», «Zanjir o'yini», «Musbat, manfiy, qiziqarli (MMQ)», «Yelpig'ich», «Location» kabi bir necha interfaol metodlardan foydalanish mumkin. Ushbu darslarda o'quvchilarning bilim olish jarayonida o'yin faoliyati bilan uyg'unlashtiriladi. Bunday metodlar yordamida o'quvchilar puxta bilim egallaydilar, mustaqil fikr yuritadilar. Quyida biz geografiya ta'limida qo'llaniladigan shunday ta'limiy o'yinlarning ayrimlariga to'xtalib o'tamiz.

«Charxpalak» metodi - O'quvchilarni dars jarayonida mantiqiy fikrlash, o'z fikrlarini mustaqil ravishda erkin bayon eta olish, o'zlarini baholash, yakka va guruhlariga ishlashga, boshqalar fikriga hurmat bilan qarashga, ko'p fikrlardan keraklisini tanlab olishga o'rgatadigan metodlardan biri. Geografiya fani dars mashg'ulotlarining barcha turlarida dars boshlanishida yoki dars oxirida yoki o'quv predmetining biror bir bo'limni tugallaganda, o'tilgan mavzularni o'quvchilar tomonidan o'zlashtirilganlik darajasini baholash, takrorlash, mustahkamlash maqsadlarida qo'llaniladi.

«Bumerang» metodi - o'quvchilar dars jarayonida, darsdan tashqarida turli adabiyotlar, matnlar bilan ishlash, o'rganilgan materialni yodida saqlab qolish, so'zlab berish, fikrlarni erkin holda bayon eta olish, qisqa vaqt ichida ko'p ma'lumotlarga ega bo'lish hamda dars mobaynida o'qituvchi tomonidan barcha o'quvchilarni baxolay olishga qaratilgan.

«Zanjir o'yini» metodi - o'quvchilarni xotirasini mustahkamlaydi, fikrni bir joyga jamlashni o'rgatadi. Ushbu metoddan o'tilgan mavzularni takrorlashda qo'llaniladi. O'quvchilarni 4ta guruhga bo'lib o'lib, har bir guruhdan 1 o'quvchi doskaga chiqadi. 1-o'quvchi fanga oid atama aytadi, keyingi o'quvchi oldingi o'quvchi aytganini va o'zinikini qo'shib aytadi. Undan keyingisi oldingi 2ta o'quvchi aytgan atamalarga yana o'zi yangisini qo'shib aytadi. O'yin shu tariqa davom etadi. Adashgan o'quvchi o'yindan chiqib ketadi, eng oxirida o'yindan chiqib ketmay qolgan o'quvchi rag'batlantiradi.

«Musbat, manfiy, qiziqarli (MMQ)» metodi-geografiya ta'lim jarayonida o'quvchilarning ma'lum voqelik, hodisa yoki jarayonning barcha jihatlariga e'tibor qaratish, ularni salbiy jihatlarini baholash, qiziqarli tomonlarini aniqlash va kengaytirishga doir ko'nikma va malakalarini rivojlantirishda samarali sanaladi. Bunda asosiy e'tibor mavjud vaziyatning barcha ijobiy jihatlarini inobatga olishga qaratiladi. O'rganilayotgan vaziyat yuzasidan xulosa chiqarish, qaror qabul qilish faqat u batafsil o'rganib chiqilgandan keyingina amalga oshirilishi mumkin. Ko'p hollarda bir qarorga kelishni talab qiladigan vaziyatlarda ham ushbu metodni qo'llash maqsadga muvofiqdir. MMQ metodi bir vaqtning o'zida o'quvchilar faoliyatini o'rganish va baholash metodi ham hisoblanadi.

«Yelpig'ich» metodi-muammo xarakterdagi mavzularni o'rganishga qaratilgan. Bunda mavzuning turli tarmoqlari bo'yicha bir yo'la axborot beriladi.

Ayni paytda, ularning har biri alohida nuqtalarda muhokama etiladi. Masalan, ijobiy va salbiy tomonlari, afzallik va kamchiliklari, foyda va zararlari belgilanadi. Ushbu metod orqali o'quvchi mavzu yuzasidan xulosa chiqarishni o'rganadi.

«**Location**» **metodi**-mazkur metod orqali xaritalardagi ob'ektlarni boshqa bir obyektlarga nisbatan joylashgan o'rniga qarab o'rganishni talab etadi. Biz bu metod orqali o'quvchilarga xaritalar hamda atlaslarni oson va qiziqarli tarzda o'rgatishimiz mumkin. Ushbu metoddan nafaqat o'quvchilar, balki geografiya fani ixlosmandlari foydalanishi mumkin. Qo'llashdan maqsad o'quvchilarni mustaqil fikrlashni oshirish, xotirasini mustahkamlash, ko'plab ma'lumotlar orasidan keraklilarini tanlab olish va guruh bo'lib ishlashni o'rgatadi.

Ta'lim metodlarida o'qituvchining qiyofasi, uning dunyoqarashi, ruhiy pedagogik, uslubiy va maxsus ilmiy tayyorgarligi aks etgan bo'ladi. Xuddi shu omillar ta'lim metodlari samaradorligini belgilaydi. Muayyan metodga yaxshi tayyorgarlik ko'rmagan o'qituvchida shu metodning o'zi salbiy jihatlarini ham namoyon qilishi mumkin, shu sababli ta'lim metodlarini samaradorligini oshirish uchun o'qituvchining tayyorgarlik darajasi muhim ahamiyatga ega. Metodlarni noto'g'ri tanlash o'quvchilarning bilim va ko'nikmalarini sustegallashga sabab bo'ladi. Demak ta'limda universal metod yo'q. Shu tufayli ham o'qituvchi faqat bitta metoddan foydalanib darso'tmaydi. Geografiya ta'limining eng muhim xususiyati shundan iboratki, o'qituvchi aksariyat darslarni o'tishda og'zaki bayon metodlarini qo'llaydi va samarali natijalarga erishadi.

THE LEVEL OF PHYSICAL PREPARATION OF THE EFFECTIVENESS OF TECHNICAL-TACTICAL MOVEMENTS OF VOLLEYBALL C HILAR

Abstract. In this article, the scientific and practical experiences of local and foreign scientists in the field of sports on the technical-tactical and physical development of young volleyball players, scientific-theoretical information presented in the sources of scientific literature are studied. By analyzing the training process of young volleyball players, modern methods of developing their technical-tactical and physical fitness were used in the research process. Scientific-theoretical opinions on the control of the level of preparation were put forward and scientific research works were carried out, the results obtained from the research were comparatively analyzed and appropriate conclusions were drawn.

Key words: Explosive force, operational force, technical-tactical training, annual training, research group, control group, training exercises.

Modern volleyball belongs to the type of sports games that require extreme speed and great effort. In order to be worthy of high technical and tactical skills, first of all, the physical qualities of volleyball players must be perfectly developed.

The modern volleyball game requires a lot of physical and technical preparation from the player, to act with accuracy throughout the game, because lack of proper physical preparation leads to ineffective completion of all actions on the field, unsuccessful team performance.

However, during the annual competitions, the problem of optimizing training sessions was left aside. The fact that volleyball competitions consist of many «rounds» requires us to have an optimal program to ensure that the players are at a high level of physical and psychological preparation for each «round».

Due to the density of «tours» during the competition, players are required to develop high level of physical fitness and technical-tactical skills in order to prepare for each «tour».

Relevance of the study.

A number of experts have recommended their method to increase the quickness of volleyball players. But currently, in the training of volleyball players, little attention is paid to the aspects of quick-strength qualities related to technical-tactical actions. First of all, it is necessary to pay great attention to the correct distribution of training loads and the development of quick-strength qualities from

the initial stage of specialization. In order for volleyball players to perform at a high level, it is necessary to develop well the various systems of the body.

The purpose of the research: to improve the effectiveness of technical-tactical training of young volleyball players during the annual training period and to study its connection with physical training.

the scientific research is to improve the effectiveness of the technical and tactical training of young volleyball players during the annual training period and to study its connection with physical training.

In order to determine the dynamics of the effectiveness of technical-tactical actions of young volleyball players during the annual training period, observations were made during training sessions and friendly matches.

Before the study, control tests on the physical training of the experimental and control groups were taken and the following results were obtained.

the experimental group 30m before the study. to run 4.8 seconds on average, 400 meters 69.2 seconds, standing long jump 186 centimeters, 30m. 5.3 in the run with the ball, 77 in the footy, 29.7 meters in the long kick with the right foot and 24.4 meters in the kick with the left foot. They also showed a result of 14.2 meters when throwing the ball from the outside (Table 6).

The control group exercised 30m before the study. to run 4.9 seconds on average according to the standard of control, 68.6 seconds for running 400 meters, standing long jump 187 centimeters, 30m. 5.3 in the run with the ball, 72.7 in the footy, 29.3 meters in the long kick with the right foot and 24.3 meters in the kick with the left foot. They also showed a result of 14.2 meters in throwing the ball from the outside. (Table 1)

Tests for the assessment of physical and technical-tactical training of the experimental group before the study (Table 1)

After that, in order to increase the efficiency of technical and tactical training in the study group during the annual training period, the ratio of technical-tactical exercises was increased in the planning of training hours, physical training exercises were added to match episodes, and in the experimental group, through this distribution, the training was trainings were conducted. After six months of training, we again received control norms from the volleyball players of the experimental group.

Training in the control group was carried out unchanged and after 6 training sessions, we rechecked them through control standards. **The control group** exercised 30m before the study. They showed an average result of 4.9 seconds of running according to the control standard, but after the study, this indicator was 4.8 seconds. 68.6 seconds before the study in the 400 meters, 67.8 seconds after the study, 187 centimeters in the standing long jump, 191 centimeters after the study, 30m. in running with the ball was 5.3 seconds before the study and 5.2 seconds after the study. 72.7 in kicking the ball, 90.2 after the study, 29.3 meters in the right-footed long kick before the study and 24.3 meters in the left-footed kick, from the study then this indicator showed 30.8 meters in the right leg and 26.7 meters in the left leg. Before the study, the result of the throw was 14.2 meters, but after the study, this indicator reached 14.7 meters (Table 4).

According to the results of the study, the indicators of physical fitness increased in both groups compared to the initial results, but in the participants of the control group, these indicators increased at a low level, while in the research group, the results showed a significant increase. we can reach

Tests for the assessment of physical and technical-tactical training of the control group after the study (Table 4)

Summary: ScientificThe evidence shows that the control of volleyball players' competitive activity takes an important place in the process of training volleyball players. Along with the assessment of individual technical and tactical movements, volleyball players can determine the qualities of speed, strength, special agility, endurance and technical movement skills. Based on the results of the analysis, it is possible to have a targeted influence on various aspects of the volleyball player's training.

Technique training and its improvement depends on several factors, for example, the level of training of the players, the training period, the number of balls, the condition of the field and the meteorological conditions. Regular monitoring of movement training serves to consciously organize the work of the coach and is of great help to young volleyball players. Control and self-control instills a sense of freshness and self-confidence in a volleyball player.

THEORETICAL FOUNDATIONS OF COSTS

Abstract. The article discusses international standards of provision, the corresponding classification of education in national practice and ensuring security in international practice.

Key words: International standards, assets, management, cost, type of activity, management decisions.

The organization of financial statements in economic entities on the basis of international standards of financial statements makes it possible to conveniently use foreign capital markets, increase confidence among foreign investors, ensure the intelligibility of reports. The application of International Financial Reporting Standards in the accounting system of countries is one of the factors of attracting high-potential investors in combination with reaching the world market. International Financial Reporting Standards are effective in assessing the financial stability of a subject, not only in their usefulness, but also in making management decisions.

The presentation of financial statements is formed on the basis of the requirements of international accounting standards (BHXS) and International Financial Reporting Standards (MHXS). It should be noted that the transition to Mhxs assumes the solution of organizational, legal, financial, technical, technological, as well as methodological and other issues of economic operations related to assets, liabilities, private equity, reserves, income, expenses, profit, losses and their movement, which are considered objects of accounting [1]. Each of the economic entities necessarily carries out expenses of different appearance in the conduct of their activities. It is important that the accounting of expenses is properly organized in economic entities in order to increase the efficiency of production and successfully continue their activities in one run. In them, the most important indicator of costs and cost in the adoption of decisions in management accounting is the recognition of expenses on the basis of MHXS, the improvement of their accounting is important for all economic entities.

Costs are the monetary expression of the costs associated with the production of products, the sale of goods, the performance of work and the provision of services. The following scientists Jumaniyozov K.K., Hasanov B.A., Pardayev A.X., Urazov K.B., Tashnazarov S.N., Hashimov A.A. in their scientific research, in their works, they stated.

The reform of accounting in our country was the adoption of PQ-4611 of the president of the Republic of Uzbekistan dated February 24, 2020 «On Additional Measures For The Transition To International Financial Reporting Standards». The decree of the Cabinet of Ministers of the Republic of Uzbekistan

No. 507 of August 24, 2020 «On Approval Of The Regulation On The Procedure For Recognizing The Text Of International Standards Of Financial Reporting And Explanations For It», the Order of the Minister of Finance of the Republic of Uzbekistan No. 61 of November 10, 2022 «On the recognition of the text of international standards of financial reporting and explanations for its application in the territory of the Republic of Uzbekistan[2,3,4].

The application of national standards affecting the accounting of expenses and expenses is based on the norms and rules for maintaining a mandatory account. National standards prevent the development of accounting thought, limit practice and do not allow the full use of professional reasoning in the reflection of certain events.

Under the international system of standards, there is no standard that sets the rules for recognizing and accounting for expenses. It can be seen from this that in economic entities, no special standards have been developed for the recognition of expenses and their accounting.

Accounting for expenses in Uzbekistan is regulated by a separate regulation. Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated February 5, 1999 «On Approval Of The Regulation On The Composition Of The Costs Of Production And Sale Of Products (Works, Services) And The Procedure For The Formation Of Financial Results». The organization of the accounting of expenses of road transport enterprises is carried out on the basis of the requirements of this regulation.

In international accounting practice, the basic requirements for the disclosure of information about expenses are established in the «principles of preparation and presentation of financial statements»(principles), which are not Standards in themselves. Nevertheless, it is this document that sets the basic requirements for the quality of financial statements and provides the basis for decision-making in cases that are not directly regulated by international standards.

Issues of accounting for certain types of expenses in business entities are solved by most standards that regulate the accounting of certain types of assets and liabilities, types and directions of activities, in particular, cost accounting and cost of finished products are considered in MHXS (IAS) 2-»Reserves». Accounting for costs associated with the execution of contracts is regulated by MHXS 11-»construction contracts». The basic standard that defines fixed assets, including depreciation-related cost accounting principles, is BHXS (IAS) 16 - «Fixed Assets». The performance of research work, as well as the accounting of costs associated with the depreciation of intangible assets, is regulated by BHXS (IAS) 38-»Intangible Assets». The main standard that determines the procedure for accounting for current employee income is MHXS (IFRS) 19-»Employee Income». The principles of accounting for expenses on debt are determined by MHXS (IAS) 23-»Expenses On Debts». The main standard that determines the procedure for accounting for leasing, rental payments is MHXS (IFRS) 16-»Rent», etc.

In accordance with the mhxs, the costs are recognized and recorded in the report during the period in which they occur, regardless of the cash payment, given that the company does not intend to stop or significantly reduce its activities. In addition, in accordance with the Mhxs, expenses must be recognized as expenses, even if there are no primary documents, such as invoices, during the reporting period to which they belong. In national standards, the last condition is not written.

International standards do not specify a mandatory classification of costs. Organizations independently choose the principle of cost distribution, setting their own choices in accounting policy.

Recently, the issue of developing a unified accounting system, including the concept of financial, management and tax accounting, has been more and more discussed in regulatory documents and specialized literature. This is primarily due to the reform of the national accounting and reporting system in accordance with the IFRS.

Recommendations for the recognition and accounting of expenses on the basis of International Financial Reporting Standards:

- formation of accounting policies based on the requirements and principles of international accounting standards;
- selection of methods in the formation of accounting policies, accounting for expenses, analyzing the requirements of current legislation;
- development of a plan of expenses accounting accounts and an instruction for its use;
- to rely on professional reasoning in recognizing expenses based on international accounting standards.

Costs are one of the categories that influence the choice of the optimal strategy for the development of the enterprise and ensure the formation of the target result today and in the future. In this regard, the cost accounting system should provide both internal and external users with information on both backward and future costs.

PRINCIPLES OF PHYSICAL EDUCATION IN ORGANIZING A HEALTHY LIFESTYLE

Abstract. This article deals with the basics of a healthy lifestyle, its meaning, the formation of a healthy lifestyle, physical culture of a healthy lifestyle, its components, physical culture, sports, travel and folk games. Information about active activities, physical education and sports, physical education, physical development, daily routine, personal hygiene, environment, training factors, physical maturity, and healthy lifestyle features, which are the basis of physical culture.

Key words: physical education and sport, mass sport, organism, functional, opportunity, healthy and well-rounded generation, active movement, physical knowledge, physical qualities, physical ability.

Kirish

Yurtboshimiz Shavkat Mirziyoyev aytganlaridek, sog‘lom xalq, sog‘lom millatgina buyuk ishlarga qodir bo‘ladi. Shu boisdan Prezidentimiz rahnamolgida yosh avlodning har tomonlama barkamol bo‘lib yetishish uchun barcha sharoitlar yaratilmoqda. Shu bilan bir qatorda mamlakatimizda sog‘lom va barkamol avlodni tarbiyalash, yoshlarning ijodiy-intellektual salohiyatini ro‘yobga

chiqarishi, mamlakatimiz yigit-qizlarini XXI asr talabalarga to'liq javob beradigan, har tomonlama rivojlangan shaxslar etib voyaga yetkazish uchun zarur shart-sharoitlar, imkoniyatlarni yaratish bo'yicha keng ko'lamli aniq yo'naltirilgan chora-tadbirlarni amalga oshirish maqsadida O'zbekiston Respublikasida qonun va qonun osti hujjatlar, jumladan, «Jismoniy tarbiya va sport to'g'risida» Qonunning qabul qilinishi (1992,2000,2015y), 2017-yil 3-iyunda «Jismoniy tarbiya va ommaviy sportni yanada rivojlantirish chora-tadbirlari to'g'risida»gi qaror; 2018-yil 5-martda «Jismoniy tarbiya va sport sohasida davlat tizimini tubdan takomillashtirish chora-tadbirlari to'g'risida» gi farmoni; 2019-yil 29-yanvarda «O'zbekistonda sog'lom turmush tarzini targ'ib qilish va aholini jismoniy ommaviy sportga jalb etish to'g'risida», 2019-yil 13-fevralda «2019-2023-yillar davomida O'zbekistonda Jismoniy va ommaviy sportni rivojlantirish konsepsiyasini tasdiqlash to'g'risida», «Sog'lom turmush tarzini keng tatbiq etish va ommaviy sportni yanada rivojlantirish chora-tadbirlari to'g'risida», 2020-yil30-oktabrda O'zbekiston Respublikasi Prezidentining farmoni va qarorlar qabul qilindi. Ushbu qaror, farmonlarni qabul qilinishi O'zbekistonda Jismoniy tarbiya va sportning qay darajada taraqqiy etayotganidan, shu bilan bir qatorda Jismoniy tarbiya va ommaviy sport bilan muntazam shug'ullanish hamda sog'lom turmush tarzi bo'yicha hayotiy ko'nikmalarni shakllantirish orqali har bir fuqaroda kasallikka qarshi kuchli immun tizimi paydo bo'lishini ta'minlash, zararli odatlardan voz kechish, to'g'ri ovqatlanish tamoyillariga amal qilish, tiklash va rehabilitatsiya ishlari hamda ommaviy jismoniy faollik tadbirlarini tizimli va samarali tashkil qilish, bu borada tegishli infratuzilma va boshqa zarur shart-sharoitlarni yaratish maqsadida qabul qilingan, desak, mubolag'a bulmaydi. Qabul qilingan me'yoriy hujjatlar ta'lim muassasalarida ilg'or xorijiy tajribani hisobga olgan holda bolalarni har tomonlama intellektual, axloqiy, estetik va jismoniy rivojlantirish sharoitlarini yaratish; ta'lim sifatini oshirish, ta'lim muassasalarida ta'lim-tarbiya jarayoniga jahon amaliyotida keng qo'llaniladigan zamonaviy ta'lim dasturlariva texnologiyalarini joriy etish imkoniyatini yaratadi.

Tahlil va natijalar

Ta'lim bosqichlarining uzluksizligi va izchilligini ta'minlash, ta'limning zamonaviy metodologiyasini yaratish, davlat ta'lim standartlarini kompetensiyaviy yondashuv asosida takomillashtirish, o'quv- metodik majmualarning yangi avlodini ishlab chiqish va amaliyotga joriy etish, ta'lim muassasalarining sifatini yaxshilash hamda ularni rivojlantirish chora-tadbirlarini amalga oshirish hamda pedagog xodimlarini kasbiy qayta tayyorlash tizimini yanada takomillashtirish taqozo etadi. Ta'lim-tarbiya tizimi jarayoniga yangicha yondashish, bola tarbiyasidagi o'zbek xalqining milliy an'analari, qadriyatlar, xalq ijodiyotining o'ziga xosligi, xalq pedagogikasining ulkan tajribasi hamda o'ziga xos xususiyatlari, mintaqa iqlim sharoitlari, bolaning jinsi, yosh bokschilari, ularning anatomik-fiziologik, psixologik-gigiyenik jihatlari, barcha ijobiy xususiyatlarini o'zlashtirishni uyg'unlashtirish masalalari alohida o'rin

egallaydi.

Sogʻlom turmush tarzi insonning madaniy, jismoniy rivojlanishi, mehnat unumdorligi va ijodiy faoliyatini oshirishni oʻz ichiga oladi. Sogʻlom turmush tarzining asosiy tarkibiy qismlari samarali ish faoliyati, shaxs gigiyena, gigiyena talablariga qatʻiy rioya qilish, zararli odatlardan voz kechish, belgilangan bir vaqtda toʻgʻri ovqatlanish, jismonan va ruhan chiniqish, jismoniy tarbiya bilan muntazam shugʻullanib turish. Sogʻlom turmush tarzi kasalliklarning oldini olishda asosiy tadbirlardandir. Sogʻlom turmush tarzi maʼlum miqdorda ruhiy va jismoniy talablarni qoniqarli darajada amalga oshirishga imkon beradi. Kun sayin sogʻlomlashtirish uslubining turlari oshib bormoqda. Jismoniy mashqlar, ovqatlanish meʼyori, uyqu, hammomdan foydalanish va boshqalar harakat faoliyatini oshirib boradi.

Jismoniy tarbiya va sportda sogʻlomlashtirish texnologiyalarining dolzarbligi va ahamiyati borasida sogʻlomlashtirish texnologiyalari birinchi navbatda jismoniy madaniyat orqali inson salomatligini saqlash va mustahkamlashni taʼminlashga qaratilgan. Sogʻlomlashtirish samaradorligi har qanday jismoniy mashqlar shakllarining majburiy komponentidir. Shu munosabat bilan jismoniy madaniyatning barcha tarkibiy qismlari (sport, asosiy, kasbiy-amaliy, sogʻlomlashtirish va jismoniy madaniyat) sogʻlomlashtirish funksiyalarini bajaradi.

Ayni paytda, zamonaviy jamiyatda jismoniy tarbiya, shu jumladan yangi va rivojlanayotgan asbob-uskunalar va texnik vositalar yordamida sogʻliqni saqlashni mustahkamlash zaruriyati tobora ortmoqda. Bu, birinchi navbatda, salomatlik muammolarini samarali hal etish uchun moʻljallangan maxsus tashkil etilgan faoliyatni talab qiladi. Jismoniy tarbiya va sportda sogʻlomlashtirish texnologiyalarning asosiy maqsadlaridan biri har bir inson organizmidagi oʻz ichki imkoniyatlarini mustahkamlashga intilishi kerakligiga daʼvat etish va har bir shaxs oʻzi va boshqalar uchun «sogʻlom turmush» tarzini yaratishligi hamda sogʻlom avlod orzusida yashashlik va unga erishishga imkoniyat yaratish, salomatlikni saqlash, mustahkamlash va uzoq umr koʻrishga daʼvat etishdan iborat.

Xulosa

Jamiyatimizda sogʻlom turmush tarzini shakllantirish, aholining, ayniqsa, yosh avlodning jismoniy tarbiya va ommaviy sport bilan muntazam shugʻullanishi uchun zamon talablariga mos shart-sharoitlar yaratish, sport musobaqalari orqali yoshlarda oʻz irodasi, kuchi va imkoniyatlariga boʻlgan ishonchni mustahkamlash, mardlik va vatanparvarlik, ona Vatanga sadoqat tuygʻularini kamol toptirish, shuningdek, yoshlar orasidan iqtidorli sportchilarni saralab olish ishlarini tizimli tashkillashtirish hamda jismoniy tarbiya va ommaviy sportni yanada rivojlantirishga yoʻnaltirilgan keng koʻlamli ishlar amalga oshirilmoqda.

Yoshlarni boʻsh vaqtlarini mazmunli tashkil etish ularni salomatligini asrab avaylash, mustahkamlash maqsadida ommaviy sport turlariga jalb etish va aholi

salomatligini mustahkamlash borasida ijtimoiy muhitga ommaviy sportni jalb etish borasida bir qancha ishlar amalga oshirilmoqda. Sogʻlom turmush tarzi va tibbiy madaniyat va sport uygʻunligi borasida yosh avlodga tushnalar berib, ongiga singdirish bugungi kunning dolzarb fazifalaridandir.

COMPOSITION AND DYNAMICS OF THE POPULATION OF THE KAGAN DISTRICT

Annotatsiya. Ushbu maqolada tadqiqot obyekti sifatida Buxoro viloyatining tumanlaridan biri Kogon tuman aholisi olingan. Maqolada tuman aholi soni, aholi zichligi va ularning hudud bo'yicha tarqalishi, aholining milliy tarkibi, yosh hamda jinsiy tarkiblari aniqlangan. Aholi tarkibini Buxoro viloyatining boshqa tumanlari bilan ham taqqoslangan.

Kalit so'zlar: Kogon tuman, aholi, aholi zichligi, yosh tarkib, jinsiy tarkib, milliy tarkib.

COMPOSITION AND DYNAMICS OF THE POPULATION OF THE KAGAN DISTRICT

Annotation. This article takes the population of Kogon district, one of the districts of Bukhara region, as the object of the study. The article identifies the district's population, population density and their distribution by Region, national population composition, age and sex composition. The composition of the population was also compared with other districts of Bukhara region.

Keywords: Kogon district, population, population density, young content, sexual content, National Content.

Kogon Buxoro viloyatining tumanlaridan biri bo'lib, maydoni 0,5 ming km². Tuman viloyat maydonining (40 220 km²) 1,2 % ni tashkil qiladi. Maydonining kattaligiga ko'ra viloyatning 11 ta tumani ichida 10-o'rinda (faqat Vobkent tumanidan katta) turadi.

1926-yil 29-sentabrda O'zbekiston SSR hududi qaytadan ma'muriy birliklarga bo'linadi hamda 7 ta viloyat va 23 ta uyezd o'rnida 10 ta okrug tashkil qilinadi. Buxoro okrugida Bahouddin (tuman markazi – Yangi Buxoro (Kogon)) tumani tashkil qilinadi. O'shanda Bahouddin tumani tarkibiga Kogon, Tutikunda, O'bacho'li, Ko'lishag'alon, Frunze qishloq kengashlari va Qorovulbozor posyolkasi kiritiladi. Keyinchalik sovet hokimiyati va kommunistik mafkura tomonidan Bahouddin tumanining nomi Yangi Buxoro, 1935-yildan Kogon

tumani deb o'zgartiriladi. 1963-yilda tuman tugatilib, 1964-yilda u qayta tashkil etiladi[2].

Kogon tuman aholisining tarkib topishi uzoq tarixiy davrni o'z ichiga oladi. Tumanda jami 84,6 ming kishi (2024-yil 1- yanvar holati bo'yicha) istiqomat qiladi. Aholi soni bo'yicha Buxoro viloyati tumanlari ichida 10-o'rinda turadi (1-jadval). Tuman aholisi o'rtacha har yili 7,6% o'sib bormoqda.

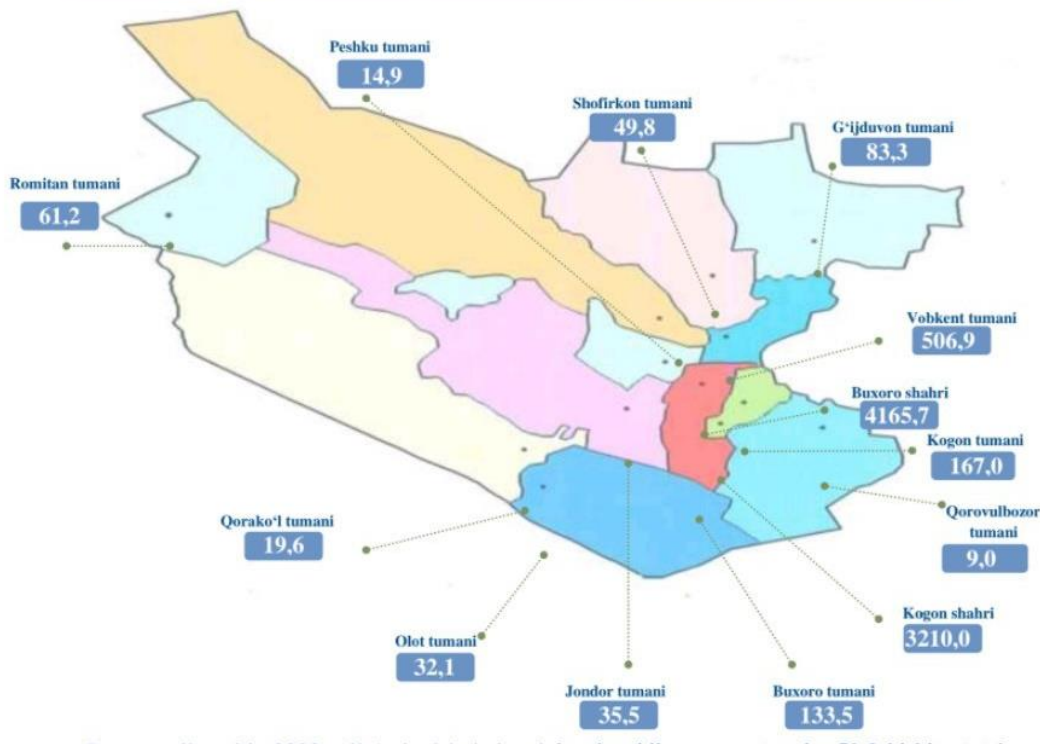

1-jadval

Buxoro viloyati tumanlarida aholi soni (ming kishi hisobida)

T/r	Tumanlar	Yillar			
		2013	2017	2021	2024
1	G'ijduvon tumani	275,0	295,0	307,2	322,5
2	Shofirkon tumani	158,0	169,2	179,0	186,5
3	Jondor tumani	152,2	164,8	176,5	185,5
4	Qorako'l tumani	145,3	155,7	165,1	171,8
5	Buxoro tumani	143,8	156,4	168,9	178,4
6	Romitan tumani	124,8	133,8	143,8	151,4
7	Kogon tumani	67,7	72,5	79,4	84,6
8	Peshku tumani	107,5	115,9	124,6	131,2
9	Vobkent tumani	123,5	132,6	141,3	148,7
10	Olot tumani	87,8	94,4	100,1	104,3
11	Qorovulbozor tum	15,9	17,4	18,5	19,9

Jadval Buxoro viloyat statistika bosh boshqarmasi ma'lumotlari asosida tuzildi

Tumanning aholisi hudud bo'ylab notekis taqsimlangan. Aholi asosan markaziy hududlarda zich o'rnashgan. Tumanning janubiy tomonlarida esa ancha siyrak o'rnashgan. Aholining o'rtachazichligi 1 km²ga 169,2 kishiga to'g'ri keladi. Bu ko'rsatkich viloyat o'rtacha ko'rsatkichidan (50,8 kishi) uch marta yuqori. Kogon tuman aholisining zichligini viloyatning boshqa tumanlari bilan solishtirsak, quyidagi holatning guvohi bo'lamiz(2023-yil 1-iyul). Aholi zichligining eng yuqori ko'rsatkichi Buxoro shahrida **4 165,7** kishi, Kogon shahrida **3 210,0** kishi, Vobkent tumanida **506,9** kishi, Kogon tumanida **167,0** kishini, Buxoro tumanida **133,5** kishi tashkil etgan bo'lsa, eng past ko'rsatkichlar Qorovulbozor tumanida **9,0** kishi, Peshku tumanida **14,9** kishi, Qorako'l tumanida **19,6** kishi, Olot tumanida **32,1** kishi, Jondor tumanida **35,5** kishi, Shofirkon tumanida **49,8** kishini tashkil etgan. Aholi zichligi bo'yicha Kogon tumani viloyat tumanlari orasida Vobkent tumanidan so'ng 2 – o'rinda turadi.

1-rasm. Buxoro viloyati bo'yicha aholi zichligi.

2023-yil 1-iyul holatiga. 1 kv.km.ga to'g'ri keladigan aholi soni, kishi

Tuman aholisining milliy tarkibiga nazar soladigan bo'lsak, jami aholining 92 %ni o'zbeklar, 3 % ni tojiklar, 2 % turkmanlar va qolgan 3% ni qozoqlar, ruslar, tatarlar, eroniylar va boshqa millat vakillari tashkil qiladi (2-a rasm).

2-rasm. Kogon tumani (a) va shahrining (b) milliy tarkibi

Kogon tuman va shahar statistik ma'lumotlari asosida tuzildi

Tuman markazida Kogon shahri anklav shaklda joylashgani uchun shaharning ham milliy tarkibiga to'xtalamiz[3]. Kogon shahri misolida aholining milliy tarkibini ko'radiganbo'lsak, shaharda 75.1 % aholi o'zbek millati, 10,94 % aholi rus millati, 7,54 % ni tojik millati tashkil etadi. Kogon shahri va tumani

aholisining milliy tarkibini taqqoslaganda tuman hududida o'zbek millati ko'proq kishini tashkil etadi. Shahar hududida esa nisbatan kamchilikni tashkil etadi (75,1 %), rus va tojik millatlari umumiy aholining 20 % ga yaqinini tashkil etadi (2-b rasm). Tumanda boshqa millat vakillarining ko'pligining asosiy sabablari Buxoro viloyatining transport tuguni aynan shu yerda joylashgan. Temiryo'l sohasidagi mutaxassislarining aksariyati dastlab xorijdan olib kelingan. Shaharda temiryo'l bilan birga ko'plab boshqa turdagi sanoat korxonalarini ham tashkil etiladi, o'z-o'zidan ushbu korxonalarining asosiy ish yurutuvchi muhandislari ham chet eldan olib kelinadi. Hozirgi kunda Kogon shahrida «Ozarbayjon madaniyat uyi», «Bratskiy Magila» rus cherkovi kabilarning mavjudligi o'zbek va boshqa millat vakillarining og'a-ini bo'lib yashayotganlaridan dalolat beradi (2-jadval).

2-jadval

Kogonshahri aholisining milliy tarkibi:

T/R	Millatlar	2018 yil 1 yanvar xolatida(kishi)	Foiz xisobida
1.	O'zbeklar	45143	75.1
2	Qoraqalpoq	20	0.03
3	Ruslar	6583	10.94
4	Ukrainlar	472	0.78
5	Kozoklar	225	0.37
6.	Tojiklar	4542	7.54
7	Tatarlar	1201	1.99
8	Ozarboyjonlar	513	0.85
9	Koreys	66	0.1
10	Beloruslar	145	0.24
11	Turkmanlar	190	0.31
12	Qirg'iz	12	0.01
13	Boshkalar:	1052	1.74
	J A M I:	60164	100.0

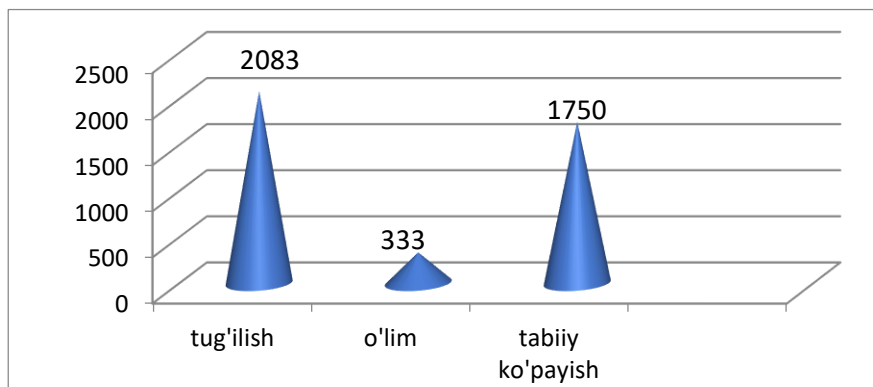

Ma'lumotlar oldingi yillarda o'tkazilgan aholiro'yxatiyakunlariga nisbatan olingan

Aholitarkibiga jins va yosh jihatdan yondashish katta ahamiyatga ega. Chunki aholini va inson omilini takrorishlab chiqarish xuddi anashu jihatlarga bog'liq. Kogon tumani aholisining jinsiy tarkibida jinslar orasida katta tafovut yo'q. Jami aholining 49,7 % (42 300 kishi) erkaklar, 50,3 % (42 700 kishi) ayollar tashkil etadi (2024-yil 1-aprel). Bu ma'lumotdan ko'rinib turibdiki Kogon tumanida ayollar erkaklarga nisbatan ko'pchilikni tashkil etadi (3-rasm).

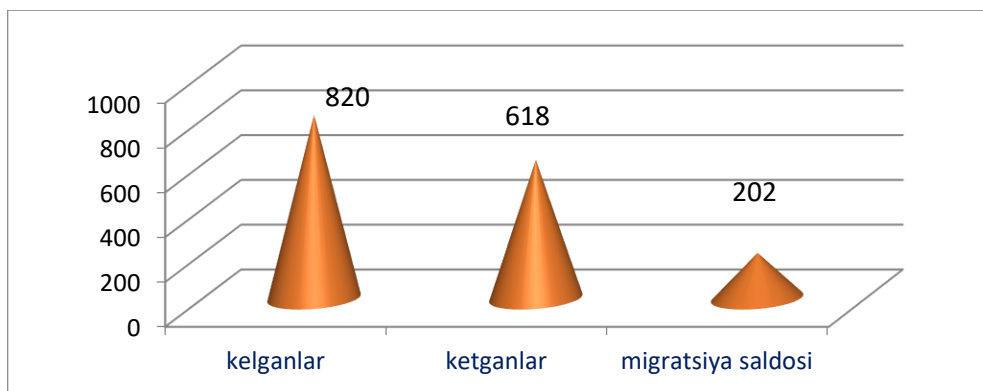

3-rasm. Kogon tuman aholisining jinsiy tarkibi

Tumanda aholi tabiiy ko'payish hisobiga ko'paymoqda. Tumanda 2023-yil ma'lumoti bo'yicha, 2083 ming tug'ilish, 333 o'lim qayd qilingan bo'lib, tabiiy ko'payish esa yiliga 1750 kishiga to'g'ri keladi (4-rasm). Bunday tabiiy ko'payish ancha yuqori hisoblanadi. Masalan, tuman aholisi 2021-yilda 79,4 ming kishini tashkil etgan bo'lsa, 2024-yilga kelib 84,6 ming kishiga yetdi.

4-rasm. Kogontumani aholisining tug'ilish va o'lim ko'rsatkichi

Tumanning migratsion holati musbat ko'rsatkichga ega. Tumanga bir yil davomida kelganlar soni 820 kishi, ketganlar soni esa 618 kishini tashkil etadi. Migratsiya saldosi ko'rsatkichi 202 kishiga teng (5-rasm). Tuman aholishining bir yil davomidagi umumiy ko'payishini ko'radigan bo'lsak quyidagicha ko'rsatkich keladi. $1750 + 202 = 1952$. Demak 2023-yilda tuman aholisi deyarli ikki ming kishiga ko'paygan.

5-rasm. Kogon tumanining migratsiya darajasi

Tuman aholisining yosh tarkibini koʻradigan boʻlsak, aholisining (73 300 kishi) 19 454 nafari 14 yoshgacha boʻlgan yoshlar tashkil qiladi. Bu jami aholining 26% ni tashkil qiladi. Tumandamehnat resurslari esa 44 000 nafarni tashkil etadi (60%). Qolgan aholi esa nafaqa va pensiya yoshidagi aholi hisoblanadi (6-a rasm).

Kogon shahrida esa 14 yoshgacha boʻlgan yoshlar shahar jami aholisining 19 840 nafarini tashkil etadi. Bu jami aholining (60 164 kishi) 34% ga teng. Shahar aholisining mehnat resursi esa 35 121 kishini tashkil etadi bu jami aholining 58% ga demakdir (6-b rasm). Kogon tumanida shahrida mehnat resurslari jami aholining yarmidan ortiqrogʻini tashkil etadi. Bundan koʻrinib turibdiki kelgusida xoʻjalik sohasini joylashtirishda koʻp mehnat talab korxonalarini qursa boʻladi.

6-rasm. Kogon tumani (a) va shahri (b) aholisining yosh tarkibi

Kogon tumani jami aholisining 60% i (43980 kishi) mehnatga layoqatli aholi tashkil qiladi. Xalq xoʻjaligi tarmoqlarida bandlik har xil boʻlib, bu talab va ehtiyojdan kelib chiqadi. Tumanning iqtisodiyot tarmoqlarida band boʻlganlar soni 34,4 ming kishi boʻlib, jami aholining 47% ga teng.

Iqtisodiyotda band aholining teng yarmisanoat va qishloq xoʻjaligida band. Bunda tumanga xos jihatlardan biri sanoatda band aholining qishloq xoʻjaligida

band aholidan ustunligidir. Bu tumanda sanoat korxonalarining nisbatan ko'pligi va yirikligi bilan izohlanadi. Bundan tashqari Kogon shahrining transport tuguni ekanligi tuman aholisi tarkibida transportda band aholining umumiy bandlikning yuqori pog'onalarida bo'lishitaminlagan.

Olingan statistik ma'lumotlarga ko'ra uy-joy kommunal xo'jaligi va maishiy xizmatda band aholi ko'rsatilmagan. Tuman aholisining iqtisodiyotda bandligi ming kishi hisobida va foizda3-jadvalda keltirilgan.

3-jadval

Kogon tumanining iqtisodiyotda band aholisi

Iqtisodiyot tarmoqlari	Ming kishi	% da
Sanoatda	9,3	27
Qishloq xo'jaligida	7,9	23
Savdo, umumiy ovqatlanish moddiy ta'minot, tayyorlov korxonalarida	5,9	17,1
Boshqa soha va tarmoqlarda	3,78	11
Qurilishda	2,9	8,4
Xalq ta'limida	2,5	7,2
Sog'liqni saqlash, jismoniy tarbiya va ijtimoiy ta'minot	1,0	3
Transportda	0,7	2
Boshqaruv organlarida	0,3	0,8
Aloqada	0,07	0,2
Madaniyat va sa'nat	0,04	0,1
Sug'urta, moliya, va nafaqa jami	0,01	0,02
Uy-joy kommunal xo'jaligi, maishiy xizmat	0	0
Jami	34,4	100

Jadval Kogon tuman statistika bo'limi ma'lumotlari asosida tuzildi

Jadvaldan ko'rinib turibdiki iqtisodiyotda band aholining asosiy qismi sanoat, qishloq xo'jaligi, savdo, umumiy ovqatlanish, moddiy ta'minot, tayyorlov korxonalarida band. Madaniyat va san'athamda sug'urta-moliya tizimida bu ko'rsatkichlar ancha past.

Kogon tumani mehnat resurslarining taqsimlanishi bo'yicha viloyatda yetakchilardan hisoblanadi. Bu borada ko'rsatkich ming kishiga 150 kishidan ortiq. Iqtisodiy faol aholi 67,8 ming kishini, iqtisodiy nafaol aholi 16,9 ming kishini tashkil etadi. Viloyat bo'yicha mehnat resurslarining taqsimlanishida tumanning salmog'i 8,3 % ni tashkil etadi. Bu borada viloyatda 6-o'rinda turadi[5].

TOPONIMLAR – KO‘HNA TARIX GUVOHLARI

Annotatsiya. O‘zbek tilshunosligida xalq tarixi, qadriyati, an‘ana va urf-odatlarini o‘zida to‘liq ifodalovchi lisoniy birliklar – toponimlarni muayyan hudud misolida lingvistik tadqiq etish dolzarb vazifalardan biri hisoblanadi. Bu jihatdan qadimdan shakllangan va hozirda ijtimoiy-iqtisodiy, madaniy rivojlanish yo‘lini bosib o‘tayogan Paxtachi tumani toponimlarining leksik-semantik, onomastik, grammatik xususiyatlarini, kelib chiqish asoslarini lingvogeografik, etnolingvistik hamda kelib chiqish xususiyatlarini o‘rganish dolzarblik kasb etadi.

Kalit so‘zlar: onomastika, grammatik xususiyatlar, lingvistik tahlil, madaniy rivojlanish, urug‘ va qabila.

TOPONAMES - WITNESSES OF ANCIENT HISTORY

Annotation. In Uzbek linguistics, one of the urgent tasks is the linguistic study of linguistic units - toponyms that fully express the history, values, traditions and customs of the people. In this regard, the study of the lexico-semantic, onomastic, grammatical features of toponyms of the Pakhtachinsky district, linguogeographic, ethnolinguistic and exhaustive features of toponyms that have long been formed and are now following the path of socio-economic and cultural development becomes relevant.

Key words: onomastics, grammar, linguistic analysis, cultural development, gender and tribe.

Asosiy matn. O‘zbek onomastikasi yoki nomshunosligi o‘tgan asrning 60-70-yillarida alohida ilmiy yo‘nalish sifatida yuzaga keldi. O‘zbek nomshunosligi o‘tgan asrning ikkinchi yarmidan boshlab eng rivojlangan sohalardan biriga aylandi. Ayniqsa, bu sohaning antroponimika, toponimika, etnonimika kabi bir qator sohalorida juda barakali ishlar amalga oshirildi. Tildagi atoqli nom (ot)larning xilma-xil xususiyatlari juda qadimgi davrlardan buyon turli soha olimlarining diqqatini o‘ziga jalb etib kelmoqda. Masalan, qadimgi yunon olimlari Aristotel, Demokrit, Geraklitning asarlarida ham atoqqi otlarning xususiyatlari haqida fikr-mulohazalar bildirilgan edi

Toponimlarni lisoniy jihatdan tahlil qilish, ayniqsa, semantik xususiyatlarini o'rganish xalqning milliy, etnik, ijtimoiy-siyosiy, madaniy tarixini, tilning tarixiy taraqqiyoti va takomilini yoritishda, tilning nominativ, kommunikativ, akkumulyativ funksiyalari mohiyatini aks ettirishdagi o'rni beqiyos. Talab va ehtiyojlar natijasida o'zbek tilshunosligida xalq tarixi, qadriyati, an'ana va urf-odatlarini o'zida to'liq ifodalovchi lisoniy birliklar – toponimlarni muayyan hudud misolida lingvistik tadqiq etish dolzarb vazifalardan biri hisoblanadi. Toponimlar, asosan, boshqa til birliklari kabi muayyan qoliplar asosida hosil bo'ladi. Ko'plab toponimlar tarkibida an'anaviy indikatorlar uchraydi. Indikator (toponimikada) – toponimlarni hosil qiluvchi маҳаллий географик терминлардир: обод, кум, тепа, кўрғон, дарё, сув, кент ва бошқалар.

Ma'lumki, bizni o'rab olgan borliq, moddiy olam nixryatda murakkab, boy, serqirra, rang-barang bo'lib, uni tashkil qilgan narsa va hodisalar mohiyati, holati, shakli, ko'rinishi va vazifasiga ko'ra bir-biridan farqlanadi. «Turdosh ot» termini bilan yuritituvchi so'zlar mana shu xususiyatlardan bir qisminigina, ot kategoriyasigi kiruvchilarnigina ifodalashga xizmat qiladi. Kishilar o'zlari yashab turgan hududdagi daryolar, ko'llar, buloqlarni va ularni tashkil etuvchi har bir daryo, har bir ko'l, har bir buloqni bir-biridan farqlash uchun ularni alohida-alohida nomlar bilan atagan. Masalan: Amudaryo, Sirdaryo, Zarafshon, Nil, Oyko'l, Baykal ko'li, Toshbulots, Ko'pshbulots, Marjonbuloq, Zirabulots kabilar. Bunday ko'rinadiki, atokli otlar narsa va hodisalarni, obyektlarni yakka, donapab atash zaruriyatigina keladi.

Toponimlarda xalqniig o'tmishi. urf-odatlarini, boshidan kechirgan turli xil siyosiy-ijtimoiy. etnomadaniy jarayonlar o'z aksini gopgan bo'ladi. Shunga binoan toponimiya muayya til yaugat boyligishshsh muxdm tarkibiy qismi, o'tmish voqealari darakchisi sanaladi. 'xl Uzbek toponimikasini ilmiy jihatdan o'rganish XX asrning 60-yillarida boshlangan. O'tgan davr mobaynida o'zbek toponimikasini o'rganish bo'yicha juda salmokli nshlar amalga oshirildi. Bu ishlar orasida tanikli geograf olim X Hasanovnish «O'rta Osiyo joy nomlari tarixidai» nomli monografiyasi alohida o'rin tutadi. Bu asarda geografik nomlar - toponimlarnij tarixi, ularnish xmlma-xilligi va shakllanish qonuniyatlarini qisqacha bayon etilgan hamda toponimika fani to'grisida qiskacha tushuncha berilgan. Asarda ta'kidlanishicha, «joy nomlariga qarab qadimiy savdo yo'llari, qabila va tillarning tarqalishi, eski qal'a va manzillarnish o'rinlari, suv va dovonlarniig hosiyatlari, foydali qazilmapar, cho'llarda quduqlarning bor-yo'qligi, joyning o'simlik. hayvonot va iqpimiy xususiyatlari, hunar-kasb, tarixiy voqealar, afsona-rivoyatlar va boshqa xil mag.lumotlarni bilim olamizki, bular xammasi xalk xo'jaligi, madaniyatimiz tarixi uchun juda muximdir.

Ma'lumki, snomastik mate)jial har qanday rivojlangan til lugat boyligining katta kismini tashkil etadi. Shusha ko'ra onomastik materialni xuddi tarix, geografiya, astronomiya kabi fanlar singari maxsuye o'rganish talab kilinadi.

Bu jihatdan qadimdan shakllangan va hozirda ijtimoiy-iqtisodiy, madaniy rivojlanish yo'lini bosib o'tayogan Paxtachi tumani toponimlarining leksik-semantik, onomastik, grammatik xususiyatlarini, kelib chiqish asoslarini lingvogeografik, etnolingvistik hamda kelib chiqish xususiyatlarini o'rganish dolzarblik kasb etadi. Samarqand viloyati tumanlaridagi hududlar toponimlarini tumanlar kesimida lingvistik tahlil etish mamlakatimizning qadimiy va zamonaviy tarixini o'rganish nuqtai nazaridan muhim ahamiyat kasb etadi. Bugungi kunda o'zbek xalqining ko'hna tarixining guvohi bo'lgan toponimlarni tumanlar bo'ylab to'plash va ilmiy baholash o'zbek nomshunosligining dolzarb vazifalaridan biri hisoblanadi. Chunki hozirgi paytda nomlarning qo'yilish sabablarini, ushbu nodir lisoniy boyliklarning ma'nolarini, ularhaqida to'qilgan rivoyatlarni biladigan keksa avlod vakillari kundan kunga kamayib bormoqda.

Paxtachi tumani etnotoponimlarining atalish motiviga ko'ra turlaridagi etnotoponimlar quyidagicha tasnif qilingan:

Tarkibi urug' va qabila nomlari asosida shakllangan etnotoponimlar. Hozirda unutilgan etnik qatlamlar nomlarining o'zbek xalqi va millatining shakllanishidagi o'rni beqiyos bo'lib, tilimizda joy nomlari sifatidagina saqlanib qolgan. Ularni qaysi urug'ga mansubligiga ko'ra shartli ravishda quyidagicha guruhlash mumkin.

Nufuzli urug' va qabila nomlari asosida yuzaga kelgan etnotoponimlar. Viloyat hamda tuman hududida arab, o'zbek, mo'g'ul, qipchoq, tojik, qozoq, qirg'iz, turkman xalqlari nomlarini tashkil etgan etnonimlar asosidagi joy nomlari ko'p uchraydi. Masalan: Mang'it, Nayman, Boyto'p, Mitan, Bahrin, Keshtali, Hunarmand, Qiltamg'ali, Qirguli, Bekto'bi, Lo'li, Mo'ltoniqishloq, Xo'ja, Urganji, Boyto'p, Damiuyg'ur, Qassobto'p, Qirg'iz aholi punkti, Mavri, Saroy. Qarnob, Ketmonchisoy, Donishmandlar, Qozoqota, Bo'riota, Darveshota, Eshonto'p kabi. Tadqiqot natijalari shuni ko'rsatadiki, mitan etnonimi 50 dan ortiq joy nomi tarkibida uchraydi. Bu nom bilan bog'liq etnoslar xalq shevalarining shakllanishiga ham kuchli ta'sir ko'rsatgan.

Joy nomlari orasida etnosning ilk makoni, yashash joyiga nisbat berib hosil qilingan bir qator etnotoponimlar uchraydi. Xususan, Bekto'bi, Urganji, Qozoqota nomlarini ifodalovchi aholi punktlari kishilarning avvalgi yashagan joylari nomini anglatadi. Paxtachi tumani hududida obyektning o'rni bilan bog'liq etnotoponimlarni ham uchratamiz, bu nomlar etnosni hududning qaysi o'rinda joylashganini ko'rsatadi. Masalan: Past Burqut. Do'ng, Do'ngboltali, O'rtaqo'rg'on, Jarboshi, Quyibuloq, Quyi Bodoy, Quyi Doyi, O'rta Mesit, Yuqori Chaqmoqli, Quyi Yangiobod, Chap tarmoq. To'g'risoy, To'g'riov, Pastki Burqutkabilar.

Antroponimlarga asoslangan etnotoponimlar: a) kishi laqablari bilan bog'liq etnotoponimlar. Masalan: Qozoqota, Gajak, Boltali, Tashkan, Ishonchli, Yombosh, Suyalota, Bo'riota, Aziztepa, Eshontepa, Xalifaota, Xo'jamatchashma, Ziyovuddin buvi, Go'ro'g'li, Ahmad polvon, Murodtepa, Farovon Yo'ldoshobod,

Mirzo Salimiy, Hayit Elbegi, Juma to‘pchi, Ahmad polvon kabi. Har qanday laqab etnonimga aylanavermaydi, chunki laqab etnonimga aylanishi uchun u faqat bir kishiga emas, balki muayyan toifa kishilar guruhi yoki o‘sha laqab egasining avlodiga taalluqli bo‘lishi kerak. Ana shunda u etnonimga, ya’ni o‘sha laqab egasi urug‘ining nomiga aylanadi; b) kasb-hunar, mashg‘ulot bilan bog‘liq etnotoponimlar. Kishilarning mashg‘uloti va turmush tarzi ayrim toponimlarda o‘z aksini topgan: Bog‘bon, Hunarmand, keshtali, Obodon, Bolg‘ali, Boltali, Ketmonchi, Ko‘rpa, Qayishfurush, Qassobto‘p, Olmazor, Sardoba, O‘rikzor, Oqqum, Darbozaqir, Do‘ltaxona, Ziyolilar, Mixchagar, Sovungar, Jumabozor, Payshanbabor, Chorshanbabor, Ziyovuddin, G‘allakor, Novvoylar kabilar.

NATURAL - GEOGRAPHICAL PROBLEMS OF USING THE MOUNTAIN AND NEAR-MOUNTAIN AREAS OF KASHKADARYA REGION

Abstract. The article describes the natural geographical basis of the use of mountain and sub-mountain areas of Kashkadarya region, their impact on landscapes is evaluated, geographical and geo-ecological problems of mountain and sub-mountain natural complexes are described.

Key words: tog` va tog` oldi hududlari, tabiat komplekslari ta`siri, geografik muammolar, geomorfologik muammolar.

Introduction. There are many laws and laws of change and development of nature, learning and knowing them will facilitate the optimal use of resources, the development of landscapes in the direction of destruction, pollution of the environment and impoverishment of resources will be prevented. The natural complexes of mountain slopes, valleys and mountain plains are constantly changing under the influence of gravitational force, large slope, oil-valley winds, underground and surface water flow and other factors. As a result of human economic activities, the placement of industrial enterprises on mountain slopes and valleys, the influence of the above factors causes environmental pollution, destruction, and out of circulation. Man has implemented large-scale creative projects in the mountain and sub-mountain regions and is constantly developing the production forces based on the use of available resources. These large-scale anthropogenic changes (reservoirs, floodplains, railways and highways, canals, hydroelectric nodes, tunnels, various engineering structures) have a long-term stable function if they are compatible with the influence of local natural conditions and factors of the area.

The main part. The use of nature is planned, staged, standardized, acting with a view to the distant future, a tactic of putting resources into circulation in a scientifically based manner, economy, wide use of renewable natural resources if there is another non-renewable alternative (wind, solar energy, etc.), It relies on more use of secondary resources in the production, timely and high-quality reclamation, regular use of low-waste and no-waste technology, full maintenance of environmental cleanliness, achieving favorable environmental conditions, and other principles. In the process of using the natural environment, it is necessary to apply measures for its protection at the same time and some of them in advance,

to replace the toxic chemical substances used against diseases and insects in plants with biometods as much as possible, for polluting and destroying it during the use of nature. it is also important to apply large fines and to apply taxation in some cases to the process of nature use in general.

a) Change of mountain and sub-mountain landscapes. The variability of mountain and sub-mountain complexes is determined by factors such as the composition of the rocks that make them up, the slope of the slope, the level of vegetation cover, and the nature of human economic activity. People often carry out economic activities without fully taking into account the landscape condition, dynamic and development stages of the slopes. The anthropogenic impact can exert different pressure on the current state of the landscape, its dynamic variability and the general direction of development. When the most important resources are used unreasonably, negative changes in the structure and dynamic state of mountain landscapes begin to occur. As a result of this, the law of natural interdependence and influence between landscape components and complexes is violated.

b) Natural geographical problems of mountain and sub-mountain complexes. Since mountain and sub-mountain areas are single, interconnected natural complexes, taking into account the exchange of matter and energy and their one-way movement, they can be called a whole geosystem in a certain sense. Mountain complexes are created, formed and developed at the expense of mountain geosystems. Taking this law into account, all structural and dynamic changes occurring in mountain complexes depend on the scale of natural and anthropogenic functional phenomena and processes. The changes that occur in the cone spreads: the increase or decrease in the thickness of coarse rocks or loess deposits depends on the speed of erosion and floods that occur on the mountain slopes. The presence of heavy metals in the soil of the foothills of the Fergana Valley cones is explained by the production activities of industrial enterprises located on the slopes of low mountains (Zevardi, Zarmas, Karatag, etc.).

c) Current geomorphological problems of mountain and sub-mountain plains. During the former Soviet Union, the main task of geological, geomorphological, glaciological and natural geographical research in Central Asia was to collect data and put them into a system. Many research scientists have dealt with these issues. However, perfect associations were not created based on the comparative analysis of regional data. Below, we will think about some problems that have been published on geomorphology and natural geography and need to be solved by comparative analysis of the data in them. One such problem is the concept of a mountain in family and high school geography education and its classification according to its height.

A hill, height or ridge made of Mesocene deposits cannot be called a mountain. For example, Beltog - Lower Amudarya, Mokhovtog - Fergana Valley, etc. were said to be the wrong mountain by local residents, and the mountain was also written on the maps. However, their absolute height does not exceed 300 m.

Hills with a meso-Cenozoic layer and steep slopes, with skirts and above the sea level can be called a mountain. Z.A. Svarichevskaya (1965), who analyzed the hypsographic curve of the earth's land, classified the mountains according to their height as follows: low mountains - up to 2000 m, medium-high mountains - up to 3000 m, high mountains - up to 5000-5500 m and the highest mountains - more than 5000 m. Taking into account that the average height of land is +875 m, the scientist believes that places with a height of 900 m can be called mountains.

Poslavskaya.O.Yu. (1980-1989) classifies the mountains used for the orography of the territory of Uzbekistan as follows: low mountains - from 350-400 m to 1000-1200 m, medium mountains - from 1000 m to 2500-3000 m to, high mountains - more than 3000 m. He believes that the highest mountains are not in the territory of Uzbekistan (Hazrati Sultan - 4648 m).

It is appropriate to accept the alternative of Z.A. Svarichevskaya's classification of mountains according to the height of the world. In our opinion, it is possible to consider low mountains up to 2000 m, medium-high mountains up to 3000 m, high mountains up to 5000 m, and the highest mountains over 5000 m, but some scientists say 6000 m. This classification corresponds to the morphological and geological structure of the world's mountains.

Location of soils in mountain and sub mountain regions

Soils	Area, thousand hectares	Comparison ratio, %	Height above sea level, meters
High mountain light brown soil	540	4,0	2800-3500
middle mountain brown and brown soils	1662	12,4	1700-2800
Dark gray soils	1055	7,9	750-1200
Typical gray soils	3051	22,7	500-750
Light gray soils	2592	19,3	250-500
Meadow gray and gray-meadow soils	781	5,8	250-500
Alluvial soils of gray soil regions	748	5,6	250-500
Slopes	3000	22,3	-
TOTAL:	13429	100	

4616 hectares of dry land located in this region have 350-900 mm of precipitation on 1371, 1 thousand hectares and are fully supplied with moisture. 2009 thousand ha had 280-300 mm of precipitation, semi-provided with moisture, and 1235, 8 thousand ha had 250-280 mm of precipitation - not supplied with moisture. The ongoing land report shows that the irrigated land area of Uzbekistan on January 1, 2002 is 4,300,000, which makes up 95% of the agricultural production of our republic. Development of new land is decreasing year by year due to water shortage in our republic. As a result, taking into account the fact that the growth rate of the population is higher than the irrigated land, the irrigated

land area per capita is sharply decreasing. In 1980, it was 0.26 ha per capita, in 2000 it was 0.20 ha, in 2010 it was 0.17 ha and in 2020 it was 0.15 ha.

Conclusion. As a result of large-scale floods in the mountainous and mountainous regions, lands used for agriculture are eroded, the fertile soil layer is washed away, and ravines are formed. Incorrect use of land, insufficient volume of work against erosion, incorrect placement of agricultural crops, and irregular grazing of livestock are the reasons for the increase of such processes. The only way to eliminate these shortcomings is to plant fruit and decorative trees on terraces on the basis of special projects, using organizational-economic-agrotechnical, forest melioration and hydrotechnical measures in mountainous regions.

As a result of the conducted scientific and calculation works, it is known that the expenses will pay for themselves in 6-8 years. Judging by the results of the research project carried out in Kashkadarya region, there is an opportunity to plant more than 100,000 ha of fruit trees in mountainous lands in our Republic. The use of such an opportunity is of great importance in the development of agriculture, prevention of water and wind erosion, and preservation of the ecological environment.

THE EFFECTIVENESS OF MINIMUM WAGE POLICIES IN REDUCING POVERTY

Abstract. Minimum wage policies are often implemented with the goal of reducing poverty and promoting economic equity by establishing a baseline hourly wage that employers must pay their workers. This article explores the effectiveness of minimum wage policies in reducing poverty, examining the theoretical rationale, empirical evidence, and case studies from various countries. While minimum wage policies can lead to increased earnings for low-wage workers, reduced income inequality, and boosted consumer spending, they also come with potential drawbacks, such as job loss, increased business costs, and limited impact on non-standard employment. The mixed results in empirical studies suggest that the impact of minimum wage policies on poverty is complex and influenced by a range of factors, including labor market dynamics, economic trends, and policy design. By analyzing these issues, this article aims to provide a balanced perspective on the effectiveness of minimum wage policies in reducing poverty and offer insights for policymakers, economists, and social justice advocates.

Keywords: Minimum wage, poverty reduction, income inequality, labor market, economic policy, job loss, social justice, wage policies, empirical studies, case studies.

INTRODUCTION

Minimum wage policies have long been advocated as a tool to combat poverty and promote economic equity. The concept of a minimum wage is straightforward: establish a baseline hourly wage that employers must pay their workers. The goal is to ensure that even the lowest-paid employees earn enough to meet basic living standards. This article examines the effectiveness of minimum wage policies in reducing poverty, considering both the theoretical underpinnings and the empirical evidence. While minimum wage policies are intended to uplift low-income workers and decrease income inequality, they also come with potential drawbacks that can impact their success in reducing poverty. The rationale behind minimum wage policies is rooted in social justice and economic theory. Proponents argue that a minimum wage can raise the income of low-wage workers, enabling them to afford essentials such as housing, food, and healthcare. In doing so, minimum wage policies aim to reduce the prevalence of working poverty, where individuals work full-time but still struggle to meet their basic needs. Additionally, minimum wage policies are seen as a means to address

income inequality by redistributing wealth from employers to employees. By mandating higher wages, these policies aim to reduce the wage gap between low-income and high-income workers, thereby promoting a more equitable society.

METHODOLOGY

Minimum wage policies have been implemented across various countries with the aim of reducing poverty and promoting economic equity. The underlying assumption is that by setting a minimum hourly wage, workers at the lowest income levels will earn enough to support a basic standard of living, thereby reducing poverty. However, the relationship between minimum wage policies and poverty is complex, influenced by a range of factors including labor market dynamics, the broader economy, and social policies. In this section, we will explore the empirical evidence, theoretical arguments, and real-world case studies to understand the effectiveness of minimum wage policies in achieving their poverty-reduction goals.

Theoretical Framework: How Minimum Wage Policies Aim to Reduce Poverty. The core idea behind minimum wage policies is to provide a wage floor that ensures workers receive fair compensation for their labor. By establishing this baseline, policymakers hope to reduce the number of people living in poverty, particularly those who work full-time yet earn insufficient income to meet their basic needs. This concept aligns with the principles of social justice and equity, aiming to protect workers from exploitation and improve their quality of life. A key aspect of minimum wage policies is their role in addressing income inequality. By mandating a minimum wage, governments can help redistribute wealth from employers to workers, particularly those in low-paying jobs. This redistribution can reduce the wage gap and promote a more equitable distribution of income across the labor force. Additionally, minimum wage policies may contribute to increased consumer spending by providing workers with more disposable income, which can, in turn, stimulate economic growth. The impact of minimum wage policies on poverty reduction varies across different demographics makes. Studies show that increasing the minimum wage is particularly low-income workers, it will be useful for women and minority groups who are high in low-paying jobs. This weak the minimum wage policy by improving the income of the population is the imbalance of poverty can contribute to reduction.

RESULT

The effectiveness of minimum wage policies in reducing poverty is a complex and multifaceted topic that has generated significant research and debate among economists, policymakers, and labor advocates. The results of the systematic literature review illuminate key aspects of this debate and provide insight into the impact of minimum wage policies on poverty reduction. One of the main results of this study is the positive effect of the minimum wage policy on income distribution. Many studies show that a higher minimum wage leads to a narrowing of the wage gap between low- and high-income earners, thereby

promoting a more equitable distribution of income. While some studies have found a significant link between higher minimum wages and poverty rates, others have found a more modest effect. The impact of minimum wage policies on poverty reduction depends on a variety of factors, including initial levels of poverty, the size of the minimum wage increase, and the overall structure of the labor market. It is important to consider that minimum wage policies are one of many anti-poverty tools, and their effectiveness may be influenced by broader socio-economic conditions and policy contexts.

Empirical Evidence: Mixed Results on Minimum Wage Policies and Poverty Reduction. Empirical studies on the impact of minimum wage policies on poverty have yielded mixed results, with some research indicating positive outcomes and others suggesting negligible or even adverse effects. To understand these conflicting findings, it's important to consider the broader context in which minimum wage policies are implemented, including labor market conditions, economic trends, and complementary social policies.

Case Study: The United States. In the United States, minimum wage policies vary by state, providing a diverse set of case studies. Some states have significantly higher minimum wages than the federal standard, while others adhere to the federal minimum wage. Research on the impact of minimum wage increases in the U.S. has shown mixed results. Some studies suggest that raising the minimum wage has led to increased earnings and reduced poverty rates, while others indicate potential job loss and adverse effects on small businesses.

Case Study: The United Kingdom. The United Kingdom introduced the National Minimum Wage in 1999, followed by the National Living Wage in 2016. These policies aimed to combat poverty and reduce income inequality. Studies on the impact of these policies suggest that they have contributed to higher earnings for low-wage workers and reduced income inequality. However, there are concerns about the impact on employment and business costs.

Case Study: South Korea. South Korea has implemented significant minimum wage increases in recent years, aiming to address income inequality and improve living standards. The rapid increase in the minimum wage has had mixed outcomes, with some reports of job loss and business closures, while others indicate positive effects on workers' earnings.

CONCLUSION

In conclusion, the effectiveness of minimum wage policies in reducing poverty is a complex and multifaceted issue. While these policies can lead to increased earnings, reduced income inequality, and boosted consumer spending, they also come with potential drawbacks, including job loss, increased business costs, and limited impact on non-standard employment. The mixed empirical evidence underscores the importance of considering the broader context in which minimum wage policies are implemented. Policymakers must balance the intended benefits of minimum wage policies with their potential risks.

SUPPORTING FINANCIAL INSTITUTIONS TO FACILITATE DIGITAL TRANSFORMATION IN THE BEEKEEPING INDUSTRY

Abstract. The article describes the organizational and economic levers for promoting the transformation of digital technologies in the beekeeping industry. Proposals for subsidizing the implementation of digital technologies in the network are described. Also, in order to support structures that finance the implementation of digital technologies, the organization of the «Technological transfer in beekeeping» fund and the sources of its financing are disclosed.

Key words: beekeeping, digitalization, incentives, digital technologies, subsidies, «Technological transfer in beekeeping», 3D devices, satellite navigation, Big Data.

Introduction

The experience of developed countries shows that activities related to the digitalization of agriculture are always carried out under state control and with the help of support mechanisms. In particular, in technologically developed countries such as the USA, Germany and Japan, where the share of the private sector is high and the quality of service is high, the issue of digitalization of agriculture is entrusted to the state.

Namely, the need for organization and economic stimulation of the industry is increasing, and the goal of obespecheniya is the need for the population of our country and natural and organic products, the development of beekeeping and the goal of increasing the productivity of agricultural culture and the establishment of modern innovative technologies.

Main part

Based on our research, we believe that organizational and economic levers should be widely used as ways to drive digital transformation in beekeeping. In particular, in the organizational direction it is advisable to implement the following tasks:

- organization of «Smart hives», conducting research and experiments related to adaptation to the climatic conditions of our country;
- improving the legal framework for the use of digital devices and remote controls and creating a system that is simple for everyone;

- holding seminars on popularization, propaganda and explanation of the use of digital devices;

- organization of bee farms equipped with intelligent devices for the targeted and orderly use of forest lands, etc.

We also believe that the following tasks must be completed as economic directions for promoting the introduction of digital technologies in beekeeping. Including:

- introduction of a system of preferential lending to farms that have fully implemented digital technologies and improvement of the insurance system;

- financial support for enterprises producing smart devices through cooperative relations with the economy;

- introduction of a system of stratified subsidies for farms that have implemented digital technologies for a certain percentage of the total number of bee colonies;

- organization, development, etc. funds helping to financially support the implementation of digital technologies in beekeeping.

The role of each of these organizational and economic levers in practice is incomparable, which is confirmed in monographic studies. It was noted that insurance, preferential lending, subsidies, and the formation of separate industry financing funds would have a positive effect.

Therefore, our research is based on a scientific proposal with special emphasis on subsidies, the creation of special funds and their financing. In particular, an analysis of questionnaires conducted in the regions shows that if one apiary contains an average of 1 pavilion (32 hives, 64 families), then at least 4 hives (12.5 percent) must be equipped with digital technology under constant monitoring. Only then will it be possible to monitor the daily condition of the bees in minimal real time.

Based on this, it is proposed to establish a minimum criterion for allocating subsidies for digitalization for beekeeping farms. It is advisable to introduce a stratified subsidy system for farmers who meet this criterion at a minimum level and are interested in increasing it in accordance with the number of cells in the pavilion (table 1).

Table 1

Subsidy system for beekeeping farms that have implemented digital technologies and its levels

Amount of subsidy	Minimum criteria	Differentiated use		
		Completed the minimum requirement	introduced to 30 percent	introduced to 50 percent
In the amount of 5 times the amount of the basic calculation	Introduction of digital technology in 12.5% of the total number of hives	1,0	5,0	10,0
It is also possible to introduce coefficients by region and type of enterprise				
	For mountain and sub-mountain beekeeping	1,0	5,0	10,0
	For beekeeping in cotton	1,0	8,0	12,0
	For desert and semi-desert beekeeping	1,5	6,5	11,0

When subsidizing beekeeping farms that have implemented digital technologies, it is proposed to allocate a subsidy in the amount of 5 billion cubic meters based on the actual assessment as of 2023.

This amount should be increased 5 times for farms that contributed it to 30% of the total number of nests on the farm, and if it was contributed to 50%, then it should be applied 10 times.

At the same time, this amount is used for mountain and foothill beekeeping, given the high impact of chemicals for honey producing farms in cotton-growing areas, coefficients of 8 to 12 are proposed, respectively 30% and 50%.

The increasing role of the private sector in market relations is a natural process and at the initial stages of state subsidies serves to create enterprises and widely promote new technologies and in the future it should work with the help of market mechanisms.

For this purpose, it is advisable to create structures that finance the implementation of these technologies and support agencies. Therefore, we consider it necessary to create a fund «Technological transfer in beekeeping» in our research (Fig. 1).

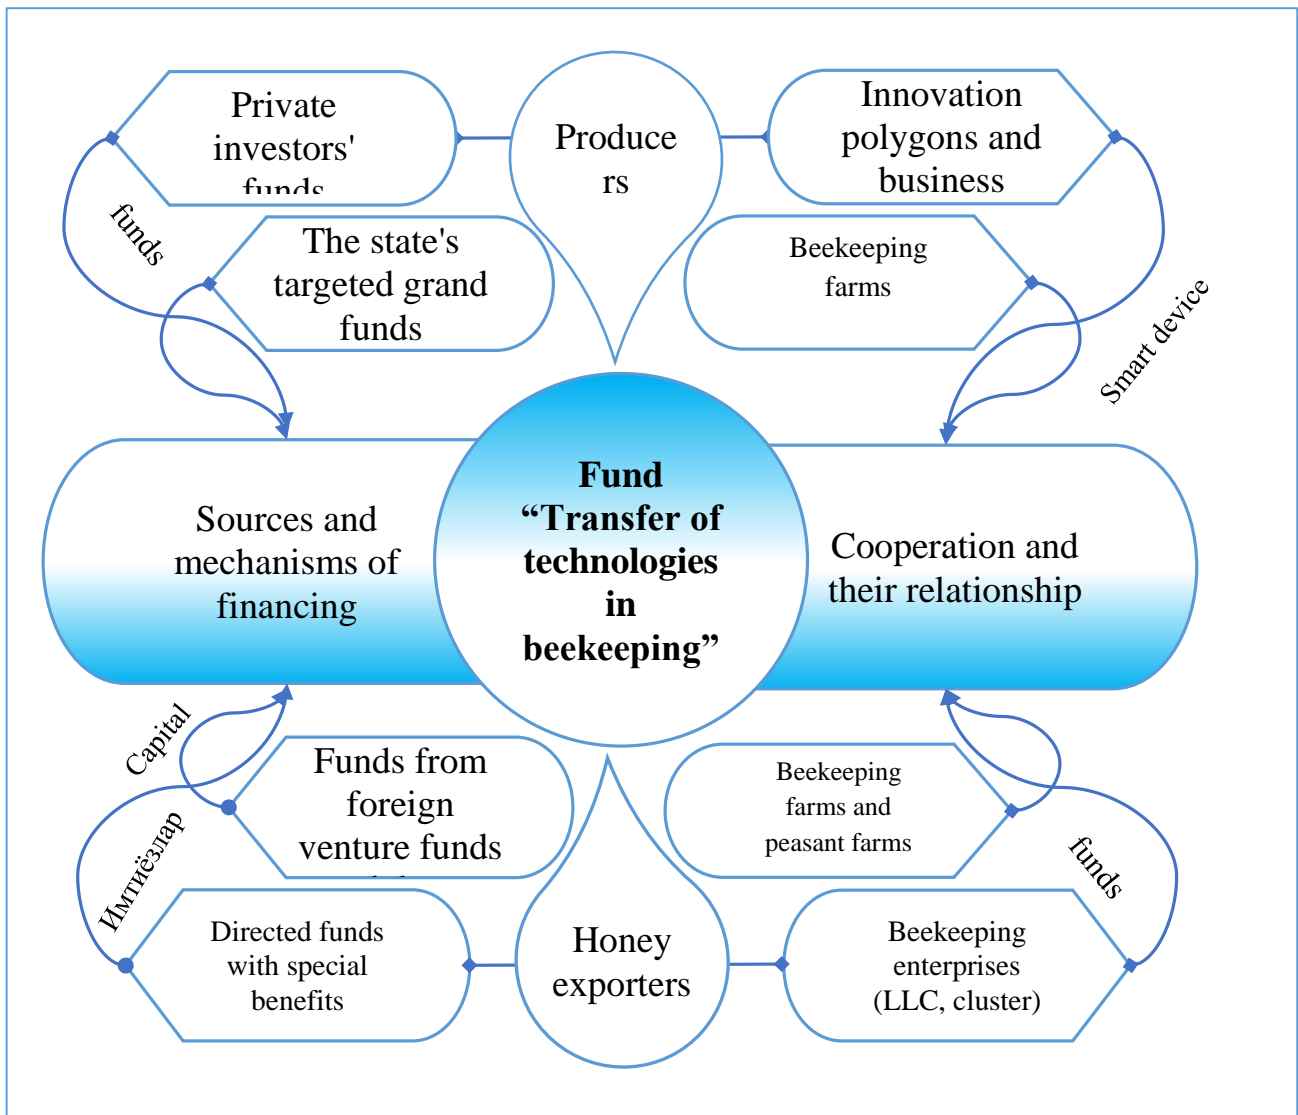

Figure 1. Technical and economic relations of the fund «Transfer of technologies in beekeeping»

The purpose of creating the fund is to financially support the introduction of modern digital technologies in beekeeping farms, providing them with preferential loans, promoting the introduction of new technologies into practice, as well as increasing the interests and skills of beekeeping farms.

In the course of its activities, this fund performs the following tasks. In particular:

- strengthening the material and technical base of beekeeping farms, introducing digital technologies, allocating credit resources for training purposes and further expanding their use;
- financial support for the innovative activities of honey farmers, stimulation of the creation, production and implementation of modern devices;
- financing of targeted state, industry and regional programs, scientific and technical projects aimed at the development of beekeeping, as well as participation in the implementation of these events;

- support the activities of honey producers, processors and service providers in need of working capital when introducing digital technologies;
- establishing leasing activities in order to provide special vehicles, equipment, devices for transporting honey and beekeeping products, as well as cooperation with interested parties for these purposes.

Digital technologies in beekeeping not only increase production efficiency and improve product quality, but also contribute to more precise resource management, lower costs and improved sustainability of the entire industry. This trend is gaining momentum and digital technology is expected to continue to transform beekeeping in the future.

When forming the financial resources of this fund, together with target and donor funds of the state, sources for the formation of funds aimed at special and general benefits are proposed (Fig. 2).

According to it, as a special incentive, it is proposed to allocate funds to the population in the amount of 20% of the market value of land allocated for beekeeping and 50% of the value added tax and duty on imported honey products and bee equipment.

Also, as a general incentive, it is desirable to create funds formed by allocating 15% of the cost of commercialization of research related to digital devices, as well as by allocating 50% of the tax benefits provided as a result of the implementation of smart hives.

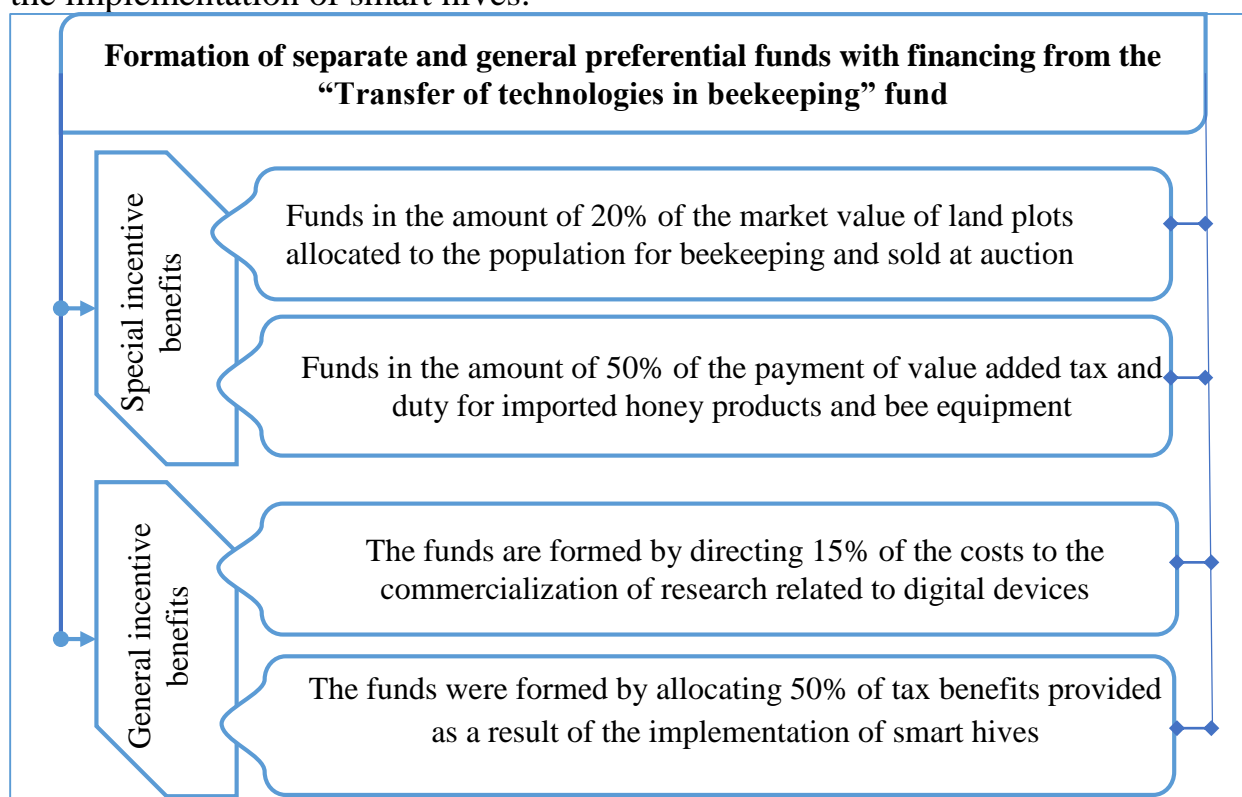

Figure 2. Formation of funds allocated with special benefits to finance the Fund «Transfer of technologies in beekeeping»

Conclusion and suggestions

By creating the «Technology transfer in beekeeping» fund we will achieve the following:

- digitalization of beekeeping;
- attracting the private sector to the implementation of «smart» hives;
- expand the scope of implementation of innovative projects carried out in the field;
- commercialization,
- create conditions for material, technical and financial stimulation of farms;
- on the other hand, it serves to create a number of effects, both social (food safety, development of science, technological weapons, skills formation) and economic (high profits, the presence of a competitive market segment, reduced unemployment).

Supporting financial institutions to facilitate digital transformation in the beekeeping industry is imperative for fostering innovation, enhancing productivity, and ensuring sustainability in beekeeping practices. This initiative holds the potential to revolutionize traditional beekeeping methods by integrating digital technologies, thereby addressing challenges and capitalizing on emerging opportunities in the sector.

In conclusion, supporting financial institutions to facilitate digital transformation in the beekeeping industry is essential for unlocking the full potential of digital technologies to enhance beekeeping practices, promote economic growth, and contribute to environmental sustainability. By implementing these suggestions, stakeholders can create an enabling environment for beekeepers to embrace digital innovation and thrive in the digital age.

IMPROVING CORPORATE GOVERNANCE SYSTEMS IN STATE-OWNED ENTERPRISES

Annotation. Corporate governance in state-owned corporations (SOCs) presents a unique blend of challenges and opportunities, significantly shaped by their dual objectives of achieving commercial success while fulfilling public policy mandates. These enterprises, owned or controlled by the state, operate in various sectors, from utilities and transportation to energy and telecommunications, often holding monopolistic or significant market positions. Unlike private firms, where governance focuses primarily on shareholder value maximization, SOCs must balance commercial goals with socio-economic responsibilities. This often includes delivering public services at reasonable costs while ensuring financial viability and operational excellence. However, corporate governance in SOCs is fraught with complexities due to potential conflicts between the government's role as owner and regulator.

Keywords: descriptive statistics, correlation coefficient, regression analysis, histogram, graph-box, ANOVA table, Normality test, Collinearity test, Shapiro Wilk test.

Introduction

SOCs especially in Asian countries, are made up of more than independent corporations and they are controlled directly by agencies and ministries of Uzbekistan. On 14th January 2019 under PF-5630 orders of the President of Uzbekistan Mirziyoyev Sh. M. 'State Asset Management Agency' was established to control and oversee all corporations, LLCs, and small businesses that the government is involved in. The establishment of the State Assets Management Agency of the Republic of Uzbekistan involved the transfer of staff units from the liquidating State Competition Committee and the State Assets Management Center. Additionally, the Agency was entrusted with the management of state assets, including those abroad, the execution of privatization measures (specifically, the sale of state shares), the leasing of state properties, the implementation of corporate governance in enterprises with state participation, the financial rehabilitation of economically distressed enterprises with state participation, and the regulation of bankruptcy, appraisal activities by the state. The Agency also oversees the approval of property valuation standards and the

certification of realtors, thereby assuming responsibilities, functions, and authorities in these areas.

State Asset Management Agency plays a profound role in the economics of Uzbekistan.

Introduction to the organizational and legal structure of the corporate entity

1. The firm: «State Asset Management Agency»

Address: 6 Amir Temur shoh Street, 100000, Tashkent,, Republic of Uzbekistan

Contact: +998(71) 259-21-37

E-mail: info@davaktiv.uz

2. The CEO: Ortikov Akmalxon Jo‘raxonovich

3. Economic activity of the firm: Reporting and oversight of Government Assets

4. The form of property ownership: Government agency

5. Form entrepreneurship: state-owned unitar entity

6. Date of establishment: January 14th, 2019

7. Number of workers: 400.

8. Product (service) produced (served) by the firm: information technologies and systems.

The corporate structure of the Agency

An agency’s corporate structure is different than normal corporations as it contains hundreds of different entities with different types of corporate structures and works in different spheres of the economy. Currently all executive directors directly report to Prime minister of Uzbekistan and President of Republic of Uzbekistan. The Director of the Agency, the First Deputy Director, and other Deputy Directors are appointed and dismissed by the President of the Republic of Uzbekistan, based on the recommendation of the Prime Minister of Uzbekistan. Their status, as well as their medical and transportation service conditions, are respectively equivalent to those of a Minister, the First Deputy Minister, and Deputy Ministers. The Director of the Agency, the First Deputy Director, Deputy Directors, and Agency staff have the right to be elected as members of the supervisory boards of economic associations in accordance with established procedures. The appointment of the heads of the Agency's regional departments is carried out by the Director of the Agency, in agreement with the Chairman of the Council of Ministers of the Republic of Karakalpakstan, governors of regions, and the mayor of Tashkent City. The medical assistance procedure provided for the employees of the dissolved State Competition Committee will be maintained for the employees of the Agency. In the Agency, the application of the main positions and professional classifications of workers requires a minimum education level of a relevant foreign higher education degree for specialists in respective fields. In defining the qualifications for various worker professions, an exception is made with an advisory nature. The corporate policy for effective management of state assets entails the implementation of a unified state strategy focused on enhancing the governance and operational efficiency of enterprises

with state participation. This includes exercising the rights of shareholders with respect to the state's equity stakes in these enterprises, ensuring a proactive and responsible role in their management.

A pivotal aspect of this policy is the introduction of modern corporate governance practices derived from advanced international experience. This strategic approach significantly strengthens the role of supervisory boards and shareholders in the management of state-participated enterprises, ensuring more robust oversight and decision-making processes. Additionally, the policy supports the transformation of state-participated enterprises into competitive and efficient market players. This transformation is facilitated through a structured and phased approach that incorporates best practices and recommendations from international financial institutions, aiming to make these enterprises viable competitors in both local and global markets.

To further the objectives of transparency and efficiency, there is a commitment to optimizing management structures within these enterprises. This includes increasing profitability and capitalization, divesting from non-core and underutilized assets, and implementing strategies that are designed to boost operational effectiveness. Furthermore, the policy emphasizes maintaining the transparency of operations and developing a robust system for monitoring the fulfillment of investment and social obligations by investors. In terms of financial strategies, the policy advocates for an effective dividend policy in collaboration with the Ministry of Finance of the Republic of Uzbekistan, ensuring that state interests are adequately represented and financially beneficial outcomes are achieved. The strategy also includes the facilitation of equity and bond issuances, including IPOs and SPOs on both local and international stock exchanges, to attract direct foreign investments as well as portfolio investments. Moreover, the policy extends to the regulatory aspects of property valuation, establishing standards for property appraisal, and the certification of real estate agents, thereby ensuring a regulated and standardized approach across the sector. Finally, the policy also encompasses the identification and rehabilitation of non-operational, low-profitability, and loss-incurring enterprises. This includes the development and implementation of financial recovery and operational efficiency programs, thereby enhancing overall corporate health and productivity. The execution of state policy concerning bankruptcy proceedings further underscores the commitment to a structured and legally compliant approach to managing enterprises facing financial distress. The full structure of how the agency operates still remains unclear. Still, all documentation and assumptions made during the internship reveal that they operate similarly to those of the ministry. There is less open data regarding the financial and internal structure of the agency.

Table №2

The results of analysis of open-source non-confidential data resources²⁸

	Unit of measure	2021	2022	2023	Description

Code of Ethics	The company has a document that specifies the norms of ethics that were established by the trade union and functions in the «comply or explain» principle

Table №3 illustrates a list of normative documents and their alternatives that are established by the «SAMA».

Analysis of individual trust in government-owned corporations

The research was done primarily among Corporate Governance students and workers in this sphere regarding the trust of individuals to invest in Government-owned corporations and its relation to the corporate system and dividend policy of the corporation

Gender (Jinsingiz)

o Age (Yoshingiz)

o Education Level (Ta'lim darajangiz)

o Employment Sector and Location (Siz mehnat faoliyatini olib borayotgan tashkilot joylashgan hudud)

o Company Orientation (Kompaniya yo'nalishi)

o Level of financial information disclosure

o Easyness of investing in stock markets

o Dividend payment expectation

o Factors while investing in state-owned corporations

o Level of confidence to invest in Government owned corporations

The survey is distributed electronically via platforms that cater to citizens and individuals within the country.

Methods

1.1 Pearson Correlation Analysis

To identify the relationship between given variables Pearson Correlation Analysis has been conducted. This analysis allows us to assess the strength and direction of linear associations between variables and the perceived effectiveness of educational program. Correlation coefficients and associated p-values are used to identify significant correlations.

1.2 Comparative Analysis

In addition to the statistical analysis mentioned above, a comparative analysis was carried out to explore any notable differences in program effectiveness across various demographic and control factors. This involved subgroup analyses based on gender, occupation, and age. Comparative statistics, such as means, proportions, and confidence intervals, are in use to highlight any significant disparities in evaluating role of corporate governance among these subgroups.

Descriptive Statistics³⁰

Variable	Obs	Mean	Std. Dev.	Min	Max
confidence level	100	55.66	28.039	0	100
divident payment	100	47.9	25.899	0	100
disclosure rate fi~e	100	2.17	.817	1	3
factors	100	2.72	1.464	1	5
level investing	100	2.22	.811	1	3
age	100	36.12	13.441	15	76
gender	100	1.62	.488	1	2
degree	100	2.45	1.417	1	5
working sector	100	2.55	1.158	1	4
location	100	3.1	1.345	1	5

Table 4: Descriptive analysis of the dataset

In this table, descriptive analysis of evaluation of 100 respondents on investment level of citizens and 4 question was illustrated. The average point given by survey participants was 55.66, while points ranged from a minimum of 1 to a maximum of 100. Confidence level, Dividend payment and disclosure level of financial documents, and easiness to enter the stock market. The first 3 dependent variables were measured in ordinal type of measurement comprising of low, medium, and high parameters and the fourth was in numeric.

In this research we do not emphasize on demographic questions such as education degree, gender, working experience, age and occupation.

2-Picture. Confidence level in GOC and dividend payment expectation³¹

Scatter plot you sent me shows a positive correlation between confidence level in GOC (Global Organization Credit) and dividend payment expectation

³⁰ Data obtained through survey conducted by researcher via online forms

³¹ Data obtained through survey conducted by researcher via online forms

analysis. This means that as the confidence level in GOC increases, the expectation of dividend payment also increases.

The data points in the scatter plot are clustered in the upper right quadrant, which means that there is a positive relationship between the two variables. The fitted line shows the general trend of the data, and it is also upward sloping, which confirms the positive correlation.

It is important to note that correlation does not imply causation. Just because there is a positive correlation between confidence level in GOC and dividend payment expectation analysis does not mean that one variable causes the other. There could be a third variable that is causing both of these variables to change.

For example, perhaps a strong economy leads to both higher confidence levels in GOC and higher expectations of dividend payments.

3-Picture. Confidence level and Financial documents disclosure³²

Box plot showing a comparison between high, medium, and low confidence levels. The box plot shows the distribution of the confidence level for each group.

The horizontal line in the middle of each box represents the median confidence level. The box contains the middle 50% of the data. The whiskers extend to the lowest and highest values within 1.5 times the interquartile range (IQR) from the median. Values outside this range are considered outliers and are plotted as individual points.

Here are some specific observations about the boxplot:

- The median confidence level is higher for the high group compared to the medium and low groups.

³² Data obtained through survey conducted by researcher via online forms

- The interquartile range is wider for the medium group compared to the high and low groups, which means that there is more variability in the confidence level for the medium group.

- There are a few outliers in the low group, which means that there are a few data points in the low group that are much lower than the rest of the data in that group.

Overall, the box plot suggests that there is a positive relationship between confidence level and the group (high, medium, or low).

Table №5

Pearson Pairwise correlations ³³					
Variables	(1)	(2)	(3)	(4)	(5)
(1) confidence_level	1.000				
(2) divident_payment	0.624*	1.000			
(3) disclosure_rat~e	(0.000) -0.185	(0.129) -0.153	1.000		
(4) factors	(0.065) 0.093	(0.271) 0.111	(0.326) 0.099	1.000	
(5) level_investing	(0.246) 0.117	(0.261) 0.114	(0.161) 0.141	(0.727) 0.035	1.000

*** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$

Table Pairwise correlations

Pearson correlation coefficient matrix. It shows the correlation between different variables.

Specifically, this matrix shows the correlation between confidence level, dividend payment, disclosure rate, factors, level investing, age, gender, degree, working sector, and location.

Each value in the table represents the correlation coefficient between two variables. The correlation coefficient ranges from -1 to 1. A correlation coefficient of 1 indicates a perfect positive correlation, while a correlation coefficient of -1 indicates a perfect negative correlation. A correlation coefficient of 0 indicates no correlation.

Here are some of the correlations that you can see in the table:

- There is a positive correlation between confidence level and dividend payment (0.624). This means that as confidence level increases, dividend payment is also expected to increase.

³³ Data obtained through survey conducted by researcher via online forms

• There is a weak positive correlation between confidence level and disclosure rate (0.185).

• There is a weak positive correlation between confidence level and factors (0.093).

• There is a weak positive correlation between confidence level and level investing (0.246).

It is important to note that correlation does not imply causation. Just because there is a correlation between two variables does not mean that one variable causes the other. There could be a third variable that is causing both of these variables to change.

³⁴³⁴ Data obtained through survey conducted by researcher via online forms

R-squared	0.512	Number of obs	100
F-test	10.475	Prob > F	0.000
Akaike crit. (AIC)	900.469	Bayesian crit.	926.520
(BIC)			

*** $p < .01$, ** $p < .05$, * $p < .1$

Table 6: Linear regression

This table illustrates that as long as F-test equals to 10.04 and probability level is 0, there is a significant relationship between control variables and dependent variable. These control variables account for 51% (R-squared) of the dependent variable.

Furthermore, in model estimation table, it is shown that besides dividend payment, the change in ordinal and binary measurement means may result in the increase in dependent variable as p-value is less than 0.05. In dividend payment from taking place can increase confidence to 0.4 average it is applicable in reality as probability test indicates 0 which is lower than 0.05.

linear regression analysis. It shows the relationship between two continuous variables: confidence level in GOC (Global Organization Credit) and dividend payment expectation.

- The vertical axis (y-axis) represents the dividend payment expectation.
- The horizontal axis (x-axis) represents the confidence level in GOC.

The equation for the regression line is shown at the top of the image. It is:
 $y = 1.877 + 0.06964 * x$

The slope of the regression line is 0.06964. This means that for every one-unit increase in confidence level in GOC, there is a 0.06964 unit increase in dividend payment expectation.

The R-squared value is 0.512. This value indicates that 51.2% of the variation in dividend payment expectation can be explained by the linear relationship with confidence level in GOC. The remaining 48.8% of the variation is due to other factors that are not included in the model.

The p-value is less than 0.001. This means that there is a statistically significant relationship between confidence level in GOC and dividend payment expectation.

Overall, the linear regression analysis suggests that there is a positive relationship between confidence level in GOC and dividend payment expectation. This means that investors are more likely to expect higher dividend payments from companies that they have a higher confidence level in.

Data distribution and density of observants ³⁵

Graph showing the level of confidence to invest in a specific organization over time. The x-axis represents time, likely in months, but the scale is not specified. The y-axis represents the level of confidence, with a scale of 0 to 100.

The data points on the graph show some fluctuations in the level of confidence over time. However, it is difficult to say for sure what the overall trend is without a longer time scale or more data points.

Here are some additional observations about the graph:

- The highest level of confidence is around 78.
- The lowest level of confidence is around 22.
- There is a data point at around month 80 with a confidence level of 100.

It is important to note that this graph only shows the level of confidence to invest in this organization. It does not tell us anything about the actual performance of the organization or whether it is a good investment.

³⁵ Data obtained through survey conducted by researcher via online forms

Shapiro-Wilk W test for normal data³⁶

Variable	Obs	W	V	z	Prob>z
confidence~l	100	0.932	5.646	3.840	0.000
divident_p~t	100	0.978	1.792	1.295	0.098
disclosure~e	100	0.996	0.312	-2.587	0.995
factors	100	0.982	1.497	0.896	0.185
level_inve~g	100	0.993	0.546	-1.341	0.910

For interpreting the results, we typically compare the p-value to a significance level (usually 0.05). If the p-value is less than the significance level, we reject the null hypothesis and conclude that the data is not likely to be normally distributed. Conversely, if the p-value is greater than the significance level, we fail to reject the null hypothesis and tentatively conclude that the data may be normally distributed.

Here are some specific observations from the table:

- **Confidence:** The p-value (0.000) is less than 0.05, so we reject the null hypothesis and conclude that the confidence data is not likely to be normally distributed.

- **Dividend p (payment):** The p-value (0.098) is greater than 0.05, so we fail to reject the null hypothesis and tentatively conclude that the dividend payment data may be normally distributed.

- **Disclosure:** The p-value (0.995) is greater than 0.05, so we fail to reject the null hypothesis and tentatively conclude that the disclosure data may be normally distributed.

- **Factors:** The p-value (0.185) is greater than 0.05, so we fail to reject the null hypothesis and tentatively conclude that the factors data may be normally distributed.

- **Level investment:** The p-value (0.910) is greater than 0.05, so we fail to reject the null hypothesis and tentatively conclude that the level investment data may be normally distributed.

- **Age:** The p-value (0.001) is less than 0.05, so we reject the null hypothesis and conclude that the age data is not likely to be normally distributed.

It is important to note that the Shapiro-Wilk test is just one way to assess normality. There are other normality tests available, and the choice of test can depend on the size and characteristics of the data set.

³⁶ Data obtained through survey conducted by researcher via online forms

Post estimation analysis - Collinearity³⁷

Figure 10 - Multicollinearity

Variable	VIF	1/VIF
disclosure~e	1.07	0.938346
divident_p~t	1.06	0.942622
level_inve~g	1.04	0.961386
factors	1.03	0.973783
Mean VIF	1.05	

Click to Open File: [Myfile.doc](#)

The table lists the VIF for each variable, which helps us understand if multicollinearity is a concern. A VIF of **1.05** means **there is no correlation** among the independent variable and the others, and generally, a **VIF exceeding 5 or 10 indicates high multicollinearity** that may be problematic. In this case, all variables have a VIF less than 5, actually all of them are even below **1.5, which is very good**. This suggests that **multicollinearity is not a major concern** for this mode

Shapiro-Wilk W test for normal data³⁸

Variable	Obs	W	V	z	Prob>z
yhat	100	0.970	2.491	2.025	0.021
ehat	100	0.970	2.470	2.006	0.022

The smaller the p-value, the stronger the evidence against normality. If the p-value is below a certain threshold (often 0.05), we **reject the null hypothesis that the data is normally distributed**.

³⁷ Data obtained through survey conducted by researcher via online forms

³⁸ Data obtained through survey conducted by researcher via online forms

Post estimation analysis – Heteroscedasticity³⁹

Figure- Frequency norm

The bars represent the frequency of outcomes that our linear model has predicted. Each bar's height indicates how many times a linear prediction and residuals occurred.

Breusch-Pagan / Cook-Weisberg test for heteroskedasticity⁴⁰

Ho: Constant variance

Variables: fitted values of confidence_level

chi2(1) = 0.72

Prob > chi2 = 0.3953

Since the p-value is 0.3953, which is much higher than the common significance levels like 0.05 or 0.01, we do **not have enough evidence to reject the null hypothesis** of constant variance in the errors. In other words, based on this test, **there is no statistical evidence of heteroskedasticity** in the model regarding the fitted values of the variable «confidence level».

⁴⁰ Data obtained through survey conducted by researcher via online forms

In conclusion, there exists a nuanced relationship between confidence levels in investing in government-owned corporations and their dividend payment policies. While dividend payments can enhance investor confidence, the extent to which GOCs prioritize dividends over other objectives, such as fulfilling public service mandates, can significantly impact investor perceptions and investment decisions. Balancing these factors is essential for GOCs to attract and retain investor confidence while fulfilling their broader societal responsibilities.

Recommendations

Transparent Dividend Policy:

Establish a clear and transparent dividend policy that outlines the criteria and process for determining dividend payments.

Ensure consistency and reliability in dividend payments, aligning them with the financial performance and profitability of the corporation.

Communicate dividend decisions effectively to investors, providing rationale and insights into how they align with the corporation's strategic objectives.

Enhanced Corporate Governance:

Strengthen corporate governance structures and practices to ensure transparency, accountability, and integrity in decision-making processes.

Implement independent board oversight and oversight mechanisms to mitigate conflicts of interest and promote sound decision-making.

Foster a culture of ethical conduct and adherence to best practices in corporate governance, emphasizing the importance of integrity and accountability at all levels of the organization.

Improved Investor Access to Stock Market:

Facilitate greater investor access to the stock market by promoting liquidity and market efficiency through measures such as enhancing trading platforms, reducing trading barriers, and expanding market participation.

Provide investor education initiatives to increase awareness and understanding of GOCs among retail and institutional investors, empowering them to make informed investment decisions.

Enhanced Disclosure of Financial Documents:

Enhance transparency and disclosure of financial documents by providing timely and comprehensive reporting of financial performance, including audited financial statements, annual reports, and disclosures of material information.

Utilize digital platforms and investor relations channels to disseminate financial information effectively, ensuring accessibility and transparency for all stakeholders.

Comply with international reporting standards and best practices in financial disclosure, demonstrating a commitment to transparency and accountability to investors.

Engagement and Communication:

Foster open and proactive communication with investors, stakeholders, and the public, providing regular updates on corporate performance, strategic initiatives, and key developments.

Encourage constructive dialogue and engagement with investors to address concerns, solicit feedback, and build trust and confidence in the corporation's management and governance.

By implementing these recommendations, government-owned corporations can enhance investor confidence, promote market integrity, and create a conducive environment for sustainable growth and investment.

DEVELOPMENT OF ABILITIES OF STUDENTS OF THE PREPARATORY GROUP BASED ON STEAM EDUCATIONAL TECHNOLOGIES

Abstract. The methods and means of conveying to pedagogues that the formation of STEAM teaching technology in preschool educational organizations is of great importance, the content, forms and ways of using the means of forming STEAM teaching technology in preschool educational organizations are discussed.

Key words: technology, process, pedagogue, education, child, education, approach.

Today, the use of STEAM educational technology, a new teaching method of organizing children's activities in a mixed method, is important in the education of preschool children. The variability of education and training is the basic principle and principle of the development of the modern preschool education system in our country today. This is a variable part of the STEAM program, which ensures the quality of the educational process and creates optimal conditions for their social and personal development, taking into account the physical and mental health of preschool children, the trajectory of individual creative development, psychological and provided pedagogic skills for studying at school and adapting to the surrounding community for physical development.

The socio-economic conditions of our time demand active, friendly and creative citizens of the society. The limited level of development of technical skills hinders the development of children's imagination, paralyzes their initiative and worsens the performance of any of their activities. In connection with the above, an urgent question arose about the introduction of the STEAM education system in preschool educational institutions in order to create an effective educational environment for the development of creative thinking and creative imagination in children based on the acquisition of basic technical skills. followed.

One thing must be said about STEAM, it is not only an innovation in the field of education, but also a significant contribution to the future of the growing young generation, where a child can independently create their own projects, be proactive, creative and easy. communicating with people.

Modern life sets difficult goals for the education sector: to teach a preschool child to live in a world that requires high intellectual abilities. STEAM technologies provide an opportunity to intelligently acquire and implement the acquired knowledge. The introduction of STEAM technologies into the process of environmental education in a preschool educational organization gives older preschool children the opportunity to understand the acquired knowledge and use it in the course of their practical activities. Children can gain the practical skills they need for their future lives in the modern world. Game situations used during training with children help to determine the capabilities and characteristics of the child. Children learn to observe the interrelationship of events, think logically and, thanks to this, create personal and unusual things. An integrated approach helps to develop their interest and involve them in the learning process.

Introduction of STEAM technologies for environmental education of preschool children in a preschool educational institution can be used in a certain way. To begin with, we need a thematic-spatial environment, thanks to which it will be possible to organize experiments and experiments with children, to organize STEAM laboratories and LEGO construction centers.

Second, STEAM allows children to combine different types of activities - and combines all areas - science, technology, engineering, art and mathematics, and thus allows them to show the results of their activities.

Thirdly, a special place is given to the teacher of the preschool educational organization in this process. Only the teacher's creative activity allows to achieve high results through practical research activities.

Pedagogical conditions of using STEAM technologies in environmental education of older preschool children.

Preschool educational organization should have the following pedagogical conditions for environmental education of older preschool children through STEAM technologies:

In the context of improving the preschool education system, the question arises of bringing this level of education to a new, higher quality level. First of all, innovations are needed, one of which is the use of STEAM technologies in the process of teaching and educating preschool children.

With the educational reform, STEAM technology was introduced in the presidential schools in Uzbekistan. Introduction of STEAM teaching technology to pre-school education organizations, which is the first link of the educational system in the country, accelerates and facilitates the early development of children who are interested in and seek new knowledge in pre-school. But if a child struggles to learn in his program, we need to be patient without forcing them, and instead of waiting until they learn, we need to allow them to learn. We can use most of the available equipment as a toy to develop a child's creativity and engineering thinking. We can make some of the types of STEAM games for children with our own hands.

As a result of mastering this education, the child accumulates the experience of a positive attitude towards the world, the surrounding environment and himself, and gains self-respect. A child in pre-school education actively interacts with peers and adults. He conducts a conversation, takes into account the interests and feelings of others, sympathizes with failures and has the ability to be happy with the success of others. In conclusion, it can be said that the beauty of the monotype lies in its elegance and simplicity. The monotype drawing technique always captures an element that has not been drawn in advance and is subject to change. No drawing is the same and the outcome is never known. Children are very fond of this monotype. After all, there is no need to study or try, the requirements are minimal, the results are guaranteed and the pleasure is guaranteed.

TALABALARDA SOG'LOM TURMUSH TARZIGA OID KOMPETENSIYALARINI RIVOJLANTIRISHNING TARIXIY- IJTIMOIY PEDAGOGIK ASPEKTLARI

Annotatsiya. Doimo sog'lom yashash va uzoq umr ko'rishga insoniyat azal-azaldan intilib kelgan. Shu nuqtai nazardan oladigan bo'lsak har qanday jamiyatning oldida turgan asosiy vazifa insoniyatning ana shu intilishlarini ro'yobga chiqarishdan, ya'ni kishilar sog'liq va uzoq umr ko'rishlari uchun sharoit yaratishdan iborat. Hamma davrlarda ham sog'lom turmush tarzi sog'liqni saqlashning asosiy omillaridan, talablaridan hisoblanib kelgan. Shuningdek, Har qanday jamiyat taraqqiyotining zamonaviy bosqichida yosh avlodni har tomonlama barkamol etib tarbiyalash eng asosiy masalalardan biri sanaladi.

Kalit so'zlar. Milliy boylik, milliy qadriyat, ta'lim, sog'lom turmush tarzi, sog'liq, sog'lom, insoniyat, ma'naviy va jismoniy sifatlar.

HISTORICAL AND SOCIAL EDITORIAL ANNOTATIONS OF THE DEVELOPMENT OF HEALTHY LIFESTYLE COMPETENCIES IN STUDENTS

Annotation. Since time immemorial, humanity has always strived to live healthy and live a long life. From this point of view, the main task facing any society is the realization of these aspirations of humanity, that is, the creation of conditions for people to live a healthy and long life. At all times, a healthy lifestyle has been considered one of the main factors and requirements of health care. Also, in the modern era of development of any society, the comprehensive education of the younger generation is one of the most important issues.

Keywords. National wealth, national value, education, healthy lifestyle, health, health, humanity, spiritual and physical qualities.

O'zining salomatligi haqida shaxsan g'amxo'rlik qilish sog'lom turmush tarzini ga oid kompetensiyalariniyoshlikdan oila va ta'limning barcha bosqichlarida jismoniy tarbiya va sportning ko'magida singdirib borish kerak.

Insonlar endilikda faqatgina soʻzda emas, balki amalda salomatligining qadriga yetib, uni milliy boʻylik, milliy qadriyat sifatida qarashga oʻtishlari lozim boʻladi.

Qadimgi faylasuf olimlar – Platon, Aristotel va boshqalarning asarlarida tarbiya taʼlim tizimida hamda insonlar solomatligi moʻtadilligini taʼminlashda jismoniy tarbiyaga yuksak baho berilgan.

Platon (miloddan avvalgi 427-347 y.y.) Afina zodagonlari vakili, faylasuf-idealist, insonning maʼnaviy va jismoniy sifatleri haqidagi nazariyaning asoschisidir. U Sparta tizimiga moyillik bildirib, harbiy-jismoniy tarbiyani aqliy tarbiya va taʼlim bilan qoʻshib olib borishni koʻzda tutdi. Platon oʻzining asarida shunday degan: «Yaxshi gimnastika oddiy boʻladi, lekin eng avvalo, harbiy gimnastika boʻlishi lozim».

Aristotel (miloddan avvalgi 384-322 y.y.). Yirik olim va faylasuf, Platonning talabasi va Aleksandr Makedonskiyning ustoz boʻlgan. Aristotel shakl va mazmun birligi haqidagi gʻoyani ilgari surgan. Shu bilan birga borliqning rivojlanishini isbotlagan. Insonning ruhi va tanasi ajralmas holda bogʻliq ekanligini tushuntirib bergan. Aristotel oʻgʻil bolalarni jismoniy jihatdan mustahkam qilib tarbiyalash tarafdori boʻlgan. U Platondan farqli oʻlaroq tarbiyada koʻproq taʼlim-tarbiyaga oʻrin berishni, gimnastika mashqlari hajmini kamaytirishni tavsiya etgan. Chunki gimnastikada koʻproq harbiy jismoniy tarbiya va taʼlim koʻzda tutilgan va u bolalar uchun juda murakkab jarayon, deb hisoblagan. Demokrit (miloddan avvalgi 460-370 y.y.) jismoniy mashqlar insonning shakllanishida muhim oʻrin tutadi, yaʼni tabiiy holatni rivojlantirishda ustunroqdir, deb taʼlim bergan. Sokrat (miloddan avvalgi 469-399 y.y.) aytishicha, mustahkam sogʻliq koʻpgina illatlardan saqlashga kafolatdir. Qadimgi grek shifokori Gippokrat (miloddan avvalgi 460-375 y.y.) taʼbiri va taʼlimi boʻyicha, jismoniy mashqlar bilan shugʻullanish turli xil kasalliklarni oldini olish va davolashda muhim ahamiyatga egadir.

Maʼlumki, hozirgi kunda respublikamizda aholi turmush farovonligini oshirish, sogʻligʻni mustahkamlash, jismoniy tarbiya va sportni aholi oʻrtasida ommalashtirish, yosh avlodni aqlan sogʻlom va jismonan barkamol qilib tarbiyalash boʻyicha katta ishlar amalga oshirilmoqda. Bugungi kundagi oʻtroq faoliyat turlarining tobora rivojlanib borishi, shaxsiy transportdan foydalanish koofitsentining ortishi insonlarda jismoniy faolligini pasayishiga olib kelmoqda. Buning natijasida yurak-qon tomir, ovqat xazm qilish tizimi buzilishi, ortiqcha vazn paydo boʻlishi kabi kasalliklarni yuza kelishiga olib kelmoqda.

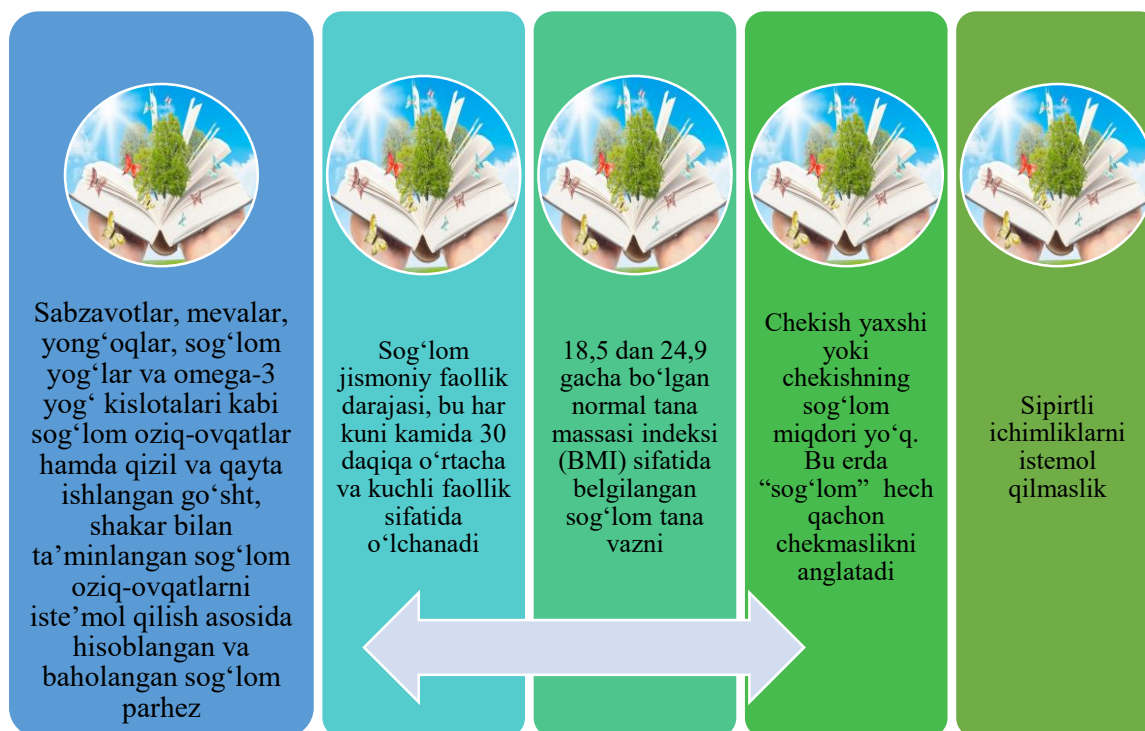

Tabiiyki, bu omillar Respublika aholisining qariyb 40 foizini tashkil etuvchi yoshlar salomatligiga ham oʻz taʼsirini koʻrsatmay qolmaydi.

Bunda sogʻlom turmush tarzini shakllantirish masalasi alohida ahamiyat kasb yetadi. Maʼlumki, barcha davlatlarning taʼlim siyosatining muhim yoʻnalishlaridan biri bu taʼlim oluvchilarning sogʻlom turmush tarzini olib borishi, jismoniy tarbiya va sport bilan muntazam shugʻullanishi, buning uchun talab etiladigan sport infratuzilmasidan foydalanishi uchun sharoit yaratishdir. Jismoniy tarbiya va sport inson salomatligini saqlash, mustahkamlashga, jismoniy

yuksalishga va sogʻlom turmush tarzini shakllantirishga hissa qoʻshishi shubhasizdir. Faol sport bilan shugʻullanish natijasida ortirilgan qobiliyatlar va qadriyat yoʻnalishlari sogʻlom turmush tarziga barqaror ehtiyojni shakllantiradigan, shaxsning oʻzini oʻzi boshqarishning motivatsiyalangan, individual jarayoniga aylanadi.

Sogʻlom turmush tarziga boʻlgan ehtiyojni shakllantirish muammosi yechimi talabalarning sport oʻyinlari, turizmning faol turlari bilan shugʻullanishga qaratilgan shaxsiy motivatsiyasiga, oliy taʼlim muassasasining taʼlim maydonida ushbu jarayonni pedagogik qoʻllab-quvvatlashga bogʻliq. Shu munosabat bilan talabalarining sogʻlom turmush tarzi ga oid kompetensiyalarini rivojlantirish muammosini oʻrganish katta ahamiyatga ega xisoblanadi.

Garvartlik Monique Tello «Sogʻlom turmush tarzi: uzoq umr koʻrishning 5 ta kaliti» nomli maqolasida beshta tanlangan sogʻlom odatlar majmuasidan doimiy foydalanish tavsiya etiladi, chunki koʻplab tadqiqotlar ularning inson salomatligiga foydali ekanligini, erta oʻlim xavfini kamayishiga taʼsir koʻrsatishini koʻrsatdi. Bu sogʻlom odatlar quydagilar(1-rasm):

1-rasm. «Sogʻlom turmush tarzi: uzoq umr koʻrishning 5 ta kaliti (Garvartlik Monique Tello)

Shunday qilib, sogʻliqni saqlash va mustahkamlash muammolari, talabalarining sogʻlom turmush tarziga boʻlgan ehtiyojlarini shakllantirish, harakat faolligini yaxshilash va uzoq umr koʻrishni toʻlaqonli uzaytirisholiy taʼlim muassasalarida oʻqish vaqtida ham tugallangandan keyin ham dolzarbligicha qolaveradi. Har qanday davrda ham sogʻliq yeng yuqori qadriyat, faollik, ijodiy hayot asosi, insonning baxt-saodati, quvonchi va farovonligi hisoblangan.

Zamonaviy jamiyatda sogʻlom turmush tarzi omon qolish shartiga aylanadi. Avvalo, inson oʻzining salomatligi uchun oʻzi javobgardir. Shu sababli, oliy taʼlim muassasalari talabalarining sogʻlom turmush tarzi ga oid kompetensiyalarini rivojlantirish, uni targʻib qilish zamonaviy jamiyatning muhim vazifalaridan biri hisoblanadi. Muammoning dolzarbligi shundan kelib chiqadiki, olimlar talabalarni sogʻlom turmush tarzini saqlash uchun motivatsiya yetishmasligini, oliy taʼlim muassasasi oʻquv jarayoniga talabalar sogʻligʻini saqlash va mustahkamlashga, ularning sogʻlom turmush tarziga boʻlgan ehtiyojlarini qondirishga qaratilgan zamonaviy sogʻliqni saqlash texnologiyalarini yetarli darajada qoʻllamasliklari taʼkidladilar. Biroq, muammoning dolzarbligi jamiyatimizning ijtimoiy-iqtisodiy rivojlanishi va ilmiy-texnik taraqqiyotini sekinlashtirishi va hatto toʻxtatishi mumkin boʻlgan demografik inqiroz tufayli yuzaga keladi.

Inqiroz holatining sabablari orasida ijtimoiy-iqtisodiy va ekologik inqirozlar, taʼlim tizimini tashkil etish va sogʻliqni saqlash strategiyasidagi kamchiliklar mavjud boʻlib, bu sezilarli psixo-emotsional yuklama boʻlib va odamlarning harkat faolligini yetarli darajada emasligi keltirib chiqaradi. Bundan tashqari, oliy taʼlim muassasalari talabalar salomatligi darajasining tez pasayishiga olib keladigan salbiy tendensiyalar sogʻliqni saqlash madaniyatining yetishmasli va inson tomonidan sogʻlom turmush tarzi normalari va qoidalariga rioya qilinmasligini aks ettiradi.

Xulosa qilib aytadigan boʻlsak, mazkur maqola yuzasidan mamlakatimiz va xorij adabiyotlari manbaalarida yoritilgan ilmiy tadqiqotlar natijalarini pedagogik tahlil qilish, ilgʻor tajribalarni oʻrganish, pedagogik kuzatuv, soʻrovnoma, joriy tadqiqotlar va pedagogik tajriba natijalarining qiyosiy tahlili asosida Talabalarda sogʻlom turmush tarziga oid kompetensiyalarni rivojlantirishning didaktik imkoniyatlarini oʻrganish boʻyicha ushbu yoʻnalishda ilmiy tadqiqotlarni olib borish zarurligini koʻrsatadi.

JIZZAX VILOYATI EKOLOGIK HOLATI VA UNGA TA'SIR ETUVCHI OMILLAR

Annatsiya. Maqolada Jizzax viloyati ekologik sharoiti va unga ta'sir etuvchi omillar, ularning oqibatlarini yaxshilash masalalari muhokama qilingan.

Kalit so'zlar. ekologiya, suv, sel, surilma, o'simlik, hayvon, tabiat muhofazasi, resurs, cho'l, chala-cho'l.

ECOLOGICAL CONDITION OF JIZZAK REGION AND FACTORS AFFECTING IT

Annotation. The article discusses the issues of improving the ecological conditions of the Jizzakh region and the factors affecting it, as well as their consequences.

Key words. ecology, water, floods, landslides, plants, animals, nature protection, resources, desert, semi-desert.

Kirish qismi: Yurtimizda boshqa sohalar qatori ekologik barqarorlikni ta'minlash, aholining qulay tabiiy muhitga ega bo'lishi uchun zarur shart-sharoitlar yaratish, tabiiy resurslardan oqilona va samarali foydalanish, yuzaga kelayotgan ekologik muammolarning oldini olish va ularning salbiy oqibatlarini bartaraf etish masalalariga ham jiddiy e'tibor qaratib kelinmoqda.

Ekologiya va tabiatni muhofaza qilish bo'yicha chiqarilgan barcha Oliy Majlis qonunlari, Prezident qarorlari va Vazirlar Mahkamasining qarorlari, ko'rsatmalari va boshqa me'yoriy hujjatlari o'z vaqtida bajarilishi va ularga amal qilinishi lozim. Ushbu qonun va qarorlarni bilish va unga rioya etish bu qonunlarga hurmat tabiatga ham hurmatni bildiradi.

Asosiy qismi: Jizzax viloyatining atrof-muhitini muhofaza qilish va tabiiy resurslardan oqilona foydalanish hamda aholining bu boradagi madaniyatini yuksaltirish bo'yicha harakatlar amalga oshirilmoqda. Shu asosda ekologiya hamda atrof-muhitni muhofaza qilish borasidagi sohaga axborot-kommunikatsiya texnologiyalarini keng joriy etish, jamoatchilik ekologik nazorati tizimini rivojlantirish, jamoatchi inspektorlarni o'qitish va ular malakasini oshirish, chiqindilar bilan bog'liq muammolarni hal etish bo'yicha bir qator samarali ishlar olib borilmoqda. Hozirgi paytda ularning sohaga oid bilim va malakasini oshirish choralari ko'rilmoqda.

Jizzax viloyati ekologik xavfsizlikni ta'minlash shuningdek, sanoat, avtotransport chiqindilari eng kam xavfsiz ko'rsatkichlarga qadar kamaygan bo'lishi, ikkilamchi resurslar to'liq qayta ishlanib ulardan foydali elementlar ajratib olinishi zarur. Eng muhimi isrofgarchilikka chek qo'yilib, tabiatdan ehtiyojga yarasha boyliklarni ajratib olib, chiqindilarni chiqarmaslik tamoyilida ish tutishga o'tishdan iborat. Tabiat resurslarini qayta tiklash, kamayib borayotganlaridan ehtiyotkorlik bilan foydalanish, bu borada muqobil variantlar, yani o'rnini bosadigan boshqa resurslardan foydanishga o'tish kabi tamoyillarni barcha joylarda, hamma ishlab chiqarish korxonalarida qo'llashga o'tish tabiatni asrash, uni e'zozlash o'z navbatida ekologik xavfsizlikni ta'minlashni kafolatlaydi.

So'nggi yillarga Jizzax viloyatini janub tomonidan o'rab turgan tog'lardagi o'rmonlarning siyraklashib, ayrim noyob o'simlik va hayvonot dunyosi vakillari yo'qolib borayotganligi sel, surilma hodisalarining tez-tez ro'y berishi oqibatida favqulodda holatlarning ko'payishiga va ekologik muammolarni vujudga keltirmoqda.

Tabiiy boylik hisoblangan suv, havo, tuproq, o'simlik, hayvonot olami, foydali qazilmalar insonning yashashi va ishlab chiqarish faoliyati uchun asosiy manba bo'lib xizmat qiladi. Jizzax viloyati respublika miqyosida tabiiy resurslarga nisbatan boy bo'lgan mintaqalardan hisoblanadi. Mavjud tabiiy resurslardan oqilona foydalanish suv va havoni toza saqlash, tuproq eroziyasining oldini olish, o'simlik va hayvonot olamini tabiiy holicha saqlab qolib, keyingi avlodlarga yetkazish viloyat aholisining eng muhim vazifalaridan biri hisoblanadi.

Viloyatdagi eng muhim va tanqis bo'lgan tabiiy resurslardan biri ichimlik suvi hisoblanadi. Suv - juda qimmatbaho xususiyatlarga ega mineral boylik bo'lib, hozirgi vaqtda suv qimmatbaho sanoat xomashyosiga aylanib qoldi. Viloyat hududi kontinental iqlimi cho'l, chala cho'l, tog' oldi dasht, qisman tog'larda joylashganligi sababli suv juda qadimdan jiddiy muammo bo'lib kelgan. Mutaxassislar tomonidan viloyat hududida, asosan neogen va to'rtlamchi davr yotqiziqlarida joylashgan yer osti ichimlik suvi havzalari aniqlangan va u viloyat aholisini toza ichimlik suvi bilan ta'minlash imkonini bermoqda. Yer osti ichimlik suvi havzalari asosan tog'li hududlarda joylashganligi bois, viloyatning cho'l zonasidagi aholini ichimlik suvi bilan ta'minlash ancha qiyin va dolzarb masala

hisoblanadi. Shu sababdan, mavjud ichimlik suvlardan tejab-tergab, oqilona va samarali foydalanish uchun, sanoat korxonalarida foydalanilayotgan suvlarni zamonaviy texnologiyalar yordamida tozalash, suvdan foydalanishning aylanma suv ta'minotiga o'tishi, qishloq xo'jaligida suv sarfini me'yor darajasiga keltirish uchun sug'orish tarmoqlarini doimiy nazorat qilib, qishloq xo'jalik ekinlarini sug'orishda yangi texnologiyalardan foydalanish, kollektor va drenaj suvlari tarkibida suvni ifloslaydigan har xil erigan tuzlar, paxta va boshqa ekinlarga sepilgan turli xil zaharli moddalar eritmasi mavjud, mana shu zovur-drenaj suvlarini alohida joyga to'plab, ularni toza suv bilan aralashib ketishiga chek qo'yish, shahar va qishloq aholi punktlarini toza ichimlik suvi bilan bir maromda ta'minlash uchun, ichimlik suvidan sug'orish uchun foydalanish, avtotransport vositalarini yuvish, suv qurilmalarining nosozligi tufayli ichimlik suvini isrof qilish kabi ishlarni qat'iy taqiqlashchora tadbirlarni amalga oshirish zarur.

Aydar-Arnasoy ko'llar tizimi, falokatli suv ko'p bo'lgan 1969-yilda Chordara suv omboridan 21 km² suvni tashlash natijasida shakllangan, vaqt o'tishi bilan Arnasoy, Aydarko'l va Tuzkonning umumiy suv hajmi 22 km² va maydoni 2500 km² bo'lgan Aydar-Arnasoy ko'llar tizimini tashkil qildi.

Aydar-Arnasoy ko'llar tizimi ko'plab qush va hayvonlar uyalaydigan joyga aylandi, ovchilik va baliqchilik rivojlandi. 1993-yildan boshlab Qirg'iziston Respublikasi To'xtagul suv ombori sug'orish tartibidan energiya tartibiga o'tdi. Natijada Aydar-Arnasoy ko'llar tizimiga 1994-yil 9km³ dan ortiq Sirdaryo suvi tashlandi. Oqibatda 120 ming gektardagi yaylovlarni, quduq, dam olish mintaqalari hamda baliq ovlanadigan joylarni suv bosdi. 2005-yilda Aydar-Arnasoy ko'llar tizimi eng yuqori hajmga 44,19 km³ ga yetdi. 1993-2006-yillar oralig'ida Arnasoy pastligiga 38,635 km³ chuchuk Sirdaryo suvi tashlandi. 2007-yilda Arnasoyga umumiy suv tashlanishi qariyb 200 mln m³ ni tashkil etdi. Hozirda suvning minerallashuvi har litrda 8g atrofida. Agar ko'llar tizimiga suv tashlanishi to'xtatilsa, suv sathi 0,4-0,6 m ga pasayadi. Yiliga suv havzasi sathidan 1250 mm suv bug'lanishi suvning minerallashuvini keyinchalik yiliga o'rtacha taxminan har litrda 300 mm ga yetishiga sabab bo'lishi mumkin. Ko'lga yiliga qo'shilayotgan kollertor-zovur suvlari miqdori 1,8-2,4 km³. Agar havzaga 4 km³ dan ortiq suv tashlansa, suv sathi kamida 0,5 (mutlaq balandlik 250 m gacha) ko'tarilishiga va 200 km² maydonni suv bosishiga olib kelishi mumkin. Bu omillar Aydar-Arnasoy ko'llar tizimida ekologik tang vaziyatni vujudga keltiradi, natijada mintaqaning katta hududlari ekotizimlariga jiddiy salbiy ta'sir ko'rsatadi. Hayvonlar, ayniqsa qushlar migratsiyasi izdan chiqadi.

Xulosa qismi: Viloyat hududidagi barcha tabiiy resurslarni himoya qilish, ulardan unumli va oqilona foydalanish uchun hozirgi davrda quyidagi vazifalarni bajarish lozim:

- Viloyat hududida mavjud bo'lgan barcha korxonalar va tashkilotlar ishlab chiqarish texnologiyalarini hozirgi ekologik talab darajasida takomillashtirishi zarur;

- Sanoat, maishiy va uy-ro'zg'or chiqindilarini o'z vaqtida olib chiqish, qayta ishlash va ularni sanitariya va gigiyena talablari asosida bartaraf etish lozim;
- Kelajakda qurilayotgan har qanday ishlab chiqarish korxonalarini hamda aholi turar joylarini ekologik nuqtai nazardan to'g'ri joylashtirish zarur;
- Aholining ekologik madaniyatini oshirish maqsadida, mavjud ekologik ta'lim va tarbiya tizimidan to'g'ri va oqilona foydalanish lozim;
- Qadimiy an'ana va urf-odatlardan kelib chiqqan holda, kelajak avlodni atrof-muhitni asrab-avaylaydigan, tabiatni e'zozlaydigan qilib tarbiyalash.

Umuman olganda, viloyat hududidagi tabiiy resurslardan oqilona foydalanish va tabiiy landshaftlarni muhofaza qilish, tabiiy muvozanatini saqlash, har qanday salbiy o'zgarishlarga yo'l qo'ymaslik, tabiatning xushmanzara va diqqatga sazovor joylarini asrab-avaylash, tabiiy resurslarni saqlash va ko'paytirish maqsadida viloyat hududida qo'riqxonalar, buyurtmalar va milliy tabiiy bog'lar tashkil etilsa maqsadga muvofiq bo'lar edi.

THE NEED FOR CORPORATE TRANSPARENCY AND INFORMATION DISCLOSURE

Annotation. In this article, the importance of the principle of transparency and information disclosure in corporate governance, its role in the system, and the reasons for the globalization of these principles are analyzed. At the same time, in the process of analysis, it is written about ensuring the openness of information in corporate governance and the factors required in this process. Including the recommendations on establishing transparency and information openness in corporate governance system, as well as its positive effects.

Key words: Corporate governance, transparency, information disclosure, corporate system, data openness, implementation, effect.

Introduction: Information disclosure and transparency in corporate governance are fundamental principles that play a vital role in ensuring accountability, integrity, and trust within organizations. These concepts emphasize the importance of companies being open and forthcoming about their financial performance, operations, decision-making processes, and overall governance practices.

Information disclosure involves companies providing accurate and timely information to stakeholders, such as shareholders, regulators, employees, customers, and the public. This information typically includes financial statements, executive compensation details, board composition, major business transactions, and other relevant data that can impact stakeholders' decisions and perceptions.

Transparency, on the other hand, refers to the accessibility and clarity of the disclosed information. Transparent corporate governance practices ensure that stakeholders can easily access, understand, and evaluate the information provided by companies. This helps to build trust, enhance communication, and foster accountability between companies and their stakeholders.

Analysis of literature on the topic: «The Transparency Edge» by Barbara Pagano and Elizabeth Pagano is a comprehensive guide that underscores the critical role of transparency and credibility in business success. The authors stress

the impact of honesty and openness on building trust with stakeholders, including customers and employees. Through practical insights and strategies, the book demonstrates how transparency can set you apart from competitors and enhance your reputation. By emphasizing the benefits of transparent practices, the authors show how businesses can leverage credibility to strengthen relationships and achieve long-term success in today's competitive marketplace. The book offers valuable advice on incorporating transparency into business operations for sustainable growth. [1] «The Transparency Fix: Secrets, Leaks, and Uncontrollable Government Information» by Mark Fenster delves into the complex world of government transparency, secrets, and leaks. The book explores how governments grapple with the challenges of controlling information flow in an era of rapid technological advancements and increasing demands for accountability. Fenster examines the tension between the government's need for secrecy to protect national security and the public's right to access information to ensure transparency and accountability. Through a mix of legal analysis, historical examples, and case studies, the author sheds light on the evolving landscape of government transparency and its implications for democracy. Ultimately, «The Transparency Fix» offers a thought-provoking exploration of the delicate balance between secrecy and openness in governance. [2] «Information Disclosure Practices and Corporate Transparency in Uzbek Companies» by Nargiza Usmanova provides a comprehensive analysis of the information disclosure practices and levels of corporate transparency in Uzbekistan. The book examines how companies in Uzbekistan navigate the balance between disclosing information to stakeholders and maintaining confidentiality. Usmanova explores the regulatory framework, cultural influences, and economic factors that shape information disclosure practices in the country. Through empirical research and case studies, the author sheds light on the challenges and opportunities for enhancing corporate transparency in Uzbek companies. This book serves as a valuable resource for academics, policymakers, and business practitioners interested in corporate governance and transparency in Uzbekistan. «Information Disclosure Practices and Corporate Transparency in Uzbek Companies» by Nargiza Usmanova provides a comprehensive analysis of the information disclosure practices and levels of corporate transparency in Uzbekistan. Usmanova explores the regulatory framework, cultural influences, and economic factors that shape information disclosure practices in the country. Through empirical research and case studies, the author sheds light on the challenges and opportunities for enhancing corporate transparency in Uzbek companies. This book serves as a valuable resource for academics, policymakers, and business practitioners interested in corporate governance and transparency in Uzbekistan. [3]

Research methods: Logical and structural analysis, grouping, economic-statistical analysis, mutual and comparative comparison methods were effectively used in the implementation of the research objectives.

Analysis: Corporate transparency refers to the practice of companies being open, honest, and forthcoming in their communication with stakeholders, including investors, employees, customers, and the public. It involves providing accurate and timely information about a company's operations, financial performance, governance practices, and other relevant aspects. Information disclosure is a key component of corporate transparency, as it involves sharing data, reports, and other details that help stakeholders understand how the company operates and makes decisions. For thus, corporate transparency and information disclosure is becoming more global day by day. One major reason is advancements in technology, particularly in communication and transportation, which have made it easier for people, goods, and information to move across borders. Additionally, trade liberalization policies have reduced barriers to international trade, making it more cost-effective for companies to do business in multiple countries. The growth of multinational corporations has also played a significant role in driving globalization, as these companies operate in multiple countries and have supply chains that span the globe. After these causes, information disclosure is also crucial in the management system for several reasons. Firstly, it helps build trust with stakeholders by demonstrating transparency and accountability. When companies are open and honest about their operations and performance, stakeholders are more likely to trust them. Additionally, information disclosure enables informed decision-making by providing stakeholders with the data they need to assess risks and opportunities. It also enhances accountability by allowing stakeholders to hold companies responsible for their actions.

Due to the reasons mentioned above, there is a demand to implement transparency and information openness in the corporate management system. Implementing effective information disclosure practices requires companies to establish clear policies and procedures for reporting information. This includes defining what information needs to be disclosed, how it will be collected and verified, and how it will be communicated to stakeholders. Companies also need to ensure compliance with relevant laws and regulations governing information disclosure. Fostering a culture of transparency within the organization is also important, as employees need to understand the importance of sharing information openly. Finally, companies can use technology to facilitate the dissemination of information, such as by creating online portals or dashboards where stakeholders can access relevant data.

The significance of corporate transparency and information disclosure in shaping effective corporate governance cannot be understated. The positive effects of transparency on businesses and the corporate governance system are manifold and far-reaching. Firstly, transparency plays a pivotal role in boosting

investor confidence by providing stakeholders with the necessary information to make well-informed investment decisions. When companies are forthcoming about their operations and financial performance, investors are more inclined to trust them, leading to a stronger investor-company relationship.

Moreover, transparency serves as a powerful deterrent against fraud and misconduct within organizations. By making it difficult for companies to conceal unethical practices, transparency acts as a safeguard against malfeasance, thereby promoting integrity and ethical conduct. Additionally, transparency enhances a company's reputation and brand value by showcasing its commitment to honesty, accountability, and ethical behavior. A transparent organization is perceived as trustworthy and reliable, which can significantly bolster its standing in the eyes of stakeholders.

Furthermore, fostering a culture of accountability and ethical behavior is another crucial benefit of transparency within organizations. When employees know that their actions are being monitored and that transparency is valued, they are more likely to adhere to ethical guidelines and uphold high standards of conduct. This, in turn, creates a positive work environment built on trust, integrity, and responsibility.

To introduce information openness to corporate governance effectively, several proposals can be considered. Implementing regular reporting requirements, establishing independent oversight mechanisms, engaging with stakeholders, and learning from best practices in other industries are key strategies to enhance transparency and information disclosure within organizations. By adopting these proposals, companies can strengthen their transparency efforts, improve stakeholder relationships, and elevate their corporate governance practices.

In essence, corporate transparency and information disclosure are indispensable pillars of robust corporate governance. By embracing transparency, companies can cultivate trust, enhance accountability, and foster a culture of integrity and ethical behavior. Implementing effective information disclosure practices requires a comprehensive approach encompassing clear policies, regulatory compliance, a transparent organizational culture, and leveraging technology for communication. Ultimately, transparency not only benefits businesses by bolstering investor confidence, mitigating fraud risks, enhancing reputation, and promoting ethical conduct but also contributes to a more sustainable and responsible corporate governance framework. Embracing transparency is not just a business imperative but a moral obligation that paves the way for long-term success and stakeholder trust in today's dynamic business landscape.

ONA TILI VA O‘QISH DARSLARIDA PIRLS HIKOYALARIDAN FOYDALANISH ORQALI XALQARO BAHOLASH DASTURIGA TAYYORGARLIK KO‘RISHNING METODIK SHARTLARI

Annotatsiya: ushbu maqolani o‘qish davomida ona tili va o‘qish darslarida PIRLS xalqaro baholash dasturiga tayyorlanish va hikoyalarni qo‘llash orqali tarbiyaviy jarayonlarni tashkil etish metodikasi haqida bilib olasiz.

Kalit so‘zlar: PIRLS topshiriqlari, savollar, boshlang‘ich sinf o‘quvchilari, natija, tafakkur, mantiqiy fikrlash.

METHODOLOGICAL CONDITIONS FOR PREPARING FOR THE INTERNATIONAL ASSESSMENT PROGRAM BY USING PEARLS' STORIES IN MOTHER LANGUAGE AND READING LESSONS

Abstract. While reading this article, you will learn about the methodology of preparing for the PIRLS international assessment program and organizing educational processes using stories in the mother tongue and reading classes.

Keywords: PIRLS tasks, questions, elementary students, result, thinking, logical thinking.

Xalqaro miqyosda tashkil etilgan ushbu loyiha, bir xil yoshdagi, bir xil tal'im-tarbiya olaytgan yoshlarni o'qib tushunish jarayonlarini tekshirish, mamlakatlar orasida eng namunali ta'lim tizimini aniqlash, namunali deb topilgan mamlakatlarni yanada qo'llab-quvvatlash, past natija ko'rsatgan mamlakatlarga ilmiy yordam berish nazarga olingan.

Rivojlangan mamlakatlar yoshlar ta'limining jamiyat taraqqiyoti va inson rivojlanishidagi o'rnini muhim deb hisoblaydi. Shu bois ham ular ta'lim sifatiga alohida e'tibor qaratadi. Rivojlanib borayotgan ta'lim tizimimizda amalga oshirilayotgan islohotlar natijasida ulkan iqtisodiy o'sish ko'rsatkichlariga erishilayotganligi barcha sohalarda malakali kadrlar va yetuk mutaxasislarga bo'lgan talabni yanada oshirmoqda. Bu o'z-o'zidan o'quvchilarimizning darslarga qiziqish xususiyatini oshirish va o'qituvchilarning har tomonlama ta'lim-tarbiyaga e'tiborini kuchaytirishni talab etadi. Ayni davrda yurtimizda ham ta'lim sohasidagi sifat tushunchasi ancha ommalashib ulgurdi. Kelajak yosh avlodning intellektual salohiyatini oshirish, keng dunyoqarashini shakllantirish

nafaqat muayyan bir mamlakat uchun, balki, xalqaro hamjamiyat uchun ham muhim hisoblanadi.

Bilamizki, ta'lim tizimimiz rivojlanishi, takomillashishi natijasida yurtimizga turli xil metodlar, manbalar, texnika va shu qatorda xalqaro baholash dasturlari ham kirib keldi. Natijada ta'lim tizimimizda yoshlar uchun keng imkoniyatlar yaratildi.

Boshlang'ich ta'lim yo'nalishi uchun PIRLS xalqaro baholash dasturi ahamiytlidir. Negaki, 4-sinf o'quvchilarimiz dunyo miqyosida har besh yilda imtihondan o'tishadi. Ular ko'rsatgan natijalar esa O'zbekistonning reytingini belgilaydi. Ushbu mas'uliyatli vazifaga tayyorgarlik jarayonida o'qituvchi sinf rahbarlaridan katta mashaqqat talab etiladi. Ular sinf o'quvchilarini tadqiqotga tayyorlashni rejalashtirishdan oldin avvalo o'zlari talab doirasidagi talablarga javob berishi, o'z ustilarida tinimsiz ilmiy izlanishlar olib borishi zarur.

PIRLSning maqsad vazifasi shundan iboratki, u o'quvchilarning ma'naviy, mantiqiy dunyoqarashini, shaxsiy fikrga, tahlilga ega bo'lishga chorlaydi. Negaki, zamon talabiga javob beradigan o'quvchi, talaba yoinki mutaxassis o'z MENiga ega bo'lishi zarur. Dunyoda boshqacha ko'z bilan qaray oladigan, o'z orzu-maqsadlarini keraksiz va samarasiz narsalardan ustun qo'ya oladigan, irodali shaxs bo'lishi zarur.

PIRLS xalqaro tadqiqoti boshlang'ich sinf o'quvchilarining o'qib tushunish ko'nikmalarini qay darajada rivojlanganligi haqidagi ma'lumotlarni xalqaro miqyosda taqqoslash imkonini beradigan, o'qish va o'qitishni yaxshilashda ta'lim sohasidagi davlat siyosatiga xizmat qilishi mumkin bo'lgan tahlillarni taqdim etadi. Ko'p imkoniyatlarni rivojlantirishga xizmat qilayotgan bu baholash dasturi O'zbekiston ta'lim tizimida ham ahamiyatli deb topilgan va amalda qo'llash joriy etildi. Shunga binoan, hozirgi vaqtda PIRLS ta'rifiga ko'ra, o'qish savodxonligi jamiyat tomonidan talab qilinadigan va inson tomonidan qadrlanadigan yozma til shakllarini tushunish va ulardan foydalanish, shuningdek, matnlardan turli shakllarda ma'no hosil qila olish qobiliyati hamdir. O'quvchi bu jarayonning faol qatnashuvchisi bo'lib, ma'no yaratadi, matn ustida mushohada yuritadi va samarali o'qish strategiyalarini ongli ravishda tanlab qo'llaydi. Har bir matn turi odatiy shakl va qoidalarga amal qilgan holda o'quvchiga matnni sharhlashga yordam beradi.

PIRLS talablari asosida mustaqil ishlar tashkil etilmoqda, uslubiy-metodik qo'llanmalar, hikoyalar to'plamlari chop ettirilmoqda. Bu jarayon albatta, o'zini oqlashiga ishonaman. Negaki, o'zimiz yaratgan hikoyalar bilan 1-2 sinf o'quvchilarida immunitet hosil qilib, 3-4 sinfda chet el adabiyotlaridan foydalansak samarali bo'ladi. Maqsad-vzaifasini, topshiriqni bajarish tartibi, baholash mezonini anglab tushunib olishgandan so'ng, tadqiqotda tushunish va tahlil qilish jarayonida albatta yuqori natijani egallashadi deb hisoblayman.

2021 – yilda o'quvchilarimiz ushbu xalqaro baholash dasturida ishtirok etishdi. 57 ta davlar orasida tashkillashtirilgan ushbu ilmiy jarayonda Vatanimiz 49 o'rinni egalladi. O'qib tushunish va tahlil qilish jarayonida xatoliklarga yo'l

qo'yilgan. Ushbu jarayon yana takrorlanmasligi uchun mukammal tayyorgarlik jarayoni olib borilmoqda.

Boshlang'ich sinf o'quvchilarining imkoniyatlari muallif tomonidan ishlab chiqilgan uslubiy qo'llanma vositasida tahlil qilindi. Erishilgan natijalardan ma'lum bo'ldiki, PIRLS xalqaro baholash dasturida berilgan topshiriqlarda asosiy obyekt o'quvchi hisoblanadi, ushbu toshiriqlarini bajarish orqali o'quvchilarning kreativ fiklashi, tanqidiy tahlili, hamkorlik qobiliyati va ijtimoiy munosabatlari shakllantiriladi.

PIRLS hikoyalari zamonaviy ta'lim uchun ahamiyatlidir. Hikoyalarning mazmun-mohiyatini xulosalash orqali boshlang'ich sinf o'quvchilari bilan birgalikda tarbiyaviy jarayonni ham tashkillashtirish mumkin. Bu jarayonni amalga oshirish uchun o'qituvchilardan ijodiy fikrlash talab etiladi. PIRLS xalqaro dasturi talablaridan kelib chiqib tayyorlangan topshiriqlardan foydalanilganda, o'quvchilarning qiziqishi, kreativligi, sezilarli darajada faollashdi.

Hozirgi vaqtda bo'lajak mutaxassislariga ya'ni boshlang'ich ta'lim yo'nalishi talabalariga PIRLS asosida mustaqil ta'lim soatlarini ajratish, ular bilan PIRLS ustida amaliy ishlar bajarib, uslubiy qo'llanmalar yaratish nazarda tutilmoqda. Va tez orada ushbu jarayon amaliyotga tadbiiq etiladi degan umiddamiz.

PIRLS talablari asosida hikoyalar to'plami ustida ishladik. 1 yil davomida uni yetarli darajada takomillashtirdik. Hozirgi unda chop etilgan «Kichik yong'oq daraxti» to'plamimiz maktablarga amaliyotda qo'llash uchun topshirilgan. Maktablarga kitobimning taqdimoti o'tkazilishi uchun yuborildim, va natijadan shu ma'lum bo'ladiki, Surxondaryo viloyati chekka hudud tumanlarida PIRLS haqidagi tushunchalar rivojlanmagan va amalda topshiriqqa tayyorgarlik jarayoni ham tashkil etilmagan. Bu holat alabttta, achinarli. Shuning uchun ham PIRLS tadqiqotlarini yanada takomillashtirish va chekka, oz komplimentli maktablarda samarali tashkil etish uchun uslubiy qo'llanmalar ustida ishlamoqdamiz. Shuni ham aytib o'tishim joizki, mustaqil ta'limni qo'llab-quvvatlash va amaliyotga tadbiiq etish zarur.

O'quvchilarni mantiqiy tafakkurini shakllantirish uchun balki ma'lum muddat kechikkandurmiz, ammo yangi darslik 4K modeli, PIRLS asosida yaratilayotgan topshiriqlar to'plamlaridan foydalanib, samarali ilmiy faoliyatni tashkil etishimiz mumkin.

Tadqiqot doirasida asosiy e'tibor tushunishni namoyon qilishdan o'zlashtirilgan ma'lumotlarni qanday qilib yangi loyihalar va vaziyatlarda qo'llay olish qobiliyatlarini namoyon qilishga qaratilmoqda. O'quvchi bu jarayonning faol qatnashuvchisi bo'lib, ma'no yaratadi, matn ustida mushohada yuritadi va samarali o'qish strategiyalarini ongli ravishda tanlab qo'llaydi.

Rivojlangan mamlakatlar yoshlar ta'limining jamiyat taraqqiyoti va inson rivojlanishidagi o'rnini muhim deb hisoblaydi. Shu bois ham ular ta'lim sifatiga alohida e'tibor qaratadi. Rivojlanib borayotgan ta'lim tizimimizda amalga

oshirilayotgan islohotlar natijasida ulkan iqtisodiy o'sish ko'rsatkichlariga erishilayotganligi barcha sohalarda malakali kadrlar va yetuk mutaxassislariga bo'lgan talabni yanada oshirmoqda. Bu o'z-o'zidan o'quvchilarimizning darslarga qiziqish xususiyatini oshirish va o'qituvchilarning har tomonlama ta'lim- tarbiyaga e'tiborini kuchaytirishni talab etadi. Ayni davrda yurtimizda ham ta'lim sohasidagi sifat tushunchasi ancha ommalashib ulgurdi. Kelajak yosh avlodning intellektual salohiyatini oshirish, keng dunyoqarashini shakllantirish nafaqat muayyan bir mamlakat uchun, balki, xalqaro hamjamiyat uchun ham muhim hisoblanadi.

Bugun dunyoda yuz berayotgan to'rtinchi sanoat tamaddunining dvigateli — harakatga keltiruvchi kuchi kreativlikdir. Atrofga boqsangiz, har tomonda inson ijodkorligining beqiyos va hayratlanarli namunalariga duch kelasiz: elektron xizmatlar, virtual reallik, to'rtburchak tarvuzlar, tuproqsiz hosil olish... Bularning barchasi inson tasavvuri, tafakkuri mahsuli. Bugun biz uchun odatiy tuyulgan kitob, musiqa, bino, samolyot, hatto lampalar ham qachonlar orzu va tasavvurda bo'lgan, keyinchalik aql-idrok samarasi o'laroq yaratilgan.

PIRLS xalqaro baholash dasturini ommalashib borayotgan so'zi bilan qo'llash bugungi kunda noo'rin bo'ladi desam, mubolag'a bo'lmaydi. Negaki, tadqiqot doirasida keng ko'lamlı ishlar olib borilmoqda. O'qituvchilar va o'quvchilar dasturga moslashish jarayonida, o'zlari ham tadqiqot ustida amaliy ishlar olib borilmoqda. Yangi darsliklar zamon talabiga binoan, xalqaro baholash dasturining talablariga xos tarzda yaratilmoqda. Ularning metodikasi 4K modeliga asoslangan bo'lib, an'anaviy ta'lim o'qitish tizimidan tubdan farq qiladi.

An'anaviy ta'lim tizimida ilmiy ustunlik o'qituvchi tomonida bo'lgan. Bugungi kunda 4K modeli o'zida mujassamlashtirgan g'oya, maqsad va vazifalariga ham ustoz yetakchilik qilgan. Bugungi zamonaviylashgan va integratsiyalashgan ta'lim tizimida asosiy obyekt o'quvchilarga qaratilmoqda

Boshlang'ich sinf o'quvchilarining imkoniyatlari muallif tomonidan ishlab chiqilgan uslubiy qo'llanma vositasida tahlil qilindi. Erishilgan natijalardan ma'lum bo'ldiki, PIRLS xalqaro baholash dasturida berilgan topshiriqlarda asosiy obyekt o'quvchi hisoblanadi, ushbu toshiriqlarini bajarish orqali o'quvchilarning kreativ fiklashi, tanqidiy tahlili, hamkorlik qobiliyati va ijtimoiy munosabatlari shakllantiriladi.

Mehnat bozorida kreativ fikrlovchi mutaxassislariga talab oshib borayotgan ekan, ta'lim jarayonida o'quvchi-talabalarning noodatiy fikrlash qobiliyatini shakllantirish, rivojlantirish dolzarb vazifadir. Haligacha ta'lim tizimida ko'plab yondashuv va metodlar ijodiy fikrlash emas, talqin va tahlilga, ya'ni berilgan ma'lumotni tushunib, to'g'ri yetkazishga, nari borsa, bir necha axborotni umumiy lashtirib, xulosa chiqara olishga yo'naltirilgan.

Xo'sh, ta'lim oluvchilarni qanday qilib kreativ fikrlashga o'rgatish mumkin? Innovatsiya yaratish uchun tafakkurda qanday o'zgarishlar kechishi lozim?

Shaxsda kreativlik sifatlarini rivojlantirish uchun dastlab bu tushunchaning mazmunini bilish lozim. Kreativlik inglizcha «create»dan olingan bo‘lib, yaratish ma’nosini bildiradi. Kreativlik deganda insonning yangilik yaratish, muammolarni yechishga qaratilgan ijodiy qobiliyati tushuniladi. Uning tagzamidagi originallik, amaliylik, noodatiylik va erkinlik yotadi. Shuningdek, kreativ fikrlash muayyan masala yuzasidan har tomonlama fikrlash, bir nuqtaga turli rakursdan yondashishni anglatadi.

Kreativlik shaxsni rivojlantiruvchi kategoriya sifatida inson tafakkuri, ma’naviyatining ajralmas qismi hisoblanadi, u shaxs ega bo‘lgan bilimlarning ko‘pqirrali ekanligida emas, balki yangi g‘oyalarga intilish, o‘rnatilgan stereotiplarni isloh qilish va o‘zgartirishda, hayotiy muammolarni yechish jarayonida kutilmagan va noodatiy qarorlar chiqarishda namoyon bo‘ladi. Ya’ni, berilgan bilimlarni takrorlash orqali kreativlikka erishib bo‘lmaydi, ijodiy fikrlash jarayonida yangi fikr, yangi g‘oyaning paydo bo‘lishi asosiy shartdir. Masalan, ingliz tilida so‘zlarni yodlab, grammatika qoidalarini «suv qilib ichib yuborgan» bo‘lsangiz ham, insho yozolmasangiz, barchasi bekor. Shuning uchun kreativ fikrlash jarayonida tasavvur muhim rol o‘ynaydi. Albert Eynshteyn «Tasavvur — bilimdan muhim» deganida aynan mana shu jihatni nazarda tutgan. Ko‘pincha noodatiy fikrlar, yechimlar kutilmaganda inson xayoliga keladi. Buning uchun, avvalo, fikrlash jarayonidagi bir xillikka, odatiylikka barham berilishi lozim.

Tadqiqot metodologiyasi: ushbu tadqiqot boshlang‘ich sinflarni tugatgan o‘quvchilarning bilimlarini tekshiradi, chunki boshlang‘ich sinflarning oxirgi yili o‘quvchilar rivojlanishidagi muhim bosqich hisoblanadi – bu vaqtda o‘quvchilar o‘qishni shunday o‘zlashtirishlari kerakki, u ularning keyingi ta’lim olishlari uchun vosita bo‘lishi lozim.

Kreativ fikrlovchi insonlar odatiy manzaralardan o‘zgacharoq tasvirlarni ham tasavvur qilib, hech kim ilg‘amagan jihatlarni payqaydi, yangilik yaratoladi.

Eng ajablanarli jihati, ta’lim-tarbiya jarayoni ham bolalarni bir xil fikrlashga o‘rgatib qo‘yarkan. Mashhur ixtirochi va kashfiyotchilarning aynan maktabdagi ta’lim jarayonidagi bir xillikka ko‘nikolmagani, qoliplarga sig‘maganini ko‘rish mumkin. Masalan, Albert Eynshteynning maktabdan haydalanishi yoki Dmitriy Mendeleyevning kimyo fanidan «uch» olgani bunga misol bo‘ladi.

Ken Robinson tomonidan tayyorlangan va YouTube saytida 5 million marta tomosha qilingan «Maktab kreativlikni barbod etyaptimi?» nomli videolavhada ham shu xususida so‘z boradi. Harf o‘rganish jarayonidayoq bolalarning belgilangan chiziqlar bo‘ylab yozishi, topshiriqlarni bajarishda namunalar orqali ishlashi, adabiyot darslarida asarni qanday tushunish kerakligi to‘g‘risida ma’lumotlar berilishi, pedagoglarning yaxshi bajaruvchilarni yaxshi baholashi natijasida bolalar qoliplar doirasida fikrlay boshlaydi.

Oqibatda ko‘plab yoshlar topshiriq berilsa, namuna bormi, deb so‘raydigan holga kelgan. Bu oldin mavjud bo‘lgan modellar asosida ishlashga o‘rganib qolish

natijasi. Bunday vaziyatni bartaraf etish uchun o'quv jarayonida ijodkorlik sifatlarini tarbiyalashga ahamiyat qaratilishi maqsadga muvofiq. Masalan, o'quvchilarga «Sizga bir kunda 86400 AQSh dollari berilsa, uni nimalarga sarflagan bo'lardingiz?» kabi noodatiy savollar berilishi mumkin. Bu savol o'quvchining topqirlik, bilag'onlik, ijodkorlik, masalaga turli nuqtayi nazardan qaray olish, yashirin jihatlarni ochish kabi xislatlarini rivojlantiradi. Sababi, 86 400 bir kundagi soniyalar miqdorini anglatadi. Savol orqali o'quvchiga har bir soniya qimmati anglatiladi, uni behuda sarflamaslik uqtiriladi. Agar o'quvchi savol tagidagi mohiyatni anglamasa, unda kreativ va evrestik sifatlar past hisoblanadi.

Ko'pgina yosh o'quvchilarning dastlabki mutolaasi aksariyat hollarda hikoya (masalan, hikoya to'plamlari yoki rasmlı kitoblar) yoki o'quvchilarga atrofıdagi dunyo haqida ma'lumot beradigan va savollarga javob beradigan ma'lumotli matnlardan iborat bo'ladi. Yosh o'quvchi uchun o'qish savodxonligining har ikki maqsadi ham muhim hisoblanadi. Shuning uchun PIRLS har bir o'qish turini baholashda matnlarni teng bo'lishni asosiy maqsad qilib olgan.

O'quvchilarning erishgan yutuqlarini baholash barcha o'quvchilardan emas, balki ushbu qatlam vakillari sifatida tanlab olingan o'quvchilardan ob'ektiv testlarni o'tkazish orqali amalga oshiriladi. Shuningdek, maktab direktorlari, o'qıtuvchilar, o'quvchilar, hattoki ota-onalardan so'rovnoma o'tkazilib, ta'lim sifatiga ta'sir etuvchi omıllarga doir qimmatli ma'lumotlar to'planadi.

Tadqiqot doirasida asosiy e'tibor tushunishni namoyon qilishdan o'zlashtirilgan ma'lumotlarni qanday qilib yangi loyihalar va vaziyatlarda qo'llay olish qobiliyatlarini namoyon qilishga qaratilmoqda. O'quvchi bu jarayonning faol qatnashuvchisi bo'lib, ma'no yaratadi, matn ustida mushohada yuritadi va samarali o'qish strategiyalarini ongli ravishda tanlab qo'llaydi. Har bir matn turi odatiy shakl va qoidalarga amal qilgan holda o'quvchiga matnni sharhlashga yordam beradi. Har qanday matn turli shaklga ega bo'lishi mumkin. Bular an'anaviy kitoblar, jurnallar, hujjatlar va gazetalar, shuningdek, raqamli ko'rinishdagi yozma shakllarni ham o'z ichiga oladi.

Barcha mamlakatlarda maktablarni tanlash mamlakatdagi barcha maktablar ro'yxatidan ehtimollik usuli bilan, ushbu maktabda so'ralgan parallel o'quvchilar sonini hisobga olgan holda, amalga oshiriladi. Tadqiqot jarayonlarini standartlashtirishga katta e'tibor beriladi. PIRLS tadqiqoti xalqaro muvofiqlashtiruvchi markaz tomonidan ishlab chiqilgan yagona ko'rsatmalar va qoidalarga muvofiq ravishda qat'iy olib boriladi. Tadqiqotning har bir bosqichi (namuna olish, tarjima qilish va moslashtirish, test va so'rovnoma, ma'lumotlarni tekshirish va qayta ishlash) xalqaro ekspertlar tomonidan nazorat qilinadi.

O'zbekistonda ham PIRLS topshiriqlaridan keng qo'llanish va unga nisbatan e'tibor berilmoqda. Dars jarayonida faol qo'llash, samarali ishlarni, jarayonlarni tashkil etish zamon talabi bo'ldi desak mubolag'a bo'lmaydi.

Shuning uchun ham boshlang'ich ta'lim o'qituvchilari PIRLS asosida topshiriqlar rejalashtirishi lozim.

FORMATION OF MATHEMATICAL COMPETENCE IN THE TRAINING OF FUTURE CONSTRUCTION ENGINEERS

Abstract. The article shows the importance of improving mathematical knowledge in the training of engineers. Problems, technologies, and pedagogical methods are presented.

Keywords: training future construction engineers, mathematical competence, practice-oriented education, latest technologies, mathematical programs, multi-set, problems, solving, pedagogical methods, integration, curriculum, technological tools, practical education, problems, independent thinking.

Bo'lajak quruvchi muhandislarni tayyorlashda matematik kompetentligini shaklantirish bugungi kunda katta ahamiyatga ega. Matematik kompetentligi, muhandislik sohasida muhimdir, chunki muhandislar kompleks muammolarni hal qilish va yaratuvchi yechimlar topishda matematik bilimlaridan kuchlanishi lozim. Bu maqolada, matematik kompetentligini rivojlantirish uchun muhim usullar va texnologiyalar ko'rsatiladi. Bu usullar o'quvchilarni matematik bilimlarini oshirish va ularning muammolarni hal qilish qobiliyatlarini rivojlanishiga yordam beradi. Maqola, matematik kompetentligini oshirishda

muhim bo'lgan usullar va texnologiyalarni ta'kidlaydi. Bu usullar o'quvchilarning matematik bilimlarini oshirishga yordam beradi va ularni muammolarni hal qilish va mustaqil fikrlash qobiliyatlarini rivojlantiriladi.

Respublikamiz mustaqillikka erishganidan so'ng barcha sohalarda bo'lgani kabi ta'limda ham ulkan islohotlarni amalga oshirdi. «Ta'lim to'g'risida» hamda «Kadrlar tayyorlash milliy dasturi to'g'risida»gi qonunlarning ijrosini ta'minlash borasida ta'limning barcha bosqichlari uchun Davlat ta'lim standartlari va o'quv dasturlari yaratildi. O'zbekiston Respublikasi Vazirlar Mahkamasining 2017-yil 6- apreldagi «Umumiy o'rta va o'rta maxsus, kasb-hunar ta'limining davlat ta'lim standartlarini tasdiqlash to'g'risida»gi 187-son qarorida aynan umumiy o'rta ta'lim maktablarining umumta'lim fanlarini o'qitishning uzluksizligi va izchilligini ta'minlash, zamonaviy metodologiyasini yaratish, umumiy o'rta va o'rta maxsus, kasb-hunar ta'limi davlat ta'lim standartlarini kompetensiyaviy yondashuv asosida takomillashtirish masalalarida belgilangan vazifalar biz pedagoglarga ta'lim tizimiga juda katta mas'uliyat bilan yondashish talabini qo'ydi. Shu nuqtai nazardan ta'lim sohasidagi «Kompetensiya» termini bilan bog'liq bo'lgan kompetentlik, kompetensiyaviy yondashuv, tushunchalarining tahliliga qisqacha to'xtalsak. «Kompetensiya» so'zi» O'zbekiston milliy ensiklopediyasi»da»lot»,»competo»– «erishayapman, munosibman, loyiqman»deb izohlangan.

I.V.Lyxina hamda F.N.Petrovalar qarashlarida «Kompetensiya» tushunchasi lotin tilidan olingan bo'lib, competensia – «tegishli bir sohani biluvchi», «to'liq huquqga ega», «muayyan bir shaxs yoki korxonaning to'liq huquqga egaligi», «shaxsning bilimlari va tajribalari atrofidagi masalalar», - degan ma'nolarni bildirsa, kompetentlik tushunchasi o'z bilimlari va huquqlariga tayangan holda muayyan bir masalalarni hal etish va echa olishga loyiqligi, fikr yurita olish malakasiga ega ekanligini bildiradi.

«Kompetentlik» tushunchasi ta'lim sohasiga psixologik izlanishlar natijasida kirib kelgan. Shu sababli kompetentlik —noan'anaviy vaziyatlar, kutilmagan hollarda mutaxassisning o'zini qanday tutishi, muloqotga kirishishi, raqiblar bilan o'zaro munosabatlarda yangi yo'l tutishi, noaniq vazifalarni bajarishda, ziddiyatlarga to'la ma'lumotlardan foydalanishda, izchil rivojlanib boruvchi va murakkab jarayonlarda harakatlanish rejasiga egalikni anglatadi. Tadqiqotchi V.S.Merlin nuqtai nazarida kompetentlik bu – yo'naltirilgan, uddalay oladigan motivasiyadir - deb ifodalansa, A.A.Leontev fikricha, kompetentlik munosabati ilg'or pedagogik jarayon hisoblaydi. Kompetensiyaviy yondashuvni amalga oshirishning mohiyati ta'limni modernizatsiyalashda (ta'lim va tarbiyaning o'zaro birgalikdagi harakati), uning sifat jihatidan o'zgarishi, tarbiyaning ustuvor yo'nalishi sifatida yangi insoniy qadriyatlar tizimini yaratishda yaqqol namoyon bo'ladi. Kompetensiyaviy yondashuvga asoslangan ta'lim har bir o'quvchining hozirgi zamon talablariga javob beradigan, kelajakda barkamol inson bo'lib yetishishiga imkon beradigan ta'limdir. Bunday ta'lim jarayonida o'quvchi tegishli o'quv fanidan yuqori baho

olish uchungina emas, balki o'zligini anglagan holda bilim, ko'nikma va malakalarga ega bo'lishga intiladi va faol fuqarolik pozitsiyasiga ega bo'lish, tashabbuskorlik, mediaresurslar va axborot-kommunikasiya texnologiyalaridan o'z faoliyatida oqilona foydalana olish, ongli ravishda kelgusidagi kasbiga mas'uliyat bilan yondashish, sog'lom raqobat hamda umummadaniy ko'nikmalarni shakllantirishga xizmat qiladi.

Начало формы

1. Amaliyotga yo'naltirilgan ta'lim: Matematikani o'rganishni o'lchovsiz amaliyotga yo'naltirilgan ta'limning ustuvor maqsadi bo'lishi kerak. O'quvchilarning matematik qarashlarini, masalalarni tahlil qilish va ularni hal qilish usullarini o'rganish orqali, ularning muammolarini hal qilishga mo'ljallangan muhit yaratilishi lozim.

2. So'nggi texnologiyalardan foydalanish: Interaktiv darsliklar, matematik darslarini o'siyotgan o'yinlar, masala yechish uchun dasturlar va boshqa texnologik vositalardan foydalanish o'quvchilarning matematik kompetentligini rivojlantirishda yordam berishi mumkin.

3. Matematik dasturlarini taqdim etish: O'quvchilar uchun relevnt matematik dasturlarini taqdim etish, masalan, algebra, geometriya, aniq aniq funksiyalar, integrallar va differensiallar, matematik modellar, statistika va olasiliklar, va boshqalar. Bu dasturlar o'quvchilarning matematik asoslarini mustahkamlash va ularga qiziqishini oshirishga yordam beradi.

4. Ko'p to'plamlilik bilan masalalarni yechish: O'quvchilarga ko'p to'plamlilik bilan matematik masalalarni yechishni o'rganish orqali ularning tahlil va qarash qobiliyatlari rivojlanishi mumkin. Bu masalalar o'quvchilarning muammolarga oid boshqa oqimlarni va algoritmik fikrni rivojlantirishi uchun yaxshi imkoniyat beradi.

5. Amaliyotga yo'naltirilgan loyihalar: Matematikani nazariy bilimdan amaliyotga yo'naltirilgan loyihalar orqali o'rgatish o'quvchilarning matematik kompetentligini oshirishda yordam berishi mumkin. Ular o'quvchilarning matematik bilimlarini real hayot bilan bog'lash, ma'lumotlarini amaliyotga o'tkazish, masalalarni hal qilish va natijalarni tahlil qilishga imkon beradi.

6. Boshqa fanlar bilan integratsiya: Matematika va boshqa fanlar, masalan, fizika, kimyo, kompyuter ilmi, va boshqalari bilan integratsiya, muhiti sozlash va ma'lumotlarining matematik modellarini o'rganish o'quvchilarning matematik kompetentligini oshirishga yordam berishi mumkin.

7. O'quv dasturlarining rivojlanishi: Matematika o'quv dasturlarini rivojlantirish va ularga pedagogik qulayliklar qo'shish o'quvchilarning matematik kompetentligini oshirishda katta ahamiyatga ega. Raqamli matematikani amaliyotga yo'naltirilgan usullar orqali o'rgatish, o'quv dasturlarida qo'llanilgan boshqa pedagogik innovatsiyalar bilan integratsiya, masalan, ishlab chiqarish, ilmiy tadqiqotlar, masala yechishning boshqa usullari, va boshqalar.

Matematik kompetentligini shakllantirishda bu yo'llardan foydalanish o'quvchilarning matematik bilimlarini rivojlantirish va ularning mustaqil fikrlash va muammolarni yechish qobiliyatlari rivojlanishiga o'z ta'siri bor.

Matematik kompetentligini rivojlantirishda amaliy ta'lim, so'nggi texnologiyalardan foydalanish, matematik dasturlarini taqdim etish, va ko'p to'plamlilik bilan masalalarni yechish muhimdir. Bu usullar o'quvchilarning matematik bilimlarini oshirish va ularning mustaqil fikrlash va muammolarni hal qilish qobiliyatlari rivojlanishiga yordam beradi.

Bo'lajak quruvchi muhandislarni tayyorlashda matematik kompetentligini oshirishga doir usullar maqolada ko'rsatilgan. Bu usullar o'quvchilarning matematik bilimlarini rivojlantirish va ularning muammolarni hal qilish qobiliyatlari rivojlanishiga o'z ta'sirini ko'rsatadi.

ANALYSIS OF ECOLOGICAL SERVICES: CHALLENGES AND RESOLUTIONS

Abstract. The consideration of ecosystem values is insufficient in decisions pertaining to natural resources. Within this particular context, the notion of ecosystem services presents a significant prospect for constructing a structure that supports the prudent utilization of biodiversity and other natural resources.

While it has been acknowledged that using ecosystem services to assess biodiversity has its benefits, the classification systems used often combine the methods used to achieve these services with the services themselves in the same category. This restricts their involvement in choices related to biodiversity. The lack of clarity in the definitions of important terminology, such as ecosystem processes, functions, and services, worsens this predicament. This paper establishes a classification of ecosystem services that serves as a framework for decision-making in natural resource management, following a thorough examination of definitions and the fundamental elements of an efficient typology. Nevertheless, additional effort is necessary to address specific challenges, such as the categorization of socio-cultural services.

Keywords: ecosystem, biodiversity, efficient typology, biodiversity protection, natural vegetation, Terrestrial features.

Introduction. Ecosystem services are being increasingly advocated as a method for documenting the worth that humans assign to ecosystems. This trend is significant, especially in the context of biodiversity protection, where values are frequently challenging to articulate in economic terms and seldom adequately justified in decisions regarding natural resources. In order for ecosystem services to serve as a useful framework for making decisions about natural resources, they need to be categorized in a manner that enables comparisons and trade-offs among the various potential advantages. According to the Millennium Ecosystem Assessment (2005), an adequate classification of ecosystem services should include all the advantages that contribute to human well-being.

Nevertheless, the categorization of ecosystem services by prominent experts, such as Costanza et al. (1997), De Groot et al. (2002), Millennium Ecosystem Assessment (2005), and Farber et al. (2006), combines the methods (means) used to achieve services and the services themselves (ends) in the same classification category. While these articles hold significant value, their classifications provide intrinsic challenges for decision-makers, a matter that will be examined further. The issue also emerges in broader literature and practical applications of ecosystem services and comparable assessments (e.g., Abel et al., 2003; Groffman et al., 2004; Anielski and Wilson, 2005; Kremen, 2005; Naiman et al., 2005).

Limitations of existing classification schemes. To make successful decisions, it is necessary to classify services. The choices are designed in a way that they create a consistent set with the characteristics outlined for multi-criteria decision analysis by Burgman (2005). The classification of services provided by the Millennium Ecosystem Assessment is widely accepted in the current literature. A simplified version of this table, referred to as Table 2, is shown here. In order to evaluate the effectiveness of this classification system, let us examine the scenario of a natural resource manager that oversees an area that consists of a combination of agricultural land and natural vegetation. The manager opts to utilize the list provided in Table 2 to guarantee a coherent arrangement of management outcomes. Consequently, the manager chooses the following as the primary services for initial planning:

The resources mentioned are food, fibre (used for construction lumber), and fresh water.

- Pollination
- Regulation of water
- Recreation and ecotourism
- Values pertaining to spirituality and religion

The two topics are photosynthesis and soil formation. In order to examine the planning consequences, the manager creates a basic schematic that illustrates some ecological connections that will require management. Based on the interactions depicted in Figure 2, it is clear that the manager does not prioritize pollination, water regulation, photosynthesis, and soil formation as individual objectives.

Biodiversity refers to the variety of life forms present in a particular ecosystem or on Earth as a whole. Biodiversity encompasses a wide range of life forms, such as plants, animals, fungi, microbes, and more. The word is limited to live organisms, thereby excluding the variety of habitats. The term «biodiversity» in this article primarily refers to natural biodiversity, unless specified differently. However, it should be noted that the term incorporates both natural and cultural biodiversity.

Biodiversity resource An organism, or collection of organisms, that serves a purpose for humans. An ecosystem is a complex network of living organisms,

their physical environment, and the interactions between them. A «functional entity or unit formed locally through the interaction of all organisms and their physical (abiotic) environment» (Tirri et al., 1998). All the ecosystems examined in this analysis consist of natural components to some extent. Ecosystem function refers to the processes and interactions that occur within an ecosystem, which contribute to its overall functioning and stability. If the ecosystem services, processes, structure, and composition are well-defined, then there is no need for this word. Considering the inconsistent and unclear usage of the phrase, «ecosystem function» is considered synonymous with «ecosystem processes» in this context, and is not utilized. Refer to the Appendix for a definition of structure and composition and for more explanation of 'ecosystem function'. Ecosystem processes refer to the various biological, chemical, and physical activities that occur within an ecosystem, influencing its functioning and dynamics. Ecosystem processes refer to the intricate interactions between living and non-living components of ecosystems that result in a specific outcome. Generally, these processes entail the movement of energy and substances (Lyons et al., 2005). A crucial differentiation exists between ecosystem components (including both living and non-living entities) and processes. The former are typically tangible entities quantified in terms of quantity, while the latter refer to operations and reactions described in terms of rates (such as production per unit time).

Ecosystem services Here, «used» refers to the definition given in the Millennium Ecosystem Assessment (2005, p. 1) as «the advantages that individuals derive from ecosystems» The benefits encompass resources such as food, water, timber, and cultural values. These advantages are the desired results of ecosystem management. The meaning of the term 'service' in this context is unclear and is explored in the Appendix.

Values held by humans The desired outcomes of existence, encompassing the conditions necessary for human survival and reproductive achievement, which collectively define human well-being. Refer to the Appendix for additional clarification. Natural factors encompass various components, such as:

- Biotic diversity
 - Terrestrial features, including:
 - Top layer of soil and loose material covering bedrock
 - Physical landscape The topic is minerals. The three main elements are water, air, and energy, which includes sources such as solar and coal.
- Socio-cultural factors encompass various aspects, such as cultural variety, which includes both domestic livestock and human populations.

- Infrastructure such as roads, buildings, cars, and homes, as well as household appliances.

- Energy generated through the process of nuclear fission.

Ecosystem processes facilitate the redistribution of matter and energy among resources, or generate new resources through evolution. The processes encompassed are as follows:

- Hydrological cycle
- Biogeochemical cycles
- Carbon cycle
- Energy flow
- Disease and pest regulation
- Photosynthesis
- Atmospheric regulation
- Flood control
- Social dynamics
- Economic activities

Revised framework and makeup of ecosystem (To simplify, we assume that natural assets include both living and non-living constituents of an ecosystem, rather than just a portion of them.)

Instead, they are all methods (procedures) used to accomplish goals (services) such as producing food and providing drinkable water. The manager will actively oversee these processes to ensure the production of sufficient quantities of food, fiber for construction, and spiritual experiences, among other things, in alignment with the overall management objectives. Therefore, the services provided in Table 2 do not form a cohesive set of services that can be examined and compared in a decision-making system. Processes such as pollination, soil formation, and water regulation are mechanisms via which several services are provided. Based on the definitions given, it is clear that these activities are undeniably part of the ecosystem. This suggests that they are methods or mechanisms to obtain services, rather than the services themselves.

Conclusion. Ultimately, the examination of ecological services poses a substantial difficulty in the current dynamic global environment. A thorough comprehension of ecosystem functioning and the vital services they give to civilization is necessary due to the intricate interplay between the environment and human activity. Although faced with difficulties, there exist numerous potential alternatives that can enhance our administration of ecological services. First and foremost, it is essential to enhance awareness and education regarding the significance of ecological services to cultivate a deeper understanding and recognition of nature, as well as to encourage the adoption of sustainable behaviors. This can be accomplished by actively involving the community, implementing educational programs focused on the environment, and enacting policies that promote conservation.

In summary, although the examination of ecological services may pose difficulties, by collaborative endeavors and inventive resolutions, we can strive towards a future that is more environmentally sound, allowing for the flourishing of both nature and society.

THE IMPORTANCE OF LOGICAL THINKING IN SOLVING THE SYSTEM OF EXPONENTIAL AND LOGARITHMIC EQUATIONS

Annotation. In this article, many professional issues of students studying in technical higher educational institutions, the importance of mathematical modeling and various approaches to solving them, were mentioned.

Key words: logarithm, index, radioactivity, half-life.

Logarifmlar va logarifmik ayniyatlarning ahamiyati: Logarifmlar o‘z davri uchun haqiqiy ilmiy inqilob o‘laroq namoyon bo‘lgan edi. Logarifmlardan foydalanish - muhandislarga hamda munajjimlarga hisob-kitoblarni yanada tezkorroq va aniq bajarish imkonini bergan. Logarifmik chizg‘ichni esa, dastlabki tezkor hisoblash texnikasi deyish mumkin. Kompyuterlarning paydo bo‘lishi bilan logarifmlar o‘z ahamiyatini biroz yo‘qotgandek go‘yo. Lekin ularning ilmiy ahamiyati zarracha kamaygan emas.

Bugungi kun uchun dolzarbligi: Logarifmlardan hozirda radioaktiv yemirilish (parchalanish) jarayonlarini tadqiq qilishda muhim matematik vosita sifatida qo‘llanmoqda.

Logarifm bu - argumentni olish uchun asosni ko‘tarish kerak bo‘lgan daraja ko‘rsatkichidir.

Radioaktiv moddalarning yarim yemirilish davrini topishda logarifmning ahamiyati.

Fransuz fizigi A. Bekkerel 1896-yilda uran tuzlarida luminessensiya hodisasini o'rganayotib, g'aroyib hodisaga duch keldi. Uran tuzini fotoplastinka ustida qoldirgan Bekkerel plastinkani ochganida plastinkaga tuzning surati o'tib qolganini ko'rdi. Tajribani bir necha bor takrorlagan Bekkerel, bunday tuzlar qog'ozdan, yupqa metallardan oson o'tuvchi, havoni ionlashtiruvchi, luminessensiya hodisasini vujudga keltiruvchi noma'lum nur chiqaradi, degan xulosaga keldi. Ushbu nurlar radioaktiv nurlar (lotincha radius – nur so'zidan olingan), radioaktiv nurlarni chiqarish esa radioaktivlik deb nomlandi.

Yadroning o'z-o'zidan bir yoki bir nechta zarrachalar chiqarish hodisasi **radioaktivlik** deyiladi (1-rasm). Shunday yadrolarni radioaktiv yadro deb yuritiladi. Radioaktiv yadrolarning o'zidan biron-bir turdagi zarralarni chiqarib, boshqa yangi yadroga aylanish jarayoni radioaktiv yemirilish deyiladi.

Tabiatda mavjud yadrolarning radioaktivligi tabiiy radioaktivlik deyiladi. Ba'zi hollarda radioaktiv yadrolar biror-bir turg'un yadrolarni zarralar bilan yoki yadrolar bilan bombardimon qilish natijasida hosil bo'ladi. Bunday radioaktivlikni sun'iy radioaktivlik deyiladi.

Radioaktiv moddani magnit maydoniga joylashtirilsa zarralar dastasi uch qismga α -zarrachalar, β -zarrachalar, γ -zarachalarga bo'lingan.

1-rasm

Radioaktiv yemirilishda radioaktiv yadrolarning sonining o'zgarishi

$$N = N_0 e^{-\lambda t} \quad (1)$$

qonun bo'yicha o'zgaradi. Ushbu ifodani radioaktiv yemirilish qonuni deb yuritiladi,

bunda λ – yemirilish doimiysi.

Agar $t=T$ bo'lsa, unda $N = \frac{N_0}{2}$ va radioaktivlik yemirilish qonuniga muvofiq:

$$\frac{N_0}{2} = N = N_0 e^{-\lambda T}.$$

Ushbu formulani potentsirlab quyidagini olamiz: $\lambda T = \ln 2$ yoki $T = \frac{\ln 2}{\lambda} = \frac{0,693}{\lambda}$ ni hosil qilamiz.

Ko'rsatkichli va logarifmik tenglamalar sistemasini yechishda asosan ularning xossalariga tayanamiz. Bunda o'quvchi ifodalardagi shakl almashtirishlar va soddalashtirishlarni to'g'ri amalga oshira bilishi muhimdir. To'g'ri va asosli fikrlash orqali shakl almashtirishlar masala yechimining asosi hisoblanadi. Quyida misollar orqali fikrlarimizni asoslasak.

$$\begin{cases} 10^{2-\lg(x-y)} = 25 \\ \lg(x-y) + \lg(x+y) = 1 + \lg 4 \end{cases} \text{ ko'rinishidagi sistemani yechsak.}$$

Bu tenglamalar sistemasini yechish uchun natural ko'rsatkichli darajaning va logarifmning xossalaridan foydalanamiz.

Sistemadagi birinchi ifodani shakl almashtiramiz: $10^{2-\lg(x-y)}$ tenglikning chap tomonidagi ifodani natural ko'rsatkichli darajaning $\frac{a^m}{a^n} = a^{m-n}$ xossasiga ko'ra shakl almashtiramiz.

$$10^{2-\lg(x-y)} = \frac{10^2}{10^{\lg(x-y)}} = 25 \Rightarrow \frac{100}{10^{\lg(x-y)}} = 25 \Rightarrow 10^{\lg(x-y)} = 4$$

Logarifmning $a^{\log_a b} = b$ xossasiga ko'ra $10^{\lg(x-y)} = x-y = 4$ ya'ni $x-y = 4$ (1) tenglik hosil bo'ladi.

Endi sistemadagi ikkinchi ifodani shakl almashtiramiz.

Logarifmning quyidagi $\log_a f(x) + \log_a g(x) = \log_a f(x) \cdot g(x)$ ($a > 0, a \neq 1$) xossasidan foydalanamiz.

$$\lg(x-y) + \lg(x+y) = 1 + \lg 4$$

$$\lg(x-y)(x+y) = 1 + \lg 4$$

$$\lg(x^2 - y^2) = 1 + \lg 4$$

$$\lg(x^2 - y^2) = \lg 10 + \lg 4$$

$$\lg(x^2 - y^2) = \lg 40$$

Demak, $x^2 - y^2 = 40$ (2) bo'ladi. (1) va (2) ifodalarni sistemaga olb borib qo'yamiz.

$$\begin{cases} 10^{2-\lg(x-y)} = 25 \\ \lg(x-y) + \lg(x+y) = 1 + \lg 4 \end{cases} \Rightarrow \begin{cases} x-y = 4 \\ x^2 - y^2 = 40 \end{cases}$$

Bu ikki no'malumli tenglamalar sistemasini ikki usul bilan yechish mumkin.

1-usul: $\begin{cases} x-y = 4 \\ x^2 - y^2 = 40 \end{cases}$ sistemadagi $x^2 - y^2$ ifodani qisqa ko'paytirish

formulasiga ko'ra $x^2 - y^2 = (x-y)(x+y)$ debyozibolamiz. Bundan $x^2 - y^2 = 4(x+y) = 40 \Rightarrow x+y = 10$ (3) ifoda kelib chiqadi.

(1) va (3) ni sistemaga olib borib qo‘ysak $\begin{cases} x - y = 4 \\ x + y = 10 \end{cases}$ ifoda hosil bo‘ladi.

Sistemadagi ikkala ifodani hadma-had qo‘shib yuborsak $2x = 14 \Rightarrow x = 7$ ga ega bo‘lamiz. x ning qiymatini (1) ifodaga qo‘ysak $7 - y = 4 \Rightarrow y = 3$ bo‘ladi. Bu qiymatlarni sistemaga qo‘yib tekshiramiz.

$$\begin{cases} 10^{2-\lg(7-3)} = 25 \\ \lg(7-3) + \lg(7+3) = 1 + \lg 4 \end{cases} \Rightarrow \begin{cases} 10^{2-\lg 4} = 25 \\ \lg 4 + \lg 10 = 1 + \lg 4 \end{cases} \Rightarrow \begin{cases} \frac{10^2}{10^{\lg 4}} = 25 \\ \lg 4 + 1 = 1 + \lg 4 \end{cases} \Rightarrow \begin{cases} 25 = 25 \\ \lg 4 + 1 = 1 + \lg 4 \end{cases}$$

2-usul: $\begin{cases} x - y = 4 \\ x^2 - y^2 = 40 \end{cases}$ sistemadagi birinchi ifodadan x ni topib ikkinchi

ifodadagi x ni o‘rnigaolib borib qo‘yamiz. Demak, $x - y = 4 \Rightarrow x = 4 + y$ ni ikkinchi ifodadagi x ni o‘rnigaolib borib qo‘yamiz.

$$(4 + y)^2 - y^2 = 40$$

$$16 + 8y + y^2 - y^2 = 16 + 8y = 40$$

$$8y = 24$$

$$y = 3, x = 7$$

Demak, ikkala usulda yechganimizda ham $x = 7$ va $y = 3$ yechimlarga ega bo‘ldik.

Xulosa

Fizik jarayon hisoblanadigan radioaktiv moddalarning yarim yemirilishi, uning davrini topishda ko‘rsatkichli va logarifmik tenglamalar sistemasiga olib kelinishi, keltirilgan funksiyalarning xossalardan foydalanish, ifodalardagi shakl almashtirishlar va soddalashtirishlar yordamida masalaning javobini topish uchun qadamlar ketma-ketligi muhim hisoblanadi. Mazkur fizik jarayonga yoki texnika yo‘nalishida taxsil olayotgan talabalarning o‘z mutaxassisliklariga mos turlicha kasbiy masalalariga mos matematik, fizik yoki ximik modellarni tuzish, ular ustida turlicha hisob-kitoblar olib boorish, kerakli natijalar, xulosalarga ega bo‘lishda yuqorida keltirilgan bilimlarni qo‘llash maqsadga muvofiq bo‘ladi.

NITRIC OXIDE ALLEVIATES CADMIUM- BUT NOT ARSENIC- INDUCED DAMAGES IN RICE ROOTS

Annotation. Nitrogen monoxide (nitric oxide – NO) is a ubiquitous gaseous molecule involved in numerous animal and plant physiological processes, and it is also a mediator of plant development and response to abiotic/biotic stresses. Different environmental stresses rapidly induce NO-production, which, in turn, participates to the regulation of the plant responses. Several researches have highlighted the involvement of NO in the regulation of plant response to toxic elements, including cadmium (Cd) and arsenic (As) pollutants.

Keywords: Arsenic Cadmium Nitric oxide Oryza sativa Peroxynitrite Root development Superoxide anion.

The NO-involvement in plant physiological/metabolic processes is due to its capability to modify numerous proteins, either directly through post-translational mechanisms, such as S-nitrosylation, nitration and nitrosylation, or indirectly by controlling the transcription of genes that encode proteins involved in stress responses. Various reports highlight that NO has an important role in reducing the damages in plant organs due to abiotic stresses by enhancing the activity of antioxidant enzymes. However, its role in the physiological processes depends on its cellular level. Indeed, at very low levels it functions as a signal molecule, on the contrary at higher levels becomes a stress-inducing molecule.

Cadmium and As soil pollution is of great concern because it prevents plant development by altering primary metabolic functions, by decreasing water and mineral nutrient uptake, and by inducing a general alteration in organ development, mainly in the root-system. Besides, the presence of Cd and/or As in the soil compromises the commercial value of the edible crops, and represents a potential risk to human health. Cadmium is present in the soil mainly as Cd²⁺. It easily enters in the root cells using the transporters of the essential nutrients, thus competing with them, or through aquaporins. Arsenic is mostly present in the environment in two inorganic forms: arsenite [As(III)], and arsenate [As(V)]. Organic forms are also possible. Arsenate, being an analogue of phosphate, enters the plant cells by the inorganic phosphate transport system., whereas arsenite uses the aquaporins of NIP subfamily. In the root cells, As(V) is easily reduced to As(III), with this reaction contributing to increase the cytosolic levels of ROS.

Nitric oxide decreases Cd and As uptake in rice seedlings

In order to investigate the effects of exogenous NO on Cd or As uptake and translocation, the accumulation of the heavy metal and of the metalloid was evaluated in the roots and shoots of the seedlings. Arsenic and Cd were mainly accumulated in the roots, and As, both as As(III) and As(V), was taken up more than Cd (Fig.1 A–B). The treatment with SNP significantly ($P < 0.01$) reduced the accumulation in the roots of both pollutants (Fig.1). The transport of Cd to the shoot was low, and the co-presence of SNP furtherly and significantly ($P < 0.01$) reduced it (Fig.1 A). Even the As was transported to the shoot at very low amounts, independently from the SNP presence (i.e., 6.41, 4.96, 12.06 and 9.11 mg/kg for As(III), As(III) plus SNP, As(V) and As(V) plus SNP, respectively) (Fig.1 B). The evaluation of the translocation factor (TF) and the bioaccumulation factor (BF) of both the elements, taken alone or combined with SNP, showed that the NO donor did not affect the translocation capability of the heavy metal and the metalloid from the root to the shoot, overall highlighting a significant role of NO in the reduction of the uptake of these elements in rice.

Figure. 1

Cadmium (A) and Arsenic (B) accumulation in roots and shoots of rice seedlings treated or not for 10 days with 100 μM CdSO_4 (Cd), 100 μM $\text{Na}_2\text{HAsO}_4 \cdot 7\text{H}_2\text{O}$ (As(V)) or 25 μM NaAsO_2 (As(III)) or 50 μM $\text{Na}_2[\text{Fe}(\text{CN})_5\text{NO}] \cdot 2\text{H}_2\text{O}$ (SNP) alone or combined. Letter a shows statistical difference, at least at $P < 0.05$ level, in comparison to the same treatment with/without SNP, for the same organ. Mean of tree biological replicates.

Nitric oxide reduces the histological alterations induced by Cd, but not all those induced by As. We deepened the investigation on the role of NO in the root alterations induced by Cd and As through histological and autofluorescence analyses on roots treated or not with Cd or As combined or not with SNP.

Nitric oxide reduces the histological alterations induced by Cd, but not all those induced by As. We deepened the investigation on the role of NO in the root alterations induced by Cd and As through histological and autofluorescence analyses on roots treated or not with Cd or As combined or not with SNP. It is known that Cd and As induce extensive damages in rice AR primary structure during LR-formation. To verify if the increased intracellular NO levels resulted into a reduction in these damages, a histological analysis was carried out in the AR region forming the LRPs, and the lignification in cell walls detected and quantified (Fig.2).

Fig. 2. Transverse sections of ARs at 2.0 cm from the root tip taken from rice seedlings treated or not for 10 days with 100 μM CdSO_4 (Cd), 100 μM $\text{Na}_2\text{HAsO}_4 \cdot 7\text{H}_2\text{O}$ (As(V)) alone or combined with 50 μM $\text{Na}_2[\text{Fe}(\text{CN})_5\text{NO}] \cdot 2\text{H}_2\text{O}$ (SNP). **A-B, D-E, G-H, J-K, M-N** and **P-Q** light microscope images of sections stained with toluidine blue. **C, F, I, L, O** and **R** images showing lignin autofluorescence (bright blue colour) in sclerenchyma and endodermis cell walls. Bar = 50 μm (B, E, H, K, N, Q) and 100 μm (A, C-D, F-G, I-J, L-M, O-P, R). cp, cortical parenchyma; ep, epidermis; ex, exodermis; s, sclerenchyma layer; en, endodermis. **S**, mean values ($\pm\text{SE}$) of lignin autofluorescence intensity in sclerenchyma and endodermis measured using ImageJ 1.52a software and expressed in arbitrary units (AUs). Letters a and b show statistical differences, at least at $P < 0.05$ level, for the same tissue and treatment, with/without SNP. Letter c shows statistical differences, at least at $P < 0.05$ level, for the same tissue in comparison with Control. Columns followed by the same letter within the same treatment with/without SNP are not significantly different $N = 30$.

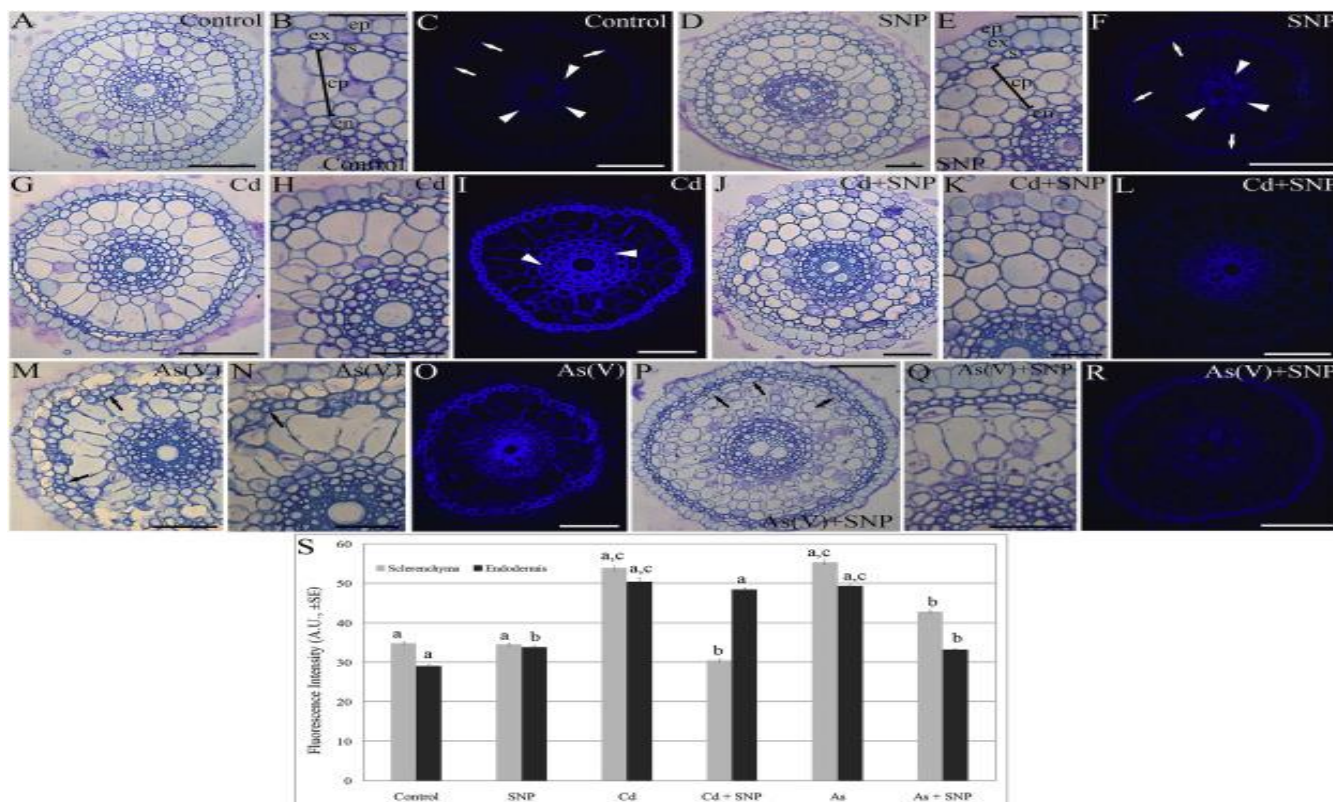

Figure. 2

The histological analysis showed that the SNP-treated roots, were characterized, as the Control ones, by regularly differentiated epidermis, exodermis, sclerenchyma layer, cortical parenchyma, endodermis and vascular bundles (Fig. 2. A–B, D–E). The autofluorescence analysis showed that the sclerenchyma cells were mildly lignified (Fig. 2. C, F, small arrows, and S), while the differentiated endodermis cells did not show regular lignin deposition in the cell walls (Fig. 2. C, F, arrowheads, and S). The Cd-alone-treatment induced a precocious aerenchyma formation and a strong thickening of the sclerenchyma cell walls due to a higher lignin deposition (Fig. 2. G–I and S). Also the endodermic cells were characterized by lignin deposition (Fig. 2. I, arrowheads), and the significant increase of lignin in the cell walls of sclerenchyma and endodermis was also confirmed by the increase of the lignin autofluorescence signal in both tissues (Fig. 2. S). The combined treatment of Cd and SNP significantly reduced cell wall lignification in the sclerenchyma (Fig. 2. J–L), with the lignin autofluorescence signal decreasing up to values comparable to the Control roots Fig. 2.S).

Considering that As(V) and As(III) induced similar histological alterations in root, here we show the images of arsenate-exposed roots only. The As-treatment determined an increase in the sclerenchyma and endodermis cell wall thickening, similarly to Cd, and a related enhancement in lignin autofluorescence (Fig. 2. M–O, S). Moreover, As also induced precocious aerenchyma formation, in addition to an anomalous proliferation of the sclerenchyma cells (Fig. 2. M–N,

arrows), and an alteration of the exodermis (Fig. 2. M). The NO-donor combined with As induced the roots to differentiate cells with a reduced lignin deposition, and a reduced autofluorescence signal (Fig. 2. P–R, S), but did not counteract the As-caused anomalous cell proliferation (Fig. 2. P–Q, arrows).

In conclusion, the results highlight that NO differently affects the responses of rice root-system to the toxicity of Cd and As. In fact, increased cellular levels of NO alleviate root damages induced by Cd by improving the entire root-system, but do not improve the root-system ability to counteract As toxicity. The explanation of this different behaviour is probably attributable to the NO-ability to restore the ROS/RNS cellular balance, differently altered by the two pollutants. Of course, further researches are needed to shed light on the full mechanisms governing NO action in pollutant environments.

QISHLOQ XO‘JALIGI KORXONALARIDA TAVAKKALCHILIKNI BOSHQARISH MUAMMOLARI VA YECHIMLARI

Annotatsiya. Mazkur maqolada qishloq xo‘jaligi risklarni boshqarish vositalari va uslubiy asoslari qo‘rib chiqilgan. Korxonada risklarni boshqarish tajribasi tahlil qilingan. Qishloq xo‘jaligi korxonalarida risklarni boshqarish tizimini shakllantirishning turli jihatlari keltirilgan. Risklarni miqdoriy va sifatli tahlil qilish usullari ko‘rib chiqilgan, qishloq xo‘jaligi korxonalarida riskini boshqarish algoritmi ishlab chiqilgan. Ushbu usullarni amalda qo‘llash muammolari aniqlangan.

Tayanch so‘z va iboralar: risk (ishlab chiqarish, moliya, tijorat, bozor, korporativ va qishloq xo‘jaligi risklari), risklarni boshqarish va baholash metodlari, risklarga ta‘sir qilish usullari va bosqichlari.

ISSUES AND SOLUTIONS OF RISK MANAGEMENT IN AGRICULTURAL ENTERPRISES

Abstract. This article examines agricultural risk management tools and methodological foundations. The experience of risk management in the enterprise is analyzed. Various aspects of forming a risk management system in agricultural enterprises are presented. Methods of quantitative and qualitative analysis of risks were considered, and an algorithm of risk management of agricultural enterprises was developed. Problems of practical application of these methods have been identified.

Key words and phrases: risk (production, financial, commercial, market, corporate and agricultural risks), methods of risk management and assessment, methods and stages of exposure to risks.

Kirish

Qishloq xo'jaligi sohasi eng xavfli sohalardan biri hisoblanadi, shu sababli qishloq xo'jaligi korxonalarining iqtisodiy faoliyati doimo risklarda'siri ostidadir. Odatda, qishloq tadbirkorlari xavfli vaziyatlarda qaror qabul qilishdan o'zlarini olib qochadilar, yuqori daromad olish mumkin bo'lgan hollar bundan mustasnodir. Hammaga ma'lumki, yuqori daromad to'g'ridan-to'g'ri yuqori risk darajasi bilan bog'liqdir. Shu sababli, riskli, ammo yuqori foyda keltiradigan vaziyatlarni boshqarishga talab oshib bormoqda. Agrosanoat majmui va umuman milliy iqtisodiyotga risklarning ta'sir darajasi, ayniqsa jahon miqyosida yuz berayotgan salbiy tendensiyalar (moliyaviy-iqtisodiy retsissiyalar, pandemiya) tufayli kelib chiqqan inqiroz sharoitida agrosanoat majmuasining risklarini qaytadan ko'rib chiqishni dolzarb masalaga aylantirdi.

Tahlil va natijalar

Iqtisodiy fan va amaliyotda risklarni yaxlit nazariyasi hali shakllantirilmagan. Ilmiy adabiyotlarda 50 dan ortiq turli riks mezonlari va 250 dan ortiq turlari keltirilgan. Birinchi marotaba, risk tushunchasi tadbirkorlikning funksional xususiyati XVII-asrda fransuz iqtisodchisi R. Cantillon tomonidan ilgari surilgan, u tadbirkorni noaniqlik sharoitida qarorlar qabul qiladigan va o'z manfaatlarini qondiradigan shaxs sifatida qaragan.

Risk va noaniqlik har qanday qaror qabul qilish uchun muhim bo'lgan ikkita turli atamadir. Bunda riskni nomukammal bilim sifatida aniqlash mumkin va yuz berishi ehtimoli mumkin bo'lgan natijalar ma'lumdir, noaniqlik esa ehtimoli mumkin bo'lgan hadisalar natijalarining noaniqligidir. Risk va noaniqlik qishloq xo'jaligidan muhimroq bo'lgan sohani tasavvur qilish qiyin. Bunda agrosanoat korxonalari risklarni boshqarishda yakka tartibdagi fermerlarga nisbatan keng imkoniyatlarga ega. Fermer esa risk va noaniqlik sharoitida qoladi va u uchun bu holatlarni yengib o'tish qiyin kechadi. Shu sababli ular faoliyatida risk menejmentini joriy etilishi muhim ahamiyat kasb etadi.

Riskning obyektiv mavjudligi sharoitida, korxonaning muvaffaqiyatli ishlashi uchun zaruriy shart bu riskning mavjudligini hisobga oladigan va bir tomondan uning korxonaga salbiy ta'sirini kamaytirishga imkon beradigan boshqaruv qarorlarini qabul qilish va amalga oshirish jarayoni sifatida belgilanadigan risklarni boshqarish tizimini shakllantirishdir, ikkinchi tomondan esa biznesning o'sishi va rivojlanishi uchun paydo bo'ladigan imkoniyatlardan samarali foydalanishdir.

Jahon va milliy ixtisoslashgan adabiyotlarda «risklarni boshqarish» («risk menejment») tushunchasi keng va tor ma'noda qo'llaniladi. Keng ma'noda, risklarni boshqarish bu risk sharoitida davlat apparati, ishlab chiqarish va iqtisodiy bo'limlar faoliyati yoki shaxsning hayoti uchun mavaffaqiyatli sharoitlarni yaratish san'ati yoki fanidir. Tor ma'noda risklarni boshqarish iqtisodiy riskni kamaytirishga qaratilgan aniq chora-tadbirlarni rejalashtirish va amalga oshirish jarayonidir. Bu har qanday tasodifiy yo'qotishlarni kamaytirish

dasturlarini ishlab chiqish va amalga oshirish shaklida yoki qarorlar ko‘rinishida amalga oshirilishi mumkin.

Zamonaviy sharoitida talab va taklifning beqarorligi, valyuta kursining o‘zgaruvchanligi, inflyatsiya jarayonlari, har bir mamlakat iqtisodiyotining hozirgi holatini belgilovchi ko‘plab boshqa omillar, shuningdek, korxonalar o‘z iqtisodiy faoliyati davomida duch kelishi mumkin bo‘lgan bir qator risklar mavjuddir. Risklarni minimallashtirishning qo‘yidagi asosiy usullari mavjud: sug‘urtalash; deversifikatsiyalash; o‘zini-o‘zi sug‘urtalashi; limitlashtirish; xedjdirilash; franchayzing va boshqalar. Bularning barchasi korxonaning bozorda izchil, barqaror va moliyaviy jihatdan mustaqil faoliyatni amalga oshirishga imkon beradi.

D.V. Bunkovskiy o‘z ilmiy ishlarida korxonalar risklarini boshqarish muamolarini tahlil qilgan. Korxonada risklarni boshqarish tizimini shakllantirishning turli jihatlarini o‘rgangan. Tadbirkorlik faoliyati xavfini miqdoriy va sifat tahlil qilish usullarini ko‘rib chiqqan, ularni korxonalar faoliyatida qo‘llash muammolarini aniqlagan. Shuningdek, muayyan korxonalar uchun risklarni boshqarish vositalaridan samarali foydalanish yoki maqbulini tanlash uning sanoat sohasi va faoliyat yo‘nalishlariga bog‘liqligidan kelib chiqadi degan xulosalarni shakllantirgan.

V.N. Xoxlovaning ilmiy ishlarida risklarni boshqarish jarayoni qo‘yidagi asosiy bosqichlarga ajratilgan:

Riskning mohiyatini tahlil qilish, risk omillarini aniqlash, risklarni sifat va miqdoriy qo‘rsatkichlar bo‘yicha baholash;

riskga ta’sir qilish usullarini taqqoslash orqali ularning samaraligini tanlash;

qaror qabul qilish;

riskga ta’sir qilish (kamaytirish, saqlash, o‘tkazish);

riskni boshqarish natijalarini nazorat qilish.

Tadbirkorlik faoliyatidagi risklarni boshqarish tizimi daromadlarni shakllantirish va xarajatlarni qisqartirish, ular o‘rtasidagi muvozanatni ta’minlashga yo‘naltirilgan korxonaning boshqaruv tizimining bir qismiga aylanishi kerak, ya’ni u korxonaning umumiy strategiyasiga, uning rejalari va faoliyatiga qo‘shilishi, birgalikda olib borilishi lozim. Korxonaning strategiyasini ishlab chiqishda riskning mavjudligini hisobga olish kerak, aks holda u iqtisodiy rivojlanishni sekinlashtirishi mumkin, chunki salbiy ehtimoliy voqealarning ta’sirini hisobga olmasdan biznesni samarali faoliyatini yaratish mumkin emas.

THE ELECTRON-SPECTROSCOPIC INVESTIGATIONS OF THE EPITAXIAL CoSi_2 FILMS ON SILICON

Abstract. This work is devoted to the study of the electronic structure, optical properties and electric resistance of the epitaxial layers CoSi_2/Si produced in the ultrahigh vacuum conditions ($p=10^{-7}$ Pa) by the molecular beam epitaxy method on Si surface (111). It has been shown that the forbidden zone width of solid CoSi_2 films is 0.5-0.6 eV and there are two maximal of the electron state density in the valence zone. These films have the low specific resistance ($\rho=20-25 \mu\Omega\cdot\text{cm}$).

Key words silicon, epitaxial, structure, vacuum, electron, zone, temperature, spectroscopy, CoSi_2 , molecular beam epitaxy method, electron-spectroscopic, silicid, peaks, spectra, films.

1. INTRODUCTION.

The good structural concordance of Si , CoSi_2 , CaF_2 and hence the growing of multi-layer systems from the layers of those materials combination are the first prerequisite to create devices with unique specifications. The creation of the $\text{Si-CoSi}_2\text{-Si}$ epitaxial structure allows the manufacturing of new type of ultrahigh frequency devices, e.g., transistors with metallic and permeable base. The main principle of such transistors creating is based on the change of the semiconductor base to the material having low electric resistance close to the metal one. In this respect, the more suitable material proved to be CoSi_2 films [1-4].

By now the regularities of the CoSi_2 film epitaxial growth on the Si single crystal surface have been studied. The optimal conditions of producing the uniform films have been determined, the type and parameters of the lattice, as well as the electric physical properties of these films have been investigated.

In the article the results of epitaxial CoSi_2/Si (111) formed by MBE, TFE and RA. Cobalt silicide layers grown on substrates such as Si doped by phosphorus -4,5, Si doped by boron -7.5, Si doped by boron -10. The growth of the films produced in ultrahigh vacuum MBE installation. Before epitaxial growth surface of the substrates were subjected to chemical cleaning and special cleaning vacuum. Detailed description of the installation of the MBE and purification methods contained in [5]. The thickness of the deposited cobalt in all cases was 100 Å, meanwhile, CoSi_2 film with thickness about 380 Å was formed. The one-

step processes were studied and a two-step growth. With two-stage increase in the growth of the film took place in two stages with different modes of growth.

This work is devoted to the study of the electronic structure, optimal properties and electric resistance of the epitaxial $CoSi_2/Si$ layers produced in the ultrahigh vacuum conditions ($p=10^{-7}$ Pa) by the molecular beam epitaxial method on Si surface (111). The optimal growth temperature is $T=850$ K and the optimal ratio of flows $SiCo$ is 2: 1. The films of the thickness $d=50-500$ Å have been studied [5].

2. RESULTS AND DISCUSSION.

Before the measurement of the $CoSi_2$ films were annealed in the ultrahigh vacuum conditions ($p=10^{-7}$ Pa) at $T=900-1000$ K for 3-4 hours. After the treatment on the HEED pictures taken for the films with $d>150$ Å the bright sharp point reflexes on Laue arcs were detected, that corresponds to the pure atomic smooth surfaces.

The photoelectrons spectra for the Si (111) and $CoSi_2$ films ($d=200$ Å) measured at $h\nu=10.8$ eV are given in fig. 1.

Fig 1. The photoelectrons spectra for the Si (111) and $CoSi_2$ films ($d=200$ Å) measured at $h\nu=10.8$ eV.

The abscissa axis is the electron binding energy E_b taken relative to the Fermi level E_F . It is seen that the shape and position of the main peaks for Si and silicide are visible distinguished from each other. In the pure Si case the presence of peaks (B, C, E) is explained by the electron excitation from $3p$, $3s$ states of valence electrons and from the surface states.

The parameters of the energy zones for Si and $CoSi_2$ defined according to the photoelectron spectra (fig.1) are given in table 1.

Table 1

Sample	Zone parameters, eV				
	ϕ	φ	E_g	χ	V_s
Si	5.1	4.7	1.1	4.0	0.3
$CoSi_2$	4.9	4.9	0.5	4.4	—

Table 1. Zone and energy parameters of Si and $CoSi_2$.

It can be seen from table I that from Si to $CoSi_2$ the decreasing (2 times) of the forbidden zone width E_g , the straightening of the zone band and some increasing of the electron affinity value occur.

The value of the both photoelectron ϕ and thermo electron φ work functions for Si and $CoSi_2$ do not sharp differ from each other. For $CoSi_2$ $F \approx \varphi$. So it can be

supposed that $CoSi_2$ is the degenerated semiconductor with the whole conductivity. The high electric conductivity of Co silicide can be due to this fact.

The electric resistance of the $CoSi_2$ films was defined by the 4-probes method [6]. The experimental result had been showed that in the case of the very thin films ($d > 100 \text{ \AA}$) the specific resistance value depends on both thickness and temperature of the film formation and in the solid films case ($d > 100-150 \text{ \AA}$) it depends mainly, on the formation temperature. The value of ρ for the $CoSi_2$ films growing at the different T are given in table 2.

So for the film width $d \approx 60 \text{ \AA}$ the value of ρ becomes higher and even at the optimal formation temperatures it is about $120-150 \mu\Omega.cm$. That is mainly due to the fact that the film is not solid. The solid films ($d \approx 200 \text{ \AA}$) growing at $T < 700-750 \text{ K}$ also have the high resistance. This fact is explained by insufficient ordering of the structure and by the high density of the point defects.

Table 2.

T, K	$\rho, \mu\Omega.cm$	
	$d \approx 60 \text{ \AA}$	$d \approx 200 \text{ \AA}$
600	250	110
750	–	50
900	150	20
1000	120	20
1100	–	40
1200	120	70

Table 2. The dependence of ρ on the temperature formation for $CoSi_2$.

The temperature increases of the film growth up to $900-1000 \text{ K}$ results the sharp ρ decreasing ($20-25 \mu\Omega.cm$), that is connected with the essential crystal perfection improvement of $CoSi_2$ film. The further formation temperature increases ($T > 1100 \text{ K}$) is accompanied by the specific resistance increasing. That can be due to both the island film formation and the enrichment of the surface with silicon owing to silicon diffusion through the film.

The optical properties of $CoSi_2/Si(100)$ films have been also studied. For the example the dependence of the light reflection coefficient on the light wave length for the 200 \AA thickness film is given in Fig.2. It was shown that within the whole studied range of light wave length λ the k value increases with the λ increasing.

However, for $\lambda < 2-2.5 \mu$ the increasing is small and its value do not exceed $10-15\%$. The considerable k increasing occurs beginning with $\lambda = 2.5 \mu$, that approximately coincides with the edge of fundamental absorption $CoSi_2$. At $\lambda > 2.5 \mu$ the $h\nu$ value becomes less than the forbidden zone width ($E_g \approx 0.5 \text{ eV}$) of $CoSi_2$ and

Fig 2. The dependence of the light reflection coefficient on the light wave length for the 200 Å thickness film hence the absorption coefficient sharply decreases. Apparently, that results in some increasing of the light reflection coefficient.

3. CONCLUSIONS.

1. The true information about the electron states density distribution in the valence zone and the energy parameters for $CoSi_2/Si$ films has been obtained.

2. It was shown that the electric resistance of $CoSi_2$ film produced by the molecular beam epitaxy method mainly depends on the thickness and temperature of the film formation. $CoSi_2$ is supposed to be a degenerated semiconductor with whole conductivity. High electric conductivity of Co silicide is explained by that fact.

3. The considerable increasing of the light reflection coefficient beginning with $\lambda=2-2.5 \mu$ was explained by the inter-zone transitions absence (fundamental absorption) in $CoSi_2$ at $\lambda>2-2.5 \mu$.

MUQOBIL ENERGIYA MANBALARINI O'QITISH JARAYONIDA ENERGIYA ISHLAB CHIQRISH USULLARI VA TAHLILI

Annotatsiya. Muqobil energiya olishning asosiy usullari energiya manbalari sifatida mustaqil bino va inshootlardan foydalanish imkoniyati nuqtai nazaridan ko'rib chiqiladi. Turli xil muqobil energiya manbalari tomonidan elektr energiyasini ishlab chiqarish xarajatlari to'g'risidagi ma'lumotlar keltirilgan. Muqobil energiya manbalarini almashish bo'yicha tavsiyalar berilgan.

Kalit so'zlar: Muqobil energiya, shamol generatori, gelioenergetika, quyosh kollektori, atrof-muhitni muhofaza qilish.

METHODS AND ANALYSIS OF ENERGY PRODUCTION IN THE PROCESS OF EDUCATION OF ALTERNATIVE ENERGY SOURCES

Abstract. The main methods of obtaining alternative energy are considered from the point of view of the possibility of using independent buildings and structures as energy sources. Data on the costs of electricity production by various alternative energy sources are presented. Recommendations on the joint use of alternative energy sources are given.

Keywords: Alternative energy, wind turbine, solar energy, solar collector, environmental protection.

Qayta tiklanmaydigan energiya manbalarining global zaxiralari pasayishi fonida yangi energiya manbalarini izlash va ma'lum alternativ energiya manbalarini joriy etish dolzarbdir. Mavjud yoki tejamkor qayta tiklanmaydigan energiya manbalarining hozirgi energiya iste'moli darajasida turli manbalarga ko'ra taxminan 50 dan 100 yilgacha qoldi. Muqobil energiya manbalarini izlash bilan bir qatorda, bugungi kunda ishlatiladigan energiya turlarining ekologik xavfsizligi birinchi o'ringa chiqadi [1, 2, 3].

Ushbu ish mustaqil bino va inshootlarning elektr energiyasi manbai sifatida maishiy ehtiyojlar uchun kam quvvatli (10 kVtgacha) muqobil energiya (elektr, issiqlik va bio - yoki boshqa yoqilg'i shaklida) olish usullarini ko'rib chiqishga bag'ishlangan.

Energiya olishning asosiy alternativ usullari orasida quyidagilarniajratib ko'rsatish mumkin:

- shamol energetikasi;
- geliyenergetika;
- gidroyenergetika;
- bioyenergetika.

Shamol energetikasi - shamolning kinetik energiyasini elektr energiyasiga aylantirishga asoslangan energiya sanoati [4]. Energiyani konvertatsiya qilish, qoida tariqasida, shamol generatorlarining turli xil konstruksiyalari tomonidan amalga oshiriladi. Bugungi kunda bu muqobil energiyaning eng keng tarqalgan manbalaridan biri bo'lib, turli manbalarga ko'ra uning global elektr energiyasini ishlab chiqarishdagi ulushi 2% ga yetishi mumkin. Yevropa ittifoqining ba'zi mamlakatlarida shamol generatorlari yordamida ishlab chiqariladigan energiya ulushi 40% dan ortiq.

Shamol generatorining ishlashining asosiy sharti 3 m/s dan yuqori tezlikda harakatlanadigan havo massalarining mavjudligi, shuning uchun, qoida tariqasida, ularning joylashgan joyi qirg'oq zonalari, tepaliklar, tokchalar (qirg'oq zonasida joylashgan).

Zamonaviy shamol generatorlari balandligi 100 m dan oshishi mumkin va pichoqlarning diametri bir necha o'n metr ga yetadi. Nominal ish rejimlarida chiqish quvvati (shamol tezligi 10 m/s) 10 Mvtgacha yetadi.

Dizayn bo'yicha shamol generatorlarini gorizontaal va vertikalga bo'lish mumkin. Ikkinchi tur yanada istiqbolli, chunki u shovqinsizroq va shamol massasi tezligiga nisbatan kamroq talabchan (1 m/s dan), ammo bazi sabablarga ko'ra shamol generatorlarining gorizontaal konstruksiyalari ko'proq tarqalgan. Vertikal shamol generatorlarining ishlash muddati 20 yilgacha bo'lishi mumkin [5].

Shamol generatorlari yordamida olingan elektr energiyasining narxi an'anaviy energiya yordamida olingan elektr energiyasining narxi 1,5-2 so'm/(kVt*soat) bilan taqqoslanadi..

Shamol generatorlarining kamchiliklari orasida shovqinning nisbatan yuqori darajasi (shamol generatorining rotori yaqinida 100 db gacha va 300 m masofada 45 db dan oshmasligi kerak), katta tebranish yuklari ham qayd etilishi kerak. Shu sababli, shamol generatorlarini turar-joy binolaridan 300 m dan kam bo'lgan masofada o'rnatish tavsiya etilmaydi.

Shamol energiyasidan foydalanishning yana bir usuli-bu bino va inshootlarni isitish uchun uni issiqlik energiyasiga aylantirish, bu yondashuv bilan shamol generatorining ulanish sxemasi va uni boshqarish ancha soddalashtirilgan hisoblanadi.

Shamol qurilmasining tuzilishi generator, generator joylashgan ustun, pichoqlar, batareyalar, inverterni o'z ichiga oladi.

Gidroyenergetika energiya ishlab chiqarish uchun harakatlanuvchi suv massalarining kinetik energiyasidan (to'lqinlar, oqim to'lqinlari, sharsharalar, okean, issiqlik energiyasidan foydalanish) foydalanadi. An'anaviy ravishda

muqobil gidroyenergetikani to'liqin va to'liqinli elektr stansiyalari, mini - va mikro GES, sharshara elektr stansiyalariga bo'lish mumkin.

To'liqin energiyasidan foydalanuvchi gidroyelektr stansiyalar bugungi kunda eng ko'p tarqalgan, to'liqin balandligi 13 metrgacha bo'lishi mumkin bo'lgan katta to'liqin mavjud bo'lgan joylarda qurilmoqda. Suv toshqini energiyasidan to'g'onlar o'rnatish orqali foydalanish mumkin, bu ekologik jihatdan juda xavfsiz emas, shuningdek, to'g'onlarni ishlatmasdan dengiz tubidagi suv oqimlari bo'lgan joylarda past tezlikli turbinalarni o'rnatish orqali foydalanish mumkin. Bunday turbinalar dengiz florasi va faunasiga deyarli zarar etkazmaydi. Bugungi kunda suv toshqini elektr stansiyalarining quvvati bir necha yuz Mvtgacha bo'lishi mumkin.

To'liqin energiyasidan foydalanuvchi gidroyelektr stansiyalar bugungi kunda eng ko'p tarqalgan, to'liqin balandligi 13 metrgacha bo'lishi mumkin bo'lgan katta to'liqin mavjud bo'lgan joylarda qurilmoqda. Suv toshqini energiyasidan to'g'onlar o'rnatish orqali foydalanish mumkin, bu ekologik jihatdan juda xavfsiz emas, shuningdek, to'g'onlarni ishlatmasdan dengiz tubidagi suv oqimlari bo'lgan joylarda past tezlikli turbinalarni o'rnatish orqali foydalanish mumkin. Bunday turbinalar dengiz florasi va faunasiga deyarli zarar etkazmaydi. Bugungi kunda suv toshqini elektr stansiyalarining quvvati bir necha yuz Mvtgacha bo'lishi mumkin.

To'liqin energiyasidan foydalanish biroz murakkabroq va qimmatroq elektr energiyasini olish imkonini beradi. To'liqinli gidroyelektrostansiya-bu dengiz tubiga biriktirilgan stasionar platforma bo'lib, unga diametri bir necha metrgacha bo'lgan katta suzgichlar qo'llarga (shpallarga) o'rnatiladi, ular dengiz to'liqinlarida yuqoriga va pastga siljiydi, gidravlik silindrlar orqali elektr energiyasini ishlab chiqaruvchi generatorlarni boshqaradi. Bugungi kunda shu tarzda ishlab chiqarilgan elektr energiyasining nisbatan kichik miqdoriga qaramay, ushbu turdagi qayta tiklanadigan energiya manbalarining umumiy energiya potentsiali deyarli cheksizdir.

Mini va mikroGES daryolar, kichik daryolar, sharsharalardagi suv massalarining kinetik energiyasidan foydalangan holda o'z miqdorda, bir necha o'nlab kVtgacha elektr energiyasini ishlab chiqarishga imkon beradi. Balandlik farqi 1,3 m dan va suv sarfi 1 m³/s mikroGES girdob prinsipiga ko'ra 10 kVt / soatgacha elektr energiyasini olish imkonini beradi. Ular suv massalarining kinetik energiyasidan maksimal darajada foydalanishga imkon beradigan maxsus shakldagi pervanelli generatorlardan iborat [7].

Kichik gidroyenergetikaning asosiy afzalligi shundaki, u ob-havo sharoitlariga bog'liq emas va yilning istalgan vaqtida elektroyenergetika ishlab chiqarishni barqaror ravishda ta'minlaydi [8].

KICHIK MAKTAB YOSHIDAGI O'QUVCHILAR BILAN ISHLASHDA DIDAKTIK O'YINLARDAN FOYDALANISH

Annotatsiya. Kichik maktab yoshidagi o'quvchilar bilan ishlashda didaktik o'yinlardan foydalanishda har bir bolaning manfaatlarini va uning rivojlanish xususiyatlarini inobatga olish zarur. Shuning uchun, muayyan o'yinni ta'lim jarayonida tanlashda o'qituvchi katta mas'uliyatga egadir. Kichik maktab yoshidagi o'quvchilar uchun didaktik o'yinlar o'ziga xos xususiyatlarga ega.

Kalit so'zlar: didaktik, o'quvchi, individual didaktik, jismonan rivojlanishi, bola, o'yinchoqlar, so'z, maktab, pedagog, psixologik.

USE OF DIDACTIC GAMES WHEN WORKING WITH PRIMARY SCHOOL STUDENTS

Annotation. When using didactic games when working with students of a small school age, it is necessary to take into account the interests of each child and the features of his development. Therefore, when choosing a particular game in the educational process, the teacher has a great responsibility. Since pupils of school age are difficult to follow orders, didactic games for them have their own characteristics.

Keywords: didactic, student, individual didactic, physical development, child, toys, word, school, educator, psychological.

Kirish: Ta'lim va o'qitish mazmunining nazariy masalalarini, uning shakli va uslublarini pedagogikaning bir qismi bo'lgan didaktika o'rganadi. Umuman pedagogika singari didaktika ham rivojlanadi. Uning rivojlanishiga Yan Amos Kamenskiy hissa qo'shdi. Uning «Buyuk didaktika» asari o'qitishni rivojlanishiga katta ta'sir ko'rsatdi. Boshlang'ich ta'lim didaktikaning asoslari Shvetsariya pedagogi I.G.Pestolotsi asarlarida ishlab chiqilgan. Bulardan tashqari rus didaktikasining atoqli namoyondasi K.D.Ushinskiy bo'lgan. U ham o'qitish masalalarini chuqur psixologik asosini yaratdi. O'zbek xalqi orasida ham H.H.Niyoziy, A.Avloniy kabi pedagoglar yetishib chiqdi. Ular ham o'zbek xalq maktablarini ochish, o'quvchilarga darsliklar yozish kabi ishlarni davom ettirdilar.

Bugungi kunda mamlakatimizda ta'lim sohada amalga oshirilayotgan keng islohotlar vatan taqdiri, xalq ravnaqi, mustaqil yurtning kelajakdagi boshqaruvchi-lari yangi avlod tarbiyasiga qaratilmoqda. Mustaqil Vatanimizga har tomonlama yetuk, mukammal, axloqiy pok, yuksak ma'naviy xislatlarga ega, iymon-e'tiqodi butun, o'z xalqi, o'z ona - Vataniga fidoiy, barkamol insonlarni tarbiyalash davlat siyosatida ustuvor masalalardan biri sifatida qarala boshladi.

Didaktikaga asoslangan holda biz o'quvchilarga yanada samaraliroq bilim beramiz. Ta'lim jarayonida turli usullardan foydalanishimiz ham kerak. Dars turini to'g'ri va muvaffaqiyatli o'tish uslubini ham to'g'ri tanlasak dars yaxshi natija beradi. Har bir darsni ko'rgazmali va texnika vositalari bilan o'tkazish joizdir. Shundagina dars bilimga boy o'tadi. O'qituvchi izlanuvchan bo'lishi, darslarni rang-barang va turli tuman usulda o'tishi kerak. Dars qiziqarli o'tishi uchun faqat ko'rgazma qurollardan foydalanib qolmay, o'yin elementlaridan, dars davomida harakatli daqiqalardan foydalanish lozim. Didaktik o'yinlar texnologiyalari o'quvchi faoliyatini faollashtirish va jadallashtirishga asoslangan. Ular o'quvchi shaxsidagi ijodiy imkoniyatlarni ro'yobga chiqarish va rivojlantirishning amaliy yechimlarini aniqlash va amalga oshirishda katta ahamiyatga ega.

O'yin orqali bola faoliyati mukammallashadi, ularni jismonan rivojlanishiga yordam beradi. O'yin jarayonida qiyinchiliklarni, to'siqlarni yengishga o'rgatib boradi.

O'yin bolalar faoliyatining asosiy turi. Bola o'yin orqali materiallarning ko'rinishi, rangi, tuzilishi turli o'simlik va hayvonot olamidagi o'zgarishlarni anglaydilar. O'yin- bu bolalar uchun o'qish, mehnat qilish va tarbiya vositalaridir. Biroq, darsning asosiy qismini o'yin darsiga aylantirib qo'ymaslik lozim.

Asosiy qism: O'yin o'sib borayotgan bola organizmining zaruriy ehtiyojidir va u orqali bolalarda tashkilotchilik ko'nikmalari tarbiyalanadi. Ammo o'yin har qanday sharoitda ham o'yindir. Shunday o'yinlar ham borki, ular bolalarga mustaqillikni, oddiylikni, bir- biriga yordam berish hissini tarbiyalaydi.

Yan Amos Kamenskiy grammatik o'yinlardan sistemali foydalanishning ahamiyati xususida gapirib, bunday deb yozgan edi: «Bola sog'lom bo'lishi uchun u doimiy harakatda bo'lishi zarur, shundagina o'yin qiziqarli o'tadi. O'yinga rahbarlik qilish va bolalarning xatti-harakatlarini doimo kuzatib turishi kerak. Chunki bolalar o'yin jarayonida har tomonlama tarbiyalanadilar.

Didaktik o'yinlarning asosiy turlari: Intelektual (aqliy) va harakatli hamda aralash o'yinlardan iborat. Bu o'yinlar ishtirokchilarda aqliy, jismoniy ahloqiy, psixologik, estetik, badiiy, tadbirkorlik, mehnat va boshqa ko'nikmalarni rivojlantirishga yordam beradi. Ta'lim – tarbiya jarayonida asosan o'quvchilarda ta'lim olish motivlarini, ularning turli yo'nalishdagi qobiliyat va qiziqishlarini oshiradigan, biror kasbga moyilliklarini ko'rsatadigan didaktik o'yinlardan foydalaniladi. Didaktik o'yinlar nazariy, amaliy jismoniy, roli, ishchanlik va boshqa yo'nalishlar bo'yicha turlari bo'yicha ajratiladi.

Ko'pchilik o'yinlarda didaktik o'yinchoqlar va bunga bevosita a'loqador bo'lgan boshqa qo'llanmalar foydalaniladi. Didaktik o'yin jarayonida shunday holatlar ham tez-tez bo'lib turadiki bolalardagi eng yaxshi kayfiyat birdan sho'xlik, notinchlik va intizomsizlik bilan ham almashib qoladi. Bunday paytlarda o'qituvchi ayrim bolalarga tanbex berishga majbur bo'ladi va bu boshqarning o'yin kayfiyatini shubhasiz tushiradi. Agar shunday vaziyat sodir bo'lsa ham o'yin qoidasi bilan birga qo'shib tushuntirsa metodik jihatdan to'g'ri bo'ladi.

Individual didaktik o'yin o'qituvchi bilan o'quvchi o'rtasida bevosita munosabat yaratishga va bolalarning orqada qolishi sabablarini chuqurroq anglashga yordam beradi. Bunda o'qituvchining quyidagi kabi mantiqiy topishiriqli o'yin mashqlarini o'tkazishi maqsadga muvofiqdir. O'qituvchi yoki o'quvchilardan birontasi bir so'z aytadi, bolalar ana shu so'zga yaqin yoki qarama-qarshi ma'noli so'z topib aytadilar.

-O'yin qoidalarini, vazifalarini bolalarga ravshan va qiziqarli qilib tushuntirishi, ularda o'yinga bo'lgan qiziqishni oshirish hamda uni mashq bilan almashtirib yubormasligi;

O'yinni qiziqarli o'tkazishi kerak. O'yin paytida o'quvchilar har doim o'zlariga tanish bo'lgan manbaalarga asoslangan holda ish tutadilar, natijada bu material ularning xotirasiga yana ham mustakam o'rnatilib qoladi. O'yin elementlari bolalarni bilim saviyasini, nutqini, o'qishini o'stiradi.

A.S. Makarenko bola qanday o'ynasa ishni ham shunday bajaradi, deb juda to'g'ri ta'kidlaydi va o'yinni tarbiyaning muhim vositalaridan biri deb hisoblaydi.

Muhokama va natijalar: Yuqorida aytib o'tilganlar qatorida didaktik o'yinlar o'quvchilarda tahlil qilish, mantiqiy fikrlash, tadqiq qilish, hisoblash, o'lchash, yasash, sinash, kuzatish, solishtirish hulosa chiqarish, mustaqil qaror qabul qilish, guruh yoki jamoa tarkibida ishlash, ahloq odob o'rgatish, yangi bilimlar o'rgatish va boshqa faoliyat turlarini rivojlantirishga yo'naltirilgan o'yinlarga ajratiladi. Umumiy o'yinlar nazariyasiga, mavjud barcha o'yin turlarini tasniflashda ularni funksional, mavzuli konstruktiv, didaktik, sport va harbiy o'yinlariga ajratiladi. Bularning orasida ta'lim-tarbiya vazifalarini amalga oshirish imkoniyatini berishi alohida o'ringa ega. O'yinlar maktabgacha yoshdagi bolalarning asosiy faoliyat shakli hisoblanadi. Bu esa pedagog va psixolog olimlar tomonidan shu yosh davridagi o'yinlarning ta'lim-tarbiyaviy ahamiyatini o'rganish va yanada oshirish bo'yicha tadqiqotlar olib borilishiga asos bo'ldi. Natijada, oldingi asrning 60-yillari boshidan AQSH-da so'ngra boshqa g'arb mamlakatlarida ishchanlik o'yinlari qo'llanila boshlandi. Ishchanlik o'yinlari 123 tadqiqotchilari bu usulni eng asosiy, samarali va tejamli ta'lim metodlaridan iborat deb takidlaganlar. Didaktik o'yin texnologiyalari amalga oshiriladigan ayrim noan'anaviy dars shakllari ishchanlik o'yini darsi –dars mavzusi bo'yicha masalalarni hal etish jarayonida o'quvchilarning faol ishtirok etishini ta'minlash orqali yangi bilimlarni o'zlashtirish mashqi.

Integral (integratsiyalashgan) darsi - bir necha fanlarga oid integratsiyalash uchun qulay bo'lgan mavzular bo'yicha tashkil qilingan dars bo'lib,

o'quvchilarning turli fanlarga qiziqishlarini ortirib, ta'lim jarayonidagi faolliklarini ta'minlaydi. Bunday darslar o'quvchilarga fanlararo bog'liqlikni o'rgatish orqali ulardan olam tuzilishining ularning ilmiy asoslarini to'liq idrok etish, ilmiy dunyoqarashlarini shakllantirish, ijodiy tafakkurlarini rivojlantirishga xizmat qiladi. «Mo'jizalar maydoni» darsi – o'quvchilar bilan o'tkaziladigan qiziqarli o'yin bo'lib, turli savollarga belgilangan vaqt davomida to'g'ri javoblar topish va g'oliblarni rag'batlantirish orqali o'quvchilarda fikrlash, topqirlik, ziyraklik va bilimlarini kengaytirib borish sifatlarini shakllantiradi. Didaktiko'yinlarni amalda qo'llash shart-sharoitlari didaktik o'yinlarni tanlashda ishtirokchilarning yoshi, bilimi va tarbiyalanganlik darajasi hisobga olinadi.

Didaktik o'yin turlarini tanlash me'zonlari: - ishtirokchilar tarkibi bo'yicha o'g'il-bolalar, qiz-bolalar, qiz bolalar, o'smirlar katta yoshdagilar uchun o'yinlar; - ishtirokchilar soni bo'yicha –yakka, juftlikda kichik guruh, sinf jamoasi, raqobtdosh komandalar, sinflar aro va ommaviy o'yinlar; - o'yin jarayoni bo'yicha – fikrlash, o'ylash topog'onlik, harakatlar musobaqa va boshqalarga yo'naltirilgan yo'llar; - vaqt me'yori bo'yicha dars, mashg'ulot vaqtining reja bo'yicha ajratilgan qismi, o'yin maqsadiga erishguncha, g'olib yoki g'oliblar aniqlanguncha davom etadigan va boshqa o'yinlar.

Xulosa: Didaktik o'yinlardan amalda foydalanish orqali boshqa usullar yordamida erishish qiyin bo'lgan ta'lim –tarbiyaviy maqsadlarni amalga oshirish ko'zda tutiladi. Turli o'quv fanlariga oid didaktik o'yinlar mavjud bo'lib, ular shu fanlarni sifatli o'rgatish maqsadlariga xizmat qiladi.

UNDERSTANDING INFLATION IN MACROECONOMICS: A PRACTICAL OVERVIEW

Abstract. Inflation, a key economic indicator, refers to the sustained increase in the general price level of goods and services over time. This article provides a practical overview of inflation in macroeconomics, focusing on its causes, effects, and measurement. It discusses various types of inflation, such as demand-pull and cost-push inflation, and their implications for the economy. The article also explores how inflation is measured using indexes like the Consumer Price Index (CPI) and the Producer Price Index (PPI). Additionally, it examines the role of inflation expectations and asset price inflation in shaping economic outcomes. Understanding inflation is crucial for policymakers, businesses, and individuals to make informed decisions in managing and navigating an inflationary environment.

Keywords: Inflation, Macroeconomics, Consumer Price Index (CPI), Producer Price Index (PPI), Demand-pull inflation, Cost-push inflation, Monetary policy, Economic indicators.

Introduction

Inflation, a term often heard in economic discussions, refers to the increase in the general price level of goods and services in an economy over a period of time. While some level of inflation is considered normal in a growing economy, excessive inflation can have detrimental effects. In this article, we will delve into the concept of inflation in macroeconomics, its causes, effects, and how it is measured, using practical examples to illustrate its impact.

[1] is a renowned textbook that covers various macroeconomic topics, including inflation. In this book, the authors provide an in-depth analysis of inflation, discussing its causes, effects, and implications for the economy. They explain how inflation is related to the overall level of prices in an economy and how it can be influenced by factors such as monetary policy, aggregate demand, and supply shocks. The book likely discusses different types of inflation, such as demand-pull and cost-push inflation, and their respective effects on the economy. Blanchard and Fischer probably also cover inflation measurement techniques, such as the Consumer Price Index (CPI) and the GDP deflator, to help readers understand how economists track inflation over time.

Additionally, the book may explore the role of inflation expectations in shaping economic behavior and how central banks use monetary policy to control inflation. Overall, «Lectures on Macroeconomics» likely provides a

comprehensive overview of inflation, making it a valuable resource for students, researchers, and policymakers studying macroeconomics.

«Mankiw's Macroeconomics» is another widely used textbook that covers various macroeconomic topics, including inflation. In this book, Mankiw provides a comprehensive overview of inflation, discussing its causes, effects, and measurement methods.

He likely explains the concept of inflation as a sustained increase in the general price level of goods and services in an economy over a period of time. Mankiw probably discusses how inflation can be caused by factors such as changes in aggregate demand and supply, as well as monetary factors like changes in the money supply [2].

Additionally, Mankiw likely covers different measures of inflation, such as the Consumer Price Index (CPI) and the Producer Price Index (PPI), and explains how these measures are calculated and used to track inflation over time. He may also discuss the implications of inflation for individuals, businesses, and the overall economy, including its impact on purchasing power, interest rates, and economic growth.

Overall, «Mankiw's Macroeconomics» is likely to provide a thorough and accessible overview of inflation, making it a valuable resource for students, researchers, and anyone interested in understanding this important economic concept.

Ball and Mankiw's paper, [4] in 1995, explores the relationship between relative-price changes and aggregate supply shocks, particularly in the context of inflation. The paper argues that changes in relative prices, which are often interpreted as demand shocks, can also be viewed as supply shocks that affect the overall price level in the economy. The authors present a model in which relative-price changes, such as an increase in the price of oil, can lead to changes in the overall price level through their effects on production costs and the aggregate supply of goods and services. They argue that these supply shocks can have significant effects on inflation, even in the absence of changes in aggregate demand.

The paper contributes to the understanding of inflation by highlighting the role of supply shocks in driving changes in the price level. It suggests that policymakers need to consider both demand and supply factors when formulating monetary policy to control inflation effectively.

Overall, Ball and Mankiw's paper provides valuable insights into the dynamics of inflation and the role of relative-price changes in shaping the overall price level in the economy.

Causes of Inflation:

Inflation can be caused by various factors, including:

1. Demand-Pull Inflation: This occurs when the aggregate demand for goods and services exceeds the economy's ability to produce them. For example, when consumer confidence is high, and people are spending more, it can lead to an increase in prices.

2. Cost-Push Inflation: This type of inflation occurs when the cost of production increases, leading producers to raise prices to maintain profit margins. For instance, an increase in the cost of raw materials or wages can lead to cost-push inflation.

3. Monetary Factors: Changes in the money supply can also lead to inflation. When there is an increase in the money supply in an economy without a corresponding increase in goods and services, it can lead to a decrease in the value of money, causing prices to rise.

Effects of Inflation:

Inflation can have several effects on an economy and its stakeholders:

1. Purchasing Power: Inflation erodes the purchasing power of money, meaning that the same amount of money buys fewer goods and services over time. For example, if inflation is 5% per year, a product that costs \$100 today will cost \$105 next year.

2. Interest Rates: Central banks often raise interest rates to control inflation. Higher interest rates make borrowing more expensive, which can dampen economic activity.

3. Income Redistribution: Inflation can lead to a redistribution of income and wealth. Debtors benefit from inflation, as they can repay their debts with money that is less valuable than when they borrowed it. On the other hand, savers and fixed-income earners may see a decrease in their real income.

Measuring Inflation: Methods and Key Indicators

Measuring inflation is essential for understanding the state of an economy and making informed policy decisions. There are several methods and key indicators used to measure inflation, each providing a different perspective on price changes in an economy.

1. **Consumer Price Index (CPI):**

The Consumer Price Index is one of the most commonly used measures of inflation. It tracks the changes in prices of a basket of goods and services that are typically purchased by households. The CPI is calculated by comparing the current cost of the basket of goods to the cost in a base year, and then expressing this as a percentage change.

2.	Producer Price Index (PPI):	The Producer Price Index measures the average change over time in the selling prices received by domestic producers for their output. It is often seen as a leading indicator of consumer inflation, as changes in producer prices can eventually be passed on to consumers.
3.	GDP Deflator:	The GDP deflator is a measure of the price level of all final goods and services produced in an economy. It is calculated by dividing nominal GDP by real GDP and multiplying by 100. The GDP deflator provides a broad measure of inflation across the entire economy.
4.	Personal Consumption Expenditures (PCE) Price Index	: The PCE Price Index is another measure of inflation that is based on the expenditures of households and includes a broader range of goods and services than the CPI. The Federal Reserve often uses the PCE Price Index to gauge inflationary pressures in the economy.
5.	Core Inflation:	Core inflation excludes volatile items such as food and energy prices, which can be subject to large fluctuations. Core inflation is often used to get a more stable and long-term view of inflation trends in an economy.
6.	Inflation Expectations:	Inflation expectations refer to the expectations that households, businesses, and investors have about future inflation. Expectations can influence actual inflation through their effects on wage and price-setting behavior.
7.	Asset Price Inflation:	Asset price inflation refers to the increase in the prices of assets such as stocks, real estate, and commodities. While not included in traditional inflation measures, asset price inflation can have significant effects on the economy.

Practical Example: Suppose the CPI in a country is 120 in the current year, compared to 100 in the base year. This means that prices have increased by 20% since the base year. If a basket of goods and services cost \$100 in the base year, it would cost \$120 in the current year.

Measuring inflation is crucial for policymakers, businesses, and individuals to understand the dynamics of price changes in an economy. By using a combination of measures and indicators, economists can gain a more comprehensive view of inflationary pressures and make informed decisions to manage them.

Practical Example: Let's consider a practical example of inflation using the CPI. Suppose the CPI in a country is 100 in the base year (year 0) and increases

to 110 in year 1. This means that prices have increased by 10% from the base year. If a basket of goods and services cost \$100 in the base year, it would cost \$110 in year 1.

Conclusion:

In conclusion, inflation is a complex economic phenomenon with significant implications for individuals, businesses, and policymakers. This article has provided a practical overview of inflation in macroeconomics, covering its causes, effects, and measurement methods.

We have seen that inflation can be caused by factors such as changes in aggregate demand, supply shocks, and monetary policy. Demand-pull inflation occurs when aggregate demand exceeds supply, leading to an increase in prices. On the other hand, cost-push inflation occurs when the cost of production increases, leading to higher prices.

Understanding how inflation is measured is also crucial. The Consumer Price Index (CPI), Producer Price Index (PPI), and GDP deflator are commonly used measures of inflation that provide insights into price changes in an economy.

Inflation has various effects on the economy, including reducing the purchasing power of money, influencing interest rates, and redistributing income. It is essential for policymakers to manage inflation effectively to maintain economic stability and promote growth.

Overall, a thorough understanding of inflation is essential for making informed decisions in both the public and private sectors. By understanding the causes and effects of inflation, individuals and businesses can better prepare for and navigate the challenges posed by inflationary environments.

FORMING THE CREATIVE ACTIVITY OF 5-6-YEAR-OLD CHILDREN

Abstract. This article talks about the importance of forming the creative activity of preschool children in preschool educational organizations. The cognitive process of a preschool child develops in the process of creative activities.

Key words: preschool age, child, knowledge, creative, activities, research, creative activity, directed, planned, standard, criterion, environment, objects, knowledge, mastery.

Today, in our country, there are many problems in the development of creative qualities in children of preschool age, and many new laws and decrees are being adopted in our country to solve them. It aims to take into account the unique cooperation in order to develop moral qualities among all representatives of the social environment, peers, and family through creative images in preparatory groups for school and to find its reflection in the life of society. However, as a result of the changes in people's worldview and the demands of the times, there are problems regarding the provision of moral education to preschool children.

The cognitive process of a preschool child develops in the process of creative activities. In order for the child to search and show his creative activity in the process of completing the given task, the need for self-aware activity is felt, which is directed to a specific goal, planned, has standards and criteria. This is the child's assimilation of environmental objects and knowledge about them; creation of educational effectiveness requires reliance on previous types of activity.

In particular, the urgent problem of «how to educate preschool children's creativity?» has not arisen today. The issue of development of creative abilities in a person, which is the beginning of creativity from time immemorial, has been of interest to both pedagogues and researchers who are directly involved in the education of children. Education and training, the formation of a person in society, the development of abilities are still relevant issues. The problem of developing the technology of forming creative activity in preschool children is one of the multifaceted pedagogical-psychological social tasks, and it is one of the urgent tasks for the social development and progress of the society.

Creativity appears in various situations of activity. Curiosity, inspiration, aspiration, etc., include the process from the highest emergence of creativity in the human mind to its manifestation. A person's need for creative activity means

a desire for new, previously untargeted creativity in activity. In children of preschool age, any buds of creative activity cannot develop outside of education and activities.

In the process of education and upbringing, revealing the hidden talents of children, creating an opportunity for them to demonstrate their activities from preschool age, developing their creativity is the guarantee of raising competitive personnel with high potential, socially active, sharp mind, and ability to discover in the future. This corresponds to one of the priorities of our country - the idea of raising a well-rounded person. Formation of creative activity in children in preschool education is considered an important component of the educational process. Age and psychological characteristics of children, who are active and leading subjects of preschool education, as well as specific aspects of visual arts, work, music and physical education require a creative approach from the educator.

Of course, such innovations, aimed at updating preschool education both in form and content, require all pedagogues, starting from parents, to approach child education and his readiness for education based on the needs of the times. Processes in development centers organized in groups of pre-school education organization help children to constantly learn and consolidate new knowledge.

The main goal of development centers is to teach children to independently supplement their knowledge and to adequately adapt to the ongoing renewal processes. Development centers organized on the basis of the program provide children with the following content:

- acceptance and implementation of changes;
- critical thinking;
- make a choice;
- to communicate problems; - manifestation of creative, thinking and inventive possibilities;
- taking care of people, society, country, environment.

In the studies of many pedagogues and psychologists, scientific research was conducted on the problem of creativity and creativity. In particular, L. S. Vygotsky, B. M. Teplov, S. L. Rubinstein, V. I. Druzhinin, A. N. Leontiev, A. R. Luria, D. B. Bogoyavlensky, A. Ponomarev, N. F. Vishnyakova, A. A. Melik-Pashaeva, V. A. Kan-Kalika, K.V. Gavriloven V. V. Poznyakova and other foreign psychologists who conducted research on this problem: D. Veksler, J.V. Poznyakova and others. Guilford, R. Sternberg, G. Eyzenak, A. Tannenbaum, et al.

The analysis of psychological and pedagogical literature made it possible to define the concept of «creativity» as «one of the types of human activity aimed at solving a conflict (creative problem solving), for which objective (social, material) and subjective personal conditions (knowledge, skills, creativity) are required. It is known that B. M. Teplov understood certain individual psychological abilities that distinguish one person from another by abilities, they

are not reduced to the existing stock of skills and knowledge that a person has, but determine the ease and speed of their discovery.

There are enough psychological reasons to believe that every child contains the potential for creativity. In practice, some limitations must be overcome. First of all, it is impossible to convey, «broadcast» creativity as knowledge or skills. Second, true creativity in any field «creates a strong psychological dominant, covering the whole person» The task is to help the child get in touch with the position of the creator. By nature, children's creativity is synthetic and often improvisational. The synthesis of emotional sensitivity and thinking, logic and intuition, creative imagination and the ability to make quick decisions plays a leading role in musical creativity. The process of children's creativity awakens in children the desire to act sincerely and naturally. In conclusion, I would like to note that when I work in this direction, I am sure that performing creative work by children using various methods and methods, materials, original techniques, creative tasks will allow children to feel unforgettable positive emotions. I got Children open up great opportunities to express their fantasies, desires and themselves. In general, children are interested in creative research and solutions, children learn to work with different materials, children develop confidence in their abilities, and their artistic horizons are expanding.

COMPETENCE-BASED APPROACH IN THE FORMATION OF DEONTOLOGICAL COMPETENCIES OF FUTURE PRIMARY CLASS TEACHERS AS A THEORETICAL FRAMEWORK

Abstract. This article presents the theoretical foundations of the development of deontological competence of future primary school teachers. The article elaborates recommendations on the formation of deontological competence of primary school teachers. Pedagogical scientists' comments are presented, which has a special place in the discussion of issues of deontological competence development of future primary school teachers.

Key words: competence, deontological competence, skilled pedagogue, competence, pedagogical activity, future teachers.

KIRISH. Insoniyat asrlar mobaynida taraqqiyot qiyofasini o'zgartiradigan qator chuqur o'zgarishlarni boshdan kechirdi, bu birinchi galda sanoatlashgan jamiyatdan sanoatlashgan axborotga o'tish bilan bog'liq, bunda bilimlarning sintezi va ularning tarqalishi hal qiluvchi ahamiyatga ega bo'ladi, chunki ta'lim sohasi siyosat, iqtisodiyot, madaniyat va boshqa sohalar bilan yaqindan

uyg'unlashdi. Ayni paytda davrimizga xos ta'lim sohasidagi o'zgarishlar bo'lajak o'qituvchilarning raqobatbardoshligiga ko'maklashadigan yuksak madaniyat, tashabbuskorlik va mustaqil izlanishlariga yana ham yorqin yo'naltiradi. Keyingi yillar mobaynida ta'lim rivojlanishining asosiy yo'nalishlari o'zgardi, shu munosabat bilan bilimlar va qobiliyatlarni o'zlashtirish bilan bo'lajak o'qituvchining kasbiy pedagogik faoliyati va har doim malakalarning shakllanishini hal qilmaydi. Shu nuqtai nazardan kasbiy pedagogik ta'lim tizimiga kompetentli yondoshishni amalga oshirish bugungi kun talabi ekanligini e'tirof etish lozim. Shu nuqtai nazardan kompetentli yondoshish nazariyasi va amaliyoti eng jadal rivojlanayotgan yondoshish hisoblanadi, shu munosabat bilan uning «kompetentsiya», «kompetentli», «qobiliyat» kabi talqin qiladigan asosiy tushunchalarini ko'rib chiqish maqsadga muvofiq hisoblanadi. Bunda ta'kidlash kerakki, kompetentli yondoshish muammolari bilan shug'ullanadigan tadqiqotchilarning fikriga ko'ra, kompetentli yondoshishning tushunchalar doirasi to'la belgilab berilmagan hamda ularning bir xil va umume'tirof etilgan talqini yo'q. Kompetentli yondoshish g'oyalarini V.I. Baydenko, V.A. Bolotov, V.V. Serikov, E. F. Zeer, E. Simanyuk, I. A. Zimneya, D.A. Ivanov, K.G. Mitrofanov, O.V. Sokolova, O.E. Lebedev, G.K. Selevko, B.Abdullaeva, N.Ro'ziqulova, O.Qo'ysinov, J.Usarov, U.Raxmatov va boshqalarning ilmiy ishlarida ko'rib chiqilgan. Mazkur ishlarning aksariyatida kompetentli yondoshish mutaxassisning sifatleri va qobiliyatlariga jamiyat tomonidan yangi talablar paydo bo'lishiga javob sifatida qaraladi, zamonaviy maktab yoki boshqaruv strukturalari uchun kompetentli yondoshish g'oyalarini amalga oshirishga muhim ahamiyat beriladi. Kompetentli yondoshishdan foydalanish insoniyat taraqqiyoti nafaqat iqtisodiy o'sishga, ayni paytda shaxs rivojlangani darajasiga bog'liq ekanini tushunishga asoslanadi, bu «inson zaxiralari» tushunchasidan «inson kompetentligi» tushunchasiga o'tishni taqozo qiladi. Kompetentli yondoshishda ta'lim natijalariga asosiy e'tibor beriladi, bunda natija sifatida o'zlashtirilgan axborotlar hajmi emas, balki turli muammoli vaziyatlarda insonning yechim topa olish va hal qila olishiga qaraladi. Bizning holatimizda bu pedagogik hodisalar hisoblanadi, shuning uchun, bizningcha, faqat OO'Yuda o'quv jarayoniga pedagogik tus berish yo'li bilan, ya'ni talabalarga ta'lim berish va tarbiyalashning barcha bo'g'in va jihatlarini ularni kasbiy pedagogik tayyorlash vazifalariga bo'ysindirish orqali kompetentli yondoshishni amalga oshirish mumkin. Bu shuni anglatadiki, psixologik-pedagogik, balki boshqa fanlar ham talabalarni pedagogik faoliyatga yo'naltirgan tarzda o'qitilishi kerak. Ta'kidlash kerakki, kompetentli yondoshish ta'lim sohasidagi modernizatsiyalash muammolariga bag'ishlangan munozaralar munosabati bilan nisbatan yaqinda tarqalgan, natijada ilmiy-nazariy va ilmiy metodik tadqiqotlar paydo bo'ldi, ularda yondoshishning mohiyati, shuningdek hal qiluvchi kompetentliklarni shakllantirish jihatleri tahlil qilingan. Mazkur ishlarda kompetentli yondoshish ta'lim maqsadlarini belgilash, ta'lim jarayonini tashkil qilish mazmunini tanlash va quyidagi pozitsiyalardan natijalarini baholash printsiplari majmuidan iboratdir:

• to'plangan tajribadan foydalanish asosida turli faoliyat sohalari va shakllarida muammolarni mustaqil hal qilish qobiliyatini mutaxassisda rivojlantirish; • bilish, dunyoqarash, ahloq va boshqa muammolarni hal qilishga ko'maklashadigan didaktik moslashgan ijtimoiy tajribadan iborat ta'lim mazmunini tanlash; • ta'lim jarayonini tashkil qilish, bilish, kommunikativ, tashkiliy, texnologik, ahloq va boshqa muammolarni mustaqil hal qilish uchun sharoitlar yaratish; • muayyan ta'lim bosqichida erishilgan ta'lim natijalari, bilim darajalarini baholash. Kompetentli yondoshishning ko'plab g'oyalari mehnat bozoridagi vaziyatni o'rganish, xodimga nisbatan talablarni belgilash natijasida paydo bo'lgan. Bunda kompetentli yondoshish ta'lim mazmunini yangilashning muhim kontseptual qoidalardan biri sifatida qaraladi. Jahon ta'lim amaliyotini hisobga olganda e'tirof etish mumkinki, «asosiy kompetentliklar» tushunchasi bilimlar, qobiliyatlar va intellektual tarkibiy jihatlarni integrativ tabiatga ega o'ziga xos bog'lovchi, markaziy tushuncha hisoblanadi. Bo'lajak boshlang'ich sinfo'qituvchisining deontologik kompetentsiyasining negizi hisoblangan kasbiy tayyorligi, uning mohiyati, strukturasiga oid aniq tasavvurlar yo'qligini hamda deontologik kompetentsiyani shakllantirishga doir ilmiy-asoslangan tavsiyalar o'rtasidagi nomutanosibliklarni ko'rib chiqish lozim. Xususan: • o'qituvchi faoliyatida deontologik kompetentsiyaning ahamiyati va oliy ta'lim tizimida uni shakllantirish mexanizmi to'la ishlab chiqilmaganligi; • Bo'lajak boshlang'ich sinfo'qituvchisiga deontologik qobiliyatlarni o'zlashtirish talablari va deontologik kompetentsiyani shakllantirishga ko'maklashadigan ta'lim modeli uzviy shakllanmaganligi; • va bo'lajak o'qituvchilarni tayyorlashda uning pedagogik shakllanishi shartlarini yechilmaganligi. Mazkur ziddiyatlarni hal qilish va bo'lajak boshlang'ich sinfo'qituvchisining kompetentligi shakllanishini ilmiy asoslangan modeli uzviy shakllanmaganligi tadqiqot muammosini belgilaydi, uning mohiyati bo'lajak boshlang'ich sinfo'qituvchisining deontologik kompetentsiyasini shakllantirish mazmuni va jarayonini ishlab chiqishdan iborat. Pedagogikada kompetentli yondoshishni amalga oshirishda predmet usti xususiyatiga ega muhim kompetentsiyalar va aniq o'quv predmetlarining o'zaro bog'liqligi maydonga chiqadi, ular doirasida faoliyatga tayyorlik, shuningdek kompetentsiyalar tarkibiga kiradigan universal qobiliyatlar shakllanadi. Bunda ta'lim mazmuni kompetentsiyalari va predmet strukturasining o'zaro bog'liqligi «muhim kompetentsiyalarini ajratib ko'rsatish; ularning mazmunini tahlil qilish hamda kompetentsiyalarni shakllantirish uchun zarur bilimlar va aniq predmet qobiliyatlarini belgilash; ta'limni aniq o'quv predmeti bo'yicha tashkil qilish»ni nazarda tutadi. Kompetentli yondoshish o'z navbatida shuning uchun ham zarurki, hozirgi jiddiy modernizatsiya va isloh qilish sharoitidagi zamonaviy ta'lim ziddiyatlarning bir necha guruhlarini hal qilishga yo'naltirilgan innovatsion pedagogik g'oyalar va kontseptsiyalarni joriy qilishni talab qiladi, ular orasida quyidagilar: • kompetentli yondoshishning boshlang'ich amaliy yo'nalganligining pedagogik amaliyotning mavjud predmet (shu jumladan meta predmet) yo'nalishiga mos kelmasligi; • kontseptual va innovatsiya

potentsialining noaniqligi, xususan faoliyatli va rivojlanadigan yo'nalishdagi mavjud psixologik-pedagogik kontseptsiyalar bilan innovatsiya potentsiali jiddiy farqining mavhumligi (N.D. Nikandrov, M.V. Boguslavskiy, V.M. Polonskiy); • kompetentli yondoshishning predmet va yosh bilan bog'liq jihatlariga (G.N. Filonov), shuningdek uni joriy qilishning tashkiliy-boshqaruv jihatlariga yo'qligi (N.D. Nikandrov, I.I. Logvinov); • kompetentli yondoshish asosida amalga oshiriladigan milliy madaniy, ijtimoiy-siyosiy, nihoyat ijtimoiy-psixologik standartlar ishlab chiqish kontekstining noaniqligi (V.I. Slobodchikov, T.M. Kovaleva). Biroq kompetentli yondoshishni amalga oshirishda quyidagi ikki jihat oldingidek muhim bo'lib qolaveradi: • birinchidan, kompetentli yondoshish kontseptsiya va mantiq amaliyotiga nisbatan, biroq tegishli fanlar tushuncha va metodologik apparatiga tayanish yoki ulardan olishni nazarda tutadigan ko'plab zamonaviy yondoshishlarning zamonaviy, shu jumladan kulturologik (V.V. Kraevskiy va boshqalar), ilmiy ta'lim (S.A. Piyavskiy va boshqalar), didaktomarkazlashgan (N.F. Vinogradova va boshqalar), funksional-kommunikativ (V.I. Kapinos va boshqalar) yondoshish sifatida qaraladi; • ikkinchidan, eng ahamiyatli holat, buning natijasida ta'limda kasbga o'qitish dolzarb tus oldi.

XULOSA Deontologik kompetentli yondoshishni xarakterlaydigan asosiy tushunchalar tahlili quyidagi tushunchalarni ajratib ko'rsatish imkonini beradi: • muayyan predmetlar va jarayonlar doirasiga nisbatan ajratiladigan o'zaro bog'liq shaxs xususiyatlari majmuini o'z ichiga oladigan kompetentsiyani; • tegishli kompetentsiyani, shu jumladan unga va faoliyat predmetiga shaxsiy munosabatlarni egallash, o'zlashtirish bilan nisbat beriladigan kompetentlikni. Kompetentlik, kompetentsiyalarni shakllantirish bosqichma-bosqich amalga oshiriladi, buning uchun birinchi bosqichda elementar o'quv kompetentsiyalar shakllantiriladi: o'qilgan yoki eshitilgan bilimning asosiy mazmunini olish; berilgan savol yoki mavzuga binoan fikrlarni aniq shakllantirish, o'ziga xos fikrlarni birga keltirish; vazifalarni hal qilishning turli variantlarini tadqiq qilish, turli mezonlar nuqtai nazaridan eng yaxshisini tanlash; umumiy vazifani bajarishda boshqalar bilan hamkorlik; harakatlar va vaqtni rejalashtirish; o'z faoliyati natijalarini baholash va boshqalar. Binobarin, kompetentli yondoshishni amalga oshirishning asosiy maqsadi pedagogik texnologiyalardan foydalanish asosida ta'lim jarayonini rekonstruktsiya qilish hisoblanadi. Ular o'quv bilish jarayoni shakllanishi (ish maqsadlari va tartibini belgilash, o'quv faoliyatini mustaqil rejalashtirish, alohida ob'ektlar o'rtasida aloqa o'rnatish, yangi vaziyatlarda o'zlashtirilgan usullarni qo'llash, o'zini nazorat qilish), kommunikativ (hamkorlik, bolalarga yordam ko'rsatish, guruh ishida qatnashish, axborotlar almashish va boshqalar), axborot (axborotni mustaqil izlash, tahlil qilish va tanlash, strukturalash, o'zgartirish, saqlash, uzatish va boshqalar), o'zini shaxsiy takomillashtirish (yutuqlar va xatolarni tahlil qilish, muammolar va qiyinchiliklarni topish, og'ir vaziyatlarda o'zaro yordam va qo'llab-quvvatlash va boshqa) kompetentsiyalarni shakllantirish vazifalarini hal qilish imkonini beradi.

HADIS VA HIKMATLARDAN TARBIYA JARAYONIDA FOYDALANISH VA ULARNING TA'LIM JARAYONIDA QO'LLANILISHI

Annotatsiya. Hadis ilmining paydo bo'lishini Payg'ambar alayhissalomning vafotidan bir asr o'tgandan keyin bilan bog'lash to'g'ri bo'ladi. Chunonchi Payg'ambar hayot vaqtlarida uning so'zlari-yu, qilgan ishlarini avval boshda faqat eshitish va mushohada qilish bilan chegaralangan bo'lsa, so'ngroq ularni naql etib rivoyat qilina boshlandi. Bu insonlarning ma'naviy olami uchun katta ozuq bo'ldi. Payg'ambardan hadis eshitgan sahobalar ham har xil sharoitda bo'lganlar-qay birlari ko'proq, boshqalari kamroq eshitganlar. Bu hol esa naql va rivoyatga ehtiyojning oshishiga sabab bo'lgan.

Kalit so'zlar: islom dini, payg'ambarlar, hadis, hadisshunoslik, sahobalar, tobeinlar, roviy, sanad, musnad.

THE USE OF HADITHS AND WISDOM IN THE EDUCATIONAL PROCESS AND THEIR APPLICATION IN THE EDUCATIONAL PROCESS

Annotation. It would be correct to associate the emergence of the science of Hadith with a century after the death of the Prophet. And when the Prophet chunun (peace be upon him) said to him during his lifetime, what he had done was first limited to hearing and observing only in the head, then it began to be narrated to narrate them. This has become a great weight for the spiritual world of people. The companions who heard hadith from the prophet were also in different conditions-which one heard more and the other less. This was the reason for the increased need for narration and narration.

Keywords: Islam, prophets, Hadith, Hadith studies, sahabas, tobeins, roviy, sanad, musnad.

Kirish. Payg'ambar alayhissalom vafotlaridan keyin, sahobalar islom diniga kirgan yangi-yangi mamlatlarga kengayib, yoyilib ketgach, Payg'ambar hadislarini bilishga bo'lgan ishtiyoq va zarurat tobora osha boshlagan. Yillar o'tishi bilan bu ehtiyoj brogan sari kuchayib xilma-xil shar'iy ahkomlarni bilish

va Qur'oni karim mazmunlarini ma'nan idrok etib chuqur anglashga ehtiyoj kuchayadi. Mana shu sabablarga ko'ra hadislarni izlab topish, ularni aniqlash talabida turli o'lkalarga har xil safarlar va rihlatlar ko'payadi. Vaqt o'ta borishi bilan hadis roviylarining bisyorligidan ularni aniq bilish, sanadini tekshirib ko'rish, ular o'rtasidagi tafovut va farqlarning qaysinisi to'g'riligiga ishonch hosil qilish kabi birqator masala va bahsli holatlar paydo bo'ldiki, bularni o'rganadigan maxsus ilm-- hadis ilmlari vujudga keldi. Hadis ilmining barcha uchun tushunarli va ravon bo'lishi biroz qiyinroq bo'lganligi uchun, hamma ham uni birdek tushunib, to'g'ri qabul qilishga qiynalgan holatlar ko'paygani bois,

--Mavzuga oid adabiyotlar tahlili (Literatura review). Muhammad (s.a.v) vafotidan keyin uning so'zlari og'zaki tarzda yetkazilgan. Islom an'analariga ko'ra, ikkinchi xalifa Umar ibn al-Xattob barcha hadislarni bir jildga jamlash ishlarini boshlagan, ammo „Qur'on musulmonlar tomonidan e'tiborsiz qolishidan qo'rqib» bu harakatdan voz kechgan (Muhammad (s.a.v) so'zlariga ko'ra). Zubayr Siddiqiy).

Umaviylar xalifasi Umar ibn Abdulaziz (umar II, milodiy 717-720 yillarda hukmronlik qilgan) ham barcha hadislarni to'plashga harakat qila boshladi. Hadislarni o'rgatish va to'plash uning musulmon jamiyatining ma'naviy hayotini yangilash rejasining bir qismi edi. U fiqh o'qituvchilarini qo'llab-quvvatlagan, badaviy qabilalariga o'qituvchilar yuborgan, Hijozda haftalik hadis ma'ruzalarini buyurgan, Misr va Shimoliy Afrikaga hadis olimlarini yuborgan (Muhammad Zubayr Siddiqiyga ko'ra).

Umar (r.a) Madinaning buyuk olimi Abu Bakr ibn Hazmga Umar ibn al-Xattobning barcha hadislarini, xususan, Oisha roziallohu anho rivoyat qilgan hadislarni yozishni buyurdi. U bu hadislarni Umaviylar imperiyasi bo'ylab tarqalgan kitoblarda to'plagan. Garchi bu kitoblar bugungi kunda yo'qolgan bo'lsa-da, Ibn an-Nadimning sharhlari ularning fiqh kitoblari, masalan Imom Molikning Muvattosi, birinchi yirik hadislar to'plami tuzilganligini ko'rsatadi. Imom Molikning o'zi, ehtimol, Umar (r.a) buyurgan ilk hadis kitoblardan birinchisini yozgandir.

Hadisshunoslikda sahih bo'lmagan hadislarning ko'payishi sodir bo'lganidan keyin eng mashhur hadis to'plovchisi va «ilm al-hadis» amaliyotchisi Muhammad al-Buxoriy tomonidan 16 yoshdan kattaroq vaqtida 600 000 ga yaqin yig'ilgan hadislar tufayli rivojlandi. Hadis ilmining taraqqiyot bosqichlari haqida to'xtalsak, quyidagilarni qayd qilish lozim bo'ladi.⁴¹

-- Tadqiqot metodologiyasi (Research methodology).

1.Payg'ambar alayhissalom davrida hadis ilmi. Bu davrdagi hadis ilmi, yuqorida qayd etilganidek, sahobalarni Payg'ambardan eshitgan hadislar va uning holatlarini mushohada etganlari bilan belgilanadi. Keyin ular (sahobalar) g'oyib bo'lganlarga u hadislarni yetkazganlar. Shu boisdan ham bu dastlabki

⁴¹ https://uz.wikipedia.org/wiki/Hadis_ilm

bosqichda hadis ilmi rivoyat, yodda saqlash (hifz) va g'oyiblariga yetkazish kabi xususiyatlarga ega bo'lgan.

2. **Sahobalar davrida hadis ilmi.** Bu davr, asosan Payg'ambar vafotlaridan keyin boshlanadi, chunki shu paytdan boshlab hadis rivoyat qilishga alohida talab paydo bo'ladi va avvalroq zikr qilganimizdek, shu maqsad yo'lida boshqa shahar va mamlakatlarga safarlar ham boshlanadi. Ayni vaqtda sahobalar katta e'tibor bilan rivoyat qilinadigan hadislarga biror xato voqe' bo'lishdan ham ogoh bo'la boshladilar. Chunki bu xususda Payg'ambar alayhissalomning **»kimki menga nisbatan yolg'onni so'zlasa, shubhasiz u jahannamdan joy oladi»**, degan ochiq-oydin hadislar ham bor edi. Darvoqe rivoyatning to'g'ri (haqiqat) ekanligi, uning shartlari, xillari, ahkamlari, roviylarning holatlariyu sharoitlariga doir hadis ilmidagi turli-tuman masalalarni tadqiq qiladigan maxsus soha bo'lib, uni **ilm ud-diroya** deb ataladi.

Tahlil va natijalar (Analysis and results). Anashu paytdan e'tiboran roviylarning rivoyatlarini aniqligi, ular Payg'ambarni ko'rganlari yoki undan bevosita eshitganligi haqida shohidlarni talab qilish, bu haqda hatto qasam ichirish kabi masalalar ko'tarila boshladi. Bunga qo'shimcha rivoyat qilinadigan hadisning matnini tadqiq etishga ham alohida e'tibor berildi. Bu hol keyinchalik hadisshunoslikda matnni tanqidiy (ilmiy) tarzda o'rganish (ya'ni **naqd al-matn**) deb ataladi. Mazkur holatlarda matnni aniqlashda islom dini asoslari-Qur'oni karim oyatlari yoki boshqa shu mavzuga dahldor hadislarga asoslanib, yetarli dalil va isbotlarga tayangan holda xulosa chiqarilardi. Mana shu jarayonda sahobalar Payg'ambar alayhissalomdan hadislar rivoyat qilishlik naqadar katta mas'uliyatni va ayni vaqtda g'oyatda muhim va hatarli ekanligini angladilar. Chunki hadislarini ishonchli, to'g'ri rivoyat qilmay uni xato yoki yolg'on, noto'g'ri holda keltirilishi jamiyat uchun muhimligi ayon bo'ldi. Halol va harom tushunchalari, hamda boshqa shar'iy ahkamlarni to'g'ri talqin qilish uchun endi sanad zarurati ham tug'ildi. Bunga ayniqsa, musulmonlar orasida har xil siyosiy fitnalar va mojarolar paydo bo'la boshlagach, tobora ehtiyoj kuchaya boshladi. Bu masalani aniqlash uchun boshqa shaharlarga borishlar ham avj olaboshladi. Hatto bitta hadisni aniq bilish uchun qanchadan-qancha masofa, cho'li-biyobonlarni bosib o'tishga to'g'ri keladi. Masalan, Payg'ambar alayhissalomning suhbatida necha martalar bo'lib undan ko'pdan-ko'p hadislar eshitgan Abu Ayub al-Ansoriy Madinai Munavvaradan atigi bitta hadis eshitish uchun Misrga, Aqaba ibn Omir huzuriga borgan va o'sha hadisni eshitgach, yana uloviga minib o'z shahri Madinaga qaytib kelgan. Hijriy ikkinchi asrdan boshlab, sahobalar davri tugab hadislarini ham matn, ham sanad jihatidan chuqur o'rganib tadqiq etishga ehtiyoj yanada kuchaydi. Bu masala ayniqsa islom olamida turli-tuman fiqohlar (guruhlar) va mazhablar paydo bo'lgandan keyin yanada katta ahamiyat kasb etdi. Shu maqsadda hadisshunoslikda jarh va ta'diy ilmi paydo bo'lib, u roviylarning holatlarini tadqiq etib ular aytganlarini qabul qilish yoki rad etishni o'rganardi. Hadis roviylarining tarixlari va ularning to'liq tarjimai hollarini o'rganish bilan

shug'ullanadigan olimlar paydo bo'lib, bu sohada alohida asarlar yarata boshladilar.⁴²

Hadislar Qur'oni karimdagi oyatlarni tushuntiradi, sharoitga tatbiq etadi. Shunga ko'ra ular o'z ahamiyati jihatidan Qur'oni karimdan keyingi eng muhim qo'llanmalardir. Hadislarni yig'ish payg'ambarimiz davrlaridan boshlangan. Lekin vaqt o'tishi bilan ularni saralash, ishonchlilarini ishonchsizlaridan ajratib olish qiyinlashib borgan. Islomni obro'sizlantirish, musulmonlarni chalg'itish uchun uning dushmanlari soxta hadislar to'qib tarqatganlar. Shuning uchun bu hadislarning kim tomonidan aytilganligiga va ularning shaxsiga alohida e'tibor berilgan. Hadisshunoslik degan fan hadislarning «sahih» (ishonchli)larini «nosahih» (ishonchsiz)laridan ajratish bilan shug'ullangan. Payg'ambarimiz so'zlari – hadislar roviylardan yig'ilgan. «Roviy» ma'lumot beruvchi, aytuvchidir. Roviylar, asosan, ikki xil bo'lgan: sahobalar, tobeinlar. Sahoba deb payg'ambarimizni ko'rgan va u kishi bilan suhbatda bo'lgan izdoshlariga aytilgan. Tobeinlar esa payg'ambarimizni emas, sahobalarni ko'rib, ulardan eshitganlarini aytuvchilardir. Hadis ikki qismdan – sanad va matndan tashkil topgan. Sanad – payg'ambarimiz so'zlarining qachon, qanday sharoitda, kimlar huzurida aytilganligi hujjati bo'lsa, matn uning mazmunidir. Imom Buxoriy mana shunday hadis ilmining Buxorodan yetishib chiqqan va butun dunyoga shuhrat taratgan allomasi edi. U kishining hayot yo'llari ham ibratlidir.⁴³ Talabalarda Yassaviy hikmatlarini o'rganish orqali bir-biriga mehr- muhabbat, muruvvat va oqibat, saxiylik, saxovat diyonat, qanoat, himmat, adolat, sabr- toqat, mehribonlik, rostgo'ylik fahm - farosatlilik, ziyraklik kabi ma'naviy-axloqiy sifatlar rivojlanib borganligiga guvoh bo'ldik. Yassaviy yoshlarga murojaat qilib, bilim egallash oson emasligini, buning uchun esa yillar davomida har qanday qiyinchiligu mashaqqatlarga qaramasdan tinmay izlanish va o'z ustida qunt bilan ishlash kishidan irodali bo'lishni talab qiladi. Shunday xulqqa ega bo'lgan Shaxsgina bilim va fan chmqqilarini yillar davomida egallab olishini ta'kidlaydi.⁴⁴

--Xulosa va takliflar (Conclusion/ Recommendations) Xulosa qilib aytganda, ta'lim-tarbiya jarayonida, o'tilayotgan mavzularga mos bo'lgan hikmatli so'z, aforizmlar va hadislardan foydalanish yaxshi samara beradi. deya ko'rsatiladi. Hadislar tarbiya manbai hisoblanadi. Hadislarni eshitib, tanishish, ko'rish, yodlash, mazmunini anglash, o'rganish orqali hayotimizda hadislardan ibrat olgan holda, ularni amalda hayotimizda qo'llab, ko'p o'zimizni tarbiyamizdagi kamchiliklarni tuzatishimizga yordam beradi. Undan tashqari o'z ona Vatanimizga muhabbat, mehnat va kasb-hunarni ulug'lash, halollik, poklik, do'stlik, oliyjanoblik, rahmshafqatlilik, kamtarlik, rostgo'ylik va vijdonlilik kabi

USE OF ELECTRONIC RESOURCES IN TEACHING INFORMATICS SCIENCE

Abstract. This article presents the algorithm of using information-educational environments in the training of future informatics teachers, the methodology of using this environment, and its level of effectiveness.

Key words: informatics, information-educational environment, algorithm, Internet.

Axborot texnologiyalari sohasi jadal sur'atlar bilan rivojlanib, takomillashib borayotgan bugungi kunda ta'limni axborot-ta'lim muhiti asosida tashkil etish, uning mazmunini ta'lim oluvchilar ongiga to'laqonli singdirish dolzarb muammo sifatida ko'tarilmoqda. Zamonaviy axborot-ta'lim muhitida o'qitishning muammoli usuli axborotretseptiv va reproduktiv metodlari bilan birgalikda keng qo'llaniladi. Bu muhitda onlayn tartibda ta'lim mazmunini

taqdim etish, ta'lim oluvchining bilish faoliyatini boshqarish va nazorat qilish vositalari sifatida foydalaniladi.

Foydalanuvchi nuqtai nazaridan tahlil qiladigan bo'lsak, axborot-ta'lim muhitining birinchi navbatda, tarmoq mijozlariga o'zaro ma'lumotlar almashish, hamda virtual muloqot qilish imkonini yaratib beruvchi axborot magistrali vazifasini o'taydi. Natijada, axborot-ta'lim muhitining tizimidan foydalanish jarayoni uchun interaktiv muloqot yuzaga keladi. Bunda ta'lim beruvchi va ta'lim oluvchi bir-biri bilan bog'liq faoliyatni, differentsiallashtirish tamoyillarini, ularning individualligini hisobga olgan holda inson va texnik imkoniyatlarni optimal amalga oshirishni hamda muloqotdan foydalanishni nazarda tutadi.

Axborot-ta'lim muhitining imkoniyatlari an'anaviy qog'oz asosidagi imkoniyatlardan ancha yuqori, chunki keng ko'lamdagi ta'lim dasturlarini o'zlashtirish va amalga oshirishni ta'minlovchi o'quv reja, fan yoki o'quv kursi bo'yicha dasturlar, uslubiy qo'llanmalar, elektron darsliklar, video lavhalar, taqdimotlar, mustaqil bajarish uchun topshiriqlar, uyga vazifalar, o'rgatuvchi dasturlar, elektron trenajyorlar, o'z-o'zini baholovchi savollar, testlar, fan yoki o'quv kursini o'rganish hamda nazorat ishlarini bajarish bo'yicha uslubiy tavsiyalarni qamrab olgan, Internet tarmog'idagi web-sayt yoki web-portalga joylashtirilgan, tizimlashtirilgan nazariyamaliy resurs hisoblanadi. Shu bois bugungi ta'lim tizimi uchun yangi zamonaviy axborot-ta'lim muhitlarni joriy etish ta'lim muassasalarining asosiy vazifalaridan biri bo'lib, respublikamizning barcha ta'lim muassasalarida Internet tarmog'i orqali axborot-ta'lim muhitlaridan foydalanish joriy etilgan. Ammo ularni o'quv jarayoniga joriy etish bo'yicha qator savollar ochiq qolmoqda.

Xo'sh, bugungi kundagi ta'lim muassasalarining o'quv jarayonida axborot-ta'lim muhitining foydalangan holda ta'limni tashkil etishning ahvoli qanday, bu sohadagi yutuq va kamchiliklar nimalardan iborat, o'z yechimini kutayotgan qanday muammolar mavjud?

Adabiyotlarning tahlili. Zamonaviy axborot-ta'lim muhitining ta'lim tizimida qo'llanishi tushunchalarni ham mazmunan, ham mohiyatan qayta ko'rib chiqishni taqozo etdi. Shu bois, ta'lim va o'qitish jarayonlariga yangicha yondashuvga e'tibor bilan qarala boshlandi. Ta'lim jarayoni deyilganda professor-o'qituvchi va talabaning o'zaro munosabatidagi yaxlit jarayon ko'z oldimizga keladi. Endilikda ushbu jarayon interaktiv o'quv majmualar, video va audio ma'ruzalar, kompyuter dasturlari, televizion va radio o'quv kurslari bilan uyg'unlashib bormoqda. Bu jarayonda o'qitish talabaning ko'proq ichki imkoniyatlari, intellektual potentsiali, axborotni qabul qilish va o'zlashtirish xususiyatlariga bevosita bog'liq. Ta'lim tizimida axborot-ta'lim muhitidan foydalanish muammolari, ta'limni axborotlashtirish nazariyasi, metodologiyasi, amaliyoti bo'yicha Mustaqil Davlatlar Hamdo'stligi va respublikamiz olimlari tomonidan ko'plab tadqiqotlar olib borilgan. Jumladan, A.A.Andreev, O.E.Belova, A.V.Baraulina, N.A.Goncharova, Ye.N.Dronova, V.A.Krasilnikova, A.L.Nazarenko, L.F.Solovev, A.A.Abdugodirov, U.Sh.Begimqulov,

M.H.Lutfillaev, F.R.Murodova, N.I.Taylakov, B.Z.To'raev, O.A.Tarabrin, T.T.Shoymardonov kabi olimlar tomonidan ilmiy-tadqiqot ishlari olib borilgan. Ushbu olimlarning ilmiy-tadqiqot ishlarida bo'lajak informatika o'qituvchilarni tayyorlashda axborot-ta'lim muhitidan foydalanish metodikasiga oid izlanishlar yetarlicha tadqiq etilmagan.

N.I.Taylaqov bugungi kunda elektron ta'limni joriy etishda quyidagi turkum muammolar mavjudligi haqida fikr yuritilgan

elektron ta'limni joriy etishga pedagogik jamoalarning yetarli darajada tayyor emasligi;

fan o'qituvchilarining elektron ta'lim imkoniyatlari haqidagi tasavvurlarining kamligi, ularni qo'llash bo'yicha salohiyatning yetishmasligi;

elektron ta'limni joriy etish bo'yicha mutaxassislarni yetarli darajada emasligi.

U.Sh.Begimqulov [3] ta'lim tizimida axborot-ta'lim muhitini tashkil etish o'quv-tarbiya jarayonlarining barcha bosqichlarini jadallashtirish, bunda axborot texnologiyalaridan foydalanish asosida ta'lim jarayoni sifati va samaradorligi oshishini, talabalarning bilish faoliyatlari intensivlashuvi, fanlararo aloqadorlikning chuqurlashuvi kuzatilishini haqida fikr yuritilgan bo'lsa, A.V.Baraulina [2] darslarda - ta'lim muhitidan foydalanilsa, quyidagi imkoniyatlarga erishish mumkinligi haqida fikr yuritgan: ta'limda ijobiy motivatsiyani ta'minlaydi; darslarni yuqori estetik va emotsional bosqichlarda olib borishni ta'minlaydi; differensiallashning yuqori bosqichlarini ta'minlaydi (yakka tartibda shug'ullanish); darsda bajarilgan ish hajmini 1,5-2 barobarga oshiradi; bilimlarni nazorat qilishni takomillashtiradi; fazoviy tasavvurlarni rivojlantiradi; o'quv jarayonini ratsional tashkillashtiradi hamda, dars samaradorligini oshiradi; tadqiqotchilik faoliyati ko'nikmalarini shakllantiradi; turli ma'lumotli tizimlar, elektron kutubxonalar kabi axborot resurslardan foydalanishga oid ko'nikmasi shakllanadi.

Ye.N.Dronova axborot-ta'lim muhitlaridan onlayn tarzda taqdim etilishi ta'lim oluvchining ushbu fanga bo'lgan qiziqishini orttirishi haqida fikr yuritgan.

Mazkur ijobiy yutuqlarni amalga oshirishda axborot-ta'lim muhitining o'quv mashg'ulotlarning tashkil etuvchilari video ma'ruza, o'rgatuvchi dasturlardan, o'z-o'zini baholovchi va nazorat qiluvchi diagnostik aparat dasturiy vositalardan hamda mustaqil bajarish uchun masalalar, laboratoriy ishlaridan iborat bo'lishi lozim.

Ushbu olimlarning fikrlarini tahliliga ko'ra, axborot-ta'lim muhitini anaviy hamda masofaviy ta'lim o'quv-metodik ta'minotining samarali integratsiyasini ta'minlashi, talabalarga mustaqil izlanish yo'li bilan materiallarni topish, o'rganish hamda muammoli masalalarni hal etish orqali ularda ma'lum tadqiqot ishlarini amalga oshirish ko'nikmalarini shakllantirishi, talabalarning kurs, malakaviy bitiruv ishlarini bajarishda, magistrlik dissertatsiyalarini tayyorlashda o'quv materiallari bilan mustaqil tanishish, tanlab olish, axborot

hamda ma'lumotlarni tahlil eta olish kabi malakalarni shakllanishi uchun sharoit yaratishga oid didaktik vazifalarni ham amalga oshiradi.

Tadqiqot metodologiyasi. Bugungi kunda axborot-ta'lim muhiti orqali ta'lim berish Amerika, Germaniya, Buyuk Britaniya, Yaponiya, Xitoy, Janubiy Koriya va Rossiya davlatlarida keng tarqalgan bo'lib, XXI asr oxirida axborot-ta'lim muhiti orqali ta'lim berish, butun dunyoni qamrab olishi kutilmoqda. Bu borada AQShning Pensilvaniya davlat universiteti masofaviy ta'lim markazi (worldcampus.psu.edu), Kaliforniya virtual universiteti (cvc.edu), Vashington ochiq universiteti (gwu.edu), G'arbiy gubernatorlari universiteti (umuc.edu), Minnesota virtual universiteti (careerwise.mnscu.edu), Florida masofaviy ta'lim universitet (fcd.ufl.edu)lar o'z hissasini qo'shib kelmoqda.

Bugungi kunda Buyuk Britaniya (open.ac.uk) ochiq universitetida 2 milliondan ortiq talaba tahsil oladi, ushbu universitetning 305 ta hududiy va 42 ta boshqa davlatlarda markazlari mavjud. Universitetning 250 ta markazida aniq va tabiiy fanlarga oid elektron resurslardan, audio video materiallardan 120 000ta o'quvchi va talabalar foydalanib tahsil olib kelmoqda. Ushbu ochiq ta'limga o'xshash ta'lim markazlari Kanada, Avstriya, Ispaniya, Pokiston, Niderlandiya, Turkiya, Hindiston va boshqa davlatlarda mavjud.

Germaniyada axborot-ta'lim muhitidan foydalanib ta'lim berish o'ziga xos xususiyatlarga ega. Ushbu ta'lim berish tizimi markazlashtirilgan holda oliy-kasbiy ta'lim mutaxassislarini masofadan turib tayyorlashni rejalashtirishdan boshlangan. Mutaxassislarni tarmog'i orqali tayyorlash, amalga oshirayotgan oliy kasb-hunar ta'lim muassasasiga misol sifatida, Xagen (fernuni-hagen.de) va Drezden texnologiya (tu-dresden.de) universitetlarini keltirish mumkin. Universitetda 50000 dan ortiq talabaga aniq va tabiiy fanlarga oid o'quv resurslari xizmati amalga oshiriladi

Xitoyning ko'plab ta'lim oluvchilari «Netease Open Course» platformasidagi elektron resurslaridan foydalanishadi. «Netease» kurslarining ochilishi erkin vaqtda to'lovlarsiz ta'lim olish uchun muqobil universitet bo'lib qolmoqda. Tarmoqqa 20 mingdan ortiq ma'ruzalar (video konferensiyalar, dunyoning eng mashhur universitetlar seminar mashg'ulotlari) joylashgan. Ko'plab video darslarda Xitoy subtitr (izohli yozuv)lari mavjuddir. Foydalanuvchilar qo'l telefonlari orqali, ularni yo'lda ketayotganda, ishda yoki sport bilan shug'ullanayotgan vaqtda foydalanish imkoniyatiga ega.

«Netease» ochiq kurslari Shtab-kvartirasi Xanchjou shahrida joylashgan bo'lib, 5 yil mobaynida ofis Oksford, Yelsk va Kembrij universitetlari hamda, Amerika web-resurslari bilan hamkorlik aloqalarini o'rnatdi. Bu yerda asosan ommaviy foydalanuvchilarni 18-35 yoshlilar hisoblanadi. Bularni asosan, universitet talabalari yoki yaqinda bitirgan bitiruvchilar tashkil etadi.

Yaponiya ta'lim vazirligining 2003 yilgacha bo'lgan milliy o'quv rejasi birinchi navbatda boshlang'ich, o'rta maktab va universitet o'qituvchilarini axborot-kommunikatsiya texnologiyalari savodxonligini oshirish bo'yicha qayta tayyorlashga qaratiladi. 2005 yilga kelib, Yaponiyadagi barcha ta'lim

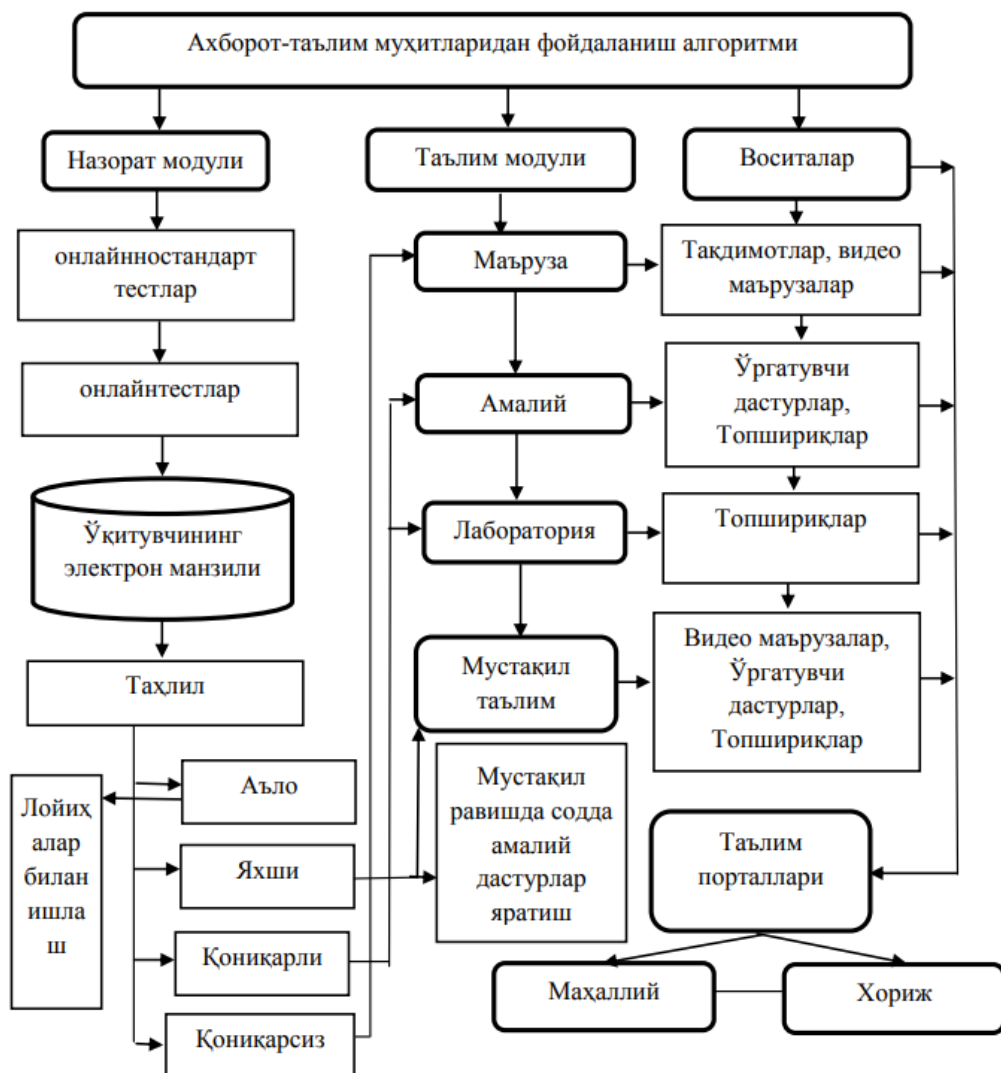

muassasalari 24 soat davomida yuqori tezlikda ishlaydigan ADSL va optik tolali Internet tarmog'iga ulandi. O'quvchilarning fanlardan o'zlashtirish darajasini baholash uchun o'qituvchi jurnali va jurnallar elektron shaklga o'tkazilib, Internet tarmog'iga joylashtirilib borildi. Ota-onalar o'z farzandlarini fanlardan o'zlashtirish darajasini onlayn nazorat qilib borishi va o'qituvchilar bilan elektron pochta orqali muloqot qilib borish uchun Internet tarmog'ida maxsus ma'lumotlar bazasi yaratildi. Shuningdek, ota-onalar bilan video konferensiyalar orqali muloqotlar o'tkazib boriladi. Yaponiyada eng yaxshi jahon standartlariga muvofiq ta'lim sifatini oshirib kelayotgan Kyoto universiteti (kyotou.ac.jp/en), Tokio texnologiyalari instituti (titech.ac.jp), Tokio universiteti (u-tokyo.ac.jp), Kyushu universiteti (kyushu-u.ac.jp), Nagoya universiteti (civil.nagoya-u.ac.jp), Osaka universiteti (osakau.ac.jp)larini misol sifatida keltirish mumkin.

Janubiy Koreyada dunyoda ta'lim jarayonida axborot-kommunikatsiya texnologiyalaridan keng foydalanayotgan davlat hisoblandi, hozirgi kunda har bir darsda axborot-ta'lim muhitidan keng foydalaniladi. O'quvchilar uchun qo'l telefonlari va smartfonlarida darsda, darsdan tashqari va uyda foydalanish uchun o'quv resurslari yaratilgan. Shuningdek, e-learning o'qitish tizimi faol tarzda yo'lgan qo'yilgan bo'lib, unda 700 dan ortiq elektron ta'lim provayderlar kompaniyasi faoliyat ko'rsatib kelmoqda.

Rossiya Federatsiyasida ta'limni axborotlashtirishga hamda ulardan ta'lim jarayonida foydalanishni rivojlantirish bo'yicha ko'plab ilmiy tadqiqot ishlari amalga oshirildi. Birinchi qadam sifatida Rossiya universitetlari davlat dasturlari doirasida Rossiya milliy, ilmiy ta'limiy runnet.ru tarmog'i shakllantirilib, ushbu tarmoqqa universitetlar, katta ilmiy ta'lim muassasalar birlashtirildi hamda, dunyo ta'lim muassasalarining ilmiy ta'lim resurslaridan foydalanishni amalga oshirildi. 2001-2005 yillar oralig'ida esa yagona axborot-ta'limni rivojlantirish maqsadida bir qancha ta'lim portallari yaratilib, ushbu yaratilgan portallarga 10 000 dan ortiq o'quv resurslari jamlanib, 42ta hududiy masofaviy ta'lim markazi Internet tarmog'i orqali ta'lim berish uchun axborot-kommunikatsion qurilmalari bilan ta'minlandi [6]. Ayni paytda informatika fanini o'qitishga mo'ljallangan access-video.ru, academu.yandex.ru, coursera.ru, loftblog.ru, cictemnik.ru kabi axborot-ta'lim muhitlaridan bo'lajak informatika o'qituvchilarini tayyorlashda keng ko'lamda foydalanilib kelinmoqda.

Bu borada mamalakatimizda Ziyonet axborot-ta'lim tarmog'i portali (ziyonet.uz), Ochiq ta'lim video portali (uTube.uz), axborot texnologiyalari universitetining web-sayti (acm.tuit.uz) kabi axborot-ta'lim muhitlari yaratilib, o'quv jarayonida keng ko'lamda foydalanilib kelinmoqda.

Ayni paytda ushbu axborot-ta'lim muhitlaridan bo'lajak informatika o'qituvchilarni tayyorlash bo'yicha o'qitish algoritmi va foydalanish metodikasini takomillashtirish zarurati tug'ilmoqda. Shu bois biz quyidagi foydalanish algoritmini tavsiya etamiz (1-rasmga qarang).

1-rasm. Axborot-ta'lim muhitidan foydalanish algoritmining tuzilmasi.

Professor-o'qituvchi onlayn tartibda axborot-ta'lim muhitlaridan foydalanib, informatika turkumiga kiruvchi fanlarni o'zlatirishini nazorat va tahlil qilib boradi. A'lo va yaxshi bahoga o'zlashtirgan talabalarga amaliy dasturlar, elektron darsliklar, o'rgatuvchi dasturlar hamda kichchik loyihalar bajarish topshiriqlari berib boriladi.

Qoniqarli va qoniqarsiz baho olgan talabalarga ma'ruzalarni, amaliy mashg'ulotlarni, laboratoriya topshiriqlarni qayta o'zlashtirish bo'yicha onlayn topshiriqlar berib boradi.

O'shbu algoritm hamda 1-jadvalda keltirilgan axborot-ta'lim muhitlaridan foydalangan holda Navoiy davlat pedagogika institutida «Informatika o'qitish metodikasi» ta'lim yo'nalishining ta'lim oluvchi talabalarini o'qitishda foydalanindi.

Т.р	Фанлар	Фойдаланган ахборот-таълим муҳитлари
1.	Алгоритмлар ва дастурлаш тиллари	ziyonet.uz, acm.tuit.uz, uTube.com

Informatika turkumiga kiruvchi fanlarni o'qitishda 1-rasmda keltirilgan algoritm asosida hamda 1-jadvalda keltirilgan va shunga o'xshash axborot-ta'lim muhitlaridan foydalanilsa, quyidagi imkoniyatlarga erishadi: shaxsning yangi g'oyalarni yaratish va qabul qilishga tayyorligini tavsiflovchi ijodiy qobiliyatini rivojlantiradi; shaxs hatti-harakati, faoliyatida kreativ mavjudligini amaldagi an'anaviy holatlar, tajribalardan farqli o'laroq muammoni yangicha yondashuvlardan foydalangan holda, nostandart usulda yechishga oid mustaqil qaror qabul qilish iqtidorini rivojlantiradi; topshiriqlarni, faollikni rivojlantirishga xizmat qiladi.

Tahlil va natijalar. Pedagogik tajriba-sinovini o'tkazish jarayonida amalga oshirilgan pedagogik eksperimentning muvaffaqiyati, ushbu jarayonda uning tashkiliy-pedagogik jihatlarini inobatga olishi zaruriyatini ko'rsatadi. Shuning uchun ham mazkur jihatlariga alohida e'tibor qaratildi. Tajriba-sinov ishlarini tashkil etish jarayoni Navoiy davlat pedagogika institutidagi professor-o'qituvchilarning fikr va mulohazalarini bilish bilan tashkil etildi. Tajriba-sinov ishlari 2017- 2020 yillarda Navoiy davlat pedagogika institutining «Informatika o'qitish metodikasi» ta'lim yo'nalishida kunduzgi va sirtqi ta'lim oluvchi talabalar o'rtasida o'tkazildi. Tajriba va nazorat guruhlariga uchun jami 246 nafar talaba tanlab olindi.

Tajriba-sinov davrida informatika fani professor-o'qituvchisi va talabalar bilan axborot-ta'lim muhitlarning asosiy hususiyatlariga oid suhbat va kuzatuvlar olib borildi. Suhbat va kuzatish natijalari uchun 18 nafar informatika fani professor-o'qituvchisi va 246 nafar talaba ishtirok etdi.

Professor-o'qituvchilar tomonidan so'rov natijalaridan ma'lum bo'ldiki, 56,4 % o'qituvchi dars jarayonida axborot-ta'lim muhitlaridan foydalanish zarur, 28,6 % mustaqil ravshda foydalanish maqsadga muvofiq, 14,8 % qiyin

mavzularni o'zlashtirishda foydalanish mumkin, 0,2 % bilimlarni o'zlashtirishga yordam bermaydi, deb hisoblashdi.

Talabalar tomonidan so'rov natijalaridan ma'lum bo'ldiki, 45 % o'qituvchi dars jarayonida axborot-ta'lim muhitlaridan foydalanish zarur, 40,3 % mustaqil ravshda foydalanish maqsadga muvofiq, 14,4 % qiyin mavzularni o'zlashtirishda foydalanish mumkin, 0,3 % bilimlarni o'zlashtirishga yordam bermaydi, deb hisoblashdi.

Tajriba-sinov ishlarining umumlashtiruvchi bosqichi 2019 yilda olingan sonli ma'lumotlarning natijalari tahlil qilinib, umumlashtirildi va uning ishonchligini tekshirish maqsadida Student Fisher kriteriyasi asosida matematik-statistik tahlili qilindi. Mazkur kriteriyadan foydalanishda tanlanmalar uchun mos o'rta qiymatlar

$$\bar{X} = \frac{1}{n} \sum_{i=1}^4 n_i X_i$$

tarqoqlik koeffitsientlarini

$$D_n = \sum_{i=1}^4 \frac{n_i (x_i - \bar{X})^2}{n - 1}$$

O'zlashtirish ko'rsatkichlarini aniqlashda esa

$$A\% = \frac{\bar{X}}{3} \cdot 100\% - \frac{\bar{Y}}{3} \cdot 100\%$$

formulalardan foydalanildi. Olingan sonli natijalarga ko'ra, o'qitish samaradorligining baholash mezoni birdan kattaligiva bilish darajasining baholash mezoni noldan katta ekan. Bundan ma'lumki, tajriba guruhi ko'rsatkichlari nazorat guruhidagidan yuqori.

Hisoblash natijasiga ko'ra, tajriba guruhining o'rtacha o'zlashtirish ko'rsatkichi nazorat guruhiga nisbatan yuqori ekanligi, ya'ni, 11,4 % ga oshganligi ma'lum bo'ldi.

Xulosa va takliflar. Xulosa qilib aytganda, informatika o'qituvchisini tayyorlash uchun Office dasturlarni, grafik dasturlarni, ma'lumotlar bazasini boshqariz tizmlarini, dasturlash tillarini hamda, kompyuterning dasturiy va texnik ta'minotini o'rganishi talab etadi. Shu sababli bo'lajak o'qituvchilar ushbu dasturiy vositalarni va kompyuterning texnik ta'minotini o'rganishi, ularni qo'llash ko'nikmalariga ega bo'lishini taqozo etadi. Ushbu dasturiy vositalarni mukammal o'rganishning eng qulay usullaridan biri, ularni mustaqil ravishda axborot-ta'lim muhitida foydalanishdan iboratdir. Bu esa o'z navbatida, axborot-

ta'lim muhitiga joylashtirilgan o'rgatuvchi dasturlaridan foydalanishni talab etadi. Axborot-ta'lim muhitidan foydalanib, dasturiy vositalarni mustaqil ravishda o'rganish, ulardan foydalanish qonun-qoidalarni intuitiv darajada tushunishga, kerakli axborotlarni izlab topishga hamda ular bilan ishlashni o'rgatadi. Shu bois bo'lajak informatika o'qituvchilarni tayyorlashda yuqorida taqdim etilgan algoritmdan hamda taqdim etilayotgan axborot-ta'lim muhitlaridan foydalanishni tavsiya etamiz. Mazkur o'qitish algoritmi hamda axborot-ta'lim muhitlaridan ta'lim oluvchini ko'proq mustaqil shug'illanishi va o'z-o'zini baholash uchun samarali hisoblanadi.

Axborot-ta'lim muhitida joylashtirilgan o'rgatuvchi pedagogik dasturiy vositalar asosida o'quv jarayonini tashkil etishda ta'lim oluvchini o'qishga qiziqishni orttiradi, ta'limning interaktiv xususiyati asosida kognitiv, kreativlik, motivatsiya, evristik fikrlash qobiliyatlarini rivojlantiradi va o'quv materiallarini o'zlashtirilishining samaradorligini oshiradi. Shu bilan bir o'rganishi qiyin yoxud murakkab bo'lgan dasturlarni modellashtirish va kuzatish imkoniyatini beradi, kompyuter dasturlarining o'zlashtirilishi nafaqat darajasiga ko'ra, balki ta'lim oluvchilar erishgan mantiq va qabul qilishlari darajasiga ko'ra ham samarali bo'lishini ta'minlaydi. Shuningdek, ta'lim oluvchilarning fanga ilmiy va ijodiy yondoshishga o'rgatadi, o'quv mavzularini oson o'zlashtirishiga, ilmiy dunyoqarashining shakllanishida muhim omil bo'lib xizmat qiladi, bilimlarni mustahkam egallashga yordam beradi, his tuyg'ularga ta'sir etgan holda fanga nisbatan qiziqishi oshadi. Shunga ko'ra, ta'kidlashimiz mumkinki, ta'lim oluvchilarning informatika turkumiga kiruvchi fanlaridan ijodiy faolligini va o'quv faoliyatining to'g'ri tashkil etilishida axborot-ta'lim muhiti va unga mo'ljallangan o'rgatuvchi dasturlar, o'z-o'zini nazorat qiluvchi onlayn vositalardan foydalanish maqsadga muvofiqdir. Bu bo'lajak informatika o'qituvchilarini mustaqil o'rganishi uchun ayni muddao hisoblanadi.

Yuqorida olib borilgan statistik-tahlillardan xulosa qilib aytish mumkinki, pedagogika oliy ta'lim muassasalarida bo'lajak informatika o'qituvchilarini tayyorlashda taqdim etilgan algoritm asosida axborot-ta'lim muhitidan foydalanish uchun ommalashtirish mumkinligiga asos bo'ladi.

THEORETICAL AND METHODOLOGICAL FOUNDATIONS, SIGNS: GOALS AND OBJECTIVES OF LEGAL RESPONSIBILITY

Annotation. The article analyzes the theoretical and methodological foundations, signs and objectives of legal responsibility. The author examines the legal system and the problem of legal responsibility in it, as well as issues of crime and punishment. The registration system has been liberalized on the basis of international standards, according to which the development of the judicial sphere, in particular the system of exemption from legal liability, is an urgent problem of today, as well as a widely studied topic in the world experience, and the author has studied this relevance.

Keywords: law, international, legal system, standards, liberalization, judicial and legal sphere, legal responsibility.

In new Uzbekistan, under the leadership of the Head of State Sh.M.Mirziyoev, in the wide-scale reforms implemented in all directions and fields, special attention is paid to improving the organizational and legal foundations of the system of protection of human rights and freedoms.

As the President of Uzbekistan Sh.M. Mirziyoev noted, the establishment of New Uzbekistan is not just a desire, a subjective phenomenon, but a fundamental historical basis, which is required by the existing political-legal, social-economic, spiritual-educational situation in our country, and the people's. It is an objective necessity that corresponds to the aspirations of the century and fully meets its national interests. New Uzbekistan is a country that develops on the basis of the principles of friendly cooperation with the world community, strictly following the universally recognized norms and principles of democracy, human rights and freedoms, and the ultimate goal of which is to create a free, prosperous and prosperous life for our people.⁴⁶

In these processes, the legal system is liberalized on the basis of international standards, in which the development of the field of judicial law, in particular, the system of exemption from legal liability, is set as a priority.

Today, the issue of exemption from legal responsibility is considered urgent for the international community, and countries and international organizations pay special attention to its causes and development trends. According to some international organizations, at least 183 regional conflicts will occur around the

⁴⁶ New Uzbekistan is becoming a country of democratic changes, wide opportunities and practical work 17.08.2021. Answers of the President of the Republic of Uzbekistan Shavkat Mirziyoyev to the questions of Salim Doniyorov, editor-in-chief of the "Yangi Uzbekistan" newspaper. <https://president.uz/uz/lists/view/4547>

world in 2023, which is the highest rate in the last 30 years.⁴⁷ According to the UN, trends in criminal responsibility are increasing in all regions, especially corruption-related crimes. Currently, the global damage of corruption is about 3 trillion US dollars.⁴⁸ According to the researchers, in 2021 alone, more than 4.3 million people worldwide were charged with a crime, a 26% increase from 2019.⁴⁹

From this point of view, many countries of the world and a number of international organizations are committed to comprehensively ensuring human rights, improving the legal system, preventing and eliminating crimes and violations, as well as developing the organizational and legal foundations of the institution of legal responsibility and exemption from it in the processes of liberalization of the legal system. practical measures are being taken.

In recent years, important programs aimed at state and society building, economic liberalization, support of private property and entrepreneurship have been consistently implemented in our country in the course of thorough reforms, and extensive reforms aimed at ensuring human rights have been implemented.

The Decree of the President of the Republic of Uzbekistan dated January 28, 2022 No. PF-60 on the strategy «Uzbekistan - 2030» was adopted in order to ensure the continuity of these reforms and bring the development of society to a new level.

Systematic work is being carried out to improve the judicial system, comprehensively ensure the rule of law, and develop the human rights system based on international standards. In this regard, in the last two years, 10 laws on law enforcement activities, about 40 decrees and decisions of the President, and more than 60 government decisions were adopted.⁵⁰ Ensuring the rule of law was defined as one of the main principles of the development of New Uzbekistan.⁵¹

As well as the changes made in all directions to the new version of the Constitution of the Republic of Uzbekistan, which was adopted by popular vote on April 30, 2023, the main guarantee of the rights of a person arrested on suspicion of committing a crime («Miranda rule»), detention for a maximum of 48 hours until the decision of a civil court norms such as impossibility («habeas corpus» institution) and the prohibition of the death penalty were reflected and strengthened at the level of the constitution.

The successful implementation of this practice in the country can be analyzed by the dynamics of increasing cases of acquittals by judicial authorities

⁴⁷ Исследование: в 2023 году в мире произошло 183 региональных конфликта. 11.12.2023.

⁴⁹ M. Akramova. special grounds for exemption from criminal liability. 12.00.08 – criminal law. criminology. criminal law. Doctor of Philosophy (PhD) Dissertation in Legal Sciences. Tashkent - 2022

⁵⁰ President: Our goal is to please our people by ensuring justice and the rule of law. 28.07.2023. <https://president.uz/uz/lists/view/6519>

⁵¹ President Shavkat Mirziyoyev's speech at the first plenary session of the Council of Foreign Investors under the President of the Republic of Uzbekistan. 11/16/2022. <https://president.uz/uz/lists/view/5702>

from year to year. In particular, during the years 2007-2015, courts considered 498,730 criminal cases against 688,354 persons, and 110 persons were acquitted, and during the years 2016-2022, 322,531 criminal cases were considered against 418,992 persons, of which 4,764 persons justified.⁵²

At this point, in order to make the Constitution a directly working document, that is, to establish the practice of directly applying its norms in the courts, the decision of the Plenum of the Supreme Court was adopted on this issue.⁵³ According to the decision, the provision of supreme legal force of the Constitution means that its norms prevail over all laws and other regulatory legal documents. Accordingly, it was noted that the courts should evaluate the content of the law and other legal documents regulating the legal relations under consideration and apply the norms of the Constitution as a normative legal basis with directly applicable supreme legal force.⁵⁴

In its constitution, the creation of a social state was defined as a strategic goal, and the principles of social justice and solidarity were introduced, and the constitutional foundations were strengthened, providing completely new mechanisms for the protection of human rights and freedoms.⁵⁵

According to Article 29 of the Constitution, anyone convicted of a crime has the right to have the sentence reviewed by a higher court in accordance with the procedure established by law, as well as the right to petition for pardon or commutation of sentence. The rights of victims of crimes are protected by law. The state provides victims with protection and access to justice, creates conditions for compensation for the damage caused to them.⁵⁶ On the basis of this article of the Constitution, the right to amnesty of persons serving or having served a sentence has been strengthened at the constitutional level.

By amnesty, a citizen may be fully or partially released from punishment, or the punishment imposed by the court may be replaced by another lighter punishment, or the conviction may be removed. This practice is also applied to citizens of the Republic of Uzbekistan and citizens of foreign countries and stateless persons.

The purpose of punishing a person who has committed a crime is to re-educate him and make him realize his mistakes. That's why it is important to give people who have committed crimes because of their delusions an opportunity to wash away their guilt before the society and return them to the family. The policy of amnesty and resocialization of convicts used in recent years is actually giving

⁵⁶ Constitution of the Republic of Uzbekistan. <https://lex.uz/docs/6445145>

its positive results. Since 2017, 22 decrees on amnesty have been adopted by the President, and these documents have had a positive effect on the fate of more than 6,000 people.⁵⁷

Special attention is paid to the issue of exemption from legal responsibility in the reforms of the judiciary. In the congratulatory speech of the President of the Republic of Uzbekistan, Sh.M. Mirziyoev, on the occasion of the 31st anniversary of the adoption of the Constitution, it is considered a priority to adapt judicial reforms to the new constitutional space, in this process, to direct the activities of courts and law enforcement agencies to the protection of human rights, freedoms and legal interests.⁵⁸

From this point of view, the relevance of the topic is related to the following.

First of all, researching the legal nature of the institution of exemption from legal responsibility, improving its organizational and legal foundations, and adapting the relevant legislation to international standards are of urgent importance.

Secondly, to analyze the internal and external factors affecting the activity of the institution of legal responsibility and to develop proposals and conclusions regarding the improvement of the institution of exemption from administrative, economic, financial, civil and criminal responsibility in the national legislation.

Thirdly, legal liability as a multifaceted legal phenomenon is one of the effective elements of legal regulation. In recent decades, the crime situation around the world has become significantly more complicated. However, it has been historically proven that only negative legal responsibility measures cannot solve the problem of fighting crime. The modern legal policy of our country should be focused on strengthening positive legal responsibility, educating a law-abiding and law-respecting person, and eliminating legal nihilism. The relevance of positive legal responsibility is also explained by the fact that fundamental changes and processes occurring in the field of legal regulation force us to reconsider many basic theoretical rules related to legal responsibility.

Fourthly, there is no general opinion in legal science about the concept, essence, content, foundations, principles, tasks of positive legal responsibility. The theoretically correct solution of these issues largely determines the activity of the legislative and law enforcement bodies and the behavior of citizens. In addition, today the problem of positive legal responsibility is gaining priority in connection with the establishment of universal human values, the construction of a legal state and the formation of a civil society.

SQL DA SO‘ROVLARNI UNION OPERATORI YORDAMIDA BIRLASHTIRISH

Annotatsiya. Ushbu maqolada SQL tilida birlashtirilgan so‘rovlar yaratish va unda UNION operatoridan foydalanish usullari ko‘rib chiqilgan.

Tayanch so‘z va iboralar: SQL tili, UNION va UNION ALL operatorlari, WHERE konstruktsiyasi va SELECT instruktsiyasi.

*Khaidarova S., candidate of technical sciences
associate professor
Kokand State Pedagogical Institute
Republic of Uzbekistan*

COMBINING QUERIES IN SQL USING THE UNION OPERATOR

Annotation. This article discusses methods for creating combined queries in SQL language and using the Union operator in it.

Keywords and expressions: SQL language, UNION and UNION ALL operators, WHERE clause and SELECT statement.

Hozirgi paytda ma'lumotlar bazasining eng keng tarqalgan modeli bu relyatsion modeldir. Relyatsion ma'lumot bazalari ma'lumotlarni jadvallarga joylash va jadvallar orasidamos bog'liqliklarni, ya'ni, munosabatni (relyatsiyani) o'rnatishga asoslangan.

SQL – bu strukturalashgan so‘rovlar tilining (Structured Query Language) qisqartirilgan nomlanishi bo‘lib, SQL foydalanuvchining ma'lumotlar bazasi bilan o‘zaro aloqasini tashkil etish uchun qo‘llaniluvchi tildir. SQL faqat relyatsion deb nomlanuvchi bir turdagi ma'lumotlar bazasi bilan ishlaydi.

O‘zbekistonda uzluksiz ta’lim tizimida SQL tili va uni o‘qitish masalalari E.S. Babajanov, S. Xaydarova va boshqa olimlarning qator ilmiy ishlarida ko‘rib chiqilgan. SQL tili va uning tarkibi, SQL tilining tarixi⁵⁹, SQL tilining imkoniyatlari va qo‘llanilishi⁶⁰ haqida ma'lumotlar keltirilgan.

SQL da so‘rovlar UNION operatori yordamida birlashtiriladi, bu operator SELECT instruktsiyasidan ko‘p marta foydalanish orqali yagona natija olish

⁵⁹ E.S. Babadjanov. SQL tili va uning tarkibi. SQL tili tarixi. <https://referat.arxiv.uz/index.php?do=files&op=download&fileid=63504>

⁶⁰ S. Xaydarova. SQL tili: Imkoniyatlari va qo‘llanilishi. O‘quv qo‘llanma. “Innovatsiya - Ziyo” nashriyoti, 2020, - 120 bet.

imkonini beradi. Bu operatoridan foydalanish juda oddiy. Buning uchun har bir SELECT instruksiyasi orasiga UNION kalit soʻzini qoʻshish kifoya.

Misol koʻraylik. Faraz qilaylik, bizga Illinoys, Indiana va Michigan shtatidagi barcha mijozlar haqidagi maʼlumotlarni oʻz ichiga olgan hisobotni olish kerak boʻlsin (Customers jadvali).

Customers jadvali

cust_id	cust_name	cust_address	cust_city	cust_state	cust_zip	cust_country	cust_contact	cust_email
1000000001	Village Toys	200 Maple Lane	Detroit	MI	44444	USA	John Smith	sales@villagetoy.com
1000000002	Kids Place	333 South Lake Drive	Columbus	OH	43333	USA	Michelle Green	
1000000003	Fun4All	1 Sunny Place	Muncie	IN	42222	USA	Jim Jones	jjones@fun4all.com
1000000004	Fun4All	829 Riverside Drive	Phoenix	AZ	88888	USA	Denise L. Stephens	dstephens@fun4all.com
1000000005	The Toy Store	4545 53rd Street	Chicago	IL	54545	USA	Kim Howard	

Bu hisobotga siz shtati qanday boʻlishidan qatʼiy nazar nomi Fun4All boʻlgan mijoz haqidagi maʼlumotlarni ham qoʻshmoqchisiz. Bunda albatta bu talablarni bajarish uchun WHERE konstruktsiyasidan foydalansa boʻladi, lekin bu holda UNION operatoridan foydalanish qulayroq. Aytib oʻtilganidek, UNION operatori SELECT instruksiyasidan koʻp marta foydalanishni taqozo qiladi, avval biz ularni alohida koʻrib chiqib, soʻngra birlashtiramiz.

1-soʻrov quyidagicha boʻladi:

```
SELECT cust_name,cust_contact,cust_email
FROM Customers
WHERE cust_state IN( 'IL', 'IN', 'MI');
```

Bu SELECT instruksiyasi mijozning shtatini operatorida koʻrsatilgan Illinoys, Indiana va Michigan shtatlariga tegishli boʻlgan satrlarni chiqarib beradi.

Bu soʻrov natijasi quyida keltirilgan:

```
cust_namecust_contactcust_email
```

Village ToysJohn Smithsales@villagetoy.com

Fun4AllJim Jonesjjones@fun4all.com

The Toy Store Kim HowardNULL

2-soʻrov quyidagicha boʻladi:

```
SELECT cust_name,cust_contact,cust_email
FROM Customers
WHERE cust_name = 'Fun4All';
```

Bu SELECT instruktsiyasi nomi Fun4All bo‘lgan mijozga tegishli bo‘lgan satrlarni chiqarib beradi.

Bu so‘rov natijasi quyida keltirilgan:
cust_namecust_contactcust_email

```
-----
Fun4AllJim Jonesjjones@fun4all.com
Fun4AllDenise L. Stephensdstephens@fun4all.com
Ikkala so‘rovni birlashtirish uchun quyidagilarni bajarish kerak:
```

```
SELECT cust_name,cust_contact,cust_email
FROM Customers
WHERE cust_state IN('IL','IN','MI')
UNION
SELECT cust_name,cust_contact,cust_email
FROM Customers
WHERE cust_name = 'Fun4All';
```

Bu birlashtirilgan so‘rov yuqorida keltirilgan birinchi va ikkinchi so‘rovlarning biri-biridan UNION kalit so‘zi bilan ajratilgan SELECT instruktsiyalarini o‘z ichiga oladi.

Bu birlashtiruvchi so‘rov natijasi quyidagicha bo‘ladi:
cust_namecust_contactcust_email

```
-----
Fun4AllJim Jonesjjones@fun4all.com
Fun4AllDenise L. Stephensdstephens@fun4all.com
Village ToysJohn Smithsales@villagetoys.com
The Toy Store Kim HowardNULL
```

SELECT instruktsiyalari alohida bajarilganda birinchi SELECT instruktsiyasi natija sifatida uchta satrni, ikkinchi SELECT instruktsiyasi esa ikkita satrni chiqarib beryapti. Bu ikki instruktsiya UNION operatori yordamida birlashtirilganda natija sifatida beshta emas, faqat to‘rtta satr chiqarib berilyapti. Natijalarga e‘tibor bersak, birinchi SELECT instruktsiyasi natijasidagi ikkinchi satr ikkinchi SELECT instruktsiyasi instruktsiyasi natijasidagi birinchi satrda takrorlanayapti.

UNION operatori natijalar to‘plamidan takrorlanuvchi satrlarni o‘chiradi, bu satr Indiana shtatidan bo‘lgan Fun4All nomli mijozga tegishli bo‘lgan satr bo‘lib, u ikkala SELECT instruktsiyasi tomonidan ham hosil qilingan edi: Fun4All Jim Jonesjjones@fun4all.com. UNION operatori yordamida birlashtirilgan so‘rov natijasida takrorlanuvchi satr bo‘lmaydi va natija unikal satrlardan iborat bo‘ladi.

Endi shu so‘rovni UNION operatoridan emas, balki WHERE konstruktsiyasidan foydalanib yarataylik:

```
SELECT cust_name,cust_contact,cust_email
FROM Customers
WHERE cust_state IN('IL', 'IN', 'MI')
OR cust_name = 'Fun4All';
```

UNION operatori va WHERE konstruktsiyasidan foydalanib yaratilgan birlashtiruvchi so‘rovlar natijasi bir xil bo‘ladi, lekin bu berilgan misoldaularni taqqoslash shuni ko‘rsatdiki, UNION operatorini qo‘llash WHERE konstruktsiyasiga nisbatan ko‘proq noqulay bo‘lishi mumkin.

Keltirilgan jadvallar orqali ma’lumotlar bazasini strukturalashni ko‘rgazmali ravishda ko‘rsatishga erishildi. Olingan bilimlarni foydalanuvchi o‘z shaxsiy bazasini yaratishda qo‘llashi mumkin.

RUSSIAN LANGUAGE IN THE WORLD LANGUAGE SYSTEM

Abstract. Indicates that the main functions of the language are social, not the sinuses of the language. All people, regardless of their affiliation and social or professional groups, should communicate, think and express their opinions.

Key words: Russian language, international educational centers, World Languages Club, International Association of Teachers of Russian Language and Literature, term.

Society, which is the most important tool of people, cannot live without the use of language. There is no human activity - they do not use it as an expression of their own thoughts, feelings and willpower. Over time, people became interested in its constant companion, language, and created a science about it. This science is now called linguistics or linguistic science. For those whose profession is related to teaching or research, this science is also very important for those who want to use it as a professional tool (teachers, lawyers, lecturers, journalists, writers, etc.). Methodology «The Russian language is the language of the world,» says the famous linguist Vyacheslav Belousov. In the third millennium it does not lose its cultural or historical significance. It will maintain its position not only in the CIS countries, but throughout the world.

First of all, the Russian language (along with English, Chinese, French, Spanish and Arabic) is the official language of many international organizations - the UN, UNESCO and others. This means that official documents and special journals of these organizations are published in Russian, their websites are created and work is carried out. Russian is one of the languages spoken by almost a third of international non-governmental organizations, including the World Federation of Trade Unions and the International Committee for European Security. It is also used as a business language at major international conferences and summits to facilitate communication between representatives of different countries.

Secondly, Russian is the language of one of the largest international educational centers. Thirdly, the Russian language opens up the possibility of familiarization not only with the riches of Russian science and culture, but also of other countries, and acts as an intermediary between different peoples, in particular in the Eurasian region. Finally, most of the scientific and fiction literature published in the world has been translated into Russian. Fourthly, Russia plays an important role in the international education market. The Russian language makes it possible to gain high professional knowledge at the level of world standards. Fifthly, the desire to get acquainted with the culture, in particular

with the literature that stands behind it, which has universal significance, is still an important reason for interest in learning the Russian language.

Communication between UNESCO and different cultures of the Council of Europe considers this as a pressing task of our time, since such conversations imply mutual understanding of the values and traditions of other peoples, the exchange of experience accumulated over centuries, the exchange of views on topical issues of the past, present and future of peoples living in the world. A certain group of students are attracted from Zoloto by their difficulties with the Russian language. According to American students, Russian is chosen by those who like to overcome obstacles. Results The Russian language is the language of the richest fiction, the importance of which in the world is incredibly great. As in the last decade, interest in the Russian language in countries outside the CIS has decreased somewhat. But today more and more people are turning to it again. On the one hand, they are interested in Russian culture, and on the other, this is a purely pragmatic interest, since the Russian language gives them the opportunity to cooperate with Russian businessmen and establish long-term business relationships. First of all, we are talking about cooperation within the CIS.

The reason was that Russian was the language of international communication during the Soviet Union, and to this day it remains so. The Russian language continues to interest the modern world. According to Russian media reports, the number of citizens of the USA, France, Spain, Sweden, Finland, Austria and Korea who have recently begun to study Russian language and literature has increased several times.

Russian is not only the official language of the Russian Federation. It is one of the languages of the world, that is, it is a language that serves as a means of international communication between peoples of different countries. Within the two and a half thousand languages known in the world, the World Languages Club, called the most developed group of languages in the world, ensures international communication. Promotion as a world language is determined by the universal importance of the culture created in that language. The status of a language as a world language is legally ensured by recognition of its official or working language of international organizations or conferences (UN, UNESCO, etc.). For example, Russian is recognized as one of the six official languages of the UN, along with English, Arabic, Spanish, Chinese and French; on which the most important international treaties and agreements are written.

The Russian language is studied in most countries of the world. Teachers of the Russian language are united by the International Association of Teachers of Russian Language and Literature (MAPRYAL). Now the Russian language is still in fourth place in the world in terms of the number of people who speak it. At the top of the list are English (about 500 million people speak English as a first or second language, and more than 1 billion people speak English as a foreign language) and Chinese (which is spoken by almost 1,350 million people as a first language).

In third place is Spanish (this language is spoken by about 360 million people, including those spoken by about 335 million native speakers). Thus, the huge role of the Russian language in the modern world is determined by its cultural value, power and greatness. The rapid socio-political changes that have occurred in the world over the past decade have led to radical changes in the social structure of society, which, of course, could not remain without consequences for the development and functioning of the Russian language. A distinctive feature of the current state of the language situation in the world is that most language changes are associated with changes in society. The proportion of people who believe that language can ignore the norms of decency is constantly growing. The number of requests to foreigners has increased significantly, especially in large cities, there is a tendency to form an opinion about the «traditionality» of language etiquette and its uselessness in modern communication. The culture of the language and the general culture of the press, radio and television staff has fallen sharply. Many linguistic errors and gross deviations from the norms of linguistic culture are translated.

Modern free behavior on air in relation to language leads to a higher voice, speed of speech, increased articulation tension and excessive emotionality of conversation with the viewer, and also often leads to the use of vulgar, dangerous speech epithets and metaphors. In all social and age groups, the level of linguistic culture has decreased. This leads to gross errors in the field of computer typing and translation of printed publications, in particular newspapers, which makes it clear that today the rules of translation among the population have been abolished. Society is increasingly paying attention to the speeches of politicians; their mistakes are recorded in the press and ridiculed. This is encouraging a new generation of politicians to take more responsibility for their speech and work on Facebook.

Conclusion The intensive technical re-equipment of citizens' everyday life can be described as a technical revolution, and this is primarily due to the widespread use of modern household and office equipment, mainly foreign-made in everyday life. Computers, video cameras, new generation televisions, faxes, copiers, household appliances, foreign cars - all this has led to the emergence of many new terms and words in the Russian language. At the same time, many instructions for cars imported from abroad and driving records recommend learning a foreign language, mainly English. High-quality modern communications - cell phones, computer communications, etc. lead to a reduction in written communication, and the share of telephone communications and technical means of communication increases. This leads to a decrease in the literacy level of the population, especially young people. For the same reason, the amount of reading fiction, especially highly artistic literature, is decreasing.

THE PLACE OF THE RUSSIAN LANGUAGE AMONG OTHER LANGUAGES OF THE WORLD

Abstract. The article is devoted to the study of the dynamics of language processes in the modern world. The trends in the development of the world language space are considered. English continues to be a kind of «lingua franca» of the world community in the era of globalization, but other languages are also entering the world arena. The Russian language has always been the language of intercultural communication due to the multiculturalism of Russia. However, the vector of transformation of his role has changed several times over the past fifteen years. Currently, it is regaining lost positions in the field of international education, remaining significant not only in Russia and neighboring countries, but in Europe, Asia and America. In general, studying the Russian language should go in conjunction with mastering the cultural characteristics of the Russian communicative style and lead to the formation of intercultural competence.

Key words: linguistic space, cultural space, English language, Russian language, international education, intercultural competence.

Language is not only the most important means of communication between people, but also a means of cognition that allows people to accumulate knowledge, passing it on from person to person and from generation to generation. The totality of achievements of human society in production, social and spiritual activities is called culture. Therefore, we can say that language is a means of its development and assimilation by each member of society.

Russian is one of the most widely spoken languages in the world. Around 250 million people around the globe speak it. In terms of prevalence, the Russian language ranks fifth in the world, second only to Chinese, English, Spanish, Hindi and Urdu.

The emergence of language is not only a linguistic issue, it also affects anthropology, that is, a set of other sciences that study man, his origin, development, existence in the natural and cultural environments.

There are a number of assumptions about the origin of language, but none of them can be confirmed by facts due to the enormous remoteness of the event in time. They remain hypotheses because they cannot be observed or reproduced experimentally.

The first hypothesis, the onomatopoeia hypothesis, comes from the Stoics and received support in the 19th-20th centuries. The essence of this theory is that

a «languageless person,» hearing the sounds of nature, tried to imitate these sounds with his speech apparatus.

The hypothesis of interjections comes from the Epicureans, opponents of the Stoics, and lies in the fact that primitive people turned instinctive animal cries into interjections accompanying emotions, from which all other words supposedly originated. The reason for the emergence of this hypothesis by supporters comes down to the expressive function. But there is a lot in language that is not related to expression.

From the middle of the 18th century, the «social contract» hypothesis emerged. It was based on some opinions of antiquity and largely corresponded to the rationalism of the 18th century. This assumption is that in later eras of language development it is possible to «agree» on certain words, especially in the field of terminology.

The trouble with all hypotheses is that the question of the emergence of language is taken in isolation, without connection with the origin of man himself and the formation of primary human teams. Engels, Humboldt and Baudouin de Courtenay believed that vertical gait was both a prerequisite for the emergence of speech and a prerequisite for the expansion and development of consciousness in human development. The various assumptions that have existed for a long time about the origin of language from gestures also do not explain anything and are untenable.

For a long time, linguists believed that the question of the origin of language is resolved only after abstracting it from the processes of speech activity. Therefore, from the middle of the 19th century, they regularly compared the patterns of different languages and constructed diagrams to reduce them to a form that could be considered their common ancestor. The totality of such forms was called the proto-language. Languages that have the same ancestor began to be called genetically related. This is how the concepts of Indo-European, Semitic-Hamitic, Niger-Kordofanian and many other families arose. Using the same method, the Indo-European, Semitic-Hamitic, Kartvelian, Uralic, Dravidian and Altaic families were raised to the next level of proto-language. They began to be called Nostratic (from the Latin word nostrum - ours) - one of the macrofamilies. Then hypotheses appeared about the further expansion of the Nostratic community of languages.

The hierarchy of languages goes deeper. The Nostratic macrofamily, along with the Afroasiatic, Sino-Caucasian, Austric, and Amerindian, is part of the Borean hyperfamily. There are also many isolate languages - these are isolated languages that are not part of any known language family.

The set of processes leading to the generation of words and other units in real language practice is called human speech activity. By studying its model, one can understand how an individual's verbal behavior is carried out. To find out how a language arose, it is necessary to study the speech activity of a group. Using

its model, one can describe the processes that stood at the origins of language and consciousness.

Based on the experience accumulated in Indo-European studies and Oriental studies, processes are identified that characterize human speech activity from the point of view of the structure of his speech organs and the communicative tasks he solves. Observation of the dynamics of their development (weakening, disappearance, conservation, emergence, strengthening) makes it possible to depend on them for all sorts of changes that occur in languages and lead to transformations of both individual words or grammatical categories, and the language system as a whole. Together with it, verbal consciousness is transformed, the philosophical (physical) picture of the world becomes different, because the concepts underlying it are based on language, its inherent categories and the way of reflecting objective reality learned from childhood. By describing the stages of development of speech activity «from zero» to today, from elementary processes to increasingly complex ones, we receive a tool for penetrating the secrets of the process of forming the categories of our thinking, which allows us to travel back to the time when they were created and follow them along the entire path of their development. By replacing the retrospective movement with a prospective one, we have a means of penetrating into the future and making a scientific forecast about what our language will be like tomorrow, how the categories of thinking will evolve, in what direction the philosophical or physical picture of the world will be rebuilt, what methodologies will determine the development of science in the new millennium.

The closer to the beginning, the more features in linguistic processes that are common to different language families, the more generalized the laws that govern them, the less discrete the continuum of linguistic reality recorded by the brain. The procedure for searching for the «zero point» in the history of a proto-language, the concept of the transition from the initial stage to subsequent ones, the new knowledge that is introduced into science by the discovery of the «language zero,» the problems that arise after this discovery - all this can be interesting not only for dedicated to linguistic matters. The materials studied show that speech activity originated in the form of exclamations of multifocal formation, not divided into individual sounds and not differentiated depending on the position of the speech organs or the nature of breathing. Both the meaning and form of these exclamations were as general as possible, not comparable with the concepts that exist today.

The initial situation is most easily represented by an analogy with a picture of a «walking» baby. The speech childhood of humanity, which appears before the reader, is not much different from the first year of life of its individual representative (as they say, phylogeny coincides with ontogenesis). Over time, amorphous, from a sound and semantic point of view, the primary element entered into the process of division: instead of one, two appeared, of which four appeared, etc., until all the words and morphemes that make up modern languages were

formed. The initial unit of the content plan is the concept of chaos; its binarization leads to the concepts of light and darkness; on their basis, a opposition is formed between the air-water substance and the solids; from the contradictions that arose within the concept of the firmament, the definition of the firmament of heaven as opposed to the firmament of the earth is formed, the binarization of the concept of an air-water substance results in the separation of the concept of water from the concept of in the spirit, etc., etc. - until All elements of our dictionary are not created. Behind this process one can easily discern the biblical story of the creation of the world. The dualization of concepts is based on the need to navigate in time and space (outside a person and inside his brain). In parallel with the semantic ones, sound processes occur in the history of language: from the syncretic polyfocus, which denoted the concept of chaos, a vocal component is isolated in contrast to the consonantal one, each of them is divided into two (for example, vowels begin to be contrasted by row and rise, consonants - by place and method of formation) etc., - right up to the current variety of phonemes. The speech organs (the specifics of their development and functioning) are responsible for this process. The discussion about the origin of languages is very interesting and exciting, but it can continue indefinitely, so it will not fit into the scope of the abstract.

Therefore, we will focus on a more detailed study of language families, in particular the Indo-European family.

In conclusion, it should be noted that the question has now become extremely relevant: «Will Russian be one of the world languages in the future?»

Currently, in terms of prevalence, the Russian language still ranks fifth in the world. If existing trends continue, by 2015 the number of people who know Russian to varying degrees will decrease to 212 million people, and by 2025, the number of people who know Russian in various countries of the world will decrease to approximately 152 million people.

The Russian language has great internal potential for further development and a rich cultural heritage. However, Russian is the only one of the 10-12 leading world languages that has been steadily losing its position in all major regions of the world over the past 15 years. And in the next 20 years, this negative trend will continue unless appropriate measures are taken to effectively support the Russian language and culture within the country, in the near and far abroad.

THE LEVEL OF PHYSICAL PREPARATION OF THE EFFICIENCY OF TECHNICAL-TACTICAL ACTIONS OF FOOTBALL PLAYERS

Annotation. This article studied the scientific and practical experience of domestic and foreign scientists in the field of sports on the technical, tactical and physical development of young football players, scientific and theoretical information presented in the sources of scientific literature. Modern methods of developing the technical, tactical and physical fitness of young players through the analysis of the training process were used in the research process. Scientific and theoretical ideas on the control of the level of readiness were put forward and scientific research was carried out, the results of the research were analyzed comparatively and appropriate conclusions were drawn.

Key words: speed strength, technical and tactical training, one-year training, experimental group, control group, educational training.

The football game requires a lot of physical and technical preparation from the player, to act with accuracy during the entire game, because the lack of physical preparation leads to the ineffective completion of all actions on the field, to the unsuccessful performance of the team.

However, the problem of optimizing training sessions during the competition was left aside. We all know that in sports games, especially in football, there is a specific importance of planning training and conducting it on the basis of a specific program. The fact that football competitions consist of many «tours» means that we must have an optimal program to ensure that the players are at a high level of physical and psychological preparation for each «tour».

Due to the density of «tours» during the competition, players are required to develop high level of physical fitness and technical-tactical skills in order to prepare for each «tour».

Relevance of the study:

The problem of training talented and competitive football players with high technical skills, wide physical and functional capabilities determines the need to develop alternative and effective pedagogical technologies.

A number of experts have recommended their method to increase the quickness of the players. But currently, in the training of football players, little attention is paid to the aspects of quick-strength qualities related to technical-tactical actions. First of all, it is necessary to pay great attention to the correct distribution of training loads and the development of quick-strength qualities from the initial stage of specialization. In order for players to play at a high level, it is necessary to develop various systems of the body.

The purpose of the research: The purpose of the scientific research: to improve the efficiency of the technical-tactical training of young football players during the annual training period and to study its connection with physical training.

In order to determine the dynamics of the effectiveness of the technical and tactical actions of young football players during the annual training period, observations were made during training sessions and friendly matches.

Players of two groups participated in the research. 20 young players will participate in each group. In order to determine the physical and technical-tactical preparation of students, their physical and technical-tactical preparation was checked through special tests and the following standards were adopted:

Before the study, control tests on the physical training of the experimental and control groups were taken and the following results were obtained.

the experimental group 30m before the study. to run 4.8 seconds on average, 400 meters 69.2 seconds, standing long jump 186 centimeters, 30m. 5.3 in the run with the ball, 77 in the footy, 29.7 meters in the long kick with the right foot and 24.4 meters in the kick with the left foot. They also showed a result of 14.2 meters when throwing the ball from the outside (Table 6).

Control group Participants 30m before the study. to run 4.9 seconds on average according to the standard of control, 68.6 seconds for running 400 meters, standing long jump 187 centimeters, 30m. 5.3 in the run with the ball, 72.7 in the footy, 29.3 meters in the long kick with the right foot and 24.3 meters in the kick with the left foot. They also showed a result of 14.2 meters in throwing the ball from the outside. (Table 1)

After that, in order to increase the efficiency of technical and tactical training in the study group during the annual training period, the ratio of technical-tactical exercises was increased in the planning of training hours, physical training exercises were added to match episodes, and in the experimental group, through this distribution, the training was trainings were conducted. After six months of training, we again received control norms from the players of the experimental group.

Training in the control group was carried out unchanged and after 6 training sessions, we rechecked them through control standards. **The control group** exercised 30m before the study. They showed an average result of 4.9 seconds of running according to the control standard, but after the study, this indicator was 4.8 seconds. 68.6 seconds before the study in the 400 meters, 67.8 seconds after the study, 187 centimeters in the standing long jump, 191 centimeters after the study, 30m. in running with the ball was 5.3 seconds before the study and 5.2 seconds after the study. 72.7 in kicking the ball, 90.2 after the study, 29.3 meters in the right-footed long kick before the study and 24.3 meters in the left-footed kick, from the study then this indicator showed 30.8 meters in the right leg and 26.7 meters in the left leg. Before the study, the result of the throw was 14.2 meters, but after the study, this indicator reached 14.7 meters (Table 4).

According to the results of the study, the indicators of physical fitness increased in both groups compared to the initial results, but in the participants of the control group, these indicators increased at a low level, while in the research group, the results showed a significant increase. we can reach

Conclusion Special literature shows that the control of competitive activity of football players plays an important role in the process of training football players. Along with the assessment of individual technical-tactical actions, players determine the qualities of speed, strength, special agility, endurance and technical movement abilities. Based on the results of the analysis, a targeted impact can be made on various aspects of the player's training.

Technique training and its improvement depends on several factors, for example, the level of preparation of the players, the training period, the number of balls, the condition of the field and the meteorological conditions. Regular monitoring of movement training serves to consciously organize the work of the coach and is of great help to young players. Control and self-control instills a sense of freshness and self-confidence in the player.

Teaching and training methods of game technique should not contradict the essence of the game, on the contrary, it is necessary to take into account the requirements of the game. Exercises adapted to home situations and selected taking into account the players' obligations at home are very important, and training sessions should make up 50-60% of the training material.

INTEGRATED APPROACH IN TEACHING FOREIGN LANGUAGES IN TECHNICAL HIGHER EDUCATIONAL INSTITUTIONS

Abstract. The article under discussion reveals integrated approach in teaching foreign languages in technical higher educational institutions. The author of the article considers that the use of integrated approach in teaching process leads to increased motivation for learning general subjects and a foreign language itself, and to the formation of readiness for professional activity in the context of integration processes in the economic, social and political spheres of life.

Keywords: vocational education, requirements, teachers, students, teaching methods, teaching methods and technologies, integration, educational process.

Introduction The modern system of vocational education and training requires constant updating and improvement, as the requirements for education are changing annually, technical means in the field of education are developing and new, modern means and technologies of education are appearing. In connection with these changes, approaches to teaching methods and technologies are also changing, and requirements for both teachers and students in terms of improving general and professional knowledge are increasing. This means that a modern teacher should be in constant search for new knowledge, use modern teaching methods and technologies and skillfully apply new technical means to enhance students' knowledge.

Main part. The article under discussion is devoted to methods and technologies of integrated classes, implementation of the principles of integrated method of teaching a foreign language (English) to the students of technical higher educational institutions. The concept of «integration», in its general meaning coinciding with the concept of «integrativity», means the process of combining individual parts into a single whole, which is subject to the laws of the relationship between the whole and its parts. The closest characteristics of integrativity may be integrity and mutual influence, and the property of integration is the principle of system formation. The Dictionary of Linguistic Terms defines «integration» as bringing languages closer to each other, leveling out their differences in the process of unification into one language. The word «integrated» in a New Glossary of Methodological Terms and Concepts (from Latin integer - whole) is defined as teaching that denies the division of knowledge into separate disciplines and is associated with a holistic perception of the surrounding world. Scientists state that the term «integrative» is in close

proximity to its synonym «wholeness», stressing the interest not in the external manifestation of wholeness, but in the more powerful reasons for the presence of this property. Integrative factors that preserve consistency are referred to as system-forming factors, the most important of which are heterogeneity and contradictory elements. Thus, «integration» is the process of combining the parts in science and the emergence of new concepts as a result of this process. If we apply the notion of «integration» to the subject of «a foreign language», we can say that in the classes of this discipline when applying the integrative approach, we can widely use examples from other fields of knowledge, other academic subjects. These can be extracts from history and literature texts, mathematical tasks, the use of maps, audio and video materials, etc. The examples used can not only arouse and maintain students' interest, but also have a positive impact on their outlook and motivation, increase their cognitive activity, contributing to the improvement of their knowledge and skills. The nature of integration is an object of consideration for many researchers. For example, V.A. Ergelhardt has defined three steps in integrating parts and a whole: a) a system of connections and relations between parts; b) when parts lose their initial identification qualities when they become part of a whole; c) new properties emerge in the integrating whole. Speaking about integration in the educational process, one cannot ignore the works of who examines the nature of interrelation of social and natural sciences, where the main thing, in his opinion, is not cooperation of independent partners, but mutual «sprouting». It is known that integrative processes in modern education imply the universalization of functions of each of its spheres, their systemic development, harmonization of relations between them. Each subsystem of the modern educational paradigm should thus increase the level of system integrity, which, in its turn, will lead to the formation of a global holistic system.

In accordance with the principle of communicative orientation, foreign language teaching is structured in such a way as to involve students in oral and written communication. In order to make such communication possible, a conducive environment is created in practical classes and extracurricular activities, such as classes of the Student English Communication Club, educational material is carefully selected and organized, possible situations and work techniques are thought through to stimulate communication. The learning tools always include authentic video, audio or printed material, and the tasks for the texts to be listened to or read are mainly communicative in nature, setting a communicative goal. Media can be integrated into language lessons in a variety of ways by developing activities based on radio programs, television shows, newspapers, and videos.

Thus, students' attention is focused not on the form of a statement, its lexical and grammatical content, but on the content, which, with little or no teacher intervention or supervision, ensures successful communication. Due to the existence of specific requirements for practical mastery of each type of speech activity in foreign language classes a certain distinction is made in teaching

listening, reading and writing (differentiated approach), which is expressed in the selection of special exercises contributing to the formation and development of the required skills and abilities, appropriate training tools and is considered when drawing up tasks of current and final control. Besides in the process of forming communicative competence in teaching various types of speech activity not only differentiated but also integrated approach is implemented: if any particular task or practical lesson in general is focused on a certain type of speech activity, a series of other tasks or lessons that are coming out to all its other types inevitably follows from them. In some cases, it is more appropriate to start with listening or reading instead of speaking, to learn language material or to introduce a new topic of conversation. The choice of receptive or productive types of speech activity is determined by the conditions under which one or another approach can ensure the greatest effectiveness and quality of teaching. The main methods of teacher's work in a foreign language classroom should include familiarization, practice and application, as well as control accompanying each main technological operation, including correction and evaluation.

Conclusion. Thus, the training of qualified specialists with knowledge of a foreign language and a broad worldview depends on the correct selection and organisation of each teaching material. When teaching a foreign language to students of technical higher educational institutions using the integrated method, the specifics of the method should be strictly taken into account. The introduction of integrated courses in the practice of foreign language teaching promotes communicative and cognitive motivation, which feeds the interest in mastering a foreign language. The leading role here should be that of teaching a foreign language as a means of communication, all aspects of which should be subordinated to communicative objectives. There is a definite relationship between communicative skills and integration. Integration is both the basis for the formation of communicative skills and the result of the implementation of communicative skills and the result of the implementation of communicative activities.

IMPROVING THE PROCESS OF PELLETING SEEDS IN COTTON GROWERS

Abstract. This article is aimed at improving the quality of panning and saving energy; instead of an additional element inside the drum, a thin sheet with staggered oval tubercles is attached around the circumference and mixing seeds with an adhesive mass, making a rotational movement along the inner circumference of the drum, they encounter tubercles that force them to turn left or right

Keywords. Cotton plant, drum, circumference, material, agricultural technology, tubercles, seeds, leaf, pelleting.

Seed pelleting is one of the stages of encrustation - complex production preparation of seeds, which includes treatment with fungicides for preventive purposes, treatment with growth stimulants, fertilizers and other plant protection agents. For inlaying, special drum-type industrial equipment, a paner or a granulator are used (the design principle is similar to a concrete mixer). When rotating, the device mixes the seeds and allows you to apply the desired compounds in strictly controlled doses evenly. With the help of adhesives, the seeds are coated with the necessary preparations and take on a spherical shape.

High-quality pelleted seeds are sown in the ground dry, since the shell of the granules dissolves when soaked. But when sowing, it is necessary to moisten the soil well. The treated seed always germinates several days later than conventional seeds, but during the growing season it quickly overtakes and outstrips traditional ones.

Experiments have proven that pre-sowing preparation is extremely important to protect the future crop from diseases and stimulate the growth of healthy plants. When using seed pelleting, the yield can increase by up to 15%, so this method is effective and popular.

In Uzbekistan, scientists from the Research Institute of Agricultural Mechanization (NIIMSH) were engaged in pelleting cotton seeds. They developed a device for pelleting cotton seeds that ensured the required flowability of the seeds.

The device consists of (Fig. 1): conveyor 1, sprayer 2, pipeline 3, working element 4, additional element 5, flange 6, support bearings 7, through shaft 8, pulley 9, mechanism for adjusting the position of additional element 10, lock 11, frame 13, unloading opening 14 and conveyor for receiving finished products 15.

The platter-drum device works as follows. The drum is installed relative to the horizon at an angle $\varphi=35-45^\circ$ and, using conveyor 1, unsown cotton seeds in the range of 100-120 kg are loaded. The electric motor is turned on, the drum begins to rotate, the unplanted seeds are soaked with liquid stimulants and adhesives with sprayer 2. After the seed shells are evenly soaked, they are treated with chemicals against diseases and insect pests.

Fig1. Schematic diagram of the operation of a plate-drum pan.

After the chemicals are evenly distributed, the seeds are mixed with lignin. At the end of the process, the seed shells become smooth and have a round shape. At this time the process stops. The finished product is poured through opening 14 into conveyor 15 and then sent for drying.

The device may be suitable for farmers to prepare the daily required quantity of pelleted seeds. The disadvantage of this device is that due to the presence of an additional element inside the drum, some of the pelleted seeds are little involved in the process.

In order to improve the quality of panning and save energy, instead of an additional element inside the drum, a thin sheet with staggered oval tubercles is attached around the circumference. In the process of mixing the seeds with the adhesive mass, they make a rotational movement along the inner circumference of the drum and collide with tubercles, which force them to turn left or right. Continuing their movement, the seeds collide with the next tubercles and perform many rotational movements, which ensure high-quality mixing of seeds with chemicals. The installation diagram of parabolic elements is shown in Fig.2

Fig-2. Diagram of the arrangement of parabolic elements along the inner circular surface of the drum.

Sheet parameters: sheet thickness $t=1$ mm; width $B=40$ cm; length $L= nD = 3786$ mm. Two options for the radius of the parabolic element $R=6$ mm and $R=8$ mm; distance between elements around the drum circumference $l=30$ mm; width $b=45$ mm. The radius of the pan is $R = 0.7$ m; the drum is installed to the horizontal plane at an angle $\beta = 400$; drum speed $n = 25$ 1/min; electric motor power $N = 30$ kW. The parameters of the dragator are scientifically proven by scientists from the Scientific Research Institute of Agriculture.

The test gave the following results.

Radius curvature (mm)	Power (kW)	Time process (min)	Power wasted (kW)	Time existing process options (min)	Power existing process options (kW)	Difference (kW)	(%)
6	30	14	6,9	17	8,4	1,5	17,0
		16	7,8	17	8,4	0,6	7,41
8	30	14	6,95	17	8,4	1.45	7,57
		16	7,85	17	8,4	1.5	7,46

Conclusions:

- during panning, all seeds participate in the process;
- during the process, the seeds do not hit hard objects, no damage occurs;
- no additional element is required, as a result of which metal and electricity are saved;

DEVELOPMENT OF DIGITAL ECONOMY AND ITS ROLE TODAY

Annotation. In this thesis, a broader understanding and thoughts about «Digital Economy» are given to people working with information technologies, the development of «Digital Economy» and its importance today, how it is created and how it works, its beneficial and harmful aspects are highlighted.

Keywords: Digital economy, digitalization, e-commerce, innovation, communication technologies, business digitalization, economic factors.

Currently, all economic transactions conducted within the global network encompass the digital economy, making it a general term for all economic matters. The digital economy is defined as economic activity resulting from billions of online connections between people, businesses, devices, data, and processes that occur daily. In other words, it is an economy based on digital and computational technologies. Therefore, there is no single definition of the digital economy. For this reason, the digital economy includes activities driven by the web and other digital communication technologies, primarily encompassing business, economic, social, and cultural activities.

The world is witnessing a digital revolution, and at its core lies the ever-expanding realm of information and communication technology (ICT). This intricate web of digital infrastructure is not just connecting people across the globe; it's driving economic growth, shaping national security, and defining international competitiveness. The United States, a leader in technological advancement, demonstrates the strategic edge gained through ICT. Its dynamic industry, strong economic foundation, and vibrant innovation ecosystem have positioned the country at the forefront of the digital economy. This success story underscores the importance of investing in ICT infrastructure and fostering a culture of innovation for any nation aiming to thrive in the digital age. The growth of the digital economy is intrinsically linked to the development of the ICT

industry. As the foundation for digital goods and services, ICT serves as a reliable predictor of economic progress.

This connection is evident across developed, developing, and emerging economies, highlighting the universal impact of ICT. Interestingly, a transformative shift is occurring within the ICT sector itself. Developed countries, in particular, are experiencing a transition from hardware-centric production to a software-driven service sector. This evolution is fueled by the widespread adoption of mobile technology, increased connectivity, and the growing popularity of mobile e-commerce and digital platforms. For nations striving to maintain global competitiveness and accelerate their digital economy, prioritizing ICT investments is crucial. Focusing on 5G technology, network development, and research and development (R&D) will be key drivers of progress. These advancements can further integrate the ICT industry with less technologically intensive sectors, creating a ripple effect of economic growth. The future of the digital economy is intertwined with the continued development of emerging technologies. Cloud computing, robotic automation, artificial intelligence (AI), deep learning, the Internet of Things (IoT), and 5G are paving the way for new frontiers in the digital landscape, particularly in the realm of cyber-physical systems.

The digital economy, a term encompassing all economic activity facilitated by digital technologies, is rapidly transforming the world. At the heart of this transformation lies the ever-expanding realm of Information and Communication Technology (ICT). From the internet and mobile networks to sophisticated software and cutting-edge devices, ICT forms the bedrock of the digital age. Countries at the forefront of ICT development, like the United States, enjoy a strategic competitive advantage. Their dynamic industries, robust economic foundations, and thriving innovation ecosystems allow them to leverage the full potential of digital platforms. This translates into economic growth, job creation, and improved quality of life for their citizens. Developing 5G networks, supporting R&D initiatives, and promoting digital literacy are essential steps in this direction. These efforts will not only enhance economic competitiveness but also improve access to essential services and empower individuals to participate fully in the digital age. The future of the digital economy is bright, with ICT continuing to drive innovation and progress. Emerging technologies such as AI, blockchain, and quantum computing hold immense potential to revolutionize various sectors, from healthcare and finance to manufacturing and transportation. However, navigating the challenges associated with this rapid technological advancement is crucial. Issues like cybersecurity threats, data privacy concerns, and the digital divide require careful consideration and collaborative solutions. As we move forward, ensuring equitable access to ICT resources and promoting responsible innovation will be essential to harnessing the full potential of the digital economy. By embracing these principles, we can create a future where

technology serves as a force for good, empowering individuals and communities across the global

Conclusion: The digital revolution is not a distant possibility, it is the reality of our present and the defining factor of our future. Nations that recognize the power of ICT and actively invest in its development will be well-positioned to thrive in the ever-evolving digital landscape. The race is on, and the stakes are high. As we move forward, embracing the opportunities and navigating the challenges of the digital age will be essential for ensuring sustained economic growth, national security, and global competitiveness.

BASIS OF EMERGENCE OF JADID LITERATURE

Annotation. In the history of the development of our literary and artistic thinking, the role and place of literature of the 19th-early 20th centuries, which is completely new in essence and content, is special. This article reflects on the genesis of jadid literature and the jadids who contributed to it.

Key words: jadid, literature, poetry, Turkestan, movement, people, work, nation, life.

The 20th century was a period that was distinguished not only in the life of the Uzbek people, but also in the life of the whole world, with its rich diversity. By this century, the speed of life processes has increased tremendously. The picture of the exchange of social phenomena has accelerated to an unimaginable level. At the beginning of this century, the peaceful life of the people of Turkestan, which has been going on for several centuries, turned upside down. The renewal of ideas, the introduction of technical advances, and the acceleration of information exchange have changed the lifestyles of Turkestan. Until that time, our national literature did not go shoulder to shoulder with our national life. Although our literature was not completely separated from life, the problems of social life could not completely engulf it. By the 20th century, literature came closer to life. Not satisfied with this, he started trying to change his life. The invasion of Russia and its colonial policy based on violence made the already difficult life of Turkestan people even more difficult. Due to social injustice and legal inequality, the owners of the land, who worked tirelessly day and night, were getting poorer, and the invaders who were engaged in robbing and deceiving them were getting richer. Due to poverty, vices such as pride, ignorance, subordination, and indifference were forming among the Turkestan, which could not but disturb creative intellectuals who are aware of their nation's past and have hope for its future. At the end of the 19th century and the beginning of the 20th century, the movement of national revival began not only in Turkestan, but also in many colonies of the world. People of opinion who want to eliminate social injustice and change unjust regimes believed that in order to change the poor state of the nation and the difficult way of life, it is necessary to educate the people first. It was understood that nothing can be achieved without awakening the nation from ignorance and creating a desire for development in the spirit of the people. It

became clear that the provision of enlightenment to the nation should be organized in a completely different way, both in terms of quality and speed.

It was realized that one cannot be satisfied only with knowledge that affects the soul and improves morals, and that it is necessary to thoroughly study the basics of science and technology. For this, new teaching methods had to be introduced. In this way, the Enlightenment views, which began to form in Turkestan from the second half of the 19th century, became the basis for the emergence of the Jadidism movement by the beginning of the 20th century. The word «Jadid» means «new» in Arabic and means a person who strives for development. Just as the enlightened people turned literature into a tool for fighting against ignorance, modernists also turned fiction into a tool to save the people from ignorance and colonial oppression. It should be said that the Enlightenment and the struggle were different events not only in terms of the time of occurrence, but also in terms of the goals they set for themselves. For example, enlighteners aimed not to change the existing situation, but to reform it, to raise the educational level of the people. For Jadids, enlightening the masses was only a stage on the way to the main goal. The goal was to make the homeland prosperous, to liberate the nation, and to restore the former glory of Turkestan. The Jadids, who started the work in the 90s of the 19th century by establishing new method schools, soon planned to establish a free, democratic independent state in Turkestan. The creation of Turkestan autonomy in 1917 was a serious attempt to implement this plan. By the beginning of the 20th century, the development of mass media and the improvement of international relations allowed the enlightened representatives of the nation to compare the life of their people with the life of the developed nations of the world. As a result of the adoption of the Manifesto on freedom of speech and press in Russia in October 1905, the development of the Uzbek press was made possible to some extent. If the first and only newspaper in the Uzbek language was the «Gazette of the Turkistan Region» published in 1870, the number of periodicals increased significantly after 1905. Between 1905 and 1917, 22 newspapers and 8 magazines were published in the Uzbek language. This situation had a serious impact on the way of thinking of the people of the nation.

The daily press caused the expansion of the scope of updates in Uzbek literature. Industrial printing of the book was also a strong factor in the development of the socio-aesthetic thinking of the nation. Jadid literature was completely aimed at awakening the nation. The heroes of this literature were not the representatives of the upper class or figures irradiated with divine power, as in the previous period, but ordinary people who came from the masses, returned to them, and therefore had a greater opportunity to influence the people. Jadid writers tried to express new themes in new genres and through new images. Another important point is that the Jadid writers

they were not only creators, but also public figures. They tried to awaken the nation not only with their pen, but also with their social, political and

educational actions. If the Enlightenment brought new topics to the centuries-old national literature, the moderns introduced new genres such as drama, novel, story to Uzbek literature. The leading field of Jadid literature was poetry. Jadid poetry, which was sharply different from Uzbek classical poetry in terms of weight, language, style, and ideology, laid the foundation stone for the development of a new direction in Uzbek literature of the 20th century. The fact that the Uzbek people lived in an environment of ignorance and ignorance at the beginning of the century, indifference to changes in social life, science, culture, and technology, being stuck in the vortex of everyday household problems and falling into a morally helpless situation is not only a matter of modern journalism, but also of poetry. determined the ideological direction. Jadids tried to hold up a mirror to the people's people with their poems, to reflect their strange and poor life, soulless state and pessimistic mood in this mirror.

Avloni published during 1909-1917 with poems and parables in the collections «First Teacher», «Second Teacher», especially «Adabiyot yahud national poems» consisting of six parts, a strong impetus to the formation of modern poetry. gave Prose takes an important place in the modern literature, which tried to bring the literary movement closer to the requirements of the time and the spiritual needs of the people.

Both of these works serve as a model for many works of modern writers, which were later illuminated by the light of enlightenment. Hamza's work «New happiness or national novel» (1915) is also dedicated to the issue of education of the young generation. In this work, Hamza describes the complicated life path of a young man named Olimjon, because he was brought up in a modern school and in the bosom of an intelligent mother, he was not only loyal to his family members and patrons, but also «necessary for a foreign nation». he also pays special attention to his growth as a person. Despite the fact that the scholar's father was the son of a rich man, he did not enjoy the source of enlightenment behind his ignorant father, because of this, he entered the path of disbelief, lost his property and became a person who made a living from gambling.

Olimjon, who has found his way and happiness in life, returns even this unhappy father to the bosom of the family and fulfills his filial duty perfectly. In the work, Hamza compared the fate of an uneducated father with an educated son, tried to reveal the great importance of science in the fate of man and society, and to spread the ideas of enlightenment among the masses of the people. In the mid-1910s, with the stories «Juvonboz» and «Uloqda», Abdulla Qadiri also contributed to the emergence of modern prose. Thus, for the first time in modern Uzbek literature, Jadid prose was able to provide good examples of realistic stories, narratives, essays, and essay-dialogue genres, and in the process, it prepared the conditions for the formation of the modern Uzbek literary language. One of the important features of Jadid literature is that representatives of this literature not only wrote works in one type of artistic creation, but also created

works in other adjacent types. Not content with this, they founded the art of theater and introduced dramaturgy to Uzbek literature for the first time.

ECONOMIC EFFECTIVENESS OF USING BIOTECHNOLOGY IN AGRICULTURE

Abstract. Biotechnology in agriculture plays an important role in the development of this industry. From the point of view of modern science, biotechnology in agriculture is the industrial use of biological processes and agents, based on the production of highly effective forms of microorganisms, cell cultures and tissues of plants and animals with specified properties.

Key words: biotechnology in agriculture, genetically modified crops, development of new markets, innovations in agriculture, genome mapping, agricultural engineering.

Agriculture plays a key role in ensuring food security and economic development in many countries. With population growth and climate change, it is becoming increasingly important to improve agricultural productivity and reduce its negative impact on the environment. One of the innovative areas that can improve the productivity and sustainability of agriculture is biotechnology.

Advantages of using biotechnology in agriculture:

1. Increased productivity: Biotechnology allows the creation of plant and animal varieties with improved characteristics, such as resistance to diseases, dead wood and pests, as well as increased yields.

2. Reduced costs: The use of biotechnology can reduce the cost of plant protection and fertilizer use, as resistant plants require fewer chemical treatments.

3. Resource Conservation: Through more efficient use of water, soil resources and energy, biotechnology contributes to more sustainable agricultural production.

4. Stimulating innovation and developing new markets: The development of biotechnology in agriculture contributes to the emergence of new sectors of the economy, such as the production of seeds and planting material with high added value.

Economic efficiency of using biotechnologies:

1. Increasing income for agricultural producers: By increasing productivity and reducing costs, agricultural producers can earn higher incomes.

2. Reducing dependence on imports: The development of our own high-tech agriculture allows us to reduce dependence on imported food products.

3. Attracting investment and infrastructure development: Expanding the use of biotechnology in agriculture attracts investment, promotes the development of research centers and the creation of modern infrastructure.

4. **Reduced environmental impact:** More efficient use of resources and reduced need for chemical fertilizers and pesticides help reduce environmental pollution.

Overall, the use of biotechnology in agriculture has great potential to improve the productivity, sustainability and economic efficiency of the industry. However, to successfully realize this potential, support from government, investors and the scientific community is required.

Biotechnology plays a key role in improving the productivity and sustainability of agriculture and reducing its negative impact on the environment. Here are some specific examples of the cost-effectiveness of using biotechnology in agriculture:

1. **Increasing yields using genetically modified (GM) varieties:**

- Example: GM soybeans and maize, resistant to certain diseases and pests, allow agricultural producers to reduce pesticide costs and increase yields.

2. **Reducing the cost of plant protection using biological preparations:**

- Example: The use of microorganism-based bioinsecticides to control pests allows agricultural producers to reduce the cost of chemical pesticides and at the same time increase crop yields.

3. **Increasing plant resistance to stressful conditions:**

- Example: The development of drought-resistant wheat varieties allows for stable yields even under unfavorable climatic conditions.

4. **Creation of varieties with extended shelf life and transportation:**

- Example: GM tomatoes, which are more resistant to damage and remain fresh longer, allow farmers to reduce product losses during transportation.

5. **Development of new markets and innovations in agriculture:**

- Example: The creation of genetically modified plant varieties with special properties (for example, flowering plants with changed flower color) contributes to the development of new markets and increased demand for agricultural products.

All of these examples demonstrate how the use of biotechnology in agriculture can provide practical benefits to farmers by reducing costs and increasing productivity. In addition, the use of biotechnology contributes to economic development by attracting investment, creating new jobs and stimulating innovation in the agricultural sector.

Advanced biotechnologies in agriculture are used throughout the world, and some of the most prominent examples include:

1. **Genetically modified (GM) crops in the USA:** The USA is the largest producer and consumer of GM agricultural products. They have successfully used GM corn, soybeans, cotton and other varieties to increase yields, disease and pest resistance, and improve product quality.

2. **Biologicals in Europe:** Some European countries such as Germany, the Netherlands and France have successfully used microorganism-based biologicals to protect plants from pests without the use of chemical pesticides.

3. Breeding resistant varieties in Asia: Southeast Asian countries such as India and China are actively developing resistant varieties of rice, wheat and other crops that can withstand drought, salinity and other stress conditions.

4. Application of genome mapping in Latin America: In some Latin American countries, such as Brazil and Argentina, research is being carried out to map and analyze the genomes of crop plants, which allows more efficient development of new varieties with desired properties.

5. Use of Agricultural Engineering in Africa: Many countries in Africa are using agricultural engineering to develop crop varieties that are resistant to diseases, pests and stress conditions such as drought and low soil nutrients.

These examples demonstrate that advanced biotechnologies are widely used in agriculture around the world and play an important role in increasing crop yields, crop sustainability and improving the livelihoods of agricultural producers.

**AMMIAKLI SELITRA VA UNING SUYUQLANMASINI MAHALLIY
NOAN’ANAVIY TABIIY MINERALLAR (BENTONIT VA GLAUKONIT
UNLARI) BILAN QO‘SHIB, ISHLOV BERISH ORQALI XOSSALARI
YAXSHILANGAN AMMIAKLI SELITRA OLISH JARAYONINI
O‘RGANISH**

Annotatsiya. Azotli mineral o‘g‘itlar orasida ammiakli selitra (AS) yetakchi o‘rinni egallaydi, chunki u ozuqa moddalarining yuqori miqdordaligi va azotning ammoniy va nitrat shakllarining muvozanatli tarkibiga ega balastsiz arzon o‘g‘it.

Ammiakli selitraning keng ko‘lamda foydalanishini cheklaydigan asosiy kamchiliklar fiziologik kislotalilik, gigroskopiklik, yopishqoqlik (slejivayemost) qobiliyati, granularning mexanik mustahkamligi yetarli emasligi, termik beqarorlik va portlash xavfining yuqoriligi. AS – bu yonishga moyil, ba’zi tashqi omillar ta’siri ostida o‘zi portlaydigan oksidlovchi modda. Muhim kamchiliklaridan, saqlash va tashish vaqtida o‘g‘itning fizik-kimyoviy va mexanik xususiyatlarida salbiy o‘zgarishlarga olib keladigan polimorfik shakl o‘zgarishidir.

Kalit so‘zlar: ammiakli selitra, ammiakli selitraning suyuqlanmasi, ammoniy sulfat eritmasi (40-45%), mahalliy noan’anaviy tabiiy minerallar (bentonit va glaukonit uni), statik mustahkamlik, yopishqoqlik (slejivayemost), mikroelementlar, yaxshilangan xossalarga ega ammiakli selitra.

**STUDY OF THE PROCESS OF AMMONIOUS NITRATE PROCESSING
WITH IMPROVED PROPERTIES BY ADDING AMMONIOUS
NITRATE AND ITS LIQUIDATION WITH LOCAL**

UNCONVENTIONAL NATURAL MINERALS (BENTONITE AND GLAUCONITE FLOURS)

Abstract. Ammonium nitrate (AS) takes the leading place among nitrogenous mineral fertilizers, because it is a low-cost, ballast-free fertilizer with a high amount of nutrients and a balanced composition of ammonium and nitrate forms of nitrogen.

The main disadvantages that limit the wide use of ammonium nitrate are physiological acidity, hygroscopicity, viscosity (slejivayemost) ability, insufficient mechanical strength of granules, thermal instability and high risk of explosion. AS is a flammable oxidizing substance that explodes under the influence of some external factors. One of the important disadvantages is the change of polymorphic form, which causes negative changes in the physico-chemical and mechanical properties of the fertilizer during storage and transportation.

Keywords: ammonium nitrate, ammonium nitrate liquefaction, ammonium sulfate solution (40-45%), local unconventional natural minerals (bentonite and glauconite flour), static strength, viscosity (slejivayemost), trace elements, ammonium nitrate with improved properties.

Tajribani olib borish. Bog'lovchi modda sifatida $(\text{NH}_4)_2\text{SO}_4$ ning 40-45% li eritmasidan foydalanildi. 1 tonna tayyor mahsulotga 25-30 kg (2,5-3,0%) miqdorida sarf me'yorlari qabul qilingan. Quyida bog'lovchi bilan qisman kompleks tuzlar hosil qilishi to'g'risida ma'lumotlar keltirilgan.

Ammoniy sulfat qo'shilishi donalarning mustahkamligini oshiradi va ularni 0,6% gacha namlik bilan ishlatishga imkon beradi. Ammoniy sulfat tuzlar nisbatiga qarab 2: 1 ($2\text{NH}_4\text{NO}_3 \cdot (\text{NH}_4)_2\text{SO}_4$) va 3: 1 ($3\text{NH}_4\text{NO}_3 \cdot (\text{NH}_4)_2\text{SO}_4$) bo'lgan qo'sh tuzlarni hosil qiladi [1].

1-rasmdagi faza diagrammasi termal tadqiqotlar asosida qurilgan. Diagrammada sof ammiakli selitrani erish nuqtasi 5 %_{mol} ammoniy sulfat bilan taxminan 180°C dan oshdi, ammoniy sulfat soviganida kristallanadi [2]. Ammiakli selitra 181°C da I shaklida kristallanadi. Ammiakli selitraga qo'shimcha ammoniy sulfatning 140°C da 5 %_{mol} va 162°C, tarkibida 10 %_{mol} qo'shilishi $3\text{NH}_4\text{NO}_3 \cdot (\text{NH}_4)_2\text{SO}_4$ hosil bo'lishiga olib keladi. Oxirgi harorat oshib ketganda, qo'sh tuzlar anionlar va sulfatlarga bo'linadi. Sovutishda I-fazadan II-fazaga o'tish 124°C o'rniga 107°C haroratda sodir bo'ladi. Keyingi sovutishda III-fazaning mavjudligi yo'qoladi va 51°C haroratda II-fazadan IV-fazaga to'g'ridan-to'g'ri o'tish sodir bo'ladi. O'tish harorati ammoniy sulfat tarkibiga qarab 32 dan 51°C gacha o'zgaradi. Xuddi shunday, I-fazadan II-fazaga o'tish harorati 124 dan 107°C gacha pasayadi. Odatda, ohak-ammiakli selitrada $\text{IV} \leftrightarrow \text{II}$ o'tishni faollashtirish uchun qo'shimchani 0,1 dan 2,0% gacha ishlatish kerak, ammo sof ammiakli selitra uchun ko'proq miqdorda bo'lishi talab qilinadi [3, 4, 5]. Taxminan 6% ammoniy sulfat qo'shilsa, $\text{IV} \leftrightarrow \text{III}$ o'tish sodir bo'lmaydi. IV-dan III-gacha bo'lgan davrda ammoniy sulfat konsentratsiyasining 2 dan 6%

gacha pasayishi kuzatiladi, bu esa IV-dan II-gacha bo‘lgan o‘tish jarayonining to‘xtatilishiga olib keladi. Rentgen tekshiruvlarida ammoniy nitrat IV panjarasining deformatsiyasi (d_{111} 3,080 Å dan 3,060 Å gacha kamaydi), bu IV→metastabil IV→II fazadan o‘tishga olib keldi [6].

1-rasm. NH₄NO₃-(NH₄)₂SO₄ tizimining fazaviy diagrammasi

20 dan 60°C gacha bo‘lgan haroratda termosikllanish dastlab metastabil shaklda bo‘lgan qo‘sh tuzlarning qayta kristallanishiga olib keladi. Qayta kristallanish IV fazani barqarorlashtiradi va keyingi termal inertsiya II fazaga o‘tishni ta‘minlaydi. Suv o‘tishlarga salbiy ta‘sir ko‘rsatadi, ammoniy sulfat tarkibining ikki baravar ko‘payishi IV→II o‘tishining kinetik konstantasini ikki kattalik tartibiga va shuning uchun ammoniy nitratning kinetik barqarorligiga kamaytiradi [7]. Ohak-ammiakli selitrada ammoniy sulfat kristallar o‘rtasida tutashuvlar hosil qiladi va shuning uchun donalar ushbu tutashuvlar mavjud bo‘lganda asl shaklini saqlab qoladi [8].

Olib borilgan natijalar shuni ko‘rsatadiki, ammiakli selitra (AS) tarkibiga bentonit (BT) qanchalik ko‘p kiritilsa, mahsulot donalari shunchalik mustahkam bo‘ladi, glaukonit (Gl)da bu ko‘rsatkich birmuncha o‘zgacharoq [9]. Agar standart ammiakli selitra (AS) donalarining mustahkamligi 1,59 MPa bo‘lsa, AS: BT=(95-70): (5-30), bu ko‘rsatkich 3,45 dan 7,47 MPa gacha ko‘tariladi. Donalar mustahkamligiga eng katta qiymatli ta‘siri - AC: BT = 70: 30 bo‘lganda erishiladi

va donalarning mustahkamligi 7,47 MPa ga teng bo‘ladi. Agar glaukonit uni qo‘shilganda bu ko‘rsatkich birmuncha past, lekin standart ASga nisbatan ancha yuqori, ya‘ni AS: Gl = (90-70): (10-30), bu ko‘rsatkich 1,02 dan 2,42 MPa gacha ko‘tariladi. Donalar mustahkamligiga eng katta qiymatli ta‘hiri - AC: Gl = 70: 30 bo‘lganda erishiladi va donalarning mustahkamligi 4,43 MPa ga teng bo‘ladi (1-jadval).

Ammiakli selitra va uning suyuqlanmasiga mahalliy noana‘naviy tabiiy mineral – bentonit (Log‘on koni) qo‘shish orqali olingan mineral o‘g‘itning tarkibi

1-jadval

2-diagramma. Glaukonit qo'shimchasi miqdorini tayyor mahsulot mustahkamligiga ta'siri

3-rasm. *Aralashtirish orqali (AS: BT = 100: 20 nisbatdagi) olingan namuna donalarining yuzasi 500 marta kattalashtirilgantasviri*

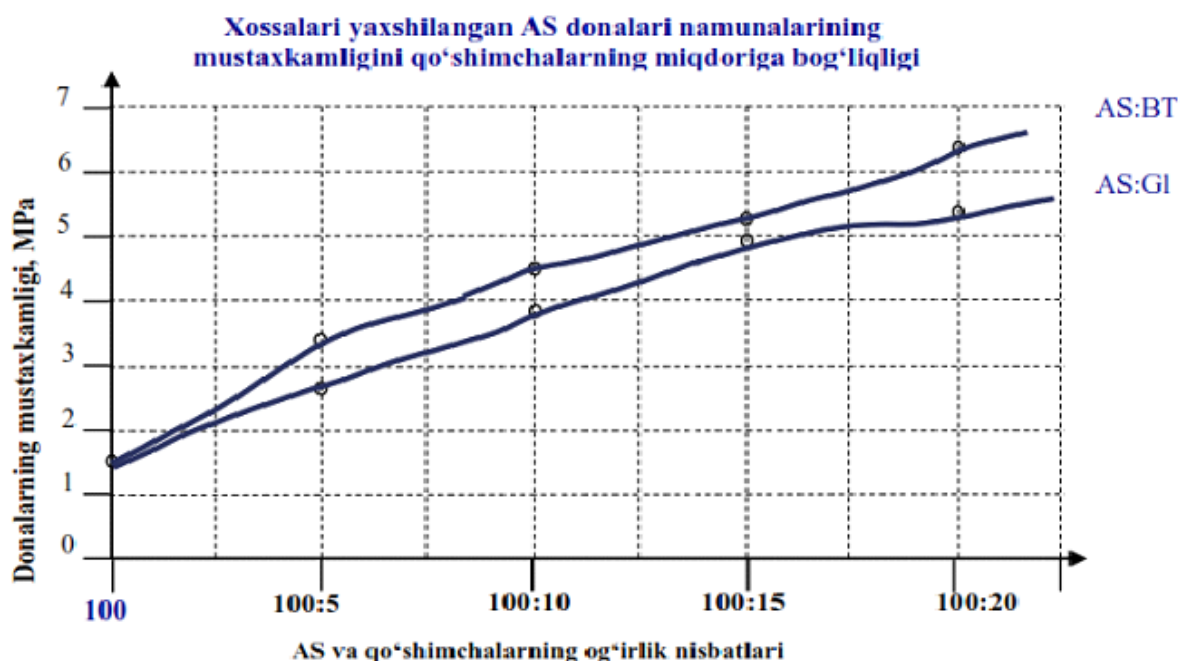

4-rasm. *Purkab berish (AS: BT = 100: 20 nisbatdagi) orqali olingan namuna donalarining yuzasi 500 marta kattalashtirilgan tasviri*

5-rasm. *Suyuqlanmaga (AS: BT = 100: 20 nisbatdagi) qo‘shish natijasida olingan namuna donalarining yuzasi 500 marta kattalashtirilgan tasviri*

Tadqiqot natijalari shuni ko‘rsatdiki, 170°C haroratda va boshqa teng sharoitlarda qotishma zichligi va yopishqoqligi kiritilayotgan qo‘shimchalar miqdorining oshishiga to‘g‘ri proporsional bo‘ladi (6-8-rasmlar).

6-rasm. *Olingan namunalarning mustahkamligini qo‘shimchalar miqdoriga bog‘liqligi*

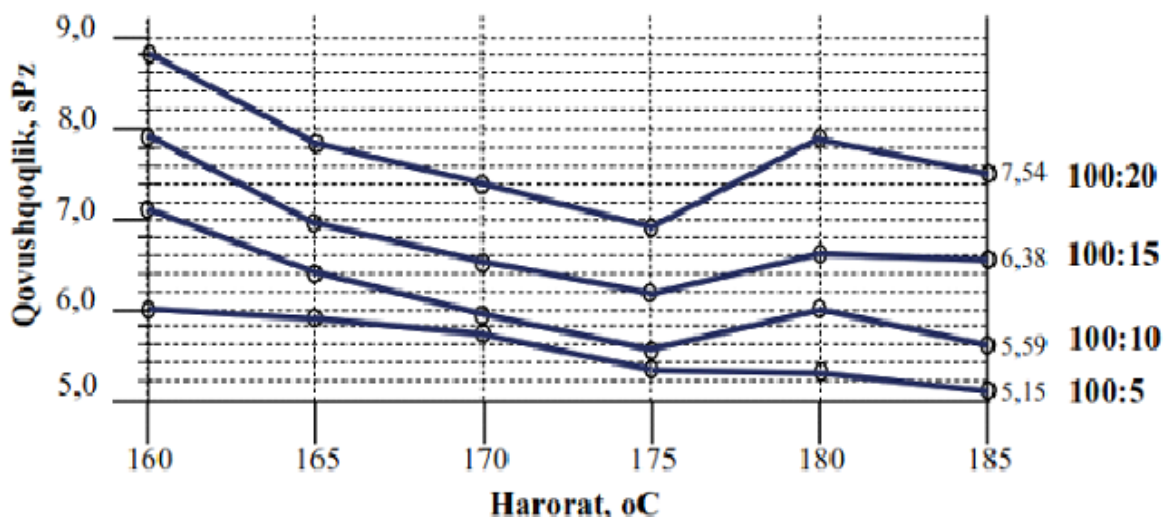

Ammiakli selitranning Log'on bentoniti bilan ishlov berilgan namunalari suyuqlanmalarining zichligini haroratga bog'liqligi

Ammiakli selitranning Changi glaukoniti bilan ishlov berilgan namunalari suyuqlanmalarining zichligini haroratga bog'liqligi

7-rasm. Qo'shimchalarning namunalari zichligiga ta'siri.

Navbatdagi, AS: BT = 100: 20 nisbatda olingan namunaga 160-185°C harorat intervalida (8-rasm) gi reologik xususiyatlarining o'zgarishi, ya'ni qovushqoqlik harorat o'zgarishiga ko'proq bog'liq, suyuqlanmalarining zichligi unchalik bog'liq emas. Shuning uchun haroratning 25°C ga ko'tarilishi zichlikning 6,9% ga, qovushqoqlikni esa 16,7% ga pasayishiga olib keladi.

Amiakli selitranning Changi glaukoniti bilan ishlov berilgan namunalari suyuqlanmalarining qovushqoqligini haroratga bog'liqligi

Amiakli selitranning Log'on bentoniti bilan ishlov berilgan namunalari suyuqlanmalarining qovushqoqligini haroratga bog'liqligi

8-rasm. Qo'shimchalarning namunalari qovushqoqligiga ta'siri.

Ushbu bog'liqlik bentonit misolida eng aniq namoyon bo'ladi, masalan, kimyoviy toza amiakli selitra bilan solishtirganda AS suyuqlanmasida qo'shimcha (bentonit va glaukonit)lar miqdorining 5,0 dan 20,0% (og'irligi bo'yicha) gacha ko'payishi, (boshqa barcha narsalar teng) uning zichligining 3,2-5,61 va 3,2-6,5% gacha va qovushqoqlik 15,6-41,0% gacha oshishiga olib keladi.

Namunalarning to'kma zichligi, qo'shimchalarning turidan qat'iy nazar deyarli bir xil – 1,06-1,10 g/sm³, sochiluvchanligi esa bir xil - 100%. Mahsulot

donalarining mustahkamligi 3,70 MPa dan ortiq, kaliy tuzlari bundan mustasno bo'lib, u 1,70 MPa ga teng.

Bentonitli va glaukonitli o'g'it namunalarning fizik-kimyoviy va mexanik xossalari o'rganilgan. Namunalarning to'kma zichligi unchalik farq qilmaydi va 1,04-1,11 g/sm³ oralig'ida bo'ladi. Barcha namunalar 100% sochiluvchanlikka ega, ularning oquvchanligi 42 soniyadan oshmaydi, tabiiy qiyalik burchagi 31-44Å ga teng.

Xulosa. Shuni ta'kidlash kerakki, zichlik va qovushqoqlikning sezilarli darajada oshishiga qaramay, tadqiqot namunalarning suyuqlanmalari harakatchan holatga va yetarli oquvchanlikka ega bo'ladi.

Olingan ma'lumotlarga va sanoat xavfsizligi qoidalariga asoslanib, biz ammiakli selitra xususiyatlarini samarali yaxshilashni ta'minlaydigan bentonit qo'shimchasining miqdoriy tarkibini 20%_{og'} qabul qilib oldik.

USING OF LOCAL RAW MATERIALS IN THE PRODUCTION OF CONSTRUCTION GLASS

Abstract. This article describes the use of local raw materials in glass production and their composition, features of construction glass, construction glass types, assortment, use, requirements for their quality, and production technologies.

Keywords: building glass, hardness, transparency, brittleness, limestone, quartz sand, soda.

Shisha deb kimyoviy tarkibi va qotish temperaturasiga bog'liqsiz ravishda yuqori temperaturada hosil qilgan va eritmani o'ta sovutish orqali olinadigan va yopishqoqlikning asta-sekin oshishi natijasida qattiq jismlarni xossalari qabul qiladigan barcha amorf jismlarga aytiladi; bunda suyuq holatning shisha tabiatiga o'tish jarayoni orqaga qaytadigan bo'lishi shart. Boshqacha qilib aytganda, kvars yoki qumtuproq ohaktosh yoki dolomit, natriy karbonat yoki natriy sulfat va boshqa komponentlarni qizdirish yo'li bilan suyuqlantirib, so'ngra maxsus rejimda qoliplash va sovutish yo'li bilan hosil qiladigan qovushqoqligi o'ta yuqori bo'lgan shaffof izotrop qattiq jismlar qurilish shishasi deb ataladi.

Qurilish shishasining asosiy xususiyatlari quyidagicha: hajmiy og'irligi 2450-2550 kg/m³, qattiqligi 5-7, issiqlik o'tkazuvchiligi 0,6-1,15 kkal/m, qalinligi 2-6 mm, siqilish va egilishga chidamliligi 10000 kg/sm².

Qurilish shishasi turi ko'p bo'lgan sun'iy materiallardan biri. U quyidagi to'rt gruppadan tashkil topgan:

1. List shishasi-deraza oynasi, foto shishasi, rangli va rangsiz naqshli shisha, metalli setka bilan amirovkalangan shisha, silliqlangan shisha;

2. Qurilish-arxetiktura shishasi-issiqlik nurini yutuvchi qurilish shishadan yasalgan konstruktiv qurilish shishasi, rangli kuzgu va arxetiktura badiiy shishasi;

3. Ko'pchitilgan shisha-tovush yutuvchi izolyasion material, filtrlovchi g'ovak shisha issiqlik izolyatsiyasini ta'minlovchi shisha;

4. Shisha trubalar-devor qalinligi 1-3 mm va diametri 0,1-40 mm bo'lgan yupqa tanali trubalar, devor qalinligi 2-4 mm va diametri 12-40 mm bo'lgan qalin tanali trubalar.

Shisha ishlab chiqarish jarayoni xomashyo (tabiiy va sun'iy) komponentlardan tayyorlash, aralashtirish, pishirish, shisha massasini sovutish, shakl berish, qizdirish va ishlov berishdan iborat. Asosiy xomashyo sifatida kvars qumlari, soda, potash, ohaktosh, kaolin, dala shpatlari, turli oksidlar, yordamchi matireallar o'rnida buyagichlar (kobolt, nikel, temir, xrom, mis oksidlari) va qaytaruvchilar (ko'mir, koks, qalay) ishlatiladi.

Kvars va ohaktosh singari qattiq xomashyolar jag'li maydalagichlarda bulakchalarga ajratilib, temir oksidi kabi rang beruvchi birikmalardan tozalanadi. So'ngra ular aylanma pech yoki kamerali qurutgichlarda qurutiladi, konusli bolg'achali tegirmonda un holatiga keltiriladi. Elangan qumtuproq, ohaktosh va soda tortilib maxsus mashinalarda aralashtiriladi.

Manzarali, rangli shisha ishlab chiqarishda esa buyoq sifatida mis, xrom, temir, kobalt va boshqa materiallarning oksidlaridan foydalaniladi. Shisha zavodagi maxsus pechlarda 1500 °C temperaturada pishiriladi. Pishirish jarayonini protokli vanna pechlarda amalga oshiriladi. Hozirgi vaqtlarda deraza oynalari vertikal yo'nalishda cho'ziladigan mashinalarda tayyorlanadi. Bu mashinalarda uzluksiz shisha lentasi qoliplovchi moslamaning tirqishi orqali cho'ziladi. Shishaning bunday usulda olingan shisha sifatliroq, shaffof, chiziqchasiz bo'ladi. Mashinalarda qoliplangan shisha eritmasi lentasi maxsus rejimda sovutiladi. Bu vaqtda shishaning ichki kuchlanishi sekinlik bilan yuqola boradi. Lenta sovub mashinadan chiqq borishi bilan tegishli o'lchamlarda list qilib qirqiladi. Qirqim qalinligi 2-6 mm atrofida bo'lib, o'lchami 250x250 dan 1600x2200 mm gacha bo'ladi.

Polirovkalangan vitrina shishasi va ko'zgu olishda kuchlanishdan holi qilingan shisha sayqallash va yaltiratish stanoklariga yo'naltiriladi. Dekarativ buyumlarga esa mexaik ishlovdan tashqari, kimyoviy va badiiy ishlov ham beriladi. Natijasda mahsulot yarqirab, jilva berib turadigan bo'ladi.

Shisha qurilish materialidir. Uning yangi, arzon, go'zal, uzoq chidaydigan shaffof, yarimtiniq, deraza va eshiklarni qoplash, balkonni o'rash, to'siq va devor o'rnida ishlatiladi.

Listli qurilish va dekorativ shishalari imorat va turar-joylarning deraza va eshiklarning oynalash, yuqori nur tushish fonarlarini qoplashda ishlatiladi. Yana ular ko'zgu va mebellar yasashda, zinapoyali jihozlashda qo'llaniladi. Ularning amirovkalangan va rangli turlarini tomlarni berkitish, olovga moyil xonalarni qoliplash, dekorativ oynalshda qo'l keladi.

Maxsus xossalari listli shishalardan ultrabinafsha nurlarini o'tkazadigan shishalar tayyorlanadi. Ultrabinafsha nurlarni yutuvchi shishalardan kitob saqlash xonalariarxiv va boshqa hollarda keng foydallaniladi.

Hozirgi kunda respublikamizning ikki yirik korxonasida qurilish shishasi ishlab chiqarilmoqda. birgina Chirchiq shisha zavodning bir yilda ishlab chiqariladigan qurilish shishasi 2.85 million kvadrat metrni tashkel qiladi. 1975 yilda ishga tushirilgan Quvasoy «kvars» zavodi dekorativ va tanirovkalangan listli shishalarni ko'p miqdorda ishlab chiqarmoqda.

Qurilish oynalarining afzalliklari:

Qurilish shishasi har tamonlama mukammal, mustahkam va zamon talablariga javob beradigan bo'lishi kerak. Qurilish oynalar har qanday me'moriy loyihaga yengillik va obodlikni qo'shadi. Bu zamonaviy, ta'sirchan va chiroyli ko'rinadi. Shu sababli bezatishning bu shakli dunyoning barcha tsivilizatsiyalashgan mamlakatlarida talabga ega bo'lib, savdo markazlari va sanoat binolarini shisha bilan qoplash uchun ishlatiladi. Alyuminiy fasad tuzilmalari yuqori yorug'lik uzatish bilan ajralib turadi. Buning yordamida sanoat va savdo binolarning zamonaviy va ishonchli jabhalari shahar me'morchiligining haqiqiy bezakiga aylanadi.

Kamchiliklari:

- ishlab chiqarish va o'rnatish texnologiyasi buzilgan taqdirda egilish va shishish ehtimoli;
- yong'inga nisbatan past qarshilik.

KIMYO FANINI SAMARALI O'QITISHDA DEDAKTIK USULLARDAN FOYDALANISHNING AHAMIYATI

Annotatsiya. Interaktiv metodlar o'quvchi va o'qituvchining birgalikdagi faoliyati bo'lib, o'quvchilarni ijodiy fikrlashga, zarur xulosalarga kelishga, tahlil qilish va olingan bilimlarni amaliyotga qo'llashga o'rgatadi. O'qituvchining zimmasidagi vazifa esa, o'quvchilarga aniq yo'nalish berish, to'g'ri xulosalarni aytishdan iborat. Bu metodlar yana shunisi bilan ahamiyatli, o'qituvchi o'quvchining fikrini hech qachon keskin rad etmaydi, to'xtatmaydi va ular o'rtasida doimiy faollik ta'minlanadi.

Kalit so'zlar: Tarbiyaviy maqsad, didaktik o'yinlar, ishchanlik o'yini, interfaol usullar.

THE IMPORTANCE OF USING DIDACTIC METHODS IN EFFECTIVE TEACHING OF CHEMISTRY

Abstract. Interactive methods are a joint activity between a student and a teacher, which teaches students to think creatively, come to the necessary conclusions, analyze and apply the acquired knowledge in practice. The teacher's task is to give clear direction to students and make the right conclusions. Interactive methods are also important because the teacher never rejects or interrupts the student's opinion, and constant activity is ensured between them.

Key words: Educational goal, didactic games, activity game, interactive methods.

Ta'lim muassasalarida tayyorlanuvchi mutaxassislar ma'naviy xislatlari va umumkasbiy salohiyatidan tashqari, avvalo muayyan tanlangan sohaning chuqur bilimdoni bo'lishi ham lozimdir. Buni amalga oshirish uchun talabalar tafakkurini faollashtiruvchi va chuqurlashtiruvchi, shuningdek, ilmiy-o'quv axborotining uzatish jarayonini jadallashtiruvchi va samaradorligini oshiruvchi faol ta'lim texnologiyalari ishlab chiqilishi va amaliyotga keng ko'lamda joriy qilinishi lozim bo'lib qoldi.

Har bir darsda, uning maqsadidan kelib chiqqan holda aniq dasturlar qo'llanishi mumkin. O'quv jarayonida samarali foydalaniladigan dasturiy vositalar kasbiy kimyo o'qitishga mos bo'lishi, yuqori darajadagi ko'rgazmalilikka, foydalanishga oson, umumo'quv va tajribaviy ko'nikmalarini shakllantirishiga, bilimlarni umumlashtirish va chuqurlashtirish imkoniyatlariga ega bo'lishi kerak [1]. Tadqiqotlarning natijalari shuni ko'rsatdiki, talabalarni o'z kasbiga bo'lgan qiziqishini oshirishda yangi axborot texnologiyalari, xususan pedagogik dasturiy vositalarning roli katta. Pedagogik dasturiy vositalarni o'quv jarayonida maqsadga muvofiq bo'lgan metodika asosida qo'llash bo'lajak pedagoglarni va boshqa mutaxassislikka oid kurslar bo'yicha amaliy bilimlarini mustahkamlash bilan birgalikda yangi axborot texnologiyalariga bo'lgan qiziqishini oshiradi. Yuqoridagi fikrlar asosida kimyo darslarini har doim an'anaviy tarzda emas, ba'zan noan'anaviy tarzda tashkil etish yaxshi natija beradi. Masalan, dars boshlanishida o'quvchilarga kartochka-topshiriq va shu topshiriqqa oid model (krossvord yoki skanvord, rebuslar tuzish ham mumkin) tarqatib chiqiladi.

Topshiriqni birinchi bo'lib bajargan o'quvchilar baholar orqali rag'batlantirilishi e'lon qilinadi.

Kimyoga oid qiziqarli masalalarga krossvord, rebus va ijobiy izlanishga undaydigan masalalarni kiritish mumkin. Bunda o'quvchilarni zeriktirmaslikka, kimyo atamalaridan so'z boyligini oshirish va tez fikrlashga o'rgatadi. Kimyoga oid rebusni tuzishga turmushda uchraydigan va o'quvchilarga ma'lum bo'lgan ob'ektlar, shakllar yoki tasvirlarni tanlash maqsadga muvofiq.

O'quvchilarni fanga qiziqtirish, darsda qiziqarli masalalar va didaktik o'yinlardan unumli foydalanib faol o'quv-biluv jarayonini vujudga keltirish orqali o'quvchilarning grafik tayyorgarligi darajasini oshirish va kasbiy shakllantirish mumkin.

Kimyodan yaratilgan o'yin dasturlari o'quvchilarda o'quv motivatsiyasini shakllantirishga, ijodiy fikrlashga, mustaqil ishlash va bilim boyligini oshirishga xizmat qiladi.

Kimyodan kompyuter o'yinlarini ishlab chiqish texnologiyalari quyidagi bosqichda amalga oshiriladi:

- O'quvchilarning o'zlashtirishida murakkab bo'lgan mavzu tanlab olinadi.

- O'yinning maqsadi va sharti aniqlab olinadi.

Ta'limiy maqsad – o'yin davomida o'quvchi mavzunining mohiyatini to'liq tushunib oladi.

Tarbiyaviy maqsad - o'quvchilarda kuzatuvchanlik, ziyraklik, ogohlik, topqirlik va estetik did kabi fazilatlarni tarbiyalaydi.

Rivojlantiruvchi maqsad – o'quvchining fazoviy tasavvur qilish, mantiqiy fikrlash va ijodkorlik qobiliyatlarini rivojlantirishga xizmat qiladi.

Ishchanlik o'yini darsi – dars mavzusi bo'yicha masalalarni hal etish jarayonida o'quvchilarning faol ishtirok etishini ta'minlash orqali yangi bilimlarni o'zlashtirish mashqi.

Rolli o'yin darsi - dars mavzusi bo'yicha masalalarni o'rganishda o'quvchilarga oldindan ma'lum rollarni taqsimlash va dars jarayonida shu rolni bajarishlarini tashkil etish asosida bilimlarni mustahkamlash darsi. bu usulni asosan element, kimyoviy belgi mavzusida qo'llash yaxshi samara beradi. 7-sinf o'quvchilari element belgisi haqida, ham element xossasi haqida tushunchaga ega bo'ladi

Teatrlashtirilgan dars – dars mavzusi bilan bog'liq sahna ko'rinishlarini tashkil etish orqali dars mavzusi bo'yicha chuqur, aniq ma'lumotlar berish darsi.

Kompyuter darsi – tegishli o'quv fani bo'yicha dars mavzusiga doir kompyuter materiallari (multimedia, virtual o'quv kursi va shu kabilar) asosida o'tiladigan dars.

Kim oshdi savdosi darsi – o'quv fani ayrim bo'limi bo'yicha bilimlarni har bir o'quvchi qanchalik ko'p bilishini namoyish etish darsi.

Formulalar darsi – o'quvchilarning formulalarni puxta o'zlashtirishlari bo'yicha turli o'yinlar shaklidagi mashqlar o'tkazish darsi.

«Mo'jizalar maydoni» darsi – o'quvchilar bilan o'tkaziladigan qiziqarli o'yin bo'lib, turli savollarga belgilangan vaqt davomida to'g'ri javoblar topish va g'oliblarni rag'batlantirish orqali o'quvchilarda fikrlash, topqirlik, ziyraklik va bilimlarini kengaytirib borish sifatlarini shakllantiradi.

Didaktik o'yinlar tashkilotchilari ular uchun ishlatiladigan har bir material bilan ishlash, ulardan tegishli didaktik vositalarni tayyorlash hamda xavfsizlikni ta'minlash texnologiyalarini puxta bilishlari va rioya qilishlari lozim. Chunki didaktik vositalarning sifati, ko'zda tutilgan maqsadlariga mosligi, qulayligi va ulardan to'g'ri foydalanish mashg'ulotlar samaradorligini oshirishga ijobiy ta'sir ko'rsatadi.

Maktabda har bir o'qituvchi ayrim turdagi didaktik o'yin mashg'uloti o'quv materiallarini amalda qo'llash uchun tayyorlashini tashkil qilish metodi faoliyatning ajralmas qismi hisoblanadi.

ELECTRONIC NATURE OF CHEMICAL BONDS IN ORGANIC COMPOUNDS

Abstract. This article describes the properties of covalent bonds found in organic compounds, their hybridization states, and the electrons involved in the bond.

Key words: covalent bond, hybridization, electronic orbital, σ and π bonds, charge, electron cloud, spatial direction, carbon atom, organic compound.

Organik birikmalarda eng ko‘p uchraydigan kimyoviy bog‘lanish biroz qutblangan kovalent bog‘lanishdir. Bu bog‘lanish elektron bulutlarning o‘zaro qoplanishi natijasida hosil bo‘ladi. Ko valent bog‘lanishlar bir-biridan o‘z qutblanuvchanligi bilan farq qiladi. Organik birikmalarda atomlar kovalent bog‘lardagi qutbla nuvchanlikka qarab qisman zaryadlangan bo‘ladi. Anorganik birik malarda bu zaryadlar butun son bilan ifodalanadi va oksidlanish darajasi deyiladi. Organik kimyoda esa qisman zaryadlanish $d+$ va $d-$ harflar bilan ifodalanadi. Elektron zichlikning bir atomdan ikkinchi atomga siljishi organik birikmalarning elektron formulalarida, ko‘pincha umumiy bog‘lovchi elektron juftlarning siljishi bilan $C \delta +$; $Cl \delta -$ yoki strelka bilan ko‘rsatiladi: $CH_3 \rightarrow Cl$.

Kovalent bog‘lanishning eng muhim xossalaridan biri uning yo‘naluvchanligidir. Bog‘lanishning yo‘naluvchanligi molekularlarning fazoviy tuzilishiga, ya‘ni ularning geometriyasiga (shakliga) bog‘liq bo‘ladi. O‘zaro

reaksiyaga kirishuvchi atom larning elektron bulutlari bir-birini qoplaganda qanday shakl va fazoviy yo'nalish kelib chiqishiga qarab molekulari chiziqli va burchaklarga ega bo'lgan birikmalar hosil bo'ladi. Ko'p atomlardan hosil bo'lgan kovalent bog'lanishlar doimo fazoviy yo'nalgan bo'ladi. Bog'lanish orasidagi burchak valent bur chaklar deyiladi. Ko'pincha kovalent bog'lanish hosil bo'lishida ishtirok etadigan elektronlar turli holatlarda, masalan, biri s, ikkinchisi p-orbitallarda bo'ladi. Bundan molekuladagi bog'lanishlarning puxtaligi ham turlicha bo'lishi kerak edi. Lekin tajriba ular teng qiymatli ekanligini ko'rsatadi. Bog'lanishlar puxtaligining bir xilligi 1931-yilda Amerikaning kimyogar olimi L. Poling (1901—1994) tomonidan taklif etilgan atom orbitallarning gibridlanishi haqidagi qoida bilan izohlanadi. Gibridlanishda atom orbitallarning dastlabki shakli hamda energiyasi o'zgaradi va bir xil shakl hamda energiyaga ega bo'lgan elektron orbitallar hosil bo'ladi. Gibridlangan orbitalning kimyoviy bog'lanishi gibridlanmagan (sof) orbitalnikiga qaraganda ancha mustahkam bo'ladi, chunki gibridlanishda bulutlar bir-birini ko'proq qoplaydi. Organik birikmalarda uglerod atomi 3 xil sp^3 -, sp^2 - va sp -gibridlanish holatida bo'lishi mumkin. sp^3 -gibridlanish. Metan molekulasining hosil bo'lishida sp^3 -gibridlanish sodir bo'ladi. Bunda uglerod atomi «qo'zg'al gan» holatga o'tadi, ya'ni $2s^2$ dagi elektronlar bir-biridan ajraladi.

Uglerod atomining sp^3 - gibridlanishi

Metan molekulasining hosil bo'lishida uglerod bitta s va uchta p- elektronlarining orbitalari gibridlanadi hamda to'rtta bir xil gibrid orbitallar hosil bo'ladi. Gibrid orbitallarning o'qlari orasidagi valent burchak $109^\circ 28'$ ga teng. Uglerod atomining to'rtta gibrid sp^3 - orbitallari bilan to'rtta vodorod atomining s- orbitallari bir-birini qoplashi natijasida to'rtta bir xil bog'lanishli mustahkam metan molekulasini hosil bo'ladi. Birikayotgan atomlarning markazlarini

biriktiruvchi to'g'ri chi ziq bo'ylab orbitallarning bir-birini qoplashi natijasida yuzaga ke ladigan bog'lanish σ (sigma) bog'lanish deyiladi. Ma'lumki, metan molekulasida 4 ta σ - bog' bor. Birikayotgan atomlar o'zaro bitta dan ortiq σ - bog' hosil qila olmaydi. Shu sababli C — C orasida oddiy bog' σ bog'lanish bo'ladi. sp^2 - gibrirlanish. Etilen molekulasi qo'shbog'idagi uglerod atomida bitta s va ikkita p-orbitallar gibrirlanib, uchta tenglashgan orbitallar hosil qiladi. Ular bitta tekislikda 120° burchakda joylashadi. Bunday gibrirlanish sp^2 - gibrirlanish (yoki trigonal gibrirlanish) deyiladi. Har qaysi uglerod atomida bittadan p-orbitallar gibrirlanmagan bo'lib, u gibrirlangan orbitallar tekisligiga perpendikular joylashgan bo'ladi. Metanning tetraedr molekulasida σ - bog' larning hosil bo'lishi. Etilen molekulasida ikkita uglerod atomi sp^2 - gibrirlangan holatda bo'lib, σ - bog'lanish hosil qiladi. Har qaysi uglerod atomidagi boshqa ikkita gibrirlanmagan orbitallar vodorod atomlari bilan to'rtta σ - bog'lanish hosil qiladi. Foydalanilmay qolgan ikkita orbital C va H atomlari joylashgan tekislikning ustidan hamda ostidan ikki marta (gantelsimon) bir-birini qoplaydi. Natijada π - bog'lanish vujudga keladi. π - bog'lanishning hosil bo'lish sxemasiko'rsatilgan. Shunday qilib, etilen molekulasida C — C bog'ning bittasi σ -, ikkinchisi π - bog'lar, etilenda jami 5 ta σ - va bitta π - bog'la nish bor. Uglerod atomlari orasidagi qo'shbog' oddiy bog'ga nisbatan qisqa: etan molekulasida uglerod atomlarining yadrolari orasidagi masofa 0,154 nm ga, etilen molekulasida 0,134 nm ga teng. π - bog'lanish oddiy bog'lanishga nisbatan bo'shroq bo'ladi. Shu sababli π - bog'lanish kimyoviy reaksiyalarda oson uziladi va etilen hosilalari paydo bo'ladi. Uglerod atomlarining sp^2 - gibrirlanishi esa sp -gibrirlanish deyiladi.

Agar gibrirlanish bitta s- va bitta p- orbitallar hisobiga sodir bo'lsa, bunday gibrirlanish sp - gibrirlanish deyiladi. Bunda hosil bo'lgan 2 ta gibrirl orbital bir-biri bilan 180° burchak ostida joylashadi. Qolgan ikkita p-orbital sofligicha (gibrirlanmay) qoladi. Bunday sp - gibrirlanishga uchlamchi bog'lanish (asetilen molekulasi)ning hosil bo'lishi misol bo'la oladi. Asetilen molekulasidagi uglerodning sp - gibrirlanish holatida turgan ikkita atomi σ - bog'lanishlar hosil qiladi. Har qaysi atomdan bittadan gibrirlangan orbital vodorod atomlari bilan ikkitadan σ - bog'lanishlar hosil qilishga sarflanadi. Bularning hammasi H - C=C- Hmolekulasiga chiziqli shakl beradi va to'rtta atom bir chiziqda yotadi. Bundan tashqari har qaysi uglerod atomining ikkita p- orbitali bir-birini qoplashi natijasida ikkita σ - bog' hosil bo'ladi. Bu bog'lar o'zaro perpendikular ikki tekislikda joylashgan (5- b, rasm). Demak, asetilen molekulasida uchta σ - bog'lanish va ikkita π bog'lanish mavjud. Uchlamchi bog'lanish qo'shbog'ga nisbatan qisqa (0,120 nm). Kimyoviy reaksiyalarda π - bog'lar oson uzilib, uchlamchi bog' qo'shbog'ga, qo'shbog' esa birlamchiga aylanadi. Uchlamchi bog' birikmalarining reaksiyaga kirishish xususiyati qo'shbog'li birikmalarga qaraganda kuchliroq bo'ladi.

HAYOT FAOLIYATI XAVFSIZLIGI YO‘NALISHIDA TALABALARNI ZAMONAVIY O‘QITISHNING O‘ZIGA XOS JIHLTLARI

Annotatsiya. Ushbu maqolada Hayot faoliyati xavfsizligi fanini o‘qitish samaradorligini oshirish hamda mashg‘ulot xonalariga qo‘yilgan talablar haqida ma‘lumotlar keltitib o‘tilgan.

Kalit so‘z: Hayot faoliyati xavfsizligi, xavf, mashg‘ulot xonasi, xavfsizlik, mehnat muhofazasi, xavfsizlik usullari, nazorat-o‘lchov asboblari.

SPECIFIC ASPECTS OF MODERN EDUCATION OF STUDENTS IN THE DIRECTION OF LIFE ACTIVITY SAFETY

Abstract. This article provides information on improving the effectiveness of teaching Life Safety and the requirements for training rooms.

Key words: Safety of life activity, risk, training room, safety, labor protection, safety methods, control and measuring devices.

Hayot faoliyati xavfsizligi fanini o‘qitishdan maqsad talabalarda kasbiy majburiyatlarini bajarish bilan birga bitiruvchi bakalavr va magistr (kelajakda turli sohalarida rahbar yoki mutaxassis vazifalari)ga ish joylaridagi ishchilarni shikastlanmasdan mehnat qilishi va ularni xavfsizligini yetarli darajada ta‘minlash bilim va ko‘nikmalarni shakllantirishdan iborat. O‘quv fanining vazifasi ishchining shikastlanishi yoki uni kasallikka olib kelishi mumkin bo‘lgan omillarni minimallashtirgan holda ishchiga qulay mehnat sharoitini yaratish orqali mehnatning maksimal samarasiga erishishdir. Oliygo‘hlarning «Hayot faoliyati xavfsizligi» kafedrasida bo‘yicha dars berish va ilmiy-tadqiqot ishlarini o‘tkazish sifatini yaxshilash uchun zamonaviy maxsus jihozlangan xona, auditoriya va o‘quv sinflari talab etiladi. Shu munosabat bilan quyidagilar zarur:

1. Mehnat muhofazasi bo‘yicha zamonaviy multimediyaviy vositalari, nazorat-o‘lchov asboblari, maketlar, manikenlar, sohalar yo‘nalishi bo‘yicha ishchilarning maxsus kiyim namunalari, yong‘in xavfsizligi texnikasi va kiyimkechagi, elektron plakatlar, videomateriallar bilan jihozlangan «Mehnat muhofazasi» xonasini yaratish.

2. Turli sohalar bo‘yicha xavfli obyektlar uchun zamonaviy multimediyaviy vositalari, xavfli obyektlarni xavfsizlik parametrlarini o‘lchash uchun nazorat-o‘lchov asboblari, maketlar, elektron plakatlar, videomateriallar bilan jihozlangan «Sanoat xavfsizligi» maxsus auditoriyasini yaratish.

3. Zamonaviy asbob-uskunalar bilan jihozlangan «Hayot faoliyati xavfsizligi laboratoriyasini» yaratish. Unda zamonaviy multimediya vositalari, radiatsiya va kimyoviy zararlantirishni o'lchash uchun nazorat-o'lchov asboblari, zamonaviy shaxsiy himoya vositalari (gazniqoblar, respiratorlar, avariyaqutqaruv otryadlarining maxsus qutqaruv kiyimlari va h.k.), maketlar, elektron plakatlar, videomateriallar bo'lishi kerak.

«Mehnat muhofazasi» xonasi mehnatni muhofaza qilish bo'yicha quyidagi chora-tadbirlarning bajarilishini ta'minlaydi:

- mehnat muhofazasi bo'yicha seminarlar, ma'ruzalar, suhbatlar va konsultatsiyalar o'tkazish;

- mehnat muhofazasi bo'yicha, Shuningdek, xavfsizlik usullari, jamoaviy va shaxsiy himoya vositalarini qo'llash, birinchi tibbiy yordam ko'rsatish masalalarini o'rgatish;

- mehnat muhofazasi bo'yicha yo'riqnomalar, mehnat muhofazasi va sanitar me'yorlar bo'yicha alohida bilim talab etiladigan ishchilar bilan tematik mashg'ulotlar o'tkazish va ularni bilimlarini tekshirish;

- xodimlar uchun mehnatni muhofaza qilish talablarini ishlab chiqish; - sog'lom va xavfsiz ish joylarini yaratish bo'yicha ko'rgazmalar, ekspozitsiyalar, stendlar, maketlar va boshqa turdagi ko'rgazmalarni tashkil qilish;

- korxonada (ish joylarida) mehnat sharoitlarini analitik tadqiqot qilish va ularni xavfsiz mehnat faoliyatiga ta'sirini baholash.

Yuqoridagilardan kelib chiqib, mehnat muhofazasi xonasi quyidagilar bilan jihozlanishi kerak: mehnat muhofazasi bo'yicha me'yoriy-texnik hujjatlar, o'quv dasturlari, uslubiy, direktiv va ishchilarga huquqiy masalalar, xavfsizlik texnikasi, ishlab chiqarish sanitariyasi, yong'in xavfsizligi masalalariga o'qitish, yo'riqnoma berish va maslahatlarga ega bo'lgan boshqa materiallar bilan; o'qishning texnik vositalari (audio, videoapparatura, kompyuter texnikasi, trenajyorlar, nazorat-o'lchov asboblari, shovqin o'lchagichlar, gazoanalizatorlar, manometrlar, lyuksmetrlar va h.k.); ko'rgazmali qurollar (plakatlar, sxemalar, maketlar, manekenlar, videofilmlar va xavfsizlik bo'yicha boshqa targ'ibot vositalari).

«Sanoat xavfsizligi» bo'yicha maxsus auditoriyani yaratishda masalan temir yo'l transportida xavfli ishlab chiqarish (texnologiya) obyektlari va asboblari, xavfli yuklarni tashish, yuklash-tushirish, to'kish va saqlash bilan bog'liq ichki temir yo'llari joylashgan temir yo'l stantsiyalari va boshqa korxonalaridagi texnologik jarayonlar keltirilgan videomateriallar bo'lishi kerak. Bevosita temir yo'l transporti sohasida esa ichki temir yo'l relslari, shpallari, tormoz bashmaklari, shlanglar, portlashdan himoyalangan yoritish asboblari, o'ta xavfli yuklarni tashish uchun mo'ljallangan sistemalar va konteynerlar, xavfli yuklarni yetkazuvchi nasoslar, xavfli yuklarni omborlarda saqlash uchun rezervuarlar, temir yo'l da xavfli yuklarni tashish uchun vositalar (lokomotivlar,

teplovozlar)ning maketlari. Shuningdek, suvning harorati 115 °C dan yuqori bo‘lgan bug‘ qozonlari, bug‘ isitish qozonlari, energetik qozonlar, sodoregenerativ qozonlar, yuqori haroratda organik moddalar bilan ishlovchi qozonlar, vakum qozonlar, modul (blokli) qozonlar, Shuningdek, bosimi 0,07 mRa (0,7 kg/sm²) va harorati 115 °C dan yuqori bo‘lgan bosim ostida ishlaydigan idishlar, qopqog‘i tez ochiladigan idishlar, ko‘p joyli barokameralar, ballonlar (avtoullov vositalari va qishloq xo‘jaligi texnikasida foydalanilmaydigan), sisternalar, bug‘ va issiqlik quvurlari, minorali kranlar, portal kranlar, ko‘prikli kranlar, strelali kranlar (avtomobil, temir yo‘l, zanjirli, pnevmog‘ildirakli, kran manipulyatorlar, quvur yotqizuvchi), kabelli kranlar, va boshqa qo‘zg‘almas asosdagi kranlar, elektrotallar, eskalatorlar, funikulyorlar, osmali po‘lat plakatlar bo‘lishi maqsadga muvofiq hisoblanadi.

«Hayot faoliyati xavfsizligi laboratoriyasini» yaratishda esa termoanemometr, lyuksmetr, shovqin o‘lchagich, vibrometr, psixrometr shovqin o‘lchagich (Shumomer), chang o‘lchagich, yurak va o‘pkani reanimatsiya qiluvchi trenajyori hamda elektr tarmog‘ini yerga va nolga ulash stend-trenajyorini bo‘lishi talab etiladi. Xulosa o‘rnida aytadigan bo‘lsak, turli oliygohlarda ta‘lim olayotgan talabalarni kelgusida yetuk mutaxassis kadr bo‘lib yetishishlari uchun nafaqat zamonaviy moddiy-texnik bazalarning mavjudligi, balki mavjud texnologiyalardan mohirona foydalana oladigan, zamonaviy o‘qitishning yuksak taktika va texnikasini egallagan malakali pedagog kadrlar ham muhim ahamiyat kasb etadi.

EFFECTIVENESS OF INTENSIVE AGROTECHNOLOGIES

Abstract. In agriculture, special attention should be paid to reducing the cost of the product using innovative technologies that minimize the cost of fertilizers, fuels, and lubricants, mechanization services for the placement of fertile varieties in conditions of appropriate soil and climate based on the integration of science, education and practice.

Key words: soil, bentonite, water, fertilizer, crop variety, cotton, rotation.

Introduction. The aim of work is to develop a technology for the use of non-conventional agro-ore material (bentonite clay) to save irrigation water and mineral fertilizers depending on an irrigation scheduling in the cultivation of early, highly-productive and high-quality yields of upland cotton varieties in conditions of the light sierozem soils of the Andijan province.

The object of study is light sierozem soils, upland cotton varieties «Andijan-37» and «Sultan», bentonite clay.

Scientific novelty of research is the following:

for the first time in conditions of the light sierozem soils of the Andijan province, a resource-saving agrotechnology for the use of unconventional agro-ore as an addition to mineral fertilizers before soil plowing at a rate of 6000 kg ha⁻¹ and during the budding phase of cotton varieties at a rate of 750 kg ha⁻¹ has been developed;

Literature review. Comprehensive soil improvement, increasing yields and economic efficiency is one of the important issues for the future development of agriculture.

- optimal water consumption has been identified, up to 25% reduction of the use of mineral fertilizers in the cultivation of cotton varieties achieved due to the use of non-traditional agro-ore (bentonite), which resulted in increase of soil water-holding capacity;

- the impact of the effective use of non-traditional agro-ore as resource-saving agrotechnologies in the cultivation of cotton varieties «Andijan-37» and «Sultan» on their irrigation scheduling, fertilization and on growth, development and yield has been determined;

- the effect of using non-traditional agro-ore as supplements to mineral fertilizers once every three years before soil fertility, agro-physical, agro-chemical properties as well as on the 10-15% increase of economic efficiency of resource-saving technology has been determined.

It is very important to make right choice of cotton varieties reliable to the local climate, fast ripen, highly productive, stable to diseases and vermins; to locate them reliable to the zones, to seed cotton in double rows, to till the soil and get ready for seeding, thin cutting, applying growth controlling minerals; cutting cotton plant top, fertilizing, eliminating qualified effective agritechnical processes on time.

Growth confirming minerals effect elevating of plants sprouting capacity, their stability to drought and activity, diseases and vermins of agricultural crops, their ripening speed elevating.

It is very important to make right choice of cotton varieties reliable to the local climate, fast ripen highly productive, stable to diseases and vermins, to locate them reliable to the zones, to seed cotton in double rows, to till the soil and get ready for seeding, seeding, thin cutting, applying growth controlling minerals. Cutting cotton plant top, fertilizing, eliminating qualified effective agritechnical processes on time.

There exist lots of factors to increase crop productivity but the most decisive part have meliorative state of soil, fertilizer, crop variety and crop rotation. Without fertilizing cotton productivity can not run over 12-14 centner per hectare, when fertilized with mineral it can reach 20-30 centners and with organic fertilizers 30-33, with crop rotation it reaches 35-40 centners /hec. (J.Akhmedov, K. Mirzajonov, 2007). Having studied the scientific conclusions of a number of scientists we experimented Sultan and Andijan-37 cotton varieties in Asaka, Izboskan districts of Andijan region and in Andijan Agriculture Institute experimental campus in 2011-2014. We studied growth, vegetation and agritechnical processes and those varieties.

Research methodology. Studying were carried out in the field conditions of Uz.S.V.I. (Uzbekistan scientific verification) based on «Methods of carrying out field experiments» (2007). Field experiments were located out at 12 variants, general area of 200 m² 100 m², in total; 8 rows and 3 repetitions [2].

In the experiment Andijan-37 and Sultan cotton varieties were sowed at scheme 90x15-1-2. The variants were cultivated in LFCD (Limited field contained dampness) soilumidity during growing period 60-70-60 % and 70-70-60% in two different watering regimes, two seedlings density 100-110 and 120-130 thousand per/hec., two kinds of fertilizers NPK 150-105-75 and NPK 200-140-100 kg/hec.

Before watering made the most reliable condition for growth and vegetation of plants and for the plants of other soil condition concerning to 70-70-60 percent watering regime variants and agricultural mineral powder used variants soil humidity [3].

Primary conclusions:

- limited field humidity capacity of the field experimental soil (LFCD) in 0-100 cm layer made 24 % and mass weight made 1,35 gr cm³ a little superiority of Sultan variety vegetation at the beginning of progressing period over Andijan-37 and capsule with bentonite was noticed;

- Cotton plant varieties were fertilized with NPK 150-105-75 kg/hect. mineral at 750 kg mixed with bentonite, in two different in comparison to variants LFCD 60-70-60% and 70-70-60% in both soil humidity variants watered with bentonite it effected fruitfully and maintained saving humidity in cotton plant rows, cavity of soil, water conductivity features during vegetation period in comparison to usual soil humidity variants

- In the experiment in the soil condition fertilized with NPK 150-105-75 kg/hect. adding 750 kg bentonite concerning to both variants LFCD in both watering regimes diminishing soil capacity and improving its cavity considerably in creasedits water absorbing capacity[4]. Soil layers watered in 60-70-60% soil humidity in comparison with LFCD showed the highest capacity of water absorbtion. Water absorbtion of soil in fertilized soil was 74,6 m³ in comparison to the starting point of vegetation period it was 80,5 m³/hect;

- in cotton plant cultivation use of NPK 150;105;75 kg/hect with minimal doses of bentonite made reliable condition for growth and vegetation of cotton plants. Efficacy of fertilizers in reased the process to 25%.

Analysis and Results. In Andijan region light grey soil conditions fertilizing cotton plants in vegetation period at NPK 150-105-75 kg/hect with minimal doze of bentonite 750 kg/hect was observed to be the most agricultural process. It gave the oportumty to diminish technology resource use, water, fertilizer, fuel, cotton plant seeds application [5].

Based on the research results on the development of optimal norms for the use of unconventional agro-ore as a supplement to application of mineral fertilizers in order to increase cotton yields in conditions of light sierozem soils:

A «Recommendation on the use of agro-mineral bentonite to provide cotton with additional water and fertilizer» for farmers have been developed and approved (Reference of the Ministry of Agriculture, №02/020-227 from August 27, 2018). This recommendation is widely used as a guideline in the agricultural departments and farms of the Andijan province;

Agrotechnology allowing to ensure saving of mineral fertilizers during production cultivation of cotton varieties «Andijan-37» and «Sultan» has been introduced on an area of 61.6 ha in light sierozem soils of the Altynkul district (Reference of the Ministry of Agriculture, №02/020-227 from August 27, 2018). Mixing of 750 kg ha⁻¹ agro-mineral bentonite clay with mineral fertilizers (N₁₅₀P₁₀₅K₇₅ kg ha⁻¹) during cotton budding phase allows reducing application of

mineral fertilizers by 25%.

This resource-saving agrotechnology was implemented in the 45 ha of the Markhamat district and 50 ha of the Izboskan district, the Andijan province (Reference of the Ministry of Agriculture, №02/020-227 from August 27, 2018).

The use of agro-mineral bentonite clay at a rate of 6 t ha⁻¹ (once in three years) before soil plowing in autumn with irrigation regime by a scheme of 1-2-1 (at 70-70-60% Fc) leads to savings of 870 to 920 m³ ha⁻¹ of water, obtaining an additional yield of 3.8 - 4.0 t ha⁻¹ of cotton yield, which is by 0.4-0.45 higher compared to the yields obtained with traditional agricultural technologies.

TRANSFERRING UNIVERSITY TEXTBOOKS TO THE BRAILLE ALPHABET

Abstract. The topic of transferring university textbooks to Braille alphabet is the main means of writing and reading for many people, so the topic of transferring university textbooks to Braille alphabet includes many instructions. In the article, Topics such as how to create Braille, methods of converting textbooks and teaching materials to Braille, the average use of Braille in university curricula and the parts used can be seen.

Keywords: University textbooks, braille, testing and corrections, creation of point sets, 3D printers.

Introduction. Braille is a raised-dot font for writing and reading by the blind, which is based on a combination of hexagonal dots. The sign, depicted by a combination of raised dots 0.6 mm high and 1.4 mm in diameter, is recorded in a cell measuring 4.2 mm x 7 mm. With a certain skill, text written in this way can be easily recognized by touch. The ease of reading signs and their compactness allow a blind reader to read the text quickly enough. Such a system of writing and reading was created by the French teacher Louis Braille (1809-1852). The alphabet, numbers, musical notes and any other printed symbols can be reproduced in the Braille system by various combinations of dots in a cell (cell). Braille notation is also used to write math symbols, equations, computer symbols, and to write foreign languages.

When blind or visually impaired children learn to read, Braille is the best way to develop spelling, grammar, and punctuation skills. In addition, complex diagrams and graphics that are difficult to describe verbally can be easily described through the Braille system.

Learning the Braille system will enable a blind child to move on to working on a computer with a Braille display and a Braille printer. Braille is read by touch, using the index finger of one or both hands [1].

The purpose for which we offer you this manual for learning the Braille system at home is to teach you how to communicate with your blind friends and blind members of your family. You can write a letter, leave a note or a phone number. And what is also very important - you will be able to read a letter, note or phone number left for you, you will be able to freely communicate with friends and relatives without intermediaries. This manual can be successfully used by

school teachers and rehabilitation specialists. It takes some effort to learn Braille and write accurately and accurately. For example, an incorrect dot can change the phone number. But knowing the Braille system is worth the effort. Set yourself the goal of achieving the highest possible results - and try to achieve success.

Main part.

To create university textbooks in Braille, the following steps are required:

Choose by Alphabet: The Braille alphabet is based on a set of 6 dots that represent both letters and numbers. For each letter of the alphabet there are sets of designated points. Communicate with a university Braille teacher or staff member. They can advise you on learning Braille and getting Braille textbooks. Get it in Braille from the university's website or other sources that provide textbook information. This is useful for downloading and reading textbooks. Find institutions and online resources that have resources and textbooks for learning Braille. This will help you learn to read Braille texts. Communicate with Braille teachers, university staff, or anyone else you want to learn from. They can help you learn and use Braille. Taking time to read Braille textbooks and learn Braille and it will be helpful if you make a study plan for the early Stages. This will help you to be effective in the learning process [7].

Data structure: Structure information about the location of each letter and the set of fixed points. For example, the letter «a» can be placed in the upper-right set, and «b» in the upper-middle set. Information can be gathered by contacting university support centers or teachers. Several public and private organizations support the study of Braille and provide Braille texts. You can contact them to use their instructions. There are art guides for learning Braille and getting Braille texts. For example, organizations such as The Braille Authority of North America provide information on how to obtain Braille texts. There are several online resources for learning Braille and obtaining Braille texts. These resources will help you get Braille texts and use them to learn Braille. Some communities or institutions assist in learning Braille and obtaining Braille texts. Seeking their support and contacting them can help you. The following methods can be used to transfer textbooks and educational materials to Latino Braille:

Exercise symbols and devices: Using exercise symbols and devices for programming is good advice for many aspects of reading and writing. These symbols and devices help to create Braille symbols and sets of dots. The practice symbols and devices method can be advantageous for converting textbooks and educational materials to Latino Braille.

Easy to learn: Learning Latino Braille practice signs is easy and fast. This makes it easier for students to understand textbooks and manuals.

Smoothness and confidence: In the fun characters and devices method, the letters and words are represented in each character, so the textbooks can be read in a concise and accurate way. This makes it easier for students to understand the text and makes them feel comfortable. Ease of use for experienced teachers:

Latino Braille practice signs and devices for teachers are reliable and easy to use. They can support students in their understanding and application of textbooks [3].

Adaptation to a variety of teaching materials: Latino Braille's practice signs and devices method allows for the transfer of textbooks and teaching materials in a variety of types and formats. It is widely used to translate texts, textbooks, articles, stories and other educational materials into Latino Braille.

Designed for Multilingual Materials: This method is designed for converting textbooks and educational materials in different languages to Latino Braille. This allows students to work with multilingual texts and enables them to read and learn multilingually.

The advantages of the interactive signs and devices method make it good and effective for translating textbooks and educational materials into Latino Braille. This allows students to feel comfortable and understand the textbooks, and also ensures that teachers can learn and understand different types of textbooks and materials.

Computer programs: Computer programs are good tools for automating textual data. These programs make it easy to convert text to Braille for reading and writing.

The role of computer software and technology in translating textbooks and educational materials into Latino Braille is very important. It is important to understand their position for the following reasons:

Speed and efficiency of training: Computer programs and technologies help to automate and speed up the method of training symbols and devices. These programs allow you to automatically convert textbooks and educational materials to Latino Braille, and also allow you to prepare a large number of texts in a short time.

Accurate and Accurate Copying: Computer software helps in accurate and accurate copying of textbooks and study materials. They allow detection and automatic correction of incorrect or fine-marked areas, as well as reducing errors and helping to make copies quickly and efficiently.

Use for Multilingual Textbooks: Computer software also helps in converting multilingual textbooks and educational materials into Latino Braille. They provide the ability to work with texts in different languages and also help in the automatic preparation of multilingual textbooks.

Authoritative Algorithms and Comprehensive Programs: Authoritative computer programs provide the necessary algorithms and comprehensive programs to implement the method of exercise symbols and devices. They help in the automatic acquisition and preparation of textbooks and study materials.

Software interface for corrections and correction process: Computer programs provide easy access and correction of exercise symbols and device method for learners, teachers and technicians. They provide future control of destinations with customizable interfaces.

Also, computer programs and technologies are useful for experienced teachers and technicians, and are of great importance in strengthening and disseminating the method of training signs and devices [5].

3D Printers: 3D printers are one of the innovative ways to transfer Braille. They are ideal devices for creating Braille dot sets.

3D printers are important for translating textbooks and educational materials into Latino Braille for the following reasons:

Products for individual use: 3D-printers allow each user to make products according to personal requirements and needs. This enables the development of customized textbooks and learning materials for each student, as well as providing them with tailored advice and support.

Structure and design possibilities: It is very easy to design and edit textbooks and educational materials with 3D printers. This allows learning materials to be tailored to the most suitable requirements and also allows them to be tailored for individual learners according to personal requirements.

Development in a short time: With 3D printers, the development of textbooks and educational materials can be done in a short time. This allows for quick reaction to requests for new textbooks or materials, as well as speed and efficient management of new materials.

Multiple functions and methods: 3D printers work with a variety of materials and learning tools. They can work on a variety of materials, such as plastics, metals, and synthetic materials. This provides an opportunity to use different methods and many materials in studying textbooks and teaching materials.

Innovative methods and technologies: 3D printers are used to learn innovative methods and technologies and create educational materials. It is new and interest-based for students, helping them think critically and solve problems.

Thus, 3D printers help to provide an innovative, efficient and individualized service for translating textbooks and educational materials into Latino Braille. They provide convenience and speed in the development and distribution of educational materials, and also enhance the environment for students to be new and interesting.

Conclusions. I present the guidelines and suggestions related to the transfer of textbooks and educational materials to the Braille alphabet with the following conclusions and recommendations:

Guidelines and manuals: Universities should demonstrate the creation of guidelines and manuals for converting textbooks and teaching materials into Braille. It provides instructions and guides on how students can learn and use Braille.

Easy to read: The use of computer software is of great importance in translating textbooks and educational materials into Braille. These programs help Braille learners to create and read texts and textbooks efficiently and comfortably.

Textbook Reinterpretation Information: When translating textbooks and educational materials into Braille, reinterpretation information is essential to improve student comprehension. Each paragraph should contain brief comments about the main content, theme and problems of the text.

Online Resources and Electronic Programs: Universities strive to provide Braille-translated textbooks and teaching materials through online electronic programs. It allows students to read for the Early Stages and also allows them to use interactive and multimedia to learn Braille.

User Education and Support: Universities strive to provide services to support students in learning and using Braille. This can be done by providing Braille teachers, techniques and Early Stage lessons and teaching materials.

Multilingual Materials: It is important to provide Braille textbooks and learning materials in a multilingual format. It supports multilingual readers and enables them to work with texts in different languages.

Thus, universities strive to provide a convenient and efficient service in the transfer of textbooks and teaching materials to Braille, as well as ensure that students feel comfortable and understand what they are reading. This is important for the development of inclusive education and the development of the potential of each student.

SOCIO-ECONOMIC ASPECTS OF INCREASING THE AVAILABILITY OF BANKING SERVICES

Abstract. The article discusses the need to increase the level of use of banking services and increase their accessibility to increase economic and investment activity, and also provides recommendations for their development.

Key words: Economic liberalization, banking services, accessibility of banking services, digital banking services, online banking, financial literacy.

Tijorat banklari iqtisodiy faoliyatining barqarorligini ta'minlashning asoslari davlatning iqtisodiy siyosati bilan uzviy bog‘liq bo‘lib, ushbu masala bo‘yicha O‘zbekiston Respublikasi Prezidentining 2020 yil 12 maydagi «2020-

2025 yillarga mo'ljallangan O'zbekiston Respublikasining bank tizimini isloh qilish strategiyasi to'g'risida» PF-5992-son Farmonida bank tizimini isloh qilish strategiyasi belgilandi[3].

Har bir jamiyatda bank tizimi iqtisodiyotning muhim va ajralmas tarkibiy qismi hisoblanadi. Banklar xo'jaliklarga kredit berish, korxonalar, tashkilotlar o'rtasida xisobkitoblarni o'tkazish jarayoni, kapital harakatida vositachi sifatida maydonga chiqadi.

Bank xizmatlari ommabopligi tushunchasining mohiyati aholining to'lovlar, hisob-kitoblar, kreditlar va depozitlar kabi turli xil bank xizmatlarini cheklovlarsiz va to'siqlarsiz olish qobiliyatidir. Bank xizmatlarining ommabopligiga ta'sir qiluvchi omillarga quyidagilar kiradi:

- banklarning filial tarmog'ining rivojlanishi va mintaqaviy kompaniyalarning xizmat ko'rsatish qulayligiga bog'liq bo'lgan jismoniy foydalanish imkoniyati;

- mavjud aloqa kanallarining qulayligi, barqarorligi va elektron xizmat ko'rsatish sifati bilan bog'liq;

- moliyaviy savodxonlikning past darajasi, moliyaviy tashkilotlarga ishonchsizlik va mentalitetning o'ziga xos xususiyatlari ham bank xizmatlaridan foydalanishni cheklashi mumkin.

O'zbekistonda, boshqa ko'plab mamlakatlarda bo'lgani kabi, bank xizmatlaridan foydalanish imkoniyatini oshirish bo'yicha ko'plab chora-tadbirlar ko'rilmog'ida. Ulardan ba'zilari quyidagilarni o'z ichiga oladi:

1. Masofaviy xizmat ko'rsatish kanallarini rivojlantirish: O'zbekistonda Internet-banking, mobil ilovalar va boshqa masofaviy xizmat ko'rsatish kanallari faol rivojlanmog'ida.

2. Filiallar va bankomatlar tarmog'ini kengaytirish: O'zbekiston hukumati bank infratuzilmasini rivojlantirishga faol sarmoya kiritmog'ida, butun mamlakat bo'ylab filiallar va bankomatlar tarmog'ini kengaytirmog'ida.

3. Ixtisoslashtirilgan bank mahsulot va xizmatlarini ishlab chiqish: O'zbekiston banklari turli toifadagi mijozlarning ehtiyojlarini qondira oladigan kreditlar, depozitlar, to'lov kartalari va boshqa xizmatlarni o'z ichiga olgan keng turdagi mahsulot va xizmatlarni taklif etadi.

4. Aholining moliyaviy savodxonligini oshirish: Mamlakatda aholining moliyaviy savodxonligini oshirish bo'yicha turli tadbirlar, jumladan, maktab va universitetlarda o'qish, shuningdek, axborot kampaniyalari o'tkazilmog'ida.

Bank tizimidan foydalanishda aholining faolligi sezilarli darajada oshdi. Agar 2023 yilning birinchi yarmida kredit portfelining 22,5 foizi jismoniy shaxslarga tegishli bo'lsa, unda bir yil ichida ularning ulushi 6 foizga o'sib, 28,6 foizni tashkil etdi va yuridik shaxslar soni mos ravishda 77,5 foizdan 71,4 foizga kamaydi [6].

- O'zbekiston bozorida 2023 yilning 1 yarim yilligi uchun jami pul tushumlari 295,4 trln so'mni tashkil etib, 2022 yilning shu davriga nisbatan 30,7 foizga o'sdi.

- O'zbekiston Respublikasi Markaziy banki ma'lumotlariga ko'ra, pul tushumlarining umumiy summasida terminallar orqali tushumlar ulushi 2022 yilning birinchi yarim yilligidagi 32,6 foizdan 2023 yilning birinchi yarim yilligidagi 38,2 foizga o'sdi. Savdo va xizmatlar sohasidan terminallar orqali tushumlar ulushi 2022 yilga nisbatan 37,5 foizdan 40,4 foizga oshdi [4].

Bank xizmatlarining ommabopligini oshirishga ta'sir ko'rsatuvchi muhim omil- bu qayta moliyalash stavkasidir. Qayta moliyalash stavkasi-bu mamlakat Markaziy banki tijorat banklariga kredit berish stavkasi bo'lib, uning darajasi banklar o'z mijozlariga taqdim etadigan kreditlar bo'yicha foiz stavkalariga ta'sir qiladi.

Ammo, agar asosiy stavka pasaytirilsa, banklar kreditlarni past foiz stavkalari bo'yicha taklif qilishlari mumkin, bu esa qarz oluvchilar uchun yanada qulayroq bo'ladi. Shunday qilib, asosiy stavka aholi uchun bank kreditlari ommabopligini aniqlashda muhim rol o'ynaydi.

Bank xizmatlarining ommabopligini oshirishning quyidagi yo'nalishlarini taklif etish mumkin:

Bank filiallari va bankomatlar tarmog'ini kengaytirish:

- qishloq va chekka hududlarda yangi filiallar va bankomatlar ochish;
- naqd pulni komissiyasiz qabul qiladigan va chiqaradigan bankomatlar sonini ko'paytirish.

Mobil va Internet-bankingni rivojlantirish:

- bank hisoblarini boshqarish uchun qulay va xavfsiz mobil ilovalar va veb-platformalarni yaratish;

- mobil qurilmalar va kompyuterlar orqali turli xil bank operatsiyalarini (to'lovlar, o'tkazmalar, to'lovlarni to'lash) amalga oshirish imkoniyatini berish [6].

To'lovlar va tariflarni pasaytirish:

- bank hisobvaraqlarini ochish va ularga xizmat ko'rsatish, naqd pul olish, pul o'tkazmalari va boshqa operatsiyalar uchun to'lovlarni kamaytirish yoki bekor qilish;

- aholining ayrim toifalari (nafaqaxo'rlar, talabalar, kam ta'minlanganlar) uchun imtiyozli shart-sharoitlarni ta'minlash.

Aholining moliyaviy savodxonligini oshirish:

- aholining moliyaviy savodxonligini oshirishga qaratilgan ta'lim dasturlari va tadbirlarini o'tkazish;

- bank xizmatlari va mahsulotlari to'g'risida ma'lumotni arzon va tushunarli tarzda taqdim etish.

Banklarning bank bo'lmagan moliyaviy tashkilotlar bilan hamkorligi:

- chekka hududlarda moliyaviy xizmatlardan foydalanish imkoniyatlarini kengaytirish uchun mikromoliya tashkilotlari, kredit uyushmalari va boshqa bank bo'lmagan moliya institutlari bilan hamkorlik aloqalarini o'rnatish.

Innovatsion raqamli texnologiyalardan foydalanish:

- bank xizmatlaridan foydalanishni osonlashtirish va ularning xavfsizligini oshirish uchun biometrik identifikatsiya, sun'iy intellekt va blokcheyn kabi yangi texnologiyalarni joriy etish.

Davlat tashabbuslarini qo'llab-quvvatlash:

- banklarning aholiga bank xizmatlaridan foydalanish imkoniyatini oshirish dasturlarini amalga oshirish uchun davlat organlari bilan hamkorligi.

Islomiy moliyalashtirish xizmatlarini joriy qilish:

- bu xizmatlarni joriy qilish bank xizmatlari ommabopligini oshirish va investitsion faollikni tezlashtirish imkonini beradi.

Bank xizmatlaridan foydalanishning ko'payishi aholining moliyaviy integratsiyasiga, umuman mamlakatning iqtisodiy o'sishiga va rivojlanishiga yordam beradi.

DEVELOPMENT OF CHILDREN'S SPEECH THROUGH STAGING ACTIVITIES IN PRESCHOOL EDUCATIONAL ORGANIZATIONS

Abstract. This article describes the organization of staging activities organized in a preschool educational organization and the development of speech of preschool children through them. Acting in a pre-school educational institution is one of the important factors that develop children's thinking.

Key words: staging activity, thinking, theater culture, children's theater.

The task of preschool education is to educate children in terms of the nation's rich national, cultural-historical heritage and spiritual ethics: to form children's feelings of national patriotism, to form preschool children's need for education, and to prepare them for the educational process on a regular basis, development of thinking, formation of skills of independent and free expression of one's opinion, provision of physical and mental health of children. Another of the main goals is to identify the abilities and opportunities of children through the art of staging, to properly shape them and bring them to light. The educator's role in shaping children's aesthetic abilities through staging activities in pre-school educational institutions is incomparable. He must have in-depth knowledge and high qualifications, for this he must regularly work on himself, constantly raise his scientific theoretical level, rely on advanced experiences. It was directed to adapt it both in form and content to the requirements of the time, to continuously improve the quality of education.

In the activities of the preschool educational institution, the tasks necessary for them to successfully study at school are solved. Also, during these processes, children learn to work in a team, to subordinate their actions to the actions of their friends. The staging activity of pre-school educational institutions is the artistic and aesthetic education of pre-school children. Currently, it is known that several types of theater are operating. These include: comedy theater, drama, folk theater, musical drama and comedy, opera, ballet and puppet theaters. Theater is derived from the Greek word (theatron) which means theater. The favorite spectacle of our little ones is the puppet theater. Through this theater, the children use familiar toys, teddy bears, puppies, and other characters to captivate children with their liveliness, movement, and talking. This theater brings great joy and happiness to children. It is not only for entertainment, but also for its educational meaning. It is impossible to put on big and difficult plays in kindergarten. They can put it with their toys on the basis of a small scene, a small fairy tale. Each of these small appearances makes a great impression on children and adds a cheerful spirit to the

holiday tales. Any work of art will be more understandable for children if it is shown through puppets.

After seeing the theater, children's worldview expands and remains in their memory for a long time. Shadow theater is one of the unique types of puppet theater. They play with toys made of shapes, not dolls. The audience can sit in front of the stage and see the shadows of people, animals and birds moving through the light on the screen. The researches and practical works conducted in the kindergarten show the development of creativity in children as a result of the education given to them from the kindergarten age. Creativity proved that children of preschool age can show creative activity in drawing, making toys from clay and plasticine. Of course, children's creativity has its own characteristics and cannot meet the criteria of adult creativity. The tasks of developing creative buds in a child depend on the anatomical and psychological features specific to his age. The completeness of a preschooler's perception of the quality and properties of objects depends on the level of performance of his analyzers. Research shows that 6-7-year-old children can see and perceive the main qualities of shape, proportion, color and components, as well as their position in space. Holidays. Organized holidays should bring joy to children and give them an opportunity to show their creative abilities. Educators should remember that holiday events bring joy to children. Holidays are a source of impressions that remain in the memory of children for a long time. Therefore, in the process of preparing for the holiday, first of all, it is important to pay attention to a well-prepared scenario, the participation of each child in the festive events, the mood and the harmony of art forms. Children should feel cheerful, happy and free at the holiday event. Performances of professional theater studios. Organization of performances of professional theater studios (circus, puppet theater, stage theater) in pre-school educational organizations.

Circle work. Another form of organizing children's staged activities in preschool educational organizations is circle work. It helps to solve the following issues: it develops children's fantasy, imagination, all kinds of memories, creativity (artistic speech, musical play, dance, stage). If a special theater club is established, the head of the theater club works with children who want to participate. The leader is the director, and the children act as actors. The leader sets a goal for himself, not to be limited to script, directing and staged work in working with children, he should form creativity in children during the period spent in the preschool educational organization. The main content of the circle work is work on the puppet theater, the analysis of the content of the work, the distribution of roles, etude game exercises that help to master the actions in the plot. The staging of the entire performance is held in special training sessions, once a week for 30-40 minutes in the first or second half of the day. In the process of organizing lessons, it is worth paying attention to the fact that if the child has knowledge and skills, but there is no interest and desire, there will be no activity.

Based on the issues of development of staging activities with preschool children, its content is determined and forms of organization are determined.

He will have an understanding and imagination about the rich cultural and spiritual heritage of our people and will learn to express them in his work. Every person's life is spent with games, it teaches the child to understand the rules of life of adults. Every child plays as much as he knows, but these games are mostly learned from the favorite heroes of adults and imitated. When choosing material for staging, it is necessary to take into account the children's age characteristics, knowledge skills, and at the same time, to enrich their life experience, to arouse interest in new knowledge and to give creative opportunities. should be allowed to grow. It is recommended to organize corners for stage shows in pre-school educational institutions. In conclusion, we also recommend forms of cooperation in the process of creating staging activities in preschool educational institutions. Involve children who are not active enough in the process of putting on a play in the cooperative staging activity, thus the staging activity helps them to lose their ability to think freely, shyness and shyness.

MAKTABGACHAYOSHDAGI BOLALARNING AQLIY RIVOJLANISHIDA O'YINNING ROLI

Annotatsiya. O'yin bolalik davrida gullab-yashnaydigan va insonni butun hayoti davomida kuzatib boradigan maxsus faoliyatdir. Hozirgi kunda o'yin maktabgacha yoshdagi bolaning etakchi faoliyati ekanligi qabul qilingan. o'yin - bu maktabgacha yoshdagi bola o'z tashabbusi va ijodiy faolligini ko'rsatadigan yagona maydon. Va shu bilan birga, aynan shu o'yinda bolalar o'zlarini boshqarish va baholashni o'rganishadi, nima qilayotganlarini tushunishadi va (ehtimol bu asosiy narsa) to'g'ri harakat qilishni xohlashadi.

Kalit so'zlar: Maktabgacha ta'lim, bola, intellektual salohiyat, o'yin.

THE ROLE OF THE GAME IN THE MENTAL DEVELOPMENT OF PRESCHOOL CHILDREN

Abstract. Play is a special activity that flourishes in childhood and follows a person throughout his life. Nowadays, it is accepted that the game is the leading activity of the preschool child. the game is the only field where the preschool child shows his initiative and creative activity. And at the same time, it is in this game that children learn to manage and evaluate themselves, understand what they are doing and (perhaps this is the main thing) want to do right.

Key words: Pre-school education, child, intellectual potential, game.

O'zbekiston Respublikasi prezidenti Shavkat Miromonovich Mirziyoyev ta'kidlaganlaridek «Maktabgacha ta'lim – ertangi kunimizga zamin» dir. Bugungi kunda maktabgacha ta'lim tarbiyalanuvchilarining intellektual salohiyatini rivojlantirish dolzarb masalalardan biri hisoblanadi. Mazkur maqolada maktabgacha ta'lim tarbiyalanuvchilarining intellektual salohiyatini rivojlantirish va takomillashtirish dolzarb masalalari yoritib berilgan.

O'yin bolalik davrida gullab-yashnaydigan va insonni butun hayoti davomida kuzatib boradigan maxsus faoliyatdir. Hozirgi kunda o'yin maktabgacha yoshdagi bolaning etakchi faoliyati ekanligi qabul qilingan.

O'yin maktabgacha yoshdagi bolaning hayotida alohida o'rin tutadi. Tadqiqotchilar (L.S.Vygotskiy, D.B. Elkonin va boshqalar) ta'kidlashlaricha,

bolani rivojlantirish uchun pedagogikada eng muhim bo'lgan mustaqil o'yin shakllari. Bolaning shaxsiyati o'yinlarda eng aniq namoyon bo'ladi.

Nazariy jihatdan, o'yin turli nuqtai nazardan qaraladi. O'yin dunyoni kashf qilishning bir usuliga o'xshaydi, chunki o'ynayotgan bola o'z dunyosini yaratadi; o'yin bolaning umumiy aqliy rivojlanishiga ta'sir qiladi; o'yin ijtimoiy tajribani o'zlashtirishga yordam beradi.

K.D. Ushinskiy o'yinni bolani atrofdagi kattalar dunyosining barcha murakkabliklariga kirishish usuli sifatida aniqladi. Taqlid orqali bola insoniy munosabatlarning asosiy jihatlarini takrorlaydi va o'zlashtiradi. D.V. Menjeritskaya o'yini axloqiy va ijtimoiy fazilatlarni rivojlantirish bo'yicha muammolarni hal qilish uchun ishlab chiqilgan va o'yin rivojlanish xususiyatiga ega bo'lishi kerak va kattalar nazorati ostida amalga oshiriladi. Bolaning har tomonlama rivojlanishi sifatida o'yinning ahamiyatiga qaramay, o'yin o'quv faoliyati bilan chetlashtirilmogda. Ko'pincha ota-onalar farzandlarini bilim olishga tayyorlashga bag'ishlaydilar. Shuning uchun bolaning maktabgacha yoshdagi shaxsini shakllantirishning eng yaxshi va tasdiqlangan vositasi - bu bolaning o'zi faol faoliyati. O'yin bu borada bir qator afzalliklarga ega. Bu bolalar hayotida muhim nazorat vositasi bo'lib, u bolalikdagi o'z -o'zidan paydo bo'lish, ijobiy his -tuyg'ular va harakatlarning namoyon bo'lishi uchun katta imkoniyat yaratadi. Rolli va qurilish o'yinlarining tabiati bolalarda yaxshi va mazmunli munosabatlarni tarbiyalashga yordam beradi. Turli qoidalarni o'rganish bolalar o'rtasidagi munosabatlarni tartibga solishga yordam beradi. Bolaga faollik kerak, bu uning hayotiyligini oshirishga, uning manfaatlarini, ijtimoiy ehtiyojlarini qondirishga yordam beradi. O'yin katta tarbiyaviy ahamiyatga ega, u kundalik hayot kuzatuvlari bilan sinfda o'rganish bilan chambarchas bog'liq. Ijodiy o'yinlarda bolaning aqliy qobiliyatlarini, uning tasavvurini, diqqatini, xotirasini safarbar qiladigan bilimlarni o'zlashtirishning muhim va murakkab jarayoni sodir bo'ladi.

Kattalar ishiga, jamoat hayotiga, sovet xalqining qahramonlik ishlariga qiziqishning rivojlanishi bilan bolalarda kelajak kasbining birinchi orzusi, sevimli qahramonlariga taqlid qilish istagi paydo bo'ladi. Bularning barchasi o'yinni maktabgacha bolalik davrida shakllana boshlagan bolaning shaxsiyat yo'nalishini yaratishning muhim vositasiga aylantiradi.

O'yinlarni shartli ravishda ikkita asosiy guruhga bo'lish mumkin: rolli va qoidali o'yinlar.

Rolli o'yinlar - bu kundalik mavzulardagi o'yinlar, tetralizatsiyalangan o'yinlar, o'yinlar - o'yin-kulgi, o'yin-kulgi. Qoidalari bo'lgan o'yinlarga didaktik o'yinlar va ochiq o'yinlar kiradi. Bolaning syujetli-rolli o'yini ijodiy xarakterga ega bo'lib, unda bolalar rol o'ynaydi va hikoya chizig'i yordamida kattalar faoliyati va munosabatlarini takrorlaydi. Bunday o'yinlarda bolalar qiziqarli ixtirolarga qodir, ular o'zlari u yoki bu o'yinga xilma -xillik olib keladi. Bolalarning tashabbusi nafaqat bitta bolani, balki butun guruhni tarbiyalashga katta ta'sir ko'rsatadi.

Qoidalarga ega bo'lgan o'yinlar boshqa maqsadga ega: ular fikrlash, his - tuyg'ular va nutq, ixtiyoriy e'tibor va xotira, turli harakatlar uchun zarur bo'lgan tizimli mashqlarni bajarish imkoniyatini beradi. Qoidalarga ega bo'lgan har bir o'yin o'ziga xos didaktik vazifaga ega, lekin oxir -oqibat u asosiy ta'lim vazifalarini hal qilishga qaratilgan. Ayniqsa, didaktik o'yinlar bolalar uchun o'yin -kulgi va mazmuni bilan qiziq: taxmin qiling, toping, nom bering. Bolalar o'yinda ma'lum qoidalarga amal qilib natijalarga erishadilar. O'yin muammosining sifatiga qiziqish o'zini namoyon qiladi: naqshni ehtiyotkorlik bilan burish, to'g'ri, rasmni olish va hk. Qiziqarli o'yin bolaning aqliy faolligini oshiradi va u darsdan ko'ra qiyinroq masalani hal qila oladi. Ammo bu mashg'ulotlar faqat o'yin shaklida o'tkazilishi kerak degani emas. O'rganish turli usullarni talab qiladi. O'yin faqat boshqa usullar bilan birgalikda yaxshi natijalar beradi: kuzatish, suhbat, o'qish va hk. o'ynab, bolalar o'z bilim va ko'nikmalarini amalda qo'llashni o'rganadilar. Qoidalarga ega bo'lgan o'yinlarda, bilimlarni umumlashtirish, muammoni hal qilishda mustaqil tanlov talab qilinadi.

Ammo bolani hayotining ongli mavzusiga aylantiradigan, uning xatti-harakatlarini ongli va o'zboshimchalik qiladigan uning harakatlarining aynan shu mustaqil tartibga solinishi. Albatta, bu zamonaviy bolalar o'zini tutish qoidalarini - kundalik, ta'limiy, muloqot, yo'l harakati va hokazolarni o'zlashtira olmaydi degani emas, lekin bu qoidalar tashqaridan, kattalardan kelib chiqadi va bola ularni qabul qilishga va moslashishga majbur bo'ladi. ularga.

O'yin qoidalarining asosiy afzalligi shundaki, ularni bolalar o'zlari ixtiyoriy va mas'uliyatli tarzda qabul qilishadi (yoki yaratadilar), shuning uchun nima va qanday qilish kerakligi haqidagi fikrlar istaklar va hissiyotlar bilan birlashtirilgan. Rivojlangan o'yin shaklida bolalarning o'zi to'g'ri harakat qilishni xohlaydi. Bunday qoidalarning o'yindan chetlashishi zamonaviy bolalar uchun o'yin «ixtiyoriy xatti-harakatlar maktabi» bo'lishdan to'xtaganligini ko'rsatishi mumkin, ammo 3-6 yoshli bola uchun boshqa hech qanday mashg'ulot bu vazifani bajara olmaydi. Lekin o'zboshimchalik-bu faqat qoidalarga muvofiq harakatlar emas, balki xabardorlik, mustaqillik, mas'uliyat, o'zini tuta bilish, ichki erkinlikdir. O'yinni yo'qotib, bolalar bularning hammasini qo'lga kiritishmaydi. Natijada, ularning xulq -atvori vaziyatli, beixtiyor, atrofdagi kattalarga bog'liq bo'lib qoladi.

Kuzatishlar shuni ko'rsatadiki, zamonaviy maktabgacha yoshdagi bolalar o'z faoliyatini qanday tashkil qilishni, uni ma'no bilan to'ldirishni bilishmaydi: ular aylanib yurishadi, itarishadi, o'yinchoqlarni saralashadi va hokazo. Ularning aksariyati rivojlangan tasavvurga ega emas, ijodiy tashabbus yo'q va mustaqil fikrlash. Maktabgacha yosh bu eng muhim fazilatlarini shakllantirishning eng maqbul davri bo'lgani uchun, bu qobiliyatlarning barchasi keyinchalik, etuk yoshda o'z-o'zidan paydo bo'lishi haqidagi tasavvurlarni yashirish qiyin. Ayni paytda, ota -onalar, odatda, bu muammolarga unchalik ahamiyat bermaydilar.

Bolalar bog'chasi ishining samaradorligi va bolaning farovonligining asosiy ko'rsatkichi-bu maktabga tayyorgarlik darajasi, bu hisoblash, o'qish, yozish va kattalarning ko'rsatmalariga amal qilish qobiliyatida namoyon bo'ladi. Bunday

«tayyorlik» nafaqat maktabda o'qishga hissa qo'shmaydi, balki to'sqinlik qiladi: bolalar bog'chasida majburiy o'qishdan charchagan bolalar ko'pincha maktabga borishni xohlamaydilar yoki boshlang'ich sinflarda o'qishga qiziqishni yo'qotadilar.

Erta ta'limning afzalliklari maktab hayotining dastlabki 2-3 oyidayoq seziladi - bunday «tayyor» bolalarni endi o'qish va hisoblashni o'rgatishning hojati yo'q. Ammo siz mustaqillik, qiziquvchanlik, qaror qabul qilish va fikrlash qobiliyatini namoyon qilishingiz bilanoq, bu bolalar taslim bo'lishadi va kattalarning ko'rsatmalarini kutishadi. Aytishga hojat yo'q, bunday passivlik, qiziqish va mustaqillikning yo'qligi, ichki bo'shliq nafaqat maktabda, balki juda achinarli natijalarga olib keladi.

OGAHI'S CONTRIBUTION TO THE DEVELOPMENT OF UZBEK CLASSICAL LITERATURE

Abstract. After Ogahi Navoi, he is one of the «most and most eloquent» poets in terms of wide use of the meaning scales of the artistic word and finding new aspects of meaning.

Key words: melody, navo, ghazal, artist, artistic word.

Ogahiy xalq orasida ko'proq lirik shoir sifatida mashhur. Ogahiy «til tiyg'i tortib, maoni mulkini olgan» mahoratli san'atkordir, uning badiiy qudrati haqida fikrlashishdan avval, shuni e'tirof etish lozimki, yosh Muhammadrizoning «til tiyg'i» Alisher Navoiy mahoratmaktabida charxlangan, sayqal topgan. Ogahiy nazmida Navoiydan o'rganish izlari, ulug' san'atkor ta'siriga berilish, udan qutila olmaslik, ustozning turli g'oyava ifodalarni o'zgacha talqinlarda sharhlash ham ko'rinib qoladi. Bunday holler shoirning kamchiligi sifatida emas, balki badiiy mahorat qozonishyo'lidagi dastlabki tajriba, har bir ijodkor tabiiy va qonuniy ravishta boshdan kechiradigan ijodiy jarayon tarzida baholanmog'I ma'quldur. Ulug' Navoiyga ergashish, uning asarlaridan iqtibos olish, fikr-g'oyalarni sharhlash barcha Navoiyga izdosh o'zbek mumtoz shoirlari qatori Ogahiyga ham fazlu iftixor sanalgan:

Ogahiy kim topqay erdi sozi nazmindan navo,

Baxrga gar yo'qdur Navoiyning navosidan sango.

Badiiy so'zning ma'no miqyoslaridan keng foydalanish, yangi ma'no qirralarini topish jihatidan ham Ogahiy Navoiydan keyin keyin «eng ko'p va eng xo'b aytqon» shoirlardandir. U ataylab badiiy san'at qo'llamaydi, uning qalamiga

tushgan so‘z san‘at bo‘lib muxrlanadi. Mazkur baytda kamdan kam san‘atkor yaratishga muyassar bo‘lgan nodir ma‘naviy san‘at – iyhom yuzaga kelgan. «So‘z» - til birligi, kalmia ma‘nosida qo‘llangani aniq ravshan anglashilib turibti. Shu ma‘no bilanoq baytdan tugal mazmun chiqadi. Iyhom san‘atining sehri shundaki, shoir forsiy tildagi «so‘z» ning ma‘nolarini ham bir yo‘la mujassamlashtirilgan. «So‘z»ning yonish, kuyish, harortli bo‘lsa ma‘nolari yashirin ifodalangan. Aslida shoirning bosh muddaosi «so‘z»ning shu ma‘nolardan kelib chiqadi. Iyhomning xosiyati shunda.

Bu o‘rinda ham bayt badiyatini iyhom san‘ati yuzaga keltirgan. Bunda san‘at «|so‘rsam» so‘zidabo‘lib, uning ko‘rinib turgan ma‘nosi «so‘ramoq» pinhonama‘nosi esa «bo‘sa olmoqdir» Bilmagam kishi yuzaki ma‘nonigina tuyin ham zavqlanishi mumkin. Ziyrak kitobxonh esa badiiy so‘zning ham zohiriy, ham botiniy ma‘nolariniyib, ikki xissa ta‘sirlanadi. Badiiy fikrni, xususan, pandnoma mazmunidagi fikrni quruq va yalang‘och aytish Sharq adabiyotida rasm bo‘lmagan. Aks holda, adabiyot hayotiylik, ta‘sirchanlik, donishmandlik kasb etolmasdi. Ushbu adabiyot uslubiga xos xususiyatlartidan biri qiyosiy-istoraviy yo‘sinni qo‘llab, aytilachak har bir gapni hayot va tabiat tarozisida tortib aytishdir. Shunday uslub taqozosi tarzida tamsil, husni ta‘til singari badiiy san‘atlar vujudga kelgan. Tamsil san‘ati talabiga ko‘ra, shoir birinchi misrada hurmat, odab to‘g‘risidagi fikrini ifodalaydi va ikkinchi misradashu fikrning hayotiy isboti tariqasida tabiatning hikmatli bir holatining misol keltiradi. Husni ta‘til san‘ati8da ham shunga yaqin usul qo‘llaniladi. Shoir badiiy fikrni chiroyli asoslash yo‘lidan boradi:

Kelgil, ey o‘tlug‘ ko‘ngul, eski chopong‘a qone o‘l,
Kim, hamisha jismig‘a kuldan qilur axgar libos.

Ushbu baytninochor holda, eski chopon yopishib yashagan shoirningo‘z-o‘ziga tasallisi o‘rnida ham qabul qilish mumkin. Ammo undan elga qaratilgan hokisorlikka, kamtarlikka davit ham anglashib turibti. Ikkinchi misrada hammaga ma‘lum va mashhur hayotiy lavha – cho‘g‘ningkul bilan qoplanganligi aytilgan fikrga juda mutanosib chiroyli badiiy asos tarzida keltiriladi. «Ta‘viz ul-oshiqin» XIX asrda gullab-yashnagan Xorzam adabiy muhitninggo‘zal gultojidir. Undagi asarlar til xususiyatlariga ko‘ra tushunrli, soda, jozibali, xalqchildir. Bu soddalik, ayniqsa, Xorazm adabiy muhitningulug‘ rahnomosi, Ogahiyning ustoz Shermuhammad Munisning «Munis ul-ushshoq» devonidagi asarlar qiyosida yaqqol ko‘zga tashlanadi. Munis adabiy maktabian ilhon va rivoj topgan Ogahiy ijodi tobora jo‘shqin va tiniq tus olgan. Uning har bir mavjida o‘zgacha joziba jilovlanaveradi. Masalan, irsoli masal san‘ati na‘munalariga uchrar ekansiz, shoirning xalq og‘zaki ijodi boyliklarini ne chog‘lio‘zlashtirganiva adabiy muddao ifodasi yo‘lida ulardan qanchalik o‘rinli foydalanish mahoratiga ishonch hosil qilasiz:

Xunob ichar vaqtimda xush kelding, ko‘ngulkim, xalq aro,
Yaxshi masaldurkim: «Kelur yaxshi kishi osh ustina».

Ogahiydek mukarram zotlar tengsizlik va manfaatparazlik ustuvor zamonda karam ko‘rmay, «ahli diramg‘a» xor bo‘lib yashagach, yana bir sherda qoyilmaqom aytilgandek Ogahiy badiiy so‘z imkoniyatlaridan bahramand bo‘lgani sher va ixlosmandlarini bahramand etganidan ogoh bo‘ldik. Ammo mumtoz adablarimiz tasaruffida yana shunday imkoniyat ham bor ediki, ular eski o‘zbek alifbosidagi har bir harf shaklidan badiiy ta’svir vositasi sifatida foydalanish baxtiga muyassar edilar. Ogahiy asarlari badiyatida ham alifbo muhimo‘rin tutgan.⁶¹

Ogahiy o‘zbek mumtoz adabiyotining badiiy timsollari tizimini muakammal o‘zlashtirgan va ularni ma’no va shakily tomondan takomillashtirishga harakat qilgan shoirdir. Birgina chumoli timsolining takomil tarixiga nazar solaylik. An’anaviy chumoli yoki mo‘r obrazining butun o‘zbek mumtoz sheriya, jumladan, Navoiy nazmda qo‘llanish miqiyoslari, ma’no doirasi, badiiy vazifasi muhtaram o‘quvchiga ayon. U- kamtarlik, xokisorlik, mehnatkashlik, sahovatpeshalik timsoli. Uning barcha sifatleri chumoli va mo‘r atamalarida mujassam edi. Obrazning ma’no ufqini kengaytirish maqsadida Ogahiy oddiy «mo‘r» emas, «xasta mo‘r» – cho‘loq chumoli timsolidan foydalanadi:

Yo‘ki, g‘alat ayladim, o‘ylakki, bir xasta mo‘r

Chekkusi poyi malax tuhfa Sulaymon sori.

«Xasta» sifati orqali shoir chumoli obrazida ulug‘vorlik, olimhimmatlik fazilatlarini mujassamlashtirgan. Ogahiy talqinidagi chumoli jismi ushoqqina, hasta bo‘lishiga qaramay, Sulaymonga sovg‘a qilish uchun o‘z jussasidan necha barobar kattalikdagi maxal- chigirtka oyog‘ini sudrab, bormoqda. Sulaymonga loyiq tuhfa olib borish ma’sulyati, or-nomus, himmatningzo‘ri xasta, zaif chumoliga g‘ayrat-shijoat, ulug‘vorlik bag‘ishlangan. Chumoli bilan Sulaymon munosabatlaridagi qarama-qarshilik an’anaviy hol edi. Chumolining hasta bo‘lishi va tuhfa uchun ulkan chigirtkaoyog‘ini tanlashi mavjud badiiy ziddiyatni yanada kuchaytirgan. Ogahiyning adabiy merosi xalqimiz ardog‘idagi mo‘tabar manaviy hazina. Uning qadr-qimmatizamon o‘tgan sari ortib boradi. Uning nasihatimiz, ma’shuqona, oshiqona, shahdomuz g‘azallari, shavqangez qasidalar, shakarrez muxammaslari, ayniqsa, bugungi tarixiy davrda insoning manaviy olamini qayta ko‘rishda, milliy mustaqillik mafkurasini yaratishda jondek aziz, suv va havodek zarur. Zamondoshlarimiz va kelgusi avlod «Ta’viz ul-oshiqin»dagi durdona asarlarni, Ogahiy orzulaganidek, «oshiqlar tumori yanglig‘ ixloslari bo‘yunlarig‘a osib, izzat bila asrasalar», bu muqaddas tumor ularni manaviy-moddiy ofatlardan omon saqlaydi, kamolot sari eltadi. Shubhasiz Ogahiy ma’lum darajada an’anaviylikni hush ko‘rgan. Negaki o‘tmish adabiyotimizdagi ko‘plab boqiy kitoblarning yaratilishiga o‘z davrining homiy va rahnamo hukmdorlari sabab bo‘lganlar.

ROLE OF GREEN ECONOMY IN EFFICIENT USE OF ECONOMIC RESOURCES

Abstract. This article describes the role of and green economy in effective use of natural economic resources, the essence of green economy, economic problems and solutions of rational use of natural resources.

Key words: Green economy, natural and economic resources, economic development, digital economy.

Mamlakat iqtisodiyotini barqaror rivojlantirish yashil iqtisodiyot sharoitida tabiatdan foydalanishning holati va atrof-muhit muhofazasi ekoturizm bilan chambarchas bog'liqdir. Shu boisdan raqamli iqtisodiyot sharoitida yashillikni muhofaza qilish va tabiiy resurslardan oqilona foydalanishning iqtisodiy mexanizmlarini yaratish katta ahamiyatga ega bo'lib, tabiatda yuz berayotgan ijobiy va salbiy o'zgarishlarni iqtisodiy jihatdan tahlil qilish natijalari orqali kishilik jamiyatining xo'jalik faoliyatiga miqdoriy ko'rsatkichlar asosida baho berish mumkin.

Bozor iqtisodiyotini rivojlantirish orqali yashil iqtisodiyotdanfoydalanishda tabiiy resurslardan foydalanuvchilarning barchasi ham uning noz-ne'matlaridan bir xilda, bir

miqyosda iste'mol qilmaydi: ba'zilar ko'proq, ayrimlari kamroq darajada moddiy boyliklarni iste'mol muomalasiga kiritadi. Jumladan, xomashyoni qayta ishlovchi barcha korxonalar tabiatda chiqindi resurslarni yig'adi, hamda tabiiy muhitga salbiy ta'sir ko'rsatadi. Darhaqiqat, tabiatga ekologik ta'sirni iqtisodiy hisoblash yo'llari bilan tahlil qilish natijasida ishlab chiqarishning daromad miqdorini oshirish masalalarining ayrim yechimlarini ham topish mumkin «Yashil iqtisodiyot» tushunchasi tabiat boyliklaridan foydalanishni me'yorlashtirishni iqtisodiy jihatdan ilmiy asoslash orqali samaradorligini baholash, atrof-muhitning ifloslanishi oqibatida ko'rilayotgan iqtisodiy-ijtimoiy zararlarni bartaraf etishga qaratilgan maqsadli dasturlarni amalga oshirish natijasida erishiladigan iqtisodiy samaradorlikni hisoblash usullarini o'rgatadi. Tabiiy resurslardan samarali foydalanish bo'yicha ilmiy asoslangan tavsiyalar yaratish, tabiatni muhofaza qilishni moliyalashtirish, rejalashtirish va boshqaruvning asoslarini takomillashtirish bo'yicha yangi tadqiqot yo'nalishlarini izlash va asoslash eng asosiy vazifalardan biridir.

O'zbekiston Respublikasi Prezidentining 04.10.2019 yildagi PQ-4477-son 2019 — 2030-yillar davrida O'zbekiston Respublikasining «yashil» iqtisodiyotga o'tish strategiyasini tasdiqlash to'g'risida qarorining asosiy maqsadlaridan birida;

«texnologik modernizatsiyalash va moliyaviy mexanizmlarni rivojlantirish orqali iqtisodiyotning energiya samaradorligini oshirish va tabiiy resurslardan oqilona foydalanish; davlat investitsiyalari va xarajatlarining ustuvor yo'nalishlariga ilg'or xalqaro standartlarga asoslangan «yashil» mezonlarni kiritish; davlat tomonidan rag'batlantirish mexanizmlarini, davlat-xususiy sherikchilikni rivojlantirish hamda xalqaro moliyaviy institutlar bilan hamkorlikni faollashtirish orqali «yashil» iqtisodiyotga o'tish yo'nalishlari bo'yicha tajriba-sinov loyihalarini amalga oshirishga ko'maklashish; ta'limga investitsiyalar kiritishni rag'batlantirish, yetakchi xorijiy ta'lim muassasalari va ilmiy-tadqiqot markazlari bilan hamkorlikni rivojlantirish hisobiga «yashil» iqtisodiyotdagi mehnat bozori bilan bog'liq kadrlarni tayyorlash va qayta tayyorlash tizimini rivojlantirish; Orolbo'yidagi ekologik inqirozning salbiy ta'sirini yumshatish choralari ko'rish; «yashil» iqtisodiyot sohasida, shu jumladan ikki tomonlama va ko'p tomonlama shartnomalar tuzish orqali xalqaro hamkorlikni mustahkamlash»⁶² kabi eng muhim masalalari ham iqtisodiy manbaalardan samarali foydalanishda yashil iqtisodiyotning o'rni ushbu sohaning ham asosiy vazifasi hisoblanadi.

Yashil iqtisod iqtisodiy o'sishga e'tibordan voz kechishni va uzoq muddatda barqaror bo'lishi mumkin bo'lgan yagona iqtisodiyot turi bo'lgan «davlat, yashil iqtisodiyotiga» o'tishni taklif qiladi. Barqaror yashil iqtisodiyotda sayyora chegarasi hurmat qilinadi va shuning uchun eng kam manba hisoblanadi. Bu bizni iloji boricha oqilona foydalanishimiz, iqtisodiyot unumdorligini oshirish

⁶² O'zbekiston Respublikasi Prezidentining qarori, 04.10.2019 yildagi PQ-4477-son2019 — 2030-yillar davrida O'zbekiston Respublikasining «yashil» iqtisodiyotga o'tish strategiyasini tasdiqlash to'g'risida

va shu bilan birga undan foydalanishimizni kamaytirishimiz kerak degan xulosaga olib keladi. Yashil iqtisodiyotning rivojlanishida tabiiy resurs salohiyatidan foydalanishning barcha jabhalarini, hamda uni muhofaza qilishga yo'naltirilgan tadbirlarni, shuningdek, qayta tiklanadigan tabiiy resurslarni muntazam tiklab borish, miqdorini ko'paytirish, sifatini yaxshilash, tabiatning muhofazaga muhtoj obyektlarni qo'riqxonalariga aylantirish kabi faoliyatlarning iqtisodiy samarasining tahliliy natijalari hisoblanadi. Mana shu jarayonlarni amalga oshirish uchun tabiat ne'matlaridan oqilona foydalanishning bir qancha vazifalarini tahlil qilib chiqamiz:

- ❖ tabiiy muhitning mahsuldorligini oshirish uchun sharoit yaratish,
- ❖ tiklanmaydigan tabiiy resurslardan o'ta tejamkorlik bilan samarali foydalanish,
- ❖ atrof-muhitni ifloslanishdan saqlash;
- ❖ tabiiy resurslardan samarali foydalanishning iqtisodiy-ekologik tamoyillarini ishlab chiqish;
- ❖ tabiiy resurslarning hozirgi va kelgusi avlodlar uchun saqlash va tiklashning iqtisodiy-ekologik tadbirlarini ishlab chiqishdan iborat.

Iqtisodiy manbaalardan samarali foydalanishda yashil iqtisodiyotning o'rnini aniqlashimizda tabiiy nmanbaalar orasida suv eng aosiy qayta tiklanmaydigan manbaa hisoblanadi. Respublikamiz va qo'shni davlatlar bo'ylab suv resurslaridan samarali foydalanish va uni asrab avaylash ham bugungi kunning bosh masalasi hisoblanadi. Statistik ma'lumotlarga tayangan holda 2023-yilda Amudaryo suvidan qaysi davlat qancha miqdorda foydalangani ilmiy asoslar yordamida tahlil qilib chiqamiz. Meteojournal xabariga ko'ra, o'tgan yili Afg'onistonni hisobga olmaganda Amudaryo suvidan uch mamlakat

(O‘zbekiston, Turkmaniston va Tojikiston) taxminan 47,58 km kub foydalangan. Daryo suvidan eng ko‘p foydalangan mamlakat Turkmaniston bo‘lgan. U sarflangan suvning jami 42 foizini (qariyb 20 km kub) ishlatgan. O‘zbekiston o‘tgan yili Amudaryoning umumiy sarflangan suvining 38,4 foizi (taxminan 18,3 km kub), Tojikiston esa 19,8 foizidan (taxminan 9,4 km kub) foydalangan. Oylar kesimida ham Turkmaniston daryodan eng ko‘p foydalanuvchi bo‘lgan. Faqat fevral, mart va iyul oylarida O‘zbekiston Turkmanistonga nisbatan ko‘proq suv olgan.⁶³

Ushbu tahliliy jarayonni yuqoridagi diagramma orqali ko‘rishimiz mumkin bo‘ladi.

Yashil iqtisod, shuningdek, butun murakkab ekologiyasi va xilma-xil turlari bilan yer sayyorasining butun tizimini ko‘rib chiqish uchun bizning yagona turimizdan tashqari tashvish doirasini kengaytiradi. Yashil iqtisodiyot tomonidan taklif qilingan yechim esa tabiiy jarayonlarga ehtiyotkorona bo‘lishimizdir. Yashil iqtisodiyot haqida turli qarashlar mavjud. Bizning ilmiy qarashimiz esa yashil iqtisodiyotni rivojlantish uchun shundek texnologiya ishlab chiqilishi kerakki bunda tabiatga hech qanday zarar yetmasligi darkor. Xulosa o‘rnida shuni ta’kidlash joizki, yashil iqtisodiyotni rivojlantirish orqali mamlakat iqtisodiyotni jadal suratlar bilan o‘rishiga erishamiz.

Foydalanilgan adabiyotlar ro‘yxati:

1. O‘zbekiston Respublikasi Prezidentining qarori, 04.10.2019 yildagi PQ-4477-son 2019 — 2030-yillar davrida O‘zbekiston Respublikasining «Yashil iqtisodiyot»ga o‘tish strategiyasini tasdiqlash to‘g‘risidagi.
2. Vazirlar Mahkamasining 2020-yil 19-maydagi 297-son qarori. O‘zbekiston Respublikasi mineral-xomashyo bazasini rivojlantirish va qayta tiklash davlat dasturlarini shakllantirish tartibi to‘g‘risida.

UMUMTA'LIM MAKTABLARIDA GEOGRAFIYA FANIDAN AMALIY MASHG'ULOTLARNI TASHKIL ETISH

Annotatsiya. Geografiya ta'limning asosiy fanlaridan biri bo'lib, o'quvchilarga atrofda dunyoni, uning tuzilishi va xususiyatlarini tushunishga yordam beradi. Geografiyani o'rganishning muhim jihati – o'quv materialini chuqurroq o'zlashtirish va o'quvchilar malakasini oshirishga yordam beradigan amaliy mashg'ulotlarni tashkil etishdir. Ushbu maqolada umumta'lim maktablarida geografiya fanidan amaliy mashg'ulotlar tashkil etishning ahamiyatini ko'rib chiqamiz.

Kalit so'zlar: Geografiya, amaliy mashg'ulotlarni tashkil etish, o'quvchilar faolligi.

ORGANIZING PRACTICAL COURSES IN GEOGRAPHY IN HIGH SCHOOLS

Abstract. Geography is one of the main subjects of education, which helps students to understand the surrounding world, its structure and characteristics. An important aspect of studying geography is the organization of practical activities that help to master the educational material in depth and improve students' skills. In this article, we will consider the importance of organizing practical training in geography in secondary schools.

Keywords: Geography, organization of practical training, student activity.

Geografiy fanidan amaliy mashg'ulotlar o'quvchilarning fazoviy tafakkurini, tahliliy ko'nikmalarini rivojlantirish va dunyoning turli mintaqalari haqidagi bilimlarini boyitishda muhim ahamiyat kasb etadi. Amaliy topshiriqlar

orqali o'quvchilar nazariy bilimlarni amaliyotda qo'llashlari mumkin, bu esa ularni yaxshiroq o'zlashtirish va tushunishga yordam beradi.

Amaliy mashg'ulotlarni samarali tashkil etish uslublari

Amaliy geografiya darslarini samarali o'tkazish o'quvchilarga fanni o'rgatishda asosiy o'rin tutadi. Geografiya - dunyo, uning tuzilishi, tabiiy sharoiti, iqtisodiyoti, aholisi va boshqa jihatlari haqidagi fan. Amaliy mashg'ulotlar o'quvchilarga materialni yaxshiroq tushunish va eslab qolish, shuningdek, geografiyani muvaffaqiyatli o'rganish uchun zarur bo'lgan ko'nikma va ko'nikmalarni rivojlantirish imkonini beradi.

Geografiy fanidan amaliy mashg'ulotlarni samarali tashkil etish uchun o'qitishning turli usullaridan foydalanish zarur. Bunga ekskursiyalar berish, loyihalar yaratish, interaktiv xaritalar va onlayn resurslardan foydalanish va o'yinga asoslangan o'rganish kiradi. Turli usullar o'quvchilarni qiziqtirishga, darslarni qiziqarli va qulayroq qilishga yordam beradi. [4, 7]

Quyida amaliy geografiya mashg'ulotlarini samarali tashkil qilishda yordam beradigan asosiy fikrlar keltirilgan:

1. Darsning maqsadi va vazifalari: Darsning aniq maqsad va vazifalarini belgilang, shunda o'quvchilar dars oxirida nimaga erishishlari kutilayotganligini bilishadi. Bu ularga materialning muhim jihatlari e'tibor berishga yordam beradi.

2. O'qitishning turli usullaridan foydalanish: Darsga turli xil o'qitish usullarini, masalan, guruhlarda ishlash, bahs-munozaralar, o'yinlar, amaliy mashg'ulotlar va hokazolarni kiritish. Bu o'quvchilarga materialni yaxshiroq tushunishga va o'quv jarayonini diversifikatsiya qilishga yordam beradi.

3. Ko'rgazmali qurollardan foydalanish: Geografiya fani xaritalar, diagrammalar va boshqa ko'rgazmali materiallar tasvirlari bilan chambarchas bog'liq. Ma'lumotni vizual tarzda taqdim etish va o'quvchilarga murakkab tushunchalarni tushunishga yordam berish uchun ularni sinfda foydalaning. [5, 38]

4. Amaliy topshiriqlarni qo'llash: O'quvchilarga olgan bilimlarini amaliyotda qo'llash imkoniyatini berish. Bu kartografik vazifalarni bajarish, dala tadqiqotlarini o'tkazish yoki geografiya muammolarini hal qilish bo'lishi mumkin.

5. Fikr-mulohaza: O'quvchilarning ishini baholash va ularga fikr bildirishni unutmang. Bu ularning xatolarini tushunishga va malakalarini oshirishga yordam beradi. [3, 441]

Ushbu ko'rsatmalarga rioya qilish orqali o'qituvchilar o'quvchilarga materialni yaxshiroq tushunish va eslab qolish, shuningdek, ushbu qiziqarli fanni muvaffaqiyatli o'rganish uchun zarur bo'lgan ko'nikma va ko'nikmalarni rivojlantirishga yordam beradigan samarali, amaliy geografiya darslarini yaratishi mumkin. [2, 5]

O'quvchilarni mashg'ulotda faol ishtirok etishga jalb qilish usullari

Geografiya darslarini muvaffaqiyatli tashkil etishda o'quvchilarni amaliy mashg'ulotlarga faol jalb etish muhim o'rin tutadi. O'quvchilarning mustaqilligi,

tashabbuskorligi, ijodiy fikrlashini rag'batlantirish ularning darsda faol ishtirok etishiga, chuqurroq o'rganishiga yordam beradi. [6, 41]

Amaliy geografiya darslarida maktab o'quvchilarining faol ishtirok etishi ularning o'zlashtirishida muhim o'rin tutadi va o'quv materialini to'g'ri tushunish imkonini beradi. Darslarda faol qatnashgan o'quvchilar fanni o'rganishga qiziqishi ortib, ma'lumotni yaxshi eslab qoladi, ko'nikma va malakalarini rivojlantiradi. Amaliy geografiya darslarida maktab o'quvchilarining faol ishtirokini ta'minlash uchun quyidagi usul va usullardan foydalanish mumkin:

1. Ta'limning interfaol usullaridan foydalanish: maktab o'quvchilarini munozaralarga jalb qilish, guruh loyihalari, o'yinlar va boshqa interfaol tadbirlarni o'tkazish ularning darsda faol ishtirok etishiga va materialni muhokama qilishga yordam beradi.

2. Amaliy topshiriqlarni bajarish: o'quvchilarga olgan bilimlarini amaliyotda qo'llash imkoniyatini berish, masalan, dala tadqiqotlarini o'tkazish, xaritalar chizish yoki geografik ma'lumotlarni tahlil qilish.

3. Vizual vositalardan foydalanish: Xaritalar, diagrammalar, fotosuratlar va videolar kabi vizual materiallar o'quvchilarga ma'lumotni yaxshiroq tushunishga va muhokamalarda faol ishtirok etishga yordam beradi.

4. Mustaqil ishlarni qo'llab-quvvatlash: o'quvchilarga o'zlarini qiziqtirgan mavzularni mustaqil o'rganish, tadqiqot olib borish va natijalarni sinf bilan bo'lish imkoniyatini berish.

5. Teskari aloqa: o'quvchilarning ishini baholash, ularga fikr bildirish va darsda faol ishtirokini rag'batlantirish.

6. Qiziqarli va amaliy ahamiyatli vazifalarni yaratish: topshiriqlar qiziqarli, o'quvchilarni qiziqtiradigan va amaliy qo'llanilishi kerak. [1, 7]

O'qituvchilar amaliy geografiya darslarida o'quvchilarning faol ishtirokini ta'minlab, o'quv jarayonini o'quvchilar uchun qiziqarli, samarali va esda qolarli qilishlari mumkin. O'quvchilarning faol ishtiroki geografiya fanini muvaffaqiyatli o'rganishning muhim elementlari bo'lgan bilim qobiliyatlari, tanqidiy fikrlash va muloqot qobiliyatlarini rivojlantirishga yordam beradi.

Xulosa. Umumta'lim maktablarida geografiya fanidan amaliy mashg'ulotlar tashkil etilishi o'quvchilarning dunyo, uning tuzilishi va xususiyatlari haqidagi tasavvurlarini shakllantirishda muhim ahamiyat kasb etadi. O'qitishning turli uslublari, zamonaviy texnologiyalardan foydalanish va o'quvchilarni faol jalb etish orqali geografiya darslarini yanada qiziqarli, qulay va samarali o'tkazish mumkin. Amaliy mashg'ulotlar o'quvchilarning o'z ko'nikma va qobiliyatlarini rivojlantirish bilan birga, atrofdagi dunyoni yaxshiroq tushunishlariga yordam beradi.

THE ORIGIN OF CHRONIC LYMPHOCYTIC LEUKEMIA, ITS PREVENTION

Abstract. Ongoing lymphocytic leukemia (CLL) is a sort of most tumors that impacts the blood and bone marrow, portrayed through the uncommon increment and expansion of lymphocytes, a sort of white platelet. CLL is a sluggish developing most malignant growths that normally influences more established grown-ups, with most of cases recognized in people beyond sixty-five years old. Regardless of its steady blast rate, CLL can regardless thought process great estimated grimness and mortality whenever left untreated or on the other hand on the off chance that fix is deferred. In this article, we will give a total outline of CLL, its finding, and treatment choices, featuring the current day query and improvements in the field.

Keywords: CLL, impacts, diseases, results, various indications, blood system, chooses, treatments, diagnoses.

Introduction: Constant lymphocytic leukemia (CLL) or little lymphocytic lymphoma (SLL) is an inactive danger described by expanded creation of mature yet useless B lymphocytes. CLL/SLL is characterized as a monoclonal lymphoproliferative sickness portrayed by the expansion and gathering of morphologically experienced however immunologically useless B-cell lymphocytes that are smirch cells, as verified on fringe smear. The essential illness locales incorporate fringe blood, spleen, lymph hubs, and bone marrow. CLL and SLL are indistinguishable from a pathologic and immunophenotypic stance. Both CLL and SLL start from B-cell lymphocytes however present with various indications relying upon where the strange cells are found. Normally, the underlying leukemic stage addresses CLL, where the cells are available in the blood. This in the end advances to the lymphoma stage, addressing SLL, where the cells are tracked down in the lymph hubs. The term SLL is ordinarily used to address the lymphoproliferative interaction restricted to the lymph hubs.

Etiology

The specific etiology of CLL is obscure. Hereditary variables, instead of ecological elements, are the most probable reason for CLL. Nonetheless, barely any realized gamble factors for CLL incorporate word related causes by openness to specific synthetic compounds, radiation openness, and tobacco clients. Reports of ranchers working around elastic assembling businesses and laborers with openness to benzene and weighty dissolvable have shown an expanded gamble of CLL/SLL. In any case, these affiliations have not yet been demonstrated. In nuclear bomb survivors, no known expansion in the rate of CLL/SLL has been

noted. Notwithstanding, there has been an expanded gamble of different kinds of leukemia. The uranium digger populace, who endure openness to ionizing and non-ionizing radiation, has shown expanded CLL occurrence. Tobacco clients and cigarette smokers show an essentially raised hazard of CLL contrasted with non-tobacco clients. The Veterans Issues perceives CLL as having a relationship to openness to Napalm or different herbicides during military help.

Histopathology

The above all else research center anomaly found in CLL is lymphocytosis in fringe blood and bone marrow. The fringe blood smear shows leukemic cells, which are little, mature lymphocytes with a dimly stained core, dense chromatin, and undefined nucleoli with a restricted edge of basophilic cytoplasm. Old style «smirch» cells («bushel» cells) are likewise seen on fringe blood smear; these are pathognomy of CLL. The smear cells are more delicate than ordinary lymphocytes that are upset during the method involved with being spread on a glass slide.

The study of disease transmission and Chance Variables

CLL is the most regular sort of leukemia in grown-ups, representing around 25% of all leukemia cases. As per the American Disease Society, in 2022, there have been an expected 20,940 new cases of CLL perceived in the US, with a mortality charge of 4,510. The frequency of CLL will increment with age, with most of cases recognized in people beyond sixty-five years old Men are more noteworthy presumably to progress CLL than ladies, with a male-to-female proportion of 1.5: 1.

A few risk components have been perceived as adding to the improvement of CLL, comprehensive of family history, exposure to positive synthetic compounds, and hereditary transformations. People with a family record of CLL or different blood issues are at raised possibility of making the sickness. Openness to sure synthetic substances, like pesticides and solvents, has moreover been connected to an increased opportunity of CLL. Hereditary changes, like these influencing the TP53 quality, can also amplify a singular's intention to make CLL.

Pathophysiology

CLL is portrayed by utilizing the phenomenal increment and multiplication of lymphocytes, which are created in the bone marrow and stream into in the blood. In CLL, the lymphocytes are abnormal and do now not trademark as expected, primary to an aggregation of these cells in the blood, bone marrow, and lymphoid tissues. This collection can prompt a change of side effects, comprising of weakness, weight reduction, and normal diseases.

The standard lymphocytes in CLL are ordinarily B cells, which are a sort of lymphocyte that produces antibodies to battle disease. In CLL, the B cells are odd and do never again highlight appropriately, primary to a debilitated safe framework. The strange B cells can furthermore jam out conventional cells in the bone marrow, principal to iron deficiency, thrombocytopenia, and neutropenia.

Analysis

Finding of CLL regularly incorporates a combination of substantial assessment, clinical history, and research center tests. A substantial assessment could likewise unveil broadened lymph hubs, spleen, or liver, which can be characteristic of CLL. A clinical record may furthermore uncover signs like weakness, weight reduction, and ongoing diseases.

Research facility tests are basic for diagnosing CLL and may also include:

1. Complete Blood Count (CBC): A CBC estimates the unique components of blood, along with white platelets, ruby platelets, and platelets. In CLL, the CBC may likewise unveil a duplicated white blood cellphone count, with an over-the-top portion of lymphocytes.

2. Blood Smear: A blood smear incorporates dissecting an example of blood under a magnifying lens to appear for remarkable cells. In CLL, the blood smear may furthermore uncover peculiar lymphocytes.

3. Stream Cytometry: Stream cytometry is a research center investigate that dissects the characteristics of cells, alongside their size, shape, and floor markers. In CLL, skim cytometry may furthermore disclose strange lymphocytes with specific floor markers.

4. Bone Marrow Biopsy: A bone marrow biopsy incorporates disposing of an example of bone marrow tissue to investigate a magnifying instrument. In CLL, the bone marrow biopsy could likewise uncover a gathering of conventional lymphocytes.

Treatment Choices

Treatment for CLL regularly involves a total of chemotherapy, focused treatment, and immunotherapy. The reason for treatment is to deal with the blast of uncommon lymphocytes, lighten side effects, and upgrade lovely of life.

Conclusion

Ongoing lymphocytic leukemia is a muddled and heterogeneous problem that requires a total procedure to examination and treatment. While cure picks are accessible, the confusion stays serious, and query into new change and cures is continuous. By handle the study of disease transmission, pathophysiology, analysis, and cure picks for CLL, medical services specialists can concede extreme consideration for victims with this illness. Besides, persevered through query into the atomic instruments hidden CLL will prompt the improvement of new and extra phenomenal medicines, upgrading results for victims with this infection.

ANALYSIS OF ROAD-TRANSPORT ACCIDENTS THAT HAPPENED IN THE CITY OF JIZZAH

Abstract. This article presents conclusions about the analysis of road traffic accidents that occurred in the territory of the city of Jizzakh and measures to reduce them.

Key words: Road transport characteristics, quantitative method, topographic method, quality, absolute index, relative fatality index, relative fatality index.

Harakat xavfsizligini tashkil etish uchun aniq tadbirlar belgilashda asosiy tayanch ko'rsatma sifatida yo'l transport hodisalarini har taraflama chuqur ob'ektiv tahlil qilish natijalaridan olingan xulosalardan foydalaniladi.

Yo'l transport hodisalari quyidagi vazifalarni hal qilish maqsadida tahlil qildik:

- Jizzax shahrida harakat xavfsizligiga taalluqli «Avtomobil-haydovchi-yo‘l-piyoda-muhit» tizimiga kiruvchi har bir faktorning faoliyatiga tegishli tadbir va choralar ishlab chiqish uchun;

- Shaxardagi biron-bir boshqaruv territoriyasidagi, vazirliklardagi va ularning korxonalaridagi falokatlar ahvolini, o‘zgarish mohiyatini hamda istiqboldagi o‘zgarishini bashorat qilish maqsadida;

- Yo‘l transport hodisalarining kelib chiqish sabablarini va ularni bartaraf qilish borasida tuziladigan ko‘rsatmalarni ishlab chiqish uchun;

- Yo‘l transport hodisalari ko‘p qaytariladigan yo‘l bo‘laklarini aniqlash maqsadida;

- Shahardagi bitta yoki bir nechta bir xil yo‘l transport hodisalarining vujudga kelish sabablarini aniqlash uchun;

- Yo‘l transport hodisalarini tahlil qilish uchun universal dastur tuzish maqsadida.

Maqsad va vazifalariga qarab yo‘l transport hodisalarini tahlil qilishning *miqdoriy*, *sifat* va *topografik* usullari mavjud. Yo‘l transport hodisalarini miqdoriy usul bilan tahlil qilishda halokatlarning absolyut, nisbiy va solishtirma ko‘rsatkichlari o‘rganildi.

Halokatlarning absolyut ko‘rsatkichlariga quyidagilar misol bo‘ladi: Yo‘l transport hodisalarining umumiy (yillik, oylik, choraklik) soni; yo‘l transport hodisalarida jarohat olganlar (o‘lganlar) soni; jarohat olganlarning yoki o‘lganlarning yoshiga, kasbiga qarab yo‘l transport hodisalaridagi soni; haydovchilarning aybi bilan o‘lganlar, jarohat olganlar soni; avtomobil yoki ular holatining nosozligi bilan bo‘lgan yo‘l transport hodisalari soni va h.k.

Solishtirma halokatlilik ko‘rsatkichi. Yo‘l transport hodisalar biron-bir absolyut ko‘rsatkichidan boshqa yo‘l transport hodisalar qancha qismini tashkil qilishi tushuniladi va odatda foiz ko‘rsatkichida keltirildi. Masalan, jami yo‘l transport hodisalar sonidan to‘ntarilish (to‘qnashish, piyodalarni bosib ketish yoki yo‘l transport hodisalar halok bo‘lgan bo‘lganlar, jarohat ko‘rganlar va h.k.) necha foizni tashkil qiladi.

Nisbiy halokatlilik ko‘rsatkichlari. Nisbiy halokatlilik ko‘rsatkichlarini hisoblashda bitta absolyut ko‘rsatkich boshqa absolyut ko‘rsatkichga nisbatan olindi.

Yo‘l transport hodisalarini oylar bo‘yicha tahlili quyidagi jadvalda keltirilgan.

1-jadval

YTH	Oylar											
	Yan	Fev	Mart	Apr	May	Iyun	Iyul	Avg	Sen	Okt	Noy	Dek
Umumiy soni	6	8	5	7	10	6	15	19	13	8	13	10
	3	1	0	0	1	0	0	4	0	1	1	2
Jarohat olganlar	7	10	8	8	15	7	16	19	18	13	15	9

Yo‘l transport hodisalarini turlari bo‘yicha taxlili, Bunyodkor ko‘chasida sodir etilgan yo‘l transport hodisalarining 48% ni piyodalarni bosish, 40 % ni to‘qnashuv va qolgan 12 % ni boshqa turdagi hodisalar tashkil etganligi ko‘rsatib turibdi.

(1-rasm)

1-rasm. YTH larni oylar bo‘yicha tahlili gistogrammasi

Tahlil natijasi iyul, avgust va sentyabr hamda noyabr oylarida yo‘l transport hodisalar soni keskin ko‘payganligi va ularning oqibatida halok bo‘lganlar va jarohat olganlarning sonini ham oshganligini ko‘ramiz. Bu yerda may va dekabr oylari ko‘rsatkichlari xam yuqoriligini ta’kidlash kerak bo‘ladi.

Yo‘l transport hodisalarini xafta kunlari bo‘yicha taxlilini quyidagi jadvalda ko‘rish mumkin.

YTH	Hafta kunlar						
	Dush	Sesh	CHor	Pay	Juma	Shan	Yak
Umumiy soni	14	21	17	20	21	13	14
Halok bo'lganlar	0	2	3	2	1	0	0
Jarohat olganlar	10	7	9	11	15	17	9

2-rasm. Hafta kunlari bo'yicha YTH lari taqsimlanish siklogrammasi.

Xulosa o'rnida shuni aytish mumkinki:

- Hafta kunlari bo'yicha YTH larining taqsimlanishi juma va seshaba kunlari eng ko'p ko'rsatkich (17.5% ni tashkil etgan, shanba yakshanba va dushanba kunlari ko'rsatkich kam bo'lgani bilan 12% dan yuqori bo'lib qolmoqda) va o'sha kunlari eng ko'p YTH lari kuzatilmoqda.

- YTH lari oqibatida juma(4 ta) va chorshanba(3 ta) kunlari xalok bo'lganlar soni 7 kishini tashkil qiladi.

- YTH lari oqibatida tan jaroxati olganlar seshanba(23 ta) va juma(25 ta) kunlari 48 tani, umumiy hafta hisobida 146 kishini tashkil etadi.

- YTH larni sodir bo'lishida piyodalarning ulushi sezilarli ko'p bo'lganligini e'tiborga olgan holda ularni kamaytirish va YTH larni oldini olish uchun taxlillar hamda yo'l sharoitini o'rganib chiqish va yana piyodalar harakati tavsiflaridan kelib chiqqan holda bajarilishi kerak bo'lgan tadbirlarni belgilab olish va ularni amalga oshirish kerak bo'ladi.

MEHNAT XAVFSIZLIGINING PSIXOLOGIK ASOSI

Annotasiya. Ushbu maqolada Mehnatni muhofaza qilish fanining asosiy maqsadi talabalarga insonning ishlab chiqarishdagi mehnat faoliyati davrida yuzaga keladigan xavfli faktorlar, ularning kelib chiqish sabablari va bartaraf etish yo‘llari, mehnat xavfsizligini ta‘minlash hamda xavfsiz va sog‘lom ish sharoitlarini yaratish bo‘yicha nazariy bilim berish va amaliy ko‘nikmalar hosil qilishdan iboratdir.

Kalit so‘zlar: jarohatlanishlar, shikastlanishlar, kasallanishlar, yong‘inlar, ishlab chiqarishdagi avariyaalar, xavfsizlik texnikasi, ruhiy jarayonlar, ruhiy xususiyatlar, ruhiy holat, mehnat psixologiyasi, mehnat faoliyati samaradorligi, paroksizmal holat, sanitar-gigiyenik sabablar.

PSYCHOLOGICAL BASIS OF LABOR SECURITY

Abstract. In this article, the main goal of the science of labor protection is to provide students with the theoretical knowledge of dangerous factors that arise during human labor activity in production, their causes and methods of elimination, ensuring labor safety and creating safe and healthy working conditions. is to give and create practical skills.

Key words: injuries, injuries, illnesses, fires, industrial accidents, safety techniques, mental processes, mental characteristics, mental state, work psychology, labor efficiency, paroxysmal condition, sanitary-hygienic reasons.

Zamonaviy ishlab chiqarish sharoitida baxtsiz hodisalarni (jarohatlanishlar, shikastlanishlar, kasallanishlar, yong‘inlar va b.) kamaytirish muammosini

faqatgina muhandislik uslublari orqali hal etib bo'lmaydi. Shu sababli, mehnat xavfsizligi psixologiyasi faoliyat xavfsizligini ta'minlashda muhim o'rin tutadi.

Tajribalarning ko'rsatishicha ishlab chiqarishdagi avariya va jarohatlanishlarning ko'pchiligi mashinalardagi muhandislik-konstruktorlik nuqsonlar yoki texnik- texnologik sabablar orqali emas, balki tashkiliy-psixologik, ya'ni xavfsizlik texnikasi bo'yicha yetarli bilimga ega bo'lmashlik, yetarli darajada o'qitilmashlik, ishchining bilib- bilmay xavfsizlik qoidalariga rioya qilmasligi, xavfli ishlarga maxsus o'qishlardan o'tmaganlarga ruxsat berish, ishga mutaxassislik bo'yicha qabul qilmaslik va shu kabi qator sabablar ta'sirida yuz beradi. Shu sababli, ko'pincha jarohatlanishlarning 60–70 foiziga bevosita jarohatlanuvchi- larning o'zlari aybdor bo'ladi. Xavfsizlik psixologiyasi deganda insonning mehnat xavf- sizligini ta'minlashga qaratilgan psixologik bilimlardan foydalanish tushuniladi[1].

Xavfsizlik psixologiyasi mehnat faoliyati davomida yuz beradigan turli jarayonlarni, xususiyatlarni va holatlarni chuqur o'rganadi hamda tahlil qiladi. Shunga bog'liq holda, insonning ruhiy faoliyatini uch xil komponentga ajratish mumkin, ya'ni ruhiy jarayonlar, xususiyatlar va holatlar.

Ruhiy jarayonlar – ruhiy faoliyatning asosini tashkil etadi. Ruhii jarayonlar bilish, emotsional va irodaviy sezish (his qilish, idrok etish, xotirlash va b.) kabi turlarga bo'linadi.

Ruhiy xususiyatlar (shaxsiy fazilatlar). Ruhii xususiyatlarga insonning xarakteri, dunyoqarashi, fikrlash qobiliyati, shaxsiy fazilatlariga esa intellektual, emotsional, axloqiy va mehnat qobiliyati hamda irodasi kiradi. Xususiyatlar turg'un va doimiy hisoblanadi.

Ruhiy holat – ruhiy jarayonlarga ijobiy yoki salbiy ta'sir etuvchi ruhiy faoliyat xususiyatini bildiradi.

Mehnat psixologiyasi vazifalari hamda mehnat xavfsizligi psixologiyasi muammolaridan kelib chiqqan holda, ruhiy holatni: ishlab chiqarish ruhiy holati va maxsus ruhiy holatlarga ajratish mumkin. Maxsus ruhiy holat ishlab chiqarish jarohatlari, shikastlanishlar va shu kabi ko'ngilsiz oqibatlar bo'yicha profilaktik tadbirlarni tashkillashtirishda yuzaga kelishi mumkin[2].

Insonning mehnat faoliyati samaradorligi (ish qobiliyati) ruhiy zo'riqish, ya'ni hayajonlanish darajasiga bog'liq holda o'zgaradi. Ruhii zo'riqish ma'lum chegaragacha ish natijasiga ijobiy ta'sir ko'rsatadi. Lekin bu xususiyatni chegaradan, ya'ni kritik darajadan ortiq bo'lishi ish qobiliyatini pasayishidan tortib umuman yo'qolishigacha olib kelishi mumkin. Bunday ruhiy zo'riqish, chegaradan tashqari zo'riqish deb belgilanadi. Ishchining mehnat faoliyat davridagi me'yoriy ruhiy yuklanganligi maksimal yuklanish darajasining 40–60 foizini tashkil etishi lozim, aks holda, yuklan- ganlikning bu chegaradan oshishi ishchining ish qobiliyatini susayishiga olib keladi. Chegaradan tashqari ruhiy zo'riqish tormozli va asabiy ko'rinishlarga bo'linadi. Tormozli ruhiy zo'riqish harakatning cheklanganligi va sekinlashishi orqali tavsiflanadi.

Asabiy zo'riqish, hayajonlanish, ruhiy zo'riqish giperaktivligi, ko'p so'zlilik, qo'l va ovoz qaltirashi kabi belgilarda namoyon bo'ladi. Bunday holatda ishchi dag'al, xafaqon ko'rinishga tushishi, tez-tez beixtiyor ish jihozlari va asboblari holatini kuzatishi, ust-kiyimini to'g'rilashi, qo'lini artishi va shu kabi qiliqlarni bajarishi kuzatiladi. Albatta, bu holatlarning barchasi xatoga yo'l qo'yilishiga va natijada baxtsiz hodisalarni kelib chiqishiga sabab bo'ladi[3].

Ishchining ruhiy ishonchliligini belgilovchi alohida ruhiy holatlar: paroksizmal hushdan ketish, kayfiyatni psixogen o'zgarishi, ruhiy aktiv vositalarni (stimulatorlar, trankvilizatorlar, alkogol ichimliklar) qabul qilish ta'siridagi ruhiy o'zgarishlar ko'rinishlarida bo'ladi.

Paroksizmal holat – turli xil toifadagi hushdan ketish (bosh miyaning organik kasallanishi, epilepsiya, hushdan ketish), ya'ni bir necha sekunddan bir necha daqiqa oralig'ida hushni yo'qotishdir. Albatta, bunday holat turli xil og'ir oqibatlariga olib keluvchi, ba'zida o'lim bilan tugovchi baxtsiz hodisalarga sabab bo'lishi mumkin.

Psixogen o'zgarishlar va «affektiv» (affekt-hissiy portlash, emotsional portlash) holatlar ruhiy ta'sir orqali yuzaga keladi. Kayfiyatning tushishi va apatiya bir necha soatdan bir necha oygacha davom etishi mumkin. Albatta, bunga turli xil ko'ngilsiz hodisalar, ixtilofli, mojaroli vaziyatlar sabab bo'ladi. Bunday holatda befarqlik, lanjlik, lohaslik, tormozlanganlik, e'tiborsizlik, muskul harakatining susayishi sodir bo'lishi yuzaga keladi va bu holatlar o'z-o'zini nazorat qilish qobiliyatini susayishiga, natija esa turli ko'rinishdagi baxtsiz hodisalarni kelib chiqishiga olib kelishi mumkin[4].

Ruhiy faoliyatni maishiy va ishlab chiqarish omillari ta'sirida o'zgarishi ishlab chiqarish faoliyatidagi muhandis-tashkilotchilar oldiga ishchining ruhiy holatini nazorat qiluvchi tizimni vujudga keltirish hamda takomillashtirish zarurligini ko'rsatadi. Ishlab chiqarishda kasb kasalliklarining oldini olish va ishlab chiqarish jarohatlarini kamaytirishda, ushbu baxtsiz hodisalarni chuqur tahlil qilish asosida ularni keltirib chiqaruvchi sabablarni hamda ishlab chiqarishdagi xavfli va zararli omillarni puxta o'rganish muhim rol o'ynaydi.

Baxtsiz hodisalarning sabablari asosan quyidagi 4 guruhga bo'linadi: texnikaviy, sanitar-gigiyenik, tashkiliy va psixofiziologik.

Texnikaviy sabablarga mashina va mexanizmlar hamda ish jihozlarining nosozligi, elektr qurilmalarining yerga ulanmaganligi, yuklashtirish mashinalaridan noto'g'ri foydalanish, mashina va mexanizmlar konstruktsiyasini mehnat muhofazasi talablariga javob bermasligi kabilar kiradi.

Sanitar-gigiyenik sabablarga esa mehnat gigiyenasi, sanitar me'yorlar va qoidalarga amal qilmaslik, yoritilganlik, harorat, nisbiy namlik, havoning harakatlanish tezligi, havoning bosimi kabi ko'rsatkichlarni me'yordan chetga chiqishi, yuqori miqdordagi shovqin, titrash, havoning changlanganligi yoki gazlanganligini kiritish mumkin.

Psixofiziologik sabablarga bajarilayotgan ishga e'tiborsiz qaralishi, ishchining o'z faoliyatida bo'lgan nazoratining bo'shligi, jismoniy yoki asabiy toliqish va boshqa shu kabilar kiradi.

Ishlab chiqarishdagi xafli va zararli omillar ishning turi va mehnat sharoitiga bog'liq holda 4 guruhga bo'linadi: fizikaviy, kimyoviy, biologik va psixofiziologik.

Fizikaviy omillarga harakatdagi mashina va mexanizmlar, ularning himoyalanmagan qo'zg'aluvchi mexanizmlari, ish joyi havosining yuqori darajada changlanganligi, gazlanganligi, baland darajadagi shovqin, titrash, infratovush, ultratovush, turli xil nurlanishlar, statik elektr zaryadlari, yuqori kuchlanishdagi elektr yoki magnit maydonlari, yoritilganlik darajasining me'yordan chetga chiqishi kabi omillar kiradi.

Kimyoviy omillarga ishlab chiqarish jarayonlarida ishlatiladigan yoki ajralib chiqadigan turli xil kimyoviy moddalar kiradi. Ularni insonga ta'sir etish xususiyatiga qarab quyidagi guruhlarga ajratish mumkin: umumiy zaharlovchi, ko'payish funksiyalariga ta'sir etuvchi; inson a'zolariga kirish yo'li orqali esa: nafas olish yo'li orqali ta'sir etuvchi, ovqatlanish va hazm qilish tizimi orqali va bevosita teri orqali ta'sir etuvchi. Biologik omillarga esa har xil jarohatlar va kasalliklarni keltirib chiqaruvchi mikro va makro- organizmlar: bakteriyalar, virus-lar, rikket, zamburug'lar, har xil zaharli o'simliklar va hayvonlar kiradi.

WAYS OF THE DEVELOPMENT OF THE COGNITIVE PROCESS OF PRESCHOOL CHILDREN AND THE IMPLEMENTATION OF INTELLECTUAL COGNITIVE SKILLS

Annotation. In this article we can learn about the development of cognitive processes in preschoolers and what to pay more attention to in this development.

Key words: cognition, mental, cognitive, mental, intellectual, intuition, perception, attention, memory, imagination, thinking, speech, imagination, emotion, will, etc.

Cognition – the process of psychic reflection, provides for the acquisition and assimilation of knowledge, interest in knowledge - the product of mental intellectual sensations, which is manifested as a person's need to know the tevarak-the surrounding world. In preschool children, the development of intuition, perception, attention, memory, imagination, thinking, speech, fantasy, emotion and will is accelerated. The child cannot yet distinguish colors well from each other. It is advisable to give him toys, colored clothes, colored folk, boxes and similar toys that will help him know the difference in colors. Although preschool children are based on their conspicuous signs (color and shape) in the perception of various things, but cannot analyze in depth. Children of preschool age will have the ability to analytically perceive pictures with the help of adults. When children perceive pictures, adults should be taught to analyze them with different questions. In this, basically, children's attention:

1. To correctly perceive the content (plot) of the photo;
2. To correctly perceive the place of each described thing in the general view of the photo;
3. It is necessary to focus on the correct perception of the relationship between the described things.

Attention is a constant companion of any of our activities. Therefore, the importance of attention in a person's life is greater than benihoya. The attention of preschool children will be largely involuntary. The game is of great importance for the growth of voluntary attention in preschool children. During the game, children gather their attention in one place and, on their own initiative, advance certain goals.

The memory of a child at this age will go to improvement on the basis of new activities and new requirements that the child sets for himself. The memory of preschool children is characterized by being visual, figurative. The child is more dominated by involuntary memorization and involuntary recall. The child

will repeat the words without any meaning. But later, under the influence of adults, voluntary memorization also gradually begins to develop.

A three-year-old child is able to keep his impressions remembered for several months. Memory growth is facilitated by games, various activities, memorizing poetry, telling fairy tales and stories, and conducting observation work during walks. Children of this age can easily remember both new words and even words in foreign languages. But, although children easily remember the material, they do not understand the meaning of many well and find it difficult to use them in speech. The task of adults is not only to make children remember as many words and visions as possible, but to achieve the acquisition of various knowledge that is understandable, useful to them. Children use this kind of knowledge in their games, paintings, conversations with teachers or adults, knowledge that serves for their mental and moral growth.

The thinking of preschool children and its development has its own peculiarity. Thinking begins to develop very quickly during the preschool age of the child. The birth of questions about each area in preschool children testifies to the fact that their thinking is being activated. When a child cannot find an answer to his question or adults do not pay attention to his question, the curiosity in it begins to fade.

Usually, any thought process arises due to surprise, surprise from something and, as a result, the birth of various questions. Many parents and some caregivers, if the children ask more questions, «don't be too mahmudana» and «Where Did you learn such things», become rich. As a result, the child will kiss and try to understand as much as he knows. Some reluctant children do not ask any questions. Such children should also be asked questions by the adults themselves in various activities and trips, thereby activating them.

Any thinking usually begins with comparing, analyzing and synthesizing something. That is why we call this comparison, analysis and synthesis a contemplative process. Trips help to activate and develop the thought process in children. Children compare different things with each other on trips to nature, strive for analysis and synthesis.

Since adults are engaged in the cultivation of children's speech, they should not forget that children of preschool age in some cases cannot fully perceive their own speech qualities. In addition, the ability to distinguish complex speech sounds in children from each other is also a buladi, which has not yet been fully improved. One of the most important conditions for correcting language fluency is to speak fluent language, fully and correctly pronouncing it with a child. Therefore, it is advisable if the above mentioned recommendations are followed in the development of cognitive processes of preschool children.

XOTIN-QIZLARNING TADBIRKORLIK VA BIZNES FAOLIYATIGA KENG JALB QILISHNING XUQUQIY ASOSLARI VA ZAMONAVIY TENDETSIYALARI

Annotasiya. Maqolada Yangi O'zbekistonda xotin-qizlarga munosabat masalasidagi davlat siyosati doirasida amalga oshirilayotgan yangi tizimli islohotlar va ularning normativ-huquqiy asoslari, xotin-qizlarning huquqlari, erkinliklari hamda qonuniy manfaatlarining himoya qilishda, bugungi kunda ayollar ijtimoiy faolligini oshirish, ularning oila va jamiyatdagi mavqeini yuksaltirishda huquqiy savodxonlikni hamda kichik biznes va xususiy tadbirkorlikni rivojlantirishda ayollarning ahamiyatini oshirish masalalariga e'tibor berilgan.

Maqola tadqiqotining ob'ekti xotin-qizlarning iqtisodiy mustaqilligini ta'minlash, huquq va qonuniy manfaatlarini himoya qilish, kasbga o'qitish va bandligini sifat jihatidan ta'minlash, ularni tadbirkorlik va biznesga keng jalb etish hamda ijtimoiy himoyaga muhtoj xotin-qizlarning huquqlari va qonuniy manfaatlarini ta'minlash bog'liq ijtimoiy-huquqiy munosabatlar tizimi hisoblanadi. Tadqiqotning predmeti xotin-qizlarning tadbirkorlik faoliyatini tartibga soluvchi normativ-huquqiy hujjatlar, ilmiy-nazariy qarashlardan iboratdir. Tadqiqot olib borishda tarixiy, qiyosiy-huquqiy, mantiqiy, ilmiy usullaridan foydalanilgan.

Muallif tomonidan ayollarning huquq va qonuniy manfaatlarini himoya qilish, ularga davlat va jamiyat taqdiriga daxldor qarorlarni hayotga tatbiq etish, xususan, qonunlarni ishlab chiqish, qabul qilish, islohotlarni amalga oshirish jarayonlarida bevosita qatnashishlari muammolariga qonun doirasida adolatli echim topish maqsadida sud-huquq sohasidagi islohotlar ham tahlil etilgan.

Kalit so'zlar: xotin-qizlar, huquq, erkinlik, tadbirkorlik, ilm-fan, innovasiya.

professor*

LEGAL FOUNDATIONS OF HUMAN-INTEREST ENTREPRENEURSHIP

Abstract. The article focuses on the new reforms carried out in the framework of the state policy on the issue of treatment of women in New Uzbekistan and their legal framework, protection of women's rights, freedoms and

legitimate interests, increasing the social activity of women today, increasing their position in the family and society and the issues of increasing the role of women's labor in the development of small business and private entrepreneurship, the role of women entrepreneurs in the modern world, support for women's entrepreneurship and the creation of a business environment.

The object of research of the article is ensuring the economic independence of women, protecting their rights and legitimate interests, ensuring high-quality professional training and employment, and broadly involving them in business activities and the system of social and legal relations related to ensuring the rights and legitimate interests of women in need of social protection. The subject of the research is normative legal documents regulating women's entrepreneurial activity, scientific and theoretical views. The study used historical, comparative-legal, logical, scientific methods. Reforms in the judicial sphere were also analyzed by the author in order to protect the rights and legitimate interests of women, to find a fair solution to their problems within the framework of the law.

Keywords: women, law, freedom, entrepreneurship, science, innovation.

Kirish

So‘nggi yillarda mamlakatimizda xotin-qizlar masalalari va ularni har tomonlama qo‘llab-quvvatlash davlat siyosati darajasiga ko‘tarilib, ushbu masala Yangi O‘zbekiston taraqqiyot strategiyasining muhim yo‘nalishlaridan biriga aylandi. Bu borada xotin-qizlarning- davlat va jamiyat boshqaruvidagi o‘rnini, ijtimoiy-iqtisodiy faoligini oshirishga, kasb-hunarga o‘qitish va bandligini ta‘minlashga, tadbirkorlik faoliyatini qo‘llab-quvvatlashga, ta‘lim olishlari va ilmiy faoliyat bilan shug‘ullanishlari uchun zarur shart-sharoit yaratilishiga, turmush sharoitlarini yaxshilashga va eng asosiysi, huquq va erkinlarini har tomonlama himoya qilishga qaratilgan tizimli ishlar amalga oshirildi va aniq natijalarga erishildi.

Shu bilan birga, xotin-qizlarni bandligini ta‘minlash, ularni tadbirkorlikka keng jalb qilish va zamonaviy kasblarni o‘rgatish bilan bog‘liq masalalar sohada dolzarb yo‘nalish va asosiy vazifalardan biri hisoblanadi. Xususan, mazkur masala O‘zbekiston Respublikasi Prezidentining 2021 yil 3 dekabrda PF–29-son «Mahallada tadbirkorlikni rivojlantirish, aholi bandligini ta‘minlash va kambag‘allikni qisqartirish bo‘yicha davlat siyosatining ustuvor yo‘nalishlari to‘g‘risida», 2022 yil 2 martdagi PF–81-son «Oila va xotin-qizlar bilan ishlash, mahalla va nuroniylarni qo‘llab-quvvatlash tizimini takomillashtirish chora-tadbirlari to‘g‘risida», 2022 yil 7 martdagi PF–87-son «Oila va xotin-qizlarni tizimli qo‘llab-quvvatlashga doir ishlarni yanada jadallashtirish chora-tadbirlari to‘g‘risida», 2021 yil 5 martdagi PQ–5020-son «Xotin-qizlarni qo‘llab-quvvatlash, ularning jamiyat hayotidagi faol ishtirokini ta‘minlash tizimini yanada takomillashtirish chora-tadbirlari to‘g‘risida»gi hamda O‘zbekiston Respublikasi Prezidentining «Oilalarni mustahkamlash va xotin-qizlarni faolligini oshirish bo‘yicha qo‘shimcha chora-tadbirlar to‘g‘risida»gi 2023 yil 21

dekabrdagi PQ-401 sonli Qarorida ham o‘z aksini topgan bo‘lib, xotin-qizlarning ijtimoiy-siyosiy faolligini hamda bandligini oshirish, tadbirkorlik ko‘nikmalarini shakllantirish, borasida amalga oshirilishi lozim bo‘lgan ustuvor yo‘nalishlar belgilab berilgan.

Shuningdek, mavzning dolzarbligi O‘zbekiston Prezidenti Sh. Mirziyoyev tomonidan qo‘rsatilib, mamlakatimizda ayollar tadbirkorligini yangi bosqichga ko‘tarish, ularning bandligiga ko‘maklashish maqsadida, 2023 yil mart oyida Senat Raisi boshchiligida maxsus komissiya tashkil etilib, har bir hududda, xotin-qizlarni kasb-hunarga o‘qitish, bandligini ta‘minlash va tadbirkorlikka jalb etish bo‘yicha ishlarni mutlaqo yangicha yondashuvlar va tizim asosida tashkil qilish masalasi ustuvor qilib belgilandi.

Material va metodlar

Maqola tadqiqotining ob'ekti ijtimoiy himoyaga muhtoj xotin-qizlarning huquqlari va qonuniy manfaatlarini ta‘minlash bilan bog‘liq ijtimoiy-huquqiy munosabatlar tizimi hisoblanadi.

Tadqiqotning predmeti xotin-qizlarning tadbirkorlik faoliyatini tartibga soluvchi normativ-huquqiy hujjatlar, ilmiy-nazariy qarashlardan iboratdir.

Tadqiqot olib borishda tarixiy, qiyosiy-huquqiy, mantiqiy, ilmiy usullaridan foydalanilgan.

Maqolada ko‘tarilgan muammo huquqshunos olimlardan G‘.A. Abdumajidov, I.R. Astanov, D.B. Bazarova, B.X. Pulatov, S.M. Rahmonovalarning ilmiy ishlarida qisman tahlil etilgan. Fuqaroviy-tadbirkorlik bilan bo‘liq masalalar esa, Z. Esanova, D. Karaxodjaeva, N. Imomov kabi olimlarning ilmiy ishlarida uchraydi.

Biroq yuqoridagi tadqiqotchilarning ilmiy ishlarida xotin-qizlarni tadbirkorlikka jalb qilish orqali ularning bandligini ta‘minlash bilan bog‘liq metodologik va xuquqiy jihatlar kompleks tahlil etilmagan.

Tadqiqot natijalari

Munozara

So‘nggi yillarda O‘zbekiston Prezidenti Sh. Mirziyoyev boshchiligida barcha sohalarda, xususan, milliy iqtisodiyotning ochiqligini ta‘minlash va uning jahon iqtisodiyotiga integratsiyasi uchun barcha zarur shart-sharoitlarni yaratish, investitsiyaviy jozibadorlikni mustahkamlash, kichik va o‘rta biznesni xalqaro standartlar asosida takomillashtirish borasida keng ko‘lamli islohotlar amalga oshirilib kelinmoqda.

Milliy iqtisodiyotimizni barqaror rivojlanishida barcha dolzarb vazifalar singari xotin-qizlar masalasiga alohida e‘tibor qaratilmoqda.

Xalqaro Mehnat tashkiloti tomonidan 2022 yilda e‘lon qilingan tadqiqot natijalariga ko‘ra «ayollar mehnat faoliyati davomida hali ham munosib ish uchun jiddiy to‘siqlarga duch kelishmoqda [1]. Bugungi kunda xotin-qizlarni tadbirkorlikka keng jalb qilish va ularni bandligi ta‘minlash masalalar, xususan sohaning institutsional va xuquqiy asoslarini takomillashtirish dolzarb muammolardan biri sifatida yuzaga chiqmoqda.

Mazkur masalaga jahon xamjamiyatida alohida e'tibor qaratilib, aynan xotin-qizlarni keng tadbirkorlikka jalb qilish orqali davlat va jamiyatning rivojlanishiga asosiy sabablardan biri bo'lib xizmat qilishi ta'kidlanadi. Xususan, Xalqaro mehnat tashkilotining ma'lumotlariga ko'ra, bugungi kunda dunyo aholisining 50%ga yaqinini ayollar tashkil etib, ularning jahon yalpi ichki mahsuloti ulushidagi hissasi 40%ni tashkil etmoqda [2].

Jahon banking prognozlariga ko'ra, bandlik sohasida gender tafovut bartaraf etilsa, uzoq istiqbolda mamlakatlarda axoli jon boshiga o'rtacha jahon yalpi ichki mahsulotini 20%ga oshirish mumkin bo'ladi hamda agar ayollar o'z bizneslarini erkaklar bilan bir hil sur'atlarda boshlasa va kengaytirsas, bu jahon iqtisodiyotiga qo'shimcha 6 trillion dollargacha qo'shilishi mumkin [3].

Mastercard kompaniyasi tomonidan 2017 yilda birinchi marotaba «tadbirkor ayollar indeksi» (Index of Women Entrepreneurs) ishlab chiqildi. Kompaniya tomonidan o'tkazilgan tadqiqotlar shuni ko'rsatdiki, ayollar asosan o'z bizneslarini ehtiyojdan kelib chiqib, iroda kuchi bilan rivojlantiradilar. Ayollarning o'z biznesini boshlashiga to'sqinlik qiladigan ikkita asosiy to'siq, ya'ni cheklangan madaniy an'analar va kasbiy o'sish uchun imkoniyatlarning yetishmasligi keltirilgan. Moliyaviy xizmatlardan foydalanish va tijorat faoliyatini rivojlantirishni qo'llab-quvvatlovchi qulay muhitni yaratish xotin-qizlarning tadbirkorlik va biznes faoliyatini rivojlantirishga xizmat qiladi [4].

Bu borada xalqaro tashkilotlar, xususan BMT xam muhim rol o'ynamoqda. BMT Bosh Assambleyaning organi - savdo va taraqqiyot bo'yicha konferensiyasi (UNSTAD) ayollar biznesini rivojlantirishda muhim rol o'ynaydi. Ayollarning tadbirkorlik faolligini oshirish maqsadida UNSTAD qator mamlakatlarda xalqaro ta'lim dasturini amalga oshirib, uning loirasida xotin-qizlarning xalqaro tadbirkor bo'yicha malakasini oshirilmoqda [5].

Bunday faollik bilan ayollar milliy va jahon iqtisodiyotini rivojlanishiga ham munosib hissa qo'shishi va ayollarimizni xalqaro darajada qo'llab-quvvatlanishi ular uchun barcha imkoniyatlarni yaratish, xususan, xuquqiy asoslarni takomillashtirish oldimizda turgan dolzarb vazifalardan biri hisoblanadi.

Tadqiqot natijalari tahlili

Bu borada keyingi yillarda mamlakatimizda qator aniq natijalarga erishildi.

Birinchidan, xotin-qizlarni xar tomonlama qo'llab-quvvatlash va gender tenglikni ta'minlash sohasida xalqaro standartlar asosida milliy qonunchilikni takomillashtirishga alohida e'tibor qaratildi. So'ngi yillarda sohaga oid 40 dan ortiq qonunchilik hujjatlari va muhim konseptual xujjatlar qabul qilindi.

Mazkur xujjatlar doirasida xotin-qizlar va erkaklar uchun teng huquq hamda imkoniyatlar, ayollarning davlat va jamiyat boshqaruvidagi o'rning mustahkamlanishi, ularning ta'lim olishlari uchun qulay sharoitlar yaratilishi, bandligini ta'minlash va kasb-hunarga o'qitish hamda ayollarning iqtisodiy hayotdagi faolligini oshirish borasida muhim tadbirlar amalga oshirilmoqda.

Qolaversa, xotin-qizlarni har tamonlama huquq va erkinlarini himoya qilish borasida mamlakatimizda aniq va manzilli ishlar amalga oshirilmoqda.

Xususan, oilaviy zo‘ravonlikni oldini olish maqsadidabirinchi navbatda qonunchilik takomillashtirildi (aloxida qonun qabul qilindi), himoya orderi berish amaliyoti yo‘lga qo‘yildi. 29 ta ayollarni reabilitatsiya qilish markazlari faoliyati yo‘lga qo‘yildi, ishonch telefoni ishga tushirildi hamda uyma-uy kirib boradigan amaliyot joriy etildi [12]

Ayollar reabilitatsiya markazi tomonidan ayollarga tibbiy, ijtimoiy psixologik va huquqiy yordam ko‘rsatilmoqda. Himoya orderi berish orqali xotin-qizlarga nisbatan turli tazyiq va zo‘ravonliklarning oldi olinmoqda.

Barcha sohalarda erkaklar va xotin-qizlar uchun teng huquq va imkoniyatlarni ta‘minlash maqsadida 2030 yilgacha O‘zbekistonda gender tengligiga erishish Strategiyasi tasdiqlandi. Yagona yondashuv asosida vazirlik va idoralar faoliyatini samarali tashkil etish va muvofiqlashtirish maqsadida Oliy Majlis Senati qoshida Xotin-qizlarning jamiyatdagi rolini oshirish, gender tenglik va oila masalalari bo‘yicha respublika komissiyasi tuzildi.

Oila va xotin-qizlarni qo‘llab-quvvatlash, ularning huquq va qonuniy manfaatlarini himoya qilish sohasidagi yagona davlat siyosatini amalga oshiradigan Oila va xotin-qizlar qo‘mitasi tashkil etildi.

Amalga oshirilgan ishlar natijasida xotin-qizlar ulushi boshqaruv sohaslarida 35 foizga, tadbirkorlik sohasida 37 foizga, siyosiy partiyalarda 46 foizga oshdi. Xotin-qizlarimizni oliy ta‘lim bilan qamrab olish ko‘rsatkichi 2017 yilga nisbatan 5 barobarga ortdi[13].

Ta‘lim va ilmni mustahkamlash yo‘nalishida xotin-qizlar uchun qulay sharoitlar yaratildi, yangi kvotalar, grantlar ajratildi, magistraturada o‘qish istagi bo‘lgan ayollar uchun to‘lovlar davlat tomonidan moliyalashtiriladigan amaliyot joriy etildi.

Xususan, har yili muhtoj yolg‘iz ayollar va boquvchisini yo‘qotgan qizlarni oliy ta‘limdagi, shuningdek, magistratura bosqichida o‘qiyotgan barcha xotin-qizlarning kontrakt to‘lovlari qoplab berish tizimi joriy etildi, xotin-qizlarning ta‘lim kontraktlarini to‘lash uchun (7 yil muddatga) foizsiz ta‘lim kreditlari ajratilishi, doktoranturaga xotin-qizlar uchun har yili kamida 300 tadan maqsadli kvota ajratib borilishi yo‘lga qo‘yildi. Ushbu maqsadlar uchun davlat budjetidan har yili 2 trln so‘m mablag‘ yo‘naltirilmoqda.

Shuningdek, bandlikni ta‘minlash va kasb-hunarga o‘qitish borasida davlat tomonidan ayollarni qo‘llab-quvvatlash maqsadida subsidiyalar, kreditlar ajratilmoqda, yangi imkoniyatlar yaratilmoqda. Bu borada respublika hududlarida, chekka mahalla va qishloqlarda Xotin-qizlar tadbirkorlik markazlari tashkil etilib, unlarda xotin-qizlar o‘qitilmoqda.

Ikkinchidan, xotin-qizlarning iqtisodiy hayotdagi va tadbirkorlik sohasidagi faoliyatining barqarorligi ta‘minlanmoqda.

Ayollarimiz iqtisodiyotning barcha asosiy «drayver»larida– u sanoat bo‘ladimi, qishloq xo‘jaligimi, kichik biznesmi, oilaviy tadbirkorlikmi, xizmat

ko'rsatishmi, barcha-barchasida o'zilarining muhim hissalarini qo'shib kelmoqda. Buning evaziga bugungi kunda iqtisodiyot va sanoat tarmoqlarida ayollarning ulushi 46 foizni tashkil etmoqda. Agar 2017 yilda xotin-qizlarning tadbirkorlik sohasidagi ulushi 21 foiz bo'lgan bo'lsa, bugungi kunda- 37 foizni tashkil qilmoqda [6].

Birgina 2022 yilda tadbirkorlik faoliyatini boshlash istagida bo'lgan 95 mingdan ortiq xotin-qizlar tadbirkor sifatida davlat ro'yxatidan o'tkazildi va bugungi kunga qadar ushbu tadbirkor xotin-qizlar tomonidan 184 mingga yaqin yangi ish o'rin yaratildi.

So'nggi 5 yil ichida O'zbekistonda ishbilarmon ayollar safi ikki barobar kengayib, o'z biznesini yo'lga qo'ygan tadbirkor xotin-qizlar soni 205 mingdan oshdi. 2023 yilda 279 mingdan ziyod tadbirkorlik loyihalariga 13 trillion so'mdan ortiq kredit, qariyb 57 ming nafar xotin-qizga salkam 300 milliard so'm subsidiya ajratildi. Shuningdek, 200 mingga yaqin ayollar kasb-hunar va tadbirkorlikka o'qitildi. Eng asosiysi – 400 mingdan ortiq xotin-qizlar ish bilan ta'minlandi [7].

Uchinchidan, xotin-qizlarning tadbirkorlik qilish borasidagi taklif va tashabbuslarini amalga oshirishda ro'y berishi mumkin bo'lgan turli byurokratik va boshqa turdagi to'siqlar va kamchiliklar ustida tizimli ishlar amalga oshirildi.

Bunda vaqtincha ishsiz, ijtimoiy-iqtisodiy ahvoli og'ir, muhtoj yolg'iz ayollar va boquvchisini yo'qotgan qizlarni yanada qo'llab-quvvatlash, ularning iqtisodiy hayotda faol ishtiroki uchun imkoniyatlar yaratildi, ularning tadbirkorlikka bo'lgan tashabbuslarini amalga oshirish va amaliy yordam ko'rsatish maqsadida turli imtiyozlar, kredit va subsidiyalar ajratildi.

E'tibor beradigan bo'lsak, 2020-yildan boshlab yo'lga qo'yilgan «Ayollar daftari» tizimi orqali qariyb 2,5 milliondan ortiq xotin-qizlarga ijtimoiy-iqtisodiy, tibbiy, huquqiy va psixologik ko'mak berish uchun 5,1 trillion so'mdan ziyod mablag' yo'naltirildi.

Natijada xotin-qizlarning iqtisodiy mustaqilligi mustahkamlandi, daromadlari oshdi va ularning bandligi ta'minlandi.

Bu yerda yana bir muhim jihat bor, ya'ni sohada siyosatimizning muhim nuqtasi – xotin-qizlar ijtimoiy huquqlarini ta'minlash orqali kambag'allikni qisqartirishdir. Birgina qishloq xo'jaligining turli sohalarida 1,5 mlndan ortiq xotin-qizlar mehnat qiladi, qishloq ayollari faolligi bilan hududlarining ijtimoiy-iqtisodiy yuksalishida alohida hissa qo'shadi.

Xotin-qizlarni ijtimoiy-iqtisodiy qo'llab-quvvatlash, ularning doimiy daromad manbaiga ega bo'lishini ta'minlash maqsadida manzilli ishlash tizimi joriy etildi. Asosiy e'tibor ijtimoiy faol bo'lmagan xotin-qizlarning jamiyat va iqtisodiy hayotda faoligini oshirishga qaratildi. Birgina Ayollar daftari orqali so'nggi yillarda millionlab xotin-qizlarga ko'mak berildi.

2023 yilning o'zida «Ayollar daftari» bo'yicha 1 trillion 234 milliard so'm hisobidan qariyb 994 ming nafar xotin-qizning muammosi hal etilgani bu fikrni tasdiqlaydi [7].

Horijiy olimlar ta'kidlaganidek, yigirma birinchi asrda aynan ayollar «yangi iqtisod kompaniyalari», yuqori texnologiyalarda o'zlarini muhim hissalarini qo'shish orqali davlatlarning milliy iqtisodiyotini rivojlantirishda asosiy rolni oynaydi [8–10].

Xulosa

1. Bugungi kunda xotin-qizlarni qo'llab-quvvatlash tizimining normativ huquqiy bazasini xalqaro standartlardan kelib chiqqan holda takomillashtirish ishlarini davom ettirish, gender ekspertizasidan samarali foydalangan holda xotin-qizlar uchun imkoniyat va kafolatlarni yanada kengaytirish, iqtisodiy tazyiqlarning oldini olishga oid normalar tadbiq etish muhim hisoblanadi.

2. Gender tengligini ta'minlashga oida turli stereotiplarning oldini olish, unga oid xuquqiy me'yorlarni aholi orasida keng targ'ib qilish dolzarb vazifa hisoblanadi.

3. Xotin-qizlarni zamonaviy kasblarga, ayniqsa, axborot texnologiyalari, dasturlash, onlayn tijorat qilish sohalarida o'qitish, ushbu sohada mehnat faoliyatini amalga oshirish uchun imkoniyatlar yaratish masalalariga e'tibor qaratish.

4. Qishloq joylaridagi ayollarining yashash prinsiplari va tajribalarini inobatga olgan holda, ularning ijtimoiy-iqtisodiy faolligini oshirish muhim hisoblanadi.

5. Xotin-qizlarning munosib ish bilan bandligini tashkil qilish yondashuvlarini takomillashtirish, bu borada milliy qonunchilikni xalqaro standartlar asosida rivojlantirish muhim hisoblanadi.

GEOGRAFIYA MAYDONCHASIDA METEOROLOGIK KUZATISHLAR

Annotatsiya. Ushbumaqolada geografiya maydonchasida meteorologik kuzatishlarni tashkil qilish, kuzatish natijalarini qayta ishlash va ulardan foydalanish masalalarini yoritishga harakat qilindi.

Kalit so`zlar: Meteorologiya quttisi, Flyuger, Yog'in o'lchagich, Qor o'lchagich, Tuproq termometrlari.

METEOROLOGICAL OBSERVATIONS IN THE FIELD OF GEOGRAPHY

Abstract. In this article, an attempt was made to clarify the issues of organization of meteorological observations, processing of observation results and their use in the field of geography.

Key words: Meteorological box, Fluger, Rain gauge, Snow gauge, Soil thermometers.

Geografiya ta'limi o'quvchilarda Yer haqidagi ilmiy dunyoqarashlarini shakllantiradi, ijtimoiy-iqtisodiy bilimlarini tarkib toptiradi, dunyo davlatlari va turli regionlardagi jamiyat va tabiatning o'zaro bog'liqligi, geografik ob'yekt, jarayon va hodisalar haqidagi bilim va tushunchalar bilan qurollantiradi. Bu esa Yer kurrasining tabiiy manzarasi, ishlab chiqarish samaradorligini oshirish, aholi turmush darajasini ko'tarish, atrof muhit holatini yaxshilash vositalari va usullari haqida mantiqiy fikrlashga undaydi. Binobarin, geografiya ta'limi o'quvchilarda umuminsoniy ma'naviyatning tarkibiy qismi bo'lgan geografik madaniyatni ta'minlaydi.

Geografiya – insoniyat yashovchi sayyora, ya'ni Yer haqida to'liq tasavur hosil qilish uchun ma'lumot berishga qaratilgan yagona o'quv fanidir. Geografiya ta'limi Yer kurrasida ro'y beruvchi tabiiy va ijtimoiy-iqtisodiy jarayonlar hamda hodisalarni o'rgatadi.

So'ngi yillarda mamlakatimizda ko'pgina maktablarda geografiya maydonchasini tashkil qilishga e'tibor ancha kuchaydi. Maktab geografiyasi oldiga qo'yilgan bu muhim vazifalarni bajarishda geografiya maydonchasi ham muhim ahamiyat kasb etadi. Geografiya maydonchasi ta'limni ko'rgazmali va qiziqarli qilishda, o'quvchilarga chuqur bilim va tajriba berishda ahamiyatli bo'lib, u ta'lim va tarbiyaning samaradorligini oshirishga katta ta'sir ko'rsatadi. Geografiya maydonchasi hamma geografiya kurslarini o'qitilishining ilmiy darajasini yuqori ko'tarilishida va geografik qonuniyatlar, xodisalar, obyektlarni muammoli yondoshish asosida o'rganishda hamda o'quvchilarda tabiat va xo'jalik hodisa va ob'yektlari ustidan kuzatish olib borishga imkon beradigan malaka va ko'nikmalarini shakllantirishda o'z ifodasini topgan. Ayrim maktablarda kuzatish ishlari yaxshi tashkillangan. Lekin, geografiya maydonchasida meteorologik va boshqa kuzatishlar izchil olib borilmayapti, hamda kuzatish natijalarida dars jarayonida foydalanishga unchalik e'tibor berilmayapti. Shuning uchun Respublikamiz maktablarida olib borilayotgan foydali tajribalarni to'plash, taxlil qilish va umumlashtirish muhimdir. Ma'lumki, ob-havo elementlari tabiatdagi ko'p jarayonlarni vujudga kelishida, tabiat komponentlarining shakllanishida katta rol o'ynaydi. Xalq xo'jaligi turli tarmoqlarining rivojlanishi, aholining hududiy tarqalishi va ularning salomatligi ham ob-havo va iqlim bilan chambarchas bog'liqdir. Ob-havo va uning o'zgarish sabablarini bilishga qiziqmagan kishi topilmaydi. Bundan tashqari maktab dasturi bo'yicha o'rganiladigan mavzular, masalan ob-havo va uni oldindan aytish, iqlim, shamol, yog'in-sochin, bulutlar va boshqa meteorologik elementlarni o'rganish o'quvchilar uchun tushunarli bo'lishida maktabda olib boriladigan meteorologik kuzatish ma'lumotlaridan foydalanish zarur. Bunda aniq va izchil tashkillangan meteorologik kuzatishlar o'quvchilarga geografiya ta'limida ilmiy tadqiqotlarni amalga oshirishga imkon beradi.

Geografiya maydonchasining meteorologiya bo'limda meteorologiya quttisi o'rnatish kerak. Bunday qutti maxsus konstruksiya bo'yicha yasaladi. U yerdan 2 m balandda o'rnatilib eshigi shimol tomonga qaratilgan bo'lib, tomi ikki qavat qilib yopilgan, uning o'lchamlari quyidagicha quttining balandligi 525 mm. Buyi 460 mm, eni 290 mm qutti devorlari qalinligi 6 mm eni 35 mm yog'och taxtachalardan yasaladi. Quttichaga quyosh nuri tushmasligi uchun reyklar 45⁰ mm burchak bilan qiya qilib o'rnatilgan bo'lib, ular orasidan shamol bemalol o'ta oladi. Qutti oq rangga buyaladi. Qutti ichida shtativ bo'lib, unga psixrometr, harorat o'lchov asbobi (termometr) o'rnatiladi. Quttining shtativda quyi qismiga mutloq va eng past termometrlar yotiq holatda yotqizib qo'yiladi. Psixrometrvertikal holatda (tik) o'rnatiladi.

Geografiya maydonchasida amaliy kuzatuv ishlari olib borish. Flyuger asbobi yordamida «Shamolning kuchi va yo'nalishi qanday aniqlanadi?» mavzusini quyidagicha tushuntiriladi. Shamolning yo'nalishi uchun strelkasi pastida sakkizta ko'rsatkich mahkamlangan, ular ufqning asosiy va oraliq tomonlarini ko'rsatadi. Strelka bilan birga flyugerning yuqori tomoniga

oʻrnatilgan ramka ham aylanadi. Bu ramkada erkin osilib turgan metall plastinka boʻlib, shamol qancha kuchli essa, plastinka oʻzining odatdagi holatida shuncha koʻp ogʻadi. Plastinka ogʻishiga qarab shamolning kuchini aniqlaymiz. Shamolning kuchi va tezligini taxminiy aniqlash ham mumkin. Shamol kuchi 1-12 ballgacha boʻladi. Har kuni ob-havo taqvimidan foydalanib shamol yoʻnalishini flyuger yordamida aniqlab belgi qoʻyib boriladi.

Flyuger shamol yoʻnalishini aniqlashga xizmat qiladi. Flyuger strelkasi (flyugarka) unda erkin aylanadi. Uning oʻtkir uchi shamol kelayotgan tomonga yoʻnalgan boʻladi. Shamol gorizont (Ufq)ning qaysi tomonidan yoʻnalayotgan boʻlsa, shu nom bilan ataladi; agar shamol gʻarbdan esayotgan boʻlsa, uni shimoli-gʻarbiy, shamol janubiy sharqdan esayotgan boʻlsa, janubiy sharqiy shamol deb ataladi. Flyuger 10-12 m balandlikka temir yoki yogʻoch ustun ustiga oʻrnatiladi. Ustun-metrlarga boʻlinib, birinchi metri oqqa keyingi qoraga soʻngra yana oq va qoraga almashib boʻyab chiqish mumkin. Shunda ustun balandlik oʻlchagich ham boʻlib qoladi. Oʻquvchilar ustunga qiyoslab boshqa predmetlar; daraxt, uy, simyogʻoch, balandliklarni aniqlaydilar.

Yogʻin oʻlchagich. Geografiya maydoniga yoqqan yomgʻir, qor, doʻl koʻrinishidagi yogʻin miqdorini oʻlchash uchun oʻrnatiladi. Qishda shamol chelak ichidagi qorni uchirib ketmasligi uchun chelak atrofiga saqlagich oʻrnatiladi, har bir yogʻindan soʻng yogʻin miqdori chelakdagi suv qatlami qalinligi oʻlchanadi. Natija yogʻin suvi oqib ketmay, yerga shimilmay, bugʻlanib ketmay turganda yer yuzasida qancha qalinlikda suv qatlami hosil boʻlganligini bilib olinadi. Doʻl yoki qor yogʻib oʻtgandan soʻng yogʻin oʻlchagich chelak issiq joyga olib kirilib doʻl va qor erigandan soʻng chelakdagi suv qalinligi qatlami oʻlchanadi. Baʼzan shisha idish voronkadan qilingan oddiygina yogʻin oʻlchagichdan ham foydalanish mumkin. Shishacha mm boʻlingan chizigʻini ip bilan bogʻlab qoʻyish ham mumkin. Bunday yomgʻir oʻlchagich tayyorlanayotganda shishaning tag qismi bilan voronka ogʻzining diametri teng boʻlishiga eʼtibor berish kerak. Yomgʻir oʻlchagich shunday oʻrnatilishi kerakki, uning ogʻzi yerdan 2 m balandlikda boʻlsin. Meteorologik qutti va yogʻin oʻlchagichda oʻlchash ishlariga qulaylik yaratish maqsadida uning yoniga 80 sm li zinalik kursiga oʻrnatiladi.

Qor oʻlchagich reyklar-geografiya maydonchasi janub qismiga qor yogʻinidan oldinroq oʻrnatib quyiladi. Reyka yaqinidagi yer yuzasi tekislanib oʻt oʻsimliklar oʻrib olinadi. Reykani oʻrnatish uchun 60 sm qoziq olinib u yerga qoqilib unga qor oʻlchash rejasi mahkamlanadi. Qoziqli reykaning nol belgisi yer yuzi sathiga toʻgʻri keladigan qilib qoqiladi. Yoki qor qalinligini oʻlchash uchun koʻtarib yuriladigan reykaning ham foydalansa boʻladi. Reyka sm, mm larda boʻlingan boʻladi. Qor qoplarning qalinligini kuzatib borish qishloq xoʻjaligi uchun muhim ahamiyatga egadir. Dalada qancha qor koʻp boʻlsa, tuproq shuncha kam muzlab bahorda nam shuncha koʻp boʻladi, ekinlarning oʻsishi uchun sharoit yaxshi boʻladi.

Tuproq haroratini oʻlchash uchun ishlatiladigan termometrlar odatda maydonchani janub qismiga oʻrnatiladi. Termometr tuproq yuzasi haroratini

o'lchash uchun 3x4 m kvadrat maydoncha ajratilib 25x30 sm chuqurlikda yumshatilib qo'yiladi. Muddatli, mutloq, eng past haroratlar 5-6 sm oraliqda ketma-ket shimoldan-janubga qarab o'rnatiladi. Termometrlarning yarmi tuproqqa botib turadi. 5, 10, 15, 20 sm chuqurlikdagi tuproq temperaturasini o'lchash uchun ishlatiladigan termometrlar tuproq yuzasining g'arbiy qismiga o'rnatiladi. Bu termometrlar chuqurligi chapdan o'nga tomon oshib boradi va shkalalari shimolga qaragan bo'ladi. Termometrlar orasidagi masofa 10 sm ortiq bo'ladi. 40 sm-320 sm chuqurlikdagi temperaturani maxsus termometrlar yordamida kerakli temperaturani o'lchaydi. Bunda termometrlar orasi 50 sm chuqurlik g'arbdan sharqqa tomon oshib boradi.

Yer shari meteorologiya stansiyalarida har uch soatda havo harorati kuzatib turiladi va shularning o'rta harorati shu kungi haroratni ko'rsatadi. Oylik o'rtacha haroartni topish uchun har bir kunni haroratni qo'shib oydagi soniga bo'lib oylik harorat chiqariladi. Havo haroratining kundalik o'zgarish joyning geografik kengligiga ham bog'liqdir.

Har kungi kuzatish natijalarini hisoblan chiqib, umumiy jurnalga yozilgandan so'ng o'qituvchi raxbarligida kundalik ob havoga xulosa chiqarishadi. Bu xulosa jadval tarzida ob-havo taqvimida darsdan tashqar mashg'ulotlarda foydalanilsa bo'ladi. Maktab geografiya maydonchasida o'quvchilar tomonidan kuzatishlar natijasida olingan sutkalik, oylik o'rtacha ma'lumotlaritelevizor, radio, gazeta va jurnallarda berilgan «ob-havo» ma'lumotlari bilan taqqoslanib borilishi mumkin. Bunda albatta ma'lum darajada farq bo'ladi, chunki e'lon qilinayotgan ma'lumotlar katta hududlar uchun beriladi. O'quvchi yashab turgan joy o'ziga xos mikroiqlimga ega. Chunki bu kichik hudud o'zining relyefi suv manbalariga uzoq-yaqinligi, yer yuzasining o'rmon, cho'l, o'tloq va boshqalar bilan qoplanganligiga qarab umumiy hududdan farq qiladi. Ayni vaqtda kichik hudud katta hududdan farq qiladi. Bu qonuniyatlarni o'quvchilargageografiya o'qituvchilari tushuntirib berishlari lozim.

Geografik maydonchasida meteorologik asboblardan foydalanib olib borilganmeteorologikkuzatish ishlari kelajakdachuqur geografikbilimga,puxta mantiqiy geografik fikr yurita olishigaerishiladi. O'quvchilar yashab turgan joyi ob-havosini kuzatishdan olingan ma'lumotlar asosida shu hududning o'rtacha oylik, yillik, ob-havosi haqida ma'lumotga ega bo'ladilar. Bu ma'lumotlardan kelajakda qishloq xo'jalik ishlarini to'g'ri tashkil qilishga foydalanishlari mumkin.

O'qituvchi o'quvchilarga geografik bilimlarning ma'lum qisminigina berish bilan kifoyalanib qolmay, yangi bilimlarni qunt bilan tushunarli va mazmunli qilib ularning ongiga singdirishi, ular bilan birgalikda doimo izlanishda bo'lishi uchungeografiya maydonchasi olib borilgan amaliy ishlar muhum ahamiyatga ega.

THE WAYS OF IMPROVING AND INCREASING THE ACTIVENESS OF UZBEKISTAN COMPOSITE INDEX (UCI)

Annotation. This article investigates strategies for enhancing and developing the Uzbekistan Composite Index (UCI), which encompasses all 102 listed joint-stock companies in Uzbekistan's stock market. Utilizing a dataset spanning 1916 days, the study analyzes the historical trends of the UCI index rates, alongside fluctuations in the number of listed companies, accumulated executed quantity, and trading amount. Employing Ordinary Least Squares (OLS) regression, the research aims to uncover correlations and insights crucial for understanding the dynamics of the UCI and devising effective measures for its advancement. This analysis provides valuable insights for investors, policymakers, and market participants interested in fostering the growth and resilience of Uzbekistan's capital markets.

Keywords: descriptive statistics, correlation coefficient, regression analysis, histogram, graph-box, ANOVA table, Normality test, Collinearity test, Shapiro Wilk test, Heteroscedasticity test, Reliability test.

Introduction

Stock market indices are important because they provide valuable insights into the overall health and performance of an economy, influence investor confidence and behavior, facilitate capital formation, serve as benchmarks for investment performance, inform policymaking decisions, and impact a country's international standing. Therefore, in this research, we mainly focused on improving the performance of Uzbekistan Composite Index (UCI) and this research including some steps. Firstly, identifying dependent variable which we are going to develop, is core of analysis and the main dependent variable is Uzbekistan Composite index rate during the 8 years. Secondly, identifying variables that influence the increasing or decreasing of the rate of the stock index. That are the number of listed companies, since, Uzbekistan Composite index consists of all companies listed and accumulated executed quantity that refers to the total number of shares or contracts of a particular security that have been traded and executed over a period of time. Furthermore, accumulated trading amount that refers to the total monetary value of all trades executed for a particular security over a specified period of time can be another independent variable, since it shows the level of trading and it impacts the index rate. In addition, this research

aims to construct a robust model that highlights the correlation between these variables and the index rate.

Methodology

This study takes a mixed-methods approach, combining quantitative analysis with qualitative insights, to evaluate the sensitivity of the stock index rate to the number of listed companies, accumulated executed quantity, and accumulated trading amount. The methodological approach is intended to provide a thorough knowledge of the factors impacting the UCI stock index rate, based on both statistical evidence and nuanced viewpoints from those concerned.

Data gathering:

The history of stock index including all information is searched from websites including World Bank data and UZSE official websites and is gathered.

The categories of data:

- Stock index rate(in 8 years)(index in Stata)
- The number of listed companies(Ncompanies in Stata)
- Accumulated executed quantity(Stocks Quantity in Stata)
- Accumulated trading amount(TradingAmount in Stata)
- The period(1916 days) (daysdate in Stata)

1.2 Data Analysis

Quantitative data are analyzed using statistical software (Stata 15) to identify patterns, correlations between the independent variables (*the number of listed companies, accumulated executed quantity, accumulated trading amount, the period*) and the dependent variable (*the rate of index*). **Descriptive statistics** provide a baseline understanding of the conditions of the all variables, while **inferential statistics**, including regression analysis, are employed to test the hypotheses.

Analysis and results

Figure 1 – Descriptive statistics

Descriptive Statistics

Variable	Obs	Mean	Std. Dev.	Min	Max
Index	1916	781.818	220.886	303.38	1443.53
NCompanies	1916	140.598	45.346	96	318
Quantity stocks	1916	1.005e+08	1.371e+09	0	5.146e+10
TradingAmount	1916	5.204e+09	5.311e+10	0	1.897e+12
Daysdate	1916	958.5	553.246	1	1916

In this table, the summary of information is presented. We have 1916 observations in every variables. Firstly, the index rates include 1916 observations, its minimum and maximum rates are 303.38 and 1443.53. Its average mean equals to 781.818 and it is higher than the index current rate. The next variable is the number of listed companies consisting of 1916 observations. That's mean is 140.59 and minimum number of listed companies on UzSE is 96 and maximum is 318. The average of the accumulated executed quantity variable is 1.005e+08 (which is 100,500,000), Standard Deviation (Std. Dev.) is 1.371e+09 (which is

1,371,000,000), minimum is 0, since, on some days, stocks may not be traded and the maximum number of traded stocks (Max) is 5.146×10^{10} (which is 51,460,000,000). The next is accumulated trading amount, its mean is 5.204×10^9 (which is 5,204,000,000 sum),

Minimum is 0, Maximum (Max) is 1.897×10^{12} (which is 1,897,000,000,000 sum).

All days are 1916 and this period, the Uzse has been working

Figure 3 – Trend scatter plot

In this scatter plot, we have a new element: a red line that represents the 'fitted values', or in other words, the best fit line through the data points. It shows us the trend in the relationship between "the number of listed companies on UzSE on the x-axis and 'index rate' on the y-axis. As 'the number of listed companies' increases, the 'the index rate' also tends to increase slightly. The upward slope of the red line indicates a positive relationship between these two variables.

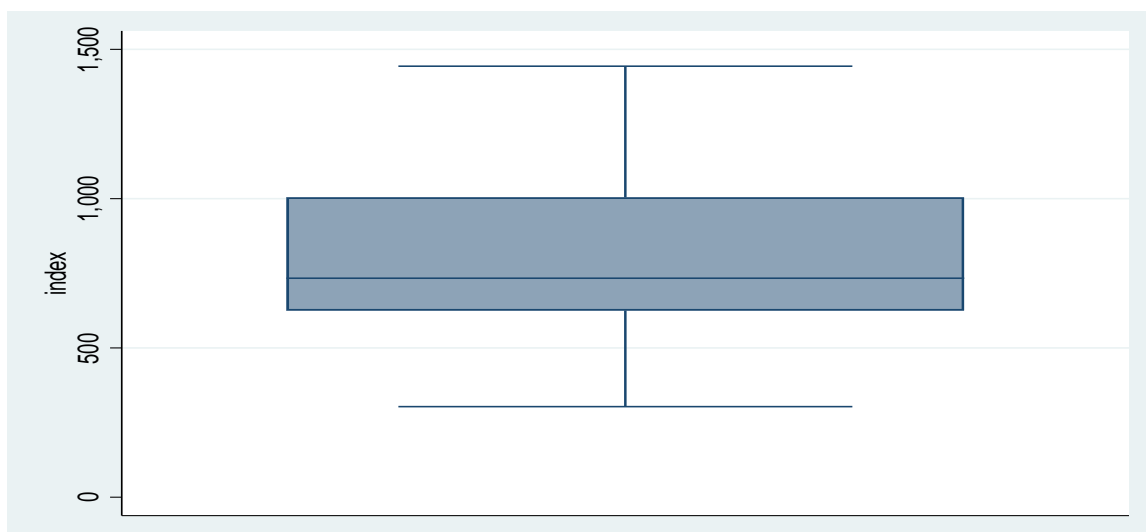

Pairwise correlations

Variables	(1)	(2)	(3)	(4)	(5)
(1) index	1.000				
(2) NCompanies	0.667* (0.000)	1.000			
(3) Quantity_stocks	-0.036 (0.117)	-0.026 (0.251)	1.000		
(4) TradingAmount	-0.006 (0.806)	-0.032 (0.165)	0.027 (0.240)	1.000	
(5) Daysdate	-0.005 (0.815)	0.008 (0.731)	0.012 (0.599)	0.024 (0.295)	1.000

*** $p < 0.01$, ** $p < 0.05$, * $p < 0.1$

The relationships between the various variables are shown in this table. The correlation between two variables is displayed in each cell, with a range of -1 to 1. A strong positive relationship is indicated by a correlation near 1, which means that when one increases, the other does too. A strong negative relationship is indicated by a correlation near -1, which means that as one increases, the other decreases. There is no linear relationship indicated by a correlation near 0. For instance, variable (1), «the index rate,» and variable (2), «the number of listed companies,» have a positive correlation of 0.667 that is statistically significant, as shown by the asterisk. This means they tend to increase together. However, variable (3), 'Quantity_stocks', has a negative correlation of -0.036 with variable (1), suggesting they tend to move in opposite directions.

Figure 6 – Boxplot

According to this graph box, 75% of 1916 index rates is about from 600 to 1000. However, on the lowest low and top parts of graph box, about 332 and 1480 index rates are illustrated.

Figure 7 – Linear regression

Linear regression

Index	Coef.	St.Err.	t-value	p-value	[95% Conf	Interval]	Sig
NCompanies	3.251	.083	39.15	0	3.088	3.413	***
Quantity_stock	0	0	-1.09	.276	0	0	
s TradingAmoun	0	0	0.96	.339	0	0	
t Daysdate	-.004	.007	-0.63	.527	-.018	.009	
Constant	328.865	13.857	23.73	0	301.689	356.04	***
Mean dependent var	781.818		SD dependent var	220.886			
R-squared	0.446		Number of obs	1916			
F-test	384.416		Prob > F	0.000			
Akaike crit. (AIC)	24997.020		Bayesian crit. (BIC)	25019.252			

*** $p < .01$, ** $p < .05$, * $p < .1$

Model parameter interpretation

We developed a statistical model to determine what factors influence variable the index rate. This model takes into account a variety of criteria, including 'Ncompanies', 'number of stocks', and others.

This model has some predictive potential, as seen by the Prob > F value of 0.0000. This suggests there is no probability that the model's outcomes are attributable to random variation, which is good because we want this value to be less than 0.05 in order to be confidence in our model. In addition, the R-squared value is 0.446, indicating that the model can explain around 45% of the variability in our dependent variable.

Model estimation interpretation

«Ncompanies» has a coefficient of 3.251, which is statistically significant, as indicated by a p-value of 0.000 (which is less than 0.05). This means that for each unit increase in «Ncompanies», «index» is expected to increase by approximately 3.251 units, holding all other variables constant. However, the coefficients of other 2 variables equals to 0 and they are not statistically significant.

Post estimation analysis – Normality

Shapiro-Wilk W test for normal data

Variable	Obs	W	V	Z	Prob>z
index	1,916	0.931	78.203	11.072	0.000
NCompanies	1,916	0.804	224.070	13.745	0.000
Quantity_s~s	1,916	0.041	1093.904	17.772	0.000
TradingAmo~t	1,916	0.062	1070.147	17.716	0.000
Daysdate	1,916	0.955	51.482	10.010	0.000

Shapiro Wilk test helps us to know the data is normal distributed (the value of W should be close to 1) and realizing statistical significance (H0 hypothesis, if $p > 0.05$). Index rate and Number of companies datasets are normal distributed but their values are not significant and others left are not normal distributed. We realize that in this test, a independent variable is normal distributed but not statistic significant.

Shapiro-Wilk W test for normal data

Variable	Obs	W	V	z	Prob>z
ehat	1,916	0.956	50.266	9.949	0.000
yhat	1,916	0.803	224.743	13.753	0.000

According to this, w is near 1, it means, data is normal distributed, however, if $p < 0.05$, this is not statistical significance.

ESTAT VIF

Variable |VIF1/VIF

-----+-----
TradingAmo~t | 1.000.997748
NCompanies | 1.000.998271
Quantity_s~s | 1.000.998501
Daysdate | 1.000.999218

-----+-----
Mean VIF | 1.00

There is no multicolliniarity because of mean vif < 10

ALPHA TEST

RELIABILITY

ALPHA TEST

Test scale = mean(unstandardized items)

Average interitem covariance: 0.1575

Number of items in the scale: 7

Scale reliability coefficient: 0.5669

In this alpha test, we can know the percentage of our data reliability. Data Reliability is 56%.

Conclusion

The research mainly focused on analysis of Uzbekistan Composite Index and concluded with some recommendations for increasing the activeness of UCI. However, As UCI includes all listed joint-stock companies on UzSE, the increase in well performing of stock index depends on joint-stock companies, free-float directly, and accumulated executed quantity, accumulated trading amount and other factors influence indirectly the index rate. It should be noted that joint-stock companies occupy a very important place in the system of a market economy. They are one of the most advanced forms of organization of a legal entity among business entities, an important source of investment that attracts free funds in production, cover wide sections of the population in the formation of a class of owners (Yuldashev, 2023). Therefore, the article analyzed them by using OLS regression method. With OLS regression analysis, we can identify problems and give recommendations for developing and improving the activeness of UCI index. OLS regression analysis showed us **the positive correlation of the number of companies and the index rate**, and the first scatter plots show us that **accumulated executed quantity and trading amount have negative and positive correlations with the index rate**. It means, listing joint-stock companies that has high free-float and high liquidity stocks influences more the index rate and show well performing. And in order to increase the investment attractiveness of large issuing companies of strategic importance, it is necessary to gradually reduce the state share in their share capital structure (Ataniyazov & Sayfullokhon, 2022)

Recommendations

- **Listed more joint-stock companies:** In this research, the number of joint-stock companies and the index rate together has positive correlation, however, we should focus on another part, accumulated executed quantity has negative but accumulated trading amount has positive correlation with the index rate. It means that joint-stock companies that its shares' price are higher should be listed on UzSE. After this, the accumulated executed quantity will be less and accumulated trading amount will be high.

Decreasing the number of state-owned joint-stock companies or their shares:

In Uzbekistan, according statistical information, there are a total of 627 joint-stock companies (JSCs) in Uzbekistan. Of these, 244 JSCs have shares directly owned by the state, making up about 84.7% of all issued stocks based on

nominal value. Furthermore, 132 JSCs are owned by state holdings, which are formally known as «Economic Management Bodies» It is required to progressively reduce the state share in the share capital structure of large issuing companies of strategic importance in order to increase their investment attractiveness.

The companies should perform **IPO** and **SPO**, and their shares should trade on the platforms. That is increasing the activeness of Stock Exchange and it leads to investments to expand the companies.

LIPIDLARNING BIOLOGIK AHAMIYATI

Annotatsiya. Ushbu maqolada inson organizmi uchun muhim bo'lgan moddalar sinfi-lipidlar, ularning sinflari, ayrim vakillarining biologik ahamiyati haqida bayon qilingan.

Kalit so'zlar: lipid, sovunlanadigan lipid, mum, sitral, omega-3, araxidon kislotasi.

BIOLOGICAL SIGNIFICANCE OF LIPIDS

Abstract. This article describes a class of substances important for the human body - lipids, their classes and the biological significance of some of their representatives.

Key words: lipid, saponifiable lipid, wax, citral, omega-3, arachidonic acid.

Tirik organizmlarning hayot faoliyatida lipidlar muhim ahamiyatga ega. Ular barcha tirik hujayralar tarkibida bo'ladigan yog'simon moddalardir. Lipidlar organizmda nerv impulsini uzatishda, muskullar qisqarishida, ko'pgina fermentlarning faolligiga ta'sir ko'rsatish, hujayralararo kontaktlarni yuzaga keltirishga va immunokimyoviy jarayonlarning amalga oshishi kabi funksiyalarni bajaradi. Lipidlar yuqori yog` kislotalari, spirtlar yoki aldegidlarni hosilalaridir. Ishqoriy yoki kislotali muhitda gidrolizga uchrashi bo'yicha lipidlar ikki guruhga bo'linadi: sovunlanadigan va sovunlamaydigan lipidlar. Ular ham o'z ichida qaysi birikmaning hosilasi ekanligiga qarab ham turlarga ajratiladi. Sovunlaymaydigan lipidlar ikki turga: terpenlar va steroidlar ga ajratiladi. Terpenlar ikki va undan ortiq ochiq yoki yopiq zanjir holida birikkan izopren qoldiqlaridan iborat. Terpenlar ham o'z ichida ochiq zanjirli va halqali guruhlarga ajratiladi. Terpenlardan tibbiyotda keng miqyosda foydalaniladi.

Sitral- $C_{10}H_{16}O$ asiklik monoterpen bo`lib, limon moyida ko`p miqdorda bo`ladi. Sitral tibbiyotda asosan keratit, konyuktivit kabi ko`z kasalliklarini davolashda ishlatiladi. Sitralning tibbiyotdagi ahamiyati shundaki, u og`riqni qoldiruvchi va yallig`lanishni davolovchi ta`sirga ega. Sitral riboflamin bilan birgalikda qo`llansa, ko`zning shox parda va konyuktivit epiteliysi yangilanishini tezlashtirib beradi. Sitral emizikli onalarda ko`krak bezidagi yoriqlarni qayta tiklash xususiyatiga ega.

Bir halqali terpenlarga limonenni misol qilib keltirish mumkin. Limonen-2 enantiomer ko`rinishda uchraydi. (+) Limonen apelsin, selderiy va zira moyida uchraydi. (-) Limonen esa, limon va archa moyida uchraydi. Limonen o`ziga suvni biriktirib olishidan terpengidrat hosil bo`ladi. Terpengidrat tibbiyotdabalg`am ko`chiruvchi (bronxit) antiseptik va siydik haydovchi vosita sifatida qo`llaniladi. Steroidlarga – buyrak usti bezi gormonlarini, jinsiy gormonlarni, o`t kislotalarini, D-darmondorilarini kiritishimiz mumkin.

Sovunlanadigan lipidlar oddiy va murakkab guruhlarga ajratiladi. Sovunlanadigan oddiy lipidlarga uch atomli spirt glitserinning yuqori molekulyar to`yingan va to`yinmagan bir asosli karbon kislotalar bilan hosil qilgan murakkab efirlar: moylar, yog`lar kiradi. Yog`larning ozuqaviy qiymati sintezlanmaydigan almashtirib bo`lmaydigan yog` kislotalarning miqdori bilan aniqlanadi. Bunday kislotalarga linol kislotasi kiradi. Ushbu kislotaga inson organizmining sutkalik ehtiyoji 3-6 gr ni tashkil etadi. Bu miqdor esa 12-15 gr o`simlik moyida bo`ladi. Linol kislotaga hujayra membranasi tarkibida Omega-3 dan 10 barobar ko`p uchraydi. Yurak faoliyatiga ijobiy ta`sir qiladi, xolesterinning umumiy miqdorini kamaytiradi, qon bosimini normallashtiradi, immunitet tizimini mustahkamlaydi, tananing qarishini sekinlashtiradi, tananing noqulay ekologik omillarga moslashishiga yordam beradi, insulinga sezgirlikni oshiradi, kognitiv funksiyalarni yaxshilaydi, ayollarning reproduktiv tizimiga ijobiy ta`sir ko`rsatadi.

Linol kislotaning organizmda yetishmasligi oqibatida terining qurishi, mushaklardagi og`riqni, tez-tez shamollashni hattoki, kallikni ham keltirib chiqarishi mumkin. Linol kislotaga organizmda araxidon kislotaga aylanadi. Araxidon kislotaga organizmda gormonal faollikning modulyatori –

prostaglandinlarni olish uchun mahsulot hisoblanadi. Prostaglandinlar mushaklar qisqarishini kuchaytiradi, qon bosimini pasaytiradi, gormonal faoliyatni taribga solib turadi. Organizmda almashinmaydigan to`yinmagan yog` kislotalarning yetishmasligi oqibatida xolesterin almashinuvining buzilishi yuzaga keladi. Natijada yurak – qon tomir kasalliklari yuzaga keladi.

Tibbiyotda zaytun moyi keng qo`llaniladi. Uning tarkibiga karotin, C, B1, B2, K, E, P vitaminlar, foli kislotasi, uglevodlar, organik kislotalar kiradi.

Mumlar- yuqori molekulyar yog` kislotalarning yuqori molekulyar spirtlar bilan hosil qilgan murakkab efirlaridir. Ular inson terisini muhofaza qiladi.

Mumlar kimyoviy tarkibiga ko'ra ko'p xollarda monokarbon kislotalardan palmitin, serotonin kislotalar hamda yuqori molekulyar spirtlardan-setil va mirisil spirtlarining murakkab efirlari hisoblanadi.

Mumlar dorishunoslikda, kosmetik va davolovchi surtmalar, moylar tayyorlashda keng qo'llaniladi.

Omega-3 yog` kislotalari kattalar va ayniqsa, keksa odamlar uchun zarurdir. Ular miya va qon tomir tizimining faoliyatini yaxshilaydi, yurak kasalliklari va ateroskleroz rivojlanishi yurak urushi xavfini kamaytiradi va immunitetni oshiradi, terini zararli ultrabinafsha nurlaridan himoya qiladi.

Xulosa qilib aytganda, lipidlar organizmda ko`plab funksiyalarni bajaradi. Ayniqsa, yurak-qon tomir tizimidagi kasalliklarning oldini olish, odam organizmi qarishining sekinlashishi, ovqat hazm qilish, organizmning gormonal boshqarilishi kabi funksiyalarda faol qatnashadi.

THE ROLE OF THE DIGITAL ECONOMY IN IMPROVING EFFICIENCY

Abstract. In the context of the development of the digital economy in Uzbekistan, the factors affecting the efficiency and quality of services provided by service enterprises are researched and proposals are made to improve the efficiency and quality of services.

Keywords: Digital economy, automation, efficiency factors, service quality, transformation.

Introduction. We know that there are various factors that influence the effectiveness of services. However, not all of these factors have a positive effect on service quality. Scientists argue that in the service industry, a decrease in efficiency usually leads to a decrease in quality, or vice versa.

The achieved result refers to the quality of the service provided to the client, how satisfied the client is with this service and how much this service is evaluated. Expenses are a patient wait for the return of expenses with a positive effect over time, and in case of failure, emotional and spiritual readiness for this trouble is understood.

Sales of services, profit from sales and share of services on the market, labor resources spent on providing services, and equipment and technologies used. From the client's point of view, overachievement leads to decreased self-efficacy, overvaluation and, as a result, a significant decrease in value.

Therefore, everyone knows that an improvement in one area, an increase in positive indicators, in turn, always leads to a decrease in other positive indicators in that area and a deterioration in efficiency (and) service industry managers need to improve efficiency only if they focus on other approaches, and not from the client's point of view, positive results will increase because the same approach does not always work.

Thus, efficiency and quality are independent concepts. The efficiency factor refers to the production of as much output as possible at a given cost, and the quality factor refers to the achievement of high quality productivity as a result of the service provided to customers and customer satisfaction with those services. From the outside it seems difficult to achieve such a result, increase productivity and quality of service at the same time. Using the latest literature and news, in this article we examine factors that can simultaneously improve both efficiency and quality of service.

Research methodology. Systematic approach, abstract-logical thinking, grouping, comparison, factor analysis, selective observation methods were used in the research process.

Analysis and results Factors that increase service efficiency. Although the importance of improving service efficiency is highly appreciated, due to the lack of conceptual models that capture the essence of the research field under study, changes in the field are partially covered, resulting in an insufficient scientific news database. Thus, the results of our research on the factors influencing service effectiveness and service performance indicate that these studies are conceptual rather than empirical in nature. At the moment, several factors have been studied to improve the efficiency of the service. To understand how each of them affects the quality of service, it is necessary to familiarize yourself with each of them in detail.

1. Organizational culture factor is studied on the basis of management criteria: it focuses on how resources are allocated and managed, how employees understand what is important and truly valued by the organizations in which they work, as well as on their work and how relationships influence on clients. ' perception of service quality. Such questions can be answered by studying and analyzing the criteria of organizational culture and management. Thus, it can be said that organizational culture and management criteria influence both productivity and quality.

2. Factor of standardization of services. Through standardization, businesses can reduce costs, which increases productivity and lowers prices, which in turn leads to competitive advantage.

However, the diversity of consumer demand, the participation of a large number of «personal»-individual services and a thin set of clients, coupled with an increase in the efficiency of standardization of services, also lead to a decrease in the quality of services; services are provided to a large number of clients. For example, if we take the process of transferring knowledge to students in the field of higher education, then if a large number of students study in large classrooms, productivity increases, the lack of opportunity to work individually with students leads to a decrease in their quality indicator., or in the case of a car plant, even more so. If you manufacture a car, due to inattention to some details, this will lead to a drop in the quality indicator. Standardization and quality of service are more suitable for industries where there is little variation in supply and demand and services are repetitive, such as fast food, banking, insurance, car rental and dry cleaning.

3. Automation (computerization) is a factor of new technologies. The purpose of investing in new technologies is to improve efficiency because they help replace the need for human labor with new technologies. Automation allows employees to work faster and better, while increasing productivity. The use of technology results in improved service quality while reducing costs and damage. However, this may depend on customer segments and type of service providers.

Previous research has shown that technological labor displacement is more common in industries with less direct human contact, such as banking. On the other hand, technological progress brings little benefit to the trade or hotel business. This is because it may improve efficiency but not maintain quality of service as customers see more appeal in people than in technology.

4. Factor of knowledge and professional training of service workers: human capital plays a decisive role in increasing labor productivity. This is because most services are produced by people, and therefore «the quality and effectiveness of services depends largely on people» However, attempts to complete the job faster are often unsuccessful because they can lead to errors or unsatisfactory results, which may result in the job being re-done. Working hard with employees to simultaneously improve productivity and service quality requires a focus on employee efficiency and effectiveness. Increasing employee technical skills (efficiency) means increasing employee productivity as well as the quality of their work. Field productivity is reduced due to lack of technical skills among employees, decreased productivity, and time spent on self-correction. Service workers' attitudes and behaviors (productivity) influence service quality and productivity, as dissatisfied customers can create additional workload and staff dealing with these complaints can reduce productivity. The results of the study showed that an effective hotel employee can achieve higher quality of service, and also that effective employees tend to produce more services, in this regard, the knowledge and professional skills of training service personnel are important.

5. Incentive and Recognition Factor: Research has shown that motivation at work, if explained through the back office concept, is very suitable for services with little customer contact, but on the other hand, front office is explained through the incentive concept. High levels of customer service lead to decreased productivity because service employees spend more time and effort on customers, which may improve service quality but not efficiency. Thus, recognition of incentives and recognition can improve the quality and efficiency of services in situations where human factors have less influence on customers. Because in this case, most of the employee's time is spent doing more work.

6. Employee Satisfaction Factor: As we mentioned above, we have tried to explain the concepts between employee job satisfaction and performance indicator. Employees will only work more efficiently if they are satisfied with their jobs and are loyal to their company, which in turn increases productivity. Indeed, satisfaction has a significant impact on productivity. On the other hand, when employees are dissatisfied with their jobs, they tend to be less productive. Dissatisfaction leads to a threefold increase in employee turnover, and employee turnover leads to decreased productivity and customer satisfaction. Research shows that employee satisfaction is also linked to customer satisfaction. Satisfaction motivates employees to work harder, achieve positive results in meeting customer needs, and provide good service: the more satisfied employees

are with their jobs, the better the quality of customer service. Thus, employee job satisfaction affects both productivity and quality.

7. Supply and demand coordination factor: Services are mostly produced and consumed simultaneously, which means that real-time production is important to coordinate supply and demand, such situations are especially observed in the airline and hotel service industries. For example, at the beginning of the season, demand exceeds available capacity, capacity is fully utilized, and therefore efficiency is maximized, but service quality may suffer because this situation causes customers to spend too much time queuing or customers are more likely to become frustrated with the situation. On the other hand, at the end of the season we can observe the opposite situation described above. Therefore, demand forecasting is essential to meet available resources and maximize production capacity. With proper forecasting, demand can be balanced by using part-time staff during the season or off-season, or by outsourcing some services to other support organizations. Well-trained and qualified employees help maintain the quality of service. Therefore, the same coordination of supply and demand is necessary to simultaneously improve efficiency and quality.

Conclusions. The main conclusions of the above article are that the factors that simultaneously improve efficiency and quality vary depending on the type of service industry. Therefore, in order to implement digital transformation and in connection with the growing need for quality service, to strengthen active cooperation with interested organizations and enterprises operating in the field, to develop educational standards and work training programs adopted in the service sector, as well as to carry out coordination, it is necessary to actively cooperate with specialized higher educational institutions (with scientific qualifications and experience in this field).

OLIV TA'LIM MUASSASALARINI BOSHQARISHNING ZAMONAVIY TENDENSIYALARI

Annotatsiya: ushbu maqola yildan-yilga sifatli ta'lim olishni xohlovchilar sonining keskin oshib borayotganligi, ta'lim oluvchilarning o'qish ehtiyojlari kengayib borishi, yangi mutaxassisliklarning paydo bo'lishidan kelib chiqqan holda oliy ta'lim tizimida ta'lim sifatini boshqarish hamda raqobatbardosh kadrlarni tayyorlashni takomillashtirishning ayrim masalalariga bag'ishlangan.

Tayanch so'zlar: Ta'lim sifati, ta'lim sifatini boshqarish, zamonaviy tendensiyalar.

MODERN TENDENCIES OF MANAGEMENT OF HIGHER EDUCATION INSTITUTIONS

Abstract. There are enlightened some issues of increasing of management in the sphere of higher educational institutions and improving of preparation of compete able personal as educates of different spheres are increasing and widening of study demand by appearing of new specialists.

Keywords: Quality of education, management quality of education, modern tendencies.

asoslari yaratildi. O'zbekiston Respublikasi Prezidentining 2019 yil 8 oktyabrdagi
«O'zbekiston Respublikasi oliy ta'lim tizimini 2030 yilgacha rivojlantirish

tarmoqlarining barqaror rivojlanishiga munosib hissa qo'shadigan, mehnat bozorida o'zo'rnini topa oladigan yuqori malakali kadrlar tayyorlash tizimini yo'lga qo'yish» ustuvor vazifa etib belgilangan [1].

Ta'limning muhim ahamiyatini anglash - sifatli ta'lim taqdim etish va o'zlashtirish sifati fenomeniga alohida qiziqish uyg'otdi. Ushbu tushunchaning paydo bo'lishi so'nggi yillar bilan bog'liq, deb aniq aytish qiyin. Ammo, unga nazariyachilarning e'tibori zamonaviy turmush sharoitida hayot sifati va ta'lim sifati o'rtasidagi bog'liqlik, ijtimoiy-iqtisodiy modernizatsiya va shaxsning o'z-o'zini anglash jarayonining sifatli ta'lim bilan yaqqol bog'liqligi nomoyon bo'lmoqda.

Ilgari ta'lim sifati muammosi vaqti-vaqti bilan tashkil etiladigan yomon o'zlashtirishga qarshi kurash kampaniyalari orqali hal qilingan holatda, ta'lim tizimining yutuqlari yoki kamchiliklarining ko'rsatkichi sifatida alohida va qoloq ta'lim oluvchilarning sonini hisoblashga qaratilgan miqdoriy yondashuv ustunlik qilar edi.

So'nggi yillarda pedagogikada gumanistik pozitsiyalarning mustahkamlanishi bilan ta'lim sifati o'rtasidagi bog'liqlikka alohida e'tibor qaratilmoqda. Bundan tashqari, mazkur holat umumevropa jarayonlarining hosilasidir deb qarasa xato qilmagan bo'lamiz. Boloniya shartnomasida ishtirok etayotgan mamlakatlar ta'limni modernizatsiyalashning ustuvor yo'nalishi sifatida uning sifati vabaholanishini ta'minlaydigan tartiblar bajarilishi kerakligiga e'tibor qaratganlar.

G'arb mamlakatlarida ta'lim sifati muammosi o'tgan asrning ikkinchi yarmida muhokama predmetiga aylandi. Bunga ikkita misolni keltiramiz. 1960 yil 14 dekabrda YuNESKO Konferensiyasi davlat ta'lim muassasalarida sifatli ta'lim olishni kafolatlaydigan ta'lim standartlari, ya'ni natijalar va mazmunga yondashuvlarning yagonaligi va shartlarning ekvivalentligini ta'minlash Konvensiyasi qabul qilindi: «(b) To ensure that the standards of education are equivalent in all public education institutions of the same level, and that the conditions relating to the quality of education provided are also equivalent» - Ta'lim standartlari bir xil darajadagi barcha davlat ta'lim muassasalarida ekvivalent bo'lishini va taqdim etilayotgan ta'lim sifatiga tegishli shart-sharoitlar teng bo'lishini ta'minlaydi» [9]. Undan tashqari 1960 yilda, Amerika Qo'shma Shtatlarida ta'lim sifatini o'rganish bo'yicha tadqiqotlar o'tkazildi: «The Quality Measurement Project, A Research Activity Conducted By The New York State Education Department» - Sifatni o'lchash loyihasi, Nyu-York shtatining Ta'lim departamenti tomonidan olib borilgan tadqiqot faoliyati. Ushbu tadqiqotning maqsadi maktab ta'lim tizimi tomonidan taqdim etilgan ta'lim sifatini mustaqil baholash uchun texnologiyalarni ishlab chiqish edi – «the purposes of the quality measurement project were to develop techniques for assessing the quality of education provided by a school system..». Shunga qaramay, ta'lim sifatiga alohida e'tibor qaratish o'tgan asrning to'qsoninchi yillaridan boshlandi.

O'tgan asrning to'qsoninchi yillarining oxiriga kelib Fransiyada bo'lib o'tgan xalqaro konferensiyada oliy ta'lim uchun «ta'lim sifati» tushunchasi kiritildi. Mazkur konferensiyada oliy ta'limdagi asosiy parametrlar nuqtai nazaridan sifat darajasini doimiy tarzda kuzatib, nazoratga olib borish va uni ko'tarishkelgusidagi asosiy vazifalardan, deb hisoblandi [4]. Mazkur holat oliy ta'lim sifatini oshirib borish har bir millatning xavfsizligini ta'minlovchi strategik soha deb belgilab olindi.

Ta'lim xarakteristikalarini talqin qilinishida sifat va ta'lim tushunchalari ahamiyatini mos qo'yish sifatni amalga oshirishning ikkita mumkin bo'lgan yondashuvini taqdim etish imkoniyatini beradi. Shaxs rivojlanishiga e'tibor qaratiladigan bo'lsak, u holda ta'lim sifati uning eng yuqori qismi bo'lib, u shaxsning xususiyatlarini aniqlaydi. Bundan kelib chiqadiki, shaxs ta'lim sifati tavsifiy-ifodaviy xususiyatga egadir, chunki u ob'ektning o'lchamining biron bir tartibiga mos kelmaydi. Har bir inson uchun alohida standart qaralib, inson hayotidavomida erishgan yutuqlari unga nisbatan solishtiriladi.

Ta'lim tizimidagi ta'limiy dasturlarga, ta'lim xizmatlarini ko'rsatishdagi shart-sharoitlar, natijalar va ularning amaliyotga tadbqiqiga, umumiy holda tan olingan standartlarga, ijtimoiy va shaxsiy talablarga mos kelishi - amaliy sharoitlarda sifatli ta'limni namoyon etadi. Birinchi ta'rifning o'ta murakkabligi tufayli pedagogika fanlari uning asosida yotgan g'oyasiga nisbatan mo'ljalni oladi, chunki pedagogik amaliyot predmet ma'nosida ta'limiy-tarbiyaviy sifatlarni shakllantirish, rivojlantirish va takomillashtirishga yo'naltiriladi.

Ta'lim sifatining turli darajadagi xarakteristik jihatlarini qayd etilgan yondashuvga asosan ajratib ko'rsatish mumkin. Bu esa ko'p hollarda alohida komponentlarni qayd etish metodi orqali aniqlanadi. Kutubxonalarni talablarga to'liq javob berishi, ularni kompyuterlar bilan ta'minlanganligi ta'lim parametrlari natijalari sifatida – ilmiy-pedagog kadrlarning klassifikatsiyasigata'sir ko'rsatadi.

O'lchov va matematik hisob-kitob qilish mumkin bo'lgan mezonlarni tanlash ehtiyojining mavjudligi ayni haqiqatdir. Biroq, qayd etilgan fundamental falsafiy talqinni mavhumlashtirsak ham ta'lim sohasida «standartlashtirilmagan» elementlar alohida ahamiyatga ega ekanligini unutmasligimiz kerak. Ta'lim standartlari so'zning qat'iy ma'nosida DTS (Davlat Ta'lim Standarti) emasligi bejiz emas, chunki har qanday DTSning o'ziga xos xususiyati bu raqamlarni aniqlash va o'lchash mumkin bo'lgan ko'rsatkichlardir. Yo'l qo'yilishi mumkin bo'lgan xatolarni hisobga olgan holda, ta'lim sifatini aniq raqam bilan ifodalash mumkin emas.

Davlat ta'lim standartlari malaka talablari ta'lim natijalariga olib keladi, uning natijasi sifatida umumkasbiy va kasbiy kompetensiyalar tushuniladi. Kompetentli deyilganda- nafaqat bilim, ko'nikma, malakani tushunamiz, balki insonning amaliy tajribasi qadriyatlarini ham tushunamiz. Shaxs tavsifiy mohiyatini tashkil etuvchi kompetentlikning asosi – sifat tavsiflari bilan chegaralanib qolmaydi.

«Miqdoriy» amaliyotlari bilan sifat xususiyatlarini belgilab olish qiyin masaladir. Qadimgi faylasuflar ob'ektlarning fazoviy-geometrik xususiyatlarini miqdoriy xususiyatlar bilan tenglashtirganlar. O'lchanadigan parametrlarni absolyutaniqlanishi boshi berk ko'chaga olib kelganligi sababli, tez orada mazkur g'oya cheklanganligi aniqlandi. Xuddi shu narsa zamonaviy pedagogika fanida ham sodir bo'ldi, ya'ni «miqdoriy» yondashuvning noto'g'ri ekanligi, ta'limning sifat xususiyatlari ustida yetarli darajada tadqiqot ishlarini olib borilishigasabab bo'ldi.

YuNESKO tomonidan tayyorlangan akkreditatsiyalangan atamalar Glossariysida ko'rib chiqilayotgan tushunchaning quyidagi: minimal ta'lim standartlarining kafolatlangan amalga oshirilishi; turli kontekstlarda maqsadlarni belgilash va ularga kirish ko'rsatkichlari hamda kontekstli o'zgaruvchilar yordamida erishish; asosiy va bilvosita iste'molchilar va manfaatdor tomonlarning talablari va kutilganlarini qondirishga tayyorlik; takomillashtirishga intilish xususiyatlari ta'kidlangan [2].

Ta'lim sifati davlat ta'lim standartlari malaka talablariga mos kelish - birinchi va ikkinchi holatda ham shu nuqtai nazardan tushuniladi. Hosil qilingan yondashuvdaturli manfaatdor tomonlarni talab ka kutilmalarini aks ettiruvchi standart bu normadir. Ta'lim shartlariga mos tarzda jarayoniy yondashuvlar talablarni aniqlaydi.

Davlat va jamiyatdagi ta'lim jarayonlarining samaradorligi va uni aks ettiruvchi holatlar, ijtimoiy tushunchalar nuqtai nazaridan ta'lim sifatini aniqlaydi. Turli ijtimoiy guruhlarning shaxs, fuqarolik va kasbiy kompetensiyalari, maqsad va vazifalarini shakllanishi hamda rivojlanishida ularni quyidagi tarzda: ta'lim mazmuni, shakl va metodlari, moddiy-texnik bazasi, kadrlar bilan ta'minlanganligi kabi ifodalash[8].

Turli ta'limiy xizmatlar kutilmalariga mos tarzda ta'lim sifati tushunchasining mazmun-mohiyati me'yorlarga adekvatligini belgilaydi. Bunda ta'lim sifati individual qobiliyatlarni shakllanganligi orqali baholanadi, boshqacha aytadigan bo'lsak, sifatning - natija maqsadiga mos kelishi. Ta'lim sifati ikkita yondashuvda baholanadi: ta'limiy xizmatlarni amalga oshirilishiga ko'ra hamda tayyor mahsulotning tavsifini aniqlash taklif etiladi.

Yuqoridagi ta'rifdan ta'lim sifati tushunchasining mazmun-mohiyati ko'rsatiladigan turli ta'lim xizmatlaridan foydalanuvchilarga, xususan, davlat, jamiyat va unda hayotiy faoliyatini amalga oshirayotgan insonlarning orzu-umidlariga, sifat normasiga, modelga mos tarzda belgilanadi. Shu bilan birga, ta'lim shaxs sifatining qobiliyatli shakllanganligi orqali, ya'ni maqsadning natijaga mos kelishi orqali baxolanadi. Ta'lim sifati mazkur baxolashning ikki yondashuvi asosida: ta'lim xizmatlarini amalga oshirish yuzasidan sifatli shakllanishi; tayyorlangan mahsulotlarning sifat xususiyatlari orqali aniqlanadi.

Natija va maqsadning o'zaro uyg'unligida sifat aniqlanadigan bo'lsa, u holda uni modellashtirish mumkin bo'ladi. Mazkur holat ta'lim sifatining turlicha bo'lishligidan darak beradi, bu esa oldinga qo'yilgan maqsadlarga bog'liqdir.

Hosil qilingan natija ularga aniq mos kelsa, u holda talab etilayotgan sifat darajasi haqida fikr yuritish mumkin. Bu esa, turli maqsadlarga turli ta'lim sifatining darajalari mos kelishini bildiradi.

Ta'lim sifatini o'quv jarayoni natijalari nuqtai nazaridan o'rgana turib, ushbu natijalar nimani anglatishini aniqlab olishimiz kerak bo'ladi. Bu savolga javob ko'p variantlidir. O'quv jarayonining natijalari sifatida quyidagilarni ko'rsatishimiz mumkin: bilimlarning shakllanganlik darajasi, ko'nikma darajasi, shaxsning intellektual rivojlanish darajasi, axloqiy fazilatlar, turli faoliyatlarda namoyon bo'ladigan ijodiy munosabat. Bu variantda ta'lim sifati quyidagiga teng: a) o'quvchining to'liq va teran bilimiga; b) bilimlarning umumlashgan va davriylashgan darajasiga; v) ta'lim muammolarini murakkablik darajasi yuqori bo'lgan holda hal qila olish qobiliyatiga. Kompetentlik yondashuvining ommaviyligi ta'lim sifatini bilimlar, qobiliyatlar to'plami bilan emas, balki insondagi asosiy va kasbiy kompetensiyalari bilan shakllantirish kerakligini belgilab berdi.

Taklif etilayotgan ta'lim sifati bilan olinayotgan ta'lim sifati o'rtasida farq ayni vaqtda mavjud emas. Mazkur kontekstda ta'lim sifati tushunchasining mazmunini aniqlashda ob'ektiv va sub'ektiv yondashuvlar haqida o'ylab ko'rish mumkin. Dastlabki shaxsdan tashqari ta'lim xususiyatlarini uning talablarini hisobga olgan holda rasmiy baholash bilan bog'liq. Ta'lim sifatining va ta'lim standartiga mosligiga e'tibor beriladi.

Xalqaro tajriba shuni ko'rsatadiki, sifat boshqaruv tizimini loyihalashtirilishi bir qancha qulay bo'lgan optimal modellarni o'zida namoyon etadi, jumladan:

1. Sifat boshqaruvining Yevropa fondi modeli [6].
2. Sifat boshqaruvi bo'yicha O'zbekiston Respublikasi Vazirlar Mahkamasi huzuridagi ta'lim sifatini nazorat qilish davlat inspeksiyasi modeli [7].
3. Tvente universiteti (Niderlandiya), Oliy ta'lim siyosatini tadqiq qilish markazi (CHEPS) modeli [10];
5. Niderlandiya universitetlari assotsiatsiyasi modeli (VSNU) [5];
6. Belgiya-Niderlandiya modeli (HBO ExpertGroup) [3];
7. Ta'lim sohasida «Baldrige National Quality Award» milliy Amerika mukofotining modeli.
8. Buyuk Britaniya modeli va boshqalar.

Mazkur modellarning barchasi jarayonga yo'naltirilgan yondashuvga asoslanib, korxonalar faoliyatining to'liqligi, teranligi va sifat boshqaruvi tizimi - ta'lim muassasasining umumiy boshqaruv tizimi bilan o'zaro bog'liqligi darajasi bilan farqlanadi. Taxlillar boshqaruv tizimlarining amaldagi modellari o'rtasidagi muvofiqlikni o'rnatishga imkon berdi.

MODERN APPROACHES TO STUDYING THE ECOLOGICAL CONDITION

Annotation. Today, the geographical and political situation in the world is changing rapidly. In such conditions, the problems of regulating the impact of humans on the biosphere, harmonizing the interaction between social development and maintaining a favorable natural environment, and achieving a balance in the relationship between man and nature are becoming more and more urgent. At the current stage of development, solving a number of problems related to the interaction of man and nature is not limited to only one country. It is clear that many problems related to the protection of the natural environment from the harmful effects of human economic activities are gaining a large scale. The world community is also responsible for any problems and events of high importance in his life.

Kay words: Ecology, environment, ecological problems, «Green Space» anthropogenic, air pollution, factors, climate change.

For reference: In Uzbekistan, in the field of ecology and environmental protection, a number of measures are being implemented to use the natural resource potential of the regions on a scientific basis, to improve the ecological situation in geosystems, and to fight against various geoecological problems. For example, in the 79th goal of the «Development Strategy of New Uzbekistan for 2022-2026»: «Elimination of existing ecological problems that harm the health and gene pool of the population», in the 80th goal «Protection of ecology and environment, improvement of the ecological situation in cities and districts» improvement, implementation of the national project «Green Space» and important tasks such as «...scientifically ensuring the solution of the problem of environmental protection»³ in the «Environmental Protection Concept» of the Republic of Uzbekistan until 2030 specified.

Analysis of literature on the topic. A number of scientists and specialists were engaged in geoecological evaluation of landscapes in the regions, formation and change of landscape-ecological conditions, geoecological problems and emerging negative landscape-ecological problems: among others, Risser Paul G., K. Troll, Yu. Odum, R. Dajo, R. Ricklefs, A.A. Krauklis, Y. Odum, T. Forman, M. Jamagne and others, from CIS scientists V.A. Kovda, N.A. Solntsev, A.G. Isachenko, V.A. Nikolayev, V.M. Chupakhin, G.V. Geldiyeva, A.A. Chibilev, L.G. Ramensky, V.N. Scientific research conducted by Sukachev, V.B. Sochava, F.N. Milkov, I.P. Gerasimov, A.N. Rozanov, V.S. Preobrazhensky, M.A. Pankov, A.M. Ryabchikov, D.L. Armand, L.I. Mukhina and others is of great importance.

In Uzbekistan, L.N. Babushkin and N.A. Kogay, A.A. Rafikov, A. Abdulkasimov, L.A. Alibekov, P. Baratov, S. I. Abdullayev, Sh. S. Zokirov, H. Vakhobov, A. N. Nigmatov, A. K. Urazbayev, S. B. Abbasov, Yu. I. Akhmadaliyev, A. Rakhmatullayev, N.K.Komilova, K.M.Boymirzayev, K.S.Yarashev, Sh.M.Sharipov, A.A.Nazarov, O.M.Koziboyeva, O.T.Mirzamakhmudov in the research works of landscape changes under the influence of active human economic activity, land reclamation, ecological condition, «anthropogenic load», Factors and sources of aggravating environmental situations, soil, water, atmospheric air pollution, ecology and human health issues and other such issues are researched. Assessment of salinity level and ecological-ameliorative conditions of soils in irrigated lands, and their improvement were carried out by Sh.M. Turdimetov, N.Yu.Abdurahmonov, V.Kh.Sherimbetov and others.

Many scientists and specialists were engaged in geoecological problems of the republic, as well as environmental education for students, industrial ecology. A.A.Rafikov, A.Soliyev, T.J.Jumayev, S.Sultonov, A.R.Roziyev, Yu.Shodimetov, A.Abdug'aniyev, A.Tokhtayev, Q.Abirkulov, A.Khojimatov, S.Daniyorov, Sh.Turdikulov from the existence of geoecological problems and natural resources they studied the issues of rational use and measures to prevent environmental problems in a wide range. But the works of the above and other scientists were mainly carried out within the framework of the republic. At the same time, the geoecological problems of the country are not sufficiently studied due to local conditions. In this regard, the work of the public in studying geoecological problems of the country and eliminating existing problems is of scientific and practical importance.

Atmospheric air pollution is mainly caused by carbon, nitrogen, sulfur oxides and dust, as well as by heavy metals, as well as the effects on the properties of vegetation, especially ornamental trees, the identification of harmful chemical elements in the waste toxic substances and scientific research aimed at reducing them is conducted by the world's leading scientific centers and higher education institutions, including the University of Birmingham (Britain), Fukui Prefectural University (Japan), Central South University (China), University of Maryland (USA), Yonsei It is being implemented at the University of Seoul (Korea). In the CIS countries, extensive research has been carried out to study the importance of ornamental trees in reducing the release of harmful substances from industrial enterprises and motor vehicles into the environment and the impact on living organisms (Polinskaya et al., 1979; Siganyok, 1988; Pakalov, 1994; Silveira, 2005; Shilin, 2011; Roshupkin, 2011 et al.).

Through research on the atmospheric air of specialists, the density and type of traffic in the city, pollution with harmful substances related to fuel types, the spread of gas fumes, testing several types of ornamental trees, and studying them at the level of regional and global research. made important contributions (A Alfani, 2000; Shrawan Singh, 2007; Qiushuang Li, 2011; Alexander Afanasev,

2017; et al.). Musin R.I., Aliyev R.R., Tolkacheva G.A., Azizova R.G. and a number of other scientists have conducted many studies. Plants in the area of influence of Almalyk TMK and

Almalyk chemical plant were the objects of research. The main phytotoxic components of the atmospheric emissions of these enterprises are sulfur dioxide, hydrogen fluoride, ammonia, which prevent the normal functioning of the photosynthetic apparatus of plants. Scientists of our republic have carried out important work on studying the effect of atmospheric air on fruit and ornamental trees (Norboyev N.N., Zakirov D. Yodgorova D.SH., Ismailkhodzhayev B.SH., I.Samatov I.M., Rakhimova T.U., Samatov I.M. and others). Despite the long-term experience of ecological research in studying the effects of environmental pollutants on plant cover, interest in this topic has not lost its vitality.

D.N. Kashkarov, S.A. Sevyertsov in the development of general ecology; in ecological parasitology V.N. Beklemishev, V.A. Dogel', Ye.N. Pavlovsky; in environmental entomology G.A. Viktorov, A.S. Danilevsky; in the ecology of hydrobionts V.V. Vasnetsov, N.A. Gerbil'sky, K.M. Dyeryugin, L.A. Zenkevich, S.A. Zyernov; in plant ecology I.G. Syerebryakov, Ye.P. Korovin, K.3. Zakirov and other scientists made great contributions. In the field of ecology in Central Asia, D.N. Kashkarov, Ye.P. Korovin, M.G. Popov, K.3. Zokirov, I.I. Granitov, T.3.Zokhidov, A.T.Tolaganov and others carried out great scientific works.

A group of scientists participated in the development of ecological physiology. Drought resistance of plants N.A. Maksimov, Yu.S. Grigor'ev; K. A. Ivanov on the effect of light; ecology of photosynthesis by V.I. Lyubimenko, A.A. Nichiporovich, O. V. Zalensky, V. A. Voznesensky; radiation resistance of plants G.A. Genkel'; cold resistance was studied by I.I. Tumanov and others. Also, services of L.G. Ramensky, A.P. Shennikov were great in the development of ecology. English population ecology scientist Ch. Developed by Elton (1930). He said that it is necessary to move from the study of certain organisms to the study of populations. Because adaptation processes take place at the population level, that is, they are clearly manifested.

S. A. Sevyertsov, S. S. Shvarts, N. P. Naumov, P. A. Viktorov, V. N. Sinskaya, T. A. Rabotnov and A. A. Uranov made a great contribution to the development of population ecology.

Research methodology. In writing this article, the scientific works of foreign and CIS scientists and researchers who carried out their scientific work in various fields of plant development in Uzbekistan were used. Also, the development of the field of ecology, the impact of the environment on living organisms was analyzed by the author.

Analysis and results. Nature is a unique complex system, and man and society are its derivatives. It exists and develops at the expense of nature. Man satisfies his needs at the expense of nature. It receives air, water, food, mineral and fuel raw materials from nature and exerts its influence on nature during its life activity. As a result, new objects alien to nature are created. These are: cities

and villages, plants and factories, roads, mines, reservoirs, agricultural land, etc. Such anthropogenic landscapes, created by human intelligence and work, will not fail to show their influence on the surrounding natural environment. The rapid growth of the population on the earth, the rapid development of science and technology, the uneven distribution of natural resources on the territory of the countries require the maximum possible use of the available natural resources and, in this way, the acceleration of the development of society. As a result, the laws of interaction between nature and man are violated. Violation of these laws will sooner or later lead to an ecological crisis.

Nowadays, the environmental situation in the whole world worries many people alike. Ecological destruction is taking a terrible shape before our eyes. Issues of environmental protection and effective use of available natural resources remain relevant. It has become known that the cause of the current ecological crisis and the one who gets rid of it with his intelligence is Man. Protection of the environment from pollution, economical use of natural resources depends to a large extent on the level of ecological literacy and ecological culture of mankind, regardless of the society in which people live. To solve environmental problems in our republic, increasing the environmental literacy of the population is one of the most important tasks.

RELEVANCE OF TEACHING FOREIGN LANGUAGES

Abstract. This article talks about the importance of learning a foreign language and its benefits.

Key words. Foreign language, language learning, method, method, innovation, society, pedagogical technology, education.

Learning a language is a difficult process that requires a lot of patience. Today, in our country, attention is being paid to learning foreign languages, especially English. In fact, according to the decision of the Cabinet of Ministers of the Republic of Uzbekistan No. 312 of May 19, 2021 «On measures to effectively organize the popularization of learning foreign languages», the study of English was introduced from the elementary grades. [1;45] According to the needs of the times, many young people are focusing their attention on learning the language quickly and easily. Many new language learners do not know how to learn a foreign language and what methods to use effectively.

One of the important things in human society is language learning. Language, which is a means of communication, can be acquired practically in the family, that is, in the natural environment, among the public, or in a gathering, that is, in classes. Theoretically studied knowledge is knowledge related to language phenomena. Learning foreign languages, especially multilingualism, or more precisely, polyglossia, is important in the era of growing international relations. Currently, many students and pupils are studying three different languages. In the theory of education, they are referred to by their own names. They are: mother tongue, second foreign language and foreign language. We know that everyone's native language is the first language that plays a key role in the development of mental thinking. Certain concepts learned through words in the mother tongue are manifested in the sound and written appearance of words in a foreign language in the process of mastering a second or foreign language. The mother tongue, the second foreign language and the word learned in a foreign language (for example: tree-tree-un arbre-ein Baum) are three in terms of number, but the concept understood from the expression of meaning is the same: «Some meaning» Noda is the most important type of plant for all humanity and nature, for existence in general. Readers and students logically connect the concepts they learn in a foreign language with words in their native language.

A foreign language is the language of a foreign country. Western European languages (French, German, Spanish, English) and languages from Eastern countries (Turkish, Arabic, Urdu, Persian, Japanese, Chinese) are taught in our

republic, and these languages occupy a place in the curriculum of the educational plan.

In the course of the development of pedagogical technologies and their introduction into the educational process, as well as the rapid exchange and improvement of information technologies, opportunities were created for everyone to strengthen their professional training and skills. Bringing advanced pedagogical technologies into the educational process is one of the tasks of the «National Personnel Training Program». Today, innovative pedagogical technologies and interactive methods are widely used in education, especially in teaching foreign languages. The application of innovative pedagogical technologies to foreign language education - orientation of a person according to the demands of society, organization of education based on these demands, formation of a person as a fully mature staff based on the relevance of educational principles and methods, full development of his abilities and opportunities is to create favorable conditions for its manifestation and development. Another characteristic of innovative pedagogical technologies is the priority of the student's activity, the fact that the student is the main figure in the educational process. In the educational process, the correct formation of knowledge, lexical, grammatical, pronunciation concepts, the correct composition of the knowledge system, self-control skills in the student's mind are components of innovative pedagogical technologies. Today, the most effective teaching methods in the educational process, which are guaranteed to achieve the goals set by teachers and pedagogues, form the basis for students to think independently, make independent decisions, solve their problems, and get out of various situations without difficulty. such teaching methods capable of being prepared are the most advanced features of pedagogical technology. Today, with the initiatives of our president, great attention is being paid to language learning in our country. If we look at the above, we will once again be convinced of how important language is in the development of our country.

In order to learn a foreign language fluently in a short period of time, it is noted that using the following methods will not be without benefits:

1. Increase self-confidence.

Don't be afraid if you've decided to learn a foreign language. Believe in your abilities. Do not be afraid to memorize long grammar rules and dictionaries. You can do it.

2. Moving towards a specific goal.

If you determine the purpose of learning a language, it will be easier to master it, that is, someone wants to study well and enter the university, someone wants to get TOEFL, IELTS or CEFR certificates, and someone wants to learn a foreign language and get their wants to develop his career. Of course, set a goal for yourself and go after it.

3. Memorizing dictionaries and grammar rules.

Just as you cannot learn any language without memorizing a dictionary, you cannot reach perfection without grammar rules. They may seem boring, but if you learn them by combining them with different games or enjoyable activities, you will naturally enjoy them.

4. Use of various language teaching programs and sites.

Currently, there are various language teaching sites and programs on social networks. Examples are Hello Talk, Duolingo, or Teach in 15 languages. If they are used wisely, they will definitely show their results.

5. Repetition.

Abu Rayhan Beruni said, «Knowledge is the fruit of repetition and repetition» After all, if we do not repeat what we have read and memorized, they will not remain in our memory for a long time. By regularly listening to new words in the form of audio, with the help of mobile communication devices and modern gadgets, we can effectively increase vocabulary.

6. Making language learning a hobby.

Language learning is one of the most important areas in human society. Language can be used as a means of communication in a natural environment (in the family, in the community) or in an organized way (in the classroom). Knowledge of language phenomena is studied theoretically. Knowledge of languages, especially multilingualism (polyglossia) is gaining great importance in our time of growing international relations. Learning a language will be easier and more enjoyable if you make it your favorite pastime.

In conclusion, it is worth mentioning that learning foreign languages is a multifaceted research, and in this process, a person becomes even more perfect. For example, experiencing psychological changes, including the process of comparing the mother tongue and a foreign language. Of course, it is necessary to use different teaching methods in this process. The use of different methods is effective as expected and provides intensity in learning a foreign language. This simplifies the process of language learning and gives sufficient results as expected. That is, it opens the door to many conveniences and opportunities for learning and teaching a foreign language. In this way, the intended goal will be achieved more easily, and the above methods will definitely make a significant contribution to it. From this we can understand that the use of methods in teaching and learning a foreign language is quite important.

TIJORAT BANKLARIDA KREDIT PORTFELINI BOSHQARISH VA DIVERSIFIKATSIYA QILISH

Annotatsiya. O'zbekiston iqtisodiyotida kreditlarga bo'lgan qiziqish ortib borayotgan bir davrda kredit risklarini tahlil qilish va ularning banklar faoliyati samaradorligidagi rolini o'rganish masalasi yanada dolzarb bo'lib bormoqda. Tadqiqot natijalari kreditlashning asosiy atributlari: kredit hajmi, muddati va foiz stavkasi bilan bog'liq bo'lgan bank kreditlashda risklarning chiziqli bo'lmagan o'sishini ko'rsatadi. Kredit portfelini boshqarishda tavakkalchilikni kamaytiradigan optimallashtirilgan yondashuvni yaratish muhim bo'lib qoladi, bu dolzarb va amaliy ahamiyatga ega masaladir. Ushbu maqolaning maqsadi kredit portfelining xilma-xilligini oshirish va risklarni kamaytirish uchun zaruratni tasdiqlash va yangi kredit portfelini boshqarish tizimini ishlab chiqishdir. Mazkur maqolada O'zbekiston Respublikasi Markaziy banki va Statistika Qo'mitasining statistik ma'lumotlaridan foydalanildi, tizim tahlili, boshqaruvning nazariy yondashuvlari, statistik ishlov berish va operatsion tadqiqotlarga murojaat qildi. Maqolada risklarni baholashning raqamli va sifat usullarini birlashtirgan kredit portfelini boshqarish usuli taqdim etilgan, bu sizga portfelni nazorat qilish, shuningdek, belgilangan xavf chegaralari asosida kredit berish yoki rad etish bo'yicha asosli qarorlar qabul qilish imkonini beradi. Shuningdek, turli kredit siyosatlarini doirasida qisqa muddatli va uzoq muddatli kreditlar o'rtasida yaxshiroq muvozanatga erishish va kredit riskini hisobga olgan holda portfel rentabelligini maksimal darajada oshirish imkonini beruvchi portfel tuzilmasini optimallashtirish modeli ham ishlab chiqilgan. Taklif etilayotgan boshqaruv mexanizmi va modelini banklar faoliyatida qo'llash kredit tashkilotlarining rentabelligi va raqobatbardoshligini oshirishda ijobiy natijalar berdi.

Kalit so'zlar: kredit risklari, kredit risklarini boshqarish, kredit portfelini optimallashtirish, diversifikatsiya.

MANAGEMENT AND DIVERSIFICATION OF THE LOAN PORTFOLIO IN COMMERCIAL BANKS

Abstract. At a time when the interest in loans is increasing in the economy of Uzbekistan, the issue of analyzing credit risks and studying their role in the efficiency of banks is becoming more urgent. The results of the research show a non-linear growth of risks in bank lending related to the main attributes of lending: loan volume, term and interest rate. Creating an optimized risk-reducing approach to loan portfolio management is an urgent and practical issue. The purpose of this article is to confirm the need to increase the diversity of the loan portfolio and reduce risks, and to develop a new loan portfolio management system. This article used the statistical data of the Central Bank of the Republic of Uzbekistan and the Statistics Committee, referred to system analysis, theoretical approaches to management, statistical processing and operational research. The article presents a loan portfolio management method that combines quantitative and qualitative methods of risk assessment, which allows you to control the portfolio, as well as make informed decisions on granting or denying credit based on established risk limits. A portfolio structure optimization model has also been developed to achieve a better balance between short-term and long-term loans under different credit policies and to maximize portfolio profitability taking credit risk into account. The application of the proposed management mechanism and model in the activity of banks gave positive results in increasing the profitability and competitiveness of credit organizations.

Keywords: credit risks, credit risk management, credit portfolio optimization, diversification.

Kirish.

Bugungi kunda bank kreditlash sektori kredit resurslariga bo'lgan talabning barqaror o'sishi bilan bir vaqtda bankning kredit portfelidagi muddati o'tgan qarzar ulushini oshirish bilan tavsiflanadi. Kredit operatsiyalari bank faoliyatining asosiy yo'nalishlaridan biri bo'lib, uning daromadlari tarkibida salmoqli o'rinni egallaydi. Banklarning ishonchliligi va moliyaviy barqarorligi kredit portfelining tarkibi va tuzilishiga, shuningdek, to'g'ri boshqaruv jarayoniga bog'liq. Shu munosabat bilan kredit portfelining kredit tavakkalchilik darajasi bilan bevosita bog'liq bo'lgan sifatli tuzilmasini shakllantirish har qanday bank uchun ustuvor vazifa hisoblanadi. Har qanday kredit tashkilotining maqsadi raqobatbardoshligini oshirishdir. Bankning kreditlash faoliyati samaradorligini ta'minlash uchun ushbu hujjatda kredit portfelini diversifikatsiya qilish asosida uning sifatini boshqarishning yangi mexanizmi va modelini joriy etish taklif etiladi. Maqolada O'zbekiston Respublikasida kreditlashni rivojlantirish uchun makroiqtisodiy sharoitlarning statistik tahlili keltirilgan va banklarning kredit portfelining dinamikasi va tuzilishi keltirilgan. Aniqlanishicha, 2019 yilning yanvar oyi holatiga ko'ra jismoniy va yuridik shaxslarning kredit resurslariga bo'lgan ehtiyoji sezilarli darajada oshgan. O'sish ipoteka krediti, avtomobil krediti va real investitsiyalar uchun kreditlashda namoyon bo'ladi. Shu bilan birga, salbiy tomoni - muddati o'tgan kreditlarning ko'payishi. Kreditlashda risk

komponentining bunday ortishi banklar rentabelligiga salbiy ta'sir ko'rsatmoqda. Majburiyatlarni to'lamaslik bilan bog'liq kredit risklarini kamaytirishning mumkin bo'lgan usullaridan biri kredit portfelini to'lovlar muddatiga qarab diversifikatsiya qilish va kredit portfelining tavakkalchilik nuqtai nazaridan eng maqbul tuzilishini ta'minlashdir. Bank kredit portfelining sifatini boshqarish mexanizmi ishlab chiqilgan bo'lib, u sifat va miqdoriy ko'rsatkichlardan foydalanishga asoslangan, mijozlar bazasining doimiy skoringini ta'minlaydi, uni kredit tarixining bir hilligiga ko'ra tuzilishga imkon beradi, shuningdek, kredit portfelining bir xilligini ta'minlaydi. xavf omillarining maqbul qiymatlariga muvofiq kredit arizasini tasdiqlash yoki rad etish bo'yicha boshqaruv qarorlarini qo'llab-quvvatlash. Qaror qabul qiluvchining riskga moyilligining turli qiymatlari bo'yicha risk/daromad mezoniga muvofiq kredit portfelining optimal tuzilishini shakllantirish uchun kredit portfelini diversifikatsiya qilish modeli taklif etiladi.

Har qanday moliyaviy tashkilotning kredit portfelini shakllantirish va boshqarish joriy bozor kon'yunkturasini, iste'molchi talabini tahlil qilish va kredit portfelini baholashga asoslanishi kerak. Iste'mol talabining qisqarishiga Markaziy bankning inflyatsiyani jilovlashga qaratilgan pul-kredit siyosati ta'sir ko'rsatdi. O'zbekiston Respublikasi Markaziy banki [1] ma'lumotlariga ko'ra (1-jadval), 2017 yilda bank sektori aktivlari 3,5% ga kamaydi, lekin 2018 yil boshida ular tuzatildi va 6,4% ga oshdi. Yengil o'sish aktivlar aholiga kredit berishning jonlanishiga yordam berdi. Jismoniy shaxslarga berilgan kreditlar hajmi oshdi: 2018 yil boshiga kelib u 12,7 foizga o'sdi, 2019-yil 1-yanvar holatiga ko'ra o'sish 22,4 foizni tashkil etdi. Yuridik va jismoniy shaxslardan jalb qilingan mablag'lar hajmi yillik hisobda birmuncha o'sdi va 2018 yil boshiga kelib mos ravishda 2,1 va 7,4 foizni, 2019 yil boshiga esa 12,7 va 9,5 foizni tashkil etdi, bu esa ushbu guruhlar uchun kredit stavkalaridan sezilarli darajada past. 2018 yil 1 yanvar holatiga aktivlar hajmi banklar nominal 6,4% ga oshdi.

1-jadval. Bank sektori ko'rsatkichlarining o'sish sur'ati (oldingi 12 oy uchun %, hisobot sanasidan)

Sana	Aktivlar	Shaxsiy mablag'lari (Kapital)	Nomoliyaviy tashkilotlarga kreditlar	Jismoniy shaxslarga kreditlar	Jismoniy shaxslarning jamg'armalari	Nomoliyaviy tashkilotlar hisobidagi depozitlar
01.01.2015	35.2	12.2	31.3	13.8	9.4	38.6
01.01.2016	6.9	13.6	12.7	-5.7	25.2	15.6
01.01.2017	-3.5	4.2	-9.5	1.1	4.2	-10.1
01.01.2018	6.4	0.1	0.2	12.7	7.4	2.1
01.01.2019	10.4	-	10.5	22.4	9.5	12.7

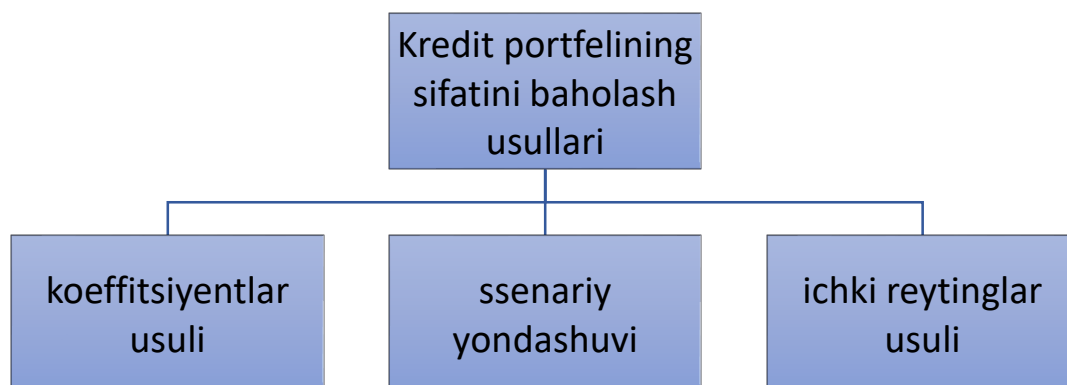

Xususi kredit portfelining o'sish sur'ati 4-chorakda real ko'rinishda 2016 yil 3-chorakga nisbatan ikki baravar sekinlashdi (0,8% ga nisbatan 1,5%). 2016 va 2017 yillarda bozor uchun asosiy yordam. ipoteka krediti taqdim etildi. 2017 yil oxirida uning o'sishi 11,7 foizni tashkil etgan bo'lsa, 2018 yil boshida o'sish sur'ati 9,8% gacha pasaygan, ipoteka kreditlash hajmi 2018 yil davomida

o'zgarmadi. Iqtisodiyotda foiz stavkalarining pasayishiga davlat subsidiyalari dasturi sezilarli ta'sir ko'rsatdi. Bu, birinchi navbatda, ushbu davrda jismoniy shaxslarni kreditlash hajmining sezilarli o'sishi bilan bog'liq. Bunday sharoitda bank sektori uchun muammoni hal qilishning ahamiyati va kredit portfelini operativ baholash va sifatini boshqarishga ehtiyoji ortib bormoqda.

Kredit portfeli deganda bank tomonidan berilgan kreditlarning sifat me'yorlariga ko'ra tuzilgan jamlanmasi tushuniladi, u bank va mijozlari o'rtasidagi ijtimoiy-iqtisodiy va pul-kredit munosabatlarini aks ettiradi hamda ssuda qarzдорligining qaytarilishini ta'minlaydi. Kredit portfelining sifati uning tuzilma xususiyatini belgilaydi, u esa kredit tavakkalchiligi va balans likvidligi maqbul darajasida eng yuqori daromadlilikni ta'minlaydi.

Kredit portfeli va uning sifati ikki subyektlar — regulyator va kredit tashkiloti tomonidan nazorat qilinadi. Regulyator (Markaziy Banki)ning boshqaruv usullari rezervlar normalariga rioya qilishga, kredit tavakkalchiligi darajasiga qo'yilgan normativlarga rioya qilishga qaratilgan va normativ hujjatlarda belgilangan. Kredit tashkiloti darajasida kredit portfelining sifati quyidagi yondashuv va usullar bilan baholanadi (1-rasm):

1-rasm. Kredit tashkiloti darajasida kredit portfelining sifatini baholash usullari

- koeffitsiyentlar usuli [4—7], 20 ta moliyaviy ko'rsatkichlar tizimiga asoslangan bo'lib, u daromadlilik, likvidlik va kredit tavakkalchiligini baholashda qo'llaniladi, kredit portfelining sifatini tavsiflaydi;

- ssenariy yondashuvi (yoki stress-testlash) [8—1], kredit portfelining holati va tuzilmasining turli ssenariylarini modellashtirishga qaratilgan. Bankning tavakkalchilik omillariga nisbatan sezgirligi tahlil qilinadi. Stress-testlash natijasi tavakkalchilikka ta'sir etuvchi muhim omillarni aniqlash va tavakkalchilik hodisalari sodir bo'lishining natijasida ehtimoliy yo'qotishlarni baholashdan iborat;

- ichki reytinglar usuli [2—6], Bazel qo'mitasi standartlariga muvofiq ishlab chiqilgan va qarz oluvchining kredit tavakkalchiligi hamda moliyaviy instrumentning kredit tavakkalchiligini hisobga olishga mo'ljallangan. Natijada qarz oluvchiga muayyan reyting berish, qarz oluvchining tavakkalchilik darajasini aniqlash, bu esa muayyan qarz oluvchi bilan munosabatlarning adekvat tizimini qurish (uning reytingiga muvofiq) va kredit berish shartlarini o'rnatish imkonini beradi.

Keltirilgan usullar klassifikatsiyasidan ko'rinib turibdiki, kredit portfelining sifatini tahlil qilishda asosiy nuqtalardan biri portfelning kredit tavakkalchiligini adekvat baholashdir. Shuning uchun tavakkalchilik choralarini asoslash katta ilmiy ahamiyatga ega bo'ladi [7, 8].

Qaror qabul qilish nazariyasida noaniqliklarni tavsiflash uchun eng ko'p ehtimollik-statistik usullar (avvalo sonli bo'lmagan ma'lumotlar statistikasi usullari, jumladan, intervalli statistika va intervalli matematika usullari) qo'llaniladi [9].

Shuningdek, noaniq to'plamlar nazariyasi usullari va ziddiyatlar nazariyasi usullari ham foydali hisoblanadi. Tavakkalchilikni baholash uchun matematik asboblardan odatda dasturiy mahsulotlar shaklida amalga oshiriladigan imitatsion va ekonometriya modellarda qo'llaniladi. Tavakkalchilikni baholash bir qator usullarga asoslanadi, ularning tanlovi tavakkalchilikning tabiati va uni tashkil etuvchi omillar bilan bog'liq.

Ikkita usul guruhi keng qo'llaniladi: empirik ma'lumotlardan foydalanishga asoslangan statistik usullar va mutaxassislar fikri va intuitsiyasiga tayanuvchi ekspert usullari.

Statistik usullarda, agar tavakkalchilik bilan bog'liq bo'lgan zarar miqdori taqsimot funksiyasi bilan tavsiflanadigan bo'lsa, uning matematik kutilmasi, medianasi va kvantilari, dispersiyasi, o'rtacha kvadratik og'ish, variatsiya koeffitsienti, matematik kutilma va o'rtacha kvadratik og'ishning chiziqli kombinatsiyasi kabi xususiyatlari ko'rib chiqiladi (masalan, an'anaviy ishonch oralig'i uchta sigma qoidasi bo'yicha baholanadi — matematik kutilish plyus-minus uch sigma), yo'qotish funksiyasining matematik kutilishi.

Bu holda zararni baholash vazifasi bir yoki bir nechta sanab o'tilgan xususiyatlarni baholash vazifasi sifatida tushuniladi. Ko'pincha bunday baholashni amaliy ma'lumotlarga asoslanib — oldin sodir bo'lgan shunga o'xshash holatlarga mos keladigan zarar miqdorlari tanlanmasi bo'yicha amalga oshiriladi. Agar amaliy material mavjud bo'lmasa, ekspert baholariga tayaniladi.

Agar noaniqlik ehtimoliy xarakterga ega bo'lsa va yo'qotishlar tasodifiy miqdor bilan tavsiflangan bo'lsa, unda xavfni minimallashtirish xavfli vaziyat yuzaga kelganda yo'qotishlarning matematik kutilmasini minimallashtirishni, yo'qotishlarning ularning o'rtacha kutilgan miqdoridan o'rtacha kvadratik og'ishini minimallashtirishni, matematik kutilma va o'rtacha kvadratik og'ishning chiziqli kombinatsiyasini minimallashtirishni, foyda funksiyasining matematik kutilmasini maksimal qilishni va hokazolarni o'z ichiga olishi mumkin.

Hozirgi kunda keng tarqalgan xavf o'lchovlaridan biri bu aktivning xavf qiymati (value-at-risk, VaR) bo'lib, u ilk bor 1994 yilda J. P. Morgan kompaniyasi tomonidan qo'llanilgan va Bazel bank nazorati qo'mitasi tomonidan qo'llanilishi tavsiya etilgan [1]. VaR kompaniya berilgan ehtimollik bilan olishi mumkin bo'lgan maksimal yo'qotishlarni belgilaydi. Uning katta mashhurligiga qaramay, ushbu o'lchov bir qator kamchiliklarga ega — kichik ehtimollikka ega bo'lgan katta yo'qotishlarni hisobga olmaydi. S. Uryasev [2] shartli xavf qiymati (conditional value-at-risk, CVaR) o'lchovini taklif qildi, bu esa VaRdan kichik bo'lgan daromadlarning matematik kutilmasini belgilaydi. Ushbu xavf o'lchovi kutilgan daromad taqsimoti og'ir dumi bo'lgan holatlarda xavfni ko'proq adekvat baholaydi. Hozirgi vaqtda kvantil xavf o'lchovlari, daraja o'lchovlari va turli indeksni birlashtirgan o'lchovsiz (indeksli) xavf o'lchovlarini ishlab chiqish bo'yicha ishlar olib borilmoqda [7, 2].

Mos boshqaruv parametrlar majmuasi yordamida tasvirlangan ko'plab ruxsat etilgan boshqaruv ta'sirlarini ajratish mumkin. Keyin, maqsadga erishish darajasini aniqlaydigan xavf xususiyatlariga ta'sir qilish imkoniyati boshqaruv parametrining qiymatini tanlash sifatida rasmiylashtiriladi. Bunda boshqaruv parametri raqam, vektor, cheklangan majmuaning elementi yoki murakkab matematik tabiatga ega bo'lishi mumkin. Asosiy muammo xavfni boshqarish maqsadini to'g'ri belgilashdir. Xavfning turli xususiyatlari spektri mavjud bo'lgani uchun, xavfni boshqarish optimallashtirish ko'p kriteriyali optimallashtirish vazifasini hal qilishga olib keladi. Masalan, o'rtacha yo'qotish (yo'qotishning matematik kutilmasi) va yo'qotishlarning tarqalishini (yo'qotishning o'rtacha kvadratik og'ishi) bir vaqtning o'zida minimallashtirish vazifasi tabiiy hisoblanadi.

Kredit portfeli sifatini boshqarish usullari, kredit xavfini kamaytirishga qaratilgan, turli va turli yo'nalishli. Ularga quyidagilar kiradi:

- qarz oluvchining kreditga layoqatini baholash va baholash usullarini takomillashtirish;
- kredit qarorini qabul qilish vakolatlarini kredit miqdori va potentsial yo'qotish miqdoriga qarab taqsimlash;
- to'lov intizomini monitoring qilish va muammoli qarz oluvchilar bilan ishlashni tashkil etish;
- shartnoma shartlarida nazarda tutilgan qarz shartlarini himoya qilish (axborot ta'minotini yaxshilash, jarimalar, penya, shartnoma buzilishi, foiz stavkalarining oshishi);

- ichki maxsus tashkiliy tuzilmalar (xavfsizlik xizmati) faoliyatini samaradorligini oshirish;

shuningdek, xavfli voqealar yuz berishining oqibatlariga qaratilgan boshqaruv usullari:

- kredit portfelini diversifikatsiya qilish, kredit sifatining bir yoki bir nechta xususiyatlari bo'yicha xavf konsentratsiyasini kamaytirish maqsadida;

- bir qarz oluvchiga beriladigan kredit miqdorini cheklash.

Ushbu tadqiqotda kredit portfelini diversifikatsiya qilish usuli ko'rib chiqilgan. O'zbekiston tijorat banklarining faoliyatini samarali boshqarishga oid kredit portfeli sifatini boshqarish sohasida qiziqishni oshirgan. Banklar bilan mijozlar orasidagi ishlovlarda yangi vositalar va qarorlar izlash, ularning yuqori sifatini ta'minlash va kredit portfelini boshqarishda samarali ishlashga oidning umumiy o'rganishini talab qilgan.

Amaliy faoliyatda kredit tashkilotlarining kreditlar qaytarilmaganligi xavfi o'sayotgan sharoitlarida kreditlar xavflarini kamaytirishga qaratilgan usullar va yo'nalishlarni tahlil qilib chiqilgan, kredit xavflarini pastga solishga qaratilgan yondashuvlar va usullar tizimli o'rganilgan. Ko'rsatilganidek, kredit portfelining xavflarini pastga solish uchun, banklarga faqatgina Rossiya Banki tomonidan qo'llaniladigan tartibga solingan normalar kuzatilmasi kerak emas, balki kredit oluvchilarning va kredit portfelining umumiy skoringini etib borish lozim.

Kredit xavflarini boshqarishda taklif etilgan uslubning yangiliklari shundayki: birinchi, uning kredit portfelini shakllantirishga qaror qabul qilishni qo'llab-quvvatlash imkonini beradi, kreditlar muddati boyicha, qabul qilingan shaxsning xavfga qarshi ko'paytmasi bilan aniqlangan kredit xavfining maqbul darajasi bilan mos keladigan; ikkinchisi, uning qo'llanilishi kredit portfelining maksimal daromadini ta'minlashga yordam beradi va bankni moliyaviy xizmatlar bozorida raqobatlik afzalliklarini oshiradi. Taklif etilgan uslubning asosiy tushunchalarining samaradorligi va ma'lumotlar asosida ko'rsatilgan nazoratli banklardan birining amaliyoti haqida olingan ma'lumotlar bilan tasdiqlangan. Natijalar haqiqiylikka muvofiq sabablarga asoslanib, olingan natijalar xavfsizligini tasdiqlangan.

QASHQADARYO VILOYATI IQTISODIY KO'RSATKICHLARI TAHLILI

Annotatsiya. Tarixiy taraqqiyotning turli bosqichlarida Qashqadaryo viloyati xo'jaligi tarmoqlari, uning iqtisodiy rivojlanish darajasi murakkab yo'lni bosib o'tgan. Tarixiy manbalarda berilgan ma'lumotlarga ko'ra, Qashqadaryo o'tmishda mamlakatdagi aholi xo'jalik faoliyati g'oyat qizg'in kechgan eng qadimiy o'lkalardan biri bo'lgan. Mamlakatimizning g'arb bilan sharq o'rtasidagi iqtisodiy taraqqiyot uchun qulay bo'lgan geografik o'rni, sahiy tabiati, boy va rang-barang tabiat resurslari, mehnat va mardona xalqi umumbashariy taraqqiyotga munosib hissa qo'shaolgan hudud hisoblanadi. Ushbu maqolada Qashqadaryo viloyati iqtisodiyoti haqida ma'lumot berilgan.

Kalit so'zlar: Iqtisodiyot, sanoat uzeli, mehnat resurslari, migratsiya, aholi bandligi, infratuzilma, ijtimoiy soha, diversifikasiya, sanoat ishlab chiqarish, xizmat doirasi.

ANALYSIS OF ECONOMIC INDICATORS OF KASHKADARYA REGION

Abstract. At different stages of the historical development of the economic sector of the Kashkadarya region, its level of economic development has passed a difficult path. According to information given in historical sources, Kashkadarya was one of the oldest regions of the country, where in the past the economic activity of the population was very intense. Our country's favorable geographical position for economic development between the West and the East, its generous nature, rich and varied natural resources, hardworking and courageous people are considered a region that has made a worthy contribution to world development. This article provides information about the economy of the Kashkadarya region.

Key words: Economy, industrial hub, labor resources, migration, employment, infrastructure, social sphere, diversification, industrial production, service sector.

Qashqadaryo – mamlakat neft va gaz sanoatining tayanchi hisoblanadi. Qashqadaryo viloyatida 150 ga yaqin sanoat korxonasi faoliyat yuritmoqda. Ularning asosiy qismi neft va gaz, paxta tozalash, binokorlik, yengil hamda oziq-ovqat sanoatiga ixtisoslashgan.

Eng yirik korxonalari: «Muborakneftgaz» unitar korxonasi, Shoʻrtan gaz unitar korxonasi, Muborak gazni qayta ishlash zavodi, Shoʻrtan gaz kimyo majmuasi, Qarshi, Koson yogʻ ekstraksiya, Shahrisabz konserva zavodlari, Shahrisabz pillakashlik, Qarshi tikuvchilik fabrikalari, Qashqadaryo marmar aksiyadorlik jamiyati va boshqalar 49 qoʻshma korxonalar faoliyat koʻrsatadi, shulardan: Oʻzbekiston – Turkiya «Kashteks» toʻqimachilik, «Oqsaroy toʻqimachilik LTD» qoʻshma korxonalari ishlamoqda.

Shoʻrtan gaz-kimyo majmuasi — Oʻzbekistondagi eng yirik gaz sanoati korxonalaridan biri. «Oʻzbekneftgaz» milliy xolding kompaniyasi tarkibiga kiruvchi unitar shoʻba korxonalar. Qashqadaryo viloyatining Gʻuzor tumanidagi Shoʻrtan shaharchasida joylashgan boʻlib, 150 ga dan ortiq maydonni egallaydi.

Mahalliy konlardan olinadigan gazni qayta ishlab, organik sintez, polietilen, yoqilgʻi gazi, suyultirilgan gaz, gaz kondensati, donador oltingugurt, polietilen tagliklar, polietilen plyonkalar ishlab chiqaradi. Qarshi choʻlining janubi gʻarbiy qismida vodorod sulfatidan gaz ajratib oladigan ulkan gaz sanoati markazi joylashgan.

Iqtisodiy tadqiqotlar va islohotlar markazi Qashqadaryo filiali tomonidan viloyatning 2022 yil yanvar-dekabr oylaridagi asosiy makroiqtisodiy koʻrsatkichlari tahlil qilindi. Viloyatda yaratilgan YaHMning Respublika yalpi ichki mahsulotidagi ulushi 5,6 % boʻlgan holda Toshkent shahri, Toshkent, Navoiy, Samarqand, Fargʻona, Andijon viloyatlaridan keyingi 7-oʻrinni egallagan. YaHM da kichik biznes va xususiy tadbirkorlikning ulushi 69,9%ni tashkil qilgan.

Viloyatda 22 814,7 mlrd soʻmlik sanoat mahsulotlari ishlab chiqarilgan boʻlib, oʻtgan yilning mos davriga nisbatan 10,5 foiz (oʻsish koʻrsatkichi boʻyicha Respublika hududlari orasida 3-oʻrin) ga oshgan. Viloyatda ishlab chiqarilgan sanoat mahsulotlarining respublika sanoatidagi ulushi 4,1 foizni va hududlar orasida 8-oʻrinni egallagan. Shuningdek, viloyat sanoati tarkibida togʻ-kon sanoatining ulushi – 7,5 %, ishlab chiqariladigan sanoat - 68,2%, elektr, gaz, bugʻ bilan taʼminlash va havoni konditsiyalash sanoati - 23,8 %, suv bilan taʼminlash, kanalizatsiya tizimi, chiqindilarni yigʻish va utilizatsiya qilish sanoati - 0,5 %ni tashkil qilgan. Jon boshiga toʻgʻri keladigan sanoat mahsulotlari hajmi 1 376,7 ming soʻm (*Respublika hududlari orasida 12-oʻrin*) boʻlgan holda oʻtgan yilning mos davriga nisbatan 102,5 foizga oshgan.

Viloyatda 4 763,1 mlrd soʻmlik (2021 yilning mos davriga nisbatan 9,0%) isteʼmol tovarlari ishlab chiqarilgan boʻlib, respublikadagi ulushi 2,4 foizni tashkil qilgan holda hududlar orasida 11-oʻrinni egallagan. Tahlil qilinayotgan davr mobaynida ishlab chiqarilgan oziq-ovqat tovarlari hajmi 2878,6 mlrd soʻm (oʻsish koʻrsatkichi 108,3%), nooziq-ovqat tovarlari 1884,5 mlrd soʻmni (110,2%) tashkil qilgan.

Qishloq, oʻrmon va baliqchilik xoʻjaligida 33 384,6 mlrd soʻmlik mahsulotlari ishlab chiqarilgan boʻlib, oʻtgan yilning mos davriga nisbatan 103,7 % ga oshgan. Respublika qishloq xoʻjaligida viloyatning ulushi 9,2 % boʻlgan holda, hududlar orasida 5-oʻrinni egallagan. Jon boshiga toʻgʻri keluvchi qishloq xoʻjaligi mahsulotlari hajmi 9 689,4 ming soʻmni tashkil qilgan.

Xizmat koʻrsatish sohasida koʻrsatilgan bozor xizmatlari hajmi 15 945,8 mlrd soʻm boʻlgan holda, 114,1 % ga oshgan. Xizmatlar hajmining respublika koʻrsatkichidagi ulushi 4,5 % boʻlib, hududlar orasida 7-oʻrinni egallagan. Jon boshiga toʻgʻri keladigan xizmatlar hajmi esa 4 628 ming soʻmni tashkil qilgan.

Chakana savdo hajmi 20 504,8 mlrd. soʻm (112,5%), respublikadagi ulushi 6,4 % ni boʻlgan holda, hududlar orasida 6-oʻrinni egallagan. Jon boshiga toʻgʻri keluvchi chakana savdo hajmi 5 951,2 ming soʻm (hududlar orasida 12-oʻrin) ni tashkil etib, oʻtgan yilning mos davriga nisbatan 110,1 foizga oshgan.

Qurilish ishlari hajmi 7 831,1 mlrd. soʻmni (oʻtgan yilning mos davriga nisbatan 105,8 %), respublikadagi ulushi 6,0%ni tashkil etib, hududlar orasida 6-oʻrinni egallagan.

Asosiy kapitalga kiritilgan investitsiyalar hajmi 16 181,5 mlrd soʻmni (oʻtgan yilning mos davriga nisbatan 80,8 %), respublikadagi ulushi 6,1% (hududlar orasida 6-oʻrin)ni tashkil qilgan. Jon boshiga toʻgʻri keladigan asosiy kapitalga kiritilgan investitsiyalar hajmi 4 696,4 ming soʻmni tashkil qilgan.

Tashqi savdo aylanmasi hajmi 547,5 mln AQSh dollarini tashkil qilgan holda, oʻtgan yilga nisbatan 96,8 foizni tashkil etgan. Viloyat tashqi savdo aylanmasining respublika jami tashqi savdo aylanmasidagi ulushi 1,1% boʻlib, hududlar orasida 13-oʻrinni egallagan. Tashqi savdo aylanmasi tarkibida eksport – 303,4 mln AQSh dollari (112,3% oʻsish) ni, import – 244,1 mln AQSh dollari (82,6%) ga teng boʻlgan. 2022 yilning yanvar-dekabr oylarida viloyatda 8 551 ta (oʻtgan yilga nisbatan 90,4%) yangi kichik biznes subʼyektlari tashkil etilgan.

2024- yilning yanvar-fevral oylarida Qashqadaryo viloyatida jami 852 ta yangi korxonalar (fermer va dehqon xoʻjaliklarisiz) tashkil etilib, ular iqtisodiy faoliyat turlari boʻyicha quyidagicha taqsimlangan:

- ✓ savdo sohasida – 276 ta
- ✓ qishloq, oʻrmon va baliqchilik xoʻjaligi sohasida – 175 ta
- ✓ sanoat sohasida – 125 ta
- ✓ yashash va ovqatlanish boʻyicha xizmatlar sohasida – 64 ta
- ✓ qurilish sohasida – 38 ta
- ✓ axborot va aloqa sohasida – 31 ta
- ✓ tashish va saqlash sohasida – 22 ta

- ✓ sog'liqni saqlash va ijtimoiy xizmatlar sohasida – 14 ta
- ✓ boshqa sohalarda – 107 tani tashkil etdi.

Qashqadaryo viloyatining ma'muriy, siyosiy, iqtisodiy va madaniy markazi Qarshi shahri hisoblanadi. Qarshi Janubiy O'zbekistonning yirik shahri bo'lib, 1926 yilda tashkil topgan. Shahar maydoni 75,51 km² ni tashkil qiladi. Aholisi 295,6 ming kishi, aholining soni jihatidan respublika shaharlari orasida 8-o'rindadir. Shaharning iqtisodiy geografik o'rni juda qulay. Qarshi shahri viloyatning va o'zlashtirilgan Qarshi dashtining deyarli markazida asosiy temir va avtomobil yo'llari kesishgan yerda, qadimdan dehqonchilik intensiv rivojlangan voha bilan keng yaylovlar Qarshi-Zarafshon, Surxon-Sherobod vodiysi oralig'ida va qulay sanoat uzeldi joylashgan. Ayni vaqtda respublika miqyosidagi ishlab chiqarish kuchlari tez rivojlanayotgan hududda o'rtnashgan. Bugungi Qarshi ko'p funksiyali shahar hisoblanadi. Shahardagi sanoat tarmoqlari tarkibida yengil sanoat va oziq-ovqat sanoati yetakchi o'rin tutadi. Paxta tozalash zavodi, yog'-sut zavodi, tikuv fabrikasi, qurilish materiallari, metallarga ishlov beruvchi kombinatlar viloyat iqtisodiyotining rivojiga munosib ulush qo'shib kelmoqda. Hozirgi vaqtda Qarshi shahrida 20 dan ortiq qo'shma korxonalar faoliyat ko'rsatadi. «Mevalar kamalagi» O'zbekiston-Britaniya, «Qarshiyog'» O'zbekiston-Singapur qo'shma korxonalari mahalliy xomashyoni qayta ishlash yo'li bilan mahsulot ishlab chiqaradi. Qarshi va uning tevaragida paxta, ipak, yog' zavodlari, metal ishlash korxonalari, tikuvchilik fabrikalari, binokorlik materiallari kombinati kabi korxonalar qurilib, Qarshi sanoat tuguniga aylandi. Cho'lni o'zlashtirishda Qarshi tayanch manzil hisoblanadi. Temiryo'l va avtomobil yo'llari Qarshida birlashadi. Bu hol Nishon, Talimarjon, Koson kabi shahar va shaharchalarning ishlab chiqarish aloqalarini rivojlantiradi. Shaharda Qarshi davlat universiteti, Qarshi muhandislik-iqtisodiyot instituti, Toshkent axborot texnologiyalari universitetining Qarshi filiali va boshqa ta'lim muassasalari bor.

Qashqadaryo viloyati ishlab chiqarish kuchlarini yanada rivojlantirish uchun katta moddiy texnika baza, mineral, yer hamda mehnat resurslariga ega. Shu boisdan, Qashqadaryo viloyati O'zbekiston xalq xo'jaligi majmuasi tarkibida muhim iqtisodiy mavqega ega. Mavjud imkoniyatlardan foydalanish kelgusida bu yerda respublika ahamiyatiga ega bo'lgan yirik dehqonchilik sanoati majmuasini vujudga keltirish imkonini beradi. Viloyatning ishlab chiqarish sohasidagi ixtisoslashuvini belgilovchi uch tarmoq majmuasi, paxta-g'allachilik, mevasabzavotchilik va neft-gaz sanoati rivojlantiriladi. Kelajakda viloyatdagi tabiiy va iqtisodiy imkoniyatlar hisobga olingan holda sanoat ancha rivojlantiriladi, sanoat korxonalarini oqilona joylashtirish, mehnat resurslaridan to'laroq foydalanish, xalq xo'jaligini malakali kadrlar bilan ta'minlash kabi vazifalar hal etiladi.

THE EFFECT OF CLIMATE CHANGE ON NATURAL GEOGRAPHICAL PROCESSES (FOR THE EXAMPLE OF FERGANA VALLEY)

Abstract. This article describes the specific features of the natural geographical processes occurring in the Fergana Valley. Also, the impact of climate change on the natural geographical processes of the Fergana Valley has been studied.

Keywords: global climate change, natural geographical processes, environmental protection, natural landscapes, anthropogenic factors.

The geomorphological structure of the Fergana Valley plays a key role in the formation of unique natural processes. The natural processes that have formed and can occur in the Fergana Valley are distinguished by their location, cause, scale, associated material damage and other characteristics. Nowadays, one of the most important tasks is to forecast the occurrence of natural disasters, to warn the public authorities and the population about the impending disaster. Geophysical, geological, hydrogeological, atmospheric and other factors play a key role in the formation of natural disasters in the regions of the Fergana Valley. Earthquakes, landslides, mudslides, floods, and floods occur relatively often in the valley. This, in turn, causes material damage to the national economy to varying degrees, and puts people's lives in danger.

The surface of the Fergana valley rises in steps depending on the height. The central part of the valley, occupying areas with an absolute height of 300-400 m, and the part up to the current valley of the Syrdarya River, is considered the first step, and in this area, mainly there are salt marshes, places of lakes and sand dunes. The regions of the Fergana Valley at an altitude of 400-600 m are the second level, which occupies the expanses of rivers and partly streams. The regions of the relief of the Fergana valley, rising to a height of 600-1200 m, consist of adyrs. This is the third step, rocks, gravel, mud and clay mixed rocks and low elevations are characteristic of the adyrs. The mountains above 1200 m and surrounding the valley form the fourth level. They consist of strongly broken, sloping slopes. This division of the relief causes an increase in the slope.

By the 70s of the 20th century, the hills of the Fergana Valley were developed for the purpose of irrigated agriculture. By organizing the development of viticulture, horticulture and other types of agricultural industries in the hills,

hilly lands with complex topography have begun to be strongly transformed. The adyrs are the main land fund in the valley and are widely used in irrigated agriculture. As a result of such exploitation of hills, non-compliance with agrotechnical rules of irrigation, unique natural and natural-anthropogenic processes are taking place. These include soil erosion, landslides, soil salinization, impoverishment of flora and fauna. Such a situation can be found in the cultivated hills of Kosonsoy, Turakurgan, Chust, Pap, Chartak, Yangikurgan and Uchkurgan, Beshariq, Sokh, Rishtan, Kuva, Markhamat, Asaka, Khujaabad, Kurgantepa, Khonobad districts of the valley. At present, inappropriate and unsatisfactory processes related to irrigation development have intensified in the area of more than 250,000 hectares of the Northern and Southern Fergana adyrs. Also, one of the biggest problems related to irrigation is the rise of groundwater in the lower parts of the mountain slopes (Chartak, Yangikurgan, Kasansay, Beshariq, Rishton, Kuva, Tashlak, etc.), has also led to increased waterlogging and salinization. For example, the exploitation of Chartak adyrs has caused groundwater to escape from residential areas (Fig. 1).

Fig. 1. Consequences of development of Chartak adyrs

Another of the most active and noticeable natural geographical processes in the Fergana Valley is the process of ravine erosion. The process of ravine erosion occurs under the influence of natural, anthropogenic and combined factors. A. Nigmatov and A. Dadakhoyhayev (1995) studied the processes of ravines in the hills of Northern Fergana and their causes.

According to the results of the conducted research, in order to prevent such natural processes, it is necessary to plant trees on the slopes, improve the condition of meadows, open the old floodplains and valley roads, timely repair existing floodplains and it is appropriate to use other hydrological measures. Adyr region

is one of the most influential regions of the valley, and the impact of the activities carried out here is reflected not only in them, but also spreads to the lower regions. Therefore, development and use of hills requires careful attitude.

Fig. 2. Consequences of development of hills (ravine erosion) (adysrs of Northern Fergana).

Currently, there are flood-prone areas in the mountainous and sub-mountainous zones of the republic, which is about 46,000 km². In particular, the stepped structure of the Fergana Valley is the basis for the occurrence of floods and landslides. These processes were studied by S.A.Shuvalov (1957), F.K.Kocherga (1962), A.Saidovlar (1971). According to them, floods and floods are formed under the influence of: 1) the structure of the surface layer of the place, 2) relief and geomorphological factors, 3) hydrolithological factors [1, 2, 3]. As a result of heavy rainfall and rapid melting of snow in Kurama, Chotkal, Fergana, Turkestan and Aloy mountain ranges surrounding the Fergana valley, floods often occur in Chartak, Yangikurgan, Kasansay, Turakurgan, Chust, Pap, Sokh, Rishton, Kuvasay, Khonobod, Markhamat districts. Flood events are seasonal in nature. Floods that occur in streams in the foothills and hills increase in early spring. Because in these regions, the amount of rain is high in March-April, and at this time, the soil has a lot of moisture. As a result, a 1.4-1.6 times increase in rainfall causes floods and floods to increase by 1.1 times in March and up to 3 times in April. The magnitude of the terrain slope also causes floods and landslides. For example, as a result of an increase in the amount of precipitation, floods and floods increase 1.5 times in areas with a slope of 10 degrees, and 2.8 times in areas with a slope of 20 degrees [1]. The presence of lakes with natural dams (Kurbankol) in the mountainous regions of the Fergana Valley remains a risk of flooding. In this place, the flood that occurred on the night of July 7-8, 1998 in the village of Shahimardan of Fergana region caused a huge disaster. Due to the sudden warming of the air, the melting of snow accelerated and a large flow of water appeared. This flow joined the Shahimardan stream, increasing its water capacity by 200-300 m³/sec, and as a result of the strong flow, 52 households and

36 recreation centers were damaged. Also, the construction of hydrotechnical structures of various sizes in the Fergana Valley increases the risk of flooding. For example, on May 1, 1979, the flood that occurred as a result of the failure of the Chartak reservoir caused the flooding of agricultural fields and partially residential areas in the district.

Plants is the main factor in reducing the occurrence of flood events. In mountainous and sub-mountainous areas, the abundance of plants increases the infiltration of rainwater into the soil, which reduces the risk of floods and landslides. The lack of plants helps the snow to melt quickly and the rainwater to form a stream without being absorbed into the ground, which increases the risk of floods and landslides. In accordance with this, it is necessary to implement measures such as regulation of the use of mountain slopes as pasture, prevention of cutting down of trees by the population (Table 1.).

Table 1.

The degree of change in the nature of the Fergana valley

Rate of change	Areas	The main problems observed
Weak	Sub-mountainous and mountainous	Erosion, deforestation, permanent change and pollution of the natural environment during the extraction of minerals, landslides, improper use of pastures, vegetation degradation, floods and landslides, mountain collapses, karst phenomena, snow cover 'chkili
Average	Adyrs	Permanent irrigation erosion, floods and landslides, erosion, suffocation, soil salinization and swamping in adirorti plains, vegetation degradation
Strong	The plain	Atmospheric air pollution, groundwater rising, salinization, wind erosion, waterlogging, siltation of collector and drainage networks, pollution of open water bodies, generation of domestic waste are characteristic.

In short, the high anthropogenic pressure on the nature of the Fergana Valley is causing geocological problems. From this point of view, solving the ecological problems arising in the process of using nature, studying them on a scientific basis, and ensuring the stability of its protection are among the urgent issues of today.

MUSIC TEACHER AND HIS PROFESSIONAL SKILLS

Abstract. This article talks about the modern music teacher and his requirements, sources of pedagogical technologies, methodological bases and their types, educational content and its mastery.

Key words: pedagogy, methodology, basis, music, modern, technology, teacher, method, independent, research.

Pedagogik texnologiyaning manbalari, metodologik asoslari va uning turlari va ta'lim mazmunini o'zlashtirishda o'qituvchilarning bilim saviyasi, o'zlashtirish qobiliyati, ta'lim manbai, didaktik vazifalariga qarab, munosib ravishda og'zaki, ko'rgazmali va amaliy kabi uch guruhga bo'linadigan metodlarning quyidagi variantlari qo'llaniladi:

- o'qitishning ma'ruza (suhbat) metodi; - o'qitishning amaliy ishlar metodi; - laboratoriya ishlari metodi;
- mustaqil ishlar metodi;
- muammoli-evristik modellashtirish metodi;
- ilmiy-tadqiqot metodlari;
- o'qitishning muammoli-izlanish va reproduktiv metodi;
- o'qitishning induktiv va deduktiv metodi;
- o'qitishning nazorat va o'z-o'zini nazorat qilish metodi.

Yuqoridagilarga asoslangan holda shuni aytish mumkinki, ta'lim muassasalarida yangi pedagogik texnologiyalar, zamonaviy o'qitish uslublaridan foydalanib, jahon talablari darajasida o'qituvchi va talabalarni o'qitish mumkin.

Zamonaviy o'qituvchi - kelajak bunyodkori, yangi pedagogik texnologiyalar, nazariyalar, konsepsiyalarning muallifi, ishlab chiqaruvchisi, tadqiqotchisi, foydalanuvchisi va targ'ibotchisidir.

O'qituvchining pedagogik mahorati - o'quv jarayonining barcha shakllarini eng qulay va samarali holatda tashkil etish, ularni shaxs kamoloti maqsadlari tomon yo'naltirish, talaba- o'quvchilarda dunyoqarash qobiliyatini shakllantirish, jamiyat uchun zarur bo'lgan faoliyatga moyillik uyg'otish asosiy vazifalardan hisoblaniladi.

Pedagogik maqsadning o'ziga xosligini quyidagilarda bilish mumkin:

Pedagogik faoliyatning maqsadi jamiyat tomonidan belgilanadi, ya'ni pedagogik faoliyatning natijasi jamiyat manfaatlari bilan bog'liqdir. Uning mehnati yoshlar shaxsini har tomonlama kamol toptirishga yo'naltirilgan. Pedagogik faoliyat avlodning ijtimoiy uzviyligi (ketma-ketligi)ni ta'minlaydi. Bir avlod tajribasini, ikkinchi avlodga o'tkazadi, ijtimoiy tajriba orttirish uchun insondagi tabiiy imkoniyatlarni ro'yobga chiqaradi.

Pedagog faoliyati doimo shaxs faoliyatini boshqarish bilan bog'liq. Bunda pedagogik maqsad o'quvchi maqsadiga aylanishi muhimdir. Pedagog o'z faoliyati maqsadini va unga erishish yo'llarini aniq tasavvur qilishi hamda bu maqsadga erishish o'quvchilar uchun ham ahamiyatli ekanligini ularga anglata olishi zarur. Gyote ta'kidlaganidek: «Ishonch bilan gapir, ana shunda so'z ham, tinglovchilarni mahliyo qilish ham o'z-o'zidan kelaveradi».

Pedagogik ta'lim-tarbiya jarayonida o'quvchi faoliyatini boshqarish shuning uchun ham murakkabki, pedagog maqsadi doimo o'quvchi kelajagi tomon yo'naltirilgan bo'ladi. Buni anglagan holda mohir pedagoglar o'z faoliyatining mantiqini o'quvchilar ehtiyojlariga muvofiq holda loyihalaydilar. Hamkorlik pedagogikasining tub mohiyati ham ana shundan iborat.

Shunday qilib, pedagogik faoliyat maqsadining o'ziga xosligi o'qituvchidan quyidagilarni talab qiladi:

- jamiyatning ijtimoiy vazifalarini to'la anglab, o'z shaxsiga qabul qilishi.

Jamiyat maqsadlarinrng «o'sib», uning pedagogik nuqtai nazariga aylanishi;

- muayyan harakat va vazifalarga ijodiy yondashishi;

- o'quvchilar qiziqishlarini e'tiborga olish, ularni pedagogik faoliyatning belgilangan maqsadlariga aylantirish.

- Pedagogik faoliyatning o'ziga xosligi quyidagilarda namoyon bo'ladi:

Inson o'zining alohida xususiyatlariga ega bo'lgan, ro'y berayotgan voqealarni idrok qila oladigan va ularga o'zicha baho beradigan takrorlanmaydigan faol mavjudotdir. Psixologiyada ta'kidlanganidek, har bir shaxs takrorlanmasdir. U pedagogik jarayonning o'z maqsadi, ishtiyoqi va shaxsiy xulqqa ega bo'lgan ishtirokchisi hamdir. Pedagog doimo o'sib-o'zgarib boradigan inson bilan ishlaydi. Ularga yondashishda bir xil qolip, shakllanib qolgan hatti-harakatlardan foydalanish mumkin emas. Bu esa pedagogdan doimo ijodiy izlanib turishni talab qiladi.

O'quvchilarga pedagogdan tashqari, atrof-muhit, ota-ona, boshqa fan o'qituvchilari, ommaviy axborot vositalari, ijtimoiy hayot ham ta'sir etadi. Shuning uchun ham pedagog mehnati bir vaqtning o'zida jamiki ta'sirlarga va o'quvchilarning o'zida paydo bo'lgan fikrlarga tuzatishlar kiritib borishni nazarda tutadi.

O'quvchi shaxsiga doimo ijobiy-axloqiy ta'sir ko'rsata oladigan kishigina haqiqiy tarbiyachi hisoblanadi. Bunga erishish uchun pedagog o'zining axloqiy sifatlarini doimo takomillashtirib borishi talab etiladi.

O'quvchilarni mehnat, muloqot, o'yin, o'qish kabi faoliyat turlarida ishtirok etishlari tarbiyaning asosiy vositasi hisoblanadi. Har bir mohir pedagog o'zining individual pedagogik tizimiga ega bo'lishi lozim. Bunda albatta mamlakatimizdagi ilm-fan, ta'lim, milliy-madaniy qadriyatlar, hamda musiqiy meros, musiqiy ijrochilik, xonandalikdagi qator yutuqlarimiz bilan o'quvchi-yoshlarni tanishtirib borish katta ahamiyat kasb etadi. U o'quvchi-yoshlar psixologiyasini o'rganishi va har biriga nisbatan individual yondoshishi, dars va mashg'ulot jarayonida ularning talab va istaklari qondirilishi uchun harakat qilishi, yaxshi ijodiy natijaga erishishga, har bir o'quvchi-yoshlarni safarbar eta olishi, bir so'z bilan aytganda, yoshlarning ma'naviy ehtiyojini qondirish uchun sharoit yaratishi lozim. Ushbu vazifalarni amalga oshirishda undan yuqori badiiy did, yangilikni tez his qilish, hayot bilan hamnafas bo'lish, mohir tashkilotchilik qobiliyati talab qilinadi. Bosh vazifa - badiiy ijodiyot yoki san'atning biror tor yo'nalishi bo'yicha mutaxassislar tayyorlash emas, balki, har tomonlama komil insonni tarbiyalash uchun uni axloqiy pok, go'zallik va ezgulikni yaxshi his eta oladigan, o'z axloqi bilan boshqalarga o'rnak bo'la oladigan ma'naviy etuk insonlarni tarbiyalash ishiga ko'maklashishdir.

Musiqqa madaniyati o'quv predmeti umumiy o'rta ta'lim maktablarida o'qitiladigan barcha o'quv predmetlari, jumladan, adabiyot, tasviriy san'at, jismoniy tarbiya, mehnat va boshqa fanlar bilan bog'lanadi. Barcha o'quv fanlari qatori musiqiy ta'limda ham DTSlarning joriy etilishi, milliy musiqiy meroslardan to'la qonli foydalanish imkonini beradi. Bular amaliy xalq kuy va qo'shiqlarida, xonanda va sozandalarning ijodiy faoliyatlarida, maqom, shashmaqom, dostonlar va bugungi zamonaviy musiqqa asarlarida o'z aksini topdi. Musiqqa san'atining bu kabi imkoniyatlari yangi avlodni tarbiyalashda, ularning barkamol bo'lib yetishlarida o'ziga xos va takrorlanmas manbaa bo'lib xizmat qiladi. Azaldan Sharq, jumladan, o'zbek musiqqa ta'lim-tarbiyasi pedagogikasi va uning mukammal ustoz va shogird an'analari misolida takomillashib borgan.

Davlat ta'lim standartlarida ommaviy xalq musiqqa pedagogikasi, professional musiqqa ijodkorlari, musiqqa ijrochilari (sozanda, xonandalar) katta ashulachilar, maqomchilar, dostonchilar tomonidan asarlarning elementar asoslarini o'rganish me'yorlashtirilgan. Musiqqa ta'limida davlat ta'lim Standartlari asosida yangi ta'lim mazmuni o'quvchilarning musiqiy bilim va malakalari bilan birga ularda kuzatuvchanlik, xotirani mustahkamlash, obrazli tassavur qilish, ularda ijodkorlik, mustaqillik, tashabbuskorlik, badiiy va musiqiy

did kabi xislatlarni rivojlantirishni ta'minlaydi. Musiqa madaniyati ta'limining yangi mazmuni yosh avlodni milliy musiqiy merosimizga vorislik qila oladigan, umumbashariy, musiqa boyligini idrok eta oladigan madaniyatli inson darajasida voyaga yetkazishni nazarda tutadi. Bunda o'quvchilar musiqa san'atini butun nafosati bilan o'rganishlari, ommaviy musiqa faoliyatlari: musiqani badiiy idrok etish, yakka va jamoa bo'lib qo'shiq kuylash, raqsga tushish va ijodkorlik malakalarini shakllantirish asosiy maqsad bo'lib hisoblaniladi. Shuningdek, o'quvchilar musiqiy iqtidorni rivojlantirish, musiqa san'atiga mehr va ishtiyoqni oshirish, musiqa san'atiga qiziquvchi o'quvchilarning o'sishlari uchun zaruriy shartsharoitlar yaratib berish, ularning badiiy extiyojlarini qondirish musiqiy ta'lim - tarbiyaning asosiy vazifasini tashkil etadi. Shu bilan bir qatorda, jahon xalqlarining umuminsoniy musiqiy qadriyatlarini ham chuqur o'rganish, yosh avlodni xalqaro nufuzga moyillik bo'lgan madaniy durdonalardan baxramand bo'lishni ta'minlaydi.

GROWTH AND PRODUCTIVITY INDICATORS OF VEGETABLE (SWEET) MAIZE MEGATON F1 AND GOLD F1 HYBRIDS IN SOUTHERN REGIONS

Abstract. The article analyzes the growth development and productivity indicators of the vegetable sweet corn Megaton F1 and Gold F1 plants in the conditions of the southern region Kashkadarya and presents the results obtained.

Key words. Sweet corn, hybrid, growth, yield, productivity, fertilization.

Introduction. One of the main problems in world agriculture is the lack of quality and nutritious food products. Because of its rich nutritional value, sweet corn is eaten when the unripe cobs are plump. It is usually eaten boiled, steamed or fried and mixed with various vegetables. Sweet corn (*Zea mays ssp. saccharata*) is becoming more and more important among the many subspecies of corn cultivated [2,5]. Sweet corn's taste and nutritional value have made it a prized crop in all countries, and sweet corn production is steadily increasing among countries around the world. The yield and productivity of sweet corn varies depending on the specific fertility status of the soil, the season of planting, the variety and species planted. Among other factors, the yield of sweet corn is influenced by the fertility status of the soil and the amount of fertilizers applied [3].

Materials and methods. Field experiments were carried out in 2022-2023 in the conditions of light gray soils that have been irrigated since ancient times in Karshi district of Kashkadarya region. The purpose of the study is to evaluate the growth, development and productivity of vegetable corn Megaton F1(st) and Gold F1 hybrids as main and repeated crops in different periods. Planting was carried out in 70x20 scheme as main crop on 10.03, 20.03, 20.04, 10.05 as repeated crop on 30.06, 10.07, 20.07 at a depth of 4-5 cm.

Megaton F1(st) is a hybrid heterozygous plant that produces bright yellow full and dense seeded pods at pod maturity. The pods are perfect for eating, storing and canning when they are ripe. According to the growth period, it is a medium hybrid. With a strong root system, the plant forms stems that are resistant to falling under the influence of wind. At the time of the plant stumps, 1.8-2 pieces of almost the same size are formed on each stem of the same cylindrical shape. The amount of dry matter in the plant is 28%. The height of the formation of the fertile joint in the plant is 75-80 cm. The length of the stumps is 24-26 cm, and when good agrotechnics are used, it produces a stump of 28-30 cm. The side section of the bulb is 5 cm and forms full and dense large grains with 18-20 rows. The product

does not lose its quality for a long time. A hybrid suitable for main and repeated planting, resistant to blister and powdery mildew disease [5,7].

Gold F1 is a sweet corn hybrid suitable for main and repeat crops and requires relatively warm temperatures. For the growth and development of the hybrid, the optimum temperature of the soil is required to be around 20-25 °C. When hybrid seeds are sown with a favorable planting time and a favorable soil environment, the seeds will produce uniform lawns in 7-10 days. It is a hybrid medium-sized plant with a growing period of 90-100 days[5,7].

During the experiment, seeds were sown at a depth of 4-5 cm in 10.03, 20.03, 20.04 and 10.05 as the main crop. During the planting period, the precipitation was observed in March, and the germination process was 7-10 days, and in the other periods, 5-7 days, respectively. The process of sprouting took place with the formation of even grasses. In the course of the experiments, when the height of the plants reached 12-15 cm, the treatment between the first row was carried out.

It can be seen from the data that germination was delayed in both hybrids planted in 10.03 period. It was found that Megaton F1(st) hybrid slightly outperformed Gold F1 hybrid in terms of germination index even at relatively low temperature. Almost no differences were observed in the seeds sown in the period 20.03. Germination was found to be 80-81%. When it was planted in 20.04 period, it was observed that the germination rate was equal in both varieties, i.e. 97-98%. When planted in the 10.05 period, a relatively low rate of germination was noted due to the lack of moisture in the soil. It was found that standard plants were formed with uniform growth and development when appropriate agrotechnical measures were applied to plants.

Discussion of research results. According to Table 1, planting periods for plant growth, development and productivity indicators had a significant impact. It was found that Megaton F1(st) and Gold F1 hybrids planted at 10.03 were 175 cm and 178 cm, respectively, with no significant difference in growth. It was found that the samples planted in the 20.03 period were on average 171 cm and 175 cm, respectively.

When planted in this period, the Megaton F₁ hybrid showed relative superiority in terms of plant height. The Gold F₁ hybrid planted in the period of 20.03 has a low height, that is, an average of 175 cm. Among the planting periods, the tallest plants were planted in the 20.04 period, i.e. 172 cm and 180 cm respectively. It was found that the Gold F₁ hybrid recorded a higher result (plant height) than the standard. Hybrids with the lowest results, i.e. 160 cm and 167 cm, appeared when planted at 10.05. In addition, planting dates had a significant effect on changes in other plant characteristics. The joint spacing in the plant changed according to the planting period, the highest (longest joint spacing) result among the periods was recorded on average 20.4 cm and 18.9 cm respectively when planted in the 20.04 period. The shortest joint spacing was 14.2 cm recorded in the Megaton F₁ hybrid planted in 10.05. In the Gold F₁ hybrid, the shortest joint spacing, i.e. 16.7 cm, was observed when it was planted at 20.03. In addition, it was found that the length of the leaves in the plants varied depending on the planting dates, and the plants with the longest leaves were found to be 73.1 cm and 80.1 cm, respectively, when planted in the 10.03 period. During this period,

there was a difference between the length of the leaves of the planted plants, and relatively longer leaves were observed in the Gold F1 hybrid. The plants with the shortest leaves were found to be 70.2 cm and 73.0 cm when planted at 10.05, respectively. It was 7.8 cm and 7.5 cm respectively when planted in 10.03 period. Plants with the shortest leaf width were 6.5 cm and 6.8 cm when planted at 10.05.

When we analyzed the productivity indicators, it was found that the number of pods per bush, the weight of one pod, the number of rows of grains per pod, and the number of grains per pod changed depending on the planting period. In particular, when planted for the main crop, the number of pods per bush was higher when planted in the period of 20.04, i.e. Megaton F1 2.4 units and Gold F1 2.3 units, and when repeated planting, Megaton F1 2.0 units and Gold F1 produced 2.2 units when planted in the period of 10.07. An increase in the weight of the sows was observed in the hybrids planted during these periods, it was 515.4 g and 512.4 g in the main planting and 504.5 g and 499.2 g in the repeated planting. The increase in the number of grain rows in the field was correspondingly, when the Megaton F1 hybrid was planted in the same period, 20 rows of the Gold F1 hybrid were planted, 19 rows of the Gold F1 hybrid, and 18 rows of the Megaton F1 hybrid, and 19 rows of the Gold F1 hybrid were produced. The number of grains in one sow also recorded a high index when it was sown in this period.

Conculution. Planting periods affect the growth, development and productivity of sweet corn, and it was determined that the most favorable planting period was 20.04 hours for the southern region when planted as a main crop, and 10.07 hours for both hybrids when planted as a repeat crop.

TODAY'S STATUS AND INDICATORS OF ELECTRICITY

Annotatiton. In the world, special attention is being paid to the complete and continuous satisfaction of the need for electricity supply of the population and economic sectors, to increase the production of renewable energy sources and to improve the accounting of its supply. According to the World Energy Agency, «in 2021, the volume of renewable electricity production in the world set a new record, accounting for 6% of the total electricity generation and reaching almost 295 GW»

Key words: In the world, consumers, electricity, supply and demand, entities, accounting, relevance and regulatory framework.

Introduction: Attracting large-scale investments to electric power supply entities and improving the reasonable assessment of their financial activity requires increasing the transparency of the assessment of their financial status by effectively establishing accounting in electric power supply entities.

In order to ensure uninterrupted supply of electricity to consumers in the world, special attention is paid to the research on ensuring their financial stability in electricity supply enterprises. In these researches, the development of the accounting policy of the electricity supply enterprises, the classification of assets, their recognition, evaluation, organization and maintenance of accounts are defined. Taking into account the specific features of the activities of supply enterprises, such as the fact that the supply and demand for electricity remains variable, the lack of an opportunity to store electricity as a commodity, the organization of liabilities, private capital, income and expense accounts, in economic entities in the energy sector that are moving to international standards of financial reporting scientific research is being conducted in such areas as the application of these standards.

In Uzbekistan, the issues of transformation of electricity supply enterprises and expansion of attracting investments to them, continuous increase of electricity produced per capita are considered as a priority direction. «Until 2030, the development of production capacities and the implementation of large investment projects in the electric power sector, including attracting direct foreign investments, are set»⁶⁴ To ensure the execution of these tasks, it is necessary to

⁶⁴ Ўзбекистон Республикаси Президентининг 2019 йил 27 мартдаги ПҚ-4249-сон «Ўзбекистон Республикасида электр энергетика тармоғини янада ривожлантириш ва ислоҳ қилиш стратегияси тўғрисида»ги қарори. Қонун ҳужжатлари маълумотлари миллий базаси, 28.03.2019 й., 07/19/4249/2840-сон; 08.07.2021 й., 06/21/6258/0651-сон

build new electricity production facilities and modernize existing ones, renew outdated fixed assets, widely introduce market mechanisms to the electricity industry, and increase their investment attractiveness by effectively introducing international standards of financial reporting in electricity supply enterprises. Development of scientific proposals and practical recommendations in the implementation of these tasks is one of the urgent issues. Decree of the President of the Republic of Uzbekistan No. PF-6010 of June 18, 2020 «On additional measures to improve the mechanism of natural gas and electricity sales», No. PF-5059 of May 29, 2017 «Supply and consumption of electricity and natural gas Decree No. PQ-4249 dated March 27, 2019 «On the strategy of further development and reform of the electric power industry in the Republic of Uzbekistan» dated November 14, 2017 No. 3384 «On measures for the rapid implementation of the automated system of control and accounting of electricity and natural gas», No. PQ-3012 of May 26, 2017 «Further development of renewable energy in 2017-2021, increasing energy efficiency in economic sectors and the social sphere on the program of measures», the decision of the Cabinet of Ministers No. VM-1050 of December 26, 2018 «On approving the rules for the protection of electrical network facilities» and No. VM-111 of February 28, 2020 «Simplifying the procedure for connecting business entities to electric networks and This thesis research serves to a certain extent in the implementation of the tasks defined in the decisions of «Measures to further improve the business environment», as well as in other normative legal documents related to this field.

Analysis and results: justification of the role of the electricity industry in the economy of the Republic of Uzbekistan and the need for its development; to study the importance, relevance and legal basis of accounting in electricity supply enterprises; analysis of the prospects of using foreign accounting experience in electricity supply enterprises; improving the formulation of accounting and tax accounting policies in electricity supply entities;

improvement of organization of accounting of assets, private capital and liabilities of electricity supply enterprises;

making proposals on the application of international standards of financial reporting in the accounting of electricity supply entities;

improvement of accounting in electricity supply enterprises.

«Working transformation tables» for the preparation of profit and loss reports according to the nature of expenses using financial statements and balance sheet data in electric energy supply entities;

0120 - «Building, structure and conductive equipment» accounting account, it is proposed to open working accounts 0123 - «Transmission wires», 0124 - «Bases» and 0125 - «Insulators» for the correct formation of the cost of electricity and other goods and services;

0130 - «Machines and equipment» in the accounting account, based on the participation and characteristics of fixed assets in the transmission of electricity,

0131 - «Power transformers», 0132 - «Power machines and equipment» and 0132 - «Measurement and control devices» offered to open accounts;

A system for calculating the cost of various branches of electricity transmission was developed on the basis of «free-to-consumer» in the entities of electricity supply.

Based on the characteristics of the industry, the plan of accounts for accounting based on international standards of financial reporting has been implemented in electricity supply enterprises;

based on the type and location of fixed assets, the proposal to assign a twelve-digit inventory number to each object (item) was adopted for practical use;

the proposal to record debt for electricity purchased from business entities producing electricity in a separate working account 6011 - «Debt to business entities for electricity» has been put into practice;

According to international standards, a formula for creating a reserve for employees' vacations before their start was developed and adopted for implementation.

ACCOUNTING AND SALES CONTROL OF ELECTRICITY CONSUMPTION

Annotatiton. The changes taking place in our country also cover the industrial sector. Today, special attention is being paid to the field of electric power in our country, all of which are actions aimed at improving the lifestyle of the population. In this article, ideas have been given on accounting and control of energy consumption of the population.

Key words: Ignoring energy efficiency, measuring devices in the transmission of energy resources, a new system.

Enter. Measures are being developed to save electricity and use it rationally.

It is very important to keep the correct accounting of expenses, to correctly determine the cost of services, to avoid excess expenses in entities that provide electric energy services. The fact that these problems are not sufficiently researched, that they are not sufficiently reflected in the periodical literature, indicates the extreme complexity of the chosen topic.

Inattention to energy saving, accurate and correct functioning of measuring devices in the transmission of energy resources, high energy consumption in technological processes, wear and tear of electrical devices lead to an increase in the wastage of energy resources. This created the need to introduce the most modern technology and system in the field.

Analysis and results: The new project is called an automated system of accounting and control of electricity consumption, all consumers will be provided with an on-line meter, and the activities of power grid enterprises will also be adapted to the new system. Through this, it is envisaged to fully achieve the reliable supply of quality electricity to the republic's economy and population. Although this system is widely used and successfully tested in a number of developed countries, it is expected that our country will be the first in the world to switch to a fully automated system by 2020.

In order to use the new system, the following works are being carried out:

According to the project, in 2016-2017, all consumers in our region were provided with an automated system of accounting and control of electricity consumption. «Zarafshan electric networks» (Samarkand district) since the 2nd quarter of this year

8,500 online meters will be installed in small-capacity legal and residential households. This system will be tested within 6 months. If deficiencies are

detected during this time, measures will be taken to eliminate them. After that, the installation of a new system will be carried out at the regional level. At the same time, the project-estimate works in Samarkand district have come to an end.

In order to work in this system, the employees of the new electric network enterprises are doing the following:

A number of obligations are imposed on the company implementing the project. Soon 120 employees will be trained for this purpose. Once the new system is in place, there will be no need for any supervisory staff in the field. All control work is carried out by computer centers in the districts, and the tasks of 500 controllers are performed automatically.

We can see the advantages of the online system in the following:

Determining the electricity consumption of consumers, making calculations is fully automated. In the new system, the concept of debt itself will not exist. Electricity is supplied on a prepaid basis. If the consumer does not pay the appropriate amount, he will be automatically disconnected from the network. New meters will clearly show how much electricity is being delivered to a home or business. Another convenience is that the subscriber himself can monitor it through the Internet. In this case, the subscriber can connect his mobile phone to the «Elektrihisob» program, access his personal cabinet through the «Uzbekenergo» website, monitor his account and payments, send inquiries and receive information on payments and debts to his mobile phone number. can receive short messages. Consumers can directly track information about their accounts.

Today, up to 17% power loss is observed in the electricity supply. In the new system, this indicator is expected to drop to 3 percent. In general, the new system has many advantages. For example, you forgot to turn off an electrical appliance when leaving the house. At such a time, you can call the district power center and disconnect your house from the network until a certain hour. Consumers are requested to install electricity meters outside.

As mentioned above, from December 31, 2017, all consumers in the region got an online meter. For this reason, new meters will also be installed to debtor consumers. But due to the electricity debt, the meter will not work until the consumer settles the bill. as soon as the computer receives payment information, the counter starts. For this reason, there is no debt in the new system. This prevents problems between the supplier and the consumer.

It is not for nothing that serious attention is paid to alternative energy sources in our country. Because it is renewable and environmentally friendly. In addition, natural resources are limited, and it has already been proven that they will run out in time.

AXBOROT TEXNOLOGIYA VA INGLIZ TILI FANLARIDA INTEGRALLASHGAN VAZIFALARDAN FOYDALANISH

Annotatsiya. Maqolada fanlararo aloqalarni tashkil etishning umumiy didaktik va psixologik-pedagogik shartlari hamda kelgusi informatika o'qituvchilariga ingliz tili va axborot texnologiyalarini o'qitishda integral vazifalardan foydalanish misollari keltirilgan. Ushbu vazifalardan foydalanish kelajakdagi informatika o'qituvchilarining kasbiy tayyorgarligi darajasini oshiradi.

Kalit so'zlar: Informatika, Kompleks, loyiha, Multimedia, gipermatn, gipermedia, telekommunikatsiya, innovatsiya, yuqori texnologiyalar, Kompyuter dasturlari, Tillar va dasturlash tizimlari.

USE OF INTEGRATED TASKS IN COMPUTER SCIENCE AND ENGLISH

Abstract. The article presents the general didactic and psychological-pedagogical conditions for the organization of interdisciplinary relations, as well as examples of the use of integrated tasks in the teaching of English and information technology to future teachers of computer science. The use of these tasks will increase the level of professional training of future computer science teachers.

Keywords: Computer Science, Complex, Project, Multimedia, Hypertext, Hypermedia, Telecommunications, Innovation, High Technology, Computer Software, Languages and Programming Systems.

Oliy ta'limning ikki bosqichli ta'lim tizimiga o'tishi bilan (bakalavr, magistr) kelajakdagi kompyuter fanlari o'qituvchilarining kasbiy tayyorgarligi "Pedagogik ta'lim" Oliy ta'lim standartlari asosida amalga oshiriladi, bu quyidagi o'quv sikllarini o'rganishni ta'minlaydi: gumanitar, ijtimoiy-iqtisodiy, matematik va tabiiy fanlar, jismoniy tarbiya, o'qitish va ishlab chiqarish amaliyoti, yakuniy davlat imtxonlari. Ammo, afsuski, o'rganilayotgan fanlar, hatto professional sohada ham, asosan, alohida holda, o'zaro bog'liqliksiz va kelajakdagi kasbiy faoliyati uchun ularning integratsion ahamiyatini aniqlamasdan ko'rib chiqiladi.

Shunga qaramay, kelajakdagi o'qituvchilarni o'qitish, shu jumladan informatika fanlararo aloqalarni hisobga olgan holda o'tkazilishi kerak.

Bizning fikrimizcha, fanlararo aloqalar uchun ushbu umumiy didaktik va psixologik- pedagogik shart-sharoitlarni muayyan intizomning boshqalar bilan, shu jumladan undan olib tashlanganlar bilan aloqalarini maqsadli ravishda mustahkamlash va yangi aloqalarni yo'lga qo'yish orqali kengaytirish kerak.

Ushbu yondashuvga asoslanib, o'qituvchi integratsiyalashgan vazifalarni maqsadli ishlatgan holda, fanlar o'rtasidagi aloqani kuchaytirishi mumkin.

Kompleks integratsiyalashgan vazifalar deganda bir-biriga bog'liq bo'lgan masalalar bo'yicha ilmiy bilimlardagi usul va faoliyatni sintez qiladigan vazifalar tushuniladi. Ularning mohiyati umumiy ta'lim, psixologik, pedagogik va ixtisoslashtirilgan fanlarni yaqinlashtirish, mantiq va argumentlash ko'nikmalarini shakllantirishdan iborat; asosiy, muhim narsani ajratib ko'rsatish qobiliyatini rivojlantirish; xatolarni toppish va tahlil qilish qobiliyatlarini boshlash va rivojlantirish [1].

Kelajakdagi informatika o'qituvchilarini tayyorlashda o'rnatilgan integral vazifalardan foydalanish misollarini ko'rib chiqaylik.

Bugungi kunda informatika o'qituvchilariga nafaqat maktab o'quvchilariga informatika asoslarini o'rgatish, balki informatika fanini o'qitish mazmunini moslashtirmaydigan vazifalar yuklangan.

Zamonaviy kompyuter fanlari o'qituvchisi unga mahalliy va global tarmoqlar bilan ishlashga imkon beradigan, barcha turdagi zamonaviy aloqa vositalari, matn, grafik, video, audio ma'lumot, kompyuter grafikasi tizimlari, dasturiy tizimlari va komplekslari bilan ishlashga imkon beradigan kompetentsiyalarga ega bo'lishi kerak tizimlar, tarmoq va amaliy dasturlarni ishlab chiqish uchun vositalar va boshqalar), o'quv elektron vositalar, joriy etish Multimedia, gipermatn, gipermedia, telekommunikatsiya va boshqalar texnologiyalariga asoslangan [3].

Bundan tashqari, maktablarning kompyuter jihozlari bilan jihozlanishining texnik suratlari bilan bog'liq holda, informatika kursini tashkil etishning amaliy amaliyotida informatika o'qituvchisi osongina navigatsiya qilishi kerak bo'lgan dasturiy ta'minot mavjud. Ko'pgina dasturlar, dasturlash tillari, yangi operatsion tizimlar, tarmoq va amaliy dasturlarni ishlab chiqish vositalari odatda ingliz tilida yaratilgan. Shuning uchun kelajakdagi informatika o'qituvchisi ingliz tilini yaxshi bilishi kerak.

Uchinchi avlod standartlarida kelajak o'qituvchisi kasbiy aloqa darajasida (OPK-5) chet tillaridan birini bilishi kerakligi qayd etilgan. Ammo informatika fan sifatida juda keng qo'llaniladigan narsalarga ega: axborot nazariyasidan hisoblash va amaliy matematikaning usullarigacha va

ularni turli bilim sohalarida fundamental va amaliy tadqiqotlarga. Chet tilini yakka holda o'rganish, kasbiy faoliyatda amaliy qo'llanmasdan, tilni o'rganishda yaxshi natijalarga erishish qiyin bo'ladi. Shuning uchun chet tilini o'rganish kasbiy fanlari bilan uzviy bog'liq holda amalga oshirilishi kerak.

“Chet tili” faniga parallel ravishda bo'lajak informatika o'qituvchilari kasbiy siklning quyidagi fanlarini o'rganadilar: “Kompyuter dasturlari”, “Til va dasturlash tizimlari”, “Kompyuter tarmoqlari, Internet va multimedia texnologiyalari”. Shuning uchun uni tashkil qilish eng qulay bo'ladi

“Chet tili” fanini ushbu fanlar bilan birlashtirish.

Sanab o'tilgan fanlarning har birida o'quv jarayoni quyidagi algoritimga muvofiq tashkil etilgan: nazariy materialni o'rganish, laboratoriya (amaliy) ishlarni bajarish, vakolatlarga yo'naltirilgan vazifalarni bajarish (ma'lum bir fan vakolatiga yo'naltirilgan vazifalar). Barcha fanlar bo'yicha nazariy materiallar, laboratoriya ishlari va vakolatlarga yo'naltirilgan vazifalar tekshirilgandan so'ng talabalar yakuniy integrallashgan topshiriqni bajarishga taklif etiladilar [2].

"Kompyuter dasturlari", "Tillar va dasturlash tizimlari", "Kompyuter tarmoqlari, Internet va multimedia texnologiyalari" va "Chet tili" fanlari bo'yicha kompleks vazifa sifatida biz quyidagilarni taklif qilamiz: tanlangan mavzu bo'yicha xorijiy tilda prezentatsiya yaratish. Taqdimot dasturlash tillarida amalga oshirilishi kerak, dinamik va samarali kirishni, asosiy sahifani, asosiy ma'lumot sahifalarini, ilovalarni (mualliflar, statistika va boshqalar) o'z ichiga olishi kerak. Bundan tashqari, navigatsiya (har qanday sahifadan boshqasiga o'tish) aniq o'ylangan bo'lishi kerak, boshqaruv tugmachalari bo'lgan video, sahifalarning ovozli qo'shilishi kerak. Taqdimotlar talabalar tomonidan loyiha shaklida va guruhda (3-4 kishi) o'tkaziladi, bu esa o'z faoliyatini loyiha doirasida tarqatish imkonini beradi, bundan tashqari o'zaro o'rganish jarayoni. Talabalarga taqdimotning navigatsiya tizimini tashkil qilish uchun dasturiy ta'minot va dasturlash tilini tanlash huquqi taqdim etiladi [4].

THE ROLE OF SHAHRISABZ IN TOURISM IN KASHKADARYA

Abstract. This article discusses the tourist potential and history of Shakhrisabz, one of the tourist cities of Uzbekistan.

Keywords: Tourism, Shahrisabz, history, economy, UNESCO, history, monuments, city, tourist potential.

Rivojlanib borayotgan O'zbekiston davlatini turizmsiz tasavvur etib bo'lmaydi. Ma'lumgina, bugungi kunda ushbu so'z, o'zbek tiliga shu darajada o'zlashdiki, bugungi kun taraqqiyotining bir bo'lagiga aylanib qoldi. Bu borada yurtboshimizning ushbu sohaga e'tibor berayotganlarini alohida e'tirof etib o'tish lozim.

Qashqadaryo viloyatining Shahrisabz shahri 2024 yil Iqtisodiy hamkorlik tashkiloti turizm poytaxti deya e'lon qilindi. Bu haqda Turizm va madaniy meros vazirligi axborot xizmati O'zbekiston raisligida onlayn formatda o'tgan IHT Turizm vazirlarining IV yig'ilishi yakuniga ko'ra ma'lum qildi.

Bunda Shahrisabz shahrining boy tarixi va madaniy merosi, Ipak yo'lida turizmning rivojlanishidagi o'rni va sohani barqaror rivojlantirish salohiyati inobatga olindi. Ma'lumot uchun, Shahrisabz 2000 yillik tarixga ega bo'lib, UNESCOning Butunjahon merosi representativ ro'yxatiga kiritilgan.

O‘z navbatida Shahrisabzning ushbu maqomni olishini keng miqyosda nishonlash ko‘zda tutilgan. Qolaversa, shaharda va butun Qashqadaryo viloyatida turizm infratuzilmasini yaxshilash, ekoturizm, etnoturizm va boshqa yo‘nalishlarda salohiyatni yuksaltirish, hududning nomoddiy merosini keng ochib beruvchi madaniy tadbirlar, turizm tadbirkorligi, shu jumladan, yoshlarning faolligini oshirish bo‘yicha alohida dastur amalga oshirilishi ko‘zda tutilgan.

O‘zbekiston boshqa davlatlardanfarqli o‘laroq, zamonaviy arxitektura namunalari bilangina emas, balki qadimiy qadamjolari bilan ham mashhurdir. Fikrimizning dalil sifatida buyuk bobokalonimiz Amir Temurning, “Bizning qudratimizga shubha qilsang, qurgan binolarimizga boq”-degan gaplarini dalil sifatida keltirishimiz mumkin [1-3].

Yurtimiz tarixiy joylarga boy, ammo Sohibqiron Amir Temur tug‘ilib-o‘sgan Shahrisabz shahri alohida e‘tiborga molikdir. Ushbu shahar tarixiga nazarsolsak, Shahrisabz–O‘zbekistonning qadimiy va go‘zal shaharlaridan biri bo‘lib, tarixiy markazi YUNESKOning Butunjahon madaniy merosi ro‘yxatiga kiritilgan, shuningdek bu jannatmakon o‘lka O‘zbekistobdagi qadimiy shaharlardan biridir. Arxeologik ma‘lumotlarga ko‘ra, shaharga miloddan avvalgi 1-ming yillikning o‘rtalarida asossolingan va bu ko‘hna diyord milod boshlarida va ilk o‘rta asrlarda turli nomlar bilan atalgan [4-8]. XIII asrdan so‘ng Shahrisabz nomi ham urf bo‘lgan, ba‘zi ma‘lumotlarga ko‘ra, shahar miloddan avvalgi VIII asrda tashkil etilganligi haqidagi ma‘lumotlarni ko‘rishimiz mumkin. Shahar qadimgi davrlarda Kesh deb nomlangan. Shahrisabz yaqinidagi Xo‘ja Ilg‘or qishlog‘i (hozirgi Yakkabog‘ tumani hududi) da Sohibqiron Amir Temur tavallud topgan. Shahar o‘sha davrda “Qubbatul ilm val adab” nomi bilanyuritilgan. Mening o‘ylashimcha, bu ko‘hna diyorda ko‘plab mashhur allomalari mavjud bo‘lganligi uchun ham tarixiy obidalarga boy va bu obidalarni ularning nomlari bilan ham yodga olishimiz mumkin, bu allomalardan Xusrav Dehlaviy, Bedil, Mirzo G‘olib kabilarni aytishimiz mumkin.

Amir Temur va Temuriylar davrida Shahrisabz ulkan saltanatning yirik shahriga, barlos beklarining yozgi qarorgohiga aylantirilgan, shuningdek Temuriylar davrida shaharlarning ansambllar majmuyi qurilishi keng tarqalgan, bu Shahrisabzda ham yaqqol ko‘rinadi, bu yerda Dorus-Tilovat va Dorus-Saodat ansambllari ajralib turadi. Dorus-Tilovatni sobiq mahalliy xonaqohlar maqbarasida saqlanib qolgan uchta inshoot tashkilotadi. Bu Shamsiddin Kulol va Gumbazi Seyidon maqbaralari hamda Ko‘k Gumbaz jome‘ masjidi inshootlaridir. Shamsiddin Kulol maqbarasi eng birinchi qurilgan Shayx 1370 yilda vafot etgan bo‘lib, uning qabri izzat-ehtirom qilingan. Uning yonida Gumbazi Seyidon-Sayidlar gumbazi nomli Ulug‘bek avlodlarning maqbarasi qurilgan [9-12]. Bu bino kichik bo‘lishiga qaramay, o‘zining nafis mutanosibli va chuquro‘ymakor naqshlar bilan qoplangan, ajoyib ishlangan kirish eshigi bilan insonni mahliyoqiladi. Me‘morchilik ansamblini mug‘ullargacha bo‘lgan qurilish poydevorida qadko‘targan Ko‘k Gumbaz jome‘ masjidi tugallaydi. Temuriylar davrida qurilgan Oqsaroy qasrining peshtoq devori, Dorus-saodat majmuasi, Ko‘k

Gumbaz masjidi, ShamsiddinKulol maqbarasi, Jahongir maqbarasi, Hazrati Imom masjidi, hamda Chorsu bozori, Chubin madrasasi, Eshonpir, Kunduzak masjidlari kabi me'moriy obidalar saqlanibqolgan. Shuningdek, Temuriylar davrida Oqsaroy majmuasi ham qurilgan bo'lib, barpoetilgan barcha inshootlar orasida eng antiqasi hisoblanadi. Ispan elchisiKlavixoo'zkundaligida shaharda ko'plab mahobatli binolar va masjidalr borligini hamdaqurilayotganini ta'kidlaydi, lekin Shahrizabz faqatgina buyuk amirning, "taxt zamini" emas, balki Temurning tug'ilishidan ancha ilgari u o'z tarixiga ega edi deb yozadi.

Avvalo, Shahrizabz jahonning eng qadimgi shaharlaridan biri ekanligini unutmashimiz lozim. Olimlarning fikricha, Shahrizabz 2700 yoshda, bu esa Boqiyshahar Rimning yoshidir. YUNESKO qaroriga ko'ra aynan shu sana 2002-yilda butunmadaniy dunyoda nishonlangan. Eramizdan avvalgi IV asrda Iskandar Zulqarnaynlashkarlari dam olishi uchun Kesh vohasida to'xtagan, Baqtriyaning satrapi bo'lgan Bess Doro III ni o'ldirib o'zini "osiyo podshohi" deb e'lon qilgan, lekin uning aynan o'zi shu yerda asirga olingan. VII asrda shaharni arablar qamal qilgan, bir asr keyn esa Kesh shahri Muqanna rahbarligi ostida arablarga qarshi kuchli qo'zg'olonning markazi ham bo'ldi [13-17].

Qancha qiyinchiliklar va yomon kunlar bo'lmasin xalqimiz ularning barchasini yengib o'tdi va muayyan bir xalq sifatida shakllandi. Mustaqillik yillarida shahar qiyofasi tubdan o'zgartirildi va qayta qurildi. Shahrizabz ahlining Temuriylar davri ulkan madaniy va ma'naviy merosi, noyob tarixiy yodgorliklarini asrab avaylash,yosh avlodnibuyuk ajdodlarimizning munosib vorislari qilib tarbiyalash va ularni ozod mamlakatimiz buyuk istiqbolini yaratishga qodir kishilar qilib yetkazish ishiga qo'shgan alohida xizmatlari e'tiborga olinib hamda Amir Temur tavalludining 660 yilligi munisabati bilan Shahrizabz, "Amir Temur ordeni" bilan mukofotlandi. Bu xalqimizuchun munosib taqdirlash boldi desak ham hech mubolag'a bo'lmaydi.

Mustaqillik yillarida turizmni rivojlantirish, sayyohlar oqimini ko'paytirishmaqsadida keng qamrovli islohotlar amalga oshirilganligini har bu soha misolida yaqqol ko'rishimiz mumkin. Xalqimizning noyob madaniy boyligi va tarixiy merosinitarg'ib qilish, xalqaro miqyosda mamlakatimizning ijobiy ko'rinishini shakllantirish vositasi bo'lgan turizm ahamiyati jihatidanVatanimizni dunyoga tanitishda sport, san'at va madaniyatning boshqa sohaları qatoridan muhim o'rin egallaydi.

Eng muhimi shundaki, yurtimizda ya'ni ko'hna zaminimiz Shahrizabzda hamturizmni rivojlantirish uchun barcha shart-sharoitlar yaratilmoqda va turistalar sonini yanada ko'paytirish maqsadida bir qancha islohotlar ham amalga oshirilmoqda. Bunga biz hozirgi kunda imzolanayotgan diplomatic shartnoma va kelishuvlarni aytishimiz mumkin. O'zbek milliy o'yinlarini xorijiy va mahalliy sayyohlarga namoyish etish maqsadida Kitob tumanida joriy yilning 23-mart kuni uloq-ko'pkari o'yinlari tashkil etildi. Uni 80 dan ortiq xorijiy va 100dan ortiq mahalliy sayyohlar zo'r qiziqish bilan kuzatdilar.

Turistlarni keng jalb qilish bo'yicha tadbirlarni jadallashtirish borasida shaharning turistik brendini yaratish va keng miqiyosda targ'ib qilish bo'yicha tanlov e'lon qilindi, chet el ommaviy axborot vositalari va turistik kompaniyalari uchun infoturlar tashkil etish maqsadida yo'nalish va mehmonxonalar ro'yxati tayyorlanmoqda, videofilmlar yaratish yuzasidan senariy va shaharning turistikekskursiya kartasi ishlab chiqilmoqda, shuningdek turistik ma'lumotnoma ofislari tashkil etish bo'yicha ishlar olib borilmoqda. O'tgan 2023-yilning yakunlariga ko'ra, O'zbekistonga 2,6 mln nafar xorijiy turistlar tashrif buyurgani va 833,5 mln AQSh dollar miqdorida turistik xizmatlar eksporti amalga oshirilgan, bu 2021-yil statistikasidan 125 foizga shubhasiz ko'pdir. O'zbekistonga tashrif buyurgan turistlarning umumiy sonidan 6,260 million kishi MDH mamlakatlaridan, 488,4 ming sayyoh esa olis xorij mamlakatlaridan kelgan.

Shahrisabz bo'ylab sayr qilar ekansiz, eski madrasalarda yoki shunchaki yo'l bo'ylab joylashgan ko'plab esdalik sovg'alar bilan savdo qiluvchi ustaxonalarni ko'rishingiz mumkin. Tarvuz qo'ltiqdagi ko'ngli ochiq chollar, o'yib ishlangan sandiqchalar va rang –barang matolar kabi hunarmandchilik mahsulotlarini taklifetishga ustalar tayyor turishadi. Ular orasida shahar tasviri tushirilgan turli xil shakldagi magnitlar alohida ajralib turadi [18]. Odatdagidek loy va keramikadan yasalganlardan tashqari, yog'och, qog'oz, teri va hatto marmardan yasalganlari ham bor. Bundan tashqari Shahrisabz iqlimi ham turistlar uchun mos keladi negaki, havo unchalik issiq emas va tabiat qo'ynida sayohat qilayotganda iqlim ularga xalaqit bermaydi. Tog' yonbag'irlariga turistlar bilan tashrif buyurganda esa yovvoyi hayvonlarni daryolarda esa bir necha turdagi baliqlarni ko'rishimiz mumkin. Eng qiziqarlisi shundaki, Shahrisabzdan o'tadigan asosiy magistral buyuk italyan sayyohi Makro Poloning marshrutini takrorlaydi.

Xulosa so'ngida shuni aytish joizki, Shahrisabz har tomonlama turistlar uchun qulay makon hisoblanadi, undagi mehmonxonalar ham turistlar uchun har tomonlama moslashtirilgan.

**KORXONALARDA MARKETING TADQIQOTLARI NATIJALARINI
TAHLIL QILISH JARAYONLARIDA AXBOROT KOMMUNIKATSIYA
TEXNOLOGIYALARI FAOLIYATINI AMALGA OSHIRISHDA
MARKETING TAMOYILLANING AHAMIYATI**

Annotatsiya. Keyingi paytlarda jahon mamlakatlarida, jumladan mamlakatimizda ham tadbirkorlik faoliyatiga katta e'tibor qaratilmoqda. Tadbirkorlik faoliyati mamlakat iqtisodiyotini rivojlantirishda ham muhim ahamiyatga ega bo'lib bormoqda. Tadbirkorlik faoliyatida qaror qabul qilish va uni ishlab chiqishda tadbirkorlikning samarali vositasi hamda asosi bo'lib marketing hisoblanadi hamda tadbirkorlik faoliyatini boshqarish tizimida, uni tashkil etishda, rejalashtirish va nazorat qilishda muhim ahamiyat kasb etadi.

Kalit so'zlar: Marketing nazariyasi, Zamonaviy marketing, Sanoat korxonalarining faoliyati, Xaridorlar va iste'molchilar.

**THE IMPORTANCE OF THE MARKETING PRINCIPLE IN
IMPLEMENTATION OF INFORMATION COMMUNICATION
TECHNOLOGIES IN THE PROCESS OF ANALYZING THE RESULTS
OF MARKETING RESEARCH IN ENTERPRISES**

Abstract. Recently, in the countries of the world, including our country, great attention is being paid to entrepreneurship. Entrepreneurship is also becoming important in the development of the country's economy. Marketing is an effective tool and basis of entrepreneurship in decision-making and development of business activities, and it is of great importance in the management system of business activities, its organization, planning and control.

Key words: Marketing theory, Modern marketing, Activity of industrial enterprises, Buyers and consumers.

Korxonaning marketing faoliyati uning bozorda omon qolishi va muvoffaqiyatining eng muhim funksiyalaridan biridir. Biznesni marketingsiz amalga oshirish mumkin emas. Jahon iqtisodiyotining globallashuvi natijasida texnologik taraqqiyot bilan parallel ravishda raqobat sharoitlari tobora murakkablashib bormoqdi. Iste'molchi elektron tijorat yoki boshqa usullar orqali dunyoning istalgan mamlakatida ishlab chiqarilgan mahsulotni osongina sotib

olishi imkoniyatiga ega bo'lib bormoqda. Bu esa allaqachon mavjud bo'lgan global raqobatni yanada keskinlashuviga sabab bo'lmoqda. Murakkab raqobat sharoitlarida ishlab chiqaruvchilar yoki xizmat ko'rsatuvchilar bozorda omon qolishi, o'sishi va faoliyati davomiylikni ta'minlashi, o'zining bozordagi ulushini oshirib borishi uchun zamonaviy marketing usullari va strategiyalaridan foydalanishni taqozo etmoqda. Brend bo'lib tanilgan korxonalar esa raqobatda ustunlikni ta'minlashi uchun asosiy e'tiborni mijozlar brendga sodiqligini oshirishga alohida ahamiyat qaratmoqda. Korxonalar klassik marketing konsepsiyalaridan chiqib, zamonaviy marketing boshqaruvi va mijozlarni shaxsiylashtirishga qaratilgan usullar yuqori darajada ahamiyat qaratmoqda. Zamonaviy marketing konsepsiyalarini o'zlashtirgan va yangi marketing tendentsiyalarini qo'llashi mumkin bo'lgan kompaniyalar global brend darajasiga ko'tarilmoqda. Bu tendentsiyalarga rioya qila olmaydigan kompaniyalar bozordan chetlashmoqda. Ushbu jixatlarni inobatga olganda korxonalarda zamonaviy marketing menejment tamoyillaridan foydalanish dolzarb vazifa sifatida qaralmoqda.

Globallashib borayotgan bozorda barcha korxonalar, ular kichik yoki katta bo'lishidan qat'iy nazar bozorga kirib borishi, unda faoliyat yuritishi, moslasha olishi va doimiy mavjud bo'lish uchun marketing faoliyatini turli yo'llar bilan amalga oshiradi. So'nggi yillarda rivojlanayotgan texnologiya ham parallel tarzda marketing yondashuvlarini o'zgartirdi. Ilgari mavjud bo'lgan klassik marketing usullari texnologik taraqqiyot natijasida tabdan o'zgarib bormoqda. Masalan, o'tmishda marketing sohasida yuqori ahamiyatga ega bo'lgan gazeta reklamalari asta-sekin raqamli marketing bilan almashtirilmoqda. Chunki, rivojlanayotgan texnologiya bilan parallel holda, eski marketing texnologiyalarining ham odamlarga ta'siri kamayadi. Yana bir asosiy tendensiya ma'lumki, "Marketing 5.0. uchta asosiy muammo fonida amalga oshadi: avlodlar farqi, farovonlikning qutblanishi va raqamli tafovut. Bu tarixda birinchi marta yer yuzida birga yashovchi besh avlodning qarama-qarshi qarashlari, mutanosibliklari va xatti-harakatlaridir."

Shunga ko'ra, bugungi murakkab raqobat va bir biridan keskin farq qiluvchi mijozlar bilan ishlash borasida qanday marketing yondashuvlaridan foydalanish muammosi borasidagi ilmiy tadqiqotlarga ustivor ahamiyat qaratilmoqda.

Korxonaning bozor faoliyatini samarali qurish maqsadli mijozlariga bo'ladigan munosabatlarini vujudga keltirish va qo'llab quvvatlashga ta'sir o'tkazish xisoblanadi. Korxonaning marketing faoliyatiga murakkab va o'zgaruvchan bo'lgan tashqi muhit omillari ta'sir qiladi.

Korxonada o'z savdo faoliyatida mijozlarni jalb qilish va ular bilan xamkorlik darajasiga olib chiqish marketing faoliyatini bosh maqsadlaridan biri xisoblanadi. Mijoz - muassasa, tashkilot, korxonada xizmatlaridan foydalanadigan shaxs, doimiy xaridorlar, buyurtmachilar. Ba'zi bir sotuvchilarning dimiy haridorlari va shu

haridorlarga nisbatan sotuvchi ham deyiladi. Mijozlar va xaridorlarni o'rganish odatda ularni «mijozli bozor» turkumiga bo'lib o'rganish keng tarqalgan.

Tashkilot o'z mijozlarini «shaxsan» taniydi, ularning nimani va qancha xarid qilishi haqida to'liq axborotga ega bo'ladi. Zarur tovarlar ishlab chiqarish eki xarid qilish o'z xaridorlarining ehtiylarini aniqroq va uzil-kesil qondirish, shuningdek, ularning kelajakdagi xoxish-istaklarini tahlil qilish borasida tuzatish kiritgan holda amalga oshiriladi. Mijozlar bilan ishlarni bunday tashkil qilishda axborot boshqa potensial xaridorlarga yetkazilish ehtimoli yuqori. Buning ustiga, hozirgi paytda muqobil, notijorat axborot manbalari (ishbilarmon hamkorlarning maslahati, ekspertlarning fikrlari) ahamiyatining ortishi kuzatilmoqda. Shu tariqa tashkilot yangi mijozlar jalb qilish bo'yicha qo'shimcha reklamaga ega bo'ladi.

Har bir bozor o'z xususiyatiga va mijozlarining turli-tuman ehtiyojlariga ega. Shu jihatdan, tashkilot mijozlar ko'lamini va tarkibini o'zgartirishi natijasida tovarni ishlab chiqarish hajmi, quvvati, sotish intensivligi, foyda me'yori turlicha bo'ladi. Demak, tashkilot o'z oldiga keng imkoniyatli mijozlar bozorini shakllantirish vazifasini qo'ymog'i lozim.

Xaridor talablari turli-tuman bo'lishi bilan bir qatorda ulardan qay birini birinchi va qaysinisini keyinroq qondirishga bevosita turli tovar yoki xizmat ko'rsatuvchi tashkilotlar o'zaro raqobatlashadilar. Masalan, to'rt a'zoli oila rahbari olgan maoshini va to'plagan jam'armasini tabiiyki, rafiqasi bilan nimaga sarflashni maslahatlashadi. Uy-ro'zg'or buyumlarini yangilash, bolalar uchun kiyimkechak olish, birga ta'tilni xorijiy davlatda o'tkazish va shu kabi talablarni qondirish zarurati va imkoniyai bor deb faraz qilaylik. Bu tovarlarni va xizmatlarni taklif etuvchi tashkilotlar qay tarzda samarali va o'z vaqtida harakat qilsalar, ushbu oila ularning mijozi, xaridori bo'ladi. Demak, uy-ro'zg'or buyumlarini, bolalar kiyim-kechagini sotuvchi tashkilotlar va sayohat byurosi oilaning istagini birinchi bo'lib qondirishda raqobatchi hisoblanadilar.

Marketing tamoyillari – bu marketing asosining tub mohiyatini ochuvchi asosiy holatlar, talablar majmuasidir. Marketing mohiyatidan kelib chiqqan holda, quyidagi tamoyillar marketing faoliyatida asosiy hisoblanadi.

1. Iste'molchi – shoh;

2. Ilshlab chiqarilgan mahsulotni sotish yemas, sotiladigan mahsulotlarni ishlab chiqarish:

3. Mahsulot yaratish bilan uning iste'molchisini ham yaratish kerak;

4. Tovar bozorlariga differensiyalashgan holda yondashish kerak;

5. Korxonada iste'molchining talabini qondirish bilangina o'z foydasi va obro'siga ham yega bo'lishi kerak;

Ijtimoiy ahamiyati nuqtai nazaridan to'rtta marketingni muqobil maqsadlarga ajratiladi.

1. Iste'mol darajasini oshirish;

2. Iste'molchilarni qondirilishini maksimallashtirish;

3. Iste'mol tanlovini maksimallashtirish;

4. Turmush tarzini (sifatini) oshirish.

Iste'mol darajasini oshirish ishlab chiqaruvchilar foydasini o'sishga olib keladi, ishlab chiqarishni va xizmatlar sohasini rivojlantirishga, shuningdek ishsizlikni kamayishiga olib keladi.

Iste'molchilarni qondirilganligini maksimallashtirish iste'mol kutayotgan tovar (xizmat) xossalariga to'liq mos kelishiga erishishni ko'zlaydi.

Iste'mol tanlovini maksimallashtirish iste'molchilarga shunday tovar (xizmat)larni turli xillarini ko'rsatib, ularning xodimlariga to'liq mos keluvchi bozorda tovarlarni qidirib topish mumkin bo'lgan tovarlarni mujassamlashtiradi.

Turmush sifatini oshirishda marketing tovarlarni sotish, sifatini ta'minlash va tovar (xizmat) narx bo'yicha maqbul bo'lish emas, balki jismoniy va moddiy jihatdan sifatni anglatadi.

Marketing tamoyillari marketing asosini va uning mohiyatini ochib beruvchi holat, talabdir. Marketingni mohiyati – tovar ishlab chiqarish va xizmat ko'rsatish albatta iste'molchiga, talab ishlab chiqarish imkoniyatlarini doimo bozor talabiga mo'ljallashdan iborat. Marketing mohiyatidan quyidagi asosiy tamoyillar kelib chiqadi:

- iste'molchilarga nima kerak bo'lsa o'shani ishlab chiqarish kerak;
- bozorga tovarlar va xizmatlar taklifi bilan emas, balki iste'molchilarni muammolarini yechish vositalari bilan ishlash;
- tovar ishlab chiqarishni ehtiyoj va talabni tadqiq qilgandan so'ng tashkil etish kerak;
- firmani ishlab chiqarish-eksport faoliyatining oxirgi natijalariga konsentrlashganini kuchaytirish;
- marketing konsepsiyasi vositalarini qo'llash asosida marketing dasturini shakllantirishga olib keluvchi qo'yilgan maqsadlarga erishish uchun kompleks yondoshish va maqsadli dastur uslubini ishlatish;
- tovarni iste'molchiga siljitishni barcha bo'g'inlarini marketing bilan qamrab olish maqsadida bir vaqtni o'zida maqsadli yo'naltirilgan ta'sir asosida bozor talabiga mos keluvchi tovar ishlab chiqarish strategiya va taktikasini qo'llash;
- korxonada faoliyatini va marketing xizmatini bozorda tovar xulq-atvorini bashorat qilishi va strategik rejalashtirishni amalga oshirish asosida samarali kommunikasiyani uzoq muddatli istiqboliga mo'ljallash;
- tovarni yashash davrini barcha bosqichlarini ishlab chiqarish va tovar taqsimlashni ijtimoiy va iqtisodiy omillarini hisobga olish;
- tashkilot va tarmoqlar rejasiga nisbatan bozorni birlamchi ekanligini eslash;

- talab va taklifni balanslashtirish maqsadida rejalarini tarmoqlararo koorrdinasiyalash va o'zaro ta'sirini ushlab turish;
- tovar bozori yoki firma imiji (obro'yi) va raqobatli afzallikni qidirish va shakllantirish jarayonida aniq holatda agressivlikka, hujumkorlikka, faollikka intilish, umumiy holda marketingning asosiy tamoyillari – bu bozorni bilish, unga moslashish va bozorga ta'sir o'tkazishdan iborat.

Korxonalar marketing faoliyatida o'tmishdan hozirgi kungacha bo'lgan asosiy maqsad mijozlarga yangi narsa sotib olish uchun yangi sabablarni taqdim etishga ahamiyat qaratilgan. Tabiatan "an'anaviy" bo'lishiga qaramay, segmentasiya-maqsadli-joylashtirish konsepsiyasi, shuningdek, mahsulot-narx-joyrag'batlantirish (4P) modeli global miqyosda zamonaviy marketologlar uchun universal asosiy vositaga aylandi.

Keyinchalik, 2000-yillarda boshlangan marketing transformatsiyasida korxonalar asosiy maqsadi iste'molchilarni brend haqida gapirishga undashdan iborat bo'ldi. Bugungi kunda brend menejment strategiyalari ishlab chiqildi. Texnologiyalarning rivojlanishi asosida marketingning kommunikasiya strategiyalari ham o'zgardi. Bir tomonlama marketing kommunikasiya modellari, raqobat muhiti doirasida ikki tomonlama kommunikatsiya modeliga o'tish boshlandi. Keyinchalik, integratsiyalashgan marketing yondashuvi bilan qo'llaniladigan kommunikasiya kanallari ishlab chiqiladi¹⁵ va diversifikatsiya qilinadi. Marketing o'zining mahsulotga yo'naltirilganligidan insonga qaratilganlik tushunchasiga o'tishi uchun qariyb 70 yil kerak bo'ldi. Evolyutsiyaning so'ngi o'n yilliklari davomida bir nechta marketing tushunchalari vaqt sinovidan o'tdi.

Mahsulotga asoslangan marketingdan (1.0) mijozga yo'naltirilgan marketingga (2.0) keyingi tendensiya esa, insonga yo'naltirilgan marketingga (3.0), marketing 4.0. esa texnologiyalardan foydalanish juda oddiy bo'lsada jismoniy va raqamli kommunikasiya nuqtalarini umumiy marketing konsepsiyalariga birlashtirishga, raqamli transformasiyaga qaratildi.

Umumun olganda marketing konsepsiyalari mijozlarni va texnologiyalar taraqqiyoti darajasida turli konsepsiyalari shakllandi va rivojlandi.

MATHEMATICS: THE FOUNDATION OF INNOVATION AND DISCOVERY

Annotation. This article delves into the fundamental role of mathematics in driving innovation and discovery across various disciplines. It explores how mathematical concepts and tools serve as building blocks for advancements in science, technology, engineering, and beyond. The article highlights key historical examples where mathematical breakthroughs paved the way for groundbreaking discoveries, emphasizing the interconnectedness of mathematical theory and practical applications. Furthermore, it examines the ongoing impact of mathematics in shaping cutting-edge fields such as artificial intelligence, cryptography, and data science. By showcasing the profound influence of mathematics on human progress, this article aims to inspire a deeper appreciation for the subject and its potential to unlock future advancements.

Keywords: mathematics, innovation, discovery, science, technology, engineering, Artificial Intelligence, cryptography, Data Science, history of mathematics.

Mathematics, often perceived as a realm of numbers and equations, lies at the heart of countless innovations and discoveries that shape our world. From the intricate workings of modern technology to the vast expanse of scientific exploration, mathematics provides the foundational language and tools for unraveling the complexities of the universe and driving progressive.

Historical Breakthroughs: Throughout history, mathematical advancements have served as catalysts for groundbreaking discoveries. The development of calculus by Newton and Leibniz in the 17th century revolutionized our understanding of motion and change, laying the groundwork for classical physics and engineering. Similarly, the pioneering work of mathematicians like Alan Turing and Claude Shannon in the 20th century paved the way for the digital revolution and the information age. Their theoretical foundations in logic and computation underpin the development of computers, the internet, and countless technological advancements we rely on today.

Shaping Modern Science: Mathematics continues to play a crucial role in modern scientific exploration. Fields such as physics, chemistry, and biology heavily rely on mathematical models and analysis to explain natural phenomena, predict outcomes, and design experiments. For instance, the intricate equations of quantum mechanics provide a framework for understanding the behavior of subatomic particles, while mathematical models in epidemiology help track and control the spread of diseases. The ability to quantify, analyze, and interpret data through mathematical tools is essential for scientific progress and discovery.

Driving Technological Advancements: The impact of mathematics extends far beyond theoretical science, driving advancements in various technological domains. Engineering disciplines, from civil and mechanical to electrical and aerospace, heavily rely on mathematical principles for design, analysis, and optimization. Mathematical models and simulations enable engineers to test and refine designs before physical implementation, leading to safer and more efficient structures, machines, and systems. Furthermore, fields like cryptography and data science, crucial for cybersecurity and information processing, are deeply rooted in mathematical concepts like number theory and statistics.

Emerging Frontiers: As we delve into the complexities of the 21st century, mathematics continues to be at the forefront of emerging fields. Artificial intelligence, a rapidly evolving domain with transformative potential, relies heavily on mathematical tools like linear algebra, calculus, and probability theory. Machine learning algorithms, for instance, utilize mathematical optimization techniques to learn from data and make predictions. Similarly, the development of quantum computing, which promises to revolutionize computation, is deeply intertwined with advanced mathematical concepts in quantum mechanics and information theory.

Inspiring Future Generations: By showcasing the profound impact of mathematics on human progress, we can inspire future generations to embrace the subject and explore its vast potential. Nurturing mathematical curiosity and providing opportunities for exploration can foster a generation of problem-solvers, innovators, and discoverers who will shape the world of tomorrow. Whether it's unraveling the mysteries of the universe, developing groundbreaking technologies, or addressing complex global challenges, mathematics will undoubtedly remain the foundation of innovation and discovery for generations to come.

While specific areas like calculus and statistics often take the spotlight, it's crucial to recognize the interconnectedness of various mathematical disciplines. Number theory, seemingly abstract, underpins modern cryptography; geometry plays a vital role in computer graphics and architectural design; and topology finds applications in network analysis and materials science. This interplay highlights the depth and breadth of mathematical knowledge, where seemingly disparate branches converge to solve real-world problems. Contrary to the perception of mathematics as a rigid set of rules, it thrives on creativity and

ingenuity. Developing new mathematical concepts, proofs, and solutions requires a high degree of imagination and out-of-the-box thinking. This creative aspect of mathematics fuels innovation by allowing us to approach problems from different angles and explore unconventional solutions. The Role of Mathematical Modeling: Mathematical modeling plays a crucial role in various scientific and engineering disciplines. By creating mathematical representations of real-world phenomena, we can analyze complex systems, predict their behavior, and test different scenarios. This ability to model and simulate complex systems is essential for innovation in fields such as climate science, finance, and drug development. Studying mathematics equips individuals with valuable problem-solving skills that extend beyond the realm of numbers and equations. Logical reasoning, critical thinking, and analytical skills honed through mathematical training are essential for tackling challenges in various aspects of life, from personal finance to navigating complex social issues. Fostering a strong foundation in mathematics education is crucial for preparing future generations to thrive in an increasingly technological and data-driven world. Innovative approaches to teaching mathematics, incorporating technology and real-world applications, can spark curiosity and inspire students to explore the power and beauty of the subject. As with any powerful tool, it's important to consider the ethical implications of mathematical advancements. For instance, algorithms used in artificial intelligence and data analysis can perpetuate biases or lead to unfair outcomes if not carefully designed and implemented. It's crucial to ensure that mathematical tools are used responsibly and ethically for the benefit of society. The future of mathematics is filled with exciting possibilities. From exploring the frontiers of theoretical mathematics to harnessing the power of artificial intelligence and quantum computing, mathematicians will continue to play a pivotal role in shaping our world. By embracing interdisciplinary collaboration and fostering a culture of creativity and curiosity, we can unlock the full potential of mathematics to drive innovation and discovery for generations to come.

YUQORI MALAKALI AKADEMIK ESHKAK ESHUVCHILARNING JAMOAVIY ESHISH TEXNIKASI SAMARADORLIGINI OSHIRISH

Annotatsiya. Raqobatbardosh eshkak eshish sohasida mukammallikka intilish yutuqlarni tinimsiz ta'qib qilish bilan boshqariladigan doimiy harakatdir. Eng elita akademik eshkak eshuvchilar orasida o'z jamoasining eshkak eshish texnikasini optimallashtirish zarurati katta ahamiyatga ega, chunki ular jismoniy jasoratining to'liq imkoniyatlarini ochishga va misli ko'rilmagan ishlash darajalariga erishish uchun harakatlarini sinxronlashtirishga intilishadi. Ushbu maqola yuqori malakali akademik eshkak eshuvchilar uchun jamoaviy eshkak eshish texnikasi samaradorligini oshirishning murakkabliklarini o'rganadi, ularning muvaffaqiyatlarini yangi marralarga ko'tarish uchun hal qilinishi kerak bo'lgan ko'p qirrali fikrlarni o'rganadi.

Kalit so'zlar: trening darslari, mashg'ulotlar, zamonaviy metodlar, malakali o'qituvchilar, mahoratlar, jamoaviy hamkorlik.

INCREASING THE EFFICIENCY OF TEAM ROWING TECHNIQUE OF HIGHLY SKILLED ACADEMIC ROWERS

Abstract. In the realm of competitive rowing, the pursuit of excellence is a constant endeavor, driven by the relentless pursuit of marginal gains. Among the most elite academic rowers, the need to optimize their team's rowing technique is of paramount importance, as they strive to unlock the full potential of their physical prowess and synchronize their efforts to achieve unprecedented levels of performance. This article delves into the intricate complexities of enhancing the efficiency of team rowing technique for highly skilled academic rowers, exploring the multifaceted considerations that must be addressed to propel their success to new heights.

Keywords: training classes, training, modern methods, qualified teachers, skills, team collaboration.

Kirish: Texnika jarohatlarning oldini olish va energiya sarfini yaxshilash uchun barcha turdagi sportchilar uchun muhimdir. Biroq, qayiq tezligini ko'rib chiqishda eshkak eshish texnikasi ham katta omil hisoblanadi. Ekipaj jismonan baquvvat bo'lishi mumkin, ammo texnikasi yomon va kuchsizroq ekipaj yutqazishi mumkin, chunki kuchliroq ekipaj o'z kuchidan foydalana olmaydi va qayiqni harakatga keltirishda kuchni samarali qo'llay olmaydi.

Eshkak eshishning o'zi suv transportining boshqa turlari bilan taqqoslaganda noyobdir, chunki qayiq eshkak eshish bilan bir xil yo'nalishda harakatlanadi, eshkak eshish esa samaradorlikka erishish uchun boshqa texnikani talab qiladi. Qobiqni harakatlantirishning ushbu noyob uslubi boshqa suv sportlarida ko'rinmaydigan kuch va nafislik aralashmasini o'z ichiga oladi va shuning uchun texnika sport uchun juda qimmatli komponent hisoblanadi.

Bahor mavsumida eshkak eshuvchilar o'zlarining mehnatsevarligi va fidoyiligini turli regattalarda va chempionat poygalarida sinab ko'rishadi. Aynan shu tadbirlarda jismonan kuchliroq ekipajlar texnik jihatdan ustun ekipajga yutqazishi mumkin.

Eshkak eshishning o'zi juda foydali va qoniqarli sport turi. Yoshdan yoshgacha bo'lgan sportchilar kuch va yurak-qon tomir fitnesini yaxshilashga yordam beradigan sevimli mashg'ulotidan bahramand bo'lishlari mumkin. Keyingi qadamni tashlab, raqobatbardosh eshkak eshuvchilarga aylanadiganlar uchun, xoh u o'quv, kollegial yoki elita darajasida bo'lsin, sport yanada foydali, hozirda u tobora talabchan bo'lib bormoqda. Yuqori malakali eshkak eshuvchilar va sportchilar jismonan sog'lom va texnik jihatdan sog'lom bo'lish uchun son-sanoqsiz soatlarda mashq qilishadi.

Samarali jamoaviy eshkak eshish texnikasining ahamiyati

Ma'lumotlar qayiq tezligini o'rganish uchun ishlatiladi, chunki zarbalar orasidagi tezlik o'zgarishi aniqlanishi va bir vaqtning o'zida kuch ishlatish bilan bog'liq bo'lishi mumkin. Zarbalar orasidagi tezlik o'zgarishini nazorat qilish ekipaj qayiqclarini sinxronlashtirish uchun ham muhimdir.

Ushbu tadqiqot kuch ishlatish va zarba tezligining qayiq tezligiga turli xil zarba tezligida ta'sirini o'rganish orqali insult iqtisodiyoti va qayiq tezligi o'rtasidagi bog'liqlik haqida ko'proq tushunishga qaratilgan. Bu, shuningdek, har xil zarba tezligida poyga qilayotgan ekipajlar uchun zarba texnikasini o'zgartirish nima uchun zarurligini yanada ta'kidlaydi va ma'lum bir qayiq va ekipaj uchun ideal ekipaj armaturasiga qarab kuch qo'llash qanday o'zgarishini ko'rsatishi mumkin. Bu so'nggi Jahon chempionatida Mahe Drysdeyl tomonidan ta'kidlangan: "tezroq insult [tezligi] kaliti siz sekinroq [insult tezligi] ga qaraganda tezroq [yoki qiyinroq] ketmayotgandek taassurot qoldirishdir...".

Martindeyl va Robertson (1984) tomonidan bitta Skull yordamida olib borilgan oldingi tadqiqotlar, uslubning o'zgarishi, zarbani yanada samarali qo'llashga olib kelganligi qayiq va eshkak tezligini oshirganligini aniq ko'rsatdi. Biroq, bu raqobatbardosh darajadagi ekipaj qayig'ida bo'lgani haqida hech qanday adabiyot topilmadi. Eshkak eshish qayig'ini suv orqali harakatlantirishning eng

samarali usulini takomillashtirish orqali, ma'lum bir ekipaj uchun bu raqobatdosh ustunlikka erishish yo'lini ta'minlashi mumkin.

Eshkak eshish zarbasi-bu inson tanasidagi deyarli barcha mushaklar va bo'g'imlarni o'z ichiga olgan murakkab birikma harakati (Martindeyl va Robertson, 1984). Uni to'rt komponentga bo'lish mumkin: ushlar, haydash, tugatish va tiklash. 'Catch' - bu pichoqni haydovchiga tayyor suvga joylashtirish. Drayv qayiqni harakatlantirish uchun eshkak yoki Skull tutqichiga bosim o'tkazishni o'z ichiga oladi. 'Tugatish' - bu pichoqni suvdan olib tashlash va tiklanish-bu ushlar holatiga qaytish. Yuqori zarba tezligida bu harakatlar ketma-ketligini tez va aniq bajarish kerak. Demak, ekipaj o'rtasidagi harakat tejamkorligidagi har qanday kichik buzilish sinxronizatsiya yo'qolishiga va pichoqlar va suv o'rtasidagi aloqaning yo'qolishiga olib keladi, bu esa harakatni kamaytiradi.

Masalaning markazida jamoaviy eshkak eshish individual va jamoaviy harakatlarning nozik muvozanati ekanligi haqidagi asosiy tushuncha yotadi. Puxta o'qitilgan va mukammallikka erishgan har bir eshkak eshuvchi o'zining noyob kuchli va qobiliyatlarini yaxlit birlikka muammosiz birlashtirishi kerak, bu yerda qismlarning yig'indisi butundan kattaroqdir. Ushbu uyg'un integratsiya samarali jamoaviy eshkak eshishning asosidir va bu dinamikani doimiy ravishda takomillashtirish va optimallashtirish murabbiylar va eshkak eshuvchilarning o'zlarining zimmasida.

Jamoaviy eshkak eshish texnikasi samaradorligini oshirishning asosiy yo'nalishlaridan biri bu eshkak eshuvchilar harakatlarini sinxronlashtirishdir. Eshkakning suvga kirish va chiqish vaqti va muvofiqlashtirishidagi eng kichik og'ish qayiqning tezligi va barqarorligiga katta ta'sir ko'rsatishi mumkin. Yuqori malakali akademik eshkak eshuvchilar qat'iy tayyorgarlik va tafsilotlarga sinchkovlik bilan e'tibor berish orqali rivojlantiriladigan tug'ma ritm va vaqt birligini rivojlantirishlari kerak. Bu nafaqat eshkak eshuvchilarning jismoniy harakatlarini sinxronlashtirishni, balki ularning aqliy diqqatini va hissiy uyg'unligini ham o'z ichiga oladi, chunki ular oqim va birlikning jamoaviy holatiga erishishga intilishadi.

Jamoaviy eshkak eshish samaradorligini oshirishning yana bir muhim jihati-eshkak eshuvchilarning individual texnikasini optimallashtirish. Har bir eshkak eshuvchi eshkak eshish mexanikasining mahoratiga ega bo'lishi kerak, to'g'ri ushlar va tanani joylashtirishdan tortib, eshkak orqali quvvatni samarali uzatishgacha. Ushbu individual texnikani takomillashtirish orqali eshkak eshuvchilar jamoaning umumiy samaradorligiga hissa qo'shishi, energiya sarfini kamaytirishi va qayiqning tezligi va sezgirligini maksimal darajada oshirishi mumkin.

Bundan tashqari, ilg'or texnologiyalar va ma'lumotlarga asoslangan tahlillarning integratsiyasi jamoaviy eshkak eshish samaradorligini oshirishda hal qiluvchi rol o'ynaydi. Harakatni ta'qib qilish tizimlari, biomexanik tahlil va real vaqtda teskari aloqa yordamida murabbiylar eshkak eshuvchilar texnikasidagi

nozik kamchiliklarni aniqlashlari va ularni hal qilish uchun maqsadli aralashuvlarni amalga oshirishlari mumkin. Ma'lumotlarga asoslangan ushbu yondashuv jamoaning eshkak eshish texnikasini doimiy ravishda takomillashtirishga imkon beradi va ularning ishlashining har bir jihati doimiy ravishda optimallashtirilishini ta'minlaydi.

Eshkak eshuvchilar orasida kuchli jamoaviy dinamikani va umumiy maqsad tuyg'usini yetishtirish ham bir xil darajada muhimdir. Ishonch, muloqot va o'zaro qo'llab-quvvatlash muhitini rivojlantirish orqali murabbiylar o'z sportchilariga individual va jamoaviy qobiliyatlari chegaralarini oshirishga imkon berishlari mumkin. Ushbu jamoaviy tafakkur jamoaning maqsadlari va strategiyalarini chuqur anglash bilan birgalikda ularning eshkak eshish texnikasi samaradorligiga katta ta'sir ko'rsatishi mumkin, chunki eshkak eshuvchilar umumiy maqsadlariga erishish uchun uzluksiz uyg'unlikda ishlaydi.

Xulosa

Xulosa qilib aytganda, yuqori malakali akademik eshkak eshuvchilar uchun jamoaviy eshkak eshish texnikasi samaradorligini oshirishga intilish har tomonlama va yaxlit yondashuvni talab qiladigan ko'p qirrali harakatdir. Eshkak eshuvchilarning harakatlarini sinxronlashtirishdan individual texnikani optimallashtirishga, ilg'or texnologiyalarni birlashtirishga va kuchli jamoaviy dinamikani yetishtirishga qadar ushbu sportchilarining barcha imkoniyatlarini ochish uchun jarayonning har bir jihatini sinchkovlik bilan hal qilish kerak. Ular inson ishlashining chegaralarini oshirishda davom etar ekan, jamoaviy eshkak eshish texnikasida samaradorlikni izlash hal qiluvchi va doimiy rivojlanayotgan muammo bo'lib qoladi, bu shubhasiz ushbu dinamik va jozibali sportning kelajagini shakllantiradi.

AKADEMIK ESHKAK ESHISH SPORTIDA SAKKIZ KISHILIK QIZLAR EKIPAJIDA JAMOAVIY HARAKAT TEXNIKASINI MUVOFIQLASHTIRISH

Annotatsiya. Akademik eshkak eshish dunyosida jamoaviy harakat texnikasini muvofiqlashtirish muvaffaqiyat uchun juda muhimdir. Bu, ayniqsa, sakkiz qizdan iborat ekipajda to'g'ri keladi, bu yerda har bir a'zo suvda optimal ishlashga erishish uchun muammosiz ishlashi kerak. Ushbu maqolada biz akademik eshkak eshish bo'yicha sakkiz qizdan iborat ekipajda muvofiqlashtirishning muhimligini, shuningdek, jamoaviy harakatni va umumiy ishlashni yaxshilash uchun ishlatilishi mumkin bo'lgan texnika va strategiyalarni o'rganamiz.

Kalit so'zlar: jamoaviy harakat, eshkak eshish mahorati, malakali o'qituvchilar, yosh sportchilar, sport o'yinlari, strategiyalar.

COORDINATION OF TEAM MOVEMENT TECHNIQUES IN THE CREW OF EIGHT GIRLS IN THE ACADEMIC ROWING SPORT

Abstract. In the world of academic rowing, the coordination of team movement techniques is essential for success. This is particularly true in the crew of eight girls, where each member must work together seamlessly to achieve optimal performance on the water. In this article, we will explore the importance of coordination in the crew of eight girls in academic rowing, as well as the techniques and strategies that can be employed to enhance team movement and overall performance.

Keywords: teamwork, rowing skills, qualified teachers, young athletes, sports games, strategies.

Kirish: Zamonaviy globallashuv sharoitida qo'lga kiritilgan akademik sektor ta'lim, ma'muriyat va tadqiqot jarayonlarida yanada samarali bo'lish uchun tobora ko'proq bosim ostida bo'lib, daromad manbalarini diversifikatsiya qilish

zarurati ortib bormoqda. Shu bilan birga, o'tgan chorak asrda, ayniqsa, yosh aholida jismoniy tayyorgarlikning umumiy darajasining butun dunyo bo'ylab xavotirli pasayishi hujjatlashtirilgan. Sport faoliyatining xilma-xilligi, shuningdek, kadrlar va imkoniyatlarga ega bo'lishdan tortib, jamoat imidjini yaxshilashga va raqobatbardosh muvaffaqiyatga erishish imkoniyatini oshirishga qadar bo'lgan sabablarga ko'ra akademik sohaga o'tishga intiladi.

Yarim murakkab interaktiv jamoaviy sport turlarini muvofiqlashtirish jamoaning muvaffaqiyatiga katta hissa qo'shadigan omil ekanligi ko'rsatildi (Davids va boshq, 2005). Muvofiqlashtirish, shuningdek, paydo bo'lgan funktsional birlik sifatida jamoaning moslashuvchan va barqaror holatlarini shakllantirishga xizmat qiladi. Sport o'yinlari doimiy monitoring va davom etayotgan tuzatishlarni o'z ichiga oladigan murakkab va dinamik tizimi sifatida qaraladi, bu muhim ahamiyatga ega hisoblanadi (gr Rachexhaigne va boshq, 1997). Dinamik naqsh nazariyasiga ko'ra, mahorat dinamik tizimni muvofiqlashtirish fazasi makonida barqarorlik mintaqalariga o'tkazish qobiliyatidir (Kelso, 1995). Buni sportchilar o'rtasida murabbiy yoki tashqi agent ta'sirisiz ma'lum bir harakat tartibiga rioya qilish imkoniyatiga ega bo'lgan o'z-o'zini tashkil qilishni targ'ib qilish orqali amalga oshirish mumkin. O'z-o'zini tashkil etish jamoalarning samaradorligini oshirish bilan bog'liq, ammo bu vosita mahoratini o'rganish bilan taqqoslaganda juda kam o'rganilgan. Sportchining sportdagi ko'rsatkichlari bo'yicha tadqiqotlar odatda sportchining fiziologiyasi va sport texnikasiga qaratilgan (Tyorner, 2002). Ushbu ikki omil sportdagi muvaffaqiyatning asosi sifatida keng tan olingan, chunki ular harakatni ishlab chiqarishga asosiy hissa qo'shadi. Sportchilarning o'zaro ta'siriga oid psixomotor omillarga kamroq e'tibor qaratildi. Biroq, yanada murakkab interaktiv sport turlari individual shakllarni yo'qotayotgani va jamoaga yo'naltirilgan formatlarni egallaganligi sababli, tadqiqotlarni sportchilar o'rtasidagi muvofiqlashtirishni o'rganishga yo'naltirish kerak (Eccles va boshq, 1998).

Avvalo, sakkiz qizdan iborat ekipajda muvofiqlashtirishning ahamiyatini tushunish juda muhimdir. Eshkak eshish-bu qayiqni samarali oldinga siljitish uchun jamoa a'zolari o'rtasida aniq sinxronizatsiya va vaqtni talab qiladigan sport turi. Sakkiz kishilik ekipajga kelsak, har bir eshkak eshuvchi zarba tezligi, quvvatni qo'llash va tanani joylashtirish bo'yicha jamoadoshlari bilan mukammal uyg'un bo'lishi kerak. Ushbu sinxronlashtirilgan harakatdan har qanday og'ish qayiq tezligi va umumiy ishlashning pasayishiga olib kelishi mumkin.

Sakkiz qizdan iborat ekipajda optimal muvofiqlashtirishga erishish uchun har bir jamoa a'zosi muvaffaqiyatning umumiy maqsadiga to'liq sodiq bo'lishi muhimdir. Bu shuni anglatadiki, barcha eshkak eshuvchilar o'zlarining mashg'ulot rejimiga bag'ishlangan, mashg'ulotlar paytida diqqatli va jamoa manfaati uchun qurbonlik qilishga tayyor bo'lishlari kerak. Bundan tashqari, jamoa a'zolari o'rtasida samarali muloqot harakat texnikasini muvofiqlashtirish va musobaqalar va mashg'ulotlar paytida hamma bir sahifada bo'lishini ta'minlash uchun juda muhimdir. Sakkiz qizdan iborat ekipajda muvofiqlashtirishni kuchaytirishning

o'ziga xos texnikasi nuqtai nazaridan, bir nechta asosiy strategiyalarni qo'llash mumkin. Bunday texnikalardan biri bu poyga paytida ekipajning ko'zlari va quloqlari bo'lib xizmat qiladigan zarba tezligi, qayiqning joylashuvi va umumiy strategiya bo'yicha ko'rsatma beradigan koksveyndan foydalanishdir. Koksveyn harakat texnikasini muvofiqlashtirishda va ekipajning birgalikda samarali ishlashini ta'minlashda hal qiluvchi rol o'ynaydi.

Vaqt va ritm:

Samarali muvofiqlashtirishning markazida aniq vaqt va ritm yotadi. Har bir eshkak eshuvchi o'z zarbasini boshqalar bilan sinxronlashtirishi va eshkaklari bir vaqtning o'zida suvga kirishi va chiqishini ta'minlashi kerak. Ushbu murakkab raqs insult tsiklini chuqur tushunishni va jamoadoshlarining harakatlarini oldindan bilish qobiliyatini talab qiladi. Koksveyn, orqa tarafdagi hal qiluvchi yetakchi, ekipajni mukammal birlashishga yo'naltirish uchun ularning ovozi va buyruqlaridan foydalanib, tezlik va ritmni belgilashda muhim rol o'ynaydi. Ko'p soatlik mashg'ulotlar orqali eshkak eshuvchilar intuitiv vaqt tuyg'usini rivojlantiradilar, bu ularga qayiq harakatidagi yoki tashqi sharoitdagi har qanday o'zgarishlarga muammosiz javob berishga va moslashishga imkon beradi.

Texnik Sinxronizatsiya:

Vaqtdan tashqari, texnik sinxronizatsiyaga erishish juda muhimdir. Har bir eshkak eshuvchi zarbani aniq texnika bilan bajarishi kerak, ularning pichog'i suvga to'g'ri burchak ostida kirishini, izchil chuqurlikni saqlashini va minimal chayqalish bilan toza chiqishini ta'minlashi kerak. Ushbu texnik aniqlik har bir zarba bilan maksimal quvvat hosil bo'lishini ta'minlaydi va qayiqni samarali oldinga siljitadi. Bundan tashqari, eshkak eshuvchilar insult tsikli davomida to'g'ri tana holatini saqlab, tortishni minimallashtirishi va optimal biomexanik samaradorlikni ta'minlashi kerak. Barcha sakkizta eshkak eshuvchilarda texnik bir xillikka erishish tafsilotlarga sinchkovlik bilan e'tibor berishni, koksveynning doimiy mulohazalarini va jamoa manfaati uchun individual texnikani takomillashtirishga tayyorlikni talab qiladi.

Aloqa va fikr-mulohaza:

Samarali muloqot muvaffaqiyatli muvofiqlashtirishning asosidir. Koksveyn Markaziy kommunikator bo'lib xizmat qiladi va ekipajga tezlik, ritm va boshqarish bo'yicha aniq ko'rsatmalar beradi. Bundan tashqari, eshkak eshuvchilarning o'zlari sinxronizatsiyani saqlash va o'zgaruvchan sharoitlarga moslashish uchun og'zaki signallar va vizual signallardan foydalangan holda samarali muloqot qilishlari kerak. Ochiq va konstruktiv mulohazalar muvofiqlashtirishni yaxshilashda hal qiluvchi rol o'ynaydi. Koksveyn individual va jamoaviy ko'rsatkichlar bo'yicha muntazam fikr-mulohazalarni taqdim etadi, eshkak eshuvchilarning o'zlari esa o'z tajribalari va kuzatuvlari asosida taklif va tuzatishlar kiritadilar. Ushbu doimiy muloqot ekipaj zaif tomonlarini aniqlashi va hal qilishi, ularning muvofiqlashtirilishi va umumiy ishlashini doimiy ravishda takomillashtirishi mumkin bo'lgan o'quv muhitini yaratadi.

Sakkiz qizdan iborat ekipajda muvofiqlashtirishni kuchaytirishning yana bir muhim usuli bu muntazam jamoaviy uchrashuvlar va yig'ilish mashg'ulotlarini o'tkazishdir. Ushbu uchrashuvlar jamoa a'zolariga o'z faoliyatini muhokama qilish, takomillashtirish yo'nalishlarini aniqlash va muvofiqlashtirish va umumiy ko'rsatkichlarni oshirish strategiyasini ishlab chiqish imkoniyatini beradi. Jamoa a'zolari o'rtasida ochiq muloqot va hamkorlikni rivojlantirish orqali ushbu uchrashuvlar eshkak eshuvchilar o'rtasidagi aloqani mustahkamlashga va suvda muvofiqlashtirishni kuchaytirishga yordam beradi.

Bundan tashqari, sakkiz qizdan iborat ekipajdagi har bir eshkak eshuvchi jamoani umumiy muvofiqlashtirishga hissa qo'shish uchun uning individual texnikasi va harakatiga e'tibor qaratishi muhimdir. Bu samaradorlikni oshirish va jamoadoshlar bilan sinxronlashtirish uchun tanani joylashtirish, quvvatni qo'llashga katta e'tibor berishni anglatadi. Shaxsiy mahorat va texnikani takomillashtirish orqali eshkak eshuvchilar ekipajning jamoaviy muvaffaqiyatiga hissa qo'shishlari va suvda umumiy ishlashni yaxshilashga yordam berishlari mumkin.

Xulosa

Xulosa qilib aytganda, akademik eshkak eshish bo'yicha sakkiz qizdan iborat ekipajda jamoaviy harakat texnikasini muvofiqlashtirish suvda muvaffaqiyat qozonish uchun juda muhimdir. Fidoyilik, muloqot va individual texnikani ta'kidlab, eshkak eshuvchilar optimal ishlashga erishish va qayiqni samarali oldinga siljitish uchun birgalikda muammosiz ishlashlari mumkin. Koksvayndan foydalanish va muntazam jamoaviy uchrashuvlar kabi aniq texnika va strategiyalarni amalga oshirish orqali muvofiqlashtirishni yaxshilash va umumiy ishlashni yaxshilash mumkin. Sakkiz qizdan iborat ekipaj muvofiqlashtirish va jamoaviy ishlarga e'tibor qaratib, akademik eshkak eshish raqobatbardosh dunyosida muvaffaqiyatga erishishi mumkin.

QISHLOQ XO'JALIGI MAHSULOTLARINI RAQOBATBARDOSHLIGINI TA'MINLASHDA KLASTER TIZIMINI JORIY QILISH MEXANIZMLARI

Annotatsiya. Ushbu takliflar qishloq xo'jaligida yetishtirilayotgan maqsulotlarni raqobatbardoshligini ta'minlashda albatta klaster tizimini joriy qilish bugungi kunning dolzarb masalasi hisblanadi. Shu nuqtai nazardan ushbu maqolada qishloq xo'jaligi mahsulotlarini raqobatbardoshligini ta'minlashda klaster tizimini joriy qilish mexanizmlari bo'yicha takliflar ishlab chiqilgan.

Kalit so'zlar: raqobat, klaster siyosati, davlat-xususiy sheriklik, intervension klaster siyosati, shartnoma munosabatlari, kooperatsiya, ixtisoslashuv, kontsentratsiya, ishlab chiqarish klasteri, innovatsion klaster, aksionizatsiya, kooperatsiya yoki klasterlash mexanizmlari

MECHANISMS OF CLUSTER SYSTEM IMPLEMENTATION IN ENSURING COMPETITIVENESS OF AGRICULTURAL PRODUCTS

Abstract. These proposals are of course the current issue of the introduction of a cluster system in ensuring the competitiveness of agricultural products. In this regard, this article develops recommendations on the mechanisms for implementing a cluster system to ensure the competitiveness of agricultural products.

Keywords: competition, cluster policy, public-private partnership, intervention cluster policy, contractual relations, cooperation, specialization, concentration, production cluster, innovation cluster, privatization, cooperation or clustering mechanisms.

Kirish. Ko'plab rivojlangan va jahon iqtisodiyotida yetakchi o'rinni egallagan mamlakatlar tajribasi shuni ko'rsatmoqdaki, raqobatbardoshlikni ta'minlash va dunyo bozorlarida o'rnini topish, birinchi navbatda iqtisodiyotni izchil isloh qilish, tarkibiy o'zgartirish va diversifikatsiya qilishni chuqurlashtirish, yuqori texnologiyalarga asoslangan yangi korxonalar va ishlab chiqarish tarmoqlarining jadal rivojlanishini ta'minlash, faoliyat ko'rsatayotgan quvvatlarni modernizatsiya qilish va texniktexnologik yangilash jarayonlarini tezlashtirish orqali sifatli va raqobatbardosh mahsulot tayyorlashni ta'minlash hisobidan amalga oshirilishi o'z isbotini topmoqda.

O'zbekiston Respublikasi Prezidentining 2019 yil 23 oktyabrdagi "O'zbekiston Respublikasi qishloq xo'jaligini rivojlantirishning 2020-2030 yillarga mo'ljallangan strategiyasini tasdiqlash to'g'risida"gi PF-5853-son farmonida quyidagi choratalbirlarni amalga oshirish masalasiga alohida e'tibor qaratilgan, ya'ni "Kooperatsiya va klaster tizimi asosida mahsulot yetishtirish, uni qayta ishlash, saqlash va ichki hamda tashqi bozorlarga sotish tizimi yo'lga qo'yiladi"[1].

Tadqiqot jarayonida qiyosiy, mantiqiy va abstrakt fikrlash usullaridan foydalanildi. Qishloq xo'jaligi mahsulotlarining raqobatbardoshligi mikroiqtisodiy kategoriya hisoblanadi, shuning uchun ham uning darajasini ko'tarish iqtisodiyotning agrar soha sub'ektlarining manfaatlari in'ikosi hisoblanadi. Qishloq xo'jaligi mahsulotlarini yetkazib berishda raqobatbardoshligining dialektikligi shundan iboratki, aynan unda qishloq xo'jaligi sohasi va davlatning iqtisodiy manfaatlarining birligi, shu bilan birgalikda qarama-qarshiligi ham namoyon bo'ladi. Qishloq xo'jaligi mahsulotlari raqobatbardoshligi milliy iqtisodiyot raqobatbardoshligi nuqtai nazaridan qaraladi, ya'ni bir tomondan, qishloq xo'jaligi mahsulotlari raqobatbardoshligining darajasi ma'lum bir darajada makroiqtisodiyot omillar bilan aniqlansa, ularni tartibga solib turilishi esa davlatning vakolatida bo'ladi. Boshqa bir tarafdin esa, qishloq xo'jaligi mahsulotlarining raqobatbardoshlik o'rnini mustahkamlash umumdavlat iqtisodiy manfaatlar sohasiga qarashli bo'lgan.

Mamlakat hududlarining raqobatbardosh salohiyatini ro'yobga chiqarish maqsadida hududiy-ishlab chiqarish klasterlari tarmog'ini yaratishni, shuningdek mamlakatning hududlarida bir qator yuqori texnologik klasterlarni shakllantirishni nazarda tutadigan uzoq muddatli ijtimoiy-iqtisodiy rivojlanish kontseptsiyasi ishlab chiqilishini taqozo etadi.

Qishloq xo'jaligining tarmoqlararo integratsiyasi bu aksionizatsiya, kooperatsiya yoki klasterlash mexanizmlaridan foydalangan holda birgalikdagi faoliyatni tashkil etishdir. Bugungi kunda yirik xo'jaliklar o'zlarining rivojlanishini aksionizatsiya mexanizmlaridan, o'rta va kichik xo'jaliklar - kooperatsiya va klasterlash mexanizmlaridan foydalangan holda ta'minlamoqda.

Jahon amaliyoti ko'rsatib turibdiki, klasterlar qishloq xo'jaligi korxonalarining raqobat muhitida ishlashining iqtisodiy mexanizmini

moslashtirish shakllaridan biri bo'lib, agrosanoat ishlab chiqarishni rivojlantirishni jadallashtirish, ayrim xo'jalik yurituvchi sub'ektlar va qishloq xo'jaligi mahsulotlarining raqobatbardoshligini oshirish, innovatsion jarayonlarni samarali tashkil etilishini ta'minlash, savdo hajmini kengaytirish maqsadida o'ziga xos iqtisodiy makonni shakllantirish, kapital va resurslardan samarali foydalanish kabilardir.

Klaster hududlarni ijtimoiy-iqtisodiy rivojlantirishda "o'sish nuqtasi" bo'lganligi sababli, qishloq xo'jaligi mahsulotlarini klasterlash agrar sektorning barqaror rivojlanishini ta'minlash va qishloq xo'jaligining raqobatbardoshligini oshirishning asosiy omillaridan biridir. Qishloq xo'jaligining raqobatbardoshligini oshirish bo'yicha agrosanoat klasteri bir qator xususiyatlarga ega:

1. Agrosanoat hududiy klasteri - bu agrosanoat ishlab chiqarish masalalari bilan shug'ullanadigan, geografik jihatdan yetarlicha yaqin bo'lgan bir yoki bir nechta (qishloq xo'jaligiga qo'shni) tarmoqlar (qishloq xo'jaligi mahsulotlarini geografik lokalizatsiya qilish) bilan shug'ullanadigan korxonalar, muassasalar yoki boshqa tashkilotlarning ixtiyoriy birlashmasi.

2. Raqobat ustunligi nafaqat tadbirkorlik sub'ektlari tomonidan, balki ularning hududiy ko'p bosqichli va ko'p tarmoqli birlashmalari tomonidan yaratiladi.

3. Iste'molchilarni zabt etishni alohida qishloq xo'jaligi emas, balki hududiy korxonalar kompleksi - klaster amalga oshiradi.

4. Klaster doirasida resurslarning kontsentratsiyasi amalga oshiriladi, ulardan foydalanish barcha ishtirokchilar uchun belgilangan va ular tomonidan qabul qilingan umumiy maqsadga erishishga qaratilgan bo'lib, yagona iqtisodiy va axborot makoni yaratiladi, ishchi kuchini boshqarish, intellektual kapitalni birlashtirish va moliyaviy resurslar bilan o'zaro qo'llab-quvvatlash imkoniyatlari paydo bo'ladi.

5. Klaster sub'ektlari birgalikda davlat organlarida klaster a'zolari manfaatlarini himoya qilishi mumkin.

6. Klaster shakllanishi yangi ish o'rinlarini yaratishi va shu bilan islohotlar va makrotuzilmaviy beqarorlashtirish jarayonlari oldida doimiy ish bilan ta'minlanishi mumkin.

7. Klaster shakllanishlari yuqori darajadagi raqobatbardoshlikka ega, chunki ular quyidagilarga imkon beradi:

- katta hajmdagi mahsulotlarni ishlab chiqarish;
- mustaqil korxonalarga nisbatan barqaror raqobatbardosh ustunliklarni yaratish;
- samarali marketing siyosatini olib borish;
- yuqori malakali kadrlarni tayorlash;
- innovatsion texnologiyalarni joriy etish;
- ekologik toza va sifatli mahsulotlar ishlab chiqarish uchun progressiv sifat standartlaridan foydalanish;

➤ sinergiya ta'sirida ishlab chiqarish xarajatlari darajasini pasaytirish va ishlab chiqarilayotgan mahsulotlar sifatini yaxshilash, shu jumladan sifat menejmenti, logistika, muhandislik, axborot texnologiyalari yondashuvlarini birlashtirish;

➤ qishloq xo'jaligi mahsulotlarining jahon bozorlariga chiqish imkoniyati tufayli mahsulotlarni sotish bozorlarini kengaytirish;

➤ bozorda talab va taklif, shuningdek raqobatchilarning yutuqlari to'g'risida ma'lumot olish va almashish uchun samarali tizim yaratish.

Klaster rivojlanishi qishloq xo'jaligi va umuman agrosanoat majmuasining raqobatbardoshligini oshirish omili sifatida zamonaviy innovatsion iqtisodiyotning o'ziga xos xususiyatiga aylanishi mumkin.

Xulosa: Xulosa qiladigan bo'lsak, mamlakatimiz qishloq xo'jaligi uchun klasterlashtirishning afzalliklari quyidagicha bo'lishi maqsadga muvofiqdir:

➤ birlashtirilgan kapitallarni bo'lishish va yangiliklarni tezlashtirish qobiliyati;

➤ resurslardan birgalikda foydalanish, moddiy-texnik ta'minotni sotib olish va saqlashda tejash;

➤ agrosanoat majmuasining har bir alohida korxonasi hududiga, faoliyat ko'lamiga va faoliyatining o'ziga xos xususiyatlariga muvofiq xo'jalikarning samarali ixtisoslashuvini aniqlash;

➤ bozorlarni ixtisoslashuvi va faoliyatining imkoniyatlariga muvofiq taqsimlash, samarasiz raqobatni oldini olish;

➤ kooperatsiyadan ko'lamlarni tejash va kichik korxonalar deb nomlangan kamchiliklarni bartaraf etish, ba'zi xarajatlarni kamaytirish;

➤ hamkorlik va sinergiya natijasida erishilgan xatarlarni kamaytirish va taqsimlash;

➤ qishloq xo'jaligi tarmoqlarining raqobatbardoshlik darajasini oshirish;

➤ yakka tartibdagi korxonalar va tarmoq barqarorligini oshirish;

➤ uzoq muddatli, shu jumladan ishlab chiqaruvchi va iste'molchi o'rtasidagi munosabatlarni o'rnatish.

DEVELOPMENT OF PROFESSIONAL COMPETENCE OF EDUCATORS OF PRESCHOOL EDUCATION ORGANIZATION BASED ON FOREIGN EXPERIENCES

Annotation. In this article, we can learn how to use the experience of preschool teachers in foreign countries, how to conduct activities of preschool organizations in foreign countries.

Key words: foreign experience, psychological aspects, state, society, development, solidarity, community, meaning of life, discipline.

There are very few separate literatures and research works on the study of the best practices of foreign countries in the preschool education and upbringing system, there are only electronic resources of the sources in this regard, which can be found and translated on various websites of the Internet. For example, B. E. Parmonov, I. G' Mamajonov, R. Mamatov, M. Kh. Qilichova conducted scientific research on this topic. B. E. Parmonov covered the best experiences of foreign countries in the article "Psychological aspects of foreign experiences in raising children in preschool education." In particular, he analytically studied the advanced experiences of countries such as Great Britain, the Russian Federation, Japan, and Germany. I. G' Mamajonov and R. Mamatov have partially included information on the preschool education system in the study of the education system of the German state. In South Korea, kindergarten is not part of general education. Parents send their children to private preschools. Activities in these organizations are conducted in Korean, English, and in some only in English.

Children from 3 to 5 years old are admitted to the kindergarten. The main task of the kindergarten is to create conditions for the comprehensive development of families. Kindergartens mainly offer music, drawing, and math lessons. In Korean kindergartens, great attention is paid to the formation of independence in children. The difference between children's ages can be up to 3 years.

One of the tasks of the administration of a preschool educational organization is to create a favorable moral and psychological climate, an environment of creative interaction and cooperation. The creative work team of educators is able to provide high-level educational work with children and the formation of a creative personality. Research shows that the main role in the development of the educator's creative ability is played by his professional activity and the desire to improve himself. The development of abilities is directly related to the pedagogical skills and abilities that each educator should acquire. It is known that, in fact, pedagogical activity has a creative nature. What is the relationship between professionalism and creativity in the work of an educator?

Perhaps these concepts are synonymous? Creativity is usually described as a process, the result of which is the creation of new material or spiritual values. The novelty criterion can have an objective content (new for a certain field of knowledge) and subjectivity (new for a person - the subject of activity). If creativity prevails in the thinking process, then it manifests itself as imagination (K.K. Platonov). Professional skills of the educator are closely related to creativity. However, these concepts are not synonymous: professionally competent actions are not necessarily the result of the educator's creativity. In teaching, creativity is often seen as a panacea for all diseases, as a dominant that leaves no room for reproductive (reproductive) activity. The first kindergarten in Japan under the leadership of American women was established in Yokohama in 1871, the first Japanese kindergarten in Tokyo in 1894, but the idea of separating the child from the mother so early was not popular. The preschool educational organization should solve the following tasks: help the child to have a good relationship with adults and children, respect nature, adopt a healthy lifestyle, acquire social behavior skills.

Public preschool education is positively evaluated: it helps to bring up an intact child who is able to cooperate with other children. There are also additional schools for gymnastics, swimming, music, dance, art, etc., as well as private kindergartens in schools preparing for admission to their affiliated universities. In addition to daily tasks, teachers must implement additional programs: celebrate the beginning and end of the school year, teach children the rules of behavior on the road and teach them safe life skills, excursions, organizes sports competitions, engages in sports competitions. traditional Japanese exercises in literary creation, celebrating children's birthdays and traditional seasonal and national holidays. Many preschools teach children to play drums and flute, they can participate in marching festivals, and learn numbers and cursive "knan" - this is done at the request of parents. The Japanese pre-school education system works as described above.

Reproductive activity, as a rule, is recognized only as an unwanted, but transition to creativity. The fact that reproducibility in pedagogical activities has a multilevel structure is really underestimated: from vague retelling of knowledge to the ability to adapt the material taking into account many external factors. Reproducibility means the ability to restore their pedagogical activity in changing conditions. A master of pedagogical work is a highly qualified specialist in psychological-pedagogical and current topics, who is able to reproduce professional knowledge, skills and qualifications at a high level. The level of professional skill of the educator depends on his qualifications (pedagogical, social-psychological, differential-psychological), as well as the level of development of professional and pedagogical thinking. Pedagogical creativity is effective if it is based on high professional and pedagogical competence. Unfortunately, in most cases this competence is not available, which leads to didactogenic factors.

True pedagogical creativity corresponds to the objective, not subjective criteria of innovation, the results of creative activity. Even history itself is a witness to this. For example, in Japanese kindergartens, educational programs are also taken into account, in addition to writing and reading, children are taught to sing, sports competitions are held, and they go on regular walks. But in addition to these, the purpose of holding these events is to develop children's sense of harmony and living in a community. The issue of development of creative potential is a process closely related to human psychology. That's why educators and pedagogues play an important role in the life of children of preschool age.

TUT KO‘CHATLARI DOMINANT ZARARKUNANDALARINING RIVOJLANISH FENOLOGIYASI

Annotatsiya. Maqolada Andijon viloyati sharoitida tut ko‘chatlari zararkunandalarining asosiy dominant turlari rivojlanishi fenologiyasi 2021-2023 yillar kesimida olib borilgan tadqiqotlar natijalari tahlili yoritilgan.

Kalit so‘zlar. Insecta qattiq qanotlilar (Coleoptera) turkum buzoqbosh qo‘ng‘izlar (Melolonthene), fenologiya birlamchi zararlanish, mavsumiy dinamika, zararkunanda.

DEVELOPMENT PHENOLOGY OF DOMINANT PESTS OF SILK BERRY SEEDLINGS

Abstract. The article describes the analysis of the results of the research conducted in the period 2021-2023 on the phenology of the development of the main dominant species of pests of mulberry seedlings in the conditions of Andijan region.

Keywords. Insecta, Coleoptera, Melolonthene, phenology, primary infestation, seasonal dynamics, pest.

O‘zbekiston ipak tolasi yetishtirish bo‘yicha, bugungi kun statistik ma’lumotlariga ko‘ra, jahon mamlakatlari orasida yuqori o‘rinlarni egallab, aholi jon boshiga mahsulot yetishtirish bo‘yicha birinchi o‘rinda turadi. Barcha o‘simliklar kabi, tut ko‘chatlarining ham bir qator zararkunandalari mavjud bo‘lib, ular tutzorlarni kengaytirish vazifasini hal qilishda jiddiy muammolar keltirib chiqaradi. Tut ko‘chatlarining kushandalaridan eng muhimlari bu – tut parvonasi, akatsiya shirasi va ildiz zararkunandalaridir.

Andijon viloyati sharoitida uchraydigan zararkunandalarning tut ko‘chatlariga yetkazadigan zararini kamaytirishda ularning fenologik kalendarini tuzish muhim ahamiyat kasb etadi. Shu sababli biz 2021-2023 yillar davomida ularning fenologik kalendarini tuzish maqsadida Andijon viloyatining Paxtaobod tumani “Muxammadqodir Baxor” hamda “Abdug‘ani –Ziyoiddin” fermer xo‘jaliklarida va Marhamat tumani “Ipak-ko‘chat klasteri“da parvarishlanayotgan tut ko‘chatzorlarida tadqiqotlar olib bordik.

Tadqiqotlar olib borilayotgan hududlarda o‘stirilayotgan tut ko‘chatlarining asosiy zararkunandalari bioekologik xususiyatlarini o‘rganish va

fenokalendar tuzishda B.V.Dobrovolskiy [21] uslubidan foydalanildi. Fenologik kuzatuvlar hasharotlarni rivojlanish muddatlariga bog‘lab, dala sharoitida olib borildi. Fenologik kuzatishlar orqali, havoning o‘rtacha harorati va nisbiy namligini hisobga olgan holda, hasharotlarning tut ko‘chatlarida paydo bo‘lish muddatlari va rivojlanish davrlari belgilandi.

Tajribalarda variantlarni qiyosiy tahlil qilishni osonlashtirish maqsadida boshqa turdagi faktorlar (agrotexnik, mexanik tadbirlar, kimyoviy kurash va hokazo) ta’siri bir xilda olib borilishiga alohida e’tibor berib borildi.

Mart buzoq boshisi (*Melontha afflicta* Ball). Lichinkalik stadiyasida va hali faol hayot kechirishga o‘tmagan qo‘ng‘izlik stadiyasida qishlab chiqqan xasharotlarni Paxtaobod tumaniga nisbatan tuproq namligi yuqoriroq bo‘lgan Marxamat tumanida nisbatan ko‘proq uchradik.

Mart buzoqboshi qo‘ng‘izlari erkaklari mart oyining 2-dekadasidan aprel oyining 3-dekadasigacha uchdi. Mart buzoqboshi qo‘ng‘izi atigi yarim soatdan keyin uchishdan to‘xtaydi.

Qo‘ng‘izlar uchib chiqqandan 2-3 hafta keyin juftlasha boshlaydi. Urg‘ochisi soya joylarga, daraxtlar tagiga, yerning yuza qatlamiga bittadan yoki 2-3 tadan tuxum qo‘ydi. 2-3 sutka mobaynida hammasi bo‘lib 30 tacha tuxum qo‘ydi. Mart buzoqboshi qo‘ng‘izlarining urg‘ochilari yana bir oycha yashab, keyin yana 4-5 ta tuxum qo‘yib o‘la boshladi.

Tuxumlar qo‘yilgandan bir yarim oydan keyin ulardan lichinkalar chiqa boshladi. Lichinkalar faqat kelasi yilda birinchi marta po‘st tashlaydi va shu vaqtdan boshlab daraxtlarning ildizlarini kemirib, sezilarli zarar yetkaza boshlaydi.

Lichinkalari aprel oyining 3-dekadasidan iyun oyining 3-dekadasigacha paydo bo‘ldi. Lichinka va g‘umbaklarni tut ko‘chatlari ekilgan tuproqning 15-20 sm. qatlamlarida tarqalganligini kuzatdik. Lichinkalari chirigan organik moddalar va keyinchalik tut ko‘chatlarining ildizlari bilan oziqlana boshladi.

1-jadval

Mart buzoqboshi qo‘ng‘izining fenologik xaritasi

OVERCOMING COMMON CHALLENGES IN ENGLISH GRAMMAR AND PRONUNCIATION: TIPS FOR SUCCESS

Abstract. This article explores common challenges encountered by learners in English language acquisition and provides practical tips for overcoming them. By addressing key obstacles such as pronunciation difficulties, grammar complexities, and vocabulary acquisition, learners can enhance their proficiency and confidence in English communication.

Key words: English language acquisition, challenges, pronunciation, grammar, vocabulary, tips, immersive learning, practice, support, success.

Introduction:

Introduction to the significance of English language acquisition in today's globalized world and the prevalence of challenges faced by learners. Proficiency in English language acquisition is increasingly recognized as a valuable skill essential for academic, professional, and social success. However, for many learners, mastering English poses significant challenges that can impede their progress and undermine their confidence. This article aims to explore the common hurdles encountered in English language acquisition and provide practical strategies and tips for overcoming them. As English differs from learners' native languages in pronunciation, grammar, and vocabulary, navigating these differences can be daunting. Pronunciation difficulties often stem from differences in phonetic sounds and stress patterns, making it challenging for learners to articulate English words accurately. Likewise, the complexity of English grammar, including verb tenses, sentence structures, and word order, presents a formidable obstacle for learners to overcome. Additionally, the vastness of English vocabulary poses a challenge in terms of memorization and retention, especially considering the diverse range of words and their nuanced meanings.

Despite these challenges, success in English language acquisition is attainable with the right approach and mindset. By adopting immersive learning opportunities, such as engaging with English-language media and participating in language exchange programs, learners can enhance their exposure to authentic language use and improve their fluency. Consistent practice is paramount in reinforcing language skills, and learners are encouraged to incorporate daily reading, writing, listening, and speaking exercises into their routine. Seeking support and feedback from teachers, language tutors, or language exchange partners can provide invaluable guidance and motivation on the language learning journey.

1. Pronunciation Difficulties:

Pronunciation is often cited as one of the most challenging aspects of learning English, particularly for non-native speakers. The English language contains a wide range of phonetic sounds, many of which may not exist in learners' native languages. Additionally, the stress patterns and intonation in English can vary significantly from other languages, leading to difficulties in articulating words and phrases accurately.

Common pronunciation challenges include:

- Differentiation between similar sounds, such as /θ/ and /ð/ (as in "think" and "this") or /ɪ/ and /i:/ (as in "ship" and "sheep").
- Pronouncing consonant clusters, such as /str/ or /skr/, which may not exist in learners' native languages.
- Mastering English stress patterns and intonation, which can affect the meaning and clarity of speech.

Strategies for improving pronunciation include:

- Practice with phonetic drills to familiarize learners with the sounds of English.
- Listening to native speakers through audio recordings, podcasts, or videos to model correct pronunciation and intonation.
- Utilizing pronunciation apps or online resources that provide interactive exercises and feedback on pronunciation accuracy.
- Engaging in speaking activities, such as role-plays or conversational practice, to apply pronunciation skills in context and receive feedback from peers or instructors.

By addressing pronunciation difficulties through targeted practice and exposure to authentic language use, learners can improve their ability to communicate effectively in English.

2. Grammar Complexities:

English grammar presents learners with a myriad of rules, exceptions, and nuances that can be challenging to master. From verb conjugation to sentence structure, learners often encounter complexities that differ significantly from their native languages. Understanding and applying these rules accurately is crucial for clear and effective communication in English.

Common grammar challenges include:

- Verb tenses: English has a complex system of verb tenses, including past, present, and future forms, as well as perfect and continuous aspects. Learners may struggle to grasp the appropriate usage of each tense and understand the differences in meaning between them.
- Sentence structure: English sentences follow a specific word order (subject-verb-object), but there are variations and exceptions depending on the type of sentence (declarative, interrogative, imperative) and the presence of auxiliary verbs or adverbial phrases.

- Articles and determiners: English articles (a, an, the) and determiners (this, that, these, those) play a crucial role in specifying nouns, but their usage can be confusing for learners, especially those whose native languages do not have similar concepts.

Strategies for mastering grammar complexities include:

- Studying grammar textbooks or online resources that provide clear explanations and examples of grammar rules.

- Practicing grammar exercises to reinforce understanding and application of grammar concepts.

- Analyzing authentic texts, such as articles, essays, or dialogues, to observe how grammar rules are used in context.

- Engaging in communicative activities, such as discussions or writing tasks, to apply grammar knowledge in real-life situations and receive feedback on accuracy.

By actively engaging with grammar concepts and practicing them in context, learners can gradually overcome the complexities of English grammar and become more confident and proficient communicators.

Summary:

Pronunciation difficulties and grammar complexities are two common challenges faced by learners in English language acquisition. Pronunciation challenges arise from differences in phonetic sounds, stress patterns, and intonation between English and learners' native languages. Strategies for overcoming pronunciation difficulties include phonetic drills, exposure to native speakers, pronunciation apps, and speaking practice.

Grammar complexities stem from the intricate system of verb tenses, sentence structures, and grammatical rules in English. Learners often struggle with verb conjugation, sentence order, and the usage of articles and determiners. To overcome grammar challenges, learners can utilize grammar textbooks, practice exercises, analyze authentic texts, and engage in communicative activities.

JISMONIY TARBIYA DARSLARIDA O'QITISHNING O'QUV-KO'RGAZMALI DIDAKTIK VOSITALARIDAN FOYDALANISHNING AHAMIYATI

Annotatsiya: mazkur maqolada o'qitishning o'quv-ko'rgazmali vositalari, jumladan: real (natural) ko'rgazmali hamda axborotli-tarqatma vositalardan foydalanish va ularning ta'lim samaradorligini oshirishdagi ahamiyati yoritilgan.

Kalit so'zlar: ta'lim, jarayon, didaktik vosita, axborot, ma'lumot, maqsad, natija.

THE IMPORTANCE OF USING TEACHING AND DEMONSTRATION DIDACTICAL TOOLS IN PHYSICAL EDUCATION LESSONS

Abstract. This article outlines the use of educational and demonstration teaching aids, including: real (natural) and information-distributing means, as well as their importance in increasing the effectiveness of education.

Key words: education, process, didactic means, information, goal, result.

Ilmiy va ilmiy texnikaviy axborotlarning keskin o'sishi va tinimsiz rivojlanib murakkablashib borishi ijtimoiy-iqtisodiy hayotni turli sohalarida bo'yicha egallanadigan ma'lumotlarning ilmiy asoslarini o'zlashtirish ehtiyojini yuzaga keltirdi. Bu hol ta'lim, ta'lim jarayonini, ta'lim mazmunini va ularni tashkil etishning shakli, metod, vositalarini mukammalligini ta'minlash zaruriyatini tug'diradi. Bu zaruriyatni amaliy hal etishning yo'llaridan biri o'quv-tarbiya jarayonini didaktik vositalar majmui bilan yaqindan ta'minlashdir.

Zero, didaktik vositalar ayni paytda tinglovchi-o'quvchining ham eshitish, ham ko'rish organlariga ta'sir etib, ularning o'quv-biluv faoliyatlarini jadallashtirish, o'zlashtirilgan bilimlarni amaliyotga tezroq tadbiiq etish imkonini beruvchi vosita hisoblanadi.

Didaktik vositalar majmui tizimida o'qitishning o'quv-ko'rgazmali vositalari muhim ta'limiy va tarbiyaviy ahamiyat kasb etadi.

Ilmiy-nazariy ma'lumotlar va ta'lim muassasalari tajribasining ko'rsatishicha o'quv-ko'rgazmali vositalar o'qitishning didaktik vositalari

majmui mazmunidagi eng oddiy, eng qulay va qo'llash uchun har tomonlama oson hamda ko'p tarqalgan vositalar hisoblanadi.

O'qitishning o'quv-ko'rgazmali vositalarini ba'zan vizual, ya'ni o'qitishning tovushsiz vositalari deb ham atashadi. Chunki, o'quv-ko'rgazmali vositalarda axborotlar (ob'yekt) tasvirlangan bo'lib, ularda tovush bo'lmaydi. Shuning uchun ham ularni faqat namoyish etish mumkin bo'ladi.

O'qitishning o'quv-ko'rgazmali vositalarini ko'p qo'llanishining yana bir sababi, ular oddiy maktab sharoitida ham tayyorlanishi mumkin. Ularda ma'lumotlar (ob'yekt) qisqa, lo'nda, yo'nalishli, bayon etiladi. Shuning uchun ulardan foydalanish, ularni qo'llash va yaratish juda oson hisoblanadi. Shu o'rinda e'tirof etish joizki, jismoniy tarbiya darslarida o'quv-ko'rgazmali vositalar muntazam faoliyatda bo'lishi, o'qituvchining mavzuli-ishchi rejasida o'z ifodasini topishi uchun ta'lim muassasalarida o'quv-ko'rgazmalari vositalar kartotekasini ishlab chiqish maqsadga muvofiq.

Kartotekada o'quv-ko'rgazmali vositaning nomi, mavzuli-o'quv dasturdagi mavzu raqami, qisqacha mazmuni ifodalanishi darkor. Chunki, bu vositadan aniq vaqtda, aniq mavzuda foydalanishni osonlashtiradi.

O'quv-ko'rgazmali didaktik vositaning juda ko'p turlari mavjud bo'lib, ular o'quv predmetlarining juda ko'p jihatlarini, kunlik turmushimizdagi hodisotlarni, ishlab chiqarish sohalaridagi ayrim lavhalarni aks ettiradi. Ulardan o'rinli foydalanish o'quv predmetining mazmunini qiziqarli, o'quv ma'lumotlarini ta'sirchan, o'quvchilar o'zlashtirish jarayonini samarali qiladi.

O'quv-ko'rgazmali vositalarini tor ma'noda ko'rgazmali vositalar, kengroq ma'noda o'qitishning didaktik vositalari deb atash qabul qilingan.

Axborotni uzatish, muayyan ko'rinishda izohlash nuqtai nazaridan natural o'quv-ko'rgazmali vositalar eng qulay va ko'p qo'llaniladigan vosita hisoblanadi.

Chunki, ularni tabiiy holda ko'rsatish imkoniyatlari katta. Ularni pechatli (chop etilgan) ko'rsatmali vositalar to'ldiradi. Ular mavjud va ularni ta'lim muassasasi sharoitida ham yasash mumkin. O'qitishning hajmli ko'rgazmali vositalari ko'p tarqalgani hamda ularni yaratish imkoniyati mavjudligi uchun ham ular eng qulay o'quv-ko'rgazmali vosita sanaladi.

Bugungi bozor iqtisodi sharoitida ulardan foydalanish faoliyat uchun samarali bo'ladi. Proeksion ko'rgazmali vositalar garchi texnika bilan bog'liqlik tomoni bo'lsada, ular ovozsiz namoyish etilganligi sababli ular ushbu guruhga kiritilgan. Ularni ham tabiiy holatda uncha ko'p mablag' sarflamasdan taxrlash va qo'llash mumkin bo'ladi.

Qayd etib o'tilgan, guruhlardan o'rin olgan o'quv-ko'rgazmali vositalardan foydalanganda, birinchidan, o'quv yurtining shart-sharoitidan kelib chiqish, ikkinchidan, o'quvchilarning ushbu didaktik vositaga munosabatlarini inobatga olish va nihoyat, uchinchidan, ularning samaradorligiga va didaktik jarayonning muhim tamoyillariga tayanish lozim bo'ladi. endi har bir guruhdagi o'quv-ko'rgazmali vositalar majmui bilan tanishib chiqamiz.

Real (natural) ko`rgazmali vositalar. Jadvalda qayd etilganidek bunday o`quv-ko`rgazmali vositalar, odatda biologiya, zoologiya, ishlab chiqarish mehnati, geografiya fanining ayrim bo`limlari, tasviriy san`at, adabiyot fanining ayrim bo`limlari (sahna asarlari)ni o`rganishda qo`llaniladi. Real (natural) o`quv-ko`rgazmali vositalar, iqtisodiy yo`nalishdagi fanlarni o`qitishda qo`llanilishi ham mumkin. Ammo, ular kam qo`llaniladi, chunki hajmli va chop etilgan (pechatli) o`quv-ko`rgazmali vositalar bu yo`nalish uchun kengroq imkoniyat kasb etadi. Chunki, ular ko`p. Real (natural) ko`rgazmali vositalar ishlab chiqarish jarayoni, mehnat, tabiat fanlarini o`rganish uchun eng ko`p ma`lumot beruvchi vositalar hisoblanadi. O`qitishning bu vositalari bir-birini to`ldiradi va mashg`ulot jarayonida uyg`unlashadi.

Ta`lim samaradorligini oshirishda kolleksiya va doska katta rol` o`ynaydi. Maktab o`quv-ko`rgazmali kolleksiylari deyilganda narsa va jihozlar inobatga olinib, ular muayyan belgilari (o`simlik, sudralib yuruvchi hayvonlar, suvda yashovchi hayvonlar va h.k.)ga qarab tanlab olingan va yangi axborotlarni bayon etish yoxud o`tilganlarni takrorlash, taqqoslash, maqsadida ishlatiladigan vositalar tushiniladi. Kolleksiylalar botanika, zoologiya, kimyo, fizika, amaliy mehnat mashg`ulotlarida ko`proq ma`lumdir. Masalan, o`simliklar kolleksiyasi, plastmassalar, tuzlar, kondensatlar va h.k.larni ko`p uchratish mumkin. Bu kolleksiyalarning ko`pchiligini o`qituvchi o`quvchilar yordamida maktab sharoitida tayyorlash imkoniyatiga ega.

Kolleksiylalar fan kabinetlarida, maxsus jihozlangan xonalarda, karidorlarda osib quyiladi va mavzuni o`rganish jarayonida undan foydalaniladi. Ularni maxsus karobkalarda saqlash, tarqatma material sifatida foydalanish ham mumkin. Ayniqsa talabalarning mustaqil ishlarini yo`lga qo`yish va amalga oshirishda kolleksiylalar katta yordam beradi.

Axborotli-tarqatma didaktik vositalar. Maktab amaliyotida qo`llaniladigan axborotli-tarqatma didaktik vositalar yangi bilim berish, yangi bilimlarni mustahkamlash va o`zlashtirilgan ma`lumotlarni muayyan jarayonda amalga oshirish uchun qo`llaniladi. Axborotli tarqatma didaktik vositalar chop etilgan yoki qo`lda yasalgan bo`lishi mumkin. Bunday didaktik vositalar topshiriq tarzida yoki test vazifasi shaklida qo`llaniladi.

Tajribaning ko`rsatishicha axborotli-tarqatma didaktik vositalarni nazariy mashg`ulotlarda qo`llash imkoniyati katta. Bunda ma`ruzachi mavzuning asosiy yo`nalishlarini bayon etgandan so`ng, ma`ruzadan o`quvchi-talabalarning qanchalik tasavvurga ega bo`lganliklarini aniqlash maqsadida tarqatma didaktik topshiriq tariqasida o`quvchilarga murojaat qilishi va asosiy ma`lumotlarni qay tarzda o`zlashtirilganligini bilib olishi mumkin bo`ladi.

Tarqatma didaktik vositalardan foydalanilganda o`qituvchi muayyan pedagogik qoidalarga rioya qilishi darkor. Bular:

- axborotli-tarqatma didaktik vosita davr talablarini o`zida ifodalaydigan DTS asosida tuzilgan bo`lishi;
- fan xususiyati, o`tilgan mavzu mazmunini o`zida ifodalashi;

- o`quvchi-talabalarda qiziqish, izlanuvchanlik, mustaqillik tuyg`ularini uyg`otishi;

- o`quvchi-talabalarning yoshi (1, 2, 3, 4 – kurs, guruh va h.k.), tayyorgarlik darajasiga mos bo`lib bilimini to`ldirishga ilhomlantira olishi;

- o`tilgan mavzu, bugun o`tiladigan mavzu va kelajakda o`tilishi kerak bo`lgan mavzularni bir-biriga bog`lay olishga xizmat qila olishi darkor.

Qayd etilgan pedagogik talablarga rioya qilish, axborotli-didaktik tarqatma materiallarning mashg`ulot mazmundorligini oshirishiga, auditoriyada ishchanlik kayfiyatini tashkil etishiga va o`quvchi-talabalarning mustaqil ishlashlarini yo`lga qo`yishga hamda shu asosda o`quv axborotlarini puxta o`zlashtirishga katta yordam beradi.

TRANSFORMATORLARNI SONI VA QUVVATI HISOBI

Annotatsiya. Ushbu maqolada ishlab chiqarish korxonalarining elektr energiyaga bo'lgan extiyojidan kelib chiqqan holatda elektr energiya isrofini kamaytirish hamda samaradorlik ko'rsatkichini yaxshilash maqsadida o'rnatiladigan transformatorlarning soni va quvvati taxlil qilingan.

Kalit so'zlar: yuklanish koeffitsiyenti, transformator podstansiyasi, to'la quvvat.

CALCULATION OF THE NUMBER AND CAPACITY OF TRANSFORMERS

Annotation. This article analyzes the number and power of transformers installed in order to reduce the wastage of electricity and improve efficiency in the case of production enterprises' need for electricity.

Key words: load factor, transformer substation, full power.

Korxonaning ratsional elektr ta'minoti tizimini yaratishda BPP va sex podstansiyalaridagi kuch transformatorlarning soni va quvvatlarini texnik va iqtisodiy nuqtai nazaridan to'g'ri tanlash katta ahamiyatga ega. Texnik ko'rsatkichlarga elektr ta'minoti sxemasining ishonchliligi, ekspluatatsiyada qulayligi, jihozlarni uzoq muddatda ishlay olishi, avtomatlashganlik darajasi va x. k. kiradi. Iqtisodiy ko'rsatkichlarni esa asosan boshlang'ich kapital mablag' va yillik sarf-harajatlar kiradi. Korxonaga uchun kuch transformatorlarning soni va quvvatlarini tanlashda ikki yoki ko'p variantlar tahlil qilinib, ulardan eng ma'quli olinadi.

Sanoat korxonalarining elektr ta'minotini yaratishda BPP va sex transformatorlari soni va quvvatini tanlash katta ahamiyatga ega. To'g'ri tanlangan transformator soni va quvvati elektr energiyasi ta'minotining uzluksizligini ta'minlaydi [1,2].

Transformatorlarning soni tanlanayotganda birinchi navbatda ularning elektr ta'minoti ishonchliligi bo'yicha kategoriyalarga ajratishga e'tibor beriladi. Bunda 1-va 2-kategoriya iste'molchilari ikki transformatorli podstansiyadan, 3-

kategoriya iste'molchilari bir transformatorli podstansiyadan ta'minlandilar [3,4,5].

Transformatorlarni iste'molchilarga o'rnatish ham kategoriyaga qarab amalga oshiriladi. Agar bitta transformator podstansiyasi yordamida bir nechta iste'molchilar guruhi ta'minlanayotgan bo'lsa, birinchi navbatda transformator 1- va 2-kategoriyali iste'molchilar joylashgan sexga o'rnatiladi.

Transformatorlarning quvvatini tanlash quyidagi ikki usul bo'yicha amalga oshiriladi [6-11]:

1. Yuklanish koeffitsiyenti usuli. Bu usul bo'yicha transformator quvvatini tanlashda yuklanish koeffitsiyentining kategoriyalar kesimida ruxsat etilgan quyidagi qiymatlariga qarab aniqlanadi.

Yuklanish koeffitsiyentining kategoriyalar kesimida ruxsat etilgan qiymatlari [12]:

I kategoriya – 0,6 dan 0,7 gacha;

II kategoriya – 0,7 dan 0,75 gacha. Ba'zi hollarda 0,85 gacha;

III kategoriya – 0,85 dan 0,95 gacha.

Transformator podstansiyasining yuklanish koeffitsiyenti quyidagi ifoda yordamida aniqlanadi [13]:

$$K_{yu} = \frac{S_{ist}}{n \cdot S_{tr}}$$

bu yerda:

S_{ist} – transformator o'rnatilayotgan iste'molchilar joylashgan sexning to'la quvvati, kVA;

n – elektr ta'minoti ishonchliligi bo'yicha o'rnatiladigan transformatorlar soni (1- va 2-kategoriya iste'molchilari uchun $n=2$ ga, 3-kategoriya iste'molchilari uchun $n=1$ ga teng);

S_{tr} – sexga o'rnatilishi rejalashtirilayotgan transformator quvvati, kVA.

Umuman olganda transformatorlarni normal ish holatida yuklanishi 70-75% bo'lishi kerak. Shu talablar bajarilgandagina transformator o'zining passport ma'lumotlari bo'yicha mo'ljallangan muddatda ishlashi mumkin [14].

2. Normal va avariya rejimlariga tekshirish usuli. Bu usul bo'yicha transformatorlarning quvvati tanlanganda, tanlangan transformator quvvati quyidagi shartlarni bajarishi lozim:

a) Normal ish rejimida: $n \cdot S_{tr} \geq S_{ist}$

b) Avariya ish rejimida: $1,4 \cdot S_{tr} \geq S_{ist}$

Avariya rejimida ifodalangan 1,4 avariya rejimi paytida transformatorni 40%ga o'ta yuklash mumkinligini xarakterlaydi. Transformatorni avariya rejimida o'ta yuklash uchun transformator normal ish rejimida maksimal 93% yuklama bilan ishlagan bo'lishi lozim. Transformatorni o'ta yuklash bir sutkada 6 soatgacha ruxsat etiladi, bu holat 5 sutkadan oshmasligi lozim [15].

Yuqorida ko'rib chiqilgan ikkinchi usul 2 va 3 kategoriya iste'molchilarga ega sexlarga transformator o'rnatilayotganda qo'llaniladi. Sex iste'molchilarini

elektroenergiya bilan ta'minlashda 2 va 3 standart quvvatli transformatorlarni tanlash maqsadga muvofiqdir.

Misol tariqasida TP ga transformator soni va quvvati tanlanadi. TPning umumiy quvvati $S_{TP}=550$ kVA ga teng. Elektr ta'minoti ishonchliligi bo'yicha TP 2-toifali iste'molchi hisoblanadi. Shuning uchun bu TPga ikki transformatorli podstansiya tanlanadi. Bu TP uchun quvvati 400 kVAli 2 ta transformator tanlanadi va yuklanish koeffitsiyentiga tekshiriladi [16].

$$K = \frac{550}{2 * 400} = 0,6875$$

Yuqoridagi hisob natijalari asosida taxlil qilish mumkinki, yuklanish koeffitsiyenti 0,6875 ga teng, qolaversa bu natija yuklanish koeffitsiyenti II-kategoriya hisoblanganligi uchun, yuklanish 68,75 % bo'lganligi hisobiga transformator o'zining pasport ma'lumotlari bo'yicha mo'ljallangan muddatdan ham ko'proq ishlashini taminlaydi. Demak bu TP uchun 2xTM-400/10/0,4 markali transformator tanlanadi. Bu kabi hisob amallarini bajarishda bo'lajak muhandis-elektriklardan kasbiy faoliyatlariga etiborli bo'lish talab etiladi.

ELEKTR YUKLAMA GRAFIKLARINI XARAKTERLOVCHI ASOSIY KATTALIKLARNI TADQIQ QILISH

Annotatsiya. Ushbu maqolada elektr yuklama grafiklarini xarakterlovchi kattaliklar tadqiq qilingan bo'lib, bu orqali sanoat korxonalarining talab koeffitsiyenti, ishlatilish koeffitsiyenti, maksimum koeffitsiyenti va forma koeffitsiyenti yordamida elektr kattaliklar taxlil qilingan.

Kalit so'zlar: talab koeffitsiyenti, ishlatilish koeffitsiyenti, maksimum koeffitsiyenti.

STUDY OF THE MAIN QUANTITIES CHARACTERIZING ELECTRICAL LOAD GRAPHS

Annotation. In this article, the quantities characterizing the electric load graphs were studied, through which the electrical quantities were analyzed using the demand coefficient, utilization coefficient, maximum coefficient and shape coefficient of industrial enterprises.

Key words: demand coefficient, utilization coefficient, maximum coefficient.

Yuklamalarni hisoblash va tadqiqot qilishda iste'molchilarning quvvat va vaqt bo'yicha ish rejimini tavsiflovchi yuklamalar grafiklarining koeffitsiyentlaridan foydalaniladi. Bunday koeffitsiyentlar xususiy va guruhiy grafiklari uchun aniqlanib, mos ravishda kichik k va bosh K xarflar bilan belgilanadi.

Talab koeffitsiyenti iste'molchilar guruhiga tegishli bo'lib, u hisobiy yuklamani iste'molchilarning nominal qiymatiga nisbati orqali aniqlanadi [1]:

$$K_{T.a} = \frac{P_x}{P_{nom}}$$

Ishlatilish va maksimum koeffitsiyentlarining ifodalarini hisobga olsak [2]:

$$K_{T.a} = \frac{P_{o'rt.}}{P_{nom}} \cdot \frac{P_x}{P_{o'rt.}} = K_{ish.a} \cdot K_{M.a}$$

shuningdek,

$$K_{T.r} = K_{ish.r} \cdot K_{M.r}$$

Talab koeffitsiyentlarining qiymatlari sanoat korxonalaridagi har xil iste'molchilar guruhlari uchun ekspluatatsiya sharoitida tajriba asosida ushbu ifoda orqali aniqlanadi:

$$K_{T.a} = \frac{P_q}{P_{nom}}$$

Bu yerda, P_q – iste'molchilar guruhining qabul qilgan aktiv quvvati. Talab koeffitsiyentining har xil iste'molchilar guruhi va korxonalar uchun qiymatlari ma'lumotnomalarda keltirilgan [3].

Ishlatilish koeffitsiyenti deganda, o'rtacha aktiv quvvatni nominal quvvatga nisbati tushuniladi va uning miqdori eng ko'p yuklamali smena uchun aniqlanadi:

$$k_{ish.a} = \frac{P_{o'rt.}}{P_n}; K_{ish.a} = \frac{P_{o'rt.}}{P_n} = \frac{\sum_1^n k_{ish.a} \cdot P_n}{\sum_1^n P_n}$$

Bu yerda, p_n, P_n – mos ravishda bir yoki guruh iste'molchilarining nominal aktiv quvvatlari. P_n ni miqdorini takroriy qisqa muddatda ishlaydigan iste'molchilarda ularning pasportlaridan olinadi [4].

P_s, P_s – mos ravishda ayrim guruh iste'molchilarning o'rtacha aktiv quvvat energiya hisoblagichlarining ko'rsatgichi bo'yicha aniqlanadi:

$$P_{o'rt.} = \frac{\mathcal{E}_a}{t_s}; P_{o'rt.} = \frac{\mathcal{E}_A}{t_s}$$

$\mathcal{E}_a, \mathcal{E}_A$ – bir yoki guruh iste'molchilarning qabul qilgan aktiv elektr energiyasi.

T_s – sikl uchun vaqt intervali.

Yuqorida keltirilgan munosabatlarni reaktiv quvvatga ham yozish mumkin [5]:

$$k_{ish.r} = \frac{q_{o'rt.}}{q_n}; k_{ish.r} = \frac{Q_{o'rt.}}{Q_n} = \frac{\sum_1^n k_{ish.r} \cdot q_n}{\sum_1^n q_n};$$
$$q_{o'rt.} = \frac{\mathcal{E}_r}{t_s}; Q_{o'rt.} = \frac{\mathcal{E}_r}{t_s}.$$

Har xil rejimlarda ishlovchi elektr iste'molchilari uchun ishlatilish koeffitsiyentlarining o'rtacha qiymati ma'lumotlarda keltirilgan [6].

Quvvat va vaqt bo'yicha ish rejimini tavsiflovchi yuklamalar grafiklarining koeffitsiyentlaridan maksimum va forma koeffitsiyentlarini aniqlash [7].

Maksimum koeffitsiyenti grafikni to'ldirish koeffitsiyentiga teskari bo'lgan miqdor, ya'ni [8]:

$$K_{m.a} = \frac{1}{K_{T.a}} = \frac{P_m}{P_{o'rt.}}; K_{m.r} = \frac{1}{K_{T.r}} = \frac{Q_m}{Q_{o'rt.}}$$

Bu koeffitsiyentning qiymati t yuklamali smena uchun aniqlanadi va guruh iste'molchilariga tegishli bo'ladi. Agar maksimal quvvat deganda hisobiy quvvatni qabul qilinishini e'tiborga olinadigan bo'lsa [9],

$$K_{M.a} = \frac{P_x}{P_{o'rt.}}$$

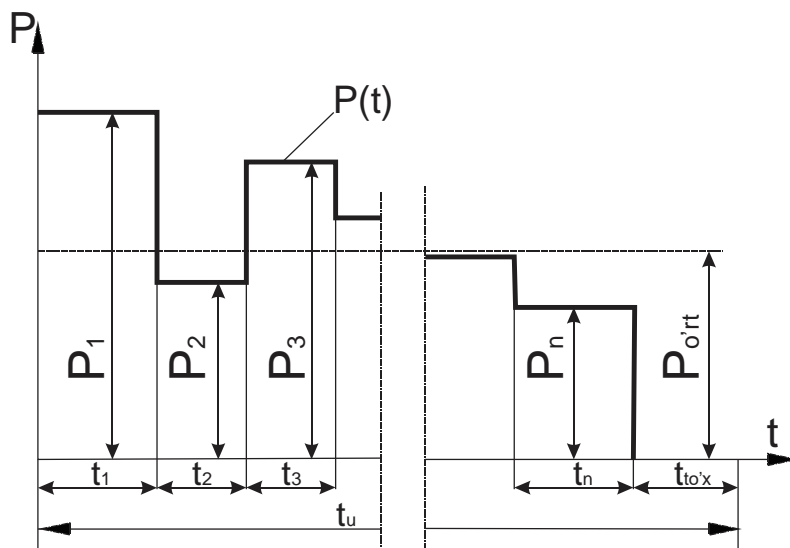

Demak, maksimum koeffitsiyenti grafikdan aniqlanadigan ikki eng asosiy miqdorlar – hisobiy va o'rtacha yuklamalar orasidagi munosabatni belgilaydi. K_m koeffitsiyenti hisobiy quvvatni o'rtacha quvvatga nisbatan qancha kattaligini ko'rsatadi. Uning miqdori birga teng yoki katta bo'lishi mumkin. O'zgarmas yuklamali iste'molchilar (ventilyatorlar, nasoslar va t.u.) uchun $K_m=1$, ya'ni $P_x = P_{o'rt.}$

Forma koeffitsiyenti yuklamaning effektiv (o'rtacha kvadrat) qiymatini uning o'rtacha qiymatiga nisbati bilan aniqlanadi. Bu ko'rsatgich ayrim iste'molchi yoki guruh iste'molchilari uchun ma'lum vaqt oralig'ida topiladi:

$$k_{f.a} = \frac{P_{o'rt.kv.}}{P_{o'rt.}}; K_{F.A} = \frac{P_{o'rt.kv.}}{P_{o'rt.}}$$

$$k_{f.r} = \frac{Q_{o'rt.kv.}}{Q_{o'rt.}}; K_{F.R} = \frac{Q_{o'rt.kv.}}{Q_{o'rt.}}$$

Forma koeffitsiyenti yuklama grafigining vaqt bo'yicha notekisligini ko'rsatadi. Uning eng kichik qiymati, vaqt bo'yicha o'zgarmaydigan yuklamada, birga teng bo'ladi. O'rtacha kvadrat yuklama quyidagi ifoda orqali aniqlanadi:

1-rasm. Yuklama grafingining vaqt bo'yicha notekisligi.

$$P_{o'rt.kv.} = \sqrt{\frac{\sum_{i=1}^n P_i^2 \cdot t_i}{T}} = \sqrt{\frac{\sum_{i=1}^n P_i^2}{n}} \quad Q_{o'rt.kv.} = \sqrt{\frac{\sum_{i=1}^n Q_i^2 \cdot t_i}{T}} = \sqrt{\frac{\sum_{i=1}^n Q_i^2}{n}}$$

Bu yerda, $n = \frac{T}{t_i}$ - yuklama grafingining T vaqt oralig'idagi teng bo'laklar

soni. Forma koeffitsiyenti $K_{f.a}$ ning miqdori ishlab chiqarish jarayoni maromida bo'lgan korxonalarda 1,05 dan 1,15 oralig'ida bo'ladi.

RADIATSIYANING INSON ORGANIZMIGA TA'SIRI

Annotatsiya. Radiatsiyaning odamlarga ta'siri nurlanish ta'siriga uchragan odam tanasining zararlanishi va genetik o'rganning shikaslanishi bilan bog'liq bo'ladi. Radiatsiya inson organizmiga turli xil radiatsiyasi mavjud o'simlik va hayvon mahsulotlari istemoli orqali kiradi. Radionuklidlar asosan inson tanasining turli joylarida – qalqonsimon bez, jigar, suyak va muskul to'qimalarida to'planishi mumkin.

Калум сўзлар: Radionuklid, radiatsiya ta'siri, somatik ta'siri, genetik effektlar, radioaktiv element, inson organizmi.

Kurbanova B.Q.

THE EFFECT OF RADIATION ON THE HUMAN ORGANISM

Abstract. The effect of radiation on humans is related to damage to the human body exposed to radiation and damage to the genetic apparatus. Radiation enters the human body through the consumption of plant and animal products containing various radiations. Radionuclides can accumulate mainly in various places of the human body - the thyroid gland, liver, bone, and muscle tissues.

Key words: radionuclide, radiation effect, somatic effects, genetic effects, radioactive element, human organism.

Radiatsiyaning odamlarga ta'siri odatda ikki toifaga bo'linadi. Bular:
1) Somatik (tanaviy) - nurlanish ta'siriga uchragan odamning tanasida paydo bo'ladi.

2) Genetik - genetik apparatning shikastlanishi bilan bog'liq bo'ladi, keyingi avlodlarda namoyon bo'ladi: bular nurlanish ta'siriga uchragan odamning bolalari, nabiralari va uzoqroq avlodlarida namoyon bo'ladi [1,2].

1 Jadval.

Radiatsiya effektlarining odamlarga ta'siri	
Somatik effektlar	Genetik effektlar
Nurlanish kasalliklari	Genning mutasiyasi
Mintaqaviy radiatsiya shikastlanishlar	Xromosomalar aberatsiyasi
Leykemiya (Лейкозы)	
Turli organlarning o'smalari	

Chegaraviy farqlanish (deterministik) va stoxastik effektlar mavjud. Birinchisi, nurlanish natijasida nobud bo'lgan, ko'payish yoki normal ishlash qobiliyatini yo'qotgan hujayralar soni kritik qiymatga etganida, ta'sirlangan organlarning funktsiyalari sezilarli darajada buzilganda paydo bo'ladi. Ta'sirlangan organlarning funktsiyalari buzilishning og'irligining nurlanish dozasi kattaligiga bog'liqligi 2-jadvalda ko'rsatilgan [3].

2 Jadval.

Turli dozadagi nurlanishning inson organizmiga ta'siri	
Doza (nurlanish miqdori), Gr	Radiatsiya ta'sirining sababi va natijasi
$(0.7 - 2) \cdot 10^{-3}$	Yiliga tabiiy manbalardan olingan doza
0.05	Yiliga kasbiy nurlanishlarning maksimal ruxsat etilgan dozasi
0.1	Gen mutatsiya ehtimolligining ikki baravar ko'payishi
0.25	Favqulodda vaziyatda asosli xavfning yagona dozasi
1.0	O'tkir nurlanish kasalligini vujudga keltiradigan dozasi
3- 5	Davolashsiz, ta'sirlanganlarning 50% suyak iligi hujayralarining faoliyati buzilganligi sababli 1-2 oy ichida nobud bo'ladi.
10 - 50	O'lim 1-2 hafta ichida, asosan, oshqozon-ichak traktining shikastlanishi tufayli sodir bo'ladi.
100	O'lim markaziy asab tizimining shikastlanishi tufayli bir necha soat yoki kundan keyin sodir bo'ladi

Butun aholi nafaqat umumiy sog'lom ishlaydigan xodimlarni, balki barcha odamlarni (bolalar, qariyalar va boshqalar) ham o'z ichiga oladi [4].

Radionuklidlar organlarda notekis to'planadi. Inson organizmidagi modda almashinuv jarayonida ular turli hujayra tuzilmalaridagi barqaror elementlarning

atomlarini, biologik faol birikmalarni almashtiradilar, bu esa yuqori lokal dozalariga olib keladi [5-9].

Radiatsiya ta'sirining effekti nurlanish ta'siriga uchragan butunlay boshqa joyda o'zini namoyon qilishi mumkin. Radiatsiya dozasini oshirib yuborish organizmning immunitetini pasayishiga olib keladi va uni turli kasalliklarga moyil bo'lishiga olib keladi. Nurlanish ham zararli shishlar paydo bo'lishi ehtimolini oshiradi [10].

Radionuklidlar tanaga (nafas olish va ovqat hazm qilish organlari), eng kuchli nurlangan organlar shuningdek, qalqonsimon bez va jigarga kiradi. Ularda so'rilgan dozalar boshqa organlar va to'qimalarga qaraganda 1-3 marta kattaroqdir. So'rilgan parchalanish mahsulotlarini konsentratsiyalash qobiliyatiga ko'ra, asosiy organlarni quyidagi qatorda joylashtirish mumkin [7,8]:

qalqonsimon bez > jigar > skelet > mushaklar

Shunday qilib, so'rilgan parchalanish mahsulotlarining 30% gacha, asosan, yodning radioizotoplari qalqonsimon bezda to'planadi.

Radionuklidlar konsentratsiyasiga ko'ra, qalqonsimon bezdan keyin ikkinchi o'rin jigar hisoblanadi. Ushbu organ tomonidan qabul qilingan nurlanish dozasi asosan ^{99}Mo , ^{132}Te , ^{131}I , ^{132}I , ^{140}Ba , ^{140}La radionuklidlarga bog'liq bo'ladi [11].

Texnogen radionuklidlar orasida yod izotoplari alohida e'tiborga loyiqdir. Ular yuqori kimyoviy faollikka ega, biologik siklda faol ishtirok etishga qodir va biologik zanjirlar bo'ylab ko'chib o'tadi, ularning bo'g'inlaridan biri odam bo'lishi mumkin [12].

So'nggi yillarda ionlashtiruvchi nurlanishning inson tanasi to'qimalari bilan o'zaro ta'siri jarayonlari batafsil o'rganilmoqda. Natijada ionlashtiruvchi nurlanishning inson salomatligiga zarari nuqtai nazaridan haqiqiy radiatsiya ta'sirini aks ettiruvchi radiatsiyaviy xavfsizlik standartlari ishlab chiqilmoqda.

Xulosa qilib aytishimiz mumkinki, inson organizmining turli qismlarida har xil radionuklidlar to'planadi. Radionuklidlar asosan inson organizmining qalqonsimon bez, jigar, suyaklar va muskullarda ko'proq to'planadi. Radionuklidlar organizmga asosan radiatsiyali o'simlik va hayvon mahsulotlarini istemol qilish orqali kiradi. Radiatsiya ta'sirida tananing turli qismlarida o'zgarishlar va shishlar paydo bo'ladi. Buning ta'sirida insonda immunitet pasayadi turli kasalliklar, jumladan qalqonsimon bez raki va ko'krak bezi raki kasalliklari paydo bo'lishiga olib keladi.

EXPRESSION OF FEMALE INTELLECT IN ENGLISH AND UZBEK PHRASEOLOGICAL UNITS

Abstract. In this article, the existence of the image of a woman in literature goes back to the ancient times of folklore. This is especially evident in religious stories. Both in the pre-Islamic period and after it, special attention is paid to the issue of women.

Key words: employee, mayor, deputy, folk proverbs, sociolinguistics.

A.V. Artemova phraseology and proverbs, as a mirror of national culture, embody the national culture, customs, traditions, and a large part of the information in the perception of the world. It is important to study the lexical-semantic level of the concept of "woman", which is widely expressed in proverbs and phraseology.

Phraseologisms and proverbs included in the concept of women perform the function of advice and instruction, and also perform the function of evaluating various qualities and signs of real existence, objects and individuals on the scales of good-bad, moral-immoral, acceptable and unacceptable.

The stereotype of a woman in English language culture consists of the following concepts: attractive appearance, love, touching the ground, family, wife's role, childbirth and child care, household management, raising children, friends. In the Uzbek linguistic culture, the stereotype of a woman is formed from these concepts, with the addition of the role of a bride. This role is one of the leading positions for women.

The gender stereotype of women consists of signs that describe a woman by age, marital status, social status, etc.: woman, girl, mother, sister, daughter, wife, grandmother, aunt, mother-in-law, granddaughter, niece, girlfriend, lady, Mrs. (Mrs. - address to a married woman) / lady, Miss (Miss - address to an untouchable girl) and so on. In both linguistic cultures, the sphere of activity of a woman is limited to the inner space, home and family: lady of the house / housewife; lady of the frying-pan. However, in modern English and Uzbek languages there is a way of expression indicating the professional training of women (not always related to the phraseological layer): adiba woman; female scientist; a hello girl – a telephone operator girl; gaiety girls - variety actress.

In English and Uzbek phraseology, a woman who is in complete control of the family (including the husband) is negatively evaluated: to seize the reins of the husband; the gray mare is a woman who does not leave her husband behind. Phraseologisms that express such a female model are popular in English and are rarely found in Uzbek. This shows that the model of a woman who fully dominates

the land is not acceptable for Uzbek culture, which corresponds to the image of a mute woman who respects and honors her husband.

In the research, not only the phraseological units related to the female intellect, but also in some places the general image of a woman in the English and Uzbek languages.

Let's analyze the following phraseological units with clothing components.

A hat (bonnet) worn only by women also gives the meaning of "bee in one's bonnet" (s.s.: bee in one's bonnet). Or the fact that women wear pants gave rise to the phrase "wear the trousers" and it means being the head of the family. We also have some idioms to talk stupidly about pants, for example, "he laughed at the torn knee with no pants" - that is, this idiom is used to make fun of someone even if he is in a bad condition. Or it means "Don't wear your pants on your head" - don't be ashamed. We can find some phraseological units related to women's skirt in English - to be in petticoat; petticoat government (s.s.: state with a skirt) - a state ruled by a woman. Gloves are another integral part of Western national clothes. Although it is hardly worn today, it served as protection for knights in the Middle Ages. Therefore, the expression "throw down the gauntlet" (s.s.: to throw a knight's glove) gives the phraseological meaning "to call for a fight, to encourage a competition". Literally translated, "a kid gloves" means "kid gloves"

Continuing with the examples: a cat with gloves catch no mice (s.s.: cat with gloves, can't catch a mouse) - sometimes you can't achieve the goal with care and gentleness; an iron fist in the velvet glove (s.s.: iron fist in velvet gloves) - a person who uses a lot of power, despite his gentle appearance; fit like a glove gloves are off (s.s.: gloves are off) - there will be a tough fight.

The English phraseology of a woman of few words refers to the fact that a woman is a woman of few words. Despite being a woman of few words, Sarah was well-respected in her field because of her actions.

In some English phraseological units, it is emphasized that a woman should focus on housework and raising children, as opposed to working outside the home: a woman's place is in the home.

I don't believe that a woman's place is in the home. I love my family, but I also love being a lawyer/I don't believe that a woman's place is at home — I love my family, but I also love being a lawyer.

The following expression is used in relation to very famous and influential, intelligent women in a certain society, in the workplace, in the field: big woman on campus.

I know it's a cliché to say that behind every great man is a great woman, but I can honestly say that I would not be standing here today, accepting this award, without the tireless support of my beautiful wife/ I know it's a cliché to say that behind every great man is a great woman, but to be honest, I wouldn't be standing here accepting this award today if it wasn't for the constant support of my beautiful wife.

In conclusion, we can say that the characteristics of Uzbek women are clearly reflected in folk proverbs. In them, the image of women's hard work, loving mother, faithful and faithful spouse is revealed. The role of women in our society and life is emphasized.

In proverbs, it is considered and glorified as a builder of the family, although it is mainly based on negative aspects. In Turkish culture, a woman is first honored to marry at an early age. Apart from these, the issue of behavior and the way of life in marriage - cooking, neatness are the characteristics expected of women. A woman who is "unvalued" from birth to marriage, begins to be valued as soon as she conceives. Getting married is her first step on this path. Having a child, especially giving birth to a boy, suddenly raises his status in the family.

DEVELOPMENT OF CREATIVE ABILITIES OF PRESCHOOL CHILDREN IN PREPARATION FOR SCHOOL EDUCATION

Annotation. In this article, we can learn about the system of work on the development of creative abilities in preparing preschoolers for schooling and how to carry out this work.

Key words: school, creativity, nature, thought, game, art, creativity, complex, leadership, imitation, green school.

It is of particular importance that children of preschool age acquire school knowledge well in the future, adapt to school easily, prevent problems that may arise in the child's personality, and involve children in preschool education organizations and include them in education. According to scientific observations and researches, 70% of all the information that a person receives during his life is taken by the age of 5 years. In fact, during this period, a human child understands the world, learns his mother tongue, develops love for his parents, family, neighborhood, Motherland, and prepares the ground for the knowledge he will acquire throughout his life. The content and methods of preschool education are organized in an environment where the processes of the formation of the child's personality and his recognition as an independent person take place.

The preschool period is the period when the child develops motivation, self-expression, self-development, the ability to apply oneself, the desire to do something, and the desire to do something. During this period, the foundation is created for the development of the child as a person. It is in the pre-school period that universal human qualities are formed that help the child to be successful in all future activities and in life in general. Despite the fact that most of the psychological processes are developing in the form of a child, at each stage it rises to a new level, and the development of creative abilities obeys different laws. And by 5-6 years, reaching the peak of their development, they begin to fall. If, according to the results of these diagnostic methods, preschool children read 90% of the initial answers, by the age of 10 this number will decrease to 20%.

Adults are usually no more than 2%. Thus, if you do not pay attention to creative development, their development may not even stop from the beginning. It's fine to let kids create and play on their own, but sometimes you might want to change how the game works and use more senses in different ways. Give lots of praise for whatever your child does, be it singing or dancing. A holistic approach to education helps develop a child's unique gifts and talents while strengthening

all areas of intelligence. There are opportunities for children to grow emotionally, physically and intellectually through daily learning activities. Classrooms engage children in caring, learning "live" approaches that allow children to become confident problem solvers. Appreciate daily rhythms, which provide a sense of balanced structure, allowing children to feel, know and respond to the next situation. Arrange everything to contribute to the development of "child will" by setting children's perspectives and setting guidelines that teach children to expect.

We contribute to the same qualities in each child's "heart", responsibility, respect and compassion. Social skills are developed based on awareness; children feel warm in the classroom atmosphere, which encourages kindness and compassion, instills a sense of care and concern for themselves and others; we understand that a small child first of all gets acquainted with example and imitation. Ability to improve problem solving and creativity through creative free play. Listening and language learning through stories, music, poetry and fingers, music, everyday circles. Music integrates and harmonizes school life through a curriculum designed to develop each child's natural musicality - singing is integrated into everyday life. Strong and motor skills are enhanced through creative play, yoga, outdoor play, classroom activities, sewing, painting, crafts, art decorating, and writing tools in the oldest classroom.

We recognize that a young child learns primarily by imitation and example. Special attention is paid to creating an environment that contributes to the development of leadership and cooperation in the child's imagination and in the world. This week is rhythmically structured to include storytelling and puppetry, creative work and play, song and creative action, finger plays and games, crafts, artwork and stories. Ways to develop children's creativity are very simple. It is easy to organize them at home, even if the child does not even go to kindergarten or other preschool educational institutions. It requires minimal funds and equipment. Activities performed in this way are interesting not only for children, but also for adults.

Developing creativity and creative thinking in young preschool children is certainly not an easy task. However, parents will be successful if they approach the issue with a sincere desire to show their abilities in childhood. From a psychological point of view, preschool age is a favorable period for the development of creative abilities, because at this age children are very inquisitive, they have a great desire to learn about the world around them. Parents and teachers contribute to the expansion of children's experiences by stimulating curiosity, providing them with knowledge, and involving them in various activities. Accumulation of experience and knowledge is a prerequisite for future creative activity. In addition, the thinking of preschool children is much freer than that of older children. He is not yet "crushed" by stereotypes. Preschool childhood is also a sensitive period for the development of creative imagination. Thus, preschoolers provide excellent opportunities for the development of creativity.

And the creative potential of adults largely depends on how these opportunities were used in childhood. One of the most important factors of creative development of children is to create the following conditions: Early physical development of the child. It should be age appropriate. Creating an environment that is ahead of children's development. As much as possible, it is necessary to surround the child with such an environment and a system of relationships that will stimulate his most diverse creative activity and develop what he is most capable of developing at that moment. efficient. Give the child the opportunity to complete the task on his own, or help him by giving hints rather than ready-made answers and solutions. Giving the child more freedom in choosing an activity, in alternative situations. Don't turn freedom into permission.

IMPROVEMENT OF PEDAGOGICAL TECHNOLOGIES OF FORMATION OF DESIGN SKILLS OF PRESCHOOL CHILDREN

Abstract. This article will talk about the development of cognitive interests of preschool older children through design activities. The essence of Cognitive interest and design activities is highlighted.

Keywords: design, cognitive interest, knowledge, skills, qualifications, activity.

The huge opportunities that are being created contribute to the education of the young generation. Special attention to the growing young generation at each educational age indicates that youth education has risen to the level of state policy. Interest in learning, aspiration, enthusiasm, perseverance, enthusiasm, high potential, characteristic of our nation, are qualities that ensure continuity of generations. Meeting the knowledge needs of preschool children and forming their interests is one of the main tasks of educators. Formation of preschool children's interest in learning depends on many factors. One of the main factors is the teacher's ability to organize the lessons in an interesting way for children, to convey them clearly through game activities.

Cognitive interest, its manifestation is associated with the predominance of special forms of activity and a positive affective state arising from the need for external impressions, interaction with the external world and selective attention to it. Preschool psychological characteristics (emotionality, due to the desire to observe, imitate, express one's impressions in play and productive activity), historical information about the objective world as a product of adult activity and the creation of his human thinking deserves special attention. The high emotionality of a preschool child determines the importance of the information received for the further development of the individual.

The development of cognitive interest as a complex personal education gradually takes place in an activity with a practical orientation that allows the child to enter a problem situation. This type of activity, which ensures the possibility of obtaining, synthesizing, combining and actively using information on the subject, is considered a project activity. For a long time, special attention was not paid to the development of educational interests of preschool children in the field of pedagogy. One of the first scientists, such as B.G. Ananyeva, L.N. Bojovich, L.S. Vygotsky, L.A. Wenger, and A.G. Zaporozhets, began to consider cognitive interest as one of the leading motives that encourage children to learn and learn.[4] Their research shows that cognitive interest is formed more

successfully with active cognitive activity. A child's cognitive interest is to learn new things, to determine the qualities and characteristics of objects, the incomprehensible things about real events, to understand their essence, the existing relationships and connections between them. appears in the desire to find.

Currently, various approaches to defining the concept of cognitive interest have been formed. It is considered as follows: - the chosen direction of a person (N.F. Dobrinin, T. Ribot); - manifestation of mental and emotional activity (S.L. Rushinstein); - activator of various emotions (D. Freyer); - a person's specific attitude to the object arising from the consciousness of its vital importance and emotional appeal (A.K. Kovalev); - active cognitive attitude of a person to the world (V.N. Myasishchev); – selected direction of the person to the objects and events of the surrounding world (T. A. Kulikova, N. G. Morozova, G. I. Shukina) [5]. Modern research presents various aspects of the problem of formation of cognitive interest. G. I. Shchukina considers the components of cognitive interest: intellectual, emotional, regulatory and creative processes. A. Vallon analyzes cognitive interest through the prism of emotional attitude to the subject of knowledge. According to him, one of the first objects of knowledge of a small child is the objective world, and the formation of a cognitive attitude to the objective world determines the success of the child's development and largely determines the process of his socialization. The project method has a holistic nature as a means of developing cognitive interest in the history of the objective world. A number of authors consider the project activity as a variant of the integrated method of teaching preschool children, a method of organizing the pedagogical process based on the interaction between the teacher and the student., step-by-step practical activities to achieve the goal (L.S. Kiseleva, T.A.Danilina, M.B.Zuykova).

Others analyze the essence of the project activity, its problematic nature, its place in the educational process. (T.A. Danilina, B.V. Ignatiev, U. Kilpatrick, M.V. Krupenina, N.G. Cherniglov) [5] At the same time, many studies have not sufficiently studied all the potential possibilities of project activity, its role in the development of cognitive interest in objective world history. Preschool children in their psychophysiological development are not yet able to independently create their own projects from beginning to end, so teaching the necessary skills and competencies is the main task of teachers. Therefore, a reasonable and appropriate combination of theory and practice project activity helps to update children's ideas, skills and abilities to independently find and solve problems, stimulates interests, the need for creative activity, creates conditions for cooperation with adults and peers. Psychological characteristics of preschool children cover cognitive, emotional, behavioral areas and allow developing interest in stable knowledge. However, not everything arouses interest in a child, for which it is important to create conditions for the development of cognitive interest. One of the conditions is the use of the most effective teaching methods, which, in my

opinion, includes the method of project activity., teaches to produce an algorithm of its actions to achieve the goal.

An educator is an assistant and consultant for children's independent acquisition of knowledge and skills, therefore, it is not necessary to try everything, but to achieve full disclosure of everything in one project. Everything is done step by step (in stages) must be done; it is necessary to clearly understand what should be required of children based on their individual, age and physiological capabilities. The educator makes conclusions about the overestimated or underestimated self-assessment of the authors of the project individually in the conversation with the children.

ORGANIZATION AND IMPORTANCE OF INTELLECTUAL EDUCATION IN PRESCHOOL EDUCATIONAL ORGANIZATIONS

Abstract. This article talks about the role of mental education in raising preschool children to become fully mature individuals. The author shows and explains the importance of cognitive processes in children's mental development.

Key words: Man, era, humanitarianism, morality, education, intelligence, intelligence, teacher, result, family, mental education, wisdom, ingenuity, mental experience, mental maturity, mental activity, mental work.

O'sib kelayotgan yosh avlodning ilmiy dunyoqarashini shakllantirish hamma davrlarda bo'lgani kabi, hozir ham millatning ilg'or kishilari diqat markazida bo'lib kelmoqda. Xo'sh, dunyoqarashni o'zini qanday tushunish kerak?

Dunyoqarash-bizni o'rab olgan borliq nima, u qanday rivojlangan, tabiatda qanday inson o'rin tutadi, uning ongi qanday paydo bo'ldi va kamol topdi, jamiyatning yaralish tarixi qanday, inosniyat turmush darajasini qanday qilib yaxshilash mumkin va shu kabi masalalarga kishilarning turlicha qarashlari, munosabatlaridir. Inson o'z faoliyatida malum ilmiy bilimlardan, qonuniyatlardan, tushuncha va g'oyalardan foydalanadi. Ana shu bilimlarga asoslanib, tabiat, jamiyat va inson tafakkuri hodisalarini baholaydi, ularni o'ziga talqin etib, ma'lum xulosalarga keladi.

Aql – keng ma'noda sezish va idrok etishdan boshlanib tafakkur va hayotni o'z ichiga oladigan bilish Jarayonlari yig'indisidir.

Aqliy tarbiya — bu aqlni rivojiantirish maqsadida yoshlarga muntazam va maqsadga muvotlq pedagogik ta'sir ko'rsatish. U yosh avlodning insoniyat

to'plagan bilimlar, malaka va ko'nikmalarda, qoidalarda o'z ifodasini topgan ijtimoiy-tarixiy tajribani egallashning rejali jarayoni sifatida ro'y beradi.

Maktabgacha tarbiya yoshidagi bolalarni aqliy tarbiyalash bolalarning fikrlash faoliyatini rivojlantirishga qaratilgan kattalarning ma'lum maqsad asosidagi ta'sir etishdir. U bolalarga tevarak-atrofdagi olam haqida bilimlar berishni, ularni tizimlashtirishni, bolalarda bilishga qiziqish uyg'otish, aqliy malaka va ko'nikmalarni tarkib toptirishni, bilim qobiliyatlarini rivojlantirishni o'z ichiga oladi.

Maktabgacha tarbiya yoshidagi bolalarni maktabga tayyorlashda aqliy tarbiyaning roli, ayniqsa, kattadir. Chunki aql his-tuyg'ular va idrok etishdan tortib, fikrlash va tasavvur etishgacha bo'lgan jarayonlar yig'indisidir. Bolaga avvalo, kichik yoshdan boshlab, ota-ona tarbiya beradi, keyin tarbiya bilan butun jamoatchilik shug'ullanadi, chunki bunda inson taqdiri hal etiladi deydi.

Sharq va G'arb xalqlari yaratgan og'zaki ijodiyot, buyuk mutafakkir, pedagog va olimlarning ta'lim-tarbiyaga doyr ilg'or fikrlarini o'rganib, tahlil qilib, barkamol insonni tarbiyalash jarayonini o'rganish biz uchun juda qimmatlidir:

— ta'lim-tarbiya to'g'risidagi qonun-qoida tamoyil, metod va usullarni bolalar bog'chalari amaliy hayoti bilan bog'lab, bo'lajak tarbiyachi;

— o'qituvchilarga o'rgatish hamda xalq ta'limini boshqarish va rahbarlik masalalarini chuqur o'rganib, bo'lajak tarbiyachilarni qanday tayyorlash muammolarini hal qilish;

— maktabgacha tarbiya muassasalarida oila bilan uzviy hamkorlikda bolalarni har tomonlama rivojlantirish ishini amalga oshirish. Bunday vazifalarda tadqiq etish:

— birinchidan, bolalar sog'lig'ini saqlaydi va mustahkamlaydi, jismoniy rivojlanishini ta'minlaydi;

— ikkinchidan, ilmga qiziqish va qobiliyatlarini rivojlantiradi;

— uchinchidan, Vatanga, tabiatga, jonajon o'lkaga muhabbat, kattalarga hurmatni, o'rtoqlik va jamoatchilik, xayrixohlik, xulq madaniyati, mustaqillik, uyushqoqlik va intizom, mehnatsevarlik kabi ijobiy fazilatlarni tarbiyalaydi;

— to'rtinchidan, estetik tarbiyani amalga oshiradi. Demak, bilish jarayonida esa bolaning ongi, his-tuyg'ulari shakllanadi.

Eng muhimi ijtimoiy hayot uchun zarur bo'lgan va ijtimoiy munosabatlarga xizmat qiladigan xulqiy odatlar hosil bo'ladi. Maktabgacha yoshdagi bolalarning, yosh va individual xususiyatlarini e'tiborga olgan holda ularning har tomonlama rivojlanishini ta'minlashga xizmat qiladi. Maktabgacha tarbiya muassasalari ham bolalarni har tomonlama tarbiyalaydi. Bola hayotidagi ilk yosh eng muhim davr bo'lib, xuddi mana shu davrda bolaning jismoniy, axloqiy, mehnat, estetik rivojlanishiga poydevor bo'ladi.

Dunyo, inson, aql-zakovat, ma'naviyat-bular bir-biri bilan chambarchas bog'liqdir. Dunyo bunyod bo'libdiki, inson dunyo yuzini ko'ribdiki, o'zini inson sifatida anglabdiki, u o'zini borliqning eng mukammal mavjudoti sifatida aql-

zakovati bilan tanib keladi. Inson ongi, tafakkuri va ma'naviyati tufayli shunday ustunlikka egadir. Inson dunyoga ma'lum bir maqsad bilan kelmaydi. U o'zligini idrok etgandan so'ng hayotda yashashdan ma'no izlaydi va shu narsa uning hayoti mazmunini tashkil etadi. Insonlar bor, dunyoga keladilaru ketadilar, ulardan nom-nishon qolmaydi, hayotning ma'nosiga, qadriga yetmaydilar. Insonlar bor – mana shu kelishi bilan ketishi o'rtasidagi “umr” deb atalmish vaqtga chaqmoqday chaq nab, o'zlarining yorqin izini qoldiradilar. Bu iz o'chmasdir. Mana shunday aql-zakovati bilan o'zidan keyin yaxshi ot qoldiruvchilar ma'naviy yuksak insonlardir. Ma'naviy komil insongina shunday yuksaklikka, avlod-ajdodlar qalbida zamonlar osha, asrlar osha yashashday shara fga sazovordir.

Demak, inson o'z hayoti va faoliyatini mazmunli o'tkazish uchun avvalo o'zini o'rab turgan borliqni bilishi, yuksak aql va tajriba egasi bo'lishi lozim. Chunki inson aqli va uning hayotida muxim o'rin tutishi, aql-idroktufayligina inson donolik, teran fikr, rostgo'ylik, to'g'rilik, uzoqni ko'ra bilish, nafsning ko'yiga tushmaslik kabi hususiyatlarni amalga oshirishi mumkin. Xalqimizning “Aql insonning ko'rki”, “Aql suvdan tiniq, oynaday ravshan” kabi naqlar bejiz aytilmagan. Shuning uchun ham aql inson uchun g'oyat oliy ne'matdir. Aql bilan ilm-ma'rifat egallanadi, kasb xosil qilinadi, dunyo sirlari o'rganiladi. “Aql-yurak ichidagi nur, bu nur bilan haq yoki noxaq bilib olinadi”, “Aql-jonning xayoti, jon esa jasadning hayoti, tan esa jasadning hayoti!”, “Kishining nafsi aqldan ustun bo'lsa, undan odamning hayvondan farqi yo'q”.

Aql kishining o'z irodasi, qalbi va fikri asosida dunyoviy, hayotiy xaqiqatlarni anglash va ularga o'z faoliyatida ma'naviy-insoniy nuqtai-nazardan amal qilishdir. Aql insonlarning piri komili, murshidi, yagonasidir. Rux ishlovi, aql boshlovchidir. Inson aqli ila din va e'tiqodni mahkam qaladi, shariat hukmlariga bo'ysunadi. Insonlarning do'sti uning aqlidir. Dushmani esa uning nodonligidir. «Ollox eng g'azab qilgan kishi ahmoqdir. Chunki u eng aziz narsadan maxrumdir». Olimlarning fikricha, aql ikki turli bo'ladi. Insonni hayvondan ajratib turadigan tug'ma aqli **tabiiy va kasbiy** bu tabiiydir. Inson tabiatdagi aqlni o'tkirlash va o'stirish faoliyati bu kasbiydir. Bu esa aqlni ishlatish, tajriba va ilm olish bilan xosil bo'ladi. U aqlni rivojlantirish uchun ham xar bir kishi xayotdan tajriba orttirish va ilm ma'rifat o'rganishi zarur, xar kimki, aqlga oshno bo'lsa, u jamiki ayblardan poklanadi, xaqiqatni, anglab, kamolotga yetadi.

Aql, zakovat jihatdan yetuk bo'lmagan inson hech qahon o'z Vatanini, o'z dinini, eng asosiysi o'zligini anglay olmaydi, o'zligini anglamagan inson esa manqurtga aylanib qoladi. Bu esa ertangi porloq kelajagimizning halokatidir. Bizning bu boradagi eng asosiy vazifamiz yoshlarni ma'naviy barkamol, elim deb, yurtim deb yonib yashaydigan, yurt istiqboli uchun qayg'uradigan komil insonlarni tarbiyalashimiz, ularni kamol zarur. Komil inson deganda, biz avvalo ongi yuksak, mustaqil fikrlay oladigan, xulq-atvori bilan o'zgalarga ibrat bo'ladigan bilimli odamni oldi-qochdi gaplar bilan aldab bo'lmaydi. Uxar bir narsani aql, mantiq asosida qurgan kishi yetuk odam bo'ladi.

Darhaqiqat ilm-ma'rifalilik kuch-quvvat manbai, qalbga nur, o'ziga ziyo bag'ishlaydigan buyuk ne'matdir. Shu sababli ham inson hayotda qunt bilan ilmni o'rganishi tufayli aql-zakovati yuksaladi, baxtli hayot uchun kurashadi. Bizga ma'lumki, inson hayoti uchun muhim bo'lgan ilm hikmatlarini o'rganishda otabobolarimizning faoliyati va ularning yoshlarga ko'rsatgan g'amxo'rliklari beqiyosdir. Xalqimiz orasidagi quyidagi o'g'itlar insonlarni ilm-ma'rifatga da'vat etuvchi buyuk kuchdir.

Inson uchun aql, eshik ochuvchi, axloqiy yo'l ko'rsatuvchidir. Yetuk axloq vaodobinsonning ziynati, donolarning fazilatidir. Aqlli kishi ahloqli bo'lsagina, xalqiga, mamlakatiga, yoru do'stlariga naf keltiradi. Alisher Navoiy o'zining aqli, ibratli axloqi, odobi bilan mamlakatiga, xalqiga hech qachon so'nmaydigan buyuk meros qoldiradi. U o'zi hayot bo'lgan davrlardayoq, aqli va axloqi bilan xalqiga, mamlakatiga ko'p foyda keltirgan. Aqliy tarbiya insoniyat paydo bo'lgandan boshlab tarbiyaning ustuvor vazifasi bo'lib kelgan.

Pedarogika fanlari nazaruotchi olimlari S.Rajapov, S.Temurova, S.Nurmatova, B.Mirzahmedova, B.Adizov, R.Og'aevlartomonidan aqliy tarbiyaning shakllanish usullari va uni amalga oshirish tizimi aqliy tarbiyani shakllantirish to'g'risidagi fikrlari mavzuning o'rganilganlik darajasini belgilaydi.

Insonni ulug'lash, uning kadriga yetish, ayniksa o'sib kelayotgan yosh avlodni aql-idrokli, odobli kilib tarbiyalash, ularni kamolotga yetkazish soxasida Respublikamizda bir kancha ishlarni amalga oshirmokda. Dunyo, inson, aql-zakovat, ma'naviyat-bular bir-biri bilan chambarchas bog'likdir. Dunyo bunyod bo'libdiki, inson dunyo yuzini ko'ribdiki, o'zini inson sifatida anglabdiki, u o'zini borlikning eng mukammal mavjudoti sifatida aql-zakovati bilan tanib keladi. Inson ongi, tafakkuri va ma'naviyati tufayli shunday ustunlikka egadir. Inson dunyoga ma'lum bir maksad bilan kelmaydi. U o'zligini idrok etgandan so'ng xayotda yashashdan ma'no izlaydi va bu narsa uning xayoti mazmunini tashkil etadi. Insonlar bor, dunyoga keladilaru ketadilar, ulardan nom-nishon qolmaydi, xayotning ma'nosiga, kadriga yetmaydilar. Insonlar bor - mana shu kelishi bilan ketishi o'rtasidagi "umr" deb atalmish vaktga chakmokday chaknab, o'zlarining yorkin izini koldiradilar. Bu iz o'chmasdir. Mana shunday aql-zakovati bilan o'zidan keyin yaxshi ot koldiruvchilar ma'naviy yuksak insonlardir. Ma'naviy komil insongina shunday yuksaqlikka, avlod-ajdodlar kalbida zamonlar osha, asrlar osha yashashday sharafga sazovordir. Demak, inson o'z xayoti va faoliyatini mazmunli o'tkazish uchun avvalo o'zini o'rab turgan borlikni bilishi, yuksak aql va tajriba egasi bo'lishi lozim. Chunki inson aqli va uning xayotida muxim o'rin tutishi, aql-idrok tufayligina inson donolik, teran fikr, rostgo'ylik, to'grilik, uzokni ko'ra bilish, nafsning ko'yiga tushmaslik kabi xususiyatlami amalga oshirishi mumkin. Xalkimizning "Aql insonning ko'rki", "Aql suvdan tinik, oynaday ravshan" kabi naqlar bejiz aytilmagan. Shuning uchun ham aql inson uchun goyat oliy ne'matdir. Aql bilan ilm-ma'rifat egallanadi, kasb hosil kilinadi, dunyo sirlari o'rganiladi. "Aql - yurak ichidagi nur, bu nur bilan haq yoki nohaq bilib olinadi",

“Aql o'z soxibini dunyo malomatlaridan kutkaradi”, “Aql- jonning xayoti, jon esa jasadning xayoti, tan esa jasadning xayoti!”, “Kishining nafsi aqldan ustun bo'lsa, unday odamning xayvondan farqi yo'k“.

Aql kishining o'z irodasi, kalbi va fikri asosida dunyoviy, xayotiy haqiqatlarni anglash va ularga o'z faoliyatida ma'naviy-insoniy nuqtai-nazardan amal kilishdir. Aql insonlarning piri komili, murshidi, yagonasidir. Rux ishlovi, aql boshlovchidir. Inson aqli ila din va e'tikodni maxkam kiladi, shariat xukmlariga bo'ysunadi. Insonlarning do'sti uning aqlidir. Olimlarning fikricha, aql ikki turli bo'ladi. Insonni xayvondan ajratib turadigan tugma aqli Tabiiy va kasbiy bu tabiiydir. Inson tabiatdagi aqlni o'tkirlash va o'stirish faoliyati bu kasbiydir. Bu esa aqlni ishlatish, tajriba va ilm olish bilan hosil bo'ladi. U aqlni rivojlantirish uchun ham har bir kishi xayotdan tajriba orttirishi va ilm-ma'rifat o'rganishi zarur, har kimki, aqlga oshno bo'lsa, u jamiki ayblardan poklanadi, haqiqatni, anglab, kamolotga yetadi.

Bolalarning aqlli bo'lishida oila, maktab, keng jamoatchilikning ta'siri kattadir. Aqlli bolalar qayerda bo'lmasinlar doimo ehtiyotkorlik bilan bilim va tarbiyali ekanligini namoyish etadilar.

Alisher Navoiy qanoatni to'ldiruvchi insoniy fazilatlar sabr, saxiylik, karam, muruvvat, himmat ekanligi ta'kidlab o'tadi. Mazkur xislatlarning bir-biriga yaqinligi hamda ularni insonning obro'-e'tiborini yuksak darajaga ko'tarishga xizmat qiluvchi xislatlar sanalishini aytib o'tadi. Ayni o'rinda sabr deb ataluvchi xislatga shunday ta'rif beradi: “Sabr achchiqdir – ammo foyda beruvchi, qattiqdir – ammo zararni daf etuvchi. Sabr shodliklar kalitidir va bandlar ochqichidir.

Alisher Navoiyning talqinicha, saxiylik, saxovat odamlarning mushkulini oson qilish maqsadida ularga beriladigan minnatsiz yordamdir. Alloma insonlarni bir-birlariga nisbatan saxovat ko'rsatishga da'vat etadi. Himmatlilik, muruvvat, karam kabi xislatlar esa saxovatning tarkibiy qismlari hisoblanadi. Ushbu fazilatlarga ta'rif berar ekan, mutafakkir quyidagi fikrlarni qayd etadi: “Saxiylik (qo'li ochiqlik) kishilik bog'ining hosildor daraxtidir, balki u daraxtning shirin mevasidir, odamgarchilik o'lkasining to'lqinli daryosi, balki u to'lqin daryosining asl gavharidir.

Yaxshilik – bir jabrlanganning qattiqchilik yukini ko'tarmoq va uni o'sha qiyinchiliklardan qutqarmoqdir. Karam birovning mashaqqat tikani og'irligini ko'tarmoq va tikan uchidan guldek ochilmoq va o'sha qilingan ishni qaytib tilga keltirmaslik, og'ziga olmaslik, kishiga minnat qilmaslik va uning yuziga solmaslik”. “Muruvvat karamning urug'-avlodi, egizak qarindoshi, kimki bu xislatlarga ega bo'lsa izzat va hurmatga sazovor bo'ladi” kabi fikrlar asosida esa muruvvat deb ataluvchi xislatga ta'rif beriladi. Alisher Navoiy karam va muruvvat sifatlarini ota-onaga qiyoslasa, vafo va hayoni esa egizak farzandlardir deya ta'kidlaydi.

Abdulla Avloniy esa inson aqliy kamoloti xususida to'xtalar ekan, quyidagilarni bayon etadi: «Ilm dunyoning izzati, oxiratning sharofatidir. Ilm

inson uchun g'oyat muqaddas bir fazilatdur, zeroki, ilm bizga o'z ahvolimizni, harakatimizni oyna kabi ko'rsatur, zehnimizni, fikrimizni qilich kabi o'tkir qilur, ilmsiz odam mevasiz daraxt kabidur». Alloma bilim insonni jaholatdan qutqarishning eng samarali vositasi ekanligiga ham urg'u beradi: «Ilm bizni jaholat qorong'usidan qutqarur, madaniyat, ma'rifat dunyosiga chiqarur, yomon fe'llardan, buzuq ishlardan qaytarur, yaxshi xulq, odob sohibi qilur. Bugun hayotimiz, salomatligimiz, saodatimiz, sarvatimiz, maishatimiz, himmatimiz, g'ayratimiz, dunyo va oxiratimiz ilmga bog'liqdur».

Abdurahmon Jomiy o'zidan keyin turli fan, adabiyot, jumladan pedagogikaga doir o'lmas meros qoldiradi. U o'z asarlarida, ayniqsa, nasriy yo'lda yozilgan "Baxoriston" asarida ta'lim-tarbiya masalalari xususida fikr bildirdi.

Jomiyning fikricha, ilm inson uchun xayotiga yo'l ochuvchi va uni o'z maqsadiga erishtiruvchi omildir. Ilm va hunarni yoshlikdan egallash kerak. Ilm insonga hamma narsani oson va puxta anglab olishga yordam beradi, mehnatni yengillashtiradi. Jomiy yoshlarni ilmlarni egallashga da'vat etdi:

Jomiy o'z pedagogik qarashlarida kishilarni adolat, xushmuomalalik va dono so'z bilan zulmkorlarga ta'sir etishga da'vat etadi. Yuqoridagi misralarda qilingan nasihat da'vat garchi shoxlarga qaratilgan bo'lsa ham, xar bir ish va xolatda tadbir va aql bilan ish tutish, do'stlarga yaqinroq bo'lish, yomonlik qilishdan saqlanish, adolatli bo'lish xar bir insonga qarata qilingan xitobdir. Jomiy manmanlik, kekkayishlarni qoralaydi, g'ururlikni nodonlikning belgisi deb biladi. Inson xatto, boshqalardan biror sifati bilan yuqori darajali bo'lsa ham, kamtar bo'lishi kerak deydi.

Jomiy manmanlik nodonlik belgisi ekanligini uqtirib, yoshlarni bu illatlardan xoli, pok bo'lishga undaydi. Jomiy to'g'ri so'zlikni inson uchun zaruriy eng yaxshi xususiyat hisoblaydi, izxor etiladigan fikr so'z va harakat bilan uzviy birlikda bo'lmog'i kerak. Shoirning ta'kidlashicha, dilkashlik, shirinso'zlik, ochiq chexralik va quvnoqlik kishilarga yaxshi, yoqimli kayfiyat baxsh etadi. Ulug' adib o'z asarlarida hasislikni, o'grilikni keskin qoralaydi, oqilona yashash, ortiqcha boylikni muhtojlarga berish, qanoatli bo'lish g'oyalarini olg'a suradi.

BUXORO VILOYATI SHAROITIDA EKIN YERLARINI TUPROQ OSTIDAN SUG'ORISH (TOS) LABORATORIYA-DALA QURILMASI

Annotatsiya. Maqolada ekin yerlarning tuproq ostidan sug'orib suv tejankorligiga erishish borasida olib borilayotgan ilmiy tadqiqot ishlari, qo'llaniladigan texnika va texnologiyalar, yangi qurilma, uni qo'llashda olinadigan ijobiy natijalar, shuningdek bu muammo echimini topish borasida ilmiy tadqiqot ishlari to'g'risida ma'lumotlar keltirilgan.

Kalit so'zlar: Tuproq ostidan sug'orish, qumli tuproq, sho'rlangan tuproq, gravitatsion kapillyar, sorbsiyali, kondensatsion, gidrostatik bosim.

UNDERGROUND IRRIGATION (TOS) LABORATORY-FIELD DEVICE IN THE CONDITIONS OF BUKHARA REGION

Abstract. In the article, the scientific research works on achieving water saving by subsoil irrigation, the used techniques and technologies, the new device, the positive results obtained from its application, as well as the scientific research works on finding a solution to this problem are presented. information is provided.

Key words: Subsoil irrigation, sandy soil, saline soil, gravitational capillary, sorption, condensation, hydrostatic pressure.

Respublikamizda paxta ekinlarni tuproq ostidan ildiz tizimini namlab sug'orish texnologiyasining deyarli yo'qligi va tadqiqot maqsadidan kelib-chiqib, TOS texnologiyasi konstruktiv sxemasi ishlab chiqildi (1-rasm). Bunda er usti yoki er osti suvlarini nasos yordamida so'rib hovuzga quyiladi, ma'lum vaqtdan keyin tindirilib filtirlardan o'tkazib nasos yordamida so'rib olinib o'g'it aralastirgich yordamida mineral o'g'itlar aralastiriladi va suv bosimi 0,5...1,5 metr suv ustini ostida asosiy polietilen quvurga yuboriladi undan ingichka quvurlarga va undan TOSE ga beriladi. TOSE dan soatiga o'rtacha 2-2,5 l suv sizib chiqadi.[1,2,3].

TOS sug'orish tizimi va uning tarkibiy qismlari. TOS tizimi mohiyatiga ko'ra, tarkibiga suv saqlovchi, organik o'g'it qo'shuvchi, suv tozalovchi, suv etkazib beruvchi, suv taqsimlovchi va namlab sug'oruvchi qismlarni o'z ichiga oladi. Tizimning qismlari joylashgan o'rni, ishlatadigan suvi sifatiga ko'ra, tizim tarkibiga kiruvchi elementlar turi va soni har xil bo'lishi mumkin. Tizimning suv saqlovchi qismi - hovuz, tindirgich yoki sisternalardan, suv tozalovchi qismi - qumli, diskli yoki turli filtrlardan, suv etkazib beruvchi qismi - nasos qurilmalari, bosh va tarqatuvchi quvurlardan, suv rostlovchi qismi - turli rostlagichlar, ilashmalar va jo'mraklardan, sug'oruvchi qismi – aylana shaklidagi namlatgichdan tashkil topgan.

TOS tizimi zamonaviy sug'orish tizimi hisoblanib odatdagi an'anaviy elementlar bilan bir qatorda suv sarfini hisobga oluvchi suv o'lchagichlar, tuproq namligini nazorat qiluvchi datchiklar va tizimni avtomatik ravishda boshqaruvchi kompyuter vositalaridan foydalanish imkoniyati ham mavjud va tuproq ostidan namlatib berish orqali sug'oriladi bunda suvning tozaligi sug'orish ishchi qisimlarining uzoq vaqt xizmat qilishini ta'minlaydi. Shu sabab suvni tozalash filtrlarini to'g'ri tanlab bilish zarur. Sug'oriladigan paxta ekinzorlari uchun ajratiladigan maydon tekis bo'lishi va uni nishabi 4-5 % dan oshmasligi lozim. Bu maydonlarning hammasi shamoldan himoyalangan bo'lishi lozim.

Quyida Buxoro-10 paxta navini tuproq ostidan sug'orishni sxemasi keltirilgan

1-rasm Buxoro-10 paxta ekinini TOS tizimi sxemasi.

2-rasm Buxoro-10 paxta ekinini TOS tizimida ekilgan jarayon

Ushbu sug'orish sxemasi ariq, filtr, nasos 1, suv qudug'i, hovuz, nasos 2, mineral o'g'itlarni aralashtiradigan aralashtirgich, jo'rak, suv taqsimlovchi va sug'oruvchi politelen quvurlar, suv beruvchi elementlardan tashkil topgan.

TOS qurilmasini o'rnatish sxemasi, uning ishlash texnologik jarayoni va texnik tavsifi. TOS texnologiyasini qo'llashda nasos uskunalari va yig'iladigan quvurlarni tanlash mahalliy sharoitga muvofiq individual ravishda amalga oshiriladi va nasos stansiyasini tanlash, yig'iladigan quvur liniyasining uzunligi va diametrlari gidravlik hisob-kitoblar orqali sug'orish manbasining uzoqligi, sug'orish maydoni o'lchamlarini hisobga olgan holda amalga oshiriladi. Ekin maydoni hududini sug'orish davrida to'liq ta'minlashda sug'orish modulining quvur liniyasining uzunligi va diametri, shuningdek o'simliklari turiga, oqim tezligiga va sug'orish halqasidagi bosimga qarab tanlash zarur. Ekinlarni TOSning sug'orish moduli uchun ekspluatatsiya qo'llanmasi ekin turi ychun tayorlangan va texnologik kartaga kiritilgan.

Tuproq ostidan sug'orish texnologiyasini texnik ekinlar uchun tavsiya etiladigan o'lchamlari quyidagicha asosiy quvurga ulangan $\emptyset 0.032$ m ingichka quvurlar orasidagi masofa 0,9 m, ingichka quvurga ulanadigan shleflar orasidagi masofa 2 m, shlefning ingichka quvurga ulangan qismi 0.3 m, namlatgichlar oralig'idagi masofa 0.5 m ni tashkil etadi.

TOS texnologiyasi o'rnatilish sxemasi, sug'orish tizimida quvurlar, traynik, mufta, shleyf, barchasi politelin materialdan tayyorlangan. Politelin quvurlar xizmat ko'rsatish muddati 5-6 yilni tashkil etadi.

TOSE ni tuproq ichida o'rnatilishi hisobiga quyosh nuri tik tushmaydi shuni hisobiga uzoq vaqt xizmat qiladi. Buxoro-10 navli paxta ekilgan konturda yuqoridagi sxema asosida sug'orilganda. Ekinni suvga bo'lgan talabchanligi, iqlim haroratini hisobga olinadi. Shu yo'l bilan sug'orish rejimi amalga oshiriladi. Paxtalar tuproq ostidan sug'orishning rasmda ko'rsatilgan tartibda tavsiyasi ishlab chiqildi bunda 1 gektar uchun maydonning ikki tarafidan 50 m dan qilib 1-magistral quvur $\emptyset 32$ tashlanadi, 2-magistral suv taqsimlagich (perexod) $\emptyset 110$ ga o'tkazib beradi, 8-namlatgichlarning o'rni $\emptyset 32$ li quvur bo'ylab joylashtirildi.

Ekinzorlarda hosildorlikni ta'minlashning asosiy omillaridan biri o'simliklarning o'sishi va rivojlanishi uchun juda muhim bo'lgan tuproqning faol qatlamida maqbul namlikni hosil qilish jarayoni hisoblanadi [4,5,6,7]. Shuning uchun, tuproq namlik tanqisligi bilan hosilni hosil qilish uchun qulay shart-sharoitlar yaratish, birinchi navbatda, optimal sug'orish rejimini [10,11,12,13,14] aniqlashni talab etadi. Sug'orish rejimining asosiy ko'rsatkichi tuproqning faol qatlamini namlash va fil'tratsiyaga yo'qolishini oldini olish bilan sug'orish normasini belgilashdan iborat. Sug'orish me'yori hisoblashda tuproqning suv-fizik xususiyatlariga, faol qatlamning chuqurligiga va namlikning ruxsat etilgan pasayishi darajasiga muvofiq amalga oshiriladi.

$$m = 0,0314 \cdot a \cdot b \cdot l \cdot n \cdot d \cdot (\beta_{HB} - \beta_m)$$

$$m = 0,0065 \cdot H \cdot B \cdot l \cdot n \cdot d \cdot (\beta_{HB} - \beta_m)$$

bu yerda a, b -namlash konturining minimal va maksimal radiusi bo'lib

mos ravishda uning kengligi va chuqurligini ifodalaydi, m ; L - TISE ning uzunligi, m ; TOSE ning n - suv chiqarish teshikchalari soni, dona; H -namlangan tuproq qatlamining chuqurligi (yer yuzasidan hisoblaganda), m ; B -namlanish konturi tuprog'ining o'rtacha kengligi, m .

Xulosa qilib aytganda Buxoro viloyati sharoitida Buxoro-10 navli g'o'zani tuproq ostidan sug'orib parbarishlaganda ananaviy usulga nisbatan juda kata samaradorlikka erishiladi. Ananaviy usulda 40-45 sentner hosil olingan joydan, bu usul yani tuproq ostidan sug'orish (TOS) usuli qo'llanilganda 65-70 sentner hosil olindi.

**RESPUBLIKAMIZ PAXTACHILIK MINTAQALARIDA G‘O‘ZA
MAYDONINI ORGANIK O‘G‘ITLASHNING AHAMIYATI (BUXORO
VILOYAT MIQYOSIDA)**

Annotatsiya. Maqolada ekin yerlarning tuproq struktuyrasini yaxchilash, hosildorlikni oshirish orqali resurs tejamkorlikka erishish borasida olib borilayotgan ilmiy tadqiqot ishlari va qo‘llaniladigan texnika va texnologiyalar, yangi qurilma, uni qo‘llashda olinadigan ijobiy natijalar, shuningdek bu muammo echimini topish borasida ilmiy tadqiqot ishlari to‘g‘risida ma’lumotlar keltirilgan.

Kalit so‘zlar: Tuproq strukturasi, qumli tuproq, sho‘rlangan tuproq, organic o‘g‘it, chorvo chiqindisi, gumus, microelement, ildiz morfologiyasi, oziqlanish radiusi.

IMPORTANCE OF ORGANIC FERTILIZATION OF COTTON FIELDS IN THE COTTON-GROWING REGIONS OF OUR REPUBLIC (ON THE SCALE OF BUKHARA REGION)

Abstract. In the article, the scientific research works on improving the soil structure of cultivated lands, achieving resource saving by increasing productivity, and the techniques and technologies used, the new device, the positive results obtained from its use, as well as the scientific research works on finding a solution to this problem. information is provided.

Key words: Soil structure, sandy soil, saline soil, organic fertilizer, animal waste, humus, microelement, root morphology, nutrition radius.

Respublikamiz paxtachilik hududlaridagi sug'oriladigan erlar ham tabiiy-iqlim va tuproq sharoitlari, tuproqning mexanik tarkibi, unga ishlov berish texnologiyasi va qo'llaniladigan mashina turlari, ularga qo'yilgan agrotexnik talablarga ko'ra uch mintaqaga bo'lingan. Odatda chigit ekish va g'o'za parvarishi davrlarida bajariladigan ishlar hamma mintaqalarda deyarli bir xil bo'lib, faqat tuproqning meliorativ holatiga qarab, asosan yerni ekishga tayyorlash va g'o'zani sug'orishga tayyorlashda bajariladigan ishlarning turlicha bo'lishi hamda sug'orishlar soni va muddati bilan farqlanadi. Sho'r yerlarda o'g'itlardan foydalanishda avvalo, yerlarning meliorativ holati yaxshilanishi, ya'ni zovurlar toza va talabga javob beradigan darajada chuqur bo'lishi, yerlar past-baland bo'lmasligi, sho'r yuvish eng qulay agrotexnikaviy muddatlarda sifatli o'tkazilishi kerak. Tuproq unumdorligi kamayib ketgan, uning mexanikaviy tarkibi og'ir yoki suv o'tkazuvchanligi kuchli bo'lgan paykallarga ko'plab organik o'g'itlar solish ayniqsa yaxshi samara beradi.[1].

Magalliy o'g'itlar ichida go'ng asosiy o'rinni egallaydi. Ma'lumki, go'ng tarkibida g'o'za uchun eng zarur hisoblangan azot, fosfor va kaliy o'g'itlari, shuningdek, o'simliklar kam miqdorda talab qiladigan mikro-elementlardan: bor (B), marganets (Mg), Kobalt (So), Mis (Cu), Pyx (Zn), Molibdep (Mo) kabi moddalar ham bo'ladi. Bulardan tashqari go'ngda kalsiy, magniy, oltingugurt kislota va boshqa foydali moddalar ham bor.

Go'ng ekinlarga oziq bo'lishidan tashqari, undagi organik moddalar tuproq strukturasi yaxshilab, unumdorligini oshiradi. Go'ng solingan yerlarda uproqning g'ovakligi oshadi, suv o'tkazuvchanligi yaxshilanadi, namni *uzoq* saqlab turadi. Tarkibida organik moddalari kam, og'ir tuproqli yerlarda uning gajmini oshirishda, suv va havo rejimi hamda mikrobiologik protseslarni yaxshilashda go'ngning roli ayniqsa katta. Mexanikaviy tarkibi yengil tuproqlarda esa uning qovushqoqlik xusu-siyatini yaxshilaydi. Go'ng yerga solingai mineral o'g'itlarning samaradorligini oshirishda ham muxim omil hisoblanadi. Shuning uchun mineral o'g'itlarni organik o'g'itlar bilan aralashtirib solish tavsiya qilinadi. Ayniqsa, u tuproqda sekin eriydigan fosforli o'g'itlarning eruvchanligi kuchaytirib uni o'simlik oson o'zlashtiradigan holga keltiradi.

To'shama sifatida yaroqsiz bo'lib qolgan somon, maydalangan yosh qamish, sholi poxoli, torf, g'ozapo'choq kabilardan foydalanish mumkin.

Qoramol va otlari uchun bir sutkada 3-6 kg, qo'y, echkilar uchun 0,5-1,0 kg, cho'chqalar uchun (bolalari bilan) 6-8 kg to'shama kerak bo'ladi. F. A. Skryabin ma'lumotiga ko'ra, bir bosh etluk qoramoldan bir yilda 4,5 t, bir bosh buzoqdan 2,5 t, otdan 4,0 t, qo'ydan 0,4 t, cho'chqadan -0,6 t atrofida go'ng chiqishi umkin.

Molxona va otxonalarda to'plangan go'nglar maxsus chuqurlarga to'planib shu yerda chiritiladi yoki dala chetlari yoki o'rtalariga uyumlab usti tuproq bilan ko'miladi. Go'ngdagi azotning kamayib ketishini oldini olish va fosforli o'g'itni o'simlik yaxshi o'zlashtirishi uchun uni dalaga chiqarish oldidan har tonnasiga 20-40 kg superfosfat aralashtirish yaxshi samara beradi. G'oz parvarishida tuproq strukturasi mikroorganizmlarga boy bo'lishi ko'zlangan natijaga erishishga zamin boladi. Ayniqsa mahalliy o'g'itlar qatorida, ko'kat o'g'itlar, bakterial o'g'itlar va g'ozani o'g'itlash muddatlari va me'yorlari rejalashtirilgan hosilni olishda muhim o'rin tutadi.

a

b

c

a, b – o'g'itlash mashinasi, c - paxata dalasining ko'rinishi.

G'oz o'zining butun o'suv davrida barcha turdagi o'g'itlarga talabchan bo'ladi. Biroq, rivojlanish fazalari bo'yicha o'simlik o'g'it turini o'zlashtirishiga qarab turli miqdorda talab qiladi. G'oz yosh paytida, ya'ni shonaga kirgan davrigacha fosforli va azotli o'g'itlarga talabchan bo'ladi. Chunki bu davrda o'g'itlar etarli bo'lsa, o'simlikning ildiz sistemasi yaxshi taraqqiy etadi, g'oz baquvvat o'sib, dastlabki hosil shoxlar poyaniig pastki bo'gimlaridan chiqadi. Bu esa g'ozalarning erta shonalashiga olib keladi. Keyingi shonalashdan gullashgacha bo'lgan davrda g'ozalar fosforli o'g'itga nisbatan azotli o'g'itni ko'proq talab qiladi. Chunki bu davrda o'simlik mevalashga nisbatan poyaning bo'yiga o'sishiga va ko'plab shox-shabba.chiqarishga zo'r beradi. Olimlarimizning kuzatish lariga qaraganda, bu davrda g'ozalar azotni fosforga nisbatan 10-13% ortiq o'zlashtirar ekan. Gullash-mevalash davrida g'ozalar azotga nisbatan fosforni 5-10% ko'proq talab qiladi. Sababi, bu davr o'simlik uchun hosil to'plash va ko'saklarni to'liq yetilish davri hisoblanadi. Shuningdek, g'ozalar pishib etilgan davrda hosilning erta yetilishi ko'saklarning bo'liq, chigiti to'q, tolasi pishiq va me'yorda yetilishi uchun ham fosforli o'g'itlarni ko'proq

talab qiladi. Kaliy o'g'itining yillik normasi odatda azotnikiga nisbatan 50% miqdorida berish maqsadga muvofiq hisoblanadi. Buning yarmini shudgorlash oldidan berish tavsiya qilinadi. Yer osti suvlari chuqur joylashgan tipik yoki och tusli kuzgi shudgorlash oldidan solish yaxshi samara beradi. Bunda azotli o'g'itlardan kalsiy sianamid, ammoniy sulfat va tarkibida azot hamda fosfor bo'lgan ammofos berish tavsiya ztiladi. Ammiakli selitra esa ekish vaqtida va g'ozaning o'suv davrida berilsa, uning samaradorligi kuzdagi berilganiga nisbatan yuqori bo'ladi. Ushbu tadqiqot ishida yuqorida aytib o'tilgan texnologik jarayonni amalga oshirishda agregatning bir o'tishida g'ozani ekishda organik o'g'itlaydigan energiya va resurstejamkor qurilmani yaratish va parametrlarini asoslash nazarda tutilgan.

NATURE OF DECISIONS ON MEASURES FOR THE DEVELOPMENT OF INFORMATION AND COMMUNICATION TECHNOLOGIES

Abstract. This article talks about the nature of decisions on the development of information and communication technologies.

Keywords: Information and communication technologies, Electronic government, Ensuring information security, Information technologies of the Republic of Uzbekistan, Development of information technologies and communications.

O'zbekiston Respublikasi Prezidentining "Yangi O'zbekiston ma'muriy islohotlarini amalga oshirish chora-tadbirlari to'g'risida" gi 2022-yil 24-dekabrda PF-269-son Farmoni bilan Vazirlar Mahkamasi tizimida Raqamli texnologiyalar vazirligi tashkil etilgan. Vazirlik faoliyatining asosiy vazifalari va yo'nalishlari quyidagilardan iborat: axborot texnologiyalari va kommunikatsiyalar sohasida, "elektron hukumat"ni joriy etishda yagona davlat siyosati amalga oshirilishini ta'minlash, axborot texnologiyalarini rivojlantirishning jahon darajasidan kelib chiqqan holda milliy axborot-kommunikatsiya tizimini tatbiq etish va rivojlantirish yuzasidan kompleks

dasturlarni ishlab chiqish va amalga oshirish; telekommunikatsiya infratuzilmasini yanada rivojlantirish va modernizatsiya qilish, shu jumladan, Internet tarmog'iga keng polosali ulanishni kengaytirish, telefon aloqasi, televideniye va radioeshittirishning raqamli tizimlariga to'liq o'tishni ta'minlash, aloqa va telekommunikatsiyalar sohasidagi faoliyatni, shuningdek, radiochastotali spektrdan foydalanishni davlat yo'li bilan boshqarish, litsenziyalash va nazorat qilish borasidagi funksiyalarni amalga oshirish;

“Elektron hukumat”ni tatbiq etish, vazirliklar, idoralar, kompaniyalar va uyushmalarning, mahalliy davlat hokimiyati organlarining axborotlashtirish va interaktiv davlat xizmatlarini takomillashtirish borasidagi faoliyatini idoralararo muvofiqlashtirish, monitoring qilish, baholash va nazorat qilish bo'yicha davlat dasturlarining amalga oshirilishini ta'minlash, shuningdek, davlat axborot resurslari hamda ma'lumot bazalarini shakllantirish, saqlash va foydalanishning yagona tizimini vujudga keltirish, idoralararo axborot tizimlarini yaratish va boshqarish;

Internet tarmog'ining milliy segmenti yanada shakllantirilishini ta'minlash, mamlakatimizning turli yo'nalishlardagi zamonaviy veb-resurslarini, shu jumladan, aholining, xususan, yosh avlodning axborotga bo'lgan va intellektual talab-ehtiyojlarini qondirish maqsadida tarmoq resurslarini rivojlantirish uchun zarur texnik va qulay shart-sharoitlarni yaratish; raqobatdosh dasturiy mahsulotlarning mamlakatimizda ishlab chiqarilishini va ichki bozorini hamda ularga ko'rsatiladigan xizmatlarni rivojlantirishga ko'maklashish va uning muvofiqlashtirilishini ta'minlash, iqtisodiyotning real sektori tarmoqlarida va iste'molchilarda zamonaviy dasturiy mahsulotlar, axborot tizimlari va axborot resurslarini joriy etish;

Axborot xavfsizligini ta'minlash va kommunikatsiya tarmoqlari, dasturiy mahsulotlar, axborot tizimlari va resurslarini himoya qilishning zamonaviy texnologiyalarini tatbiq etish chora-tadbirlarini amalga oshirish, axborot resurslarini himoya qilish bo'yicha texnik infratuzilmani yanada rivojlantirish; zamonaviy kommunikatsiya vositalari sohasida ilmiy tadqiqotlar va ishlanmalarni, kadrlarni tayyorlash, qayta tayyorlash va malakasini oshirishni tashkil qilish, dasturiy mahsulotlar, axborot tizimlari va ma'lumotlar bazalarini ishlab chiqish va tatbiq etish, axborot xavfsizligini ta'minlash va axborot-kommunikatsiya texnologiyalarining boshqa sohalarida shunday ishlarni tashkil etish; aloqa, axborot texnologiyalari va kommunikatsiyalar sohasida xalqaro hamkorlikni yo'lga qo'yish, ustuvor loyihalarni amalga oshirish, radiochastotalik spektrdan samarali foydalanish uchun hamda vazirlik faoliyati doirasiga kiruvchi boshqa yo'nalishlar bo'yicha xorijiy investitsiyalarni jalb etish.

O'zbekiston Respublikasi Prezidentining «O'zbekiston Respublikasi Aloqa, axborotlashtirish va telekommunikatsiyalar texnologiyalari davlat qo'mitasi faoliyatini tashkil etish to'g'risida» 2012-yil 23 oktabrdagi PQ-1836-son qaroriga muvofiq, shuningdek iqtisodiyot tarmoqlarida axborot-kommunikatsiya texnologiyalarini joriy etish va ulardan foydalanish

jarayonlarida Axborot-kommunikatsiya texnologiyalarini rivojlantirish jamg'armasining rolini oshirish va ishtiroki ko'lamlarini kengaytirish maqsadida Vazirlar Mahkamasining 2012-yil 19-dekabrda «Axborot-kommunikatsiya texnologiyalarini rivojlantirish jamg'armasini yanada rivojlantirish va uning mablag'laridan samarali foydalanish to'g'risida»gi qarori imzolangan.

Mazkur qaror bilan Axborot-kommunikatsiya texnologiyalarini rivojlantirish jamg'armasi to'g'risidagi nizom 1-ilovaga muvofiq;

Axborot-kommunikatsiya texnologiyalarini rivojlantirish jamg'armasi boshqaruvi apparati tuzilmasi 2-ilovaga muvofiq;

Axborot-kommunikatsiya texnologiyalarini rivojlantirish jamg'armasi Kengashi tarkibi 3-ilovaga muvofiq tasdiqlangan. Quyidagilar Jamg'armaning vazifalari va faoliyatining asosiy yo'nalishlari hisoblanadi:

a) ushbu Nizomning 4-bandida ko'rsatilgan manbalardan tushgan mablag'larni jamlash;

b) Jamg'arma hisob raqamlarida jamlangan mablag'lardan:

- davlat boshqaruvi organlari va mahalliy davlat hokimiyati organlarining idoralararo integratsiyalashtirilgan axborot tizimlarini joriy etishni, ma'lumotlar uzatishning idoralararo tarmoqlarini tashkil etishni, «Elektron Hukumat» tizimlarini va davlat buyurtmasi doirasida amalga oshiriladigan qidirish tizimlarining milliy segmentini shakllantirish bo'yicha loyihalarni ishlab chiqish, amalga oshirish va kuzatib borishni;

- xalqaro standartlarga muvofiq va mamlakatni ijtimoiy-iqtisodiy rivojlantirishning uzoq muddatli istiqbollarini hisobga olgan holda aloqa, televideniye va radioeshittirish sohasida telekommunikatsiya tarmoqlari va tizimlarini rivojlantirish va modernizatsiya qilishni;

Internet tarmog'ining milliy segmentini shakllantirishni, turli yo'nalishdagi zamonaviy mahalliy axborot resurslarini, shu jumladan aholining, ayniqsa yosh avlodning axborotga bo'lgan va intellektual ehtiyojlarini qondirish uchun tarmoq resurslarini shakllantirishni;

✚ davlat axborot resurslari va ma'lumotlar bazasini shakllantirish, saqlash va ulardan foydalanishning yagona tizimini ishlab chiqish, amalga oshirish va kuzatib borishni;

✚ ma'lumotlar uzatish tarmoqlarini va axborot-kommunikatsiya texnologiyalarini rivojlantirish sohasida ustuvor loyihalarni amalga oshirishni, normativ-huquqiy hujjatlar, ilmiy-tadqiqot ishlari va dasturlarni ishlab chiqish, shuningdek ushbu sohada loyihalarni tayyorlash uchun tadqiqotlar o'tkazishni;

✚ aloqa, axborot-kommunikatsiya texnologiyalari, respublikaning butun hududida ma'lumotlarni uzatish milliy va xalqaro axborot tarmoqlaridan yuqori tezlikda foydalanish sohasida xizmatlarning yangi turlarini ishlab chiqish va joriy etishni;

✚ aloqa, kompyuter va tarmoqli texnologiyalar, dasturlashtirish va elektron ma'lumotlar bazasini yaratish sohasida mutaxassislar tayyorlash va

ularni qayta tayyorlash tizimini rivojlantirishni, shuningdek kompyuter va axborot texnologiyalaridan keng foydalanishga asoslangan o'qitish tizimini;

O'zbekiston Respublikasi Axborot texnologiyalari va kommunikatsiyalarini rivojlantirish vazirligi hamda Aloqa, axborotlashtirish va telekommunikatsiya texnologiyalari sohasida nazorat bo'yicha davlat inspeksiyasi apparati faoliyatini xodimlarni qo'shimcha ravishda moddiy rag'batlantirish va moddiy-texnika bazani mustahkamlash yuzasidan; (O'zR VM 27.06.2015-y. 171-son Qarori tahriridagi xatboshi)

Axborot texnologiyalari va kommunikatsiyalarini rivojlantirish vazirligi tizimiga kiruvchi telekommunikatsiya va axborot tizimlari ustidan boshqarish va nazorat qilish organlarini, shuningdek aloqa obyektlari davlat kadastri xizmatlari, elektron raqamli imzolar kalitlarini ro'yxatdan o'tkazish markazlari faoliyatini, terminologiya va lug'atlarni, standartlashtirish bo'yicha bazaviy tashkilotlarni va bazaviy metrologik xizmatni, shuningdek axborotlashtirishni joriy etish va rivojlantirish bo'yicha mustaqil daromad manbaiga ega bo'lmagan xizmatlarni rivojlantirishga ko'maklashishni; (O'zR VM 27.06.2015-y. 171-son Qarori tahriridagi xatboshi)

Respublika axborot-kutubxona markazining faoliyatini;

✚ axborot va pochta xavfsizligi, telekommunikatsiya tarmoqlari tizimini, axborot tizimlari va resurslarini himoya qilish texnologiyalarini joriy etishni, zamonaviy talablar va standartlarga muvofiq axborot va pochta xavfsizligini ta'minlash bo'yicha texnik infratuzilmani rivojlantirishni;

✚ tanlov asosida tanlab olinadigan aloqa, axborotlashtirish va telekommunikatsiya texnologiyalari sohasini rekonstruksiya qilish, ularni rivojlantirish va kompyuterlashtirish bo'yicha loyihalarni amalga oshirishni;

✚ efirga ruxsat berilmagan chiqishlarning va davlat tuzilmalari radio vositalariga to'sqinlik qilishning oldini olish maqsadida radio chastota spektridan foydalanish ustidan davlat nazorati uchun maxsus nazorat-o'lchov texnikasi sotib olish xarajatlarini qisman qoplashni;

✚ axborot-kommunikatsiya texnologiyalarining sifatli vositalarini va mahalliy dasturiy mahsulotlarni, shu jumladan, ijtimoiy-ko'ngilochar va ta'lim yo'nalishidagi dasturiy mahsulotlarni ishlab chiqarish infratuzilmasini rivojlantirishni;

✚ qishloq joylarda xizmatlar ko'rsatuvchi aloqa, radioeshittirish va televideniye tashkilotlariga vaqtincha moliyaviy yordam berishni;

✚ O'zbekiston Respublikasining qishloqlari va chekka aholi punktlarining telekommunikatsiya infratuzilmasini maqsadli qayta jihozlash va yanada rivojlantirishni;

✚ operatorlar va provayderlar tomonidan ko'rsatiladigan universal aloqa xizmatlarini rivojlantirishni;

✚ dasturlashtirish, tizimli ma'muriyatchilik, kompyuter dizayni, animatsiyalar va axborot texnologiyalarining boshqa yo'nalishlari bo'yicha tanlovlar, musobaqalar va bellashuvlar o'tkazish yo'li bilan axborot-

kommunikatsiya texnologiyalari sohasida mutaxassislar faoliyatini rag'batlantirishni;

Litsenziyalar berilganligi, abonent raqamidan foydalanganlik uchun mobil aloqa operatorlari tomonidan to'lanadigan to'lov, aloqa sohasida faoliyatni amalga oshiruvchi yuridik shaxslardan olingan jarima sanksiyalarining undirishdan tushgan mablag'lar summasining 5 foizi miqdorida davlat boji O'zbekiston Milliy kutubxonasi huzuridagi byudjetdan tashqari Axborot-kutubxona muassasalarini rivojlantirish jamg'armasiga ajratilishi bo'yicha xarajatlarni moliyalashtirishda foydalanish.

DEPENDENCE OF MATURING PERIOD ON SPEED OF COTTON VARIETIES

Annotation. The paper presents materials related to investigation of maturation intensity of F_1 - F_3 hybrids which created by crossing ultra-early maturing lines with upland varieties in the period of growth stages.

It is known that early ripening of cotton is one of the important problems, and it is one of the main factors determining the yield. Usually, quick ripening is the period from planting cotton to ripening of bolls.

N.G.Simongulya said that signs of early ripening are biologically different signs of plants, due to their non-uniform genetic nature, so it is appropriate to see them separately. In recent years, a number of researchers (V.P.Senoedov; G.R.Kholmurodova, etc.; A.E.Egamberdiev, etc.) in the F_1 - F_2 hybrid generations have shown the development phases, inheritance patterns, dominance (extreme and complete) valuable information about the differences between the characteristics, the duration and duration of the flowering and ripening phases was obtained.

In our research, very fast (100 days), fast (110-115 days) and medium (120-125 days) cotton varieties were used as starting sources. According to the data obtained on the periods of F_1 - F_3 hybrids until 50% flowering (table-1), the period of 50% ripening of hybrids in the first year biological nursery was 52-56 days. and the 50% flowering period in the hybrid generations was 5, 6, and 7 days faster in the medium-growing Bukhoro-102, Bukhoro-8 and Bukhoro-6 varieties, and in the hybrid generations in which the fast-growing UzPITI-103 and UzPITI-102 varieties participated. it was observed that it started 1 and 3 days earlier, respectively. This indicates the beginning of alternation of these signs in the forms of motherhood. Also, the comparative analysis of ultra-quick varieties taken as fathers shows that the medium-quick Bukhoro-102, Bukhoro-8 and Bukhoro-6 varieties were used for 4-6 days in F_1 hybrids, and 2-4 days when the quick-quick varieties UzPITI-102 and UzPITI-103 were used. more closely, the stabilization of the transmission of these signs of rapidity from generation to generation is continuing from a genetic point of view. Compared to the control S-6524 variety (59 days), F_1 hybrids were 3 days earlier in the Bukhara-6x010888 hybrid, 4 days in the Bukhara-8x010941 hybrid, 5 days earlier in the Bukhara-102x010941 hybrid, especially 4 days in the UzPITI-103x010738 hybrid. In the UzPITI-102x010797 hybrid generation, it was observed that it accelerated to 5 days and in the UzPITI-102x010941 hybrid generation to 7 days.

It is known that early ripening of cotton is one of the important problems, and it is one of the main factors determining the yield. Usually, quick ripening is the period from planting cotton to ripening of bolls.

The above-mentioned characteristics of 50% flowering period were genetically transferred to F_2 - F_3 hybrid generations from generation to generation, and were preserved in the second and third year biological nurseries. In particular, with the 50% flowering period of hybrid offspring in the third year biological nursery (F_3) being 53-56 days, these traits are genetically stabilized compared to the paternal and maternal forms, as a result, in these hybrid offspring, compared to the control S-6524 variety, Bukhara-6x010888 hybrid offspring 3 per day, 4 days in the Bukhara-6x010941 hybrid, 5 days in the Bukhara-102x010941 and UzPITI-103x010738 hybrids, and up to 6 days in the UzPITI-102x010941, UzPITI-102x010953 and UzPITI-102x010797 hybrids it was observed that it was in longer periods.

According to the data obtained on the study of the maturation period of 50% of the F_1 - F_3 hybrid offspring, it was calculated that it was 109-114 days in the first-year biological seedlings (F_1). When the 50% ripening periods of these F_1 hybrids were compared to the varieties obtained as maternal forms, it was 11 days earlier when the medium Bukhara-102, Bukhara-8 and Bukhara-6 varieties participated, and the early UzPITI-103 and UzPITI-102 varieties participated. and in the hybrid generations, it was observed that it accelerated up to 8 and 12 days, respectively. This is the fact that the signs of pregnancy are embodied in the forms taken as motherhood. According to the comparative analysis of the super-quick varieties obtained as paternal forms, in hybrids with the participation of the medium-quick Bukhoro-102, Bukhoro-8 and Bukhoro-6 varieties, respectively, 11, 12 and 14 days, and with the participation of the quick-quick UzPITI-102 and UzPITI-103 varieties. closer to 9-12 days, respectively, it was observed that the stabilization of these characters continues genetically.

As a result of the research, it was observed that in the second and third year (F_2 - F_3) biological nurseries, the laws of genetic inheritance of signs of quick ripening were preserved. In particular, with the 50% ripening period of the hybrid offspring in the third-year biological nursery (F_3) being 110-113 days, the genetic stabilization of these traits compared to the paternal and maternal forms, as a result, in these hybrid offspring, compared to the control variety S-6524, Bukhara-6x010888 and Bukhara -8x010941 hybrids for 8 days, for 10 days for Bukhara-102x010941 and UzPITI-103x010738 hybrids, and for 11 days for UzPITI-102x010941, UzPITI-102x010953 and UzPITI-102x010797 hybrids it was observed that the pace accelerated.

From the above data, it can be concluded that in the F_1 - F_3 hybrid generations obtained from medium-ripening forms as mother (Bukhoro-6, Bukhoro-8, Bukhoro-102 varieties) and extremely fast-ripening samples (010941 and 010888) as father The 50% ripening interval was on average 62 days in the control S-6524 cotton variety, 57-58 days in the Bukhara-6x010888 hybrid, and

57 days in the Bukhara-8x010941 and Bukhara-102x010941 hybrids. Compared to the S-6524 variety, it was observed that it accelerated up to 4-5 days. Also, the time interval from 50% flowering to 50% ripening in the F₁-F₃ hybrids obtained from quick-ripening forms as maternal (UzPITI-102 and UzPITI-103 varieties) and ultra-quick samples (010941, 010953, 010797, 010738) in the control variety S-6524 with an average of 62 days, UzPITI-102x010941, UzPITI-102x010953, UzPITI-102x010797 and UzPITI-103x010738 hybrids had an average of 57 days, that is, the rate of ripening of these hybrids compared to the sample S-6524 succeeded in speeding up to 5 days. This makes it possible to further accelerate the future selection processes, as a result, to select new selection materials with a high 1st harvest weight and to evaluate them comprehensively according to their general economic value characteristics.

MEASURES OF FIGHTING AGAINST FRUIT TREES

Abstract. It is known to everyone that the number of orchards in Uzbekistan is increasing year by year. Fruit products grown in our country are loved and consumed not only in our country, but all over the world. The reason for this is the timely arrival of crops in our country, moderate weather and high-quality cultivation technologies. At the same time that orchards are increasing, their harmful organisms are also increasing. One of them is the Californian shields, which currently causes some difficulties to fight against such pests. The formation of protective shields and rapid adaptation to the season of California shields have become the main problems of farmers. If effective methods against such pests are not destroyed, long-term fruit trees can dry out quickly. Our research has shown that the best results can be achieved against Californian beetles if applied in early spring when the beetles are weak.

Key words: Fruit trees, apple, pear, plum, cherry, peach, cherry, apricot, control measures and chemical drugs.

More than 160,000 farms operate in the republic. Multi-branch farms have increased by 45% and their number has reached 75 thousand. This year, 8.377 million tons of grain, more than 2.93 million tons of cotton, 12.45 thousand tons of cocoons, 318 thousand tons of rice, 23 million tons of fruits and vegetables, 13 million tons of meat and dairy products were grown in our country. For the first time, planting of saffron was started, soybean planting expanded. 132 thousand tons of agricultural products were processed and finished products worth 100 million dollars were exported. 724,000 tons of wet fruits worth 856 million dollars were sold abroad. First of all, efficient use of land and prevention of its looting is one of the most important tasks, the head of state said. There is only 3,300,000 hectares of irrigated land in the country, and there is no way to increase it. Because water resources are limited in Uzbekistan. There are difficulties in irrigating 830,000 hectares of land.

In terms of damage, the California shield is second only to the apple borer. (5) California shields from fruit trees, mainly apples, pears, plums, cherries, peaches, cherries, apricots, and black currants, from forest and ornamental forest trees, hawthorns, roses, willows, flowers, red causes serious damage to fruit bush plants. Apple is one of our favorite fruits. I can't be surprised, because it is not only a sweet fruit with an amazing taste, but also a blessing with healing properties. Abu Ali ibn Sina, the great exponent of Eastern medicine, also recommended eating one apple before going to bed every day. Apple is a place of various vitamins, trace elements and other useful substances. (7)

It is known that no matter how much the farmers fight against this pest, the damage of this pest does not decrease. Therefore, the speed, direction and location of the terrain are of great importance. In the valleys, the shield spreads faster than in the mountainous regions. They spread quickly mainly in densely planted (intensive type) gardens. California shields damage a variety of plants. From fruit plants, it damages apples, pears, plums, and reds more, and from grass plants, it is more common in beans, carrots, turnips, and pumpkins..

If a plant is infected with a scab for a long time, not only the bark, but also the internal tissues are damaged, which has a negative effect on the healthy growth of the plant. As a result, cracks appear, the bark becomes reticulated and resembles the bark of old trees. As a result of a long-term damage to a plant by a colony of beetles, some parts of the bark, branches and the whole tree trunk dry up. Red spots on fruits can also be caused by leafhoppers similar to the California leafhopper. Such spots are usually scattered on the fruits.

California shields - *Diaspidiotus perniciosus* Somst (Homoptera - family of isteroptera, Diaspididae - family of shields). It is considered a plant quarantine object. It is distributed in Georgia, Krasnodar and Sevastopol regions, Rastovsk region, southern Ukraine, Moldavia, several regions of Central Asia, Primorye and Khabarovsk regions, and the southern part of Sakhalin. (Osmolevsky 1980). Leaf beetles damage many types of plants, that is, more than 200 trees and shrubs are affected, their growth slows down, the yield and quality decrease, red spots or packages appear on the affected fruits, they do not develop fully, it takes a cold shape and cracks appear, some branches dry out, of course, not to mention the harvest.

In practice, the study of the coccid fauna of Uzbekistan and all of Central Asia began in 1908, when academician N. Nosonov (1908) was the first to find the eastern pillow (*Pulvinaria orientalis* Nas). From Muyunkum, the American coccidologist S. Marlatt (Marlatt 1908) described the Caspian shield from Ashgabat (*Aspidiotus transcaspianus* Marlatt. In 1911, the establishment of the Turkestan Entomological Station in Tashkent was an important event in the study of coccids (now the Plant Protection of the Republic of Uzbekistan The staff of this station paid attention to coccids, and these pests (coccids) became the object of research (Plotnikov, 1915). Observations were made on succulent shields found on fruit trees in orchards around Tashkent. Young apple and on pear trees, a large shield (*Lecanium bituberculatum* Tang) was observed. Now it is called a false shield of hawthorn (*Palaeolecanium bituberculatum* Targ). Later, in 1913-1914, the author noted an increase in the number of comma-shaped shields of apples (*Lepidosaphes ulmi* L and *Lecanium* sp.).The scientist notes that it resembles a comma-shaped shield (*Lecanium bituberculatum* Tang) (Plotnikov, 1915). At the same time, Turkestan agriculture reported on damage to fruit trees in the Isfara valley (I. Sevastyanov, 1914, present-day Khojand region). Along with the mulberry tree, hawthorn and spherical shields and others are widespread.

Purple shield (*Parlatoria oleae* Solvey). The body shape of the female is wide oval (egg-shaped), almost five-sided, evenly segmented, purple, the front part is wide circular. The joints of the body are well formed, the pygidium is broadly formed, the neck of the khartoum is long, the mustache is articulated, the part of the pygidium is 3 pairs with one hair, the length of the undivided body is 1-1.3 mm, the shield of the female is white or white gray, short ovoid with a convex oval, sometimes rounded, 2-2.5 mm long and 1-1.5 mm wide, the skin of the larva is located eccentrically at the edge of a large, dark green, brown or almost black shield. The male is reddish-purple, the front wings are well developed, the length of the body is up to 1 mm, the nymph shield of the female is flat, elongated, white, 1.5 mm long. dark green larval skin looks good. Purple leaf beetle is a serious pest of many fruit and ornamental trees. Widespread in Mediterranean countries, Middle East and Middle East: Pakistan, India, Brazil, Argentina, Australia and America. Widespread in Uzbekistan, Tashkent, Syrdarya, Samarkand. It was found in Andijan, Jizzakh, Kashkadarya, Surkhandarya and Fargona regions. Larvae and females settle on the leaves, branches and twigs of cherry, mountain cherry, peach, plum, apricot, cherry and other fruit trees and suck cell juice. This leads to a weakening of the tree, a decrease in yield and a decrease in the quality of its fruit. Reddish spots (spots) appear in the affected areas, especially on the fruits, which reduces the quality and taste of the fruits. A heavily infected tree dries up.

Chemical control measures against the California shield (*Diaspediotus persinosus*).

Chemical control measures should be carried out in the case of the damage caused by the economically dangerous number of pests. When carrying out chemical control measures against insects, the pest's way of life, its structure, biology, ecology, vitality, adaptation to the external environment, giving many generations in one season are factors that affect the effectiveness of chemical control. Sometimes drugs that enter the stomach through the intestine and affect pests do not affect the pests that are absorbed and feed, on the contrary, systemic drugs also affect the pests that are absorbed and fed. At the same time, the thyroid gland is affected by these drugs, i.e. contact. The drugs given in the list of approved chemical pest control are effective if they are used in moderation.

O‘ZBEKISTON RESPUBLIKASIDAGI XUSUSIY SEKTOR KORXONALARIDA SOLIQ HISOBINI AVTOMATLSHTIRISH YO‘LLARI

Annotatsiya. Mazkur maqolada soliq tizimida raqamli texnologiyalardan samarali foydalanish orqali soliq bilan bog‘liq barcha xizmatlarni osonlashtirish, ya’ni soliq organlari xodimlari va soliq to‘lovchilarning imkoniyatlari kengaytirish, soliq tizimidagi ko‘plab ishlarni raqamli texnologiyalari orqali bajarish bo‘yicha taklif va amaliy tavsiyalar shakllantirilgan.

Kalit so‘zlar: soliq tizimi, raqamli texnologiyalari, soliq hisoboti, soliq tushumlari, soliq, samaradorlik, raqamli platforma, raqamli transformatsiya.

WAYS TO AUTOMATE TAX CALCULATION IN PRIVATE SECTOR ENTERPRISES IN THE REPUBLIC OF UZBEKISTAN

Abstract. In this article, through the effective use of digital technologies in the tax system, all tax-related services are facilitated, i.e., the opportunities of tax authorities and taxpayers are expanded, and many tasks in the tax system are performed through digital technologies. recommendations are formulated.

Key words: tax system, digital technologies, tax reporting, tax revenue, tax, efficiency, digital platform, digital transformation.

So‘nggi vaqtlarda “Raqamli iqtisodiyot” tushunchasi juda ko‘p marta qo‘llanilmoqda. Darhaqiqat, ko‘plabrivojlangan mamlakatlarda raqamli iqtisodiyot ularning rivojlanish omillariga sezilarli darajada ta‘sir o‘tkazgan. Raqamli iqtisodiyot – bu xo‘jalik faoliyatini yuritish bo‘lib, bunda ishlab chiqarish va xizmat ko‘rsatishdagi asosiy omil raqamlar ko‘rinshidagi ma‘lumotlar bo‘lib, katta hajmdagi axborotlarni qayta ishlash va shu qayta ishlash natijasini analiz qilish yordamida har xil turdagi ishlab chiqarish, xizmat ko‘rsatish, texnologiyalar, qurilmalar, saqlash, mahsulotlarni yetkazib berishda oldingi tizimdan samaraliroq yechimlar tatbiq qilishdir. Boshqacha qilib aytganda, raqamli iqtisodiyot bu onlayn xizmatlar ko‘rsatish, elektron to‘lovlar amalga oshirish, internet savdo, va boshqa turdagi sohalarni raqamli kompyuter texnologiyalarini rivojlanishi bilan bog‘langan faoliyatdir. Soliq tizimida raqamli texnologiyalardan unumli foydalanish birinchi navbatda davlat soliq xizmati organlari xodimlari tashkil qilinib, amalda qo‘llaniladi. Davlat soliq siyosatini

amalga oshirishda asosiy mavqeni egallagan soliq organlariga soliq qonunlariga rioya qilinishi ustidan nazoratni amalga oshirishdek yuksak vazifa yuklatildi. O'tgan davr oralig'ida soliq organlari davlat budjetining daromad qismini uzluksiz to'ldirishni ta'minlaydigan muntazam tizimga aylandi.

Soliq tizimida raqamli texnologiyalarining vazifasi soliq xizmati organlari oldiga qo'yilgan masalalarni hal etish uchun to'langan soliqlar va yig'imlar tushumi haqida ma'lumotlar statistikasini ishlab chiqilgan maxsus algoritmlar asosida olib borish va tegishli organlarga uzatish, tushumlar dinamikasini tahlil qilish, boshqaruv qarorlarini qabul qilish uchun tahliliy ma'lumotlarni berish, tahliliy ma'lumotlar asosida hisobotlar tayyorlash masalalarini yechishni ta'minlashdan iborat [1]. Soliq xizmati organlarida axborot tizimlari va texnologiyalarini joriy etishning maqsad va vazifalari soliq xizmati organlari bajaradigan funksiyalar, vazifalar, bir xildagi operatsiyalarni yangi dasturlar bilan imkoni boricha kengroq qamrab olishni ta'minlashdir, zero bu dasturlar soliq ma'lumotlariga ishlov berish jarayonini jadallashtirish, soliq inspektorlari ishining samaradorligini oshirish, ularning ishidagi bir tUSDagi hisob-kitob va oxiri yo'q yozuvlar bilan ishlash yukini kompyuter statistikasining zamonaviy vositalaridan foydalangan holda ijodiy tahlil qilish sohasiga chiqish imkonini beradi. O'zbekiston Respublikasi Prezidenti Shavkat Mirziyoyev 2019-yilning 10-iyul kuni "Soliq ma'muriyatchiligini takomillashtirish bo'yicha qo'shimcha chora tadbirlar to'g'risida"gi qarorni qabul qildi. Farmonida ham soliq tizimida Soliq tizimini yanada takomillashtirish, iqtisodiyotda xufiyona aylanmani qisqartirish va O'zbekiston Respublikasi soliq siyosatini takomillashtirish konsepsiyasining asosiy yo'nalishlarini amalga oshirish maqsadida [2]: Davlat organlari va tashkilotlari o'rtasida axborot almashish mexanizmlarining, elektron soliq ma'muriyatchiligi hamda soliq nazoratini amalga oshirish shakl va uslublarining takomillashmaganligi e'tiborga olinadi.

Davlat soliq qo'mitasi (DSQ) va uning bo'g'inlari bilan ularga aloqador tashkilot va muassasalar uchun talab etilgan tartibda axborot va ma'lumotlar tayyorlashdan iborat. Davlat soliq xizmati organlari axborot texnologiyalarining oldiga qo'yilgan vazifalarni bajarish uchun quyidagi masalalar hal etilgan [3]:

- Barcha hujjatlar mazmuni va shakli standartlashtirilgan va unifikatsiyalashtirilgan;

- Axborotlar klassifikatsiyalashtirilgan va kodlashtirilgan;

- Bo'g'inlar va tizimning bosqichlari o'rtasida axborotni uzatish tizimi joriy etilgan;

- Avtomatlashtirilgan tizim, hamda u bilan bog'liq bo'lgan axborotlashgan tizim o'rtasida axborotlar almashish yo'lga qo'yilgan;

- Dasturiy-texnik majmua va tizimli dasturiy ta'minot unifikatsiyalashtirilgan. Soliq xizmati organlarida joriy etilgan axborot tizimlari va texnologiyalarining tuzilishi va tarkibi hamda ungayuklatilgan vazifalar soliq tizimida boshqaruvni avtomatlashtirish imkoniyatini beradi. Shu bilan birga u takomillashib, yangilanib borish xususiyatiga ega. Soliq xizmati organlarida soliq

obyektlari va ularning tushumlari hamda soliq ishini tashkil etishning avtomatlashtirilgan (axborot texnologiyalarini qo'llash) shakllarini yaratish va realizatsiya qilishdan unumli foydalaniladi. Soliq xizmati organlarida ish jarayonlarini, shuningdek, soliq obyektlari, tushumlari va soliq to'lovchilarning holati va harakati to'g'risidagi ma'lumotlarning yagona axborot bazasini yaratish va unga zamonaviy axborot texnologiyalarni qo'llash ishlari tashkil etiladi. O'zbekiston soliq tizimida bu borada 30 dan ortiq maxsus dasturiy mahsullardan foydalaniladi [1]. Davlat soliq xizmati organlari faoliyatini kompyuterlashtirish va axborotlashtirish, malakali xodimlarni tayyorlash, kompyuter jihozlari, dasturiy mahsullar bilan ta'minlash hamda zamon talabidan kelib chiqib, soliqdoralarda jamlangan hisobotlarni elektron ko'rinishda quyi soliq xizmati organlaridan Davlat soliq qo'mitasigauzatish, Davlat soliq qo'mitasi tomonidan beriladigan operativ topshiriqlarni davlat soliq boshqarmalariga va davlat soliq inspeksiyalariga to'g'ridan – to'g'ri uzatish masalalari, shu bilan birga soliq to'lovchi yuridik va jis-moniy shaxslarni ro'yxatga olish, ularni davlat budjeti oldidagi majburiyatlarining bajarilishi haqidagi ma'lumotlarni yagona soliq to'lovchilar bazasida saqlash va boshqa masalalar dolzarb masalaga aylandi [3]. Soliq tizimida zamonaviy axborot-kommunikatsiya texnologiyalarini qo'llashda bir qancha muammolar yuzaga keladi. O'sha muammolardan birini axborot xavsizligini ta'minlash hisoblanadi. Davlatning axborot xavsizligini ta'minlash muammosi milliy xavfsizlikni ta'minlashning asosiy va ajralmas qismi bo'lib, axborot himoyasi esa davlatning birlamchi masalalariga aylanmoqda. Axborotni himoyalashning turli usullari mavjud bo'lib, elektron hujjat aylanishi tizimiga o'tilayotgan bugungi kunda elektron raqamli imzo asosida hujjatlar aslligini tasdiqlash va ularni himoya qilish iqtisodiy axborot almashinuvida eng qulay usullardan biri hisoblanadi. Soliq tizimida raqamli texnologiyalaridan foydalanishning asosiy maqsadlari quyidagilardan iborat:

- Soliq tushumlari bo'yicha ma'lumotlarni olish.
- Ish samaradorligini oshirish.
- Qog'ozdagi ish oqimining hajmini kamaytirish.
- Soliq tekshiruvlarini ma'lumotlar bilan ta'minlash.
- Soliq to'lovchilar to'g'risidagi ma'lumotlarning ishonchliligini oshirish.
- Soliq qonunchiligiga rioya etilishini nazorat qilish.

Boshqa har qanday avtomatlashtirilgan tizimlarda bo'lgani kabi, Soliq tizimida axborot texnologiyalaridan foydalanishga ham bir qator talablar qo'yiladi, birinchi navbatda, tegishli funksiyalarni samarali bajarish bilan bog'liq. Ishlab chiqilgan soliq axborot tizimi nafaqat soliq organlari ishlarini osonlashtirishga imkon beradi, balki uning barcha faoliyat elementlarini ham tartibga soladi. Tizim alohida elementlarni va butun tizimni boshqaradi. Hozirgi kunda elektron deklaratsiyalar ham yaratilmoqda. Endi soliq to'lovchilarga soliq deklaratsiyasini elektron shaklda topshirish imkoniyati mavjud va bu, shubhasiz, ularni soliqlarni yig'ish jarayonini osonlashtiradi. Bu usldan foydalanish ancha afzallikka ega bo'lmoqda chunki soliq to'lovchilar endi soliq idoralariga tashrif

buyurishi shart emas. Shuningdek, o‘z navbatida, soliq inspeksiyasi kiruvchi ma‘lumotlarni qo‘lda qayta ishlash bilan shug‘ullanmaydi, chunki soliq tizmida axborot texnologiyalaridan foydalanib avtomatlashtirilgan axborot tizimini modernizatsiya qilish imkoniyati mavjud.

TARVUZNING ZAMBURUG‘ KASALLIKLARI VA ULARGA QARSHI SAMARALI KURASH USULLARI

Annotatsiya. Ushbu maqolada tarvuzning kasallik qo‘zg‘atuvchi patogen Tarvuzning fuzarioz so‘lishi (fuzarioz vilt)ni Fusarium oxysporum Schl. f. niveum Wr. Antraknoz kasalligi Colletotrichum lagenarium Ellis et Halsted zamburug‘larining tarqalishi, zarari va ularga qarshi samarali kurash usullari haqida ma’lumotlar berilgan.

Kalit so‘zlar: tarvuz, fuzarioz so‘lish, Fusarium oxysporum Schl. f. niveum Wr. Antraknoz kasalligi, Colletotrichum lagenarium Ellis et Halsted, zamburug‘larining tarqalishi, zarari, qarshi kurash usullari.

FUNGI DISEASES OF WATERMELON AND EFFECTIVE METHODS OF FIGHTING AGAINST THEM

Annotation. In this article, the disease-causing pathogen of watermelon Fusarium wilt of watermelon (fusarium wilt) is caused by Fusarium oxysporum Schl. f. niveum Wr. Anthracnose disease Colletotrichum lagenarium Ellis et Halsted fungi distribution, damage and effective methods of combating them are given.

Key words: watermelon, fusarium wilt, Fusarium oxysporum Schl. f. niveum Wr. Anthracnose disease, Colletotrichum lagenarium Ellis et Halsted, spread of fungi, damage, control methods.

Kirish. Poliz ekinlaridan O‘zbekiston sharoitida yuqori hosil olish, kasallik va zararkunandalarni yo‘qotish, mavjud imkoniyatlardan to‘g‘ri foydalanish hozirgi kunda muhim ahamiyat kasb etadi. Bu sohasini serdaromad, kam xarajatli sohaga aylantirish, ekish xarajatlarini kamaytirish, yuksak agrotexnikadan foydalanish, saqlashning kam harajatli yangi usullarini yaratish bilan bir qatorda havfli kasalliklarga qarshi samarali pestitsidlarni kam normalarida qo‘llash, iqtisodiy zarar keltirishini hisobga olgan holda uyg‘unlashgan himoyadan foydalanishga katta e’tibor berish zarur.

O'simliklarning zamburug'lar qo'zg'atadigan kasalliklari hosil sifati va miqdoriga salbiy ta'sir ko'rsatib qolmasdan, balki ularni ko'p hollarda butunlay nobud qilishi mumkin. Shu sababli fitopatogen mikroorganizmlarga qarshi samarali kurash choralarini ishlab chiqish fan va ishlab chiqarishning doimo diqqat markazida turadi.

O'zbekiston, Tojikiston, Turkmaniston, Qirg'iziston va Janubiy Qozog'istonda qovun yetishtirishda eng katta zarar keltiradigan va soha rivojlanishiga to'siq bo'lib kelayotgan ikkita zamburug' kasalliklari mavjud bo'lib, ular un-shudring va fuzarioz so'lishdir.

Tarvuzning fuzarioz so'lishi (fuzarioz vilt)ni *Fusarium oxysporum Schl. f. niveum Wr.* takomillashmagan zamburug'i qo'zg'atadi. Kasallik qovun, tarvuz va bodringning maysalari va katta yoshli o'simliklarini zararlaydi. Maysalarning urug'pallasi so'liydi, ildizi yoki poya asosi chiriydi, natijada ko'pincha ular yalpi yotib qoladi

Fuzarioz so'lish bilan tarvuz barcha o'sish va rivojlanish fazalarida zararlanadi. Ekin odatda mavsumning ikkinchi yarmida, to'la hosilga kirgan paytida ko'proq zararlanadi. Yosh maysalarning urug'baglari, poyasi va ildiz bo'g'zida qaynoq suvga kuyganga o'xshash, rangsiz, so'ngra qo'ng'ir tus oluvchi dog'lar rivojlanadi, ular chiriydi va maysalar qurib qoladi, ekin siyrak bo'lib qoladi. Kasallangan katta yoshli o'simliklar yaxshi rivojlanmaydi, ko'pincha so'liydi va so'ngra nobud bo'ladi. Poya va ildizi kesib ko'rilganda o'tkazuvchi naylarning qorayganligi kuzatiladi. Ba'zan sog'lom bo'lib ko'ringan o'simliklar kechasi nobud bo'ladi. Ertapishar navlar maysalarining 43-86 foizi nobud bo'lgani O'zbekistonda qayd etilgan.

Oldin o'simlikning pastki yarusdagi barglarida sarg'ish, so'ngra qo'ng'ir tus oluvchi dog'lar paydo bo'ladi va ular yuqori yarus barglariga o'tadi. Palaklardan biri yoki bir nechtasi, so'ngra butun o'simlik so'ladi. Ildiz po'sti titilgan shakl oladi, usti kukunga o'xshab qoladi. Ba'zan o'simlik kasallikka mavsum so'ngigacha qarshilik ko'rsatadi, so'lmaydi, ammo ular zaif, palagi kalta bo'lib qoladi, kam hosil tugadi. Kasallikning tez rivojlanuvchi shakli kuzatilganda o'simlik 1-2 kun ichida so'lib qoladi. Namlik yetishmasligi (yetarlicha sug'ormaslik) kasallikni juda kuchaytiradi.

So'lishning sababi - o'simlikning o'tkazuvchi tomirlari zamburug' mitseliysi bilan to'lishi va suv o'tmay qolishidir. So'ligan o'simliklarning ildizi va poyasi kesib ko'rilganda, ularda sarg'ish, jigarrang va qo'ng'ir dog'larni ko'rish mumkin, ammo bu dog'lar har doim mavjud bo'lmaydi. Kasallikning rivojlanishiga tuproqning past xarorati (16-18⁰S) va past namlik imkon beradi. Patogen tuproqda sklerotsial xosilalar va xlamidospora shaklida saqlanadi.

Kasallikka qarshi kurash choralari. Kasallik mavjud bo'lgan dalalarga 4-5 yilgacha tarvuz ekmaslik; so'lishga chidamli navlar ekish; urug'likni faqat sog'lom o'simlik mevalaridan olish, ekishdan oldin uni mikroelementlar (Fe, B, Zn, Mn, Cu) eritmasida ivitish, quritish va samarali fungitsid (misol uchun, Vitavaks 200 FF) bilan dorilash; tarkibida elementlar balansi mavjud bo'lgan

o'g'itlarni kiritish; o'simlik qoldiqlarini daladan chiqarib, yoqib yuborish tavsiya qilinadi.

O'zbekistonda ekinga superfosfatning 5% li eritmasini 3 marta (ekin 4-10 barg chiqarganda, gullash-meva tugish paytida hamda mevalar pisha boshlaganda) purkash kasallikka qarshi yaxshi natija bergan.

Antraknoz kasalligi tarvuz, qovun, bodring va ba'zan qovoqni zararlaydi. Antraknoz kasalligi issiqxona va dala sharoitida uchrab, o'simlikning barcha yer usti a'zolarini zararlaydi. Bargning kasallangan joyida dumaloq, sarg'ish dog'lar paydo bo'lib, bu dog'lar keyinchalik teshilib qoladi.

Poyada dog'lar uzunchoq, qo'ng'ir sarg'ish rangda bo'lib, botiq xosil qiladi. Bu belgilar mevada dastlab kichik shaklda xosil bo'lsa, keyinchalik shakli yiriklashib, chuqurlashadi. Mevalarda dog'lar xilma xil o'lchamda ko'rinadi: dastlab ular mayda, qo'ng'ir, ammo keyinchalik tezda kattalashadi, chuqurlashadi va yaralarga aylanadi. Yaralarning yuzasida pushtisimon sporadastalar xosil bo'ladi. Kuzga borib dog'lar to'q tusga kiradi. Yosh paytida zararlangan mevalar ko'pincha deformatsiyaga uchraydi.

Kasallikni *Melanconialis tartibi* vakili *Colletotrichum lagenarium* Ellis et Halsted takomillashmagan zamburug' turi keltirib chiqaradi.

Kasallangan joyda zamburug' konidialarni xosil qiluvchi loja xosil qiladi. Unda rangsiz, bir xujayrali o'lchami 10-30x3-5 mkm konidiya bandlarida tuxumsimon, silindsimon shakldagi o'lchami 11-20x3,6-6,5 mkm kattalikdagi konidialarni xosil qiladi. Zamburug' bargga ustitsalar vositasida va shikastlangan joy orqali kirib keladi.

Kasallikning inkubatsiya davri namlik va xaroratga bog'liq ravishda 3-6 kun davom etadi. Uning konidialari 4 dan 36⁰S gacha bo'lgan xaroratda (qulay chegarasi 24-25⁰S) va xavoning nisbiy namligi 60 dan 100% gacha bo'lganda o'sishi mumkin. Tik tushgan quyosh nurlari antraknozni to'xtatib qo'yadi, kasallikning soya joylarda kuchli rivojlanishi aynan mana shu xolat bilan tushuntiriladi.

Kasallikning yetkazadigan zarari barglar assimilyatsiya qobiliyatining susayishi va aloxida o'simliklarning yotib qolishi, xosildorlik va maxsulot sifatining pasayishi bilan ifodalanadi. Mazkur kasallik tarvuz, qovun va bodring mevalarida ularni tashish va saqlashda kuchli rivojlanadi.

Kurash choralari. Kasallikka chidamli navlarni ishlab chiqarishga joriy qilish va almashlab ekishga to'g'ri rioya etish tizimning muxim bo'g'ini xisoblanadi. Antraknoz, fuzarioz va boshqa kasallik qo'zg'atuvchilarining tuproqda uzoq yashashini xisobga olgan holda qovoqdosh ekinlarni dastlabki joyiga eng kamida 4-5 yildan keyin ekishga ruxsat etiladi. Ekinni baland jo'yaklarning yon tomonlariga ekish tavsiya qilinadi. Dalalarda poliz ekinlari har 4-5 yilda qayta joylashtirish nazarda tutiladigan almashlab ekishni yo'lga qo'yish tavsiya qilinadi

Poliz ekinlarining hosildorligini oshirishning asosiy omillaridan biri – bu serhosil, turli kasallik, hasharotlar, ekstrimal sharoitga chidamli navlar urug'larini

tanlab ekish va ekinlarni yuqori texnologiya asosida parvarishlashdir.

Poliz ekinlaridan yuqori hosil olish uchun uyg'unlashgan kurash tizimida tashkiliy-xo'jalik, agrotexnik tadbirlar hamda kimyoviy va biologik kurash choralarini reja asosida o'z vaqtida qo'llash muhim ahamiyat kasb etadi.

Urug'lar faqatgina sog'lom maydonlar va zararlanmagan mevalardan olinadi. Urug'larning mog'orlashi, maysalarning yotib qolishi, fuzarioz ildiz chirishi, fuzarioz so'lish, antraknoz, bakterioz va boshqa kasalliklarga qarshi urug'lar pestitsidlar bilan dorilanadi. Namlangan (1 t urug'ga 10 l suv) urug'larni mazkur preparat bilan dorilash ekishdan 2-3 oy oldin o'tkaziladi.

Himoyalangan joylarda issiqxona ichini dezinfeksiyalash, tuproq, idishlar va asbob-anjomlarni zararsizlantirish, xosil yig'ib olingandan keyin o'simlik qoldiqlarini yo'qotish, karantin tadbirlariga amal qilish zaruriy tadbirlar xisoblanadi.

Issiqxona va ochiq dalada fuzarioz so'lish yoki ildiz chirishi qayd etilsa, mazkur o'simliklar tuprog'i bilan birgalikda kavlab olinadi va yo'qotiladi. Qo'shni sog'lom o'simliklar tuprog'i yumshatiladi, issiqxonaga esa qum sepiladi, bu tadbir qo'shimcha ildizlarning xosil bo'lishini ta'minlaydi.

Kasallik rezervatorlari va tashuvchilari bo'lgan begona o'tlar va xasharotlarga qarshi tizimli kurashiladi.

Hosilni yig'ib olishda mevalarning mexanik shikastlanishiga yo'l qo'ymaslik lozim. Bu ayniqsa tarvuz, qovun va bodring mevalarini tashish va saqlashda rivojlanuvchi antraknoz kasalligiga qarshi juda muximdir.

EKOLOGIT KOMPETENSIY: MAZMUNI, TUZILISHI, XUSUSIYATLARI

Annotatsiya: XX asrning ikkinchi yarmidan boshlab. Ekologik muammo o'z ko'lami va ahamiyatiga ko'ra butun sayyorani qamrab olgan global muammolardan biriga aylandi. Ushbu muammoning strategik yechimi sifatida BMTning qarori bilan tuzilgan Atrof-muhit va rivojlanish bo'yicha xalqaro komissiya barqaror rivojlanish konsepsiyasini taklif qildi. 1992 yilda Birlashgan Millatlar Tashkilotining Atrof-muhit va rivojlanish bo'yicha konferensiyasida (Rio-de-Janeyro "Kun tartibi 21") Barqaror rivojlanish kontsepsiyasini amalga oshirish bo'yicha harakatlar dasturi ko'pgina mamlakatlar rahbarlari tomonidan tasdiqlangan. 36-moddasi 21-kun tartibida ekologik ta'lim va ekologik kompetensiya dasturi amal sifatida belgilab qo'yildi va loyihasi ishlab chiqildi. Ushbu maqolada ekologik kompetensiyasini yoritish borasida ko'plab olimlar ishlari tahlil qilib o'rganildi va xulosa ishlab chiqildi.

Kalit so'zlar: Ekologik kompetensiya, ekologik ong, epistemologik yondashuv, motivatsion komponent, kognitiv komponent, hissiy-irodaviy komponent, qiymat-semantik komponent.

COMPETENCE OF ECOLOGIST: CONTENT, STRUCTURE, CHARACTERISTICS

Abstract. From the second half of the 20th century. The environmental problem has become one of the global problems, covering the entire planet due to its scale and importance. As a strategic solution to this problem, the International Commission on Environment and Development, created by decision of the UN, proposed the concept of sustainable development. In 1992, at the UN Conference on Environment and Development (Rio de Janeiro Agenda 21), a program of action to implement the concept of sustainable development was approved by the leaders of many countries. In the 21st agenda of Article 36, the environmental education and environmental competence program was defined as an action and a project was developed. This article analyzes the work of many scientists and draws conclusions regarding the scope of environmental competence.

Key words: Environmental competence, environmental consciousness, epistemological approach, motivational component, cognitive component, emotional-volitional component, value-semantic component.

Kirish. Ekologik kompetentsiya ko‘p o‘lchovli tushunchadir, uning mazmuni ko‘plab omillarga bog‘liq [1]. Ekologik kompetentsiyaning mohiyatini va shunga mos ravishda kompetentsiyani aniqlash uchun ushbu tushunchalarning ekologik psixologiya va pedagogika toifalari tizimidagi munosabatlarini tahlil qilish kerak [2].

Markaziy element berilgan tizimlari hisoblanadi tabiatga zarar keltirmaydigan shaxsiyat - shaxsiyat, egalik qilish ekosentrik turi ekologik ong va quyidagi xususiyatlar bilan tavsiflanadi: psixologik ishtirok V dunyo tabiat, sub'ektiv xarakter idrok tabiiy ob'ektlar, tabiiy dunyo bilan pragmatik bo‘lmagan o‘zaro ta'sir qilish istagi. Vakolatlilik doirasida yondashuv mumkin ishoning, Nima ahamiyatli xususiyat tabiatga zarar keltirmaydigan shaxslar hisoblanadi ekologik malaka, vakili ekologik kompetentsiyaning o‘ziga xos individual ko‘rinishidir.

Asosiy qism. Ekologik kompetentsiyaning mohiyatini aniqlash uchun ekologik tadbirlar (ekologik ong, ekologik fikrlash va ekologik qadriyatlar) asos toifa hisoblanadi: [3]. "Atrof-muhit faoliyati" tushunchasini hisobga olgan holda, uning talqin qilinishini ta'kidlash kerak [4]. Biroq, har qanday holatda ham, inson shaxsiyatining asosi uning dunyoga bo‘lgan munosabatlari yig‘indisi ekanligidan kelib chiqqan holda, ularning kompleks faoliyati orqali amalga oshiriladi. [5;6]. Ekologik faoliyatni aks ettiruvchi ijtimoiy faoliyatning tarkibiy qismi sifatida tabiat va jamiyat munosabatlarni ko‘rish mumkin. Ushbu faoliyat subyekti ham obyektu ham ularning o‘zaro ta'siri, ya'ni ekologik muhit Demak, ekologik faoliyat shartlari ushbu o‘zaro ta'sir usuli bilan bog‘liq insondir

Inson faoliyatining boshqa har qanday shakllari singari, ekologik faoliyat ham ong sifati (ekologik ong) belgilanadi. Bu esa insonga nafaqat o‘zgartiradigan yoki o‘zgartiradigan, balki ekologik muhitni yaratadigan sub'ektning xususiyatlarini olish imkonini beradi.

Ekologik ongni aniqlashning ikkita yondashuvi mavjud [7], ular ekologik savodxonlikdan farqli ravishda ekologik kompetentsiyaning mohiyatini tushunish uchun juda samarali bo‘lib tuyuladi. *Epistemologik yondashuv* – ekologik ongdagi fundamentallik tarbiyaviy munosabatni shakllantiruvchi yondashuv. Ekologik ongdagi gnoseologik tipni aks ettirish va tartibga solish funksiyalarini bajaradi, unga vositachilik qiladi va ayni vaqtda maqsadga erishtiruvchi faoliyatni belgilaydi.

Kompetentsiyaning ontologik mohiyati shundan iboratki, u inson va uni o‘rab turgan muhitni keng diapozonda idrok qilishdir.

Shunday qilib, ekologik kompetentsiyani rivojlantirish jarayonining harakatlantiruvchi kuchlari ekologik ziddiyatlarni hal qilishdir, masalan, insonning ekologik jihatdan qulayroq, xavfsiz sharoitlarda yashash istagi va

buning uchun sharoit va imkoniyatlarning yo'qligi. Ushbu turdagi qarama-qarshiliklar ekologik faoliyatda hal qilinadi, ularning ob'ekti, predmeti va mazmuni ta'lim mazmunining tarkibiy qismlari shaklida taqdim etilishi ekologik kompetentsiyani belgilaydi.

Aloqa ekologik kompetensiyalar bilan boshqalar toifalar ekologik psixologiya va pedagogika taxmin qiladi Keyingisi mantiq. Ekologik bilim, o'rgangan talabalar va jarayon ekologik ta'lim, kundalik hayotda shakllangan ekologik g'oyalar ogohlikka hissa qo'shadi ahamiyati ekologik muammolar, tushunish qiymatlar tabiat. Bilim va qadriyatlar ekologik ongning shakllanishiga ta'sir qiladi va o'zgaradi va e'tiqodlar, qaysi piyon asos ekologik dunyoqarash. O'z navbatida, dunyoqarash shaxsning ideallarini belgilaydi, munosabatini belgilaydi Kimga tabiat, qaysi paydo bo'ladi va ekologik tadbirlar — harakatlar, harakatlar, xatti-harakati, odatlar. Boshqalar so'zlar, ekologik xulq-atvor oqibatidir amalga oshirish mazmuni ekologik ong.

Ekologik kompetentsiyaning mazmuniga ko'ra bir qancha olimlar quyidagi turlarga ajratgan:

- motivatsion, kognitiv, faollik (L.E. Pistunova);
- mazmunli, faoliyatga asoslangan, shaxsiy (L.V. Panfilova);
- uslubiy, motivatsion-qiymatli, kognitiv-axborot, prognostik (A.I. Novik-Kachan);
- ekologik-kognitiv, ekologik-motivatsion, axloqiy-ijtimoiy, kasbiy-xulq-atvor (V.A. Danilenkova);
- Kognitiv, operatsion, ehtiyoj-motivatsion, qiymat-semantik (A.A. Makoedova);
- ilmiy blok, integrativ shaxs sifatleri bloki, malakalar bloki (S.N. Glazachev);
- motivatsion, intellektual, hissiy-irodaviy, predmetli-amaliy quyi tuzilmalar (F.S. Gaynullova).

Ong va faoliyatning psixologik birligi tamoyiliga asoslanib, kasbiy kompetensiyalar tarkibini o'rganishga asoslangan [5; 8], ekologik kompetentsiya tuzilmasini besh komponent shaklida taqdim etish tavsiya etiladi: qiymat-semantik, motivatsion, kognitiv, amaliy-faol, hissiy-irodali.

Ekologik kompetentsiya mazmunini tanlashda ikkita asosiy yondashuv mavjud. *Substantiv yondashuv* - kompetentsiyaning aniq o'quv predmeti, ushbu yondashuvga tegishli kompetentsiyani (bilim, qobiliyat, ko'nikma) shakllantirishga qo'shgan hissasini aniqlashtirish faoliyati[11]. Shubhasiz, ushbu protsedura kompetensiyaga asoslangan yondashuvning innovatsion imkoniyatlarini sezilarli darajada toraytiradi, chunki u faqat an'anaviy ta'lim mazmunini qayta qurish va bir oz integratsiyalashuviga olib keladi.

Albatta, ekologik kompetentsiya mazmunini loyihalash va amalga oshirishda umumta'lim davlat standarti talablarini hisobga olish zarur, bunda ayrim fanlar (tabiatshunoslik, biologiya, kimyo, fiziklar, geografiya, texnologiyalar, tarix, ijtimoiy fanlar)ning ekologik kompetentsiyalari individual

tarkibiy qismlarini shakllantirish zarurati ko'rsatilgan: maqsadlar, mazmun, kognitiv va amaliy faoliyat tajribasi [10].

Funksional-maqsadli yondashuv - kompetentsiyaga asoslangan paradigmaning mohiyatiga ko'proq mos keladi [1]. Bu yondashuvda kompetensiya mazmunini aniqlash tartibi, birinchi navbatda, insonning ijtimoiy ahamiyatini aniqlash (faolness)ni o'z ichiga oladi (nazariy va uslubiy asoslash, tarixiy-pedagogik tahlil, ekspertiza va tahlili). Shu asosda, kompetensiyalar tilida bashorat qilingan ta'lim natijalari aniqlanadi.

Funksional-maqsadli yondashuv doirasida umumta'lim davlat standarti talablarini, kasbiy ekologik faoliyatning o'ziga xos xususiyatlarini va ekologlar tomonidan o'tkazilgan ketaxizik so'rov natijalari [4] hisobga olgan holda, ekologik kompetentsiyaning mazmuni umumiy o'rta ta'lim darajasini quyidagicha ko'rsatish mumkin.

1. *Motivatsion komponent* ekologik faoliyatni amalga oshirishni rag'batlantiradigan manfaatlar va ehtiyojlarning kombinatsiyasini o'z ichiga oladi: xavfsizlik ehtiyojlari (barcha tirik mavjudotlar mavjudligi uchun qulay sharoitlar, o'z hayoti va sog'lig'ini saqlash); kognitiv ehtiyojlar (o'z faoliyatini tabiiy jarayonlarga uyg'un ravishda integratsiya qilish uchun tabiatni bilish); estetik ehtiyojlar (tabiat bilan ma'naviy aloqa, atrofdagi dunyoning go'zalligini ko'rish va amalga oshirish, uni saqlash va himoya qilish istagi) [9]; mafkuraviy ehtiyojlar (odamning dunyodagi o'rni va maqsadini, o'z hayotining ma'nosini tushunish va shunga muvofiq o'z faoliyatini qurish istagi); o'z-o'zini namoyon qilish va o'z ichki salohiyatini, shu jumladan ekologik faoliyat va ekologik ta'lim orqali amalga oshirish zarurati.

2. *Kognitiv komponent* atrof-muhit tizimini shakllantirishni o'z ichiga oladi bilim (tabiiy fanlar, mafkuraviy, me'yoriy, huquqiy, amaliy), indikativ asos bo'lib xizmat qiladigan fikrlash usullari ekologik tadbirlar (kognitiv muammolar, modellashtirish, haqiqatni amaliy o'zgartirish); ekologik toza texnika va turmush tarzini o'zlashtirish; tabiat-inson-ekologik muhitning qadriyat munosabatlarini shakllantirishga oid tadbirlarni amalga oshiruvchi kompetensiyaviy yondashuv.

Biologiya fanidan zamonaviy ekologiya geografiya, geologiya, kimyo, fizika, sotsiologiya, madaniyat nazariyasi, iqtisod, huquq elementlarini o'zlashtirgan holda yaxlit kompleks tizimga aylandi.

3. Ekologik kompetensiya tarkibidagi *amaliy-faoliyat komponenti* quyidagilarni nazarda tutadi: ekologik muammolarni aniqlash, hal qilish va oldini olish, atrof-muhit holatini yaxshilashda ekologik bilimlarni amalda qo'llash qobiliyati; ekologik faoliyatda amaliy tajribaning mavjudligi. Shu bilan birga, ekologik muammolarni hal qilishning oqilona tartiblarini shakllantirish (loyihalash, xavflarni tahlil qilish, qarorlar mezonlarini ishlab chiqish, faoliyatni o'z-o'zini baholash) katta ahamiyatga ega [8].

4. Insonning tabiat bilan ongli yoki ongsiz birligida, uyg'unlik hissidan quvonchni his qilishda ifodalangan tabiatga, ekologik muammolarga va ularni hal qilishga munosabatni belgilaydigan *hissiy-irodaviy komponent* alohida

ahamiyatga ega. Bu munosabatlar insonning xulq-atvori va faoliyatini tartibga soluvchi omil bo'lib xizmat qiladi. Ular shaxsning maqsadlari, ideallari va munosabatlarida topiladi va hissiyotlar bilan ranglanadi, shaxsning faoliyatga munosabatini shakllantiradi va uni amalga oshirish vositalarini tanlaydi [10].

5. *Qiymat-semantik komponent* qiymat yo'nalishlarining mavjudligini, tabiiy muhitni eng muhim qadriyat sifatida saqlash zarurligini anglashni belgilaydigan ekologik faoliyatning ma'nolarini tushunishni nazarda tutadi; ekologik faoliyatning ijtimoiy va shaxsiy ahamiyatini tushunish; xavfsizlik muhiti; ongli fuqarolik; atrof-muhitni muhofaza qilishda faol ishtirok etishga tayyor tadbirlar, ekologik voqealar; mas'uliyat orqasida o'zining ekologik faoliyati natijalari, transformatsiyalar va atrof-muhitni muhofaza qilish sohasida qabul qilingan qarorlar.

Shaxsning "filtrlari" u tomonidan o'ziga xos baholash va kontseptual toifalarga, munosabat va xulq-atvor dasturlariga aylanadi. Faqat inson tomonidan e'tirof etilgan qadriyatlar (tabiat qiymati, atrof-muhit faoliyati) yo'nalishlari va ma'nolariga aylanadi, ular orqali atrof-muhit faoliyatining tashqi xususiyatlari va talablari vakolatga aylanadi [11].

Xulosa. Shunday qilib, taklif etilayotgan ekologik kompetentsiya modeli ekologik ta'limni bilimlarni shakllantirishga emas, balki, birinchi navbatda, insonni o'rab turgan atrof-muhit holatini yaxshilash, ekologik muammolarni aniqlash va hal qilishda yordam berish, bu jarayonda yangi maqsadlar, baholar, motivlar, munosabatlar, ma'nolar shaklida ruhiy yangi shakllanishlar paydo bo'ladi.

**DEVELOPMENT OF SMALL BUSINESS AND ENTREPRENEURSHIP
AS A RESULT OF TRAINING QUALIFIED PERSONNEL IN THE
PROFESSIONAL EDUCATION SYSTEM**

Abstract. This article talks about the importance of professional education in the development of small business and private entrepreneurship and its role in life.

Key words: Action strategy, modern innovations, vocational schools, colleges, technical schools, business, private entrepreneur.

Bugungi kunda mehnat bozoridagi ehtiyojlar, masalan, kichik biznes va xususiy tadbirkorlik subyektlari uchun raqobatbardosh kadrlarni professional ta’lim bosqichlarini joriy qilish orqali tayyorlash hamda turli yoshdagi kishilarning “Umri davomida ta’lim olish” usuli yordamida ta’lim olishga bo’lgan talablarini qondirish professional ta’limning maqsadi hisoblanadi. Prezidentimiz Sh.M. Mirziyoyevning “2019-2021 yillarda O‘zbekiston Respublikasini innovatsion rivojlantirish strategiyasini tasdiqlash to’g’risida”gi Farmonida “Jamiyat va davlat hayotining barcha sohalari shiddat bilan rivojlanayotgani islohotlarni mamlakatimizning jahon sivilizatsiyasi yetakchilari qatoriga kirish yo’lida tez va sifatli ilgariylashini ta’minlaydigan zamonaviy innovatsion g’oyalar, ishlanmalar va texnologiyalarga asoslangan holda amalga oshirishni taqozo etadi”⁶⁵- deb alohida ta’kidlangan. Harakatlar strategiyasida mehnat bozori mutanosibligini va infratuzilmasi rivojlanishini ta’minlash, mehnatga layoqatli

⁶⁵ <https://lex.uz/docs/-3913188>

aholining mehnat va tadbirkorlik faolligini to'liq amalga oshirish uchun qulay shart-sharoitlar yaratish, ishchi kuchi sifatini yaxshilash, ishga muhtoj shaxslarni kasbga tayyorlash tizimini kengaytirish vazifalari belgilangan⁶⁶. Bu borada yurtimizda amalga oshirilayotgan keng miqiyosdagi islohotlar Respublika iqtisodiyotida bir muncha sezilarli rivojlanish ko'zga tashlandi, rivojlanish jihatdan jiddiy tarkibiy o'zgarishlar amalga oshdi. Iqtisodiyotning barcha soxalariga zamonaviy innovatsion texnologiyalar shiddat odimlamoqda. Sanoatda, qishloq xo'jaligida, transport va xizmat ko'rsatish sohalarida yuqori qiymat, yuqori hosildorlik, unumdorlik va tejamkorlikni ta'minlovchi zamonaviy texnologiyalar, ishlab chiqarish sohasida juda keng ko'lamdagi innovatsiyalar tadbiriq qilinmoqda. Ushbu jarayonlarga milliardlab AQSh dollari miqdorida xorijiy investitsiyalar jalb qilinmoqda va minglab yangi ish o'rinlari yaratilmoqda. Birgina 2019 yilning o'zida barcha moliyalashtirish manbalari hisobidan jami 220,7 trillion so'mlik investitsiyalar o'zlashtirildi, shundan asosiy kapitalga investitsiyalar hajmi 189,9 trillion so'm ekanligi va bu 2018 yilgi ko'rsatkichlariga nisbatan 1,3 barobar o'sganligi yaqin kelajakda mazkur loyihalar yuqori malakali professional kadrlarning yangi avlodi yetishib chiqishi zarurligini belgilab bermoqda⁶⁷. Shu bilan birga, xalqaro mehnat bozori talablari, integratsion jarayonlarning jadallashuvi, raqamlashtirish, sanoatdagi texnologik inqiloblar davrida zamon talablariga mos bilim va ko'nikmalarga ega bo'lgan raqobatbardosh mutaxassislarini tayyorlashni, kasb-hunar ta'lim sohasida yangi tizimni - xalqaro andozalarga mos professional ta'lim tizimini talab qildi. Natijada kasb-hunar ta'limi tizimida ham davlat siyosati tubdan o'zgardi. Prezidentimiz tomonidan sohada tub islohotlarni amalga oshirish va zamonaviy professional ta'lim tizimini yaratishning maqsad va ustuvor vazifalari, bir so'z bilan aytganda, tizimning yangi yo'nalishi belgilab berildi. Ushbu yo'nalish mohiyati yangi sifat va formatda inson resurlarini yanada rivojlantirish, yoshlarda ichki va tashqi mehnat bozori talab qilayotgan amaliy kvalifikatsiyalarni shakllantirish, ularning Ona Vatanga bo'lgan sevgisini, xalqiga sadoqatini yanada rivojlantirishdan iboratdir. Shu tariqa tizim oldiga quyidagi vazifalar qo'yildi:

- hududlar va sohalar kesimida iqtisodiy taraqqiyotga munosib hissa qo'sha oladigan o'rta bo'g'in kadrlarini tayyorlash;

- yoshlarni malakali mehnat orqali o'z hayot farovonligini ta'minlashga o'rgatish;

- o'z mehnat faoliyatiga innovatsion va kreativ yondashish, yaratuvchanlik, intellektual, madaniy, ma'naviy potensialni rivojlantirish kabi kompetensiyalarni shakllantirish metodologiyasini yaratish.

Ana shu missiya va maqsadlarni ko'zlab, Prezidentimizning 2019-yil 6-sentyabrda "Professional ta'lim tizimini yanada takomillashtirishga doir

⁶⁶ <https://review.uz/uz/post/2016-2021-yillarda-mehnat-bozorida-amalga-oshirilgan-ishlar-va-erishilgan-natijalar-sharhi>

⁶⁷ [Review.uz/uz](https://review.uz/uz)

qo'shimcha chora-tadbirlar to'g'risida"gi Farmoni⁶⁸ qabul qilindi. Mazkur Farmon O'zbekiston tarixida yangi professional ta'lim tizimini tashkil etishga asos bo'lgan bo'lsa, 2020-yil 24-yanvarda davlatimiz rahbari o'z Murojaatnomasida "Joriy o'quv yilidan boshlab, mutlaqo yangi professional ta'lim tizimi yo'lga qo'yilib, kasb-hunar maktablari, kollejlari va texnikumlar tashkil etiladi" deb mazkur tizimning ahamiyatini yana bir bor alohida ta'kidladi⁶⁹. Bunda iqtisodiyotning barcha tarmoqlari barobarida tadbirkorlik, kichik biznes, oilaviy biznes, tomorqa biznesi, qurilish, xizmat ko'rsatish, chorvachilik, parrandachilik, asalarichilik, baliqchilik kabi tez sur'atlarda ravnaq topayotgan sohalar uchun ishchi kasblar bo'yicha malakali kadrlar tayyorlanishi ko'zda tutildi. O'z navbatida, yangi tizimning barcha huquqiy-meyoriy asoslari yaratildi. Jumladan, yaqinda "O'zbekiston Respublikasida uzluksiz boshlang'ich, o'rta va o'rta maxsus professional ta'lim tizimini tartibga soluvchi normativ-huquqiy hujjatlarni tasdiqlash to'g'risida"gi hukumat qarori e'lon qilindi⁷⁰. Qaror bilan uzluksiz boshlang'ich, o'rta va o'rta maxsus professional ta'lim to'g'risidagi nizom⁷¹, Boshlang'ich professional ta'lim bosqichida kadrlar tayyorlaydigan kasb-hunar maktablarining namunaviy ustavi⁷², O'rta professional ta'lim bosqichida kadrlar tayyorlaydigan kollejlarning namunaviy ustavi⁷³ hamda O'rta maxsus professional ta'lim bosqichida kadrlar tayyorlaydigan texnikumlarning namunaviy ustavi⁷⁴ tasdiqlandi. Ko'rsatib o'tilgan hujjatlar asosida o'quv jarayoni xalqaro standartlarga muvofiqlashtirilgan ta'lim dasturlari asosida tashkil etiladigan 3 ta toifadagi ta'lim muassasalari faoliyati yo'lga qo'yiladi. Joriy etilayotgan yangi tizim xalqaro andozalarga to'la mos bo'lishi uchun 14 ta xalqaro tashkilot bilan hamkorlikda rivojlangan xorijiy mamlakatlarning ilg'or tajribalari o'rganildi. Germaniya, Shveysariya, Koreya, Turkiya va Xitoy hamda YuNESKO, Britaniya Kengashi, Germaniya xalqaro hamkorlik jamiyati, Osiyo taraqqiyot banki, Yevropa ta'lim fondi, Turkiya hamkorlik agentligi, Xitoyning Universitetlar uyushmasi kabi qator xorijiy davlat va tashkilotlardan 200dan ortiq nufuzli xalqaro ekspertlar jalb qilindi. Yangi professional ta'lim muassasalarida ta'lim mazmuni, soni va sifati, ta'lim dasturlari, texnologiyalarining isloh qilinishi oqibatida bir qancha o'zgarishlar amalga oshirildi. Birinchidan, 2020/2021-o.,quv yilida professional ta'lim tizimida respublika bo'yicha jami 725 ta ta'lim muassasasi, ya'ni 339 ta kasb-hunar maktabi, 200 ta kollej va 186 ta texnikum faoliyat ko'rsatishi belgilandi. 1-toifa - kasb-hunar maktablarida ta'limning xalqaro standart tasniflagichining 3-darajasiga mos keluvchi 2 yillik ta'lim dasturlari asosida 9-sinf bitiruvchilari boshlang'ich professional ta'lim oladi.

⁶⁸ <https://lex.uz/docs/-4500926>

⁶⁹ 2020-yil 24-yanvar kuni Prezident Shavkat Mirziyoyev O'zbekiston Respublikasi Oliy Majlisiga joriy yil va kelgusidagi mamlakatimiz taraqqiyotining eng ustuvor vazifalari to'g'risida Murojaatnomasi

⁷⁰ <https://lex.uz/docs/-4945840>

⁷¹ <https://lex.uz/docs/-4945840>

⁷² <https://lex.uz/docs/-4945840>

⁷³ <https://lex.uz/docs/-4945840>

⁷⁴ <https://lex.uz/docs/-4945840>

Kasb-hunar maktablarida ustuvor yo'nalish sifatida oilaviy biznes, tomorqa biznesi, qurilish, xizmat ko'rsatish, chorvachilik, parrandachilik, asalarichilik, baliqchilik kabi iqtisodiyotimizda muhim o'rin egallagan 200 dan ortiq ishchi kasblar bo'yicha kadrlar yetishtirildi. Kambag'allikka qarshi kurash borasida, avvalo, ijtimoiy himoyaga muxtoj oilalar farzandlarida tadbirkorlikka va biznesga oid bilim, malaka, ko'nikmalar rivojlantiriladi. 2-toifa – kollejlarda ta'limning xalqaro standart tasniflagichining 4-darajasiga mos keluvchi, kasblarning murakkablik darajasidan kelib chiqib, 2 yilgacha bo'lgan muddatlar davomida o'qitishga mo'ljallangan ta'lim dasturlari asosida o'rta professional ta'lim mutaxassislari tayyorlanadi. Vazirliklar, idoralar va tashkilotlar tasarrufida faoliyat ko'rsatadigan va shu sohadagi aniq ish o'rnini uchun mutaxassislar tayyorlaydigan ushbu kollejlarga maktablarning 11-sinf bitiruvchilari qabul qilinadi. Kollejlarda Germaniya tajribasida yaxshi samara bergan "dual" ta'lim prinsiplari joriy etiladi: o'quvchilar haftaning ma'lum kunlarida kollejda nazariy bilim oladi, boshqa kunlari korxonaning o'zida biriktirilgan usta rahbarligida to'g'ridan-to'g'ri kelajakda ishlaydigan ish o'rnida amaliyot o'taydi. 3-toifa – texnikumlarda ta'limning xalqaro standart tasniflagichining 5-darajasiga mos keluvchi, bakalavriat ta'lim yo'nalishlari bilan integratsiyalashgan, kunduzgi, kechki va sirtqi ta'lim shakllarida kamida 2 yil muddatga mo'ljallangan ta'lim dasturlari asosida 11-sinfni tugatgan yoshlar o'qitiladi. 2 yillik tahsildan so'ng bitiruvchilar oliy ta'lim muassasasida o'qigan kasbi bo'yicha suhbat asosida o'qishga qabul qilinishi mumkin. Bu tizim oliy ma'lumot olish istagida yurgan ko'plab maktab bitiruvchilarini oliy ta'lim bilan qamrab olish darajasini yaqin yillarda 50-60 foizga yetkazish uchun xizmat qiladi.

Professional ta'limning yangi tarmog'ida faoliyat olib borayotgan direktorlar, direktor o'rinbosarlari, o'qituvchi pedagoglar, ishlab chiqarish ustalarini saralash, tanlash, tayinlash, qayta tayyorlash va attestatsiyadan o'tkazish, ularning maqomini belgilash va mehnatini rag'batlantirishning yangi tartiblari ishlab chiqiladi. Professional ta'lim jarayoniga keyingi yillarda milliy iqtisodiyotni diversifikatsiya qilishda Respublikada ishga tushirilgan innovatsion ishlab chiqarish quvvatlari, sanoat, ishlab chiqarish, agrar sohalaridagi yirik korxonalar, innovatsion biznes va tadbirkorlik sub'yektlari, AKT, turizm va xizmat ko'rsatish tarmoqlarida zamonaviy texnologik tarmoqlarini boshqarishda ko'p yillik tajribaga ega bo'lgan mutaxassislar, ish yurituvchilar, injener-texnologlar, agronomlar va masterlar jalb qilindi. Shu vazifalarning bosqichma-bosqich amalga bajarilishi esa iqtisodiyotni yanada taraqqiy ettirish, kambag'allikni qisqartirish, yoshlar va xotin-qizlarning hayotda muhim o'rin topishi, xalqimiz turmushining yaxshi tomonga o'zgartirish masalalarining ijobiy hal etilishini ta'minlaydi.

MIKRONEYRDA PAXTA TOLASINING PISHGANLIGINI VA INGICHKALIGINI ANIQLASH USULLARI

Annotatsiya: ushbu maqolada paxta tolasining pishganligini va ingichkaligini aniqlash laboratoriya asbobi - mikroneyr bilan ishlash hamda olingan ko'rsatkichlar asosida paxta tolasining pishganligi va ingichkaligi natijalari taxlil qilingan.

Kalit so'zlari: mikroneyr, paxta tolasini, porshenli stabilizatsiya, kompressor, ishchi kamera, kalibrovka, plunjer, elektron tarozi, mikroneyr, chiziqli zichligi.

*Rakhmanov F.A.
teacher

METHODS OF DETERMINING COTTON FIBER RIPENESS AND THINNESS IN MICROWAVE

Abstract: this article analyzes the results of cotton fiber ripeness and thinness based on working with a laboratory instrument for determining the ripeness and thinness of cotton fiber - micronaire.

Key words: microwire, cotton fiber, piston stabilization, compressor, working chamber, calibration, plunger, electronic scale, microwire, linear density.

Mikroneyr - bu paxta tolasining pishganligini va ingichkaligini aniqlash laboratoriya asbobidir.

Mikroneyrning 2 xili mavjud: statsionar va ko'chirma. Ko'chirma mikroneyrlar klassterlar bilan faqat paxta zavodlarida ishlatiladi. Tarozili va tarozisiz ko'chirma mikroneyrlar mavjud. Mikroneyr o'z ichiga: elektr kompressor, porshenli havo kamerasi, tarozi, mikroneyr ko'rsatkich shkalasi, ishchi kamera, 8 gr tosh va kalibr shaybasi (6,5-0 mic ko'rsatkichi bilan)ni oladi. Ish uchun kalibr tolasini kerak.

Elektr kompressor- mikroneyr tizimiga havo berish uchun xizmat qiladi. Porshenli stabilizatsiya havo kamerasi - mikroneyr tizimida bosimni teng taqsimlash uchun kerak. Tarozisi - ma'lum miqdorda paxta tolasini olchash uchun (8 gr) xizmat qiladi.

Mikroneyr ko'rsatkich shkalasi - mikroneyr ko'rsatkichini aniqlash uchun xizmat qiladi, mikroneyr ko'rsatkichi bosim shkalasi dan va ko'rsatish

strelkasidan iborat. Ishchi kamerasi - temirli stakan va richag orqali harakatlanuvchi plunjerdan iborat 8 kg tosh - tarozining kalibrovkasi uchun xizmat qiladi.

Kalibrovkali shayba - yuqori va pastki mikroneyr ko'rsatkichi-ning (6,5-0 mic) kalibrovkasi uchun xizmat qiladi, u temir metall bochkasi va klapandan iborat. Kalibrovkali tola - bular mikroneyrda o'z ko'rsatkichiga xos bo'lib, ular AQSH ning qishloq xo'jaligi vazirligi etalon laboratoriyasida standartlar bo'yicha yaratilgandir.

Mikroneyrning ishlashi.

Ishni boshlashdan oldin - elektr kompressor elektr tarmoqqa (220 volt) ulanadi. Kompressordan havo rezinali shlangdan havo kamerasiga ko'tariladi, so'ng porshen kameraning eng yuqori nuqtasiga kotariladi (1- rasm).

Mikroneyrni ishga tayyorlash.

Birinchi navbatda tarozining kalibrovkasi qilinadi. Buning uchun mikroneyr ko'rsatkich shkalasida romb shaklida bolinma bor. Taroziga tosh (8 gr) qo'yiladi, ammo ko'rsatkichning strelkasi rombning o'rtasida turishi kerak, buni tarozi va havo kamerasining orasidagi uzatma vint bilan to'g'rilanadi. Tarozining kalibrovkasidan so'ng yuqori va pastki mikroneyr ko'rsatkichining kalibrovkasiga o'tiladi. Ishchi kamerasiga kalibrovkali shaybani joylashtiriladi, plunjemi ko'tarib (richagni tushirib), ishchi kameraning tepasida joylashgan o'ng vint bilan mikroneyming yuqori nuqtasi kalibrlanadi.

1-rasm. Mikroneyr chizmasi:

1 - tarozi; 2 - mikroprotssessor; 3 - kamera; 4 - richag; 5- shkala;
6 - strelka; 7- vakuum-klapan.

So'ng klapan yordamida ishchi kamerasidan havo chiqariladi va mikroneyming nol ko'rsatkichi kalibrlanadi. Bundan keyin plunjerni tushirib (richagni ko'tarib), kalibrovkali shaybani chiqariladi.

Mikroneyrni aniq kalibrovka qilish uchun kalibrovkali toladan foydalaniladi. Kalibrovkali tola paxtaning navi bo'yicha aniq bolinmaydi, ammo mikroneyrni past ko'rsatkichi bilan kalibrovkali tola paxtaning past navlari uchun, yuqori ko'rsatkichi bilan kalibrovkali tola paxtaning yuqori navlari uchun ishlatiladi.

Mikroneyrning ko'rsatkichlarida kalibrovkali tola 2,1 mic.dan 6,0 mic.gacha boiadi. Kalibrovka uchun mikroneyr tarozida yoki elektron tarozida, 8

gr kalibrovkali tolani olchab va keyin ishchi kamerasiga joylashtiriladi, so'ng ishchi kamerasining qopqogi yopilib va plunjer ishlash holatiga ko'tariladi (richagni tushirib).

Paxta tolasining mikroneyrini aniqlash uchun o'rtacha namuna olinadi, tarozida 8 gramm paxta tolasi tortilib ishchi kamerasiga solinadi. Ishchi kamerasining qopqogi yopilib, plunjerni ishchi holatiga keltiriladi va mikroneyr ko'rsatkichi shkalasi bo'yicha yoziladi. So'ng plunjer tushiriladi, ishchi kamerasining qopqogi ochiladi va paxta tolasining namunasi olinadi.

Paxta tolasining partiyasidan 10% namunasi mikroneyr ko'rsatkichi yoziladi. Sinash usullarini nazorat qilish uchun maxsus tartibda tasdiqlangan paxta tolasining standart (etalon) namunalari qolaniladi.

Namunalarni sinashdan avval iqlim sharoitida, harakatdagi havo oqimi ostida kamida 4 soat yoki harakatsiz havo oqimi ostida 12 soat davomida yoki namuna vaznining o'zgarishi 2 soat davomida 0,25 foizdan oshmagan hollarda undan kam vaqt davomida ushlab turiladi.

Mikroneyr ko'rsatkichini aniqlash uchun LPS-4 qurilmasi qolanilganda sinash uchun namuna massasi $9,0 \pm 0,02$ g. Sinash uchun namuna kichik-kichik qismlarda qurilmaning kamerasiga tolalarning to'p- to'p bolib yigilib qolishiga yoi qo'yilmaydigan qilib joylashtiriladi. Zichlashgan va yigilib qolgan tolalar albatta qo'1 bilan titiladi. Namuna orqali qurilmaning konstruksiyasiga bogliq boigan malum bosim (yoki oqim) ostida havo oqimi yuboriladi. Asbob shkalasi bo'yicha hisob ± 1 foiz aniqlikda bajariladi.

Mikroneyr va LPS-4 asboblarda mikroneyr ko'rsatkichini aniqlash uchun ishlatilayotgan namuna sinash oldidan paxta analizatoridan o'tkazilmaydi.

Olchashlarning natijalarini hisoblash.

Mikroneyr ko'rsatkichini havo o'tkazuvchanlik bo'yicha aniqlash usuli. Mikroneyr kattaligida graduurovka qilingan shkalali asboblarda sinaladigan namuna uchun o'rtacha qiymat dastlabki ikkinchi o'nlik belgisigacha aniqlikda hisoblanadi.

Natija 0,2 dan oshib ketsa sinashlar qaytariladi. Agar shunda ham qiymatlar meyorlardan oshsa, hamma sinalgan namunalar bo'yicha o'rtacha arifmetik qiymati hisoblanadi.

Boshqa kattaliklarda graduurovka qilingan shkalali asboblarda nisbatlar yoki jadvallar yordamida ko'rsatkichlar to'gridan-to'gri mikroneyr kattaligiga aylantiriladi.

PIVOLARNING SIFAT EKSPERTIZASI. PIVOLARNING SIFATINI ORGANOLEPTIK KO'RSATKICHLARI ASOSIDA BAHOLASH

Annotatsiya: ushbu maqolada pivoning organoleptik ko'rsatkichlari bo'lgan tiniqligi, ta'mi, xmel achchiqligi, aromati va ko'piklanishi xususiyatlarini e'tiborga olgan holda ushbu ko'rsatkichlar asosida pivoning iste'mol xossalarini baholashning asosiy mezonlari tahlil qiingan.

Kalit so'zlari: davlatlararo standart, organoleptik ko'rsatkichlar, achchiqlik, harorat, sifat, maxsus solod, achchiq modda, ta'm.

*Rakhmanov F.A.

QUALITY EXPERTISE OF BEERS. EVALUATION OF THE QUALITY OF BEERS BASED ON ORGANOLEPTIC INDICATORS

Abstract: this article analyzes the main criteria for evaluating the consumption properties of beer based on these parameters, taking into account the organoleptic indicators of beer: clarity, taste, hop bitterness, aroma and foaming.

Key words: international standard, organoleptic indicators, bitterness, temperature, quality, special malt, bitter substance, taste.

Pivolarning sifati GOST 31711-2012 davlatlararo standarti talablariga javob berishi kerak. Mazkur standart standartlashtirish, metrologiya va sertifikatlashtirish bo'yoicha davlatlararo kengashi tomonidan 2012 yil 15 noyabrdagi 42-sonli bayonnomasi bilan kuchga kiritilgan.

Mazkur standart bo'yicha pivo oqish va qo'ng'ir pivo turlariga bo'linadi. Ishlov berish usuli bo'yicha pasterizatsiya qilinmagan, pasterizatsiya qilingan, filtrlangan, filtrlanmagan turlarga bo'linadi.

Piva suslasida (atalasida) dastlabki quruq moddaning massa hissasiga qarab pivolar quyidagi guruhlarga bo'linadi: 8,10,11,12,13,14,15,16,17,18,20 foizli tiniq pivolar va 12,13,14,15,16,17,18,20,21 foizli qora qo'ng'ir rangli pivolar.

Pivolarning sifatini baholashda uning organoleptik ko'rsatkichlari juda muhim hisoblanadi. Pivoning organoleptik ko'rsatkichlariga quyidagilar kiradi: tiniqligi, ta'mi, xmel achchiqligi, aromati va ko'piklanishi. Bu ko'rsatkichlar pivoning har bir turi uchun individual hisoblanadi va iste'mol xossalarini baholashda asosiy mezon hisoblanadi. Pivoning hamma organoleptik ko'rsatkichlari degustatsiya jarayonida aniqlanadi. Hozirgi kunda iste'molchi

pivoning rangiga va tiniqligiga qarab pivoga baho berishini hisobga olib, ana shu ko'rsatkichlariga e'tibor qaratiladi. Pivolarning rangi –har bir turi uchun farq qiluvchi belgi hisoblanadi. Tiniq pivolar toza, tiniq, tillasimon-qo'ng'ir rangga ega bo'lishi kerak.

Qora-qo'ng'ir pivolarga rangi bo'yicha tiniq pivolar singari qat'iy talab qo'yilmaydi.

Butilkalarga quyilgan pivolarning rangi deyarlik o'zgarmaydi. Butilkalarga quyilgan tiniq pivolarga quyosh nuri to'g'ridan-to'g'ri tushib tursa ularning rangi o'zgaradi va turli xil kimyoviy o'zgarishlar ro'y berib, natijada oziqaviy qiymati va iste'mol xossalari pasayadi.

Tiniq pivolar, o'ziga xos rangga ega bo'lish bilan bir qatorda tiniq bo'lishi kerak. Uning tiniqligini pivolarni maxsus bokalga quyib, taralib tushayotgan quyosh nuriga qarab aniqlanadi. "Pivoni ko'z bilan ichadilar" degan fikrlar mavjud, shu sababli pivoning tiniqligi iste'molchi yuqori baholaydigan eng muhim ko'rsatkichlardan biri hisoblanadi. Lekin shuni ham qayd etish lozimki pivoning tiniqligi qancha yuqori bo'lsa, unda shuncha darajada ta'mini va ko'pik hosil qilish xususiyatini ta'minlaydigan kolloid moddalar shuncha darajada kam bo'ladi.

Pivoning ta'mi, aromati, xmelga xos yoqimli achchiqligi uni biroz xo'plab ichib aniqlanadi. Bu yerda birinchi navbatta uning ta'mi, aromati, xmelga xos yoqimli achchiq ta'miga e'tibor beriladi va ikkinchidan pivoda qanday ta'mlar va hidlar mavjudligini bilish ham juda muhim hisoblanadi. Pivolarning ta'mi va hidi toza, to'liq, garmonik, yaqqol seziluvchan xmelga xos achchiqlik va aromatga ega, begona ta'mlarsiz va hidlarsiz bo'lishi kerak.

Pivolarning ta'mining sezilish darajasiga harorat ham ma'lum darajada ta'sir ko'rsatadi. Haroratning oshishi bilan pivoning kolloid sistemasining xossalari ham o'zgaradi, bu esa o'z navbatida ta'm ko'rsatkichlariga ta'sir ko'rsatadi. Agar degustatsiya qilinayotgan pivoning harorati juda past bo'lsa ta'mi oddiy, kam seziluvchan bo'ladi, agar juda yuqori bo'lsa yoqimsiz seziladi. Shu sababli iste'molchiga berilayotgan pivoning harorati 8-12⁰S bo'lishi maqsadga muvofiq hisoblanadi.

Qora-qo'ng'ir rangli pivolarda esa ishlab chiqarish uchun foydalanilgan maxsus solodlarning(qora, karamelizatsiyalangan) ta'mi yaqqol sezilib turishi kerak. Bunday pivolarning ta'm ko'rsatkichlari xom ashyo tarkibi va texnologik jarayonlarga bog'liq bo'ladi. Begona ta'mlar, yoqimsiz achchiq ta'm, yuqori nordonlik va SO₂ gazi bilan yetarli darajada to'yinmaganlik pivolarning ta'm ko'rsatkichlarini keskin darajada pasaytiradi.

Tiniq pivo navlarida mayin xmel achchiqligi sezilib turadi, lekin juda o'tkir, yoqimsiz achchiq ta'm bo'lmasligi kerak. Bu ta'm tiniq pivolarni ichgandan keyin darhol tarqalib ketishi kerak.

Qo'ng'ir-qora pivolar tiniq pivolarga qaraganda shirinroq. Ichgandan keyin tilda qora solodning ta'mi qoladi, xmelning achchiqroq ta'mi esa deyarlik sezilmaydi.

Bunda eng muhim ta'm komponenti bo'lib etil spirti hisoblanadi, u ko'pchilik ta'm va aromat beruvchi moddalarning ta'sirini ko'chaytiradi. Bunday pivolarning ta'mi va hididagi farq yuqori spirtlar, xmel efir moylari, achishda hosil bo'lgan boshqa moddalarning borligi bilan tushuntiriladi.

Pivoning achchiqroq ta'mi xmelning achchiq va oshlovchi moddalariga, arpa va solod po'stlog'i achchiq moddasiga, achitqilarning ajratib chiqarayotgan moddalariga bog'liq bo'ladi.

Yaxshi pivolar bir butun birlashgan garmonik ta'm va hidga ega bo'lishi kerak.

Pivolarning sifatini organoleptik baholashning haqiqiylikini oshirish uchun 25-balli sistemadan ham foydalaniladi. Bunda pivoning organoleptik ko'rsatkichlari bo'yicha ballar quyidagicha taqsimlanadi.

Tiniqligi - 3 ball

Rangi - 3 ball

Ta'mi - 5 ball

Xmel achchiqligi - 5 ball

Hidi - 4 ball

Ko'pirishi - 5 ball

Jami 25 ball

Agar pivo degustatsiya natijasi bo'yicha 22-25 ball olsa a'lo, 19-21 ball olsa yaxshi, 13-18 ball olsa esa qoniqarli sifatga ega deb topiladi. Agar pivo 12 va undan kam ball bilan baholansa, bunday pivolar qoniqarsiz sifatga ega bo'lgan pivolar deb baholanadi va sotishga ruxsat etilmaydi.

SEVERAL PREVALENT ESSENTIAL OIL PLANTS FOUND IN THE KYRTASHTAU REGION, ALONG WITH THEIR DISTINCTIVE BIOMORPHOLOGICAL CHARACTERISTICS

*Abstract. This article reviews several key essential oil plants commonly found in the territory of Kyrkashtau, focusing on their unique biomorphological features. Through field surveys and detailed morphological analyses, the research identifies and describes the botanical traits of these plants. The species examined include *Torilis arvensis*, *Mentha longifolia* var. *asiatica*, *Prangos pabularia*, *Marrubium anisodon*, and *Artemisia rutifolia*. Understanding the biomorphological characteristics of these plants is crucial for their accurate identification, conservation, and sustainable utilization in various industries. This study contributes valuable insights into the botanical richness of Kyrkashtau and underscores the significance of these essential oil plants for both ecological conservation and economic development.*

Key words: essential oil plants, torilis arvensis, mentha longifolia, prangos pabularia, marrubium anisodon, artemisia rutifolia.

Kyrkashtau, a region known for its diverse and unique flora, encompasses a variety of essential oil plants that contribute significantly to the local ecosystem and various industries. Essential oils extracted from these plants are valued for their aromatic properties and have applications in cosmetics, pharmaceuticals, and traditional medicine. This study focuses on elucidating the biomorphological features of key essential oil plants found in Kyrkashtau (Imom ota), Uzbekistan, providing insights into their botanical characteristics and ecological roles. Understanding these features is crucial for plant identification, conservation efforts, and sustainable utilization of natural resources. The selected essential oil plants, including *Torilis arvensis*, *Mentha longifolia* var. *asiatica*, *Prangos pabularia*, *Marrubium anisodon*, and *Artemisia rutifolia*, represent a cross-section of the region's botanical richness. Each species exhibits unique traits that make them distinct contributors to the essential oil industry and local biodiversity. Through field surveys and detailed morphological analyses, this research aims to document and describe the key biomorphological characteristics of these plants. This knowledge not only enhances our understanding of the flora of Kyrkashtau but also underscores the importance of sustainable resource management and conservation practices. By exploring the biomorphology of essential oil plants in Kyrkashtau, this study seeks to contribute valuable insights to botanical research, conservation efforts, and economic development initiatives centered around

natural resources. The findings of this study will provide a foundation for further exploration into the chemical composition and potential applications of essential oils derived from these plants. In summary, the study of essential oil plants in Kyratashtau offers a window into the region's botanical diversity and highlights the ecological and economic significance of these plants. This research is pivotal for promoting sustainable practices that support both biodiversity conservation and local livelihoods.

***Torilis arvensis* (Huds.) Link**

Biomorphological Features: *Torilis arvensis*, commonly known as spreading hedge-parsley, is a herbaceous annual plant characterized by its slender, branching stems and finely divided leaves. The leaves are pinnate with narrow, toothed leaflets. Small white flowers form in umbels at the tips of the branches, giving way to fruits with hooked spines. The native range of this species is Europe to Central Asia and Pakistan, Macaronesia, N. Africa to Arabian Peninsula. It is an annual and grows primarily in the temperate biome. [1]

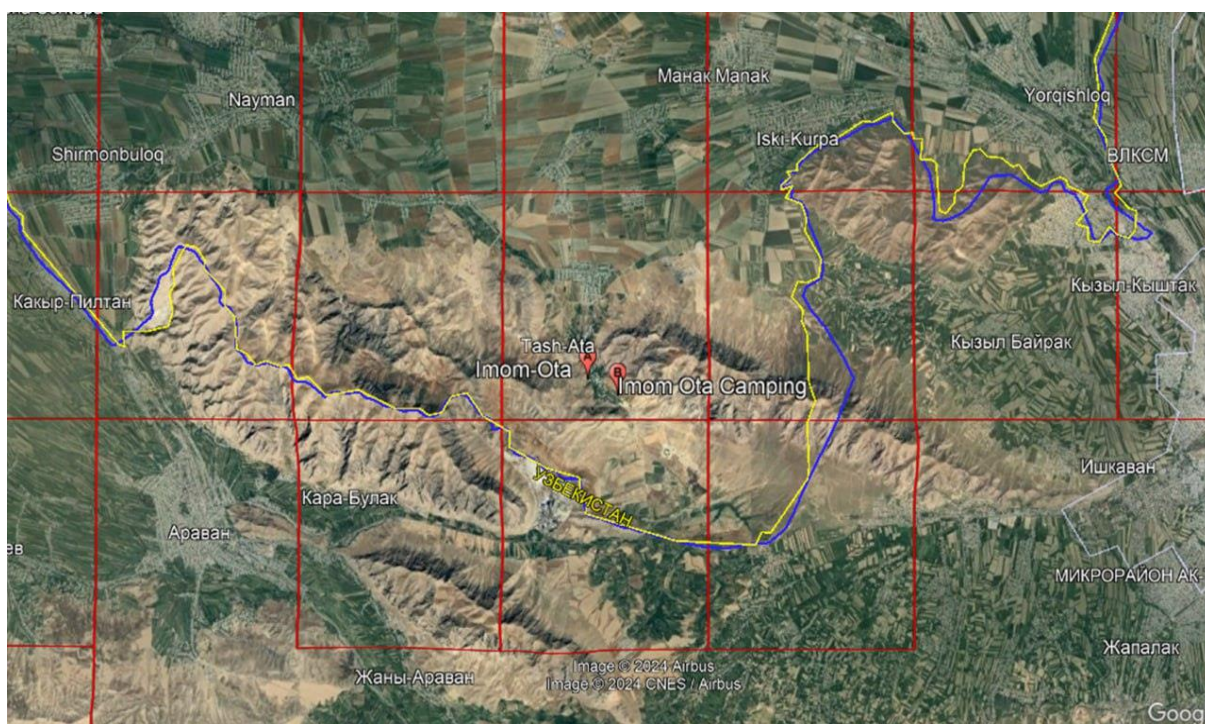

Fig. 1. *Torilis arvensis* is native to Central Asia, including Kyratashtau [2]

***Mentha longifolia* var. *asiatica* (Boriss) Rech. f.**

Biomorphological Features: *Mentha longifolia* var. *asiatica*, a variety of wild mint, is a perennial herb with elongated lanceolate leaves and a strong minty aroma. It produces dense spikes of small lilac-colored flowers. The stems are square-shaped, a characteristic feature of the mint family (*Lamiaceae*). The native range of this variety is W. Asia to W. China. It is a perennial and grows primarily in the temperate biome. First published in Fl. Iranica 150: 559 (1982)

***Prangos pabularia* Lindl.**

Biomorphological Features: *Prangos pabularia*, a member of the *Apiaceae* family, is a tall perennial herb with compound umbels of small white flowers. The plant features finely divided, aromatic leaves and a robust taproot. Its fruits are oval-shaped and ribbed. The native range of this species is Afghanistan to Central Asia and W. Himalaya. It is a perennial and grows primarily in the temperate biome.

***Marrubium anisodon* Koch**

Biomorphological Features: *Marrubium anisodon*, also known as horehound, is a perennial herb with woolly leaves and square stems. The leaves are wrinkled and emit a strong, pleasant aroma. Clusters of small white flowers are densely packed in whorls around the stem. The native range of this species is Central Albania to Central Asia and W. Himalaya. It is a perennial and grows primarily in the temperate biome. First published in *Linnaea* 21: 696 (1849) Native to: Afghanistan, Albania, Greece, Iran, Kazakhstan, Kirgizstan, Krym, Pakistan, Tadjikistan, Transcaucasus, Turkey, Turkmenistan, Uzbekistan, West Himalaya [3]

***Artemisia rutifolia* Steph. ex Spreng. [4]**

Biomorphological Features: *Artemisia rutifolia*, a species of sagebrush, is a shrub characterized by its silvery-gray foliage and aromatic scent. The leaves are deeply lobed or divided into linear segments. This name is reported by *Asteraceae* as an accepted name in the genus *Artemisia* (family *Asteraceae*). [5] The record derives from TICA (data supplied on 2023-11-28) which reports it as an accepted name Yellowish flower heads are borne in clusters along the branches. First published in *Syst. Veg.*, ed. 16. 3: 488 (1826)

Fig. 2. *Artemisia rutifolia* Steph. ex Spreng [6]

The native range of this species is Uzbekistan, Afghanistan to S. Siberia and Himalaya. It is a perennial or subshrub and grows primarily in the temperate biome. These essential oil plants play significant roles in the local ecosystem and have traditional uses in herbal medicine and culinary practices. The biomorphological descriptions provided here serve as foundational knowledge for identifying and studying these plant species in Kyrntashtau. Further research on the chemical composition of their essential oils and their ecological interactions would contribute to a comprehensive understanding of their importance and potential applications.

ConclusionThe study of essential oil plants in Kyrntashtau highlights the importance of biodiversity conservation and sustainable resource management. By leveraging the biomorphological knowledge presented here, stakeholders can make informed decisions to harness the benefits of these natural assets while ensuring their long-term preservation for future generations. The essential oil plants identified in the territory of Kyrntashtau exhibit diverse biomorphological characteristics that contribute to their ecological significance and economic potential. Through this study, we have highlighted five key plant species—*Torilis arvensis*, *Mentha longifolia* var. *asiatica*, *Prangos pabularia*, *Marrubium anisodon*, and *Artemisia rutifolia*—each possessing unique traits that make them valuable contributors to the essential oil industry and local biodiversity. Understanding the distinct attributes of each species facilitates their sustainable utilization for essential oil extraction, herbal medicine, and other commercial applications. Furthermore, the presence of these essential oil plants underscores the ecological resilience and adaptability of Kyrntashtau's flora to its specific environmental conditions. Conserving and promoting the cultivation of these plants not only preserves biodiversity but also supports local livelihoods and promotes sustainable practices in the region.

In conclusion, the study underscores the importance of botanical research and conservation in Kyrntashtau, emphasizing the need for sustainable practices that balance economic development with environmental stewardship. By continuing to explore and protect the unique flora of this region, we can ensure its preservation for future generations while unlocking the full potential of its natural resources.

SOME ESSENTIAL OIL PLANTS COMMON IN THE TERRITORY OF KYRTASHTAU, AND THEIR BIOMORPHOLOGICAL FEATURES

Abstract. This article reviews the essential oil plants prevalent in the Kyrtaştau region, detailing their biomorphological characteristics. The study identifies key species and elucidates their morphological traits, focusing on plants known for their essential oil production. Through field surveys and morphological analyses, this research aims to contribute valuable insights into the diverse flora of Kyrtaştau, emphasizing the significance of these plants for essential oil extraction and potential applications in various industries. The findings highlight the unique biomorphological features of select plant species, offering a comprehensive overview essential for conservation, cultivation, and utilization of these valuable botanical resources.

Key words: Uzbekistan, Kyrtaştau, plants, territory, species, essential oil, grows.

The territory of Kyrtaştau boasts a rich diversity of flora, including numerous plant species renowned for their production of essential oils. Essential oils are valued for their aromatic properties and have a wide range of applications in industries such as cosmetics, pharmaceuticals, and aromatherapy. Understanding the biomorphological features of these essential oil plants is crucial for their identification, cultivation, and sustainable utilization. This study focuses on identifying and characterizing the essential oil plants that are prevalent in the Kyrtaştau region, located in Uzbekistan. By examining the biomorphological traits of these plants, including their growth habits, leaf morphology, flower structure, and other botanical features, we aim to provide a comprehensive overview of the diverse plant species contributing to the essential oil industry in this region. The research combines field surveys with detailed morphological analyses to elucidate the unique characteristics of each identified species. This knowledge is essential for effective plant conservation, cultivation, and optimization of essential oil extraction methods. Furthermore, understanding the biomorphological features of these plants enhances our appreciation of their ecological roles and potential economic contributions to local communities. Through this exploration of essential oil plants in Kyrtaştau, we seek to contribute valuable insights into the botanical richness of the region and promote sustainable practices for harnessing the benefits of these natural resources.

The territory of Kyrtaştau, located in Uzbekistan, harbors a diverse array of plant species known for their production of essential oils. Understanding the

biomorphological characteristics of these plants is essential for their identification, conservation, and sustainable utilization. Here, we highlight five prominent essential oil plants found in Kyrntashtau and describe their key biomorphological features based on field observations and botanical analyses.

***Torilis arvensis* (Huds.) Link**

Biomorphological Features: *Torilis arvensis*, commonly known as spreading hedge-parsley, is a herbaceous annual plant characterized by its slender, branching stems and finely divided leaves. The leaves are pinnate with narrow, toothed leaflets. Small white flowers form in umbels at the tips of the branches, giving way to fruits with hooked spines. These essential oil plants play significant roles in the local ecosystem and have traditional uses in herbal medicine and culinary practices. The biomorphological descriptions provided here serve as foundational knowledge for identifying and studying these plant species in Kyrtashtau. Further research on the

chemical composition of their essential oils and their ecological interactions would contribute to a comprehensive understanding of their importance and potential applications.

Conclusion The essential oil plants identified in the territory of Kyrtaştau exhibit diverse biomorphological characteristics that contribute to their ecological significance and economic potential. Through this study, we have highlighted five key plant species—*Torilis arvensis*, *Mentha longifolia* var. *asiatica*, *Prangos pabularia*, *Marrubium anisodon*, and *Artemisia rutifolia*—each possessing unique traits that make them valuable contributors to the essential oil industry and local biodiversity. The biomorphological features described, including leaf morphology, flower structure, growth habits, and aromatic properties, serve as essential tools for the accurate identification and conservation of these plants. Understanding the distinct attributes of each species facilitates their sustainable utilization for essential oil extraction, herbal medicine, and other commercial applications. Furthermore, the presence of these essential oil plants underscores the ecological resilience and adaptability of Kyrtaştau's flora to its specific environmental conditions. Conserving and promoting the cultivation of these plants not only preserves biodiversity but also supports local livelihoods and promotes sustainable practices in the region. Future research directions may include comprehensive chemical analyses of the essential oils derived from these plants, exploring their pharmacological properties, and investigating their interactions within the local ecosystem. Such endeavors would contribute to a deeper understanding of the botanical resources in Kyrtaştau and their potential contributions to various industries and scientific fields.

In conclusion, the study of essential oil plants in Kyrtaştau highlights the importance of biodiversity conservation and sustainable resource management. By leveraging the biomorphological knowledge presented here, stakeholders can make informed decisions to harness the benefits of these natural assets while ensuring their long-term preservation for future generations.

ROLE OF LIVESTOCK NETWORK IN ENSURING FOOD SECURITY IN KASHKADARYA REGION

Abstract. This article describes the attention to cattle breeding in Uzbekistan, its prospects, the role of cattle breeding in the economic life of the Kashkadarya oasis, the reforms implemented by the state in the field of cattle breeding, the role of cattle breeding in ensuring food security.

Key words: Kashkadarya, cattle breeding, cattle breeding, sheep breeding, economy.

Oziq-ovqat xavfsizligi butun dunyo mamlakatlari oldida turgan eng dolzarb vazifalardan biridir. BMT ham bugungi kunda oziq-ovqat mahsulotlarini yetishtirish va ularni taqsimlash bo'yicha yondashuvni mutlaqo o'zgartirish vaqti kelganini ta'kidlamogda. Zero, ideal holatda qishloq, o'rmon va baliqchilik xo'jaliklari barchani oziq-ovqat bilan to'liq ta'minlash va odamlar uchun risoladagidek daromad manbaini yaratib berishga qodir. Bunday holatda inson manfaatlari yo'lida ham qishloq xo'jaligi rivojlanadi, ham atrof muhitni muhofaza qilish bo'yicha chora-tadbirlar ijrosi ta'minlanadi.

O'zbekiston Respublikasi Prezidentining 2019 yil 28 martda "O'zbekistonda veterinariya va chorvachilikni rivojlantirish davlat qo'mitasi faoliyatini tashkil etish to'g'risida"gi qarori bilan viloyatimizning har bir tumanida kamida ikkitadan qora mol bo'rdoqchilik va sutchilik yo'nalishlarida chorvachilik komplekslari tashkil etish maqsadida loyihalar ishlab chiqilmoqda.

Bugungi kunda tabiatga befarq munosabat, unga antropogen ta'sirning kuchayib borishi, isrofgarchilik, ilg'or va rivojlanayotgan davlatlar o'rtasidagi oziq-ovqat balansi bo'yicha farqning o'sayotgani, iqlim o'zgarishlari qator salbiy

omillarni keltirib chiqardi. Noz-ne'matlarimiz, chuchuk suv, ummonlar, o'rmonlar, biologik xilma-xillik keskin sur'atlarda kamayib bormoqda, yer unumdorligi pasayib, tuproq degradatsiyaga uchramoqda. Qishloq xo'jaligining barcha sohasi uchun tuproq unumdorligi asosiy o'rinlarda turadi.

Oziq-ovqat xavfsizligini hal etishda bir qator qiyinchiliklar mavjudligiga qaramay, mamlakatimizda qishloq xo'jaligi mahsulotlari ishlab chiqarish hajmini ham miqdor, ham sifat jihatdan muntazam oshirib borish va shu orqali oziq-ovqat ta'minotini mustahkamlash borasida salmoqli natijalar qo'lga kiritilmoqda. Xususan, 2023 yilda belgilangan ko'rsatkichlarga erishish maqsadida 4 million gektar (+358 ming gektar), shundan 2,5 million gektar asosiy, 214 ming gektar bog'-tok qator orasi, 424 ming gektar lalmi va 903 ming gektar takroriy maydonlarda oziq-ovqat mahsulotlarini yetishtirish belgilangan. Mazkur maydonlardan 8,1 million tonna boshqli don, 528 ming tonna sholi, 579 ming tonna dukkakli, 345 ming tonna moyli o'simliklar, 12,2 million tn sabzavot, 2,5 million tonna poliz, 4,1 million tonna kartoshka, 3,1 million tonna meva va 2 million tn uzum yetishtirilishi prognoz qilindi.

Qashqadaryo viloyati qishloq xo'jaligi tarmog'i paxtachilik, donchilik, zabzavotchilik, donchilik, uzumchilik, bog'dorchilik bilan birga chorvachilikning asosiy ixtisoslashgan tarmoqlar zaminida tarkib topgan. Yer suv resurslaridan samarali foydalanish orqali qishloq xo'jaligini intensiv rivojlantirish uchun mo'ljallangan yirik masshtabli xaritalarni tuzishda asosiy e'tibor ushbu sohaning o'ziga xos mintaqaviy qaratilishi lozim.

Bugungi kunda respublikamizda jami 18 032 ta chorvachilik xo'jaliklari mavjud bo'lib, shundan 7 614 tasi qoramolchilik, 3 263 tasi qo'y va echkichilik, 142 tasi yilqichilik, 52 tasi tuyachilik, 1 163 tasi parrandachilik, 4 829 tasi baliqchilik, 715 tasi asalarichilik va 254 tasi quyunchilik yo'nalishida tashkil etilgan.

1-jadval

Aholi jon boshiga go'sht mahsulotlari ishlab chiqarish 47,5 kilogrammga (1 kishiga yillik me'yor — 46,1 kilogramm), sut mahsulotlarini ishlab chiqarish ko'rsatkichi 336 kilogrammga (1 kishiga yillik me'yor — 310,4 kilogramm) yetkazildi.[1]

2-jadval

O'zbekiston Respublikasida chorvachilik sohasi va uning tarmoqlarini rivojlantirish bo'yicha 2022 — 2026-yillarga mo'ljallangan dasturning maqsadli ko'rsatkichlari (indikatorlar)

T/r	Ko'rsatkichlar nomi	2021-yil	2022-yil	2024-yil	2026-yil
Chorvachilikda naschilik va chorva mollari mahsulдорligini oshirish yo'nalishida					
1.	Umumiy qoramollar podasida sof zotli naslli qoramollarning ulushi (foiz)	9	11	16	33
2.	Umumiy qoramollar podasida zoti yaxshilangan mahalliy qoramollarning ulushi (foiz)	54	62	72	90
3.	Chorva hayvonlarini saqlash uchun kompyuterlashtirilgan dasturlardan foydalanuvchi chorvachilik xo'jaliklari sonini ko'paytirish (foiz)	20	25	30	50
4.	Milliy va xalqaro (Global GAP, NACCP va boshq.) standartlarga javob beradigan fermer xo'jaliklarining ulushi (foiz)	1	2	15	30
Qo'ychilik va echkichilik tarmog'ida					
5.	Go'sht-jun yo'nalishida naslli qo'y va echkilar ulushi (foiz)	15	20	25	35
6.	Qurg'oqchilikka chidamli bo'lgan yem-hashak o'simliklarini ekish bilan tog' va tog'oldi yaylovlarning hosildorligini oshirish (sentner/ga)	8	9	10	12
7.	Yaylovlarda tik quduqlar qazishga ruxsat berish (ming/ga)	—	200 ming ga	500 ming ga	800 ming ga

Yaylov yerlaridan maqsadli foydalanish orqali arzon ozuqa mahsulotlari yetishtiriladi hamda chorvachilik sohasida suv resurslari va energiya iste'moli tejamkorligiga erishiladi. Iqlim o'zgarishi, tabiatning biologik xilma-xilligini saqlash va cho'llanishga qarshi kurashish bo'yicha xalqaro jarayonlarni e'tiborga olgan holda chorvachilik sohasida amalga oshirilayotgan islohotlarni tabiiy resurslar barqarorligini va atrof-muhit muhofazasini ta'minlashga qaratish muhim hisoblanadi.

Qashqadaryo viloyatida zamonaviy chorvachilik komplekslarini tashkil etish bo'yicha qiymati 235,437 mlrd so'mlik 73 ta loyiha ishlab chiqildi. 2023-yil 15-iyul holatida tijorat banklarining viloyatda faoliyat ko'rsatib kelayotgan filiallari tomonidan 105 ta chorvachilik yo'nalishidagi loyihani moliyalashtirish uchun jami 44 mlrd 211 mln so'm va xorijiy kredit liniyalari hisobidan esa 877 ming 400 AQSH dollari miqdorida mablag'lar ajratildi.

Misol uchun, Qamashi tumanidagi “Murodov Rahmatullo Mavlonovich” MCHJ 2019-2021 yillarda sutchilik yoʻnalishida chetdan naslli qora mollar olib kelish va sutdan 14 xildagi mahsulotlar tayyorlash hamda goʻsht mahsulotlarini qayta ishlash maqsadida 447 ming 690 AQSH dollari miqdorida investitsiya kiritish loyihasi ishlab chiqildi.

Qashqadaryo viloyatida davlat tomonidan chorvachilik uchun yaratib berilayotgan imkoniyatlardan foydalanib, chorvachilikni rivojlantirishda amaliy ishlar bajarilmoqda. Taʼkidlash joiz, Yurtboshimiz tomonlaridan yurtimizda chorvachilikni yanada rivojlantirish uchun ulkan imtiyozlar berilmoqda. Shu oʻrinda chorvachilikni rivojlantirishni davlat tomonidan qoʻllab-quvvatlash maqsadida ajratilayotgan subsidiyalarni eslatib oʻtamiz. Bu imkoniyatlardan samarali foydalanib, chorvachilik tarmogʻini intensiv rivojlantirilsa, chorvachilik sohasidan tushadigan daromadning yuqori darajada koʻtarilishiga sabab boʻladi.

BANKLARDA ZAMONAVIY KREDIT XIZMATLARINI KO'RSATISHNING AHAMIYATI

Annotatsiya. Ushbu maqolada tijorat banklarida zamonaviy va masofaviy bank xizmatlari ko'rsatishning ilmiy-nazariy asoslari va O'zbekistonda zamonaviy bank xizmatlarini ko'rsatishning iqtisodiy ahamiyati o'rganilgan.

Kalit so'zlar: bank xizmatlari, masofaviy bank xizmatlari, zamonaviy bank xizmatlari, bank xizmatlari, masofaviy bank xizmatlari, zamonaviy bank xizmatlari, internet-banking, raqamli banking, onlayn banking

THE IMPORTANCE OF PROVIDING MODERN CREDIT SERVICES IN BANKS

Abstract. In this article, the scientific-theoretical basis of providing modern and remote banking services in commercial banks and the economic importance of providing modern banking services in Uzbekistan are studied.

Keywords: banking services, remote banking services, modern banking services, banking services, remote banking services, modern banking services, internet banking, digital banking, online banking.

KIRISH

Hozirgi davrdagi tezkor va shiddatli rivojlanish hamda iqtisodiyotdagi tub o'zgarishlar davrida raqamli iqtisodiyot va u bilan bog'liq bo'lgan bir qancha ilg'or raqamli texnologiyalar iqtisodiyotimizga kirib kelmoqda. Shu sababli aholining turmush tarzini yanada yaxshilash va osonlashtirish, kompyuterlashtirish va mamlakatimiz taraqqiyotini yanada jadallashtirish maqsadida Respublikamiz rahbariyati bir qancha qarorlarni qabul qildi va "yo'l xaritasi"ni ishlab chiqmoqda. O'zbekiston Respublikasi bank tizimida mijozlarga taqdim etiladigan elektron bank xizmatlarini ko'rsatish borasida tizimli ishlar

tashkil etilmoqda. Xususan, O‘zbekiston Respublikasi Prezidentining 2020 yil 12 maydagi “2020 - 2025 yillarga mo‘ljallangan O‘zbekiston Respublikasining bank tizimini isloh qilish strategiyasi to‘g‘risida”gi PF-5992-sonli Farmonida “O‘zbekiston Respublikasining bank tizimini isloh qilishning ustuvor yo‘nalishlaridan biri sifatida qaralib, bank xizmatlarini modernizatsiya qilish, samarali infratuzilma yaratish va banklar faoliyatini avtomatlashtirish, shuningdek, banklarning asosiy faoliyat turi bilan bog‘liq bo‘lmagan funksiyalarini bosqichma-bosqich bekor qilish orqali bank tizimining samaradorligini oshirishga juda katta e‘tibor berilmoqda.

Shuningdek, zamonaviy axborotkommunikatsiya texnologiyalarini keng joriy etish, tijorat banklarining biznes jarayonlarini avtomatlashtirish va masofaviy bank xizmatlari turlarini kengaytirish uchun zarur shart-sharoitlar yaratish; nazorat yuklarini, shu jumladan banklarning regulyator va davlat organlari bilan axborot almashinuvini takomillashtirish hamda hisobotlarni shakllantirish jarayonlarini soddalashtirish va avtomatlashtirish orqali ularni taqdim etish bilan bog‘liq bo‘lgan yuklarni kamaytirish; masofaviy bank xizmatlari, shu jumladan kontaktsiz to‘lovlar soni va qamrovini kengaytirish; avtomatlashtirilgan skoring tizimi, raqamli identifikatsiyalash va kredit konveyeridan keng foydalanish; bank ma‘lumotlari va tizimlarining axborot xavfsizligini kuchaytirish; bank sohasidagi yangi kontseptsiya va texnologiyalarni joriy qilish (fintex, marketpleys, raqamli bank) ” kabi vazifalarning belgilanganligi mavzuning dolzarbligidan dalolat beradi.

MAVZUGA OID ADABIYOTLAR TAHLILI

Mavzuga oid bir qator olimlarning tadqiqot ishlari bilan yaqindan tanishib chiqildi. Ularda olimlarning masofaviy bank xizmatlariga odi fikr mulohazalari tahlil qilindi. XX asrning 60-70 - yillari bank xizmatlari nazariyasi rivojlanishining boshlang‘ich bosqichi hisoblanadi. Bu paytda X. Duglas Michigan universitetining “Kreditlash sohasidagi bank siyosati” (1971 y.), D.Revel Uels universitetining «Raqobat va bank faoliyatini boshqarish» (1978 y.), Jeneva universitetining «Jamg‘arma banklarining kredit xizmatlari» (1974 y.) tadqiqotlari, Sh.Dereyning «Britaniya banklari strategiyasi va xalqaro raqobat» asari (1977 y.) xamda G.Brayanning «Bank sohasidagi raqobat» tadqiqoti (1970 y.) chop etiladi. Yuqorida qayd etilgan ilmiy ishlar bank xizmatlari bozori va uning bank xizmati segmentini o‘rganishga bag‘ishlangan. Rus iqtisodchi olimi V.K. Spilnichenkoning fikricha «Bank hisobvarag‘iga masofadan xizmat ko‘rsatish bu informasion xizmatlarning kompleksi va mijozning hisobvarag‘i bo‘yicha operatsiyalarni uning bankka tashrif buyurmasdan bergan topshirig‘iga asosan bajarishdir.

Bank hisobvarag‘iga masofadan xizmat ko‘rsatish tizimi telekommunikatsiya tizimi orqali bankning ma‘lumotlar bazasiga mijozning murojaatiga asoslanadi. N.I.Lixodeyeva esa bank hisob-varag‘iga masofadan xizmat ko‘rsatish tizimini mijoz tomonidan kompyuter texnologiyalaridan

foydalangan holda bankka tashrif buyurmasdan ya'ni masofadan buyurtmalar asosida bank xizmatlarini taqdim etish texnologiyasi sifatida e'tirof etgan.

TAHLIL VA NATIJALAR

Raqamli banking - bu onlayn banking va mobil bankingning kombinatsiyasi. Raqamli bank xizmatlaridan foydalanish xarajatlaringizni kamaytirishga yordam beradi, chunki bu nafaqat pulingizni, balki vaqtingizni ham tejaydi. Onlayn banking - bu o'z qurilmangizdan bank veb-sayti orqali bank xizmatlaridan foydalanishni anglatadi. Masofaviy bank xizmatlarini ko'rsatish turli bank operatsiyalarini masofadan amalga oshirish imkoniyatini beradigan xizmatlar kompleksidir. Buning uchun bank muassasasiga tashrif buyurmasdan turib kompyuter yoki mobil telefondan foydalanish kifoya. Masofaviy texnologiyalar mijozga bank xizmatlaridan foydalanishda maksimal qulaylik va bank bilan ishlash jarayonida vaqt hamda moliyaviy xarajatlarni minimallashtirish imkonini beradi. Masofaviy bank xizmatlarining rivojlanishi bank xizmatlari tizimida yangi hajmdagi va yangi shakldagi turli xizmatlarni yuzaga kelishiga sabab bo'ldi.

Masofaviy bank xizmatlarining asosiy tamoyili mijoz va bank o'rtasida turli axborotlarning masofadan almashinuvi hisoblanadi. Bunda bank tomonidan mazkur amaliyotning xavfsizligi ta'minlanadi. Internet-banking xizmati orqali mijoz o'z ish joyida yoki boshqa o'ziga qulay sharoitda: to'lovlarni o'tkazish; Jismoniy shaxslar tomonidan bank kartasi olish va mobil ilova orqali xaridlarni amalga oshirish uchun quyidagi amallarni bajarish lozim: - plastik kartani olish uchun o'zi tanlagan bankka pasport bilan murojaat qilish (onlayn tarzda tijorat banklarning rasmiy veb-saytlari orqali ham buyurtma berish imkoniyati mavjud) - bank kartasini pul mablag'lari bilan to'ldirish (bankomatning "cash-in" funksiyasi yoki bank xizmatlari markazlariga tashrif buyurish orqali); - bankka tashrif buyurib yoxud bankomat va infokiosklar orqali bank karta hisobvarag'ini o'z mobil telefon raqamiga bog'lash (biriktirish) orqali sms-xabarnoma yoki telegram-xabarnoma xizmatini faolashtirish; - tijorat banklari yoki to'lov tashkilotlari mobil ilovalarini Android operatsion tizimli mobil telefon uchun "Google Play market" internet ilovasidan yoki iOS operatsion tizimli mobil telefon uchun "Appstore" internet ilovasidan yuklab olish (ro'yxat ilova qilinadi); - mazkur mobil ilovalarda ro'yxatdan o'tish, ya'ni olingan bank karta raqami va amal qilish muddati kiritilgandan so'ng mobil telefonga kelgan maxfiy kodni kiritish orqali identifikatsiyadan o'tish; - xavfsizlikni ta'minlash maqsadida mobil ilovaga kirish uchun maxfiy kodni o'rnatish.

Mazkur amallarni bajarish uchun hech qanday bank xizmati bo'yicha vositachilik haqi olinmaydi. 1994 yil 13 iyul kuni Vazirlar Mahkamasining "O'zbekiston Respublikasi bank tizimini moliyaviy qo'llab-quvvatlash chora-tadbirlari to'g'risida"gi Qaror qabul qilindi. Unga asosan banklar qator soliqlardan ozod qilindi va bo'shagan mablag'larni o'z faoliyatini kompyuterlashtirishga sarflash shart qilib qo'yildi. Mazkur Qarorlarga binoan tijorat banklarining bo'limlari kompyuterlashtirila boshlandi va ular elektron

to'lov tizimiga qo'shib borildi. Avgust oyi oxiriga kelib mustaqillikning uch yilligi sharafiga elektron to'lovlar vaqtinchalik Nizomi yaratildi. Oktyabr oyidan boshlab esa elektron pochta respublika bank tizimida ishga tushirildi. Respublika bank tizimida buxgalteriya hisob-kitoblarni va bank amaliy ish kunini umumiy bir ko'rinishga keltirish uchun zarur ishlar amalga oshirildi. O'zbekiston Respublikasi Prezidentining 2018 yil 19 sentyabrdagi "Milliy to'lov tizimini rivojlantirish chora-tadbirlari to'g'risida"gi PQ-3945-sonli qaroriga asosan Milliy banklararo protsessing markazi 2018 yilning IV-choragida tashkil etildi va "Humo" to'lov tizimi 2019 yilning I-choragidan boshlab ishga tushirildi. Markaziy bankning banklararo to'lov tizimi quyidagi normativ-huquqiy hujjatlarga muvofiq tartibga solinadi:

XULOSA

Xulosa qilib aytganda, mamlakat iqtisodiyotining asosi hisoblangan bank tizimini yanada isloh qilish, uning barqarorligini oshirish, yuqori xalqaro reyting ko'rsatkichlariga erishishning ustuvor yo'nalishlari hamda axborot-kommunikatsiya texnologiyalaridan keng foydalangan holda zamonaviy naqd pulsiz hisob-kitoblar mexanizmlarini joriy etish bo'yicha olib borilayotgan ishlar banklarimiz tomonidan mijozlarga ko'rsatilayotgan xizmatlar sifati, to'lov intizomi va madaniyatini yangi bosqichga ko'tarilishini ta'minlash bilan birga, barcha iqtisodiy tarmoqlar taraqqiyotini mustahkamlashga ham o'zining ijobiy ta'sirini ko'rsatadi. Shunday zamonaviy texnologiyalar asosida masofaviy bank xizmatlari, xususan Internetbanking

SEMANTICS OF PROVERBS EXPRESSING HUMAN IMAGE IN UZBEK LANGUAGE

Abstract. This article is devoted to the comparative analysis of phraseological units expressing the image of a person in the English and Uzbek languages, their expression and their place in the structure of speech, as well as a comparative typological analysis in terms of modern linguistics.

Key words: Phraseologism, emotional-expressive meaning, component, general market.

In modern psychology, there are four systems of character traits determined by different relationships of a person.

1. Traits that express their relationship to the community and some people (goodness, kindness, demandingness, arrogance, etc.).

2. Characteristics of attitude to work: (such as diligence, laziness, conscientiousness, responsible or irresponsible attitude to work).

3. Features expressing the attitude towards things (such as freedom or dirtiness, treating things sparingly or sparingly).

4. Features that express a person's attitude towards himself (respect - sensuality, ambition, pride, arrogance, humility, etc.).

From time immemorial, our ancestors expressed many ideas about the expression of human character in paremiological units. Folk proverbs show the character of a person, his behavior, qualities, and characteristics. Sometimes proverbs reflect on good and bad people.

The Uzbek phrase "Don't say pisht to a cat" is used for people who do not harm anyone. The fish stinks from the head. Var: "Muddy from the head of the water": "If mud comes from the head of the river, the downstream is subject to plunder." Metaphorical meaning: "When every work is rough and crude at the beginning, it gets worse and worse. Any corruption, decay, crisis, chaos, turmoil, etc., first of all starts from "above". In the past, people with advanced worldviews understood to some extent that the reason for the corruption of the existing social system is, first of all, the corruption, injustice, and corruption of those who rule the country (king, emir, khan) and also lead the people on the wrong path, and they used sarcastic sayings against them. used in such a way.

In Uzbek society, people who always laugh at someone else's plight, and put such a situation on their face, are reprimanded. One winter becomes one summer, the raven's cawing remains. If the fifteenth day of the month is dark, then the fifteenth day is bright, bad days will pass and good days will come. In the days of poverty and need, those who reproached you will continue to scold you. Don't

take such reproaches to yourself, don't read, don't despair, on the contrary, be brave and continue what you are doing", they comfort a person who is in a difficult situation with this saying. "Winter will pass, blackness will remain on the crow", "This world will pass, blackness will remain on you."

Some young people say these proverbs sarcastically while disrespecting and disrespecting the elderly and laughing at their weakness. When the wolf grows old, the puppy laughs. Var.: "When the wolf grows old, he becomes a toy for the rabbit"; "When a cat grows old, it becomes a game for a mouse"; "When a deer grows old, it becomes a sparrow"; "When the swan grows old, it becomes useful for the sparrow."

In the past, when a fish was caught, a man used a piece of wood with a tunic nailed to the tip like a trumpet, and would come to the lip of the water, to the bulung, to the belt. Two or three large nets were holding down towards the stream of water. As soon as he hit the wood, the water became cloudy and the sound of his slapping scared the fishes, they ran towards the flow of the water and fell into the net. It can be seen that these ideas are expressed in the following paragraph. This is the true meaning of these proverbs. In a metaphorical sense, they apply it to provocative and stupid people, such people, like a fisherman muddying the water and catching fish, seek their own benefits, destroy the relationship between two friends with incitements from nowhere, set people of one circle against people of another circle, and confuse the minds of many. and they want to achieve their goals by taking advantage of the storm (when the water is cloudy).

Folk proverbs are second only to national literature in terms of showing the capabilities and characteristics of the national language. I. Melchinko emphasizes the need to study the process of its historical development in order to research the national paremiological fund of the people. In this process, the layer of words that reflect the attitude of a person to a person is important from the point of view of reflecting the worldview, mutual relations and the linguistic, cultural and pragmatic situation in society. First of all, it is necessary to mention the two main ways of expressing this concept within the language: direct meaning expression and ways of expressing thoughts through figurative words. Uzbek folk proverbs are colorful in content. In the process of researching proverbs that reflect or refer to human characteristics, it is necessary to create a microfield like phraseological units.

In the cited proverbs, the word lazy directly refers to the character of a person, and the word's function in the sentence has different aspects.

We can divide the expression of concepts related to labor into two types. Conditionally this group: units representing direct labor, a group of units representing indirect labor. For the first group, we give the above-mentioned words as an example. In the second group, we can refer to proverbs with metaphorical words and figurative images, which refer to the quality of hard work. During the study of the paremiological foundation of the language, the above-mentioned two types of meaning expressions are clearly visible. On the example

of analyzed paremiological units, it can be said that the classification of units that directly and indirectly express the quality of hard work can also be seen on the example of proverbs. There are the following proverbs in the Uzbek language that refer to the quality of hard work: "The fault is not in the year, but in the work", "Don't trust your luck, trust your finger", "Work in vain until you sit idle", "A hunter who does not give will get a hunter from a God who does not give", "If you give - you receive, you sow - you reap", "Don't worry is the main rule, "no work is a rule", "What someone gives is prosperity, "what labor gives is satisfaction", "As long as you know how to talk, know how to work", "Talk is another", work is different", "Speak little words, "look at work a lot", "A tree is beautiful with a leaf, "a man is with his work", "Spring carries the water of a river, "a person's worth is work" increases", "Earth is a mother, water is a father, work is wealth", "Earth is a treasure, work is the key", "Don't be the owner of the land, be the owner of the work", "See the land with the rain decision, "with work - live", "If you don't burn your soul, it's a rule of heart", "If you don't climb a mountain, it's a hawthorn rule", "There is work, there is soup", "Work makes you hungry, the lazy avoids work", "Work attracts soup, "laziness - to the head", "Don't let the work defeat you, "you eat the work", "Fear the master of the work", "Sacks for those who work, "empty sacks for those who don't", "Working teeth, "unworked stone teeth", "Working teeth, not working teeth"

In some of the cited proverbs, the words work and work are mentioned, these proverbs form the first group of the classification given above. If you don't burn your life, it's a good rule, if you don't climb a mountain, it's a hawthorn rule; Proverbs such as "Don't trust your luck" and "Trust your finger" belong to the second group. Although the words "work" and "hard work" are not used in their content, they refer to work and hard work.

The use of proverbs to describe human characteristics has a long history. Proverbs that reflect the character of a person through the content of a proverb are listed in "Devoni Lugatit Turk" and can be expressed today in full content, incompletely, in the form of a phrase. In particular, the proverb "kishi alasi ijtin, yilqi alasi tashtin" mentioned in the Divan is used in today's Uzbek language in the style of "in the heart of a person" and reflects the image of a person who is malicious or does evil from the heart. The second part of the proverb is almost obsolete.

The meaning of proverbs is truly endless. Proverbs cover all spheres of human activity, reflect society's lifestyle, culture, life and history. As proverbs express the wisdom of the people, they appear as a unique code of ethics in which the most moral qualities of a person are approved, spirituality is confirmed, and any defects and vices are condemned. Many proverbs encourage a person to act correctly: they show a person what to do and what not to do, protect against negative actions. We will focus on the semantics of proverbs that are widely used in everyday life and are numerous in the composition of Uzbek folk proverbs. From the good the horse remains, from the bad - the dod.

STRATEGIES USED IN THE DEVELOPMENT OF THE QUALITY OF EDUCATION OF HIGHER EDUCATION INSTITUTIONS OF DEVELOPED COUNTRIES

Annotation. This article will show the ways that several developed countries have overcome in improving the quality of education in higher educational institutions, the strategic measures that the same state has taken on a state scale for the development of education-the proposal of practical work that can be used as a template in our country.

Keywords. Higher education, structure of higher education, management, strategy, universities, quality of education, foreign experience.

Introduction. In the rise of the social and economic development of the country, the educational system and attention to it are crucial. Today, the use of innovative educational technologies in improving the quality of education, the foundation of modern principles and strategies in the management process leads to an increase in efficiency indicators in this area. A number of regulatory documents developed by our government, including the state program on implementation of the strategy "Uzbekistan — 2030"[1], which is currently in force, in the year "Youth and business support", developed a plan of practical activities for 2024, according to which, expanding coverage with higher education, improving the quality of training of specialists with higher education is confirmed for the 7th purpose. On the basis of this, directions are established to adapt to World educational standards in society through the training of personnel with high scientific potential and ensure high economic growth rates, to raise the level of knowledge of students in higher education through sustainable economic growth. In recent years, advanced experiences of developed foreign countries have been used in the application of modern educational technologies in higher education institutions.

Thematic literature analysis. The education system, including the issues of quality education in higher education institutions, has been studied by many foreign scientists. In Particular, the scientific works of Sh.V. Tagirova, Ye.S. Konovalova, A.A. Egorov, M.A. Suxomlinova, Ye.Yu. Shibanova are focused on the management of the educational sphere and the improvement of the information base. In this regard, in the study of economic development and structural changes in the effective management system in higher education in Uzbekistan, the scientific researches of A.O. Ochilov, Sh.Dj. Ergashxodjaeva,

J.Xamraqulov, X.U.Umarova, A.Maxmudov, F.U.Nazarova, E.Abdusattorov and others were studied in the scientific investigation.

Research methodology. When conducting research on the topic, research methods such as observation, comparison, conversation, questionnaire surveys were used.

Analysis and results. In our country, a lot of foreign experience is used in the transition of the higher education system to a digitized system based on modern technologies. In Uzbekistan, post - graduate education is established to last up to 3 years, in 2 different forms, namely as doctoral studies and as an independent researcher.

In this regard, it is advisable to give an example of the experience of the states of the United States, Germany, China, Japan, South Korea and France. In these countries, there is an emphasis on higher education, student empowerment indicators, integration between theory and practice. The improvement of innovative technologies in the course process serves as the main criterion for an increase in the quality of Education, an increase in economic and social efficiency. In these countries, the excellence of the management structure in higher education is an important factor in the maturation of personnel with high scientific potential.

(Table 1).

Organizational and economic mechanisms of higher education institutions in developed foreign countries (author development)

Name of states	Literacy rate	Form of institution providing higher education	Legal and economic mechanisms supporting higher education	Number of competitors per 1 seat, per person
USA	99 %	College, University	Morilla law	150-170
Germany	90 %	University, Institute, Academy	Federal law on financial aid for study	100-130
China	75 %	University, College and higher vocational school	Beijing Declaration on mutual cooperation in higher education	300-400
Japan	99 %	University and non-university	Education Act	80-120
South Korea	95 %	Upper school, college and University	"Foundation grants" for students	70-80
France	99 %	Higher School	"Savari" law	85-100

Based on the data in the table, the higher education system in the United States is given impartial state support to the education system based on Morilla law in colleges and universities. According to research conducted in 2019, the literacy rate is 99%, and the competition between applicants who have expressed

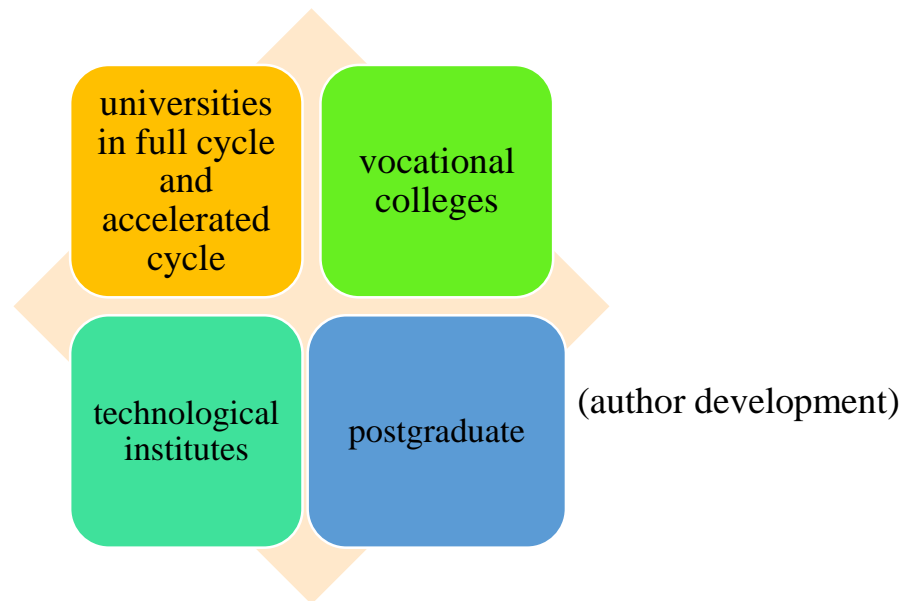

a desire to study in higher education institutions is high, that is, an average of 150-170 applicants per seat. The period of study in higher education is four years, and a bachelor's degree is awarded in the end. A notable aspect is that separately accredited HEI and faculties award the degree of Doctor of Medicine and law, for which special, enhanced training is required. In the case of Economics, a doctor of Science degree is awarded, requiring scientific research for 3 years or more. In Germany, the stages of education are 4 years, and in pedagogy is 3 years, and additional time is spent for practice, that is 18 months, as well as taking exams. In Germany, higher education institutions are distinguished by a large number of types and Regular updating of the management system. In particular, the system of higher education in Germany covers the system of universities and institutes, special higher educational institutions, higher schools of management and art, academies. This is also implemented in higher education institutions of other countries due to the excellence of the strategy for managing the education system in the state. In this respect, the literacy rate in Germany is 90 percent, and according to the Federal law on financial assistance for Study, economic mechanisms have been developed by the state. The Higher School, on the other hand, is self-governing, with the governing authority governed by a president elected for several years. In the management structure, the tasks are followed according to the step-by-step principle with the participation of several groups, which are clearly distributed. Its component is composed of professors, scientific staff and other staff. In the organizational structure, the process of studying students is freely organized, in which, along with a large number of educational stages, curricula are offered. There is no tuition fee, unless the student or their parents are able to raise food costs, under the Federal law on financial aid for tuition, they receive financial support. 50% of this support is added to their scholarship, while the rest is provided on loan.

The higher education system of the people's Republic of China includes University, College and higher professional schools, divided into several hierarchical categories in terms of management strategy [2]. Summed up, according to the scores obtained in the school graduation exams, graduates can be nominated for the upper or lower categories of higher education institutions. The admission process to Chinese universities is carried out in conditions of strict competition, and in some universities there are 200-300 people per seat. In China, there is a three – stage standard preparatory stage, as in other Western countries, that is, the duration of undergraduate studies is 4-5 years, the duration of graduate studies is 2-3 years, while doctoral studies are 2-3 years, depending on the fields, sometimes for 4 years there are two stages of education for graduate students, namely postgraduate and doctoral studies. The reason why the literacy rate in the PRC is relatively low, that is, 75 percent, is that some groups of the population still use hieroglyphs.

After higher education in South Korea, it is possible to study for Master's and doctoral studies. The South Korean higher education system is conducted at

the undergraduate, graduate and doctoral levels. The duration of study is 4 years in the baccalaureate, students receive a total of 140-150 credit hours of theoretical education. For 2-3 years in the magistracy, they strengthen their knowledge and favor a dissertation at the end. In doctoral studies, however, the duration of study is 3 or 4 years, depending on the areas. At the end of the study, a doctoral dissertation is defended by passing an oral or field-specific exam.

In the Japanese education system [3], higher education management is conducted in the form of a university and a non-university. The system of higher education in this state covers the following four types of educational institutions.

Draw 1: Types of higher education institutions in Japan

While the first group includes students studying in a full cycle for 4 years and universities studying in an accelerated cycle for 2 years, the second group takes the form of vocational colleges, and they are trained in a specific profession, with graduates working in the manufacturing or service sector. Technological institutes, on the other hand, are special preparatory schools. The fourth group of institutions of higher education is referred to as schools of education after receiving a diploma and is equated with the type of postgraduate education. In Japan, the non-universities are, in essence, secondary educational institutions, the management structures of which are notable for adapting to a more social orientation than the function of Higher Education. In recent years, although they are considered a full-fledged higher education institution from a legal point of view, in practice they do not correspond to higher schools in terms of training and prestige of their diploma. A system of Education funded under the "Savari"[4] law exists in France, and it is established that higher education will be carried out after obtaining a bachelor's degree of completion of Secondary Education. The literacy rate in this state was 99% in the 2020s, with 80-100 applicants per seat.

Conclusions and suggestions. In the process of studying the higher education system, structure and management strategies of developed countries, we came to the conclusion that the South Korean education system is suitable for the educational system, stages of Uzbekistan. In our opinion, in order to further improve quality indicators in higher education today, it is necessary to further improve the system of continuing education, to carry out the perfect integration between theory and practice. In addition, an increase in the level of use of modern innovative technologies also causes an increase in the level of coverage of qualified and competitive personnel.

THE ROLE OF VISUAL ARTS IN THE PRESCHOOL EDUCATION SYSTEM

Abstract. In this article, the development of fine art in preschool education system has a great impact on the child's development, the influence of colors on the expansion of imagination and mental potential. In addition, the broad development of the imagination of a child engaged in visual arts can be expected from such people in society. In the following article, we will consider the role of visual arts in the formation of such individuals.

Key words. Integrated, global, intelligence, early education, mortart, Optimization, integration, methodical assurance, individual, reproductive.

Modern living conditions, its speed and wealth of information place high demands on a person. People of the new millennium are more integrated into the global cultural process, they feel themselves as part of a complete single system. But at the same time, there is a decrease in the level of spiritual and spiritual development, cultural and intellectual potential of people.

Recently, representatives of pedagogical, psychological, as well as practicing teachers have paid serious attention to the need to apply preschool children to the world of art. Preschool children have been shown to have great potential for perceiving, understanding, and emotionally reacting and creating works of art. The works of art, which express universal values and the uniqueness of national mentality, reflect the whole world around us: nature, social life, the inner world of man, etc., have a great influence on the formation of spiritual life. Develops his intellect and feelings, needs and creative abilities. [1]

Since time immemorial, a unique ability is first of all considered a hereditary, natural gift. If they tell us: "Mortart played the piano from the age of three" or "John Stuart Mill read the Latin classics at the same age", most of us simply say: "Of course, they are geniuses".

But from the in-depth analysis of Mortart and Mill's childhood life, it is known that their fathers used effective methods of upbringing in order to make their children mature as great personalities. [2]

Taking into account several examples, it is necessary to think more about the strong influence of education and environment on a newborn baby. Usually, we think we know everything about children. In fact, we have very little idea of their true potential. We pay more attention to the question of what to teach children older than three years. However, according to modern studies, 70-80 percent of brain cells can be developed by this age. This means that we are working very slowly on child education.

Early education does not necessarily mean forcing babies to learn different numbers and difficult terms. To direct the child means to increase his interest in science. Mother is the main mediator who helps us in this. Because mothers understand the child's feelings very well, and they know exactly when to educate them. Baiz think that education is a disciplined state of learning. The pre-school education system is preparation for disciplined education. Early childhood education is a term that refers to educational programs and strategies aimed at children from birth to eight years of age. This period of time is widely recognized as the most delicate and important stage of human life. Early childhood education often focuses on learning through play, based on the research and philosophy of Jean Piaget. Play meets children's physical, intellectual, language, emotional, and social needs (PILES). Children's curiosity and imagination naturally sparks limitless learning. Learning through play enables a child's cognitive development. This is the first form of cooperation between children. In this, children learn through their interactions with others. Many people are against the theory of learning through play because they think that children do not acquire new knowledge. In fact, play is the first way children learn to understand the world at a young age. Research shows that the way children play and interact with concepts at a young age helps explain differences in social and cognitive interactions later in life. Learning how to associate behavior with prescribed actions can lead children to a more capable future. As children watch adults interact, they pick up on subtle nuances, from facial expressions to tone of voice. They are learning different roles, learning how things work, learning to communicate and work with others. Thus, children learn more effectively and acquire more knowledge through activities such as dramatic play, artistic and social games. The term usually refers to preschool or infant care programs. According to the research of the brain, on the one hand, and the results of child psychology, on the other hand, the key to the development of a child's mental abilities is the experience he received in the first three years, that is, in the formation of brain cells. You cannot force something into a child, but children are very curious, so it is necessary to instill love and interest in teaching a child. For example, children If you want to draw something, you can't draw it in the same scale and size, the child draws with his imagination. And we're underestimating that because we want to include a child in the nested shell. In fact, by limiting the opportunities and talents of a young child, we put an obstacle to his future. Children do not build the world as we imagine. We can only make people interested in visual art, show the right way, the rest is the child's work. The format of the paper, tools, and techniques used in visual arts are just a limitation that we set. This young artist does not need any technique, but the interest in visual art will help the child to understand the existence.

It is known that visual art education is aimed at the artistic, aesthetic, moral and emotional development of students, at determining their creative potential, at acquiring theoretical and practical knowledge, skills and competences of children

in drawing, painting and composition. In the organization of the educational process at the children's art school, special attention is paid to the preparation of talented children to pass entrance exams to secondary and higher vocational education institutions in the field of visual arts and to study. Currently, the children's art school has created a system of programs aimed at preparing students for the profession. This program system expands the student's opportunities and provides opportunities for academic preparation, including freedom of choice and flexibility of individual development. In the process of teaching fine art, the teacher uses methods, forms and tools that serve to effectively develop the creative thinking of teenagers, solve creative problems, and activate imagination and fantasy in fine art classes.

In conclusion, it is permissible to say that a person's abilities and character are not determined at birth, but are formed during a certain period of life. It is more effective to try it in the early taste. One of the reasons that limit us is talent, the concept of genes is actually a factor that makes a person 1% talent and 99% effort. Establishing early education in fine arts helps to expand the scope of a child's imagination, to understand existence, to see color and perspective in nature. This, in turn, increases the child's mental potential. In the European education system, visual art is an important subject, and more lessons are allocated to children, and in the pre-school education system, children are taught the professional type of visual art.

BURG`ILASH MINORASINI MONTAJ VA DEMONTAJ QILISH TEKNOLOGIYASINI ASOSLASH

Annotatsiya. Maqolada neft va gaz sanoatining asosiy ustuni bo‘lgan neft va gaz quduqlarini burg‘ilashga tayyorlashda burg‘ilash minorasi o‘rnatish jarayoni, minorani montaj qilish va demontaj qilish jarayoni muhim rol o‘ynaydi. Bu esa o‘z navbatida quduqlarni samarali burg‘ilash, ularni o‘z vaqtida ishga tushirish va burg‘ilash jarayonida avariyalarni oldini olish, mumkin. Maqolada burg‘ilash samarali montaj qilish orqali vaqt, ishchi kuchi va resurslar sarfi haqida ma‘lumot beriladi. Burg‘ilash minorasi montaj qilish jarayonini zamonaviy va innovasion ishlanmalarni yaratish va ushbu zamonaviy montaj qilish usullari orqali quduqlarni kam vaqt, eng tejamkor va samarali burg‘ilash imkoniyatlarini oshirish bo‘yicha takliflar berilgan.

Kalit so‘zlar: burg‘i, quduqni burg‘ilash, kern, burg‘ilash uskunalari, tog‘ jinslari, murakkab quduqlar, shlam, rekultivatsiya, nasoslar, burg‘ilash davri.

SUBSTANTIATION OF DRILLING DERRICK INSTALLATION AND DISMANTLING TECHNOLOGY

Abstract. In the article, the process of installing the derrick, installing and dismantling the derrick plays an important role in preparing oil and gas wells for drilling, which is the main support of the oil and gas industry. This, in turn, makes

it possible to effectively drill wells, launch them in a timely manner, and prevent accidents during drilling. The article provides information on the use of time, labor and resources through an efficient drilling rig. Proposals were made to create modern and innovative developments of the drilling rig installation process and to increase the possibilities of drilling wells in less time, as economically and efficiently as possible due to these modern methods of dismantling.

Keywords: drilling, well drilling, core, drilling equipment, rocks, complex wells, drilling mud, reclamation, pumps, drilling cycle.

Burg`ilash minorasini montaj qilish.

Biror hududda neft va gaz qudug`ini burg`ilash tugallangandan so`ng burg`ilash qurilmalari yangi joyga yetkazilishi kerak va u yerda burg`ilash ishlarini boshlashga tayyorlash kerak. Burg`ilash qurilmalarining tashish usuli uning tuzilishiga, transport bazasiga, qurilmalarni qayta ko`chirish amalga oshiriladigan mahalliy sharoitlarga bog`liq. Minoralarni montaj qilish ishlari quyidagilardan iborat:

1. Ho`jalikdagi yer xujjatlashtirib olinadi va 4 gektar joy tekislanadi.
 2. Shu yerda burg`ilash uskunalari olib kelib o`rnatiladi, montaj qilinadi.
 3. Burg`ilash ishlariga tayyorgarlik ko`rish davri.
 4. Quduqni burg`ilash, unga yo`llanma, konduktor, oraliq tizma va ishlatish tizmasini tushirish – burg`ilash davri deyiladi.
 5. Shu quduqlardan mahsulot olib sinab ko`rish davri.
 6. Burg`ilash uskunalari qilish yoki boshqa joyga ko`chirish davri.
 7. Demontaj qilingandan keyin, maydonni tekislab, ishlab-chiqarishga tayyorlanadi.
- Shulardan 1-2-3-6 va 7-davrlarni minora qurish (vishkomontaj) brigadasi bajaradi.
4-davrni burg`ilash brigadasi bajaradi.
5-davrni, ya`ni quduqdan mahsulot chiqarib aniqlash ishlarini tekshirib ko`rish brigadasi bajaradi.

Burgilash qurilmasini tashish usuli eng avvalo transport bazasi imkoniyatlariga ko`ra oldindan aniqlanadi. Yuqorida e`tirof qilinganidek, hamma burg`ilash qurilmalari tuzilishiga ko`ra quyidagi tasniflarga ajratiladi:

- shinali pnevmatik yoki o`rmalab yuruvchi
- ko`chma yoki doimiy (statsionar) hamda
- o`ziyurar burg`ilash qurilmalariga bo`linadi.

Rekultivatsiya – burg`ilash uskunalari maydonga olib kelishdan avval vaqtinchalik foydalanishga olingan 4-gektar yerning 25-30 sm qalinlikdagi ustki mahsulot ekiladigan qismi buldozerlar yordamida yig`ib, bir chekkaga to`plab qo`yiladi. Burgilash ishlari tugatilgandan keyin barcha burg`ilash uskunalari maydonchadan olib chiqib ketiladi. Shlam omborlari va transheyalar ko`miladi va

burg`ilash ishlarini boshlashdan oldin yig`ib olingan to`proq qatlami o`z o`rniga qaytariladi.

Burg`ilash minorasini demontaj qilish.

So`nggi quduqni burg`ilash ishlari yakuniy ishlar olib borilib, burg`ilash qurilmasini demontaj qilishga topshiriladi. Burg`ilash qurilmasi demontajga qabul qilingandan so`ng quyidagi tayyorgarlik ishlari amalga oshirilmoqda: minora inshootlarini, nasoslarning gidravlik qismida bosimni yo`qotish, kompensator blokidagi havo yig`uvchilaridagi bosimni yo`qotish, kommunikatsiyalarni, mayda-blok metall konstruksiyalari va elektr kabellar demontaj qilish. Burg`ilash minorasini demontaj qilishdan oldin, barcha yirik bloklarni quduqlarni neft va gazni qazib olish korxonasiga topshirish uchun oxirgi quduqdan 15 m uzoqlikda yig`iladi. Montaj maydonida yo`naltiruvchi balkalarning to`liq to`plami rel`slar o`rtasidagi o`lcham 10000 ± 10 mm oraliqda o`rnatiladi. Yirik bloklarni demontaj qilish kompressor blokidan boshlanadi. Blokni yo`naltiruvchi balkalar bo`yicha ko`chiriladi. Blokning knextlarini stroplar bilan ulash, kran bilan ko`tarish va MAZ – maydon yoki trallerga tashish uchun o`rnatish.

Agar burg`ilash bloklarini tashish yo`lida) yuqori voltli elektr uzatish liniyalari kesib o`tsa, ko`rsatilgan bloklarda 4,5 m balandlikgacha bo`lgan bloklarning panasini, uskunalarni demontaj qilish zarur. Haqiqat, yirik blokli demontaj va tashish amaliyotida mavjud emas, chunki o`rnatilgan og`ir yuklarga ega bo`lgan nasos blokining birligi – 7,8 m, hajmiy blok – 9 m, minoralarni ko`tarish va tushirish mexanizmi – 9 m. Nasos bloki o`ng tomonga yo`naltirilgan yo`nalishlar bo`yicha ko`chiriladi. Uchta og`ir yuk tashuvchi TG-60, T-60 yoki T-70 traktorlar bilan nasos blokiga, kran bilan ko`tariladi, ko`chiriladi va yo`naltiruvchilar balkalari o`rniga o`rnatiladi. Shundan so`ng og`ir yuk tashuvchi traktorlar tomonidan nasos blokiga o`rnatiladi va o`z domkratlarini bilan nasos blokining transport ballariga o`tkaziladi va mustahkamlanadi. Og`ir yuk tashuvchilarning domkratlarini bilan blok rels va yo`naltiruvchilardan 150-200 mm yuqoriga ko`tariladi. Yo`naltiruvchilar traktorlar bilan nasos bloki ostidan ko`chiriladi. Shundan so`ng transport texnikasi o`rnatiladi. Shundan so`ng barcha og`ir yuk tashuvchilar va nasos bloki qurilayotgan quduq ustiga tashiladi. Shunday tartibda va shu sxema bo`yicha og`ir yuk tashuvchilarda (TG-60, T-60 yoki T-70) hajmiy blokni demontaj qilish va o`rnatish ishlari amalga oshiriladi. Minora blokini demontaj qilish umumiy ko`rinishdagi chizmaga muvofiq minorani tushirishdan boshlanadi. Minorani ko`tarish va tushirish qurilmasi minora markazidan 34 m uzunlikda qabul qiluvchi ko`prik stellajlarini o`rnatadi, minorani troslar yordamida tushiriladi va maxkamlanadi, tashish sxemasiga muvofiq og`ir yuk tashuvchi texnikaga mustahkamlanadi va minorani tushiriladi.

1 – rasm. Minorani demontaj qilish.

Shundan soʻng minorani oldiga minorani tashish uchun moʻljallangan ogʻir yuk tashuvchini keltiramiz, uchta ogʻir yuk tashuvchini (TG-60, T-60 yoki T-70) minorani tagiga olib kelib minorani oʻrnatamiz, texnikani tashish sxemasiga muvofiq holda, qurilayotgan maydonga minorani keyingi burgʻilash maydonchasiga tashib boramiz.

ZAMONAVIY NEFT VA GAZNI TASHISH VA SAQLASH TEKNOLOGIYASI VA JIHOZLARI

Annotatsiya. Xalq xo'jaligi tarmoqlarining uzluksiz ishlab turishi neft, gaz, neft mahsulotlarini o'z vaqtida sifatli yetkazib berilishiga bog'liq. Mahsulotlarni yetkazib va tarqatish jarayonlari tashish va saqlash tizimi orqali amalga oshiriladi. Bu tizim temir yo'l, suv yo'li, quvuruzatmalar, avtomobil transportlarini, mamlakat hududida ratsional tarzda joylashgan neftbaza tarmoqlarini, gaz saqlagichlarni, benzin-gaz tarqatuvchi stantsiyalarni o'z ichiga oladi.

Kalit so'zlar: tanker, tabiiy gaz, gaz quvurlari, neft omborlari, rezervuarlar saroyi, gaz saqlagichlari, gazgolderlar, yer osti gaz omborlari, temir yo'l transporti, barjalar.

MODERN TECHNOLOGIES AND EQUIPMENT FOR TRANSPORTATION AND STORAGE OF OIL AND GAS

Abstract. The uninterrupted operation of the national economy depends on the timely and high-quality delivery of oil, gas and petroleum products. The processes of delivery and distribution of products are carried out through a transportation and storage system. This system includes railways, waterways, pipelines, road transport, rationally located oil storage networks, gas storage facilities, and gasoline and gas distribution stations.

Key words: tanker, natural gas, gas pipelines, oil storage facilities, tank farm, gas storage facilities, gas holders, underground gas storage facilities, railway transport, barges.

Mustaqillik yillarida bu soha ancha rivojlanib hozirgi zamon talablariga ko'ra yanada rivojlanmoqda.

1 – rasm. Gaz tashuvchi tanker.

2 – rasm. Neft tashuvchi tanker.

Yiliga ishlab chiqarilayotgan 55 mlrd m³ dan ortiq tabiiy gaz, “O’ztransgaz” AK qaramog’idagi uzunligi 13000 kmdan ortiq magistral gaz quvurlari orqali kerakli manzillarga yetkazib berilmoqda. Iste’molchilarni neft va neft mahsulotlari bilan ta’minlash umumiy rezervuarlar saroyining hajmi 1,1 mln m³ dan ortiq bo’lgan 60 ta taqsimlovchi neft omborlari va umumiy rezervuarlar saroyining hajmi 380 ming m³ bo’lgan 2 ta uzatuvchi neft omborlari (Angren va Pop) orqali amalga oshirilmoqda. Bulardan tashqari Respublikamizda xalqaro andozalarga javob beruvchi 6 ta “Kompleks avtoservis punktlar” tashkil etilgan.

3 – rasm. Magistral quvuruzatmalar.

Iste’molchilar tomonidan gazni ishlatishdagi notekisliklarni (sutkalik, mavsumiy) kompensatsiya qilish maqsadida Respublikamizda yer usti gaz

saqlagichlari (gazgolderlar) va yer osti gaz omborlaridan (Xo'jaobod, Gazli, Shimoliy So'x) foydalanilmoqda.

O'zbekistonda neft va gaz ishlab chiqarishning rivojlanishi magistral quvurlar qurilishining tez sur'atlar bilan o'sishiga olib keldi. Quvurlarni qurish 1960-yildan boshlanib, hozirgi kunda ularning umumiy uzunligi 13 ming km dan ortiq.

Bu quvurlar "O'ztransgaz" AK tarkibida umumlashgan. Ularning diametrlari bo'yicha taqsimlanishi 15-jadvalda keltirilgan.

Respublikamizdagi yer osti magistral gaz quvurlari uzunligining diametrlari bo'yicha taqsimlanishi.

1 – jadval

T/r	Quvur diametri (mm)	Uzunligi (km)	T/r	Quvur diametri (mm)	Uzunligi (km)
1	1420	616,38	11	219	527,084
2	1220	2299,89	12	168	6,175
3	1020	4682,52	13	159	162,173
4	820	250,71	14	146	4,46
5	720	1626,02	15	133	0,86
6	530	893,44	16	114	15,522
7	426	346,03	17	108	32,669
8	377	74,871	18	89	13,512
9	325	951,86	19	76	0,4
10	273	393,731	20	87	10,51

Neft, gaz, neftgazkondensat mahsulotlarini tashish turlari quyidagicha:

- magistral quvurlar orqali,
- temir yo'l transporti orqali,
- avtomobil transporti orqali,
- havo orqali,
- suv havzalari orqali (tankerlar va barjalar),

4 – rasm. Avtotsisterna.

Quvur transporti bilan bir qatorda neft va suyultirilgan gazlarni tashuvchi boshqa transport vositalari ham rivojlandi. Ularni suv transportida tashishda yuk ko'taruvchanlik qobiliyati 5000 tonnadan 45000 tonnagacha bo'lgan dengiz va daryodan (tanker va barjalaridan), shuningdek, yuk ko'taruvchanlik qobiliyati 450 ming tonnadan 1 mln tonnagacha bo'lgan dengiz va okean supertankerlaridan ham foydalanilmoqda.

5 – rasm. Temir yo'l tsisternalari.

Temir yo'l orqali neft, neft mahsulotlarini va suyultirilgan gazlarni tashishda yuk ko'taruvchanlik qobiliyati 50, 60, 90 va 120 tonnaga teng bo'lgan oddiy va maxsus konstruksiyaga ega bo'lgan vagon-sisternalardan foydalanilmoqda.

Neft, va neft mahsulotlari va suyultirilgan gazlarni tashishda yuk ko'taruvchanlik qobiliyati 4 m³ dan 30 m³ gacha bo'lgan avtosisternalardan ham foydalaniladi.

MOLIYAVIY TEXNOLOGIYALAR ORQALI MOLIYAVIY RISKLARNI BARTARAF ETISH

Annotatsiya. Ushbu maqolada moliyaviy texnologiyalar va moliyaviy risklar to'g'risida tushunchalar, raqamli iqtisodiyot sharoitida moliyaviy texnologiyalarning ahamiyati haqida fikrlar yuritilgan. Moliyaviy risklarni qanday qilib moliyaviy risklar orqali bartaraf etish mumkinligi to'g'risida tavsiyalar berilgan.

Kalit so'zlar: moliyaviy texnologiya, fintech, moliyaviy risklar, raqamli iqtisodiyot, avtomatlashtirish

*Samadova Z.Z.

Khorezmi*

ELIMINATION OF FINANCIAL RISKS THROUGH FINANCIAL TECHNOLOGIES

Abstract. This article discusses the concepts of financial technology and financial risks, the importance of financial technology in the digital economy. Recommendations are given on how to eliminate financial risks through financial risks.

Keywords: financial technology, fintech, financial risks, digital economy, automation.

Kirish. So'nggi yillarda jadal bilan butun jahonda raqamli texnologiyalar rivojlanib bormoqda. Raqamli texnologiyalar rivojlanishi esa raqamli iqtisodiyot rivoji uchun ulkan hissa qo'shmoqda. Axborot texnologiyalarining rivojlanishi tufayli ko'pgina mamlakatlarning moliya va pul tizimi o'zgarib boshladi. Masalan, naqd to'lovlardan naqd pulsiz onlayn to'lovlarga faol o'tish; banklar yoki mikromoliya tashkilotlari tomonidan berilgan kreditlardan onlayn platformalar orqali boshqa jismoniy shaxslardan qarz olishga qadar. Moliyaviy texnologiyalarining rivojlanishi moliyaviy bozorlarda paydo bo'ladigan turli moliyaviy risklarni bartaraf etish uchun qo'l kelmoqda. Moliyaviy texnologiyalar orqali moliyaviy risklarni boshqarishning dolzarbligi, moliyaviy tizimlarni ko'paytirish va moliyaviy axborotlar bilan ishlashning ishonchliligini ta'minlashni talab qiladi. Bundan tashqari, texnologik vositalarni qo'llab-quvvatlash, ma'lumot xavfsizligi va himoya tizimlarini joriy etish, xodimlar uchun moliyaviy xavfsizlik

ta'limoti o'tkazish va moliyaviy risklarni identifikatsiya qilish va boshqarish jarayonlarini tahlil qilishning juda muhim ekanligini aytilishimiz mumkin.

Mamlakatimizda "Raqamli O'zbekiston — 2030" strategiyasiga muvofiq iqtisodiyot tarmoqlari va hududlarini raqamlashtirish, davlat axborot tizimlari va elektron xizmatlarni joriy etish, shuningdek, raqamli texnologiyalardan keng foydalanishni ta'minlash bo'yicha xalq ta'limi, davlat xizmatlari, sud, moliya va bank tizimida kompleks chora-tadbirlar amalga oshirilmoqda⁷⁵.

Moliyaviy risklarni moliyaviy texnologiyalar orqali bartaraf etish iqtisodiy o'sish va barqarorlikni qo'llab-quvvatlovchi mustahkam, samarali va inklyuziv moliyaviy tizimni rivojlantirish uchun juda muhimdir.

Moliyaviy texnologiyalar (FinTech) moliyaviy dunyoning eng tez rivojlanayotgan sohalaridan biriga aylandi. Blokcheyn va sun'iy intellekt kabi yangi texnologiyalarning rivojlanishi bilan moliya sektori o'z faoliyatini yaxshilash va samaradorlikni oshirish uchun yangi imkoniyatlarga ega bo'lmoqda. Ushbu maqolada biz moliya sohasida qanday yangi texnologiyalar qo'llanilayotgani va moliyaviy risklarni bartaraf etishga qanday ta'sir qilishini ko'rib chiqamiz.

Mavzuga oid adabiyotlar sharhi

Moliyaviy texnologiyalar to'g'risida ko'plab olimlar kitoblar, maqolalar yozishgan, ilmiy ishlar qilishgan.

Roy S. Freedman o'zining "Moliyaviy texnologiyalarga kirish" nomli kitobida tizimlar qanday ishlashini - ular qanday paydo bo'lganini va qanday rivojlanganligini texnologik nuqtai nazardan tushuntirib bergan. Moliyaviy modellar ortidagi mantiqiy asosni ko'rsatish uchun moliyaviy formulalar, baholar va munosabatlarni sodda va tez olish uchun kompyuter algebra tizimlari texnologiyasidan foydalanilgan. Ko'pgina moliyaviy hisob-kitoblar va ma'lumotlar taqdimotini amalga oshiradigan dasturlar C, C++, Java, Visual Basic, MuPAD kompyuter algebra tizimi va AMPL modeli spetsifikatsiyasi tilida, shuningdek, turli XML dialektlarida ko'rsatilgan⁷⁶.

D. Voycik [2] (Wójcik, 2021) fikricha, haqiqiy fintech 21-asrda shakllangan va kichik innovatsion biznesning moliyaviy bozorida bo'sh o'rinlarni egallay boshlagan yoki shakllana boshlagan startap harakatining rivojlanishi bilan bog'liq va muqobil biznes. bank vositalari va moliyaviy aktivlarni boshqarish xizmatlari: uning fikricha, boshlang'ich nuqtani Buyuk Britaniyada Zopa P2P kreditlash xizmati joriy etilgan va dunyodagi birinchi nobank kredit agregatoriga aylangan 2005 yil deb hisoblash mumkin⁷⁷.

T. Puschmann, S. Hoffmann, V. Xmarskiy fintechning mustaqil bozor ishtirokchisi, birinchi navbatda banklar sifatida paydo bo'la olmasligini ta'kidlaydilar. Eng yangi texnologiyalarni joriy etish va ulardan foydalanish

⁷⁵ O'zbekiston Respublikasi Vazirlar Mahkamasining qarori, 15.06.2021 yildagi 373-son

⁷⁶ Roy S.Freedman Introduction to financial technology 2006

⁷⁷Fintech: sanoatning qisqacha tarixi (19.11.2019) [Elektron resurs]. URL: <https://frankrg.com/8732> (kirish sanasi: 07/12/2021, bepul)

hamda yangi davr tendentsiyalarini kuzatish uchun vaqt bor, xususan: raqamli iqtisodiyot va natijada moliyaviy aktivlarni boshqarish operatsiyalari samaradorligining pasayishi bilan bir vaqtda tranzaksiya xarajatlari oshib bormoqda deb ta'kidlaydilar,⁷⁸.

Jiyanova N. o'zining ilmiy ishlarida iste'molchilarga taklif eta oladigan moliyaviy xizmatlar sanoatining nisbatan yosh, ammo tez rivojlanayotgan sohasi arzon narxlarda turli xil moliyaviy xizmatlar ko'rsatish, aholining ilgari kredit, bank va tegishli xizmatlardan foydalana olmagan qatlamlariga xizmatlar taklif qilish, moliyaviy xizmatlarning yangi turlarini yaratish, moliya bozorlarida bozor samaradorligini oshirish kerakligi haqida ta'kidlab o'tgan⁷⁹.

“Moliya bozori va moliyaviy texnologiyalar” darsligida moliyaviy texnologiya - bu moliyaviy muammolarni hal qilish yo'llarini o'ylab topish jarayonidir deb ta'rif berilgan. Umuman olganda, o'z faoliyatidagi boshqa barcha muammolar korxonalarining moliyaviy muammolarida o'z ifodasini topadi. Moliyaviy texnologiyalar moliyaviy xizmatlar va texnologiya sektorlari chorrahasida joylashgan dinamik segmentdir. Unda texnologik startaplar va bozorning yangi ishtirokchilari hozirda an'anaviy moliyaviy xizmatlar sektori tomonidan taqdim etilayotgan mahsulot va xizmatlarga innovatsion yondashuvlarni qo'llashadi. Moliyaviy texnologiyalar segmenti tez rivojlanib, an'anaviy qiymat zanjiridagi narsalarning odatiy tartibini buzadi⁸⁰.

Yuqoridagi olimlar tomonidan olib borilgan tadqiqotlar asosan moliyaviy texnologiyalarning nazariy va uslubiy masalalariga bag'ishlangan bo'lib, ularda moliyaviy texnologiyalar samaradorligini oshirishning faqat ayrim toifalari va yo'nalishlari ko'rib chiqildi. Biroq ularning ishlarida moliyaviy texnologiyalarni takomillashtirish jarayoni va ular orqali moliyaviy risklarni bartaraf etish yo'llari bilan bog'liq real amaliy masalalar ko'rib chiqilmagan.

Tadqiqot metodologiyasi

Ushbu maqolaning metodologiyasida kuzatish, umumlashtirish, guruhlash, qiyosiy tahlil va nazariy izohlash usullari qo'llaniladi. Bundan tashqari, maqolaning ilmiy asosini xalqaro standartlar va me'yoriy hujjatlar, mamlakatimiz olimlari tomonidan olib borilgan tadqiqot ma'lumotlari va xorijiy ilmiy nashrlar tashkil etadi.

Tahlil va natijalar

Moliyaviy texnologiyalari orqali moliyaviy risklarni bartaraf etish uchun moliyaviy risklar va ularning turlari haqida tushunchaga ega bo'lmog'imiz zarur.

Moliyaviy risk deganda moliyaviy bitimlarni amalga oshirish (bankka mablag'larni qo'yish, aksiyalar muomalasi, birja faoliyati va hokazo) chog'ida

⁷⁸ Puschmann T., Hoffmann C. H., Khmarskiy V. (2020). How green fintech can alleviate the impact of climate change—The case of Switzerland Sustainability. (12(24)). 1–28. doi: 10.3390/su122410691.

⁷⁹ Жиянова Н. ФИНАНСОВЫЕ ТЕХНОЛОГИИ И ИХ ВЛИЯНИЕ НА ФИНАНСОВЫЕ РЫНКИ //Economics and Innovative Technologies. – 2022. – Т. 10. – №. 3. – С. 9-17.

⁸⁰ S.Elmirzayev, N.Shavkatov, N.Sherkuziyeva, A.Karimov, D.Abduraximova, S.Omonov Moliya bozori va moliyaviy texnologiyalar: Darslik – T.: « DIADEMA NUR SERVIS » OOO. – 412 b. 2023-yil

vujudga keladigan risklar tushuniladi⁸¹. Moliyaviy risklar - moliyaviy faoliyatni amalga oshirish shartlari noaniq bo'lgan vaziyatda daromad va kapitalni yo'qotish shaklida salbiy moliyaviy oqibatlarining yuzaga kelish ehtimoli. Turli sohalari sohalarda turli moliyaviy risklar paydo bo'lishi mumkin. Risklarni oqilona boshqarish mumkin, ya'ni ma'lum darajada xavfli hodisaning sodir bo'lishini bashorat qilish va xavf darajasiga qarab chora ko'rish imkonini beradigan turli xil choralarni qo'llash.

1-rasm. Moliya risklarning tasniflanishi⁸²

Fintech yoki moliyaviy texnologiya bizning moliyaviy operatsiyalar va xizmatlarni boshqarish uslubimizda inqilob qildi. Biroq, har qanday boshqa soha singari, fintech ham o'ziga xos qiyinchiliklar va muammolarga duch keladi.

Moliyaviy texnologiyalarning asosiy maqsadi⁸³:

- ✓ Moliyaviy xizmatlarning mavjudligi, sifati va turlarini oshirish.
- ✓ Moliyaviy sektordagi risklar va xarajatlarni, shuningdek, iste'molchilar uchun xizmatlar narxini kamaytirish.
- ✓ Moliya bozorida raqobatni rivojlantirishni qo'llab-quvvatlash.
- ✓ Bank jarayonlarining xavfsizligi va barqarorligini ta'minlash.

Moliyaviy texnologiyalar orqali risklarni bartaraf etishda integratsion va innovatsion yondashuvlar, kiber xavfsizlikga e'tibor berish, ma'lumotlar analitikasi va avtomatlashtirilgan jarayonlarni qo'llash kabi yondashuvlar katta ahamiyatga ega. Bu usullar bilan, moliyaviy tashkilotlar risklarni aniqlash, tahlil qilish va ularni minimallashtirishda muvaffaqiyatli bo'lishadi.

Bu texnologiyalar moliyaviy sohasida moliyaviy risklarni kamaytirish va moliyaviy operatsiyalarni ishonchlilik va effektivlik bilan bajarishda yordam berishi mumkin. Yangi texnologiyalardan foydalanish shuningdek, yangiliklarga moslashtirilgan xavfsizlik chora-tadbirlarini amalga oshirishni talab etadi

Moliyaviy texnologiyalar, moliyaviy sohasida innovatsiyalarni amalga oshirish, xizmatlar va operatsiyalarni yaxshilash, ma'lumotlar tahlili va boshqa moliyaviy jarayonlarni rivojlantirish uchun kerak. Quyidagi sabablarga ko'ra moliyaviy texnologiyalarga ehtiyoj bor:

⁸¹ Moliyaviy risklar nazariyasi: O'quv qo'llanma / Sh.Q.Fozilchayev, N.G.,Xidirov; O'zbekiston Respublikasi Oliy va o'rta maxsus ta'lim vazirligi. – T.: “Iqtisod-Moliya”, 2019. - 240 b.

⁸² Moliyaviy risklar nazariyasi: O.,quv qo.,llanma / Sh.Q.Fozilchayev, N.G.,Xidirov; O.,zbekiston Respublikasi Oliy va o.,rta maxsus ta"lim vazirligi. – T.: “Iqtisod-Moliya”, 2019. - 240 b.

⁸³ <https://trends.rbc.ru/trends/industry/618b6f349a794772fa50adf4?from=copy>

✓ Birinchi sababi avtomatlashtirish va avtomatlashtirish. Moliyaviy texnologiyalar, moliyaviy operatsiyalarni avtomatlashtirish yoki avtomatlashtirish yordamida ishni osonlashtiradi. Bu jarayonlarning avtomatlashtirilishi moliyaviy institutlar uchun vaqt va resurslarni tejashda yordam beradi.

✓ Ikkinchi sababi ma'lumotlar tahlili. Moliyaviy sohada yetarli ma'lumotlar mavjud bo'lishi va ularni tahlil qilish, tendentsiyalarni aniqlash, risklarni oldini olish va strategik qarorlar qabul qilishda yordam beradi.

✓ Uchinchi sababi xavfsizlik. Moliyaviy texnologiyalar, xavfsizlik sohasida yangiliklarni taklif etadi va moliyaviy operatsiyalarni hofizalashning yuqori darajada bo'lishini ta'minlaydi.

✓ To'rtinchi sababi moliyaviy innovatsiyalar. Moliyaviy texnologiyalar, yangi xizmatlar va mahsulotlarni rivojlantirish va taklif etishda yordam beradi. Bu, moliyaviy sohaning rivojlantirilishiga yordam beradi va iste'molchilarga qulaylik yaratadi.

✓ Beshinchi sababi ishonchlilik va ishonchli hisob-kitob Moliyaviy texnologiyalar, moliyaviy operatsiyalarni ishonchli tarzda bajarish, moliyaviy risklarni tahlil qilish va ishonchlilikni oshirish uchun yordam beradi.

✓ Oltinchi sababi mobil ilovalar. Moliyaviy texnologiyalar, mobil ilovalar orqali mijozlarga moliyaviy xizmatlarni tezroq va qulayroq taklif etishga imkon beradi.

Fintechlardan foydalanish qanchalar samarador bo'lmasin, ulardan foydalanishda turli xil muammolarga duch kelish mumkin.

Birinchi, tartibga solish muammolari. Fintech kompaniyalari ko'pincha yuqori darajada tartibga solinadigan muhitda ishlaydi, bu mamlakatdan mamlakatga sezilarli darajada farq qilishi mumkin. Ushbu qoidalarga rioya qilish va ularga rioya qilish fintech startaplari uchun katta muammo bo'lishi mumkin, ayniqsa ular xalqaro miqyosda kengayib boradi.

Ikkinchi, kiberxavfsizlik risklari. Fintech kompaniyalari nozik moliyaviy ma'lumotlar bilan shug'ullanadi va bu ularni kiberjinoyatchilar uchun jozibador maqsadlarga aylantiradi. Mijozlar ma'lumotlari va tranzaksiyalarini himoya qilish uchun mustahkam kiberxavfsizlik choralari ta'minlash juda muhim, ammo bu doimiy ravishda rivojlanib borayotgan kiber tahdidlarning oldini olish uchun doimiy kurash bo'lishi mumkin.

Uchinchi, mijozlarning ishonchi va qabul qilinishi. Moliya sanoatida ishonch muhim va fintech kompaniyalari yangi, notanish moliyaviy xizmatlardan ehtiyot bo'lishlari mumkin bo'lgan mijozlar bilan ishonchni mustahkamlashda ko'pincha qiyinchiliklarga duch kelishadi. Ushbu shubhani bartaraf etish va fintech mahsulotlari va xizmatlarini keng qo'llashni rag'batlantirish muhim to'siq bo'lishi mumkin.

To'rtinchi, eski tizimlar integratsiyasi. Ko'pgina an'anaviy moliya institutlari zamonaviy fintech yechimlari bilan osonlikcha integratsiyalashuvi mumkin bo'lmagan eski tizimlarda ishlaydi. Fintech kompaniyalari ushbu

muassasalar bilan hamkorlik qilish yoki ularga xizmat ko'rsatishda qiyinchiliklarga duch kelishi mumkin, bu esa ulardan bo'shliqni bartaraf etishning innovatsion usullarini topishni talab qiladi.

Beshinchidan, Fintech startaplari ko'pincha o'z operatsiyalarini kengaytirish va vaqt o'tishi bilan barqaror o'sishni ta'minlash muammosiga duch kelishadi. Moliyaviy barqarorlik va rentabellikni ta'minlagan holda tez kengayishni boshqarish fintech kompaniyalari uchun nozik muvozanatlash harakati bo'lishi mumkin.

Oltinchidan, ma'lumotlar maxfiyligi va etikasi bo'yicha fintech kompaniyalari shaxsiylashtirilgan xizmatlarni taqdim etish uchun katta hajmdagi mijozlar ma'lumotlarini to'plash va tahlil qilish bilan birga, ular ma'lumotlar maxfiyligiga oid murakkab qoidalar va axloqiy mulohazalarni ko'rib chiqishlari kerak. Ma'lumotlarning mas'uliyatli va axloqiy tarzda ishlanishini ta'minlash mijozlar ishonchini va tartibga solish talablariga rioya qilishni ta'minlash uchun juda muhimdir.

Yetinchidan, raqobat va bozor to'yinganligi. Fintech sanoati yuqori raqobatbardosh, bozorga yangi startaplar muntazam kirib boradi. Fintech kompaniyalari o'zlarini raqobatchilardan ajratib turishlari va dolzarb bo'lib qolish va bozor ulushini egallash uchun doimiy ravishda innovatsiyalar qilishlari kerak.

Ushbu muammolarni hal qilish me'yoriy hujjatlarga muvofiqlik, innovatsion texnologiya yechimlari, kuchli kiberxavfsizlik choralari, samarali risklarni boshqarish va mijozlarga yo'naltirilgan yondashuvni talab qiladi. Ushbu qiyinchiliklarni muvaffaqiyatli hal qila oladigan fintech kompaniyalari moliya sanoatini buzishga va moliyaviy xizmatlarni etkazib berish va ulardan foydalanish usullarini mazmunli o'zgartirishga yordam beradi.

Moliyaviy texnologiyalar (FinTech) moliyaviy sohasida innovatsion yechimlarni taklif etadi va moliyaviy xizmatlarni osonlashtiradi. Bu texnologiyalar orqali moliyaviy tizimlar boyicha xizmatlarni yaxshilaydi, texnikaviy texnologiyalar va ma'lumotlar analitikasi yordamida moliyaviy jarayonlarni boshqarish imkoniyatini oshiradi va moliyaviy sohani rivojlantiradi.

Xulosa va takliflar.

Moliyaviy texnologiyalar, moliyaviy institutsiyalar va korxonalariga moliyaviy risklarni boshqarishda katta yordam beradi. Bu texnologiyalar tahlil qilish, monitoring qilish, ma'lumotlar analizi, avtomatlashtirilgan qaror qabul qilish va boshqa moliyaviy jarayonlarni boshqarish imkoniyatlarini ta'minlaydi. Quyidagi xulosa va takliflar moliyaviy texnologiyalardan foydalanishda muhimdir.

Moliyaviy texnologiyalar (fintech) orqali risklarni bartaraf etish uchun quyidagi usullarni kiritishingiz mumkin:

1. Avvalgi ma'lumotlar analiziga asoslangan tahminlardan foydalanish. Moliyaviy texnologiyalar ma'lumotlar analizini o'rganish va ma'lumotlar ustida tahminlar qilishga imkon beradi. Bu, potentsial risklarni avvaldan aniqlash va ularni oldini olishga yordam beradi.

2. Ma'lumotlar analitikasi va monitoring. Ma'lumotlar analitikasi va monitoring texnologiyalari yordamida tashkilotlar o'zlarining operatsiyalarini va tranzaksiyalarini tahlil qilishlari, anomalialarni aniqlashlari va potentsial risklarni oldini oladilar.

3. Avtomatlashtirilgan risk boshqarish. Avtomatlashtirilgan risk boshqarish vositalari yordamida, moliyaviy tashkilotlar risklarni avtomatik ravishda aniqlash, baholash va boshqarishlari mumkin bo'ladi. Bu, risklarga tezroq reaksiya ko'rsatish va zararlarini minimalizatsiya qilishga yordam beradi.

4. Qo'llab-quvvatlash tizimlari. Moliyaviy texnologiyalar orqali risklarni bartaraf etishda, kiber xavfsizlikni ta'minlash va ma'lumotlarni himoya qilish uchun kuchli qo'llab-quvvatlash tizimlaridan foydalanish juda muhimdir.

5. Tashqi taqdimotlar bilan ishbilarmonlik. Tashqi taqdimotlar va shaxsiy ma'lumotlarni himoya qilish xizmatlari bilan hamkorlik qilish orqali, moliyaviy tashkilotlar o'zlarining xavfsizlik tizimlarini kuchaytirish va risklarni kamaytirishlari mumkin.

6. Ma'lumotlarni himoyalash va shaxsiylik. Foydalanuvchilarning shaxsiy ma'lumotlarini himoya qilish, ma'lumotlarni shifrlash va ma'lumotlar etikasiga rioya qilish moliyaviy texnologiyalar orqali risklarni kamaytirishda muhim ahamiyatga ega.

7. Regulyatorlik va sharoitli rivojlanish. Moliyaviy texnologiyalar sohasida faoliyat ko'rsatayotgan tashkilotlar uchun, qonun hujjatlari va regulyatorlik talablariga rioya qilish zarur bo'ladi. Moliyaviy texnologiyalar sohasidagi yangiliklarga va o'zgarishlarga mos keluvchi rivojlanish strategiyalarini amalga oshirish muhimdir.

Moliyaviy texnologiyalar orqali moliyaviy risklarni bartaraf etish uchun quyidagi texnologiyalardan foydalanish mumkin:

➤ Ma'lumotlar analitikasi va ma'lumotlar modellash - bu texnologiyalar moliyaviy sohasidagi ma'lumotlarni tahlil qilish, tendentsiyalarni aniqlash va moliyaviy risklarni oldini olish uchun yordam beradi.

➤ Ma'lumotlar xavfsizligi. Moliyaviy ma'lumotlar xavfsizligi ko'p muhimdir. Shuningdek, blockchain texnologiyasi moliyaviy operatsiyalarni xavfsizlik va ishonchlik bilan bajarish imkonini yaratadi.

➤ Moliyaviy robotlar (Robo-advisors) - Robotlar moliyaviy maslahatchilik xizmatlarini taklif etish orqali investitsiyalar va moliyaviy qarzlarni boshqarishda yordam beradi.

➤ Biometrik tasdiqlash - Biometrik tasdiqlash texnologiyalari moliyaviy platformalarda ishonchli identifikatsiya va autentifikatsiya uchun ishlatiladi.

➤ Machine learning va AI - Sun'iy intellekt va mashina o'rganish texnologiyalari moliyaviy sohasida moliyaviy risklar va tartibotni boshqarishda yordam beradi.

Moliyaviy texnologiyalar, moliyaviy sohaning yanada rivojlantirilishiga va moliyaviy jarayonlarni yaxshilashga yordam beradi. Bu texnologiyalardan foydalanish, moliyaviy tizimlarning samaradorligini oshirish, moliyaviy

xizmatlar va mahsulotlarni yaxshilash, moliyaviy risklarni kamaytirish va mijozlarga yuqori sifatli xizmat ko'rsatishga yordam beradi.

RESEARCH OF SOFT STARTING SYSTEMS OF AN INDUCTION MOTOR WITH AN INDUCTION RHEOSTAT IN FAN MECHANISMS

Annotation. This article provides information on the use and control of an adjustable asynchronous electric drive with an induction rheostat. Theoretical calculations and study of motor starting modes for various asynchronous electric drive schemes are presented.

Keywords. Adjustable electric drive, asynchronous motor, induction rheostat, control systems, speed control, control characteristics, mechanical characteristics.

Regulating the rotation speed of the electric drive of fan mechanisms is a rather complex electromechanical system, including elements (thyristors, IR, etc.) with different laws of parameter change. Satisfying certain requirements with an electric drive is associated with changing the parameters (usually electrical and mechanical) of these elements as a function of time, rotation speed and other regulatory parameters of the system. Therefore, the justified use of an adjustable electric drive requires studying its operation not only in stationary modes, but also in dynamic ones.

Start-up processes are integral elements of the operating cycle of any electric drive. To take into account the influence of start-up processes on the operating mode of the production mechanism, it is necessary to know their duration and the nature of their occurrence.

One of the options for the starting circuit is a fairly simple circuit with a frequency-dependent induction rheostat (IR) connected to the rotor circuit [1-8]. An induction rheostat (IR) is a three-phase a device consisting of a massive magnetic circuit and phase windings. There are different designs of the magnetic circuit of induction resistances operating in starting mode at a rotor current frequency of 50 to 4-5 Hz, with the most common design containing three hollow tubular rods connected by a yoke. Due to the surface effect that determines electromagnetic processes in massive ferromagnetic bodies, the wall thickness of the tubular magnetic circuit is about 10 mm [1-4]. The winding is located on tubular rods and is usually single-layer. The principle of induction resistance is based on the phenomenon of absorption of electromagnetic energy by a massive magnetic circuit and its conversion into thermal energy. The higher the frequency of the current flowing through the windings of the IR, the higher the power absorbed by the magnetic circuit, which determines the electrical parameters of the induction resistance. The nature of the change in frequency and current magnitude in the IR windings determines the value of the complex active-

inductive resistance of this device and affects the characteristics of the electric motor [9-11].

The starting characteristics of an electric drive are closely related to their operating characteristics. In the developed electric drives, with increasing resistance IR, the starting current decreases to the value $I_{\pi} = I_{\pi}$ and at the same time the starting torque M_{π} increases compared to the rated torque M_{π} to a certain value $[r']_{\pi}(\text{irr}(c)); [x']_{\pi}(\text{irr}(c))$. The next increase in $[r']_{\pi}(\text{irr}(c)); [x']_{\pi}(\text{irr}(c))$ leads to a decrease in M_{π} compared to M_{π} , but does not play an important role during startup pneumatic conveyor, because the nature of the load: $M_{\pi}(C) \propto n^2$.

With thyristor-induction-rheostat control of the electric drive of a pneumatic conveyor, of particular practical interest is the determination of starting characteristics for the cases: переменных U , фиксированных $r'_{\text{ирр}}; x'_{\text{ирр}}$;

variables $[r']_{\pi}(\text{irr}); [x']_{\pi}(\text{irr})$, fixed U ;

variables $[r']_{\pi}(\text{irc}); [x']_{\pi}(\text{irc})$, $[r']_{\pi}(\text{irr}); [x']_{\pi}(\text{irr})$.

In the first case, on the stator side, the voltage is regulated using a thyristor regulator at certain values of the IR resistance in the rotor circuit. As U decreases, the starting current of the motor also decreases, since in this case

$$I_{\pi} = U / \sqrt{((r_1 + [r']_{\pi}(\text{irr}))^2 + (x_1 + [x']_{\pi}(\text{irr}))^2)} \quad (1.1)$$

For this case we obtain the expression for the starting torque

$$M_{\pi} = (m_1) U_1^2 ([r']_{\pi}(\text{irr})) / (\omega_o [(r_1 + [r']_{\pi}(\text{irr}))^2 + (x_1 + [x']_{\pi}(\text{irr}))^2]) \quad (1.2)$$

Let us consider the case of determining the starting characteristics for the value of the thyristor control angle α at constant values of the active and inductive resistance of the rotor. In Fig. 1.1. the dependences $I_{\pi}(\alpha), M_{\pi}(\alpha)$ are shown. Solid lines indicate cases for $\delta_2 = 0$, and dotted lines indicate cases for $\delta_2 = 2$.

It is clear from the curves that by increasing or decreasing the angle α in the range $0 \leq \alpha \leq 180^\circ$, you can smoothly adjust the values of starting currents and torques from maximum to zero, i.e. By changing α you can smoothly start and stop the engine.

In the second case, the resistance IR is adjusted in the rotor circuit. The values of starting current I_{π} and starting torque M_{π} are determined by formula 1.1 and 1.2.

The best starting characteristics are obtained by reducing the voltage at the stator terminals and at the same time increasing the IR resistance in the wound rotor circuit. In Fig. 1.3. a;b the dependences of the starting torque and starting currents are given for various U_d and δ_2 .

Рис. 1.1

Рис. 1.2

a)

b)

picture.1.4

In picture. 1.2. the dependences of the starting torque and starting currents are given at $\delta_1=0...10$; $\delta_2=2$

As you can see, when changing $[r^{\wedge}]_{irs}$, $[x^{\wedge}]_{(irs)}$ with the help of thyristors for different resistances of the stator circuit, it becomes possible to regulate the starting torques of the engine. Maximum increase in $M_{(p)}$ and $I_{(p)}$ at $\delta_1=0$; $\delta_2=0$.

The curves show that optimal values of $[r^{\wedge}]_{irr}$ remain in the rotor chain; $[x^{\wedge}]_{irr} = \text{const}$ and using a thyristor controller by changing the values

of ω_{irs} ; ω_{irs} you can adjust the values of $M(p)$ and $I(p)$ in a wide range.

In Fig. 1.4 a; b; the dependences $M(\pi)$ and $I(\pi)$ are shown for different values of $\delta(1)$ [; $\delta(2)$]. From the curves it is clear that from $\delta(1)$ [and $\delta(2)$] the starting current and starting torque are regulated in a wide range. In this case, a non-contact method ensures a smooth start, but, however, the method leads to complication of the electrical circuits of the electric drive.

The paper discusses the implementation of a soft start of an asynchronous electric drive with an induction rheostat connected to the rotor circuit. Which makes it possible to limit the starting current at the moment of starting, and as a result, control the starting torque of the electric motor. Smooth acceleration with a given starting torque is ensured. However, for electric drive systems that require speed control, an induction rheostat is more suitable as a frequency-parametric device.

TRANSPORT VOSITALARINING VAZNINI AVTOMATIK NAZORAT STATSIONAR PUNKTI

Annotatsiya. Ushbu maqolada davlat chegaralari orqali o'tkazish punktlarida va O'zbekiston Respublikasining avtomobil yo'llari xorijiy va milliy transport vositalarining vazn va xajm parametrlari nazoratining asosiy maqsadi transport vositalarining avtomobil yo'llari va yo'l inshootlarining tamirlararo muddatlarigacha buzilishining oldini olish hamda yo'l xarakati xavfsizligini kuchaytirishni taminlashdan ibotat.

Kalit so'zlar: Suniy inshootlar, transport vositalari, transport ekspulatatatsiyasi, transport kompleksi, rekonstruksiya, statsionar punktlar.

STATIONARY POINT OF AUTOMATIC WEIGHT CONTROL OF TRANSPORTATION VEHICLES

Abstract. In this article, the main purpose of the control of weight and volume parameters of foreign and national vehicles at the points of transfer through state borders and highways of the Republic of Uzbekistan is to prevent the damage of vehicles to highways and road structures up to the inter-railway period and road consists of ensuring the strengthening of the security of movement.

Key words: Artificial constructions, vehicles, transport exploitation, transport complex, reconstruction, stationary points.

Yo'l harakati xavfsizligini avtomobiy yo'llari va suniy inshootlarning saqlanishi taminlash maqsadida katta hajmli va og'ir vazmli transport vositalari xarakatlanishi yo'nalishini tanlashda avtomobil yo'llarining transport ekspulatatatsiya xolati va yuk ko'tarish qobiliyati taklif qilinayotgan qatnov yo'lidagi suniy inshootlarning yuk ko'tarish qobiliyati va parametrlarining baholanishi hamda yo'l harakati intinsivligi inobatga olinadi.

Aynan yuk va yo'lovchi tashishni tashkil etishda xavfsizlikni ta'minlash, shuningdek, yo'l tarmog'ini saqlash va yo'l harakati qatnashchilari uchun iqtisodiy qulay muhit yaratish.

O'zbekiston Respublikasida avtomobil yo'llari tarmog'ini saqlashga katta moddiy, moliyaviy va texnik resurslar sarflanmoqda. Og'ir avtomashinalar har yili davlat yo'llariga zarar yetkazadi, shuning uchun yo'l qoplamalarini tiklash uchun milliardlab so'm mablag' talab etiladi. Ushbu xarajatlardan foydalanish samaradorligini oshirish muammosi mamlakatni avtomobillashtirish jarayonini boshqarish, ya'ni butun transport kompleksini va uning alohida quyi tizimlarini, shu jumladan yo'l tarmog'ini rivojlantirish va takomillashtirish nuqtai nazaridan tobora muhim ahamiyat kasb etmoqda.

Jamiyatni avtomobillashtirish sur'atlaridan avtomobil yo'llari tarmog'ini rivojlantirishda sezilarli orqada qolish mavjud. Og'ir yuklarni tashish hajmi yuqori sur'atlarda o'sib bormoqda, bu esa, mos ravishda, O'zbekiston Respublikasi avtomobil yo'llari tarmog'idagi yuklarning oshishiga olib keladi. Avtotransport vositalarining yuk ko'tarish qobiliyatining o'sishi bilan bir tomondan, yuk tashish xarajatlari kamaysa, ikkinchi tomondan, yo'l tarmog'ini qurish, rekonstruksiya qilish va ta'mirlash xarajatlari ortib bormoqda.

Yo'lning qatnov qismi va yo'l chetlari yo'l qoplamasining eskirishi va buzilishiga ko'rsatkichlari ko'pchilik umumiy foydalanishdagi yo'llarda sezilarli o'sish tendentsiyasiga ega bo'lgan yuk tashuvchi transport vositalarining ruxsat etilgan o'qiga yuklanishi omili sezilarli ta'sir ko'rsatadi.

Shu bilan birga, qatnov qismi qoplamasining ekvivalent eskirish koeffitsienti o'qdagi yukga nisbatan 6 dan 10 tonnagacha 2,9 baravarga, 10 dan 13 tonnagacha esa 6 baravarga oshadi, bu esayo'llarning intensiv muddatidan oldin eskirishiga olib keladi. va ularni ta'mirlash uchun katta mablag' talab qiladi. Bundan tashqari, O'zbekiston Respublikasi hududining salmoqliqismida iqlim va ob-havo sharoitlarining o'ziga xosligi avtomobil yo'llarida har yili mavsumiy vaqtinchalik cheklovlar joriy etish zaruratini keltirib chiqarmoqda.

Hozirgi vaqtda O'zbekiston Respublikasida yuk tashuvchi transport vositalarini ko'rikdan o'tkazish imkonini beradigan va avtomobil yo'llariga yetkazilgan zararining o'rnini qoplash uchun mablag' undirilishi nazarda tutilmagan avtotransport vositalarining og'irlik va o'lchovlarini nazorat qilish tizimi mavjud emas. Yo'llarda og'ir yuk avtomobillarining harakatlanishi yo'l harakati xavfsizligini ta'minlash, barcha yo'l harakati qatnashchilarining qulay harakatlanishi uchun sharoit yaratish kabi dolzarb vazifalarni hal qilishni taqozo etadi. Yo'l qoplamalarining xizmat qilish muddatini qisqartirishning oldini olish va yo'l harakati xavfsizligini ta'minlash maqsadida qonunchilik va me'yoriy hujjatlar bilan belgilangan:

O'zbekiston Respublikasi Vazirlar Mahkamasining 2020-yil 28-maydagi "Transport vositalarining og'irlik va hajm parametrlari ustidan nazoratni joriy etish chora-tadbirlari to'g'risida"gi 337-son qarori;

O‘zbekiston Respublikasi Prezidentining 2022-yil 12-iyuldagi “2022-2026-yillarda amalga oshirilishi rejalashtirilgan “Xavfsiz va ravon yo‘l” umummilliy dasturini tasdiqlash to‘g‘risida”gi PQ-316-son qarori.Transport vositalarining og‘irligi va umumiy parametrlarini nazorat qilish va cheklash ko‘plab mamlakatlarda amalga oshirilmoqda.

Bularning barchasi yuk tashuvchi transport vositalarining og‘irlik va o‘lchovlarini nazorat qilish tizimida ilmiy izlanishlar zarurligini ko‘rsatadi.

O‘zbekiston hududida avtomobil yo‘llari tarmog‘ini saqlash va avtomobil transportining xavfsiz harakatlanishini ta‘minlash, avtomobil yo‘llarining ta‘mirlararo muddatlargacha buzilishining oldini olish maqsadida Vazirlar Mahkamasi 28.05.2020 yilda «Transport vositalarining vazn va hajm parametrlarini nazorat qilishni joriy etish chora-tadbirlari to‘g‘risida»gi 337-son qarorni qabul qildi.Transport vositalarining vazn va hajm parametrlarini nazorat qilish tartibi to‘g‘risidagi nizam;

Katta hajmli va og‘ir vaznli transport vositalarining yo‘nalish bo‘yicha harakatlanishidan oldin avtomobil yo‘llarini o‘rganish tartibi to‘g‘risidagi nizam Transport vazirligi huzuridagi Avtomobil yo‘llari qo‘mitasi transport vositalarining vazn va hajm parametrlarini nazorat qilish punktlarini loyihalashtirish, qurish, ta‘mirlash, jihozlash maxsus texnika xarid qilish va saqlash bo‘yicha buyurtmachi hisoblanadi.

Moliyalashtirish Qo‘mita faoliyatini rivojlantirish va qo‘llab-quvvatlash jamg‘armasi mablag‘lari hamda qonun hujjatlarida taqiqlanmagan boshqa manbalar hisobidan amalga oshiriladi. Qo‘mita xalqaro amaliyotdan kelib chiqib xorijiy yuk avtotransport vositalarining respublika avtomobil yo‘llari bo‘ylab o‘tishi kilometrini yoki vaqtini hisob-kitob qilish tartibini belgilaydi. Shuningdek buning uchun haq undirish bo‘yicha texnik-iqtisodiy hisob-kitoblarni ishlab chiqadi.

Katta hajmli va og'ir vaznli yuklarni avtomobil transportida tashishda harakat xavfsizligini ta'minlash qoidalariga

Uzun o'lchamli transport vositasi belgisi

Ortiqcha yuklangan yuk mashinalari muammosini ko'rib chiqish va tahlil qilish va xorijiy mamlakatlarning vazni va o'lchamlari nazorati

Yuk mashinalari tarozilarini avtomatlashtirish asta-sekin katta transport oqimiga ega bo'lgan yirik korxonalarining vakolati bo'lishni to'xtatadi va kichik va

o'rta sanoatda tobora ko'proq foydalanilmoqda. Bunday texnik echimlarning o'ziga xos xususiyati shundaki, ular avtomatlashtirilgan boshqaruv tizimlari, video kuzatuv, axborot tizimlari va kirishni boshqarish tizimlari texnologiyalari kesishgan joyda joylashganligi sababli, hatto tajribali muhandis uchun ham bunday vazifani bajarish oson emas. Shu sababli, ushbu maqolada men tarozilarni avtomatlashtirish bo'yicha texnik echimlarni ishlab chiqishning umumiy metodologiyasi, shuningdek, bunday loyihalarni amalga oshirishning ayrim jihatlari bilan bo'lishmoqchiman. Bu yuk avtomobillari tarozida tortish jarayonini optimallashtirish vazifasi turgan korxonalar mutaxassislariga ushbu vazifaga yanada tizimli va kompleks yondashishga yordam beradi.

Quyidagi muammolarni oldini olish uchun avtomobil tarozi tortish tartibi:

➤ imkoniyatlar va'da qilish oshi- tomoni operator tarozilar, ayniqsa tarozi ko'rsatkichlarini yozib olishda "ostida qalam";

➤ imkoniyatlar suiiste'mol qilish jo'natish paytida xodimlardan ke yoki qabul qilish yuk;

➤ hujjatlarning etishmasligi tortish jarayonining raqamli shaklida tikuvchilik va, natijada, murakkab Yangiliklar ma'lumotnoma talab ish bilan kontragentlar;

➤ jarayon uchun ortiqcha mehnat xarajatlari yuklar yoki qabul qilish tovarlar;

➤ o'tkazish qobiliyatining etarli emasligi xususiyatlari tarozilar, nima xarakterli uchun mavsum bilan bog'liq korxonalar - sikllar (qishloq xo'jaligi Va boshqalar);

➤ tartibsiz jarayon harakat - zheniya transport orqali tarozilar.

➤ Shuningdek bildirmoq holatlar, Qachon avtomatlashtirish tarozilar yoki ortiqcha

➤ ustida, yoki oz amal qiladi:

orqali tarozilar ketadi Juda kichik qatnov avtomobillar;

ahamiyatsiz narx oshitomoni operator;

➤ tarozilar portativ (pastki qatlam) yoki eksenel statik.

Shunday qilib, transpotrlarni vaznini va hajm parametrlarini nazorat qilish quyidagi statsionar punkt yordamida amalga oshirilishi mumkin,

1-rasm: “Automarshall Weigh” tizimidan foydalangan holda vazn nazorat qilish uchastkasining diagrammasiga misol: 1 - “Automarshall.Weigh” dasturiga ega kompyuter; 2 - “Avtomarshal Weigh” operator xonasi; 3- tanib oluvchi videokameralar; 4 - svetofor; 5 - LED yoritgichlar; 6 - tarozida transport vositasining holatini kuzatish uchun sensorlar; 7 - to'siqlar; 8 - avtomobil kuzovidagi videokamera.

Vazn va hajm parametrlari nazorati punktlari uch xil bo‘ladi: statsionar; ko‘chma; avtomatlashtirilgan (foto va video suratga olish funksiyalariga ega avtomatlashtirilgan tarzda ishlovchi maxsus vositalardan foydalanuvchi nazorat punkti).

Xulosa: Vazn va hajm parametrlari nazoratining asosiy maqsadi transport vositalarining avtomobil yo‘llari va yo‘l inshootlarining ta‘mirlararo muddatlarigacha buzilishining oldini olish hamda yo‘l harakati xavfsizligini kuchaytirishni ta‘minlashdan iborat.

Haydovchilarning nazorat punktida yo‘qolgan vaqti tekshiruv uchun kelgan og‘ir transport vositalarining hajmiga bog‘liq. U qanchalik katta bo‘lsa, stantsiya bo‘sh bo‘lmagan vaqt davomida yo‘qotilgan vaqt shunchalik yuqori bo‘ladi. Ba‘zan, transport vositasi ruxsat etilgan tashish qobiliyatiga qarab yuklangan bo‘lsa ham, o‘qdagi yuk qonuniy chegaradan oshib ketdi. Nizomning ijrosini ta‘minlashda nazorat punktlarining samaradorligi minimal edi, bu mas‘ul inspektorning shaxsiy fikriga bog‘liq edi (ortiqcha yukni nazorat qilish bardoshliligi doimiy emas, u inspektordan inspektorga farq qiladi, hatto reglament hech qanday tolerantlikka yo‘l qo‘ymasa ham).

Foydalanilgan adabiyotlar:

1.O‘zbekiston Respublikasi Vazirlar Mahkamasining 2020-yil maydagi “Transport vositalarining og‘irlik va hajm parametrlari ustidan nazoratni joriy etish chora-tadbirlari to‘g‘risida”gi 337-son qarori;

2. O'zbekiston Respublikasi Prezidentining 2022-yil 12-iyuldagi "2022-2026-yillarda amalga oshirilishi rejalashtirilgan "Xavfsiz va ravon yo'l" umummilliy dasturini tasdiqlash to'g'risida"gi PQ-316-son qarori.

3. O'zbekiston Respublikasi Prezidentining 2022-yil 2-fevraldagi Toshkent shahri jamoat transporti tizimini yanada rivojlantirishga doir qo'shimcha chora-tadbirlar to'g'risidagi PQ-111-sonli Farmoni.

AVTOMOBIL OG'IRLIGINI ANIQLASH USKUNALARI TA'RIFI VA ISHLASH PRINSPI

Annotatsiya. Transport vositalari va ularning yuklarini tortish uchun mo'ljallangan maxsus jihozlar. Ular yuk mashinalari va boshqa transport vositalarining og'irligini maksimal ruxsat etilgan og'irlik qoidalariga rioya qilinishini ta'minlash, shuningdek, tashish xarajatlarini hisoblash, tashilgan material miqdorini aniqlash va ortiqcha yuk tufayli yo'l sirtining buzilishini oldini olish uchun ishlatiladi.

Kalit so'zlar: Suniy inshootlar, transport vositalari, Tenzometr, Masshtabli dizaynlar, statsionar punktlar, raqamli va analog deformatsiya.

DESCRIPTION AND PRINCIPLE OF OPERATION OF VEHICLE WEIGHT DETERMINATION EQUIPMENT

Abstract. Special equipment for weighing transport and court cargo. They ensure that the weight of trucks and other vehicles comply with the rules of the maximum permissible weight, load products, pay for cleaning, clean the road surface due to air freight to clean the transported material.

Key words: Artificial structures, vehicles, Tensometer, Scale designs, stationary points, digital and analog deformation.

Avtomobil transporti qo'llaniladigan deyarli har qanday korxonada yukning massasini aniqlash zarurati mavjud. Hozirgi vaqtda massani aniqlashning yagona ishonchli usuli bu tortishdir.

Yuk mashinalari tarozilarining turlari haqida gapirganda, biz bir nechta narsalarni anglatishimiz mumkin:

- Yuk mashinasi tarozilarini o'rnatish usullari: poydevor, chuqurda, poydevorsiz
- Tarozilarning maqsadi
- Masshtabli dizaynlar

➤ Tarozi turi bo'yicha: elektron yoki mexanik

Yuk mashinalari tarozilari ishlab chiqarish va transport jarayonlarini boshqarish va nazorat qilishning asosiy elementidir. Ular nafaqat aniq o'lchovlarni ta'minlaydi, balki butun korxonada faoliyatini optimallashtirishga yordam beradi.

Yuk mashinalari tarozilari qayerda ishlatiladi?

Yuk mashinalari tarozilari faoliyatning turli sohalarida o'z qo'llanilishini topadi. Katta massalarni aniq tortish qobiliyati va buxgalteriya hisobi va nazorat qilish tizimlari bilan integratsiyalashuvi tufayli ular sanoat, qishloq xo'jaligi, savdo va qurilishda ajralmas vositaga aylandi. Bunday uskunadan foydalanish nafaqat tashilgan yuklarning massasini qayd etish imkonini beradi, balki ma'lumotlarni yig'ish, qayta ishlash va tahlil qilish jarayonini ham soddalashtiradi. Ixtisoslashgan ma'lumotlar bazalarini yaratish, hisobot shakllarini tayyorlash va ularni chop etish mahsulotning hisobini va inventarizatsiyasini boshqarishni sezilarli darajada osonlashtiradi, bu esa korxonaning umumiy unumdorligi va samaradorligini oshirishga yordam beradi.

Dizayn xususiyatlari

Avtotransport vositalarining statik tarozilarining dizayn xususiyatlari ularning o'ziga xos qo'llanilishi va o'lchov aniqligiga qo'yiladigan talablar bilan belgilanadi. Bu tarozilar tenzometrlarga o'rnatilgan yuk qabul qiluvchi platformadan iborat bo'lib, bu yuk mashinalarining og'irligini aniq aniqlash imkonini beradi. Keling, ushbu tarozilarning asosiy tarkibiy qismlari va dizaynini batafsil ko'rib chiqaylik.

1-shakl. Yuk mashinasi tarozilarining sxematik diagrammasi

Yukni qabul qilish platformasi

Yuk mashinalari tarozilarining asosiy elementi yukni qabul qilish platformasi bo'lib, u bitta qattiq konstruktsiya yoki ikkita yarim platforma shaklida tayyorlanishi mumkin. Trek tipidagi shkaladan foydalanilganda,

platforma ikkita alohida yo'ldan iborat bo'lib, ishlatiladigan metall miqdorini kamaytiradi va dizaynni soddalashtiradi. Yarim platformalar modulli bo'lishi mumkin, bir nechta elementlardan iborat bo'lishi mumkin, ularning har biri o'z deformatsiya o'lchagichlar guruhi tomonidan quvvatlanadi. Bu tarozilarning konfiguratsiyasida moslashuvchanlikni ta'minlaydi va ularni tashish va o'rnatishni osonlashtiradi.

O'rnatish va ulash

Yuk mashinasi tarozilarini o'rnatish uchun beton yo'l plitalariga yoki mustahkam poydevorga birlashtirilishi mumkin bo'lgan o'rnatish ramkasi ishlatiladi. Ramka strukturaning barqarorligini va uning xavfsiz joylashishini ta'minlaydi. Yukni qabul qiluvchi platforma modullarini o'rnatish chegaralarini yordamida amalga oshiriladi, bu ham platformaning bo'ylama siljishini oldini olishga xizmat qiladi.

Opsiyonel uskunalar

Yuk mashinalari tarozilari uchun qo'shimcha jihozlar platformaga kirish uchun rampalarni, shafqatsiz modellar va to'siqlar uchun markaziy polni o'z ichiga oladi. Ushbu elementlar tarozilar bilan to'liq ta'minlanishi yoki alohida o'rnatilishi mumkin. Ular tarozidan foydalanishni soddalashtiradi va tortish paytida xavfsizlikni oshiradi.

Shunday qilib, statik tortish tarozilarining dizayni transport vositalarining massasini aniq o'lchashga qodir bo'lgan murakkab va moslashuvchan tizimdir. Bu faoliyatning turli sohalari ehtiyojlarini qondiradigan yuqori ishonchlilik va chidamlilikni ta'minlaydi.

Ishlash printsipi

Avtotransport vositalarining statik tortish tarozilarining ishlash printsipi massa o'lchash jarayonida asosiy elementlar bo'lgan deformatsiya o'lchagichlardan foydalanishga asoslangan. Ushbu qurilmalar avtomobilning og'irligi bilan hosil bo'lgan jismoniy bosimni elektr signaliga aylantiradi. Ushbu jarayon yuqori tortish aniqligini ta'minlaydi va tashilgan yukning og'irligi haqida ishonchli ma'lumotlarni taqdim etadi.

Tenzometr tarozilarining ishlash printsipi

Tenzometrli avtomashinalar tarozilari yuk qabul qilish platformasi ostida o'rnatilgan bir qator tenzometrlar (odatda 4 dan 12 gacha) bilan jihozlangan. Ushbu sensorlar avtomobilning og'irligini oladi va aloqa qutisiga signal uzatadi. Analog tizimlarda barcha yuk xujayralarining signallari ushbu qutiga yig'iladi, shundan so'ng umumiy signal tortish terminaliga uzatiladi. Terminal qabul qilingan ma'lumotlarni qayta ishlaydi va yukning og'irligini ko'rsatadi.

Raqamli va analog deformatsiya o'lchagichlarning xususiyatlari

Shuni ta'kidlash kerakki, raqamli yuk hujayralaridan foydalanganda ma'lumotlarni uzatish jarayoni boshqacha. Bunday tizimlarda signal ulanish qutisida dastlabki yig'indisiz to'g'ridan-to'g'ri terminalga uzatiladi. Bu yuqori o'lchov aniqligini ta'minlaydi va butun tizimning tuzilishini soddalashtiradi.

Birlashma qutisining roli

Birlashma qutisi o'lchov jarayonida muhim rol o'ynaydi, ayniqsa, yuk xujayrasi ko'rsatkichlaridagi nomuvofiqliklar yuk plitasining siljishi yoki sensorning chiqish parametrlaridagi farqlar tufayli yuzaga kelsa. Bunday hollarda quti signal darajasini sozlash va tekislash imkonini beradi, bu esa aniq o'lchovlarni ta'minlaydi.

Statik tortish avtomobil tarozilarining ishlash printsipti mexanik bosimni kuchlanish o'lchagichlar yordamida elektr signaliga aylantirishga asoslangan. Bu avtomobil og'irligi va uning yukini aniq o'lchash imkonini beradi.

O'rnatish usuli bo'yicha yuk mashinalari tarozilarining turlari

O'rnatish usullarini maqolada batafsil muhokama qildik yuk mashinalari tarozilarini o'rnatish imkoniyatlari. Yuk mashinasi tarozilari poydevor va poydevorsiz bo'linadi.

Birinchi turdagi tarozilar uchun, nomidan ko'rinib turibdiki, beton poydevor talab qilinadi. Ushbu parametr tarozilarni bir marta va uzoq vaqt davomida (10-15-20 yil va boshqalar) o'rnatadigan kompaniyalar uchun javob beradi. Poydevor er ustida yoki chuqurda bo'lishi mumkin.

Poydevorsiz yuk mashinalari tarozilari bilan, nomiga qaramay, hamma narsa juda oddiy emas. Metrologiyani kafolatlash uchun tekis, qattiq sirt kerak. Bu holda uskunani o'rnatishning eng keng tarqalgan varianti yo'l plitalarida. Vaqt o'tishi bilan ish joylarini o'zgartiradigan kompaniyalar uchun bu variant afzalroqdir, masalan, quruvchilar, qurilishni tugatgandan so'ng, tarozilarni yangi loyihaga ko'chirish, yo'lchilar yo'l qurilishining borishiga qarab tarozilarni ko'chirish. Bunday hollarda to'liq poydevorni qurish vaqt va pul uchun juda qimmatga tushadi. Plitalar yangi joyda qayta ishlatilishi mumkin.

Ba'zi ishlab chiqaruvchilar to'g'ridan-to'g'ri erga joylashtirilgan tarozilarni taklif qilishadi. Buning uchun ishlab chiqaruvchilar deformatsiya o'lchagichlardan yukni ko'taradigan maxsus ramkadan foydalanadilar. Biroq, bu variantni uzoq vaqt davomida ishonchli deb atash qiyin - tuproq etarlicha qattiq asos emas va vaqt o'tishi bilan cho'kishi mumkin va shu bilan shkala ko'rsatkichlarini buzishi mumkin.

2-shakl. Avtomobil tarozilari turlari.

Yukni qabul qilish platformasi

Yuk mashinalari tarozilarining asosiy elementi yukni qabul qilish platformasi bo'lib, u bitta qattiq konstruktsiya yoki ikkita yarim platforma shaklida tayyorlanishi mumkin. Trek tipidagi shkaladan foydalanilganda, platforma ikkita alohida yo'ldan iborat bo'lib, ishlatiladigan metall miqdorini kamaytiradi va dizaynni soddalashtiradi. Yarim platformalar modulli bo'lishi mumkin, bir nechta elementlardan iborat bo'lishi mumkin, ularning har biri o'z deformatsiya o'lchagichlar guruhi tomonidan quvvatlanadi. Bu tarozilarning konfiguratsiyasida moslashuvchanlikni ta'minlaydi va ularni tashish va o'rnatishni osonlashtiradi.

3-shakl. Mobil va statsionar og'irlik va o'lchamlarni nazorat qilish postlari

Tortish terminali

Tarozilarning o'lchash tizimining asosini platforma ostida o'rnatilgan tenzometrlar tashkil qiladi. Ular yukni transport vositasining og'irligidan sezadilar va uni elektr signaliga aylantiradilar, bu esa tortish terminaliga uzatiladi. Taroz terminali bu signalni qayta ishlaydi va yukning og'irligini ko'rsatadi. Deformatsiya o'lchagichni va terminal modelini tanlash ishlab chiqaruvchiga va o'lchov uchun maxsus talablarga bog'liq.

O'rnatish va ulash

Yuk mashinasi tarozilarini o'rnatish uchun beton yo'l plitalariga yoki mustahkam poydevorga biriktirilishi mumkin bo'lgan o'rnatish ramkasi ishlatiladi. Ramka strukturaning barqarorligini va uning xavfsiz joylashishini ta'minlaydi. Yukni qabul qiluvchi platforma modullarini o'rnatish chegara murvatlari yordamida amalga oshiriladi, bu ham platformaning bo'ylama siljishini oldini olishga xizmat qiladi.

Opsiyonel uskunalar

Yuk mashinalari tarozilari uchun qo'shimcha jihozlar platformaga kirish uchun rampalarni, shafqatsiz modellar uchun markaziy taxta va to'siqlarni o'z ichiga oladi. Ushbu elementlar tarozilar bilan to'liq ta'minlanishi yoki alohida o'rnatilishi mumkin. Ular tarozidan foydalanishni soddalashtiradi va tortish paytida xavfsizlikni oshiradi.

Statik tortish tarozilarining dizayni transport vositalarining massasini aniq o'lchashga qodir bo'lgan murakkab va moslashuvchan tizimdir. Bu faoliyatning turli sohalari ehtiyojlarini qondiradigan yuqori ishonchlilik va chidamlilikni ta'minlaydi.

4-shakl. Avtomatik og'irlik va o'lchamlarni nazorat qilish nuqtasi

Ishlash printsipi

Avtotransport vositalarining statik tortish tarozilarining ishlash printsipi massa o'lchash jarayonida asosiy elementlar bo'lgan deformatsiya

o'lchagichlardan foydalanishga asoslangan. Ushbu qurilmalar avtomobilning og'irligi bilan hosil bo'lgan jismoniy bosimni elektr signaliga aylantiradi. Ushbu jarayon yuqori tortish aniqligini ta'minlaydi va tashilgan yukning og'irligi haqida ishonchli ma'lumotlarni taqdim etadi.

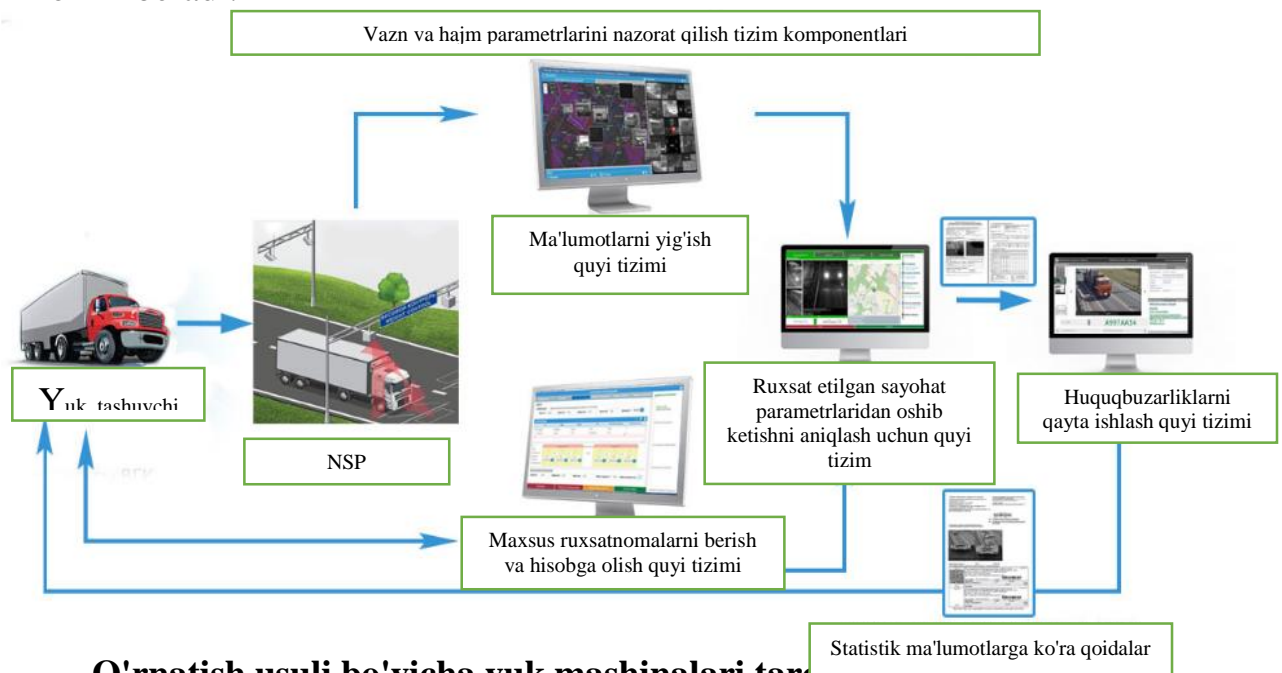

Raqamli va analog deformatsiya o'lchagichlarning xususiyatlari

Shuni ta'kidlash kerakki, raqamli yuk hujayralaridan foydalanganda ma'lumotlarni uzatish jarayoni boshqacha. Bunday tizimlarda signal ulanish qutisida dastlabki yig'indisiz to'g'ridan-to'g'ri terminalga uzatiladi. Bu yuqori o'lchov aniqligini ta'minlaydi va butun tizimning tuzilishini soddalashtiradi.

Birlashma qutisining roli

Birlashma qutisi o'lchov jarayonida muhim rol o'ynaydi, ayniqsa, yuk xujayrasi ko'rsatkichlaridagi nomuvofiqliklar yuk plitasining siljishi yoki sensorning chiqish parametrlaridagi farqlar tufayli yuzaga kelsa. Bunday hollarda quti signal darajasini sozlash va tekislash imkonini beradi, bu esa aniq o'lchovlarni ta'minlaydi.

Shunday qilib, statik tortish avtomobil tarozilarining ishlash printsipti mexanik bosimni kuchlanish o'lchagichlar yordamida elektr signaliga aylantirishga asoslangan. Bu avtomobil og'irligi va uning yukini aniq o'lchash imkonini beradi.

O'rnatish usuli bo'yicha yuk mashinalari tarozilarining turari.

O'rnatish usullarini maqolada batafsil muhokama qildik yuk mashinalari tarozilarini o'rnatish imkoniyatlari. Yuk mashinasi tarozilari po'ydevor va po'ydevorsiz bo'linadi.

Birinchi turdagi tarozilar uchun, nomidan ko'rinib turibdiki, beton po'ydevor talab qilinadi. Ushbu parametr tarozilarni bir marta va uzoq vaqt davomida (10-15-20 yil va boshqalar) o'rnatadigan kompaniyalar uchun javob beradi. Po'ydevor er ustida yoki chuqurda bo'lishi mumkin.

Poydevorsiz yuk mashinalari tarozilari bilan, nomiga qaramay, hamma narsa juda oddiy emas. Metrologiyani kafolatlash uchun tekis, qattiq sirt kerak. Bu holda uskunani o'rnatishning eng keng tarqalgan varianti yo'l plitalarida. Vaqt o'tishi bilan ish joylarini o'zgartiradigan kompaniyalar uchun bu variant afzalroqdir, masalan, quruvchilar, qurilishni tugatgandan so'ng, tarozilarni yangi loyihaga ko'chirish, yo'lchilar yo'l qurilishining borishiga qarab tarozilarni ko'chirish. Bunday hollarda to'liq poydevorni qurish vaqt va pul uchun juda qimmatga tushadi. Plitalar yangi joyda qayta ishlatilishi mumkin.

Ba'zi ishlab chiqaruvchilar to'g'ridan-to'g'ri erga joylashtirilgan tarozilarni taklif qilishadi. Buning uchun ishlab chiqaruvchilar deformatsiya o'lchagichlardan yukni ko'taradigan maxsus ramkadan foydalanadilar. Biroq, bu variantni uzoq vaqt davomida ishonchli deb atash qiyin - tuproq etarlicha qattiq asos emas va vaqt o'tishi bilan cho'kishi mumkin va shu bilan shkala ko'rsatkichlarini buzishi mumkin.

Tarozilarning tortish tamoyiliga asoslangan turlari

Mexanik tarozilarni ishlab chiqarmasligiga qaramay (lekin bu aniq emas), ba'zi korxonalar hali ham bunday agregatlardan foydalanadilar.

Ishlash printsipti - tutqichlar va qarshi og'irliklar tizimi. Dizayn ishonchli - ishlab chiqarilgan kundan boshlab 30 va 40 yil o'tgach, bunday tarozilarni topish hali ham oson. Biroq, hozirgi vaqtda ushbu uskunaning ahamiyati yo'q - uni o'rnatish ancha qiyin va eng muhimi, bu tarozilarni hech qanday tarzda avtomatlashtirish mumkin emas.

Elektron avtomobil tarozilari

Ushbu uskunaning ishlash printsipti deformatsiyalar (siqilish) paytida qarshilikni o'zgartirishdan iborat. Tarozni natijalari imkon qadar aniq. Elektron avtomobil tarozilarini ishlatish mumkin bo'lgan harorat diapazoni juda katta farq qiladi (ba'zi ishlab chiqaruvchilar uchun -60 dan +60 gacha).

Butun dizayn mexanik tarozilarga qaraganda ancha ixchamroq. Va eng muhimi, ushbu uskuna yordamida siz tortish jarayonini avtomatlashtirishingiz mumkin. Elektron avtomobil tarozilari bir nechta tarmoqqa birlashtirib, kompyuterga ulanishi mumkin. Ushbu parametr yirik ishlab chiqarishda tortish mashinalarining buxgalteriya hisobini sezilarli darajada osonlashtiradi. Natijalarni masofadan turib ko'rish mumkin, dastur ma'lumotlarni qayta ishlashdan so'ng darhol barcha hisobotlarni yaratadi.

Xulosa

Yuk tarozilari turli sohalarda, jumladan, sanoat, qishloq xo'jaligi, savdo va qurilishda asosiy ro'l o'ynaydigan yuk og'irligini aniq hisobga olish va nazorat qilishning ajralmas vositasi hisoblanadi. Ular yuk xujayralari printsipti tufayli yuqori aniqlikdagi o'lchovlarni ta'minlovchi poydevor va poydevorsiz modellarni, shuningdek, elektron va mexanik tortish tizimlarini o'z ichiga olgan keng turdagi dizaynlarni taklif qiladi. Ushbu uskuna nafaqat me'yoriy talablarni qondirish va ishlab chiqarish jarayonlarini optimallashtirishga yordam beradi, balki tortish

jarayonini avtomatlashtiradi, bu esa uni yanada samaraliroq va kamroq mehnat talab qiladi.

Foydalanilgan adabiyotlar:

BO‘LAJAK BOSHLANG‘ICH TA‘LIM O‘QITUVCHILARNI TARBIYAVIY ISHLARGA TAYYORLASH KOMPETENSIYALARI

Annotatsiya. Ushbu maqolada bo‘lajak boshlang‘ich ta‘lim o‘qituvchilarini tarbiyaviy ishlarga tayyorlash, o‘quvchilar bilan ishlash mazmuni va ularning asosiy vazifalari va kompetensiyalari ilmiy pedagogik jihatdan asoslangan.

Kalit so‘zlar: Ta‘lim, tarbiya, jamiyat, mezon, strategiya, tafakkur, o‘qituvchi, o‘quvchi, qobiliyat, yoshlar, qadriyat, sog‘lom turmush tarzi, millat, kuch, imkoniyat, ijtimoiy faollik, mas‘uliyat, inson, qadr, jamoa, nufuz.

*Saparboeva D.S.
Head of the "Pedagogy" department
University of Science and Technology*

COMPETENCES FOR PREPARING FUTURE PRIMARY EDUCATION TEACHERS FOR EDUCATIONAL WORK

Annotation. In this article, the preparation of future primary education teachers for educational work, the content of working with students, and their main tasks and competencies are based on scientific pedagogy.

Key words: Education, upbringing, society, criterion, strategy, thinking, teacher, student, ability, youth, value, healthy lifestyle, nation, power, opportunity, social activity, responsibility, person, value, community, influence.

Bo‘lajak boshlang‘ich ta‘lim o‘qituvchisi intellektual jihatdan o‘quvchilarda aqliy qobiliyat, qiziquvchanlik, tasavvur, mustaqil bilim egallashga intilish, ijtimoiy jihatdan kirishimlilik, hazilni tushunish va o‘zi ham hazil qila olish, emotsional jihatdan vazminlik, ajablanish va hayratlanishga oid amaliy mashg‘ulotlar, axborot darslari, davra suhbatlari, individual suhbatlar, konsultatsiyalar, sog‘lom turmush tarzini, munozarali klublarni tashkil etish, innovatsiyalarni yaratish asosida individuallashgan, yangi bilimlarni egallash xususiyatlariga ega bo‘lishi lozim. Ushbu jarayonda ta‘lim sohasida yangi pedagogik texnologiyalar, innovatsiyalar, o‘qitishda yangi metodlar, yangi tashkiliy tuzilmalarni shakllantiradi va ularning birligini ta‘minlaydi. Bo‘lajak boshlang‘ich ta‘lim o‘qituvchilarini tarbiyaviy ishlarga tayyorlashda pedagogik muhitni yaratish, o‘quvchilarning bilimlarini rivojlantirish bo‘yicha tizimli ishlarni amalga oshirish, innovatsion faoliyatga tayyorlash mexanizmlarini optimallashtirish pedagogik imkoniyatlarini kengaytirish, pedagogik

innovatsiyalarni joriy etish va uning samaradorligini baholash asosida takomillashtirishga qaratilgan ilmiy izlanishlarni amalga oshirishda faol ishtirok etadi.

Ushbu jarayonda o'qituvchi sog'lom muhitni yarata olish, o'quvchilar bilan ijobiy muloqotni tashkil etish, turli salbiy psixologik ziddiyatlarni o'z vaqtida anglash va bartaraf etish, pedagogik jarayonlarni metodik jihatdan oqilona tashkil etish, tarbiyaviy faoliyat shakllarini to'g'ri belgilash, metod va vositalarni maqsadga muvofiq tanlay olish, tarbiya metodlarini, vositalarni muvaffaqiyatli qo'llash, axborot muhitida zarur, muhim, kerakli, foydali ma'lumotlarni izlash, yig'ish, qayta ishlash va ulardan maqsadli, o'rinli, samarali foydalanish, pedagogik faoliyatga nisbatan tanqidiy va ijodiy yondashish, o'zining ijodkorlik malakalariga egaligini namoyish eta olish, pedagogik jarayonini takomillashtirish, ta'lim sifatini yaxshilash, tarbiya jarayoninig samaradorligini oshirishga doir yangi g'oyalarni ilgari surish, ularni amaliyotga muvaffaqiyatli tatbiq etish, ta'lim jarayonining barcha ishtirokchilari, jumladan, o'quvchilarni tinglay bilish, ularga ijobiy ta'sir ko'rsata olish, izchil ravishda kasbiy o'sishga erishish, malaka darajasini oshirib borish, kasbiy faoliyatda o'z ichki imkoniyatini namoyon qilish, pedagogik texnologiyalarni o'zlashtirish, zamonaviy vosita, texnika va texnologiyalardan foydalana bilish, ta'lim-tarbiya ishlari bo'yicha tadbirlarni rejalashtirish, takomillashtirish bo'yicha takliflar kiritish, o'z ustida ishlash kasbiy mahoratini takomillashtirib borish, faoliyatga tanqidiy va ijodiy yondashish, ishchanlik qobiliyatini rivojlantirish, salbiy odatlarni bartaraf etish, o'z-o'zini namoyon etishi, ta'lim muhiti-tarbiya jarayonini tashkil etish va boshqarish, ta'lim mazmunini yangilash ishlarini o'rganishlari muhim hisoblanadi.

Bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiya jarayoniga tayyorlashda oila va mahalla hamkorligi kompetensiyasi asosida qiziqarli va doimo yangilanib turuvchi shakl, metod va vositalarini maqsad sari yo'naltirish, ular faoliyatini rejali tashkil etish hamda har tomonlama ta'sir etishda imkoniyat yaratib berish, shuningdek, davlat va nodavlat tashkilotlari bilan hamkorlikda amalga oshirish muhim ahamiyat kasb etadi. Ushbu jarayonda tarbiya izchillilik, uzviylik, ko'rgazmalilik, tadbirlarning yosh va psixologik xususiyatga mosligi, maqsadlarning mushtarakligi, o'z-o'ziga talabchanlik, shakl va metodlaridagi moslik tamoyillarga asoslangan xolda o'quvchilarni hayotga tayyorlash, sog'lom turmush tarzini namunali yo'lga qo'yish maqsadga muvofiq.

Bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiyaviy ishlarga tayyorlashda ularni o'quv faoliyatini sifatli amalga oshirishda iqtidorli yoshlarni aniqlash va ularni kasbga yo'naltirish tizimini takomillashtirish, ta'lim jarayonlarida inovatsion texnologiyalaridan foydalanishda pedagogik mahorat kompetensiyasi asosida o'quvchilarni kelgusi hayotini o'z qo'li bilan qura olishiga ishonirish, ezgu ishlarga rag'batlantirishi, eng muhimi ularni baxtli yashashga o'rgatishga doir ilg'or tajribalarni o'rganishi, hozirgi kunda dunyoda ruy berayotgan ijtimoiy-iqtisodiy o'zgarishlarni o'quvchilar ongi va qalbiga

yetkazishi muhim hisoblanadi. Ushbu jarayonda bo'lajak boshlang'ich ta'lim o'qituvchisining axborot texnologiyalaridan xabardor bo'lishi, o'quvchilarning qobiliyatlari va ehtiyojlariga muvofiq ravishda unumli foydalana olish, tarbiya mavzularini tanlash va o'zgartira olish, har bir tadbir uchun mas'uliyatni his qilish, muammoli vaziyatlar, vazifalarning murakkabligiga e'tibor qaratishda o'quvchilarning bilishiga oid qobiliyatini inobatga olish zarur. Chunki o'quvchilar dars jarayonida shunchaki ma'lumotni o'zlashtirmaydilar, balki yangi bilim olishga kirishadilar. Ushbu jarayonda o'qituvchi va o'quvchi munosabatlari, shaxsi maqsadga muvofiq shakllantirish uchun uyushtirilgan pedagogik jarayon uchun xizmat qiladigan zarur xulq-odoblarni yuzaga keladi. Ushbu jarayonda o'quvchilar hayotida tarbiyaviy ta'sirlar shaxsiy tajribalar va ehtiyojlar namoyon bo'ladi. O'quvchi faoliyatini tashkil etish, ichki kechinmalarini anglash, bahslashish, his qilish, aniq maqsad bilan ishlashda o'qituvchining samimiy munosabati ijobiy samara beradi.

Bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiyaviy ishlarga tayyorlashda millatlararo totuvlik kompetensiyasini amalga oshirish jarayonda millatlarning qadriyatlarini asrab-avaylash, turli millatlarning ajdodlari yaratgan milliy urf-odatlarini jamiyatda keng amalga oshirish, milliy ananalarni rivojlantirish asosida har bir o'quvchida insoniylik, millatparvarlik, mehnatsevarlik singari umuminsoniy madaniyatni shakllantiradi. Har bir millat vakillarining bir-birlarini hurmat qilishi, badiiy adabiyot va san'atga qiziqishlarini kuchaytirish ishlarini olib boradi. Yangi O'zbekistonda barcha millatlarning jipsiligini taminlash, moddiy va ma'naviy hayotlarini farovon qilish masalalariga oid tadbirlar o'tkazish, millat va elatlarning tarixini aks ettiruvchi san'at asarlari haqida o'quvchilarga ma'lumot berishga e'tibor qaratish, O'zbekistonda 130 dan ortiq millat va elatlarning bir oila sifatida totuv, inoq yashayotganligi haqida olib borilayotgan tadbirlar va ularga homiylik qiluvchi tashkilotlarning faoliyati haqidagi ishlar o'quvchilarning bilimlarini rivojlantirish va ma'naviy-axloqiy ta'sir etish, o'z-o'zini xis qilishida ijobiy samara beradi.

Bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiyaviy ishlarga tayyorlashda o'zbek xalqi hayotidan o'rin olgan va jamiyat tomonidan mustahkamlangan odob-axloq kompetensiyasiga amal qilish, jamiyat qonun-qoidalari axloqiy normalarini o'rganishda, tarbiyaviy ishlarni amaliyotga tatbiq etishda "Texnologiya", "Tarbiya" mashg'ulotlarida axloqiy muhit va tarbiyaviy ta'sir etish sinf jamoasida o'tadigan yig'ilishlar, tarbiyaviy soatlar, ma'ruzalar, suhbatlar kabilarda o'quvchilarning doimiy ishtirokini ta'minlash va ularning bilimlarini shakllantirishda individual xususiyatlarini to'liq va aniq hisobga olish, ularni tarbiyalashda mas'uliyatni yuqori darajada amalga oshirish, tarbiyaviy ishlarni tashkil etish, yig'ilish qarorlarini doimiy bajarish, jamoat ishlarida ishtirok etish va nazorat qilib borish kabi vazifalarni amalga oshiradi.

Bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiyaviy ishlarga tayyorlashda o'quvchilar jamoasini tashkil etish kompetensiyasini shakllantirish muhim hisoblanadi. Bunda bo'lajak boshlang'ich ta'lim o'qituvchisining

pedagogik-psixologik tayyorgarligining yuqori darajada bo'lishi bilan birga tarbiyaviy faoliyatni amalga oshirishda ijobiy natijani beradigan shakl va metodlarni tanlashi muhimdir. Bo'lajak boshlang'ich ta'lim o'qituvchisi o'quvchilar sinf jamoasining rivojlanishi va mustahkamlashda yordam berish, ularni bir-biriga yaqinlashtirish, do'stlikni mustahkamlash, psixologik va pedagogik savodxonligi bilan ajralib turadi. Shuning uchun bo'lajak boshlang'ich ta'lim o'qituvchisi tarbiya jarayonining optimal shart-sharoitlarini yaratish, o'quvchi maqsadini tushunish va uning mas'uliyatni yanada yuqori darajaga ko'tarishda ularda munosabat, tashabbuskorlik, tashkilotchilik xususiyatlariga ega bo'lishi muhim o'rin tutadi. Bunda ta'lim-tarbiya ishlarini amalga oshirishda jamoa a'zolarining ishtirok etishlari muhim hisoblanadi:

1. Buning uchun: jamoa hamkorligida tarbiyaviy ishlarni amalga oshirish rejasini tuzish.

2. O'quvchilarning yashash joylarida sport maydonchalari va komplekslari, klublar, axborot resurs markazlari, o'yin maydonchalari, yozgi teatrlar, texnik stansiyalari faoliyatini tashkil qilish.

3. O'quvchilarning qizikishlariga oid to'garaklar tashkil etish, ular bilan birgalikda ekskursiyalar, quvnoqlar va zukkolar kabi musobaqalar salomatlik, bilimlar kuni kabi bayram tadbirlarini o'tkazish asosida jamoani mustahkamlash.

4. Boshlang'ich ta'lim jarayonida jamoa faoliyatida turli tadbirlarni o'tkazish, ularni ijtimoiy aloqalarini kengaytirish va boyitish bilan birga ularda fuqarolik yetukligini shakllantirish.

5. Bo'lajak boshlang'ich ta'lim o'qituvchisi jamoa faoliyatida o'z ma'ruzalari bilan ilmiy-amaliy konferensiyalarda ishtirok etishi, o'z bilimlarini keng targ'ibot qilishi, ustoz-shogirdlar davrasida pedagogika asoslarini o'rganishi muhim hisoblanadi. Bo'lajak boshlang'ich ta'lim o'qituvchisining jamoa muammolarini chuqur tushunishlari ta'lim samaradorligini oshirishni ta'minlaydi. Ushbu kompetensiyalarni amalga oshirishda o'qituvchining fikrlash doirasi, ekstremal holatlarda ishlay olish layoqati, nohush holatlarga qarshi tura olish, aloqa, hamkorlik, ixtiloflarga bardoshlilik, mehnatdan qoniqish, o'z-o'zini rivojlantirish, faoliyatini loyihalashtirish, o'zini o'zgartira olish kabi kompetentlarga ega bo'lishi maqsadga muvofiqdir. Chunki ushbu jarayonlarda o'qituvchining kasbiy va psixologik sifatlarga ega bo'lishi tarbiya ishlarini tashkiliy, ijtimoiy- siyosiy, ma'naviy axloqiy, iqtisodiy jihatdan tahlil etish, nazorat qilish va muayyan mazmundagi xulosalarni tayyorlash kabilar mas'uliyatli bo'lishni talab etadi. Ushbu jarayonda bo'lajak boshlang'ich ta'lim o'qituvchisi:

-mamlakatimiz va xorijiy davlatlar tajribalari asosida ularning o'sishi va ishchanlik malakasini yuksalishini nazorat kilish sifatlarini ifoda etuvchi model va uning me'yorlari, kategoriyalarini o'rganish;

-tarbiyaviy ishlarni amalga oshirishda milliy urf-odat va udumlaridan samarali foydalanish va ularga nisbatan o'z munosabatini bildirish;

-tarbiya ishlarining asoschisi sifatida o'zining individual xususiyatlarini ya'ni kasbiy bilim, malaka, ko'nikma va qobiliyati, xulq-atvor madaniyati, nutqi, muomalasi, kiyinishi, ma'naviy axloqiy sifatleri bilan na'muna bo'lishi, uning o'ta nozik, noyob xususiyat va alomatlar, insoniy fazilatlarga, yangi fikrlarga ega bo'lishi, ta'sirchanligi, qat'iyat va irodasi bilan o'quvchilarni boshqarishi, uni turli qaltis qadamlardan asrab, to'g'ri yo'lga boshlashga har qanday sharoitda ham ularning ruhini ko'tarish, lo'nda qilib aytganda, har qaysi ta'lim oluvchining yuragiga yetib borishga, uning kuchiga kuch, ishonchiga ishonch, g'ayratiga g'ayrat qo'shishga qodir bo'lishi shart.

Boshlang'ich ta'lim jarayonida o'quvchilarni ezgu niyatlar bilan o'ziga ergashtira olgan o'qituvchi hamisha ularning hurmat e'tiborida bo'ladi. O'quvchilarni bir-birlariga suyanib, tayanib, bir-birlarini tushunib, muammolarini birgalashib bartaraf etishga da'vat qilish o'qituvchining noyob fazilati hisoblanadi. O'qituvchining katta dushmani- kibru havo, o'ziga bino qo'yish, o'ziga ortiqcha baho berishdir. Bunday o'qituvchi uzoqqa borolmaydi. O'qituvchi o'quvchilar o'rtasida ma'naviy ruhiy, siësiy-axloqiy muhitni yaratadi. Demak, tarbiyaviy ishlar jarayonida o'qituvchining kayfiyati o'quvchilarga bo'lgan munosabati muhim o'rin tutadi. Albatta, o'quvchilar har xil. Ularning orasida gap uqmaydigan, ba'zan esa ro'y rost e'tiroz bildiradiganlari ham bo'ladi. O'qituvchi degani barcha fazilatlari bilan bir qatorda nuqsonlari bilan ham yaxlitligicha ustozdir. Haqiqiy o'qituvchi ana shu yaxlitlikni anglab, aql bilan his etib, o'quvchilarning boshini qovushtirib, o'ziga ergashtira olishi bilan ular oldida munosib hurmat va izzat qozonadi. Tarbiyaviy ishlarni amalga oshirishda o'qituvchining ma'naviy ahamiyatga ega bo'lgan holatlari, uning mas'uliyati, axloqiy tamoyil va qoidalariga ongli ravishda rioya etish irodasi o'quvchi hayotini butunlay o'zgartirish, tahlil etish, anglab yetish va himoya qilish, nafaqat o'z xatti-harakatlari, ishlari va uning natijasi uchungina emas, balki o'z qobiliyatini ro'yobga chiqarish samaradorligini oshiradi.

Bugungi kunda bo'lajak boshlang'ich ta'lim o'qituvchilarini tarbiyaviy ishlarga tayyorlashda ularni mamlakat ijtimoiy- siyosiy hayotining barqarorligini ta'minlash, ma'naviy-axloqiy xususiyatlarining ustuvorligini takomillashtirish, o'qituvchining tafakkurida mafkuraviy immunitetni kuchaytirish, sinf jamoasini jipsligi, jismoniy sog'lomligi, demokratik hamda umummilliy taraqqiyoti tahdidlariga qarshi tura olish kabilarni amalga oshirish muhim o'rin tutadi.

THEORETICAL BASIS OF DRUG USE IN THE PHARMACEUTICAL INDUSTRY: INTERNATIONAL AND NATIONAL ASPECTS

Abstract. The article's recipes contain basic theoretical and theoretical tools aimed at minimizing and eliminating minor problems faced by Turkmens.

Key words: Dosage forms, medicines, medicinal products, production, technology, supply, storage, transportation and sales.

Presidency of the Republic of Uzbekistan “Republic of Uzbekistan “2022 to establish the state budget of the Republic of Uzbekistan” and the Law of the Republic of Uzbekistan on measures to ensure the security of the Republic of Uzbekistan” and resolutions of the “2022-2024 to establish funds in the budget budget for distribution and development instructions the purpose of the indicator” yes “ agricultural reform, especially the state sector in the process of improvement, the market of municipalities, the food sector of the participating countries, food and services, development subjects of municipalities have strengthened their fundamental rights, the investment sphere of the company “strategic goals belgilab berylgan” is one of the largest producers of agricultural products in world strategic goal of the SBU food and agricultural industry forecast of agricultural exports for 2022, 2023 and 2024

Solving such pressing problems and tasks at the country's enterprises today requires improving not only practical, but also theoretical issues of accounting for finished products. During the study, one can see that when studying regulations, international and national standards, as well as foreign and domestic literature, the given various definitions and definitions of finished product terms, including medicines.

The Law of the Republic of Uzbekistan “On the quality and safety of medicines” contains the following definitions on medicines:

Food products - products made from medicines and sold in natural or processed form;

Medicine - a medicinal substance (including ethyl alcohol), food products and their components, medicinal substances and substances related to food substances, materials, auxiliary and packaging materials and products made from them:

Children's medicines are special medicines that meet the physiological characteristics of the child's body (up to three years);

Circulation of medicines - activities related to the production, manufacture, purchase, processing, supply, storage, transportation and sale of medicines;

The quality of medicinal products is a set of criteria that determine the consumer properties of medicinal products and ensure their safety for human life and health;

Medicinal substance - plant, animal, microbiological, as well as mineral objects used for food production.

International Accounting Standard No. 2 (IAS) Inventories defines the term “inventories” as follows:

“Inventories are assets held for sale in the ordinary course of business, in the process of production for such sale, or in the form of raw materials and supplies intended for use in the process of production or provision of services. The research required the views and comments of a number of foreign scientists.

As Russian scientist S.N. Polenova noted, “finished products are a fully completed production process at an enterprise that meets standard requirements and technical specifications, products accepted by the service, issued with acceptance documents and delivered to the finished products warehouse.

The National Accounting Standard No. 4 of the Republic of Uzbekistan provides the following definitions:

Inventories are material assets stored in the process of activity for the purpose of subsequent sale and located in the production process, as well as used in the process of producing products, performing work or providing services, or for carrying out administrative and socio-cultural tasks. Finished products manufactured in the organization (assets intended for sale and undergone processing (assembly), corresponding to the technical and quality characteristics stipulated by the contract or the requirements of other documents in cases established by law).

When conducting research on products, including finished products, it is necessary to take into account the scientific research of domestic scientists.

According to the economists of our country K.S. Ismailov and A.B. Utemuratov, “Finished products are the result of the production process. At manufacturing enterprises, labor products include all finished products produced.”

Online sources in dictionaries related to the field provide the following definition of these categories:

Product is the result of economic activity, embodied in things and services. Its material-material form has the appearance of a material product.

Finished Goods - goods that have undergone the production process or purchased for resale and are owned by the company, but have not yet been sold.

Finished Goods is a category of inventory typical for manufacturing enterprises. These are products that have completed the production process, but have not yet been sold or distributed to sellers. Finished products are products that have gone through all stages of technological processes and meet established requirements (customer, state standards, technical specifications). It is taken into

account by type, grade and storage location according to real and cost indicators. Depending on the adopted accounting policy, ready

Products can be accounted for at actual production costs or at estimated prices.

Finished products are the final product of the process of its production at enterprises. Finished products are considered products that have passed all stages of technological processing, comply with approved standards and technical specifications (provided with a certificate or other document confirming their quality), received and delivered to the warehouse or shipped to the buyer.

Finished goods are products or goods produced during the full production cycle or purchased in finished form, but not yet sold to customers

Finished products - products and semi-finished products, fully prepared by processing, complying with current standards and technical specifications accepted at the warehouse of the organization and the customer (buyer)

Finished products (TM) are goods produced by a company for the purpose of further sale

Thus, as a result of the research carried out, based on the descriptions and descriptions given in the literature, we can conclude that the finished product is a product independently produced and completed by the enterprise, which must fully meet the requirements established by the state and be ready in the warehouse for sale to customers. This asset, which is a finished product for the manufacturing enterprise, is intended for the processing process and is an acquired inventory

The above international and national standards, as well as those set out in information sources, have important scientific and practical significance and reveal important aspects of the finished product. However, from these descriptions it is clear that there is no single description of products, including ready-made ones, which contain all their properties. They cannot be said to cover every aspect of the product and finished product. What is the current task of accounting for finished products? What does our national asset standard cover for this business and what issues exist? What approaches exist in international financial reporting standards and what are the needs for improving our national standard? What should you pay attention to in terms of improving the theoretical foundations of accounting for finished products?

One of the important tasks facing international and national accounting is the search for answers to the listed and other pressing questions relating to the accounting of finished products.

METHODOLOGICAL ISSUES OF THE AUDIT OF INSURANCE RESERVES

Abstract. The article describes the classification and description of reserves in insurance organizations, as well as the goals and objectives of their audit.

Key words: insurance, insurance reserves, reserve capital, audit, audit inspections.

Jahon iqtisodiyoti va global moliya tizimining uzluksiz rivojlanishi sharoitida sug'urta tizimi va uning asosiy komponenti, sug'urta bozorining ahamiyati ortib bormoqda. Birinchidan, jahon amaliyotida sug'urta tizimi ma'lum bir fondlarni shakllantirish va xo'jalik yurituvchi sub'ektlarning mablag'larini qayta taqsimlash munosabatlari orqali iqtisodiyotda investitsiyalarning eng katta manbalaridan biri hisoblanadi. Ikkinchidan, sug'urta zamonaviy iqtisodiyotda murakkab va o'sish tendensiyasiga ega bo'lgan risklarni boshqarishning asosiy shakllaridan biridir. Bundan tashqari, sug'urtalangan shaxsning mulkiy manfaatlarini himoya qilishni ta'minlash doimiy ravishda takror ishlab chiqarish jarayonini yuzaga keltiradi, bu esa iqtisodiy va moliyaviy barqarorlikni ta'minlashga yordam beradi. Shuni ta'kidlab o'tish joizki, zamonaviy global

sug'urta bozorining umumiy aylanmasi 2,4 trln. AQSh dollarini tashkil etadi. Rivojlangan davlatlar tajribasi ijtimoiy-iqtisodiy muammolarni samarali hal etishda sug'urtaning rolini ortib borayotganligidan dalolat beradi.

Sug'urta tizimi va uni amalga oshirish mexanizmini takomillashtirish bo'yicha xalqaro amaliyotda keng qamrovli tadqiqotlar amalga oshirib kelinmoqda. Ushbu tadqiqotlar sug'urta tizimini tadbirkorlik sub'ektlarining mulkiy manfaatlarini himoya qilishning samarali shakli sifatida, shuningdek, sug'urta kompaniyalari tomonidan milliy iqtisodiyotga investitsiya kiritish uchun mablag'larni jalb qilish usuli sifatida ko'rib chiqadi. Lekin bugungi kunda sug'urta tizimining iqtisodiy mohiyati va faoliyat mexanizmini tahlil qilish, mamlakatda sug'urta tizimining institutsional muhitini shakllantirishning o'ziga xos xususiyatlari va sug'urta tizimini amalga oshirish mexanizmini takomillashtirishga qaratilgan tadqiqotlarni olib borish asosiy masalalardan biri bo'lib qolmoqda.

Sug'urta korxonalarida zaxiralarni ikki asosiy guruhga ajratish mumkin:

1-rasm. Sug'urta korxonalarida zaxira turlari.

Rezerv kapitali – bu korxonaning turli maqsadlarda va turli manbalar evaziga shakllantirilgan xususiy kapitalning bir turi. Ushbu kapital asosan quyidagi manbalar hisobidan vujudga keladi:⁸⁴

- mavjud mulkni qayta baholash natijasida paydo bo'ladigan yangi qiymat evaziga;

- korxonaning sof foydasi hisobidan;
- qaytarib bermaslik sharti bilan kelib tushgan mulk evaziga.

O'zbekiston Respublikasi Moliya vazirligi tomonidan tasdiqlangan «1 yanvar holati bo'yicha asosiy fondlarni har yili qayta baholashni o'tkazish tartibi to'g'risida NIZOM»ga⁸⁵ va unga kiritilgan o'zgartirishlarga muvofiq korxonalar har yilning 1 yanvar holatiga o'zlarining asosiy vositalarini, tugallanmagan qurilish obyektlarini bozor baholaridan kelib chiqib yoki Iqtisodiyot vazirligi belgilagan koeffitsiyentlar asosida qayta baholaydilar⁸⁶. Qayta baholashda asosiy vositalarning oldingi boshlang'ich qiymati va jamlangan eskirishi real bozor baholaridan kelib chiqqan holda, ko'payish yoki kamayish tomonlariga

⁸⁴Уразов К.Б. Молиявий ҳисоб ва ҳисобот. Замонавий педагогик технологияларга асосланган кўргазмали маърузалар курси. 2-қисм. - СамИСИ, 2019. - 155 бет.

⁸⁵Ўз.АВ томонидан 2002 йил 4 декабрда рўйхатга олинган, № 1192

⁸⁶Микрофирмалар ва кичик корхоналар ҳар 3 йилда бир марта қайта баҳолайдилар

o'zgartirilishi mumkin. Agar o'zgartirishlar o'sish tomonga yuz bergan bo'lsa, o'rtadagi ijobiy farq rezerv kapitalini vujudga kelishiga sabab bo'ladi.

O'zbekiston Respublikasi qonunlari va ta'sis hujjatlariga muvofiq korxonalar o'zlarining sof foydasi evaziga rezerv kapitalini shakllantirishlari mumkin. Chunonchi aksiyadorlik jamiyatlari va aksiyadorlar huquqini himoya qilish to'g'risida qonunga muvofiq ular o'zlarining ustav kapitali miqdorining 15 %gacha bo'lgan miqdorida sof foyda evaziga rezerv kapitalini shakllantirishlari shart. Boshqa turdagi korxonalar (MChJ, xususiy korxonalar, xorijiy investisiyalar ishtirokidagi korxonalar) ham o'zlarining sof foydasidan ta'sischilar yig'ilishi qaroriga asosan ma'lum foizda rezerv kapitaliga ajratma qilishlari mumkin.

Qaytarib bermaslik sharti bilan kelib tushgan mulk evaziga vujudga keladigan rezerv kapitali. Ushbu kapital har qanday korxonada mol-mulkni beg'araz olish natijasida vujudga keladi. Respublikamizning Soliq kodeksiga muvofiq bepul kelib tushgan mulklar bitta tizim korxonalarida yuqori tashkilotning qarori bilan balansdan balansa o'tkazish tarzida amalga oshirilgan bo'lsa, daromad solig'iga tortilmaydi. Boshqa xo'jalik yurituvchi subyektlarda bepul kelib tushgan mulk ularning yalpi daromadiga kiradi va soliqqa tortiladi.

Yuqorida zikr etilgan manbalar evaziga shakllanadigan rezerv kapitali korxonalarda turli maqsadlarda, masalan ishlab chiqarishni rivojlantirish, xodimlarni rag'batlantirish, imtiyozli aksiyalar egalariga dividend hisoblash, korxonalar likvidasiyasi chog'ida vujudga kelgan o'tgan yillar zararlarini qoplash qoplash va boshg'a maqsadlarda ishlatiladi.

Rezerv kapitalining jamlangan summasi korxonalar tugatilishida taqsimlanmagan foydaga qo'shiladi va ta'sischilar o'rtasida taqsimlanadi.

Rezerv kapitali bo'yicha buxgalteriya hisobining asosiy vazifalari bo'lib quyidagilar hisoblanadi:

*rezerv kapitalini vujudga kelishini to'g'ri va o'z vaqtida hisob va hisobotda aks ettirish;

*rezerv kapitalining tegishli maqsadlarda ishlatilishini ta'minlash, nazorat qilish hamda to'g'ri va o'z vaqtida hisob va hisobotda aks ettirish.

Sug'urta korxonalarida sug'urta zaxiralari quyidagilardan iborat:

- Ishlab topilmagan mukofotlar zaxirasi
- Sodir bo'lgan lekin xabar qilinmagan zararlar zaxirasi
- Xabar qilingan lekin bartaraf etilmagan zararlar
- Ogoxlantirish chora-tadbirlari zaxirasi
- Aktivlarning nomuvofiqligi zaxirasi
- Falokatlar zaxirasi
- Hayot sug'urtasi bo'yicha zaxiralar
- Ishlab topilmagan mukofotlar zaxirasidagi qayta sug'urtalovchilarning

ulushi

➤ Xabar qilingan lekin bartaraf etilmagan zararlar zaxirasidagi qayta sug'urtalovchilarning ulushi

➤ Sodir bo'lgan lekin xabar qilinmagan zararlar zaxirasidagi qayta sug'urtalovchilarning ulushi

➤ Hayot sug'urtasi bo'yicha zaxiralardagi qayta sug'urtalovchilarning ulushi

M.Abduraimova esa o'zining qarashlarida, sug'urta tashkilotlarining moliyaviy hisobotini tekshirish makroiqtisodiy darajada ahamiyatli bo'lib, auditorlik tekshiruvining faoliyat yuritishi quyidagilar bilan belgilanadi: ⁸⁷

1.Sug'urta tashkilotining moliyaviy hisobotini tekshirish va natijalardan manfaatdor foydalanuvchilar qarorlari uchun, sug'urta tashkilotiga qiziqish bildirgan shaxslar, davlat organlari va jamoatchilik uchun qo'llaniladi.

2.Sug'urta tashkilotining moliyaviy hisobotini audit o'tkazish jarayoni bir qancha sabablar oqibatida buzilishi yoki bo'lmasa, ma'lumotlarning yetarli bo'lmasligi natijasida auditor o'zi kutgan maqsadga erisholmasligi mumkin. Masalan, sug'urta tashkilotida zaxiralar shakllantirishda me'yoriy talabga rioya qilinmagan, moliyaviy hisobotlarida sodir bo'lgan operatsiyalar noaniqlikka ega, bu esa har jihatdan subyektga borib taqalishi va shunga o'xshash bir qancha jarayonlarni sanab o'tgan.

U.A. Shirinov "Sug'urta sohasidagi auditorlik faoliyatini o'ziga xosligi, avvalo, bu borada maxsus sug'urta qonunchiligi mavjudligi, mazkur sohada buxgalteriya hisobini yuritishni.... tubdan farq qilishi bilan tavsiflanadi."⁸⁸

M.Abduraimova sug'urta tashkilotlarida auditorlik tekshiruvining natijalarini rasmiylashtirish auditor professionallik asosida auditorlik tekshiruvlarini tashkil qilish va moliyaviy hisobot ishonchliligini xolis va halol tekshirish natijalari yuzasidan xulosa yoki fikri bilan aks ettirish jarayoni hisoblanadi.⁸⁹

1.Auditor tomonidan sug'urta tashkilotlarini tekshirishda, avvalo, auditor audit strategiyasini tuzishda sug'urtaning xususiyatidan kelib chiqib yondashuvni tanlashi kerak.

2. Auditor tekshiruvni boshlashdan oldin, albatta, sug'urta tashkilotining ichki nazorat tizimi bilan yaqindan tanishib, yetarlicha ma'lumotga ega bo'lishi kerak.

3. Auditor tekshiruv jarayonlarini optimallashtirish uchun, albatta, tarmoqning risk hududini tanlab, tekshiruvning ko'p qismini o'sha hududga targ'ib qilishi kerak.

Xulosa qilib aytadigan bo'lsak sug'urta korxonalarida auditorlik tekshiruvlarini to'g'ri tashkil etish, ularda sug'urta rezervlari xarakatini to'g'ri tashkillashtirilganini o'rganish korxonalar iqtisodiy ko'rsatkichlariga ham bevosita ta'sirini o'tkazadi.

PROBLEMS OF IMPROVING REVENUE AUDIT IN CONSTRUCTION ENTERPRISES

Abstract. The article discusses the levers of organizing income audits at construction enterprises, issues of organizing income audits, and the sequence of income audits.

Key words: construction enterprises, income audit, sequence of inspections, procedure for conducting inspections.

Mamlakatni modernizasiya qilish, raqamli iqtisodiyotni rivojlantirish, innovasion jarayonlarini jadallashtirish hamda milliy iqtisodiyotni tubdan yaxshilash sharoitida qurilish tashkilotlari faoliyati samaradorligini oshirish muhim ahamiyatga ega.

O'zbekiston Respublikasi Prezidenti Shavkat Mirziyoyevning Oliy Majlis va O'zbekiston xalqiga Murojaatnomasida "Iqtisodiyotimizda kundun-kunga yangi-yangi yo'nalish va sohalar yaratilmoqda. Bu borada xususiy tashabbuslarni yanada kengaytirish, ularga yangi istiqbollarni ochish maqsadida endi "qo'l boshqaruvi"dan – aniq natijaga ishlaydigan tizimli boshqaruvga o'tish vaqti keldi" deb ta'kidlagani bejiz emasdir. Keng ko'lamli va samarali islohotlarimiz natijasida yalpi ichki mahsulot hajmi ilk bor 80 milliard dollardan oshdi.

Iqtisodiyotimizga shu yilning o'zida 8 milliard dollar to'g'ridan-to'g'ri xorijiy investitsiyalar kirib keldi, eksportimiz esa, 19 milliard dollarga yetdi⁹⁰. Davlat statistika qo'mitasi ma'lumotlariga ko'ra, 2022-yilning yanvar-noyabr oylarida O'zbekistonda 115,1 trln. so'mlik qurilish ishlari bajarilgan. Bajarilgan qurilish ishlari hajmi o'tgan yilning mos davriga nisbatan 5,7 % ga oshgan (1-rasm).

2022 yilda O'zbekistonda yalpi ichki mahsulotni iqtisodiy o'sish sur'ati 5,9 foizni tashkil etib, 2023 yilda 6,2 foiz, 2024 yilda 6,6 foiz o'sishga erishish rejalashtirilgan. YaIM hajmi qariyb 840 trln so'mga yetishi ko'zda tutilgan edi. Ma'lum qilinishicha, 2022 yilda asosiy **tarmoqlar kesimida yalpi ichki mahsulot tarkibi** quyidagicha shakllanadi: sanoat - 217,7 trln so'm, qishloq xo'jaligi - 207,6 trln so'm, **qurilish - 52,5 trln so'm**, xizmatlar sohasi - 300,3 trln so'm⁹¹.

1-rasm. O'zbekistonda bajarilgan qurilish ishlari hajmi⁹².

Mamlakatimizda 2022 yilning yakuni bo'yicha asosiy tarmoqlarda kutilgan real o'sish miqdori: qurilish - 8,1 %, sanoat - 7 %, xizmatlar sohasi - 6,5 %, qishloq xo'jaligi - 3,1 % ko'zda tutilgan edi. Yuqoridagi statistik ma'lumotlardan ko'rinib turibdiki, qurilish industriyasini rivojlantirishda qurilish mashina-mexanizmlarni ish faoliyatiga ham alohida urg'u berib o'tsak maqsadga muvofiqdir. Har qanday rivojlangan davlatlarda bevosita qurilish tashkilotlari faoliyatini asosiy ko'rsatkichlarini qurilish mashina-mexanizmlar tomonidan bajarilgan ishlar hajmi hisoblanadi. Shuni ta'kidlash joizki, respublikamizda, qurilish ishlarini bajarilish hajmi yillar davomida keskin o'sib bormoqda (1-jadval).

⁹⁰ Ўзбекистон Республикаси Президенти Шавкат Мирзиёевнинг Олий Мажлис ва Ўзбекистон халқига Мурожаатномаси.20.12.2022 йил.

⁹¹ <https://www.gazeta.uz/uz/2021/11/11/gdp-2022/>

⁹² <https://www.gazeta.uz> - «Газета.uz» интернет-нашри. © 2008-2023.

Jadval ma'lumotlaridan ko'rinib turibdiki, mamlakatimizda qurilish ishlarini bajarilish ko'rsatkichi 2022 yilda 2018 yilga nisbatan, 125,1 foizga keskin ravishda o'sgan bo'lib, bajarilgan qurilish ishlari hajmi bevosita eng katta ko'rsatkichi, ya'ni 246,9 foizi Toshkent viloyatiga to'g'ri keladi. Bundan ko'rinib turibdiki, mamlakatimizda oxirgi to'rt yil mobaynida qurilish ishlari keskin ravishda o'sganligi milliy iqtisodiyotimizda va aholi turmush darajasini yanada yaxshilanishidagi hamda qurilish industriyasini rivojlanishidagi o'rni alohida ahamiyat kasb etilgan. Qurilish tarmog'i iqtisodiyotning barcha sohalari moddiy-texnik bazasini yaratishda hamda aholining shinam uy, ijtimoiy va muhandislik infratuzilmasi xizmatlari, shuningdek, madaniy xordiqqa bo'lgan ehtiyojlarini qondirishda muhim rol o'ynaydi.

Daromadlar hisobi va auditi bo'yicha bir qancha olimlar va tadqiqotchilar izlanish olib borishgan, jumladan, K.B.Urazov, U.A.Shirinov, T.Yaxyoyev va boshqalar.

Qurilish tashkilotlarida audit tekshiruvini o'tkazish va uni tashkil etishning bir qancha xususiyatlari mavjud. Jumladan, qurilish ishlarini auditdan o'tlazish bir muncha qurilish sohasiga oid bilimlarni ham talab qiladi.

Qurilish ishlarini audit qilishda quyidagi xolatlariga jiddiy ahamiyat berish lozim:

- ❖ qurilish ishlari smetalari to'g'ri qilibgani;
- ❖ qurilishga oid daromadlarni to'g'ri tan olinayotganligi;

⁹³ <https://stat.uz/uz/rasmiy-statistika/construction-2>

❖ qurilish ishlarida ishlayotgan xodimlarga to'g'ri ish haqlari hisoblanayotganligi;

❖ qurilish inventarlarini to'g'ri hisobdan chiqarilayotgani;

❖ qurilishdagi mashina va uskunalarga to'g'ri eskirish hisoblayitganligi va boshqalar.

Qurilish tashkilotlarida daromadlar auditi ma'lum xususiyatlarga ega bo'lib, ularni quyidagicha ifodalash mumkin:

✓ Daromadlarni shakllanishi bir qancha ko'rsatkichlarga bog'liq;

✓ Daromadlar hisobot davridagi korxonada faoliyatining yakuni hisoblanadi;

✓ Korxonaning foyda bilan ishlashi yoki hisobot davrini zarar bilan yakunlanishi moliyaviy natijalarni shakllantiruvchi ko'rsatkichlarga bevosita bog'liq bo'ladi;

✓ Daromadlar oldindan aniq bo'lmagan xavf-xatarlar, tasodifiy hodisalar o'z ta'sirini ko'rsatadi.

Qurilish tashkilotlarida daromadlar auditining maqsadi buxgalteriya hisobida va hisobotida korxonada daromadlarini ishonchli aks etganligi, daromadlarni qonuniy taqsimlanganligi va barcha hisob kitoblar O'zbekiston Respublikasi me'yoriy hujjatlariga, MHXS va BHMSga mosligini aniqlashdan iboratdir.

Qurilish tashkilotlarida daromadlar auditini tekshirish uchun ma'lumot manbalari bo'lib quyidagilar hisoblanadi:

1. Ta'sis hujjatlari, ta'sischilar majlisi bayonnomalari, buyruqlar, farmoyishlar.

2. Dastlabki hujjatlar (kirim va chikim kassa orderlari, to'lov qaydnomalari, chiptalar, schetlar, to'lov topshiriqnomalari, ilova kilingan so'mdagi va valyutadagi schetlari bo'yicha bank ko'chirmalari, sotish, foyda va zararlar, soliqlar va yig'imlarni to'lash uchun foydadan foydalanish schetlari bo'yicha hisob registrlari (qaydnomalar, jurnal- orderlar, mashinogrammalar).

3. Bosh kitob, moliyaviy natijalar to'g'risida hisobot, alohida soliqlar bo'yicha hisob- kitoblar va boshqalar hisoblanadi.

4. 9000-«Asosiy faoliyatdan olingan daromadlar hisobi schyotlari» ma'lumotlari.

5. 9300 -" Asosiy faoliyatning boshqa daromadlarini hisobi schyotlari " ma'lumotlari.

6. 9500 «Moliyaviy faoliyat daromadlarini hisobga oluvchi schotlar» ma'lumotlari.

Xulosa qilib aytganda qurilish tashkilotlarida daromadlar hisobini to'g'ri tashkil etilishi korxonada iqtisodiy faoliyatini yaxshilashiga sabab bo'ladi. Bu esa o'znavbatida daromadlar auditini ham to'g'ri o'tkazilishi ham axborot foydalanuvchilarni qaror qabul qilishiga sabab bo'ladi.

CAUSES OF INCOME INEQUALITY IN A MARKET ECONOMY

Abstract. In this article, the factors driving the origin of income inequality in the conditions of the market economy, their causes and the research carried out for the purpose of prevention and its results are highlighted. Also, as a clear example of this problem, income inequality in certain sectors in the Republic of Uzbekistan is presented with statistical data.

Key words: income inequality, market forces, social development, government policy, Lorenz curve, Gini coefficient, financial sector.

As we all know, the problem of wealth and poverty has always worried people. The reason is that as a result of regulating social progress and equality in any country, the maximum level of economic progress and development can be achieved in the country. But at present, even in developed, that is, from the point of view of development, there is a problem of income inequality even in the TOP-10 countries in the world. Scientists and researchers have been researching and explaining their concepts for many years. However, a clear solution has not yet been found, although the results of this research are widely used to prevent the mentioned economic problem.

The growth of NSE is the outcome of multiple forces. It reflects changes in the world of work brought about by globalization and social change – such as the increased role of women in the world’s labour force – but also regulatory changes. At times, laws have encouraged the use of NSE – either purposefully or unwittingly – by creating incentives for its use by enterprises. In other cases, there are gaps or grey areas in the law that have provided fertile ground for the development of non-standard work arrangements. Some of these gaps have resulted from the decline of collective bargaining in countries where collective agreements had previously been the dominant form of regulation.

Differences in the slopes of tenure profiles have important implications both for measurement and for understanding job turnover. Since potential earnings and investment in human capital are not directly observable, one has to make inference about earnings capacity from the level and growth in observed wages. If workers of all education levels invest the same proportion of their earnings capacity into the production of human capital, then earnings profiles are parallel and the gap in observed log earnings between different education groups

is equal to the unobserved gap in potential earnings. If, on the other hand, workers with low education invest less in human capital than workers with high education, then the gap in observed earnings understates the gap in earnings capacity, especially early in the life-cycle when the investment occurs.

In a market economy, income inequality refers to the unequal distribution of income among individuals or households within the economy. In a market economy, where goods and services are exchanged through market mechanisms such as supply and demand, income inequality can be caused by a variety of factors, such as differences in skill, education, opportunity, and luck.

The main causes of income inequality in a market economy are:

1. Wage disparity: Differences in skill and education levels lead to variation in wage rates between people. Those with in-demand skills or advanced degrees often earn higher wages than those with less qualifications or education.

2. Capital Ownership: In a market economy, individuals who own capital assets such as property, stocks, or businesses are able to accumulate wealth and earn passive income, leading to an income disparity between capital owners and non-owners.

3. Market forces: Market fluctuations, economic cycles, and technological advances can affect wages and job opportunities differently across industries and regions and contribute to income inequality.

4. Government policies: Tax policies, subsidies, and social assistance programs can exacerbate or mitigate income inequality in a market economy, depending on how they are designed and implemented.

Income inequality can have both positive and negative effects on society. While some level of income inequality can encourage people to work hard, innovate and invest, extreme income inequality can lead to social unrest, economic instability and barriers to social mobility.

Governments and politicians often use a variety of measures to encourage a more equitable distribution of income and opportunity, such as progressive taxation, minimum wage laws, education and training programs, social safety nets, and antitrust regulations seeks to address income inequality through

The growth of income stratification during the transition from the administrative-command system to the market system is related to the fact that part of the population continues to live in the conditions of the old, rotten system, and at the same time, the creation of a functioning social stratum. according to the laws of the market economy. As a result of the involvement of more layers of the population in market relations, the scale of inequality will decrease. Various indicators are used to quantify income inequality. The level of income inequality is reflected in the Lorenz curve, in the construction of which the shares of families with the appropriate percentage of income (% of their total number) are drawn along the abscissa axis and income. the shares of the considered families (in percent of total income) are drawn along the ordinate axis. The theoretical possibility of an absolutely equal distribution of income is represented by the

bisector, which shows that any percentage of families will receive the corresponding percentage of income. This means that if 20, 40, 60 percent of families receive 20, 40, 60 percent of the total income, respectively, then the corresponding points will lie on the bisector. The Lorenz curve is a general distribution of population and related incomes. As a result, it shows the percentage of all income and the percentage of all recipients. If income is distributed equally, that is. 10% of the recipients will have one-tenth of the income, 50% - half, etc., then such a distribution will resemble the same distribution line. The uneven distribution is characterized by the Lorentz curve, i.e. the longer the actual distribution line is a straight line, the greater the variance.

The most widely used indicator (or coefficient) to express the level of income inequality in the country is the Gini coefficient. The Gini coefficient (Gini index, Gini coefficient) is used to measure the distribution of income among the population and is expressed by a number ranging from 0 (absolute equality) to 1 (absolute inequality). According to official statistics, the Gini coefficient, which began to be officially announced again in Uzbekistan in 2017, did not undergo any changes until 2020 and remained at the level of 0.26 (an indicator close to 1 is a high level of inequality, 0 and closely formed means a low level of inequality). The 2020 pandemic has led to an increase in inequality. However, after 2021, the Gini coefficient is decreasing. However, for some reasons, this trend does not mean that everything is fine with the distribution of income in Uzbekistan.

In recent years, income inequality has been evident across sectors. In particular, wages in the finance and insurance and information and communication industries are growing significantly faster than in other industries. For example, according to official statistics, in the first three quarters of 2017, the average salary in the finance and insurance sector was 1.8 times higher than the average salary in the republic, and by 2022, this difference will be 2, reached up to 6 times (in the information and communication sector, salary growth was relatively slower than in the finance and insurance sector).

On the other hand, in two important fields - education and medicine, the salary level was lower than the national average 5-6 years ago, and in recent years it has shown a further downward trend (in other words, wages in two sectors are growing slowly compared to the average wages in the country).

Thus, equality of economic opportunity is not always observed, at least for the reasons mentioned. Poor and rich exist even in the most prosperous highly developed countries. Differences in income per capita or per employed person are called income differentials. Income inequality is inherent in all economic systems. The biggest income gap was observed in the traditional system. This gap was greater than under free competition capitalism. Then, with the transition to a modern market economy, differences in income (and wealth) levels are significant decreases.

INNOVATION ON THE BASIS OF SMALL BUSINESS ENTITIES IN WORK PRODUCTION EFFICIENCY INCREASE

Annotation. This article about the importance of achieving competitive advantage in small business today with the passing of innovations, as well as their importance in the effective activities of the organization.

Keywords: innovative, small business, management, market segmentation, economy, export.

Introduction Today's day in the enterprise production, production and market activities in the development of a new type of product, work out, innovative technologies and digital technologies introduction to essential is earned is. Long - term enterprise of effective functioning display, its competitiveness increase and development of high levels to achieve the enterprise innovative activity level by is determined.

Research

Our country's President, Shavkat Mirziyoyev's "2022 — 2026 in the year of Uzbekistan, the republic of innovative development strategy of approval on 2022 year 6 June in UP-165-the number of li to the decree according "small entrepreneurship innovative activity increasing by the territory of social-economic rapid growth to ensure, innovative business entities (industry work out of the organization), the number of its 613 than 2 250 up to far to deliver, innovative infrastructure entities (texnoparklar, technology transfer centers, innovation clusters, venchur organizations, innovation centers, business incubators and akseleratorlar) the number of 3 times to increase, internal and external markets for commercialization as a result of which created new innovative developments, the number of 2 times increase as the task set is given.[1]

Innovation process innovation changes the preparation and implementation of the increase is to is and single a whole constitute which are mutually connected from the circuit up I find. This process, as a result out carried o`zgarib to innovative appearing toe' ladi. Innovation the process of implementation increase to diffusion balances - new conditions and application areas of a once mastered and using, which is this innovativerni in time the distribution of very big importance has. Innovation is the process of periodic character has, in this economy, the organization of to and the management compact system working out when you take into account to take need. Jaho that economic literature "innovation" a potential scientific - technical progress (ITT) to true, new products

and technology in the realization out of cycle as interpreted is. Our country is in the news due to enter one of the problems many years for scientific - technical progress of economic studies in the framework of worked out. "Innovation" term from the uzbekistan's transition economy in both independent and also a number of similar concepts: "Innovative activity", "innovation process", "innovative decision", and so on.k. marklash for were used. Xorijlik the scientists from N. Monchev, perl i., d. v. I xart, E. Mensfield, R. Foster, B. Tviss, Y. Shumpeter, E. Rodjers and others this understanding to their own research object and the subject according to each xil interpret qiladiler, but of innovation that each xil definition of analysis such a conclusion brought kelis adi, changes to this innovativerning to himself, the specific content of the organization qiladilar, changes in function, while innovation activities, the main function is.

Austria scientists Y. Shumpeter by five typical changes in separatelgan: 1) new technology, new technological processes and production, production, new market supply use (before - buy);

2) new properties having data tatbiq to;

3) yangi raw materials use;

4) work production and its material - technical supply of organized complexity changes;

5) new sales of the market is the emergence be.

This is the rules, Y. Shumpeter by 1911 the year since formed. It innovation concept-consumer goods with new types of new work, the production and the technical means, the market established in the forms to the industry tatbiq to and of them is to use purpose in a change as interpreted was.

Innovation management is incredibly complex. Innovative jarayonlirning the development of the qonuniyat analysis make to innovative managers are the professionals necessary, they're the news, enterning each xil organizational and economic aspects with the dealing there are. Theyrning this innovativerni managing the main function - the innovation process, earlier push, probably the to'siqlirni forecast to make and theyrni eliminate to the way of a sign. [2]

"Innovation" is the word, news, new creation, new technologies or new changes with associated with all the activities, for is used. In fact, the innovative word lotin taken to be "innovative"from taken and "the news" or "development" of the meaning it represents. Innovation with associated activity of different areas when used in also, basically updates, learn, create and perform to processes means. This process of technology development, new products, creating, xdata, and then prime minister improvement, entrepreneurship and economic renewal, social and cultural development, strengthening learning and other areas, be may. Innovation, every kind in the area news and developments get to go to the opportunity it gives.

In the economy, innovation, new technologies, products, services and processes of the study, creation, and execution of processes refers to. Innovation,

new ideas, speed, due to the expansion and due to the creation on the basis of his business development for created to be can.

A directory in innovation, new business and methods, technologies, markets, products, and services, improving by enterprises development and effectiveness to increase try to represent. This activity is to facilitate, quality improve, costs kompensatsiyalash and market of the weld increase help will.

Innovation, new ideas and products that work out, new market segments, access, work activities, facilitate and work production level in increasing great importance to be able to be, of the economy development and in accordance use it for is important.

Innovation on the basis of small business entities in work production efficiency increase to the following ways of use you can:

New products and services work out to: Small business entities new products and services, working out with germination learn and they apply or existing products update they can. This trade activities expansion, new market segments, access and customers to new interested measures to learn for opportunities to create the opportunity it gives.

Technological development: Small business and technological development strengthening studied, new technology use, and with them their own business, introduction to through the effectiveness of the increase they can. This automation, the internetof platform use, lighting and foreign to the expansion of their own into gets.

Experience training boost: Small business innovation mastering to training update and in them high quality of products, production, production, and services to improve, replace, you should. This staff new technologies to learn and for them to support encouraging by practical experience and mature and to increase the opportunity it creates.

Social media and advertising: Innovation to employees, customers and other persons provide to for social media and advertising media, the use of small business for very important. This is a new products and services, post to, trade activities, expansion and customers with connecting to the possibility of it creates.

Cooperation and alliances: Small business innovations learn and them their business to the introduction in other entrepreneurs, academic institutions, and emerging technologies offer who will individuals with cooperation they can. This is mutually thoughts sharing the news to learn the capacity and expanding for good opportunities it creates.

This way, the use of small businesses for innovation, and the study and use an important role plays and their effectiveness to increase help will.

Conclusion. Innovation provides the opportunity to be campaigning and active in competition, attract customers through the unique characteristics and advantages of the enterprise itself and add value to them. The use of an innovative Tavar in competition ensures the continuous development of the enterprise and the Prevention of competition through itself.

**MONITORING THE DISTRIBUTION OF THE MUSHROOM
FUSARIUM OXYSPORUM IN CONIFEROUS PLANTS OF FORESTRY
IN THE ANDIJAN REGION**

Annotation. The article provides information on monitoring and combating diseases that are of great importance in protecting the environment of green spaces, which can cause great damage to their growth and development.

Keywords: Ecological, green areas, UN, forestry, pest, disease, landscaping, fungal diseases, Fusarium, Alternaria, Botrytis, Verticillium, Pythium.

Ekologik innovatsiya va texnologiyalar, ya‘ni muhim komponentlardan biri bo‘lgan o‘simlik va hayvonot olamini qayta tiklash, saqlab qolish, tabiiy resurslarni saqlash, ijtimoiy jihatdan hududdagi aholi hayot sifatini va yashash tarzini yaxshilash, eng muhimi xalq manfaatlarini va yashash tarzini yaxshilashga yo‘naltirilgan ilmiy-tadqiqot loyihalarini kuchaytirish hamda kelajak avlodga tabiatni shu holda yetkazish, cho‘l o‘simliklaridan “yashil xududlar” barpo etishni izchil davom ettirish kabi muhim va sharaflil vazifalarni yuklaydi.

Shuningdek, **BMT bosh kotibi Antoniu Guterrish Xalqaro biologik xilma xillik kuni munosabati bilan tabiat bilan uyg‘un munosabatlarni tiklashga chaqirdi.** “Biz tabiatga urush e‘lon qildik. Biz biologik xilma xillikni saqlash borasida birorta vazifani bajara olmadik”, deb aytgan Guterrish o‘z murojaatida. Uning ta‘kidlashicha, ko‘z o‘ngimizda butun boshli ekotizimlar, nabobat olami yo‘q bo‘lib bormoqda, cho‘l hududlari esa tobora kengaymoqda,

har yil 10 mln gektar oʻrmon yoʻqotilmoqda, okeanlar plastik chiqindiga toʻlib-toshmoqda va insoniyat atrof-muhitga chiqarayotgan karbonat angidridni tobora koʻproq yutishi oqibatida oksidlanmoqda. Shu bilan birga, tabiatni muhofaza qilishga uni yoʻq qilayotgan sohalarga qaraganda kamroq pul sarflanmoqda.

Oʻzbekistonda choʻl hududlarida oʻrmon-meliorativ tadbirlarni amalga oshirish borasida **tajribalar yetarli**. Oxirgi yillarda tajribalar almashish maqsadida yuzlab **xalqaro tashkilotlar vakillari va davlatlar delegatsiyalari** bajarilgan ishlarni va ularning natijalarini koʻrish va kuzatish uchun keldilar, ushbu tabiat uchun qilingan xayrli ishlarga iliq munosabat bildirdilar.

Bundan tashqari, oʻrmon fondi yerlarida **oʻrmonlarni muhofaza qilish va qoʻriqlash** – oʻrmon xoʻjaliklarining asosiy vazifalaridan biridir.

Koʻpgina daraxtlar, ayniqsa ignabargli daraxtlar zararkunandalar va kasalliklarga taʼsirchan boʻlib, bu ularning qurishiga olib keladi. Yangi maydonlarda ekilgan qaragʻay va archalar doimiy parvarishga muxtoj.

Keyingi paytlarda shahar, qishloq va ishlab chiqarish korxonalari, ijtimoiy soha obʻektlarini obodonlashtirishga, koʻkalamzorlashtirishga katta eʼtibor qaratilmoqda. Koʻkalamzorlashtirishdagi ekinzorlar nafaqat shahar va aholi yashash joylarining koʻrinishini yaxshilaydi, balki kishilarga estetik zavq bagʻishlaydi, sanitariya — gigienik sharoitlarini ham yaxshilab, havoning salqinligini, musaffoligini taʼminlaydi. Shu bois har yili joylarda millionlab buta va daraxt turlari ekilmoqda. Ekilgan koʻchat va nihollarning koʻpgina qismi notoʻgʻri tanlanganlik, ekish va parvarishlashning belgilangan texnologik tadbirlarini amalda qoʻllanmasligi oqibatida nobud boʻlmoqda. Shu sababli ham har bir hududga mos keladigan manzarali daraxt-buta turlarini toʻgʻri tanlash, maqbul muddatlarda va usullarda ekish, parvalishlash juda katta ahamiyatga ega.

Maʼlumki, asosiy zarakunanda va kasalliklarga qarshi kurash choralari muxim ahamiyat kasb etadi Yashil hududlarga asosan bargxoʻr, soʻruvchi, tana zararkunandalar va kasalliklarda zang, qoʻngʻir dogʻlanish, un shuduring, parsha, sitosporoz zamburugʻlik kasalliklar katta zarar keltirmoqda. Hozirgi kunda tavsiya etilayotgan koʻplab usullar ichida kimyoviy kurashga muqobil variant sifatida mikrobiologik kurash usullari ham tavsiya etilmoqda.

Qayd etish kerakki, aholisi koʻp hududlarni koʻkalamzorlashtirish maqsadida igna bargli daraxtlardan keng koʻlamda foydalaniladi. Igna bargli daraxtlar oʻzining issiq-sovuq, qurgʻoqchilikka chidamliligi bilan boshqa manzarali daraxt va butalardan farq qiladi. Igna bargli daraxtlarning yaxshi oʻsishi, koʻrkam boʻlishi uchun ularni oʻz vqtida oʻgʻitlash, sugʻorish, zararkunanda va kasalliklardan himoya qilish muhim ahamiyatga ega.

<https://pubhtml5.com/jhog/owge/basic/>

Asosan daraxt mikobiotasini ikkiga yaʼni katta yoshli oʻsimliklar va nihol hamda koʻchatni zararlaydigan turlarga ajratishimiz mumkin.

Adabiy manbalarga asosan qaragʻay koʻchat va nihol fazalarida kuchli kasallik bilan zararlanadi. Oʻzbekistonda introduksiya sharoitida pitomniklarda

qarag'ayning biologik xususiyatlarini o'rganib fuzarioz bilan kasallanishini qayd etishgan [1]. Urug' va nihol kasalliklaridan nihol yotib qolishi va chirishini qo'zg'atuvchilar tuproqda asosan saprotrof holatda o'simlik qoldiqlarida rivojlanish xususiyatiga ega. Bunday zamburug'larga *Fusarium*, *Alternaria*, *Botrytis*, *Verticillium*, *Pythium* turkum vakillari kiradi [2].

Ninabargli daraxtlarning zamburug'li kasalliklarini aniqlashda tadqiqot ishlari Andijon, Namangan Farg'ona viloyatlarida o'tkazildi.

O'simlik tana (poyalarda), ignalarda dog'lar va g'uborlar, zang va so'lish ko'proq aniqlandi, ildiz chirishi va fuzarioz kasalliklari ildizlarda qayd etilgan.

Tadqiqot xududlardagi ko'chatxona ko'chatlarida ildiz chirish (*Fusarium oxysporum*) kasalligini rivoji va zararini 2018-2020 yillari kuzatilganda Andijon viloyati, Baliqchi tumani Olimbek o'rmon xo'jaligi ko'chatxona maydonlarida archa daraxtlarida kasallik rivojlanishi: 2018 yildagi - 49,8%, 2019 -63,8% 2020-57 % da tashkil etilganligi aniqlangan.

Andijon viloyati Baliqchi tumani Olimbek o'rmon xo'jaligi ko'chatxona maydonlarida ildiz chirish kasalligiga qarshi urug' dorilagich preparatlari Maksim 2,5% sus.k., 1,0 va 1,5l/t, Topsin M 70% n.kuk. 1,0-1,5 kg/t, Vitavaks 200 75% n.kuk., 3,0 va 4,0 kg/t va Baraka 60% ps. 1,0 va 2,0 kg/t sarf me'yorlarda foydalanildi.

Maksim 2,5% sus.k., 1,0 l/t sarf - me'yorda virgin archasida ildiz chirish kasalligiga qarshi qo'llanilganda 15 kundan so'ng zararlanishi 24,0%, rivojlanishi 9,6%, biologik samaradorlik esa 85,8% ga teng bo'ldi, 1.5 l/t sarf - me'yorda esa zararlanish 15,8%, rivojlanishi 5,7%, biologik samaradorlik esa 85,9% gacha qo'rsatgichga ega bo'ldi.

Topsin M 70% n.kuk., 1,0 kg/t sarf - me'yorida qo'llanilganda 15 kundan so'ng zararlanishi 23,3%, rivojlanishi 9,3%, biologik samaradorlik 73,3% teng bo'ldi, 1,5 kg/t sarf - me'yorda esa zararlanish 20,0%, rivojlanishi 8,0%, biologik samaradorlik esa 77,0% gacha qayd etildi.

Olib borgan tadqiqotlarimiz natijalariga virgin archasi urug'larini zararlash xususiyatiga ega bo'lgan patogenlarga qarshi yuqori samara beradigan preparatlar tanlandi. Ushbu preparatlar Maksim 2,5% sus.k., 1.5l/t, Topsin M 70% n.kuk., 1,5kg/t ekanligi aniqlandi. Ushbu preparatlarni ninabargli daraxtlarni ildiz chirish kasalliklariga qarshi urug'larni ekishdan oldin dorilashda tavsiya etishimiz mumkin.

METHODOLOGICAL CAPABILITIES OF «EXPERIENCED TEACHING» OF THE DEVELOPMENT OF STUDENT CREATIVITY WITH THE HELP OF COMPUTER GRAPHICS PROGRAMS

Annotation. It is known to us that bringing creativity to a higher level and supporting will be the impetus for the development and rise of education, the emergence of innovative ideas. Clear objectives in this regard should be provided with a guide in the rock landscape and orientation. Developing the technology of creative research based on the creation of visual and problematic situations, as well as developing the method of “experienced teaching”, it is advisable to develop several methods in increasing creativity from the “science of Engineering and computer graphics” and add massively to the increase in cognitive potential.

Keywords: experienced teaching, innovative education, talent, development, problem education, ability, activity, creative.

It is the most favorable period for the beginning of the development of the entire variety of human abilities in the gradual systematic blurring of the level of knowledge based on the creation of visual and problematic situations in the formation of creativity in students through an innovative educational environment, and in the development of the method of “experienced teaching”, a person begins to develop. The more favorable conditions they are closer to the optimal, the more successful the development begins. If the onset of maturation and activity (development) is timed, synchronously leaves, and conditions are favorable, development proceeds easily - with the highest acceleration. Development can reach its peak, and the student can be talented, talented and bright.

It is recommended to use new technologies in the educational process, choose technologies according to the content of the topic, the goals of the lesson, the level of training of students, the possibilities of meeting their educational needs, the age category. The most favorable period for the beginning of the development of the entire variety of human abilities in the gradual systematic design of the level of knowledge based on the creation of visual and problematic situations in the formation of creativity in students through an innovative educational environment. The more favorable conditions they are closer to the optimal, the more successful the development begins. If the onset of maturation and activity (development) is timed, synchronously leaves, and conditions are favorable, development proceeds easily - with the highest acceleration. Development can reach its peak and be capable, talented and bright.

Loss of development opportunities is an irreversible process. The time interval between the moment of maturity of the structures necessary for the formation of creative abilities and the beginning of the targeted development of these abilities leads to serious difficulties in their development, slows down its pace and leads to a decrease in the final stage.

Currently, the urgent problem of university education is to increase the professional training of graduates of the pedagogical higher educational institution. The need for the pedagogical profession, for its creative nature, is primarily associated with its high social significance and originality - the personality of the student, which has formed his personal identity. It is precisely the perfect formation of students of the modern period that is becoming a Talb of time. It is necessary to insist that ensuring that students are free-minded, able to interpret their knowledge fluently, and paving the way will stimulate the development of the potential for creativity. To do this, it is necessary to use modern programs and, on this basis, raise the level of knowledge of students.

Problem education technology, like other technologies, has pros and cons. Advantages of problematic teaching technology: helps not only to acquire the necessary system of knowledge, skills and qualifications by students, but also to achieve a high level of their mental development, to form the ability to independently acquire knowledge through their creative activity; develops interest in educational work; provides the results of continuing education.

Conducting problem education technology in small groups was carried out in several stages. At the first stage, each student draws up a set of questions that are interesting to him and proceeds to search for answers to these questions. In the second stage, the members of the group give assignments to the student based on what topic it is and make a plan to complete this topic. These tasks are initiated by validation and execution between the group members. In the third stage, each member of a small group is traced in the path of completing a task that concerns himself: collected information, summarized the data, analyzed it, came to the final conclusion, exchanged views with the groupmates, revised the conclusion based on their feedback. In the fourth stage, each member of the group produced a report on the outcome of the search. At the fifth stage, a presentation of a small group is prepared based on reports. In the sixth stage, the activities of each group in the team are evaluated. Interactive teaching methods can be used purposefully. The introduction of the model in the development of creativity there is an opportunity to achieve effective results based on the method of "experienced training" and the use of several interactive techniques.

The method of "experienced teaching" helps to deeply master the science of engineering graphics on the basis of practice and strengthen the interests of students, to increase cognitive activity, to form the ability to quickly receive information (educational information).

In the process of teaching engineering graphics, the method "experienced teaching" is aimed at the gradual systematic design of the level of knowledge

based on the creation of visual and problematic situations in practice in shaping creativity in students through an innovative educational environment. As we know, the most relevant treatment and possibilities of the current day go back to raw technologies. Therefore, the most basic task is aimed at achieving creativity by properly directing existing technologies. The method of "experienced teaching" consists of three systems: personality, field of activity (general practices, values, knowledge) and teachers, that is, a society of people who carry out their professional activities in this area. In my opinion, experience is the development of a series of ideas that can be options for solving a particular problem. Based on experience and knowledge, a person chooses the most correct solutions, and it eventually becomes the final product. It also states that creative ideas can be identified by applying certain measurement parameters. Of course, to carry out such a process, not only experience and knowledge are needed, but also a number of certain abilities and qualities. The method of "experienced teaching" is indicated precisely by evidence of the validity of drawings or thought-out projects carried out in experiments, which is considered an extremely important issue in the field of engineering.

The asasiy backbone of the "experienced teaching" method is an enterprise belonging to the field of engineering, manufacturing firms, in which it is possible to obtain basic knowledge in practice. On the basis of this practical experience, they also occupy the theoretical knowledge of science. First of all, we will consider three levels of analysis in the method of "experienced training" step by step.

This approach introduced the concept of how to achieve creativity in the context of students, groups and organizations

in the creative process.

1. Subjective (individual) – perception that corresponds to the self-thought style directed at the student is thought and evidence in "engineering graphics" science aimed at achieving creativity by using effective exercises and creating a suitable environment to enrich the imagination of students. Starting with a direct instruction on the use of reasoning tools, then entering as a task that they need to know how to use tools accurately and efficiently to facilitate the formation of ideas.

2) intersubjective (group), these higher analyzes aimed at strategic creativity include: analogous thinking: situations arise and make the right decisions, comparing with specific processes that are connected to each other. It is usually the idea that creativity consists of reassembling elements in a new style from an existing knowledge base to produce a new idea.

Auxiliary personal characteristics on the method of "experienced teaching", the desire for creativity increases in originality. Such creative students manage themselves. They open up new ways of illuminating their ideas and founders and halting their attitudes. Students are encouraged to motivate to create independence and learn new things to enhance the development of self-management processes. Organization of the educational process, which is a priority in the field of accounting for these peculiarities.

In the research period, topics in small groups based on the method of "experienced teaching" ("drawing tools, objects and compounds, information about drawings", "projection methods and layout of drawings". A presentation was held on the "clear image", "views", and the result was assessed on the basis of selected criteria. The use of the "experienced teaching" method and the use of information communication technologies make it possible to achieve effective results. Personality-oriented education is also one of the most effective methods for freethinking a student and fluently expressing his opinion and ideas. In this case, the student is in the main center, the teacher puts the attitude towards the middle, and each student is required to respond positively to the mule, to find and mature words that will motivate their search. We must not forget that imagination is in the main place in each area. The science of engineering graphics in particular is considered very important in this regard.

In the process of teaching engineering graphics in educational institutions, it is required to determine the conditions and pedagogical and psychological factors for the development of student creativity. Let's compare these values in degrees.

The intermediate level – retrieval activity-separates the student from memorizing and retelling the material, making it Sample-specific.

High level-interpretive activity-this is when the student's attempt is manifested to realize the studied material, to divide it with certain concepts, to apply knowledge in a new new setting.

The highest level - activity at the level of creative search – is characterized by the interest and effort of the student to find a new solution to the issue.

The main focus should be on improving student creativity, ensuring the quality content of educational programs, introducing modern teaching aids. To organize work in these areas, it is necessary to combine the existing mechanisms of the search and support of creative students into the national system of identification and development of young talents. This requires strategies to develop engineering creativity. In addition," engineering graphics " shows the

importance of providing students with problem-solving contexts in the curriculum for creativity.

CULTURAL AND HUMANITARIAN COOPERATION BETWEEN UZBEKISTAN AND THE REPUBLIC OF KOREA

Abstract. Uzbekistan and the Republic of Korea have been fostering a deep and fruitful cultural and humanitarian cooperation, characterized by strong bilateral relations and a mutual commitment to collaboration. Through the exchange of knowledge, arts, and social initiatives, the two countries have enhanced their cultural understanding and nurtured a spirit of harmony and friendship. This article explores the various aspects of this cooperation.

Keywords: culture, diversity, relationship, international agreements, investments, organizations.

Introduction. Uzbekistan and the Republic of Korea have forged a strong partnership grounded in cultural and humanitarian cooperation. This collaboration has sparked a rich tapestry of mutual understanding, respect, and growth. Through a shared commitment to cultural exchange, the two nations have cultivated a vibrant relationship that continues to flourish.

President of the Republic of Uzbekistan Shavkat Mirziyoyev is making a state visit to this country on November 22-25 this year at the invitation of the President of the Republic of Korea, Moon Jae-in.

Successful cooperation between the countries in the humanitarian sphere has a long history. Everyone knows that Koreans, who have been living in Uzbekistan for many years, have become an integral and important part of social life.

Since 1992⁹⁴, the Korean educational center has been operating in Tashkent. The center is engaged in language learning in the Republic of Korea on a competitive basis and organization of professional development courses for university teachers and students.

Today, Korean language and culture centers are operating in the leading higher educational institutions of Uzbekistan, including the State University of World Languages of Uzbekistan, the Samarkand State Institute of Foreign Languages, and the University of World Economy and Diplomacy.

Korean language is taught as a subject in 12 universities and 28 schools and lyceums across the country.

Uzbek-Korean educational centers were established in Tashkent in 2012 and in Samarkand in 2016 based on the grant of the International Cooperation Agency of the Republic of Korea (KOIKA).

⁹⁴ Diplomatic relations between Uzbekistan and Korea (Ilyas Ismailovich Okbo"tayev). ISSN: 2181-1385

An electronic library of oriental studies was created at the Tashkent State Pedagogical University, the Tashkent State Institute of Oriental Studies, and the International Cooperation Agency of the Republic of Korea on the basis of the free aid program of the government of the Republic of Korea.

On September 1, 2014, a branch of Korea's Inha University, specializing in computer and software engineering, logistics, was opened in Tashkent.

Also, on September 1, 2014, Seoul Park was opened in the territory of "Babur" Park of Tashkent. Today, construction work is underway to build the Korean House of Culture and Art.

Every year, in cooperation with the Ministry of Cultural Affairs of the Republic of Uzbekistan and the Embassy of the Republic of Korea in Uzbekistan, "Korean Culture Week" is held in the country. During the week, Korean film night, master classes of Korean traditional artists, art and photo exhibitions, Korean song and speech contest, Korean fashion shows will be held.

The Republic of Korea will help equip the Taekwondo Association of Uzbekistan with sports equipment and organize training sessions for athletes from both countries.

For their contribution to the development of Uzbekistan-Korea relations, 10 representatives of the South Korean government have been awarded the "Dostlik" order.

Embracing Diversity and Tradition

Uzbekistan and the Republic of Korea have embraced each other's cultural diversity and traditions, fostering a deep appreciation for the unique heritage of both nations. This open-minded approach has paved the way for meaningful cultural exchanges, allowing the people of Uzbekistan and Korea to connect on a profound level.

Humanitarian Initiatives: Fostering Compassion and Empathy

The humanitarian cooperation between Uzbekistan and the Republic of Korea has been instrumental in fostering compassion and empathy. Both nations have collaborated on various initiatives aimed at uplifting communities and promoting sustainable development. This concerted effort has not only brought tangible benefits to those in need but has also strengthened the bond between the two countries.

Education and Knowledge Sharing

Education and knowledge sharing have been pivotal in nurturing the relationship between Uzbekistan and the Republic of Korea. Through academic exchanges, research collaborations, and scholarships, both nations have enriched each other's intellectual landscape. This commitment to learning has expanded horizons and created a fertile ground for the exchange of ideas and innovation.

Building Bridges Through Art and Entertainment

The arts and entertainment industry has served as a powerful bridge between Uzbekistan and the Republic of Korea. From captivating performances to thought-provoking exhibitions, the creative exchange has ignited a cultural

renaissance, allowing the people of both nations to revel in the beauty of each other's artistic expressions.

A Shared Vision for the Future

As Uzbekistan and the Republic of Korea continue to deepen their cultural and humanitarian cooperation, they are laying the foundation for a brighter and more interconnected future. By cultivating understanding, compassion, and mutual respect, these two nations are not only enriching their own societies but also setting an inspiring example for the world.

In today's complex situation, world peace, security and stability depend on mutual trust, solidarity and friendly relations between countries and nations. Only the positive development of socio-political, cultural and economic relations can bring humanity out of today's difficult situation.

Our country, which entered the world stage as an independent country in 1991, is boldly and determinedly moving forward under the leadership of President Islam Karimov. Until now, it has been stated many times that our country is in favor of solving any conflicts, conflicts and crises by peaceful means, on the basis of universal criteria and international laws, and this position is being steadfastly defended.

South Korea⁹⁵ is another country of peace, goodness and harmony that is progressing along the same path. It should be noted that Uzbek and Korean nationalities have many similarities and commonalities. We are linguistically united by the Altai language family, and territorially we are united by one continent, one region - Eurasia and the East. Historically and culturally, many harmonies can be seen.

Like the Uzbeks, the brave Korean people were forced to live under the oppression of invaders many times in the past, and to wage a blood and life struggle against them. It is probably because of such difficulties that even in the current peaceful and prosperous environment, Koreans are distinguished by their hard work and perseverance.

After the independence of our country, on December 30, 1991, South Korea was the first among the countries of the Asia-Pacific region to recognize the independence of Uzbekistan. Diplomatic relations were established between the two countries on January 29, 1992. Since that day, the relations between Uzbekistan and South Korea have been developing successfully in every sphere in a positive spirit.

On June 19, 1992, the President of the Republic of Uzbekistan Islam Karimov paid a state visit to the Republic of Korea. This visit laid the foundation for economic, trade, cultural and technical relations between the two countries and nations. It was during this trip that the declaration "On Interstate Relations and Cooperation between Uzbekistan and South Korea" was signed.

⁹⁵ <https://journals.sagepub.com/doi/10.1177/18793665221123598?icid=int.sj-full-text.similar-articles.2>

A number of agreements were signed on trade and economic exchange, guarantees to South Korean businessmen who invest in the development of Uzbekistan's economy. Long-term plans for cooperation in the fields of culture, education, mass information, travel, and sports were determined. It was agreed with the leaders of DEU Corporation in South Korea to build a car factory in Asaka, Andijan region.

In 1992-1996, the construction and design of the Uzbekistan-South Korea joint venture "UzDEUavto" was carried out. On March 25, 1996, the first product of the plant was produced.

The scope of cooperation between our countries is trade, investment, export-import, fuel and energy, chemistry, transport and logistics, automotive industry, mining industry, light industry, food, agriculture, information technology and telecommunications, covering many fields such as medicine, tourism, science and education and culture.

Currently, 412 enterprises established in cooperation with South Korean investors, representative offices of 81 companies in this country are working in Uzbekistan. The volume of investments in Uzbekistan exceeded 6 billion dollars. The Republic of Korea is one of the main foreign trade partners of Uzbekistan. 7.8 percent of our country's foreign trade belongs to South Korea, and in 2014, the volume of mutual trade exceeded 2 billion dollars.

When it comes to the relations between the two countries, it is worth mentioning the cooperation in the field of culture and education. The Korean educational center has been operating in Tashkent since 1992. Several universities and institutes have opened Korean language and culture centers. Korean language is taught in 13 higher education institutions, 28 schools and lyceums. Universities of Uzbekistan have been cooperating with more than thirty higher educational institutions and scientific production organizations in South Korea.

To date, 14 rounds of political consultations have been held between the Ministries of Foreign Affairs of the two countries (the last one was held on November 5, 2020 in the form of a video conference). On April 17-18, 2018, the Minister of Foreign Affairs of the Republic of Korea, Kang Gyeong-hwa, paid an official visit to Uzbekistan.

Since November 2007, the annual cooperation forum "Republic of Korea - Central Asia" has been operating. In November 2020, Minister of Foreign Affairs A. Kamilov participated in the 13th meeting of the Forum.

The Republic of Uzbekistan has supported all the initiatives of the Republic of Korea in cooperation within international organizations

Conclusion

Cultural and humanitarian cooperation between Uzbekistan and the Republic of Korea has been instrumental in fostering strong ties and promoting mutual understanding. Through a variety of cultural exchange programs and humanitarian initiatives, both countries have successfully bridged the gap and built lasting relationships. It is imperative to continue nurturing these connections

for the betterment of both nations and to pave the way for a brighter future of cooperation.

PEDAGOGIK AMALIYOT JARAYONIDA MULTIMEDIA VOSITALARIDAN FOYDALANISHNING AFZALLIKLARI

Annotatsiya. Mazkur maqolada pedagogik amaliyot jarayonida multimedia vositalaridan foydalanishning afzalliklari, texnologiyalarining istiqbollari va dars samaradorligini oshirishda videolar, audioyozuvlar, interfaol simulyatsiyalar hamda grafika kabi zamonaviy pedagogik texnologiyalar orqali oʻqituvchi taʼlim jarayonidada turli xil uslublarni qoʻllashlari tufayli oʻquvchining darsdagi faolligini oshirish toʻgʻrisida fikr va mulohazalar keltirilgan.

Kalit soʻzlar: pedagogik amaliyot, multimedia, kognitiv, taqdimot, texnologiya, interfaol simulyatsiya, ogʻzaki, matn, dars.

ADVANTAGES OF USING MULTIMEDIA IN THE PROCESS OF PEDAGOGICAL PRACTICE

Annotation. In this article, the advantages of using multimedia tools in the process of pedagogical practice, the perspectives of their technologies and increasing the effectiveness of the lesson, due to the use of modern pedagogical technologies such as videos, audio recordings, interactive simulations and graphics, the teacher uses various methods in the educational process to increase the student's activity in the lesson, opinions and comments are presented.

Key words: pedagogical practice, multimedia, cognitive, presentation, technology, interactive simulation, oral, text, lesson.

Bugungi kunda taʼlim jarayoni raqamli texnologiyalarning keng tarqalishi tufayli sezilarli oʻzgarishlarni boshdan kechirmoqda. Taʼlim tizimida axborot texnologiyalarining jadal surʼatlar bilan joriy etilishi zamonaviy texnologiyalarning qoʻllanish sohalarini kengaytiradi. Ayni paytda taʼlimda zamonaviy axborot texnologiyalarini rivojlanayotgan yoʻnalishlarini alohida taʼkidlash mumkin. Ular quydagilar:

1. Oʻquv maqsadlaridagi dasturiy vositalarning imkoniyatlarini oʻqitish vositasi, oʻrganish asosi va axborotlarni qayta ishlash vositasi sifatida joriy etish.
2. Oʻquv-metodik majmualar yaratishda, oʻquv-namoyish asboblari va kompyuter vositalari imkoniyatlarinish integratsiyasi.

3. Multimedia tizimlarini yaratishda, kompyuterlar va audio-video axborotlarni uzatish vositalari imkoniyatlarining integratsiyasiga erishish. Bunday tizimlar o'zida dasturiy-apparat vositalar va asboblarning majmuasini mujassamlashtirib, axborotning turli (matn, grafika, ovoz, tasvir) ko'rinishlarini birlashtiradi va foydalanuvchi bilan interfaol muloqotni tashkil etad.[1., 405-407-b]. Dars davomida matn, audio, video, tasvirlar va animatsiyalar kabi turli elementlaridan foydalanish multimedia texnologiyalarining yanada qiziqarli va samarali o'quv muhitini yaratishini ta'minlaydi. Pedagogik amaliyotda multimedia vositalaridan foydalanish o'qitish va ta'lim tajribasini sezilarli darajada yaxshilaydigan ko'plab afzalliklarni bermoqda. Multimediali texnologiya (multi – ko'p, media – muhit) bir vaqtning o'zida ma'lumot taqdim etishning bir necha usullaridan foydalanishga imkon beradi: matn, grafika, animatsiya, video-tasvir va ovoz.

Multimediali ma'lumotlarni quyidagicha uch xil sinfga ajratish mumkin:

1. Vaqtga nisbatan o'zgarmas bo'lgan, shuningdek interfaol bo'lmagan statik tasvir va grafik obyektlar.

2. Vaqt bo'yicha o'zgaruvchan, harakatlanuvchi hamda interfaol bo'lgan dinamik audio, video va animatsiyalar.

3. Ko'p o'lchovli virtual reallik, 5D- va 7D- filmlar, 3D o'yinlar, tasvirlar, videolar [2.,5-6-b].

Multimediali texnologiyaning eng muhim xususiyati interfaollik – axborot muhiti ishlashida foydalanuvchiga ta'sir o'tkaza olishga qodirligi hisoblanadi. Multimedia vositalaridan foydalanishning asosiy afzalliklaridan biri shundaki, ular turli xil ta'lim uslublariga mos keladi. Ko'rgazmali qo'llanmalar, audiokliplar, videoroliklar va interfaol taqdimotlarni o'zida jamlagan holda o'qituvchilar vizual va eshitish qobiliyatiga ega bo'lgan o'quvchilarni qiziqtirishi mumkin, bu esa o'quv jarayonini yanada qamrab oladi va samarali qiladi. Taqdimotning bu xilma-xilligi esa o'quvchilarni dars mazmuniga qiziqtirishga yordam beradi.

Dinamik vizual ketma-ketlik (slyd-shou, animatsiya, video)ni ovozli tarzda namoyish etish orqali insonlarning e'tiborini ko'proq jalb qilamiz. Shundan kelib chiqib, multimediali texnologiyalar axborotni maksimal samarali tarzda taqdim etishga imkon beradi [2., 6-b]. Multimedia vositalarini ta'lim va amaliyotda qo'llash orqali o'qituvchilar hamda bo'lajak pedagoglar darslarni yanada interaktiv va amaliy qilish imkonini beradi. Undan tashqari multimedia vositalari viktorinalar, o'yinlar va virtual tajribalarni ham o'z ichiga olgan holda, o'qituvchilar o'quvchilarning faol ishtirokini rag'batlantiradigan dinamik va qiziqarli o'quv muhitini yaratishi mumkin. Richard Mayer tomonidan ishlab chiqilgan multimedia ta'lim nazariyasi ta'lim dizaynini ma'lumotni bir nechta dasturlar orqali taqdim etish, optimallashtirish mumkinligini ta'kidlaydi [3., 31-48-b]. Ushbu yondashuv inson miyasining bir vaqtning o'zida turli xil usullardan ma'lumotlarni qayta ishlash qobiliyatidan foydalanadi. Diagrammalar va animatsiyalar kabi vizual elementlar murakkab tushunchalarni aniqlashtirishi

mumkin, audio tushuntirishlar esa tushunishni kuchaytirishi mumkin. Taniqli kognitiv psixolog Jerom Brunerning fikriga ko'ra, o'rganish "faol, ikonik va ramziy tasvirlash" jarayonini o'z ichiga oladi. Multimedia bu turli xil tasvirlash rejimlariga xizmat qiladi. Masalan, simulyatsiyalar o'quvchilarga virtual muhitni boshqarish imkonini beruvchi faol tajribani taqdim etishi mumkin. Tasvirlar va illyustratsiyalar ramziy tasvirlarni, matn esa ramziy tasvirlarni taqdim etadi [4]. Ushbu hilma-xil ta'lim uslublarini qo'llab-quvvatlagan holda, multimedia chuqurroq kognitiv qayta ishlash va bilimlarni saqlashga, pedagogik amaliyot davomida bo'lajak pedagoglarning kasbiy tajriba hamda darsning sifatini oshirishga yordam beradi. Bundan tashqari, multimedia vositalari murakkab tushunchalarni soddalashtirishga va mavhum g'oyalarni yanada aniq va tushunarli qilishga yordam beradi. Animatsiyalar, simulyatsiyalar va interfaol diagrammalardan foydalanish orqali o'qituvchilar qiyin mavzularni hazm bo'ladigan qismlarga ajratishlari mumkin, bu esa o'quvchilarga materialni osonroq tushunish imkonini beradi. Bu mavzuni eslab qolish va tushunishni yaxshilashga olib kelishi mumkin. Pedagogik amaliyot jarayonida multimedia vositalaridan foydalanishning yana bir afzalligi shundaki, ular o'rganishni yanada interaktiv va amaliy qilish imkonini beradi. Viktorinalar, o'yinlar va virtual tajribalarni o'z ichiga olgan holda, o'qituvchilar o'quvchilarning faol ishtirokini rag'batlantiradigan dinamik va qiziqarli o'quv muhitini yaratishi mumkin. Bu nafaqat o'rganishni kuchaytirishga yordam beradi, balki tanqidiy fikrlash va muammolarni hal qilish ko'nikmalarini rivojlantiradi. Darslarni samarali tashkil etish nuqtai nazaridan multimedia vositalaridan foydalanish o'qituvchilarga o'z mazmunini aniq va izchil tuzishga yordam beradi. Hozirgi zamon o'qituvchisi, o'z fani bo'yicha mutaxassisligidan tashqari fanni o'qitayotganda axborot va kommunikatsiya texnologiyalarining barcha afzalliklaridan bimalol foydalana oladigan, o'quvchi va talabalarda bu texnologiyani amalda ishonch bilan fan va texnikaning mavjud yangiliklari ularni o'quv darslari va darsliklari mazmuniga jadal kiritishni talab etadi va bu orqali talabalarning zamonaviy bilimlarini shakllantirishga zamin yaratadi [5., 189-b]. Ilg'or ta'limning yetakchi tarafdori Jon Dyui o'quvchiga yo'naltirilgan ta'limning muhimligini ta'kidladi. Multimedia o'quvchilarga o'z ta'lim tajribasi ustidan ko'proq nazorat qilish orqali ushbu falsafaga mos keladi. Multimedia elementlarini o'z ichiga olgan o'quv o'yinlari va mashg'ulotlar o'quvchilarni rag'batlantirishi va o'rganishni yanada qiziqarli va foydali jarayonga aylantirishi mumkin [6., 328-335]. Multimedia inklyuzivlikni targ'ib qilish va turli xil ta'lim ehtiyojlarini qondirish uchun qimmatli vositalarni taklif etadi. Matndan nutqqa dasturiy ta'minot o'quvchilarga o'qishda qiyinchiliklarga yordam berishi mumkin, videolardagi yopiq lavhalar esa kar yoki eshitish qobiliyati zaif talaba o'quvchilar uchun foydali bo'lishi mumkin. Bundan tashqari, multimedia resurslari turli o'quv uslublariga moslashtirilishi mumkin. Vizual o'quvchilar diagrammalar va animatsiyalardan foydalanishlari mumkin, eshitish qobiliyatini o'rganuvchilar esa podkastlar yoki audiokitoblarni afzal ko'rishlari mumkin. Govard Gardnerning ko'p intellekt

nazariyasi o'quvchilarning turli kuchli va zaif tomonlariga ega ekanligini ta'kidlaydi. Multimedia bu hilma-xil intellektlarga xizmat qiladi. Kinestetik o'quvchilar simulyatsiya yoki virtual haqiqat tajribasidan foydalanishlari mumkin, mantiqiy-matematik o'quvchilar esa interaktiv simulyatsiya va ma'lumotlar vizualizatsiyasini qadrlashlari mumkin. Turli multimedia resurslarini taqdim etish orqali o'qituvchilar ta'limni farqlashlari va barcha o'quvchilarning mazmunli o'rganish tajribasidan foydalanishlarini ta'minlashlari mumkin [7., 285-294]. XXI asr tanqidiy fikrlash, muammolarni hal qilish, axborot savodxonligi va raqamli ravonlikni o'z ichiga olgan yangi ko'nikmalar to'plamini talab qiladi. Multimedia bu kompetensiyalarni rivojlantirishda hal qiluvchi rol o'ynashi mumkin. Interaktiv simulyatsiyalar talabalarni vaziyatlarni tahlil qilishga, qaror qabul qilishga va muammolarni hal qilishga undashi mumkin. O'quv o'yinlari tanqidiy fikrlash va axborot savodxonligi ko'nikmalarini rivojlantirishi mumkin, chunki o'quvchilar murakkab senariylar va tadqiqot yechimlari bo'yicha harakat qilishadi.

Multimedia vositalarini sinfga kiritishning afzalliklari ko'p qirrali. Mana bir nechta asosiy jihatlar:

1. Ishtirok etish va motivatsiyaning ortishi:
2. Multimedia o'z tabiatiga ko'ra o'ziga jalb qiladi.
3. Simulyatsiyalar, animatsiyalar va o'quv o'yinlari kabi interfaol elementlar o'quvchilar e'tiborini jalb qilishi va faolroq o'quv muhitini rivojlantirishi mumkin.

Multimedaning multisensorli tabiati turli xil o'rganish uslublariga mos keladi. Vizual o'quvchilar grafikalar, animatsiyalar va diagrammalardan foyda ko'radilar, eshitish qobiliyatini o'rganuvchilarga esa audio ma'ruzalar yaxshiroq xizmat qiladi. Multimedia vositalarining integratsiyasi o'qitish samaradorligini ko'p jihatdan sezilarli darajada oshirishi mumkin ya'ni darsni rejalashtirish va o'tkazishni soddalashtirish: Oldindan tayyorlangan ta'lim resurslari, simulyatsiyalar va interaktiv tadbirlarning keng to'plami internet saytlarda mavjud. Bu o'qituvchilarga yuqori sifatli materiallarni tanlash va qiziqarli darslarni osonlik bilan loyihalash imkonini beradi..

Umuman olganda, bugungi kunda ta'lim jarayonida interfaol uslublar, innovatsion texnologiyalar, pedagogik va axborot texnologiyalarini o'quv jarayoniga qo'llashga bo'lgan qiziqish, e'tibor kundan kunga kuchayib bormoqda, bunday bo'lishining sabablaridan biri shu vaqtgacha an'anaviy ta'limda o'quvchi talablarni faqat tayyor bilimlarni egallashga o'rnatilgan bo'lsa, zamonaviy texnologiyalar xususan multimedia ularni egallayotgan bilimlarini o'zlari qidirib topishlariga, mustaqil o'rganib, tahlil qilishlariga, hatto xulosalarni ham o'zlari keltirib chiqarishlariga o'rgatadi [8., 152-b].

Xulosa qilib shuni ta'kidlash joizki, multimedia vositalari pedagogik amaliyotni takomillashtirish uchun kuchli vositalardan biri hisoblanadi. Pedagoglar multimedia texnologiyalarining imkoniyatlaridan foydalangan holda va uning cheklovlarini tan olgan holda, ular barcha talaba yoshlar uchun yanada

qiziqarli va samarali ta'lim muhitini yaratishi mumkin. Ta'lim sifatini yanada takomillashtirishda axborot texnologiyalar sohasi rivojlanishda davom etmoqda va davom etayotgan izlanishlar natijasida multimedia vositlarining ta'limdagi imkoniyatlarini maksimal darajada oshirish juda muhimdir.

BLENDED LEARNING IN THE TEACHING OF ENGLISH

Abstract. Blended learning has become one of the most common ways of teaching English as a Foreign Language (EFL). Language due to its dual component, which combines face-to-face teaching with virtual learning to provide students with a wide range of methodically organised materials and resources. Over the years, teachers and students have changed the way they view this educational process, as new technologies have been introduced and teachers have had to propose new ways of working in order to provide materials to complement face-to-face EFL teaching. However, the implementation of a blended course must have a pedagogical basis for each setting in which it is to be developed.

Keywords: Blended learning, face-to-face teaching, methodology, pedagogical basis, virtual learning.

Introduction

The educational process is a daily challenge for many students and teachers. Most of the time they are participants in a 'game' in which they take on different roles; for example, EFL teachers must have to be facilitators, helping students to move through the different stages of learning a foreign language (FL) and make them aware of the importance of the resources around them in order to learning a foreign language. This means that there is not only printed material but also a wide range of technological resources of technological resources, thanks to the invention of the Internet and the technological devices that are which are used all over the world to supplement face-to-face teaching. These are virtual resources such as such as wikis, blogs, podcasts, emails, websites, video links, iPods, third screen devices, etc. which that enhance foreign language learning.

This paper presents an integrative view of blended learning - as it is conceived from different research experiences - and presents some important considerations regarding this pedagogical this pedagogical model. It begins with some accounts of a blended learning model proposed by proposed by Khan (2005), consisting of 8 aspects: pedagogical, technological, interface design, institutional, ethical institutional, ethical, resource support, management and evaluation. After defining what BL means and implies, we outline some previous research carried out in different countries on BL. We then present some key aspects of BL. Finally, we draw some conclusions and implications and further research on blended learning in EFL.

A blended learning model

In order to address the issue of Blended Learning (BL), we need to refer to some definitions that have been proposed for this type of process. Albrecht (2006, p. 2) states that "BL combines face-to-face classroom instruction with web-based activities". Similarly, Bersin (2004, p. 8) affirms that "blended learning is the combination of different training media (technologies, activities and types of events) to create an optimal training programme for a specific audience". Furthermore, as Bender (2003, p.6) states, "research shows that through BL, students become far more active in their own learning, feel more technologically empowered, and are able to learn anywhere, anytime, in a way that best fits their lifestyle".

Considering the above, in many educational settings, BL is a tool available to students to go beyond the classroom and engage in various interactive activities as an extension of direct instruction. With all the technological resources they have around them, students can learn about different subjects and cultures, surf the Internet and use the technological devices they have access to, such as iPods, iPads, laptops, Mp3s and Mp4s, among others.

When planning blended courses, it is important to consider all the aspects involved. The institutional aspect is the first element that teachers need to consider, as it depends on the institutional policies regarding the curriculum, the design of the material and the administrative and financial areas, administrative and financial aspects. On the one hand, teachers and students have no or very limited access to technological resources and the number of computers is very limited or the bandwidth does not work properly; these EFL teachers and students have to adapt the scarce tools they work with and plan courses that partially meet the course needs.

If teachers have a methodological plan to organise both their face-to-face classes and the online aspect.

According to Dudeney and Hockly (2007), it is important to consider some considerations for pedagogical implementation, such as delivery mode, task design, materials, learner and teacher roles, tutors, assessment and evaluation:

- Delivery mode: teachers and curriculum planners need to consider what percentage of the course will be face-to-face or online, and how and which materials will be delivered using a VLE (Virtual Learning Environment), Internet groups, email, etc. (Dudeney & Hockly, 2007).

- Task design and materials: Blended learning teachers need to consider the type of

materials, whether they are tailor-made or existing tools from the internet. It is also important that English teachers planning blended courses provide their students with a wide range of online and face-to-face activities that appeal to their students and are based on a needs analysis carried out at the beginning of the course.

- Teachers - Students: Both are the main participants in the EFL teaching and learning process. When planning BL courses, it is necessary to take into account students' and teachers' familiarity with technology and the roles of both in face-to-face and virtual classes. It is important to consider how much guidance students need from teachers and the students' previous knowledge. In addition, according to Núñez and Téllez (2009, p. 172), "the teaching process is crucial in the search for the development of materials that meet students' learning objectives and styles, preferences and expectations". When students find the appropriate resources and teachers provide them according to students' needs, learners are able to resolve their doubts and answer their own questions. These aspects can promote autonomy because students can monitor their learning process, determine their learning strategies and take responsibility for their own way of acquiring knowledge.

- Assessment and evaluation: Teachers and curriculum planners need to decide whether the course is designed to include formative and summative assessment.

In this respect, teachers need to create coherence between the institutional curriculum, the EFL curriculum and the blended learning approach. BL can be applied to different types of courses offered by the institution through curricular platforms, defined by Ariza (2004) as the basic principles underlying the construction and implementation of a curriculum.

Conclusions

Blended learning is the integration of face-to-face teaching with a virtual component where students have the opportunity to practice beyond what is taught in the classroom. So far, the research carried out in this field has shown that this hybrid learning offers students a lot of materials, resources, offline and online activities, the integration of what they learn in the classroom with what they learn on their own through the use of a virtual platform.

In addition, one of the most highlighted aspects is the fact that students can develop autonomy towards the English learning process. For example, EFL teachers can guide students through the process and also give them extra activities to do on their own; in this way, they are freer to choose what they want to see in a lesson at their own pace.

MODELING THE IMPACT OF INDICATORS OF SMALL BUSINESS AND PRIVATE ENTREPRENEURSHIP ON THE LEVEL OF WELL- BEING OF THE POPULATION

Annotation. The article modeled the effect of the size indicator of small business and private entrepreneurship in the industrial sector on the Legatum Population Welfare index. In modeling, linear, exponential and graded equations were used. The optimal model has been compiled and the Legatum index, which represents the well-being of the population, is projected to be by 2023.

Keywords: model, Legatum welfare Index, Small Business, Private Enterprise, regression, linear model, exponential model, level model.

Enter

At the current stage of socio-economic development, one of the urgent and problematic issues in the republic is the formation of a system for evaluating the effectiveness of state social policy. In practice, various indicators are used to assess the well-being of the population.

The main goal of the socio-economic development of the society is to achieve the well-being of the population. From the point of view of the World Bank, the goal of achieving population welfare is to increase the income of the bottom 40 percent of the population. Without sustainable economic growth, it is difficult to improve the living standards of the poor. However, economic growth alone is not enough to achieve prosperity. To improve overall welfare, growth must be inclusive – that is, it must reach the disadvantaged sections of the population[9].

The well-being of the population, on the one hand, is determined by the structure and level of their needs for various social benefits, which are constantly changing, and on the other hand, it is determined by the opportunities to satisfy the needs, the situation in the market of goods and services, the income of the population, and the wages of workers[1].

According to the Legatum welfare index, in 2021, the Republic of Uzbekistan took 100th place and the index value was 53.9. In 2021, it increased by 9 points compared to 2010, and by 6 points compared to 2015. The highest figure (98 places) was reached in 2020 (Figure 1). In addition, 27 high ratings were achieved in terms of social capital and 50 in terms of health. The top 5 places

in the rating are occupied by the developed countries of the world, Denmark, Norway, Sweden, Finland, and Switzerland. Among the CIS countries, Kazakhstan took 64th place, Kyrgyzstan took 90th place, Tajikistan took 110th place, and Turkmenistan took 108th place. The lowest place in the rating was occupied by the country of South Sudan, occupying 167 places.

Figure 1. Indicator of the Legatum Welfare Index of the Republic of Uzbekistan for 2007-2021⁹⁶

It should also be noted that the order of the President of the Republic of Uzbekistan dated 02.06.2020 No. PF-6003 "Improving the position of the Republic of Uzbekistan in international rankings and indexes and introducing a new mechanism of systematic work with them in state bodies and organizations" According to the Decree, measures to reflect the indicators of the republic in indicators such as the Legatum welfare index have been determined.

Analysis of literature on the topic

In 2015, the UN General Assembly adopted a document reflecting 17 sustainable development goals aimed at improving and protecting the well-being of the countries of the world. The 2030 Agenda for Sustainable Development sets the goal of ending poverty and creating healthy lifestyles for the peoples of the world, peace, prosperity and opportunity for all[15].

The concept of "quality of life" was first used by JK Galbraith in his scientific research, and he evaluated this concept as the same as the concept of "standard of living" [16]. In addition, J.K. In his scientific research, Galbraith studied economic growth and its effects on the environment, and in his writings he justified the ecological consequences of economic growth on the environment and the quality of human life.

P.D. The concepts of quality of life and standard of living are widely used in Kosinski's scientific research. But they are not the same concept. According to

⁹⁶ It was compiled by the author based on the data of the British Legatum Institute analysis center.

him, the "standard of living" reflects the level of meeting the needs of the population and its development. The concept of "quality of life" defines various (economic, social, ecological) living conditions and the state of people's use of social opportunities created by society[18].

V.T. According to Shishmakov, the concept of "quality of life" includes not only the level of consumption of material goods and services, but also the satisfaction of spiritual needs, the state of health, the life expectancy of the population, human living conditions, moral and psychological climate. It is considered as a generalizing socio-economic category containing[17].

Currently, the term "quality of life" is actively used in discussing issues of human development, determining the level of inequality, as well as comparing the well-being of the population between countries [15].

In the analysis of the quality of life of the population, general indicators reflecting the level of socio-economic development of the region are used. The level of well-being of the population can be expressed in indicators such as the size of the national income, real income per capita, as well as the unemployment rate and various indices. One such indicator is the Legatum Prosperity Index. The Legatum Prosperity Index is a comprehensive indicator of the British think tank Legatum Institute, which evaluates the achievements of the countries of the world in terms of their well-being and development. The research has been conducted annually since 2006. The index is compiled on the basis of many different indicators combined in three directions, reflecting various aspects of society and parameters of social well-being. These are: open society; openness of the economy; people's capabilities. The ranking of each country is determined by calculating the weighted average of these indicators, each of which is defined as the basis of well-being. Indicators are based on statistical analysis, social research and expert assessments of survey participants. The statistical data used in the rating were obtained from the UN, World Bank, ICT, WTO and other global organizations and international think tanks[3].

Assessing the level of well-being of the population is a complex process due to the large number of factors affecting it. T.V. Ignatov[11] tried to use the criteria for assessing the welfare of the population used by the World Bank in his research. Ayvazyan S. A. [10] developed a methodology for assessing the quality of life of the residents of the region based on the use of an integral index.

The problem of determining the relationship between the level of well-being of the population and economic indicators is one of the current research directions. Barro RJ, Banerjee AV, Duflo Ye. [14] studies are devoted to assessing the impact of inequality on economic growth. Based on the analysis of data on a group of countries, Duarte, Simcotekmes M., Andrade J. S.[15] recommended using the quantile regression method in their research to assess the relationship between the level of well-being and economic indicators.

In various literature, the factors affecting well-being are classified based on different approaches and different methodologies have been developed. S.A.

Balashova and E.O. Nakhatakyan[5] developed a well-being index based on the systematization of the existing methodologies by systematizing the widely used global well-being indices, analyzing their level of relevance and evaluating the relationship with traditional socio-economic indicators. O.A. Kislitsyna[6] analyzed the approaches to measuring the level of development and the quality (welfare) of the population's lifestyle and highlighted their importance. The author has also developed an integral index of well-being [6]. Fundamental approaches to measuring the level of social well-being of regions were discussed in the researches of M.V. Smirnov [8].

Despite the many methods of assessing well-being, the issue of determining the factors affecting it remains relevant.

Research methodology

Analysis of the validity of the influence of the indicator of the size of small business and private entrepreneurship in the industrial sector on the Legatum population welfare index, verification of the completeness of its components, between the resulting and factor indicators based on linear, exponential and rank equation econometric modeling quantitatively and qualitatively scientific assessment of dependence, as well as development of the forecast parameter of the Legatum index, which represents the well-being of the population, until 2025 based on the constructed econometric model.

Analysis and results

As mentioned above, several factors are the basis for the formation of the Legatum welfare index. From an economic point of view, it is important to assess the impact of the size of small business and private enterprise on the industrial sector. After all, small business and private entrepreneurship play a central role in the development of society, providing employment to the population, and ensuring the well-being of the population.

For this purpose, the indicators of 2010-2021 were selected for correlation regression analysis. In it, the welfare index of the Republic of Uzbekistan according to Legatum was determined as a result indicator, and the size of small business and private entrepreneurship in the industrial sector as a factor indicator (Table 1).

Table 1

Legatum Prosperity Index of the Republic of Uzbekistan and the size of small business and private entrepreneurship in the industrial sector of the Republic ⁹⁷

Years	Legatum Prosperity Index (point)	The volume of small business and private entrepreneurship in the industrial sector (billion soums)
2007	48,0	2432,4
2008	48,7	3489,5
2009	49,1	5072,3
2010	49,2	10132,9
2011	49,6	13586,8
2012	50,4	17114,6
2013	50,2	23312,0
2014	51,0	30907,0
2015	51,6	39643,5
2016	52,1	50654,5
2017	52,4	61367,8
2018	53,2	87962,0
2019	53,6	83344,2
2020	54,7	103020,8
2021	53,9	121719,2

Correlation-regression analysis was conducted in Microsoft Excel software. The results of the regression analysis are given in Table 2.

Table 2

Correlation-regression analysis results⁹⁸

T/r	Model type and regression equation	Approximation reliability coefficient	Fisher F test	Student's t test
(1)	Exponential $y = 48,995e^{9,864 \cdot 10^{-07}x}$	$R^2 = 0,9141$	$F = 138,3$	$t_a = 802,49$ $t_b = 11,76$
(2)	Linear $y = 48,975 + 5,075 \cdot 10^{-05}x$	$R^2 = 0,9201$	$F = 149,8$	$t_a = 204,27$ $t_b = 12,24$
(3)	Logarithmic $y = 35,168 + 1,583 \ln x$	$R^2 = 0,9219$	$F = 153,5$	$t_a = 27,01$ $t_b = 12,39$
(4)	Level $y = 37,379x^{0,031}$	$R^2 = 0,9293$	$F = 170,8$	$t_a = 149,84$ $t_b = 13,071$

⁹⁷ Author development based on research results

⁹⁸ Author development based on research results

From the data of Table 2, it can be seen that all models are significant according to Fisher's F test at $\alpha=0.05$ level, and their parameters are statistically significant according to Student's t test. It is known that the coefficient of determination is the part of the variance of y explained by x. The bigger it is, the better. From this, it follows that polynomial model (4) is more suitable for the economic process than other models according to the coefficient of determination ($R^2=0.9718$).

For the purpose of forecasting, we created an exponential trend equation for the factor sign:

$$x = 2704,4e^{0,277t} \quad (6)$$

(6) it was found that the exponential trend equation and all its coefficients are statistically significant at $\alpha=0.05$ according to Fisher's F criterion and Student's t criterion, and its coefficient of determination is higher than other significant trend models.

Table 2

Exponential trend equation and its coefficients⁹⁹

Years	Legatum Prosperity Index (point)	The volume of small business and private entrepreneurship in the industrial sector (billion soums)
2022	54,7	227 512,2
2023	55,1	300 132,7

Conclusions and suggestions

Having systematized well-being indices, we can say that the results of correlation-regression analysis based on the objective-subjective approach allow for the most accurate assessment of national well-being. They minimize the positive and negative features of objective and subjective approaches, and are widely used both for annual comparisons of countries and for analyzing the dynamics of indicators within a given country. Therefore, it is considered the most appropriate method for analyzing the well-being index of the Legatum Institute within the framework of an objective-subjective approach.

Based on the econometric analysis, a strong correlation was found between the size of small business and private entrepreneurship in the industrial sector and the prosperity index of the Republic of Uzbekistan according to Legatum. The reason for this is that the higher the volume of industrial production, the higher the standard of living of the population.

The relationship between the welfare index and the size of the business in the industrial sector is very close for all groups of countries, and this evaluation method can be used at the level of the country and region.

⁹⁹ Author development based on research results

Thus, Legatum's well-being index can be used to assess national well-being, as it represents an appropriate assessment of the well-being of countries, taking into account socio-economic indicators.

The approaches presented in the article are an important step towards analyzing the validity of the impact of the indicator of the size of small business and private entrepreneurship on the Legatum index of population well-being, the success of further research in this area, subjective perception of well-being and can be seen by forming a complex index that combines objective indicators of social development.

BUXORO VILOYATI SUV RESURLARIDAN SAMARALI FOYDALANISHNING ILMIY ASOSLARI

Annotatsiya. Ushbu maqolada muallif tomonidan hozirigi kunda qishloq xo'jaligida mavjud bo'lgan suv resurslaridan samarali foydalanish va sug'oriladigan yerlarning meliorativ holatini yaxshilash bo'yicha fikr mulohaza yuritilgan.

Kalit so'zlar: Buxoro vohasi, suv resurslari, kollektor-zovur, sug'oriladigan maydonlar, landshaft, yaylov, tuproq unumdorligi.

SCIENTIFIC BASES OF EFFECTIVE USE OF WATER RESOURCES IN BUKHARA REGION

Abstract. In this article, the author examines the issues of effective use of water resources available in agriculture today and improvement of land reclamation.

Key words: Bukhara oasis, water resources, collector-zovor, irrigated areas, landscape, pastures, soil fertility.

Kirish. Keyingi yillarda mamlakatimizda qishloq xo'jaligida mavjud suv resurslaridan samarali foydalanish, sug'oriladigan yerlarning meliorativ holatini yaxshilash, tuproq unumdorligini oshirish va qo'shimcha suv manbalarini shakllantirish bo'yicha bir qancha tadbirlar amalga oshirilmoqda. Suv resurslaridan foydalanishda zamonaviy bozor mexanizmidagi, innovatsion resurs tejovchi texnologiyalarni joriy etish, past hosilli paxta va g'alla maydonlarini qisqartirish hisobiga yuqori daromadli eksportbop mahsulotlar yetishtirish bo'yicha tizimli chora-tadbirlar amalga oshirilmoqda.

O'zbekiston Respublikasi Prezidentining 2022 yil 28 yanvardagi PF-60-son «O'zbekiston Respublikasini 2022-2026 yillarga mo'ljallangan Yangi

O‘zbekistonning taraqqiyot strategiyasida, «Suv resurslaridan samarali foydalanish hisobiga 7 milliard kub metr suvni iqtisod qilish va sug‘oriladigan yerlarning meliorativ holatini yanada yaxshilash, qishloq xo‘jaligi ishlab chiqarish sohasiga intensiv usullarni, eng avvalo, suv resurslarini tejaydigan zamonaviy agrotexnologiyalarni joriy etish¹⁰⁰» bo‘yicha muhim chora-tadbirlar belgilab berilgan.

Mavzuga oid adabiyotlar sharhi. O‘zbekiston Respublikasi hududi Markaziy Osiyoning qirg‘oqchil zonasiga kiradi. Hududning 70 % ni cho‘l va chala cho‘llar egallagan. O‘zbekiston Respublikasining tabiiy geografik joylashuvi bo‘yicha ikkita katta sahro Qizilqum va Qoraqum vohasigacha cho‘zilgan. Suvning tanqisligi mamlakatning xarakterli xususiyati hisoblanadi. Mamlakatda suvning asosiy qismi sug‘orma dehqonchilikka to‘g‘ri keladi.

Respublikada foydalanilayotgan jami suv resurslarining 20 foizi mamlakat ichkarisida qolgan, 80 foizi esa qo‘shni Tojikiston va Qirg‘iziston hududida shakllanadi.

O‘zbekiston Respublikasi hududida suv resurslarining shakllanish ko‘rsatkichlari.

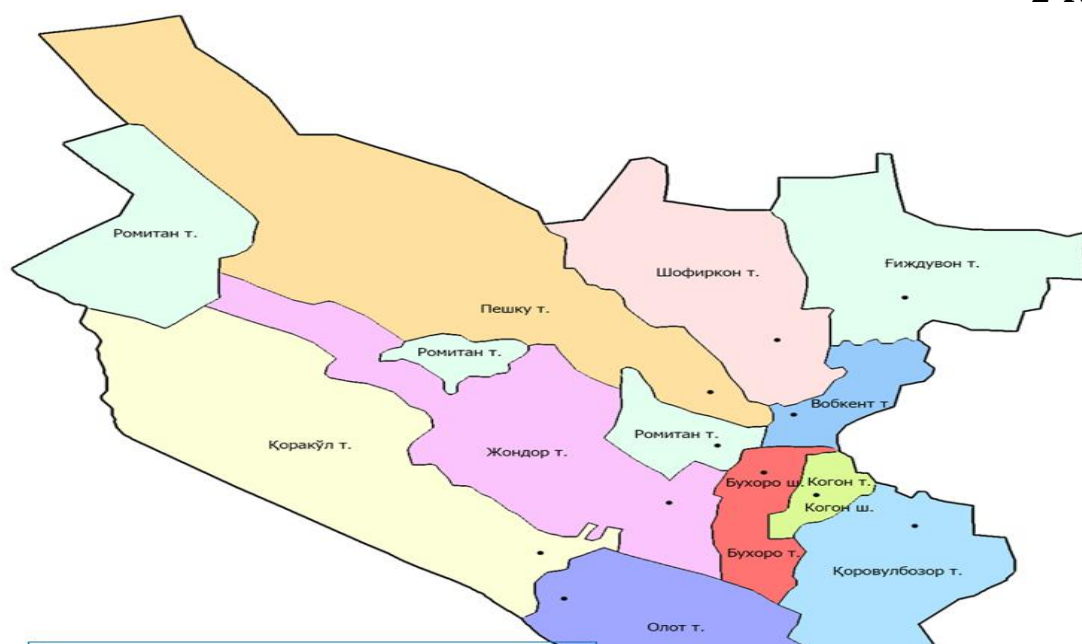

Buxoro viloyati Respublikaning janubiy g‘arbida, Zarafshon daryosining quyi va o‘rta qismida joylashgan bo‘lib, shimoliy-g‘arb tomondan qisman Amudaryo bilan Turkmaniston Respublikasi, janubiy-sharqdan Qashqadaryo

¹⁰⁰Ўзбекистон Республикаси Президенти Ш.М.Мирзиёевнинг 2022 йил 28 январдаги “2022-2026 йилларга мўлжалланган янги Ўзбекистоннинг тараққиёт стратегияси тўғрисида”ги (PF-60 сон 31 мақсад, 1-илова) Фармони.

viloyati, shimoliy-g'arbdan Navoiy viloyati, shimoliy-sharqdan Xorazm va Qoraqalpog'iston Respublikasi bilan chegaralangan.

Viloyatning umumiy yer maydoni 4 mln 200 ming gektardan iborat bo'lib, sug'oriladigan maydonlari 274.60 ming.gektar, shulardan 20909 gektar (0,5%) bog'lar, 2674186 gektar (63,77%) yaylovlar, 205616 gektar (4,9%) O'rmonzorlar va 1002295 gektar (23,9%) boshqa yer maydonlari tashkil qiladi, qolgan 6,9 foiz yer maydonlarini tashlandiq yerlardir.

2-rasm.

Buxoro viloyat tumanlarining geografik xaritasi.

Sug'oriladigan tekisliklar mintaqasi Janubiy Qizilqum sahrosida joylashgan bo'lib, Zarafshon daryosining qirg'oqlaridagi yerlar bilan birgalikda Buxoro va Qorako'l vohasigacha cho'ziladi. Buxoro-Qorako'l vohasi Zarafshon daryosining qadimgi va hozirgi zamon del'tasiga va uning atrofidagi erlarga joylashgan sug'oriladigan yerlar, Qorovulbozor, Buxoro va Qorako'l kabi o'ziga xos vohalarda joylashgan va qadimdan sug'oriladigan yerlar maydoniga to'g'ri keladi.

Qorovulbozor vohasi tog' oldi mintaqasiga Zarafshon daryosining yuqori oqimida joylashgan va Zarafshon daryosi sizot suvlari uchun zovur vazifasini bajaradi; Buxoro vohasi esa havzaning markaziy qismida joylashgan, Zarafshon daryosining del'tasini tashkil qiladi. Bu yerda daryoning erozion kesimi 3,0-8,0 metrni tashkil qiladi. Vohaning chap qirg'og'ini o'rab turgan saxro yerlarining chap qirg'oqdagi relyefi Quyi-Mozor, Xo'ja-Kab, Kunja-Ko'l kabi qadimiy erozion chuqurliklar bilan o'ralgan. Birinchi chuqurlikdan Zarafshon daryosi va Amu-Buxoro kanali suvlarini to'playdigan suv ombori sifatida foydalaniladi [2].

Qorako'l vohasi daryoning quyi deltasida va past gipsometrik balandliklarda joylashgan. Qorako'l vohasi Buxoro vohasidan Qizilqum platosimon balandliklari bilan chegaralangan.

Buxoro viloyati ichki havzaga kiradigan o'lkalardan bo'lib, subtropik va mo'tadil iqlim mintaqalarining shimoliy chegarasida joylashgan. Hududning iloyatning geografik jihatdan bunday bo'lishi iqlimning shakllanishiga ta'sir ko'rsatadi. Umuman Buxoro viloyati iqlimi yozda quruq tropik havo massalari ta'sirida, qishda esa shimoldan mutadil kengliklardan keladigan salqin havo massalari ta'sir ostida shakllanadi.

Geologik nuqtai nazardan hududi egarsimon strukturada joylashgan va qalinligi 400 metrga etadigan kontinental yotqiziqlar bilan to'ldirilgan. Ular hamma yerda keng tarqalgan paleogen davrning gillari ustida yotadi. Paleogen davri gillari, pastda joylashgan bo'r qumtoshlari davri uchun suv o'tkazma qatlam vazifasini bajaradi, qatlam sersuvligi bilan farq qiladi va bosim ta'sirida yer yuziga o'zi oqib chiqadi. Tarkibi sulfatli, minerallashtirilganligi 2-3 g/l ni tashkil qiladi.

Tadqiqot metodologiyasi.

Respublikamizda minerallashtirilgan suvlardan foydalanish miqdori yilning suv bilan ta'minlanganlik darajasiga bevosita bog'liq hisoblanadi.

Buxoro viloyatidagi sug'oriladigan yerlar meliorativ holatini yaxshilashda kollektor-zovur tarmoqlarisiz tasavvur etib bo'lmaydi. Shu maqsadlar uchun viloyat bo'yicha hozirgi kunda umumiy uzunligi 8851.60 km bo'lgan kollektor-zovur tarmoqlari qishloq xo'jaligi va foydalaniladigan yerlar uchun xizmat qiladi.

3-rasm.

Suv resurslarining joylashish xaritasi.

Tumanlararo Markaziy Buxoro kollektori - Buxoro viloyatida qurilgan eng yirik gidrotexnika inshootlaridan biridir. 1955 yilda Markaziy-Buxoro kollektori Vobkent tumanidan Zarafshon daryosining eski o'zani Duob gidrouzelidan Moxanko'l kollektorigacha bo'lgan o'zanini chuqurlashtirib,

kengaytirilib ishga tushirildi. Markaziy Buxoro zovurining uzunligi 95.1 km bo'lib, suv o'tkazish qobiliyati $80 \text{ m}^3/\text{s}$ ni tashkil qiladi [5].

4-rasm.

Markaziy Buxoro zovur suvidan namunalar olish jarayoni.

Markaziy Buxoro kollektoriga Buxoro, Jondor, Vobkent va Romitan tumanlari hududidagi kollektor-drenaj tarmoqlarida yig'iladigan sizot suvlar tashlanadi. Kollektorning umumiy suv yig'ish maydoni 64.6 ming ga.

Markaziy-Buxoro zovuriga viloyatdagi 80 ga yaqin xo'jalik ichki va xo'jaliklararo kollektor suvlari qo'yiladi. Markaziy-Buxoro zovuri viloyatdagi 1200 gektar maydonga xizmat qiladi [4].

Markaziy Buxoro zovuri suvining tarkibidan natijalar olinganda quyidagilar aniqlandi.

Markaziy Buxoro zovur suvining tahlil natijalari.

Markaziy Buxoro zovuridan oqib o'tayotgan suvning tarkibidagi loyqaligi 1 litr suvda 2 milligrammni tashkil qildi. Markaziy Buxoro zovuri suvining ishqoriyligi 3.0 milligramm. 1 litr suvdagi quruq qoldiq 1348.0 mg/dm³, umumiy qattiqligi 13.0 mg/dm³, va azot nitrit 18.8 mg/dm³, shuningdek, xloridlar 385.0 mg/dm³, sulfatlar 633.0 mg/dm³, ftor 0.003 mg/dm³ ni tashkil qildi.

Suv tarkibida azot ammoniy miqdori kuzatilmadi. Mahalliy moddalarga xos bo'lgan maxsus moddalar (fosfat, mis, qurg'oshin, sink) kabi moddalar miqdori Markaziy Buxoro zovurining suv tarkibida aniqlanmadi.

Shimoliy magistral zovuri. Shimoliy tumanlararo zovuri 1948 yil ishga tushirilgan. Uzunligi 139.9 km ni suv o'tkazish qobiliyati 56.5 m³/s ni tashkil qiladi. Shimoliy tumanlararo kollektori viloyatdagi G'ijduvon, Shofirkon, Rometan, Peshku va Vobkent tumanlaridagi ekin maydonlarida hosil bo'ladigan sizot suvlarni olib chiqib ketadi. Shimoliy zovur suvidan olingan natijalar quyidagi elementlar aniqlandi.

Shimoliy zovur suvining kimyoviy tarkibi

Shimoliy tumanlararo kollektor suvidan namuna olinib, Buxoro viloyati Ekologiya va atrof muhitni muhofaza qilish qo'mitasining laboratoriyasida tekshirildi. Suvdagi ishqor moddalar 3,2 mg/l, cho'kindilar 1,8 mg/l, quruq qoldiq 1136 mg/l, suvning qattiqligi 10,8 mg/l, azot nitrit 18,1 g/l, xloridlar miqdori 350 mg/l, sulg'fatlar miqdori esa 561 mg/l, ftor 0,03 mg/l va boshqa elementlarining miqdori aniqlandi.

Oyoqog'itma zovur. Oyoqog'itma tumanlararo zovuri 1969 yil ishga tushirilgan. Oyoqog'itma tumanlararo zovurining uzunligi 68.7 km ni suv o'tkazish qobiliyati 100 m³/s dan iborat. Oyoqog'itma tumanlararo zovuri viloyatdagi Shofirkon, G'ijduvon tumanlaridagi qishloq xo'jaligi ekin maydonlarida hosil bo'ladaigan qaytarma suvlarni to'plab, suvini Oyoqog'itma ko'liga tashlaydi. Natijalar shuni ko'rsatmoqdaki, G'ijduvon, Shofirkon tumanlaridagi fermer (Olimbobo) xo'jaliklarida Oyoqog'itma zovuri suvini yig'ib, nasoslar yordamida qishloq xo'jaligida sho'r yuvish va vegetatsion sug'orishda foydalanilmoqda. Zovur suvi vegetatsiya va sho'r yuvish vaqtida sug'orish suvining asosiy qismini tashkil etib, yangi yerlarni o'zlashtirish hisobiga sug'oriladigan maydonlarni kengaytirish, eskidan sug'orilib kelinayotgan yerlarni suv bilan ta'minlashni yaxshilash uchun qo'shimcha manba hisoblanadi [7].

Viloyatdagi mavjud kollektor-zovurlardagi suvlarining sho'rlik kimyoviy darajasi har yili o'zgarib turadi. Buning asosiy sababi ob-havoning issiq kelishi, hamda sug'orishga berilgan suvning tarkibi va tuproq tarkibining sho'rlik darajasi yuqori bo'lganligidir. Qorako'l va Olot tuman hudularidagi sug'oriladigan yerlardan chiqadigan sizot suvlariining sho'rlik darajasi juda yuqori bo'lib, o'rtacha 5,902 gr/litr ni tashkil etadi. Bu mintaqadan chiqadigan sizot suvlar "Bosh Qorako'l", "Dengizko'l" kollektorlari orqali Dengizko'l tashlamasiga yuboriladi.

Buxoro, Kogon, Jondor tumanidagi sug'oriladigan yerlardan chiqadigan sizot suvlar "Parallel", "Markaziy Buxoro" va "G'arbiy Romitan" kollektorlari orqali chiqarib yuborildi. Sug'oriladigan yerlarga beriladigan suvlar va atmosferadan keladigan yomg'ir hamda sizot suvlarningharakati nihoyatda kam bo'lganligi natijasida suv tuz muvozanatini buzilishiga sabab bo'ladi.

Buxoro viloyatida sizot suvning oqim yo'nalishi g'arb, shimoliy g'arb hamda janubiy g'arb tomonga bo'lib, nishabning kichikligi tufayli sug'oriladigan hududlardan chiqib ketmaydi. Markaziy Buxoro, Oyoqog'itma va Shimoliy kollektor-zovurlardan suv miqdori va uning tarkibi o'rganilganda qo'yidagilar aniqlandi.

Xulosa.

Buxoro viloyatida jami sug'oriladigan erlar 274,60 ming gektar bo'lib, asosan Amudaryodan Amu-Buxoro mashina kanali orqali va qisman Zarafshon daryosi suv resurslaridan foydalanadi. Sug'orish maqsadida bir yilda qishloq xo'jaligi uchun jami 4.1-4.3 mlrd m³ suv resurslari ishlatiladi.

Sug'oriladigan maydonlardan har yili kollektor-zovurlar orqali 1.9-2.1 mlrd m³ suv olib chiqib ketiladi. Suv tanqis bo'lgan yillarda ularning 60-61 % ini

sug'orma dehqonchilikda qayta ishlatish, 5.2-5.3 % ini daryo suvlari bilan qo'shib qishloq xo'jalik ekinlarini sug'orishda foydalanish orqali suv tanqisligining salbiy oqibatlarini olish mumkin. Ilmiy tadqiqot natijalari viloyat suv resurslarini muhofaza qilishda va ulardan oqilona foydalanishda muhim omillardan hisoblanadi.

2. Buxoro vohasining geologik tuzilishi va rel'yefi boshqa hududlardan sezilarli darajada farq qiladi va uning iqlimiy va gidrologik sharoitlarini belgilaydi. Vohaning iqlim sharoiti atmosfera yog'inlarining ahamiyatsizligi bilan ajralib turadi. Havо haroratining yuqoriligi gidrologik va gidrogeologik nuqtai nazardan juda noqulay omillardir. Bular birgalikda hududdagi oqova suvning miqdori va sifatiga tahsir qiladi.

3. Kollektor-zovur tarmog'ibilan suv tanqis bo'lgan sharoitda o'simlikning suvga mineral va organik o'g'itlarga bo'lgan talabini qondirish, hosildorlikni saqlab qolish, suv resurslaridan oqilona foydalanish, mineral o'g'itlarga bo'lgan talabning kamayishi hisobiga fermer xo'jaliklarining iqtisodiy ahvolini yaxshilashga, etishtirilayotgan hosil tannarxini asaytirish, oziq-ovqat xavfsizligini tahminlash va ekologik toza mahsulotni etishtirish hamda sug'oriladigan ekin maydonlarning qishloq xo'jalik muomilasidan chiqishning oldini olish imkonini beradi.

4. Buxoro viloyati tumanlaridagi fermer xo'jaliklarida Markaziy Buxoro, Shimoliy va Oyoqog'itma zovurlaridan suvni nasoslar yordamida qishloq xo'jaligida sho'r yuvish va vegetatsion sug'orishda foydalanilmoqda.

Zovur suvlari vegetatsiya va sho'r yuvish vaqtida sug'orish suvining asosiy qismini tashkil etib, yangi yerlarni o'zlashtirish hisobiga sug'oriladigan maydonlarni kengaytirish, eskidan sug'orilib kelinayotgan yerlarni suv bilan tahminlashni yaxshilash borasida qo'shimcha rezerv hisoblanadi.

METHODS OF COMBATING DISEASES OF FRUIT TREES

Abstract. The efficacy of fungicide spraying against peach leaf curl disease at leaf fall stage in autumn has been evaluated in the conditions of the Andijan region in field experiments. The biological efficacy of difenoconazole (Rayok 25EC) and kresoxim-methyl (Ustroby 50WDG) was the highest and amounted, respectively, 86-93% and 85-89%. The efficacy of the complex formulation copper chlorine oxide + cymoxanil (Ordane 73WP) and penconazole (Topoz X 10EC) was lower and equaled 65-70% and 65-79%, respectively.

Key words: peach, leaf curl, Taphrina deformans, control, fungicide, difenoconazole, kresoxim-methyl.

Diseases and arthropod pests (insects and ticks) always coexist in all crops. For this reason, both of the above systems are practically a single, complex system, which is applied together in the field or garden and includes the fight against all pests in the crop. Its common name is the Integrated Disease and Pest Management System (IDPM; sometimes abbreviated as IPM). When developing a control program to achieve the highest biological and economic efficiency in disease control, it is necessary to have all relevant information about the crop, pathogens, disease history of previous seasons, disease resistance of the variety, expected weather conditions, growing location and costs are given. In some cases, if the crop is at risk of a specific underlying or single disease (e.g., apricot klyasterosporiosis or peach leaf wilt disease), a IPS program is designed to plan to combat that source of risk. IP systems imply the following.

1) to determine the incidence and development of disease species in plants; loss of primary inoculum in the crop or reduction of its quantity and effect;

2) not to eradicate pathogens, but to keep their quantity at a level that does not cause economic damage to the crop, while ensuring that the negative impact on the environment is minimal;

3) ensuring a high level of agricultural technology for the cultivation of plants that are resistant to adverse conditions and complete, including the application of special agro-technical measures that reduce the number of particularly harmful phytopathogens;

4) increase the resistance of the host plant; planting of disease-resistant and pest-resistant (tolerant) crop varieties; delay the onset of the disease; reducing the number of pathogen-producing offspring by slowing disease progression;

5) regulation (reduction) of the number of phytopathogenic organisms and selection and application of means and methods that not only stop, but also

activate their activity, while maintaining the number of natural antagonistic microorganisms;

6) implementation of effective measures to reduce the amount of pests, primarily the use of biological and chemical agents after a detailed analysis of the agrobiocenosis and an objective determination of the expected level of disease development.

The methods used in IPS should not harm beneficial organisms in nature. One of the important conditions of IPS is the use of disease prevention methods as much as possible and the creation of unfavorable conditions for the emergence and development of the disease.

Thus, IPS is the most optimal combination of biological, agrotechnical, chemical, physical and other methods recommended against a complex of diseases (and pests) in a particular ecological-geographical region, a particular crop type, which, while maintaining the number of beneficial natural organisms, phytopathogen a system aimed at reducing the number of organisms to a level that does not harm the farm.

The IP system is prepared separately for each crop type grown in a particular region, taking into account the specific characteristics of the region and crop type and other conditions. Applying the IP system scheme prepared for one ecological-geographical zone mechanically in another region does not give good results.

Successful application of the IP system in practice involves the use of agrotechnical preventive methods, primarily disease-resistant varieties. Cultivation of such varieties not only reduces the number of chemical treatments, but also radically improves the ecological condition of agrobiocenoses, reduces pollution of the environment and agricultural products with pesticide residues. Adherence to crop rotation schemes, planting times, tillage, and fertilizer application rules can often protect plants without the use of chemical methods.

Chemical, biological, physical and other methods aimed at actively reducing the number of pests in the IP system are applied taking into account the expected level of development of these organisms, the planned yield, "threshold criteria" of phytopathogenic organisms and economic damage.

The use of a IP system rather than the use of a separate control measure ensures that the economic performance of phytosanitary measures is high, while environmental requirements are fully met, and adverse effects on natural agrobiocenoses and nature in general are minimal (Popkova et al., 2005; Agrios, 2008; Alston et al., 2012 and b).

The most important element of IPS is that the specific information collected about the presence of a particular disease (and pest), when it occurred, and at what stages of development were observed, is recorded in a special workbook - a diary. This book also includes important, detailed information about the fungicides used against the disease, the prevalence and development of the disease during treatment, the biological and economic efficiency obtained as a

result of treatment. These data can serve as a basis for short-term (weeks, months) forecasting of disease and pest development and selection of the most optimal control measures against them (Hetherington, 2005).

In order for the seedlings to grow, develop and not get sick until they start to bear fruit after transplanting, it is necessary to feed them with fertilizers in a timely manner, watering, bushing and treating them against pests and diseases common in this region. It is necessary to pay more attention to the period of fruiting of trees, to take measures to combat any disease that occurs in them. All trees with diffuse disease caused by a systemically developing pathogen (e.g., virus, phytoplasma) in the body should be dug up and destroyed as soon as possible.

In gardens, the fight against diseases (and pests) can begin during the winter, when it is necessary to pick up, burn, or bury the weak, diseased or dead twigs, branches and hanging fruit. This measure will reduce primary sources of infection by phytopathogenic fungi and bacteria next spring. For this purpose, the garden should also collect and remove fallen leaves, fruits and twigs, or spray the soil with fungicides or biological control agents. Each time after processing (before processing a new tree) it is necessary to disinfect the work tools with a special liquid. Shrubs should be sprayed with one of the fungicides as soon as possible (such as benomyl) to prevent cancer-causing fungi from entering the scars.

Many fungi and bacteria (as well as insects and canals) are also active in the weather during spring budding, so trees should be treated with a fungicide-bactericide or other simple fungicide and insectoacaricide mixture, such as Bordeaux liquid, before the buds burst. Later, when the buds open, usually the flowers and leaves become very resistant to pathogenic fungi and bacteria. For this reason, they should be sprayed again with a fungicide and / or bactericide, and possibly with an insect acaricide that is harmless to bees, in the form of a tank mixture. If it is not possible to mix the pesticides, each of them should be sprayed separately. During this period, when flowering lasts several days, when new flowers continue to open, and when the leaves grow rapidly, many fungi release spores into the air, and bacteria also spread in large numbers by rain and wind; during this period, flowers and leaves may need to be protected with a systemic fungicide. If only a protective fungicide (or bactericide) is available, the trees should be treated once every 3-5 days. If the fungicide still needs to be added insectoacaricide, it should not be poisonous to pollinating bees. The longer the weather conditions are maintained and the longer the plant tissue continues to grow, the longer the regular treatments with pesticides should be continued. In this case, processing times are based on weather forecasts. In developed countries, computer programs are used to determine when to start gardening and how often and when to continue (Hetherington, 2005; Agrios, 2008; Bazdyrev et al., 2014).

Fruits are often resistant to certain staining and rot-causing fungi from the time of ripening to the time of harvest as well as during storage. For this reason,

the fruits need to be sprayed with appropriate fungicides every 10–14 days before harvest. These fungi often enter the fruit from areas damaged by insects, so insecticide spraying is also continued. To protect the fruits from damage, they should be carefully picked and placed in containers. Containers used for picking fruits should be clean, free of rotten debris, packaging and warehouses should be clean, disinfected with formalin, sulfur dioxide or any other fumigant. In many countries, harvested fruit is washed with water containing a fungicide or biological agent, and this measure protects the fruit from damage during storage and transportation. Before packing, the damaged and damaged fruit is separated and discarded. Fruit warehouses, transport used for transportation and storage containers should be refrigerated during the period of sale (Agrios, 2008).

PESTS OF POLICE CROPS AND MEASURES TO CONTROL THEM (EPILACHNA CHRYSOMELINA)

Abstract. As with all representatives of the plant world, protection from pests, diseases, and weeds that disrupt the high productivity and physiological processes of rice crops in agriculture remains an urgent topic. In this article, information about dangerous pests of citrus crops (melon, watermelon, cucumber, pumpkin) and effective measures to fight against them are highlighted.

Key words: beetle, fungus, larva, polyz, biology, ecology, imago, oligophagous, upper hairs, kakana, paykal.

In the decisions of the President of the Republic of Uzbekistan and the Cabinet of Ministers, it was emphasized that special attention should be paid to the expansion of cultivated areas and increasing their productivity in order to continuously provide the population of the Republic with high-quality poliz products, and for the purpose of efficient use of the lands where poliz crops are grown.

Due to the fact that the climatic conditions of Uzbekistan are favorable for the increase of pests that harm the crops, various pests are observed in the crops. In some years, as a result of their damage, the weight and quality of melons, watermelons, pumpkins, and cucumbers are reduced to a certain extent in all regions of our republic. Such a group of dangerous pests is the polyz beetle, epilyachna, aphids, root-gnawing tundra, melon fly, nematode causing swelling, rotting nematode.

Polyz beetle or epilyakhna - oligophagous. (*Epilachna chrysomelina*) mainly belongs to the Coccinellidae family of the Beetle family.

It is found in Central Asian countries and in the Caucasus. Spread abroad in Afghanistan, Iran, Asia Minor, South Europe, and partly in Africa, the Uzbek beetle can be found in the Surkhandarya, Kashkadarya, Bukhara, and Samarkand regions. This plant-eating coccinella beetle can be identified immediately because of its specific symptoms. The beetle has a semicircular shape and is 1.75 mm in size. The larva is yellowish in color, has three pairs of thoracic legs, and has five rows of branched black spines on its upper side, 9 mm long. The bulb sticks to the leaf with its back end typical of coxellids, the body is narrowed and widened, the top is covered with hairs, the color is yellow.

Forgiveness: The beetle hibernates in the place where it lives under the remains of various plants. It was also found in reed stalks. The awakening of the beetles in the spring is much longer and coincides with the period of flowering of poliz crops. Beetles fly to the crops and feed on them, they lay 20-50 eggs on the

upper side of the plant leaves. After another 3-5 days, larvae emerge from them and begin to feed on leaf tissue. After molting three times in 15-25 days, the larvae pupate between the leaves. After 8-10 days, new joints will be confused with each other, and it will be possible to meet different forms of the pest at the same time. The third joints are confused, and it is possible to meet different forms of the pest at the same time. Third instar beetles hibernate. The polyz beetle itself and its larvae are oligophages that damage melons, watermelons, pumpkins, and cucumbers. When the pest multiplies, not only the plant becomes leafless, but its young crop is also damaged.

As a result, it rots quickly. Pest control crops are very sensitive to pests and diseases, and if the necessary measures are not taken against them, a large part of the harvest of the crops may be lost or the plant may not produce at all. Dozens of sucking and rodent pests feed on sorghum crops, the most dangerous of which is the sorghum beetle. The biological and ecological characteristics of this pest have not been studied in the Zarafshan oasis, and effective and ecologically harmless control measures have not been developed.

Therefore, we believe that it is an urgent issue to study the biological and ecological characteristics of the beetle beetle in the Zarafshan oasis and to develop ecologically harmless control measures. For this, it is important to study the

COMBAT MEASURES. It is necessary to remove the remnants of plants in the fields planted with polys crops, to deeply plow the land and to water it. Carrying out these activities is important in preventing the mass reproduction of the beetle next year.

Planting polys crops early and harvesting healthy seedlings. In early spring (March-April) it is effective to carry out preventive measures against sucking pests (aphid, thrips, spider mite, spider mite) that have started to develop in the weeds around the field. BI-(58-0.2%) benzaphosphate-(0.3%), karate-(0.05%), cyperphos-(0.1%). This event is of great importance in the prevention of damage to cultivated crops by aphids and other sucking pests during the feeding period of the silkworm, as well as in increasing the number of useful insects in the fields. If the amount of aphids increases in June, and the ratio of beneficial insects to active forms is more than 1:15-20, chemical control is necessary. For this, karbofos (0.1%), BI-58 (0.2%), benzophosphate (0.25%), mospilan (0.02%) or confidor (0.03%) are used. it is necessary to stop 30 days before the harvest.

CONTENT AND SCIENTIFIC THEORETICAL BASIS OF THE CONCEPT OF REGIONAL EMPLOYMENT

Abstract. The article talks about the essence and scientific theoretical foundations of the concept of territorial employment.

Key words: area, body, concept, content, essence, scientific, theory, basis.

Mintaqaviy darajada bandlikning o'ziga xos xususiyatlarini o'rganish, birinchi navbatda, mehnat munosabatlari sohasida o'zini namoyon qiladigan hududiy naqshlarni aniqlashni o'z ichiga oladi. Mintaqaviy darajada bandlikning o'ziga xos xususiyatlarini ko'rib chiqayotganda, uning mintaqalar ichidagi iqtisodiy vaziyatga ta'sir qiladigan iqtisodiy jarayonlarga bog'liqligini ta'kidlash kerak.

Aholi bandligini muayyan darajada barqaror ushlab turish har qanday mamlakat oldida turgan murakkab vazifalardan sanaladi. Bandlik sohasida bozorning o'zini o'zi avtomatik suratda tartibga solish jarayoniga ta'siri har doim ham sezilmaydi. Shu sababli bozor iqtisodiyotiga yo'naltirilgan barcha mamlakatlarda doimiy, bandlik sohasiga ta'sir ko'rsatish shakllari va vositalari jihatidan egiluvchan choralarni qo'llash asosida bandlikni tartibga solish siyosati amalga oshirilmoqda. Aholining to'liq va samarali bandligini ta'minlash har qanday demokratik jamiyatning muhim vazifalaridan biridir.

Aholini ish bilan ta'minlash (bandlik) siyosati - jamiyat va uning har bir a'zosining ijtimoiy-iqtisodiy rivojlanishiga bevosita va bilvosita ta'sir etuvchi chora tadbirlar yig'indisidir. Bandlik sohasidagi davlat siyosati ikkita asosiy

vazifani hal qilishga qaratilgan: birinchidan, amaldagi investitsiyalanayotgan kapitalning ishchi kuchiga bo'lgan ehtiyojini qondirish. Jadal va foydali amal qiladigan kapital – ishchi kuchidan samarali foydalanishning eng muhim dalilidir;

ikkinchidan, mehnatga layoqatli aholini kishilarning me'yoridagi hayot kechirishlarining muhim sharti sifatida ish joylari bilan ta'minlash. Aholining farovonligi to'g'risida g'amxo'rlik qilish davlatning an'anaviy vazifasi hisoblanadi

Davlat mehnat bozorida ikki turdagi – passiv va aktiv siyosatni amalga oshirishi mumkin. Passiv siyosat ish izlayotgan fuqarolarni ro'yxatga olish, ishsizlik nafaqasini tayinlash, uni taqdim qilish tizimini tashkil etish, ishsizlar va ularning oilalarini qo'llab-quvvatlashning pulsiz shakllarini amalga oshirish bilan cheklanadi. Davlatning mehnat bozorida faol siyosati bozor iqtisodiyoti sharoitida mehnat qilayotgan aholi ehtiyojlariga ko'p darajada javob beradi. Uning maqsadi mehnat qilishni istagan har qanday inson o'z talablariga mos ish joyini topishidan iborat. To'liq bandlikni ta'minlashga qaratilgan aktiv siyosat olib borish rivojlangan mamlakatlar mehnat bozorida davlat siyosatining ustuvor yo'nalishi hisoblanadi. Bu siyosat asosiy tadbirlariga quyidagilar kiradi

- davlat tomonidan iqtisodiyotga investitsiyalarni rag'batlantirish, bu yangi ish joylarini yaratishning asosiy sharti hisoblanadi;

- tarkibiy o'zgarishlar bilan bog'liq ishsizlarni qayta o'qitish va malakasini oshirishni tashkil etish;

- mehnat bozorida vositachilik qilayotgan mehnat birjalari va bandlik xizmatlarini rivojlantirish, friksion ishsizlik va tarkibiy o'zgarishlar bilan bog'liq ishsizlikni pasaytirish maqsadida vakant ish joylari to'g'risida ma'lumotlar yig'ish, taxlil qilish va bartaraf qilish borasida choralar ishlab chiqish;

- kichik va oilaviy tadbirkorlikka ko'maklashish, bu ko'plab mamlakatlarda aholi bandligini ta'minlashning muhim uslubi sifatida o'rganilmoqda;

- ish beruvchilar tomonidan alohida aholi guruhlari – yoshlar, nogironlarga ish joylarini taqdim etishni davlat tomonidan rag'batlantirish (soliq va qonunchilik tadbirlari orqali);

- zarurat tug'ilganda ish topish uchun yashash joyini o'zgartirishda ko'maklashish;

- bandlik muammolarini hal qilishda xalqaro hamkorlik, xalqaro mehnat migratsiyasi bilan bog'liq masalalarni hal qilish;

- davlat sektorida – ta'lim, tibbiy xizmatlar, kommunal xo'jaligi, jamoatchilik binolari va inshootlarini qurish sohalarida ishchi o'rinlarini yaratish;

- jamoat ishlarini tashkil qilish. Mehnat bozorida faol siyosat olib borishda bandlar, band bo'lmagan va ishsiz fuqarolarning yosh-jinsiy tarkibi, kishilarning o'rtacha yoshi, mazkur tarmoq mehnat salohiyatini tashkil qiluvchilar, ularning malaka darajasi, yollanib ishlashdan oladigan oila daromadi, mustaqil bandligi, yakka mehnat faoliyati hamda mehnat muassasalarini (tadbirkorlar, ishlovchilar,

kasaba uyushmalari tashkilotlari) rivojlantirish va uning samaradorligini hisobga olish zarur.

Mehnat bozori bozor iqtisodiyoti tizimida markaziy o'rinni egallaydi. Bu, birinchi navbatda, bozor munosabatlari sharoitlarida amal etadigan turli: xom ashyo, materiallar, yoqilg'i, tayyor buyumlar, loyihalar, ilmiy ishlanmalar, xizmatlar, turar joy, investitsiyalar, qimmatli qog'ozlar va boshqa bozorlar bir-birlaridan farq qilsa ham ularni asosiy sub'ekt - inson birlashtirib turishi bilan izohlanadi. Mehnat bozori va ish bilan bandlik nazariyasining maqsadi mazkur sohalarda ro'y berayotgan voqea va jarayonlarni ilmiy holda ifoda etishdir. Bu nazariya amaliy ahamiyatga ega: u mazkur sohalarga oid bilimlarni integratsiyalashtirar va umumlashtirar ekan, ularni iqtisodiy, ijtimoiy, siyosiy va inson hayoti faoliyatining boshqa jabhalarida real tarzda namoyon bo'lishiga xizmat qiladi.

Mehnat bozori va ish bilan bandlik nazariyasi uning vazifalarida konkretlashadi. Bu mehnat bozori va ish bilan bandlik rivojlanishi qonuniyatlari va tendensiyalarining tahlili asosida mazkur sohalarning tub muammolarini aniqlash va ularni hal etish yo'llari va usullari yuzasidan ilmiy asoslangan tavsiyalar tayyorlash, mehnat bozori samaradorligini oshirishga xizmat qiladigan modellar ishlab chiqish, mehnat resurslari prognozlarini asosida mamlakat va mintaqani iqtisodiy-ijtimoiy rivojlantirish istiqbol rejalariga aniqliklar kiritish bo'yicha xulosalar tayyorlashdan iboratdir.

Mehnat bozori va ish bilan bandlik nazariyasida umumiy, alohida va xususiy qonuniyatlarni ham mavjud bo'lib, ular mehnat bozorida talab va taklifning ish haqi miqdoriga bog'liqligi, ishsizlik va iqtisodiyotdagi mehnat unumdorligining o'zaro bog'liqligi («Ouken qonuni»), ish bilan bandlik tarkibining xo'jalik yuritish shaklidagi bog'liq ravishda o'zgarishi, ilmiytexnikaviy va texnologik taraqqiyot natijasida tarkibiy ishsizlikning paydo bo'lishi kabi jarayonlarda o'z ifodasini topadi.

Mehnat bozorida faol siyosatni amalga oshirish mintaqalarda iqtisodiyot tarkibiy o'zgarishlar va uni tartibga solishning samarali usullarini shakllantirish bilan bog'liq. Mehnat bozorini tartibga solish deganda, tashqi mehnat bozoriga ta'sir ko'rsatadigan chora-tadbirlar ko'zda tutiladi. Bu tadbirlar iqtisodiy, ma'muriy, tashkiliy, qonuniy va mehnat bozoriga ta'sir ko'rsatishning boshqa tadbirlari majmui hisoblanadi. Mehnat bozorini davlat tomonidan tartibga solishning asosiy maqsadlari ishsizlarni mehnat faoliyati jarayoniga yanada jadalroq jalb etish, tarkibiy qayta qurishni rag'batlantirishni xohlovchilarga ishchi o'rinlarini taqdim etish va ishdan bo'shatilayotgan ishlovchilarni qayta taqsimlashdan iborat. Band bo'lmagan fuqarolarni ijtimoiy muhofazalash, egiluvchan mehnat bozorini huquqiy ta'minlash hamda ishga joylashtirish, kadrlarni tayyorlash va qayta tayyorlash yo'li bilan rivojlantirish bu faoliyatning asosiy yo'nalishlari hisoblanadi.

Mehnat bozorlarida boshqa bozorlardagidan farqli ravishda iste'molchi ehtiyojini qondiradigan tovar emas, balki muayyan mahsulot ishlab chiqarish

(xizmat turi ko'rsatish) uchun talab etiladigan ishchi kuchi xarid qilinadi. Ya'ni ishchi kuchiga talab tovar va xizmatlarga talabdan kelib chiqadi, bu esa mehnat bozori tovar bozorlari bilan uzviy bog'liqligini ko'rsatadi. Ayni paytda ishchi kuchiga talab kapital bozoridagi holat investitsiya muhitidan ham kelib chiqadi. Mehnat va kapital bir-birini to'ldira oluvchi va bir-birining o'rnini bosa oluvchi ishlab chiqaruvchi omillar hisoblanadi. Shuning uchun kapital qiymatidagi har qanday o'zgarish mehnat bozoriga ta'sir ko'rsatmay qolmaydi. Bu omillar mehnat, tovar va kapital bozorlari o'zaro aloqada amal qilishini ko'rsatadi.

Shu bilan birga mehnat bozori va ish bilan bandlik nazariyasiga hozirgi paytdagi konseptual yondashuvlarda aholining ish bilan bandligi sifati muammosiga e'tibor tobora kuchaymoqda. Iqtisodiy adabiyotda shaxsning ish bilan bandligi sifati hamda jamiyatdagi ish bilan bandlik sifati tadqiq etiladi. Lekin ayrim tadqiqotchilar ish bilan bandlik sifatiga ish bilan bandlik sharoitlari va inson salohiyatini rivojlantirish nuqtai nazaridan yondashsalar, boshqa izlanishlarda shaxs yoki ijtimoiy guruh turmush darajasi, shuningdek ish bilan bandlik xususiyatida namoyon bo'ladigan xususiyatlar tahlil etiladi.

Fikrimizcha, ish bilan bandlik sifatiga yondashuvlardagi bunday farqlarga qaramay, mazkur tushunchaning aniq ko'rsatkichlar tizimi mavjud, Bizningcha, ular quyidagilardan iborat:

- ish bilan band xodim daromadining darajasi. Bu daromad Xalqaro mehnat tashkiloti (XMT) hujjatlarida qayd etilganidek, faqat xodimning emas, shuningdek uning oila a'zolari ehtiyojlari eng kam miqdori hamda ish kuchini hosil etish (ta'lim olish, kasb egallash, salomatlikni saqlash va hokazolar) uchun yetarli bo'lishi lozim;

- oilada jon boshiga to'g'ri keladigan daromadning xarid qobiliyati;

- ijtimoiy mehnat unumdorligi darajasi. Mazkur ko'rsatkichning umume'tirof etilgan mezoni - iqtisodiy faol aholi birligiga to'g'ri keladigan yalpi ichki mahsulot hajmi mavjud;

- mehnatga haq to'lash xarajatlarining yalpi ichki mahsulot hajmidagi solishtirma ulushi. Bu ijtimoiy yo'naltirilgan bozor iqtisodiyotida ish bilan bandlik sohasidagi iqtisodiy siyosatning eng muhim indikatorlaridan biri hisoblanadi;

- mehnat bozorida ish kuchi sifati va raqobatdoshligi darajasi. Ishsiz qolgan shaxslarni davlat tomonidan qo'llab-quvvatlash, ularni ijtimoiy muhofazalash mehnat bozoriga davlat siyosatining passiv shakliga kiradi. Ishsiz fuqarolarni davlat kafolatlaydi:

- ishsizlik bo'yicha nafaqalar ko'rinishida ijtimoiy qo'llab-quvvatlash, moddiy yordam va boshqa ijtimoiy to'lovlarni ta'minlash;

- bepul tibbiy xizmat ko'rsatish.

Rivojlangan mamlakatlarda ishsizlarga moliyaviy yordam ishsizlik bo'yicha sug'urta tizimi asosida amalga oshiriladi. Aholining alohida guruhlari, ishlovchilar, tadbirkorlar hamda mehnatni tashkil etishning ma'lum unsurlari davlat ta'sir ko'rsatish ob'ekti hisoblanadi. Davlat ularga turli imtiyozlar, shu

jumladan, soliq imtiyozlari taqdim etadi, jamoat ishlarini tashkil qiladi, shu orqali mehnatga bo'lgan talabni rag'batlantiradi va bandlik muammolarini hal qiladi, korxonalar va ish joylarini (davlat tadbirkorligi) o'zi yaratadi va h.k. Ta'sir ko'rsatish ob'ekti xususiyatlaridan kelib chiqib, umumiy ta'sir ko'rsatish choralarini va maxsus tadbirlarni ajratish mumkin.

Ta'sir ko'rsatish yo'nalishi bo'yicha xodimlarga bo'lgan talabni ham, taklifni ham oshiradigan (kamaytiradigan), talab tarkibi va taklifning tarkibida aks etadigan, ularning o'zaro muvofiqligi darajasini oshirishga qaratilgan tadbirlar farqlanadi.

Ta'sir ko'rsatish shakliga ko'ra, bevosita va bilvosita tartibga solish usullari farqlanadi. Birinchi guruhga davlat subsidiyalashi va turli imtiyozlar, shu jumladan, soliqlardan imtiyozlar taqdim qilish yo'li bilan barcha mumkin bo'lgan tashkiliy-huquqiy shakllardagi, davlat bandlik xizmati bilan hamkorlik qiladigan va qandaydir kasb bo'yicha o'qigandan keyin ishga qabul qiladigan korxonalarda bandlikni rag'batlantirish kiradi. Ikkinchi guruhga demografik vaziyatni tartibga solish, davlat xaridlarini ko'paytirish, soliq to'siqlarini kamaytirish, amortizatsiyani jadallashtirish va boshqa tadbirlar, ya'ni mamlakat iqtisodiyoti pasayish bosqichida bo'lgan davrdagi ishbilarmonlik faolligini rag'batlantiradigan dastaklar kiradi.

O'zbekistonda hozirda qanday bandlik siyosati qo'llaniladi? Iqtisodiyotni modernizatsiyalash bosqichida O'zbekistonda aktiv bandlik siyosatga o'tish hayotiy zaruriyatdir. Aktiv bandlik siyosati - bu davlat tomonidan ishsizlik darajasini pasaytirish maqsadida olib boriladigan huquqiy, tashkiliy va iqtisodiy chora-tadbirlar yig'indisidir. Bu siyosat ish o'rinlarini saqlab qolish maqsadida ishchilarni kutilayotgan bo'shatishlardan ogohlantirish; ish izlayotganlarni o'qitish, qayta tayyorlash va malakasini oshirish; yangi ish o'rinlarini yaratishni moliyalashtirish; ish o'rinlarini izlash va tanlash; jamoat ishlarini tashkil etish tizimi orqali yangi ish o'rinlarini yaratish va boshqalarni qamrab oladi.

Bandlik sohasida faol davlat siyosatini olib borish aholini ish bilan ta'minlash dasturini ishlab chiqish va uni hayotga tatbiq etish orqali amalga oshiriladi. Bu dastur mehnat bozoridagi holat va uning rivojlanish istiqbollariiga mos ravishda shakllanadi.

Bandlikni hududiy tartibga solish hududlar rivojlanishining ko'plab o'ziga xos jihatlarni hisobga olishni va ular asosida aniq maqsadga yo'naltirilgan chora-tadbirlar ishlab chiqishni taqozo etadi. Ammo, ko'pchilik hududlarda yangi ish o'rinlarini yaratish borasida passiv siyosat olib borilayotir.

Kichik va o'rta biznes yangi ish o'rinlari yaratish mumkin bo'lgan soha bo'lishi bilan birga qo'shimcha daromad manbai hisoblanadi. Bu soha ishchilardan yuqori malaka talab qilmaydi va ish tartibi yetarli darajada egiluvchan bo'lganligi bois ayollarni ish bilan ta'minlash darajasini oshirish imkonini beradi. Shunga qaramasdan, davlatning bandlik sohasida olib borayotgan siyosati faqat shu soha bilan chegaralanishi mumkin emas. Iqtisodiyotning davlat va xususiy sektorida ilgari ko'rib chiqilgan bandlik turlari

bilan bir qatorda aholini ish bilan ta'minlash sohasida iqtisodiyotning norasmiy sektoridagi faoliyat yangi hodisa hisoblanadi. Xalqaro Mehnat Tashkiloti iqtisodiyotning norasmiy sektoriga katta kapitalga ega bo'lmagan, mehnat unumdorligi birmuncha past, yuqori daromad keltirmaydigan, tovarlar va xizmatlar ishlab chiqarish va sotish bilan shug'ullanuvchi kichik muassasalarni kiritadi. Bu muassasalarda yaratilayotgan ish o'rinlari barqaror emas. Odatda, bu muassasalar statistikada hisobga olinmaydi, hukumat tomonidan qo'llab-quvvatlanmaydi, ularga nisbatan mehnat qonunchiligi, ijtimoiy himoya tizimi va boshqalar joriy etilmaydi.

Iqtisodiyotda norasmiy sektorning paydo bo'lishi ayniqsa rivojlanayotgan mamlakatlar uchun xosdir. Xalqaro ekspertlarning baholashicha, shaharlarda band bo'lganlarning 30%dan 50%gachasi mazkur sektorda faoliyat olib borishadi. O'tish davri sharoitida aholining sezilarli qismi mana shu sektorda faoliyat olib boradi va ayrimlarining faoliyati noqonuniy faoliyat bo'lganligi sababli hukumat bu sektorni qonuniy tartibga solmog'i darkor.

Shunday qilib, mehnat bozorini tartibga solish siyosati iqtisodiy siyosatning ajralmas qismi bo'lib, u quyidagi maqsadlar uchun xizmat qiladi:

- iqtisodiyotda tarkibiy o'zgarishlarni rag'batlantirish va bo'shagan ishchi kuchini qayta taqsimlash jarayonini tezlashtirish;
- ishsizlarni iloji boricha tezroq ishga jalb etish;
- ish izlayotgan har bir ishchini ish bilan ta'minlash. Shuning uchun aholini ish bilan ta'minlash sohasida olib borilayotgan siyosatni quyidagi yo'nalishlar bo'yicha amalga oshirish maqsadga muvofiqdir:
 - inson resurslarini yanada faolroq rivojlantirish;
 - fuqarolarning yangi ish joylari va o'z-o'zini ish bilan ta'minlash borasidagi tadbirkorlik tashabbuslarini qo'llab-quvvatlash;
 - ijtimoiy himoyaga muhtoj va ish izlashda qiynalayotgan fuqarolarni ish bilan ta'minlashga ko'maklashuvchi maxsus tadbirlar o'tkazish;
 - yangi ish o'rinlari yaratayotgan va mavjudlarini saqlab qolayotgan (eng avvalo, ijtimoiy himoyaga muhtoj va ish izlashda qiynalayotgan fuqarolar uchun) ish beruvchilarni rag'batlantirish;
 - aholini ish bilan ta'minlash sohasida olib borilayotgan faoliyatni ijtimoiy iqtisodiy siyosatning boshqa yo'nalishlarida olib borilayotgan faoliyat bilan (shuningdek, bu faoliyatni mahalliy, hududiy va respublika miqyosida) muvofiqlashtirish;
 - ishchi kuchiga bo'lgan talab va taklifning ham tarkibiy, ham kasbiy jihatdan balanslashuviga doir chora-tadbirlarni ishlab chiqish va amalga oshirish;
 - qishloq joylarda ishchi kuchi harakatlanishi va malakasini oshirishni rag'batlantirish, shuningdek, uy-joy bozorining shakllanishini tezlashtirish;
 - yangi ish o'rinlarini yaratish sur'atlarini aholi o'sish sur'atlariga yaqinlashtirish;

● aholini ish bilan ta'minlash va ishchi kuchi migratsiyasi muammolarini yechishda xalqaro hamkorlikni (ko'proq MDH mamlakatlari bilan) rivojlantirish, mehnat migrantlarini har tomonlama himoyalashni yo'lga qo'yish.

Mintaqaviy iqtisodiy jarayonlarning xususiyatlarining mintaqa aholisining ish bilan bandligining xulq-atvor omillariga ta'sirini ko'rib chiqaylik.

Birinchidan, mintaqaning tabiiy xususiyatlari, shuningdek, mintaqaning iqlim sharoiti aholining yashash sharoitlarini belgilaydi.

Ikkinchidan, aholining demografik xususiyatlari, mintaqaning milliy, madaniy, tarixiy xususiyatlari mintaqaviy mehnat bozorida ishchilarning iqtisodiy xatti-harakatlarining o'ziga xos xususiyatlarini, xulq-atvor stereotiplarini va mintaqaviy mehnat bozorining turli hodisalariga munosabatini belgilaydi.

Mintaqa aholisini ish bilan ta'minlashning ko'rib chiqilayotgan omillarining ustunligi to'g'ridan-to'g'ri hududiy kontekstda davom etayotgan iqtisodiy jarayonlarning o'ziga xos xususiyatlariga bog'liq bo'lib, bu o'z navbatida ma'lum bir hudud aholisini ish bilan ta'minlashning mintaqaviy tendentsiyalari va naqshlarini belgilaydi.

METHODOLOGY FOR DEVELOPING PRACTICAL COMPETENCE IN PHYSICAL EDUCATION FOR STUDENTS AT HIGHER MEDICAL EDUCATION INSTITUTIONS

Abstract. In this article, several important pedagogical technologies and methods used to shape students' practical competence in physical education are outlined. Additionally, the article assesses the effectiveness of developing students' practical competence based on these instructional methods.

Keywords: physics, practical competence, teaching process, student, independent work, technology, methodology, T-scheme, interactive.

INTRODUCTION

All the efforts carried out in medical institutions of higher education, including the educational process organized in physics, are aimed at training qualified personnel for this field, who can fully demonstrate their talents and abilities., aimed at raising mature individuals capable of finding their place in life. In the future, these approaches will serve to ensure the high development of our country, increase the well-being of our lives, and develop the medical field. For this, it is necessary to implement the tasks of using innovative pedagogical and information technologies in the organization of this process.

In the concept of the development of the higher education system of the Republic of Uzbekistan until 2030, quality renewal of the content of the continuous education system, improvement of the teaching methodology, focusing on the in-depth study of basic subjects, provided for in the state education standards Tasks such as developing criteria for evaluating pedagogical activity based on competencies are defined. This justifies the need to clarify the content of education aimed at improving the teaching methodology in the example of these subjects and the structure of the necessary base and subject-related competencies in the development of students' competence, and to improve the model and methods of developing students' competence based on general competency approaches related to the base and physical science [1].

In order to implement competency-based guidance in education, it's essential to have skills (competencies) that entirely differ from the methods used

to teach students their subjects. Most crucially, creating a unique approach tailored specifically to the student is vital.

At present, intensive efforts are underway globally to enhance physics education: defining the goals of teaching physics, determining the content of study materials, modernizing textbooks and other learning tools, and developing effective teaching styles and methods. Any pedagogical technology implemented by a physics teacher in the course of the learning process should primarily aim to foster the student's independent and creative activities. Teaching methods are considered a fundamental part of the learning process. Without appropriate methods, effective pedagogical activities cannot be realized.

Interactive methods (strategies, graphic organizers) enable students to systematically and effectively assimilate learning information. These interactive methods facilitate students in analyzing, synthesizing knowledge, organizing essential concepts, and articulating the overall essence of objects, processes, activities, and events while working with learning materials.

LITERATURE ANALYSIS AND METHODOLOGY

According to S. Isamitdinov and A. Mavlyanov, interactive methods are based on enhancing the activity, independent thinking, and autonomy of students in higher medical education institutions. When utilizing these methods, learning becomes an engaging activity, fostering independent learning strategies and skills. Students acquire scientific inquiry, research, and experimental skills, which contribute to their personal development. This enhancement in their learning significantly boosts effectiveness. Below, let's discuss some important methods for shaping the preparedness of students in higher medical education institutions[2, 3, 4].

These authors suggest that the following interactive methods can be effective for teachers to use in their teaching activities.

RESULTS

The brainstorming method: method of generating ideas. Students try to solve the problem together: they put forward their personal ideas for solving. The task is to create new ideas with the help of small groups. This method encourages problem-solving students to generate fantastic ideas. The more ideas, the better. At least one may be appropriate.

The T-scheme method: is a universal organizer for comparative concepts (yes/no or agree/disagree), facilitating the visual representation of contrasting ideas in a structured and concise manner. For instance, after reading a text discussing traditional and non-traditional forms of education, the first group sketches a T-schema, listing the advantages of traditional education on the left and presenting them during the given time. Then, they present opposing thoughts, highlighting the drawbacks of this approach. The second group does the same, analyzing the merits and drawbacks of non-traditional education in a similar schema. The groups' diagrams are compared, and a discussion is held based on the T-schema created in collaboration.

Reinforcement of the subject by the method of T-scheme
If you agree with the opinion presented in the table, go to the first column
“ + ”, otherwise put a “ - ” in the end column.

+	<i>Studying the physical basis of blood pressure measurement in the clinic opinions on the subject</i>	-
	There are several ways to measure arterial blood pressure. For example: 1. It is measured by inserting a needle directly into a vein and connecting the other end of the needle to a manometer with a rubber tube. 2. A thin catheter (a thin polyethylene tube) is inserted into a large blood vessel and the other end is connected to a manometer and the pressure is measured. 3. Bloodless blood pressure measurement method used in the clinic is the Korotkov method. Below are examples of electronic blood pressure measuring devices	
	N.S. Korotkov's method is based on listening to sounds made when blood flows from an artery compressed by a cuff.	
	When the artery is completely blocked, no sound is heard. Tones are heard when the air in the cuff is slowly deflated. These sounds are caused by the vibrations of the artery and the walls of the artery.	
	When the pressure is equal to the systolic pressure, the blood is able to rush through the constricted artery, creating laminar flow.	
	The first tone in the artery corresponds to the maximum value of pressure and is called systolic pressure.	
	When measuring the pressure, the phonendoscope is placed on the artery at a distance from the cuff (that is, far away from the heart) and the tones and noises associated with the turbulent flow and created together with it are heard. By gradually reducing the cuff pressure, laminar flow can be restored, as can be seen by the sudden decrease in audible tones. The cuff pressure corresponding to the restoration of laminar flow in the artery is recorded as diastolic pressure	
	The device for measuring arterial pressure consists of the following parts: - a cuff, a tourniquet, an air driver, a membrane manometer - a sphygmotonometer	
	During systole, the high-pressure wave caused by the ejection of blood from the left ventricle and spreading through the aorta and arteries is called a pulse wave.	
	The pulse wave propagates with a speed of 5-10 m/s and more. So, during systole (around 0.3 s, it should spread to a distance of 1.5-3 m), and this distance is more than the distance from the heart to the hands and feet. This means that the pulse wave front reaches the endpoints of the arms and legs after the pressure drop in the aorta.	
	According to general concepts and experiments conducted on cardiac function, it's understood that the pulse wave is not sinusoidal (harmonic).	
	The heart expends energy to increase the pressure of blood flow and impart kinetic energy to the blood.	

Modeling method: involves a device or situation designed to recreate real life. Students perceive the events and events described by the teacher and reinforce the topic through the model they draw in their notebooks. For example, an internal combustion engine. The steam pipe theme can be displayed. Before

moving on to this topic, the teacher gives and explains the model of the internal combustion engine to the group. The following questions are explained depending on the engine model: What kind of engine is called an internal combustion engine? It is called an internal combustion engine because the fuel burns directly inside the engine, in its cylinder.

What are the main parts of an internal combustion engine? The engine consists of a cylinder, inside which a piston moves, the piston is attached to the crankshaft by means of a connecting rod. For smooth rotation of the shaft, a weighted wheel is installed on the shaft. At the top of the cylinder are two valves that open and close automatically when the engine is running. The combustible mixture enters the cylinder through the first valve and is ignited by a spark plug. Combustion gases are released through the second valve. All this is shown through the model.

Work in small groups: the complexity of the work of a pedagogue is the ability to create conditions for the development of opportunities in the group. The most important thing is to create a need to understand their identity and life, and in order for them to succeed in their hard work on the path of learning, the pedagogue needs to believe in the capabilities of each of them. Success in this way depends on the pedagogue's determination and ability to provide timely help. They should be divided into 4 groups. Then you need to give them a name. For example, atom, molecule, force, work, etc. *It would be more appropriate if it was named with important words of the topic to be covered.*

One of the effective methods used in organizing the educational process is training. In this, the ability to achieve the desired goal, active participation, and find a positive solution to tasks is encouraged. During the training, he learns to use communication methods depending on the situation, acquires skills and competencies. These serve to form professional skills and qualifications in the process of methodological training of students.

In her research, Sh. Shodmonova emphasizes the resolution of problems related to real situations in formulating tasks for independent and creative work, highlighting the development of practical competencies in students through various methods, illustrating the significant relevance between the content of tasks and events, identifying solutions, and emphasizing the importance of reinforcing connections between events or processes in the minds of students.

The practical method is considered the most important in the formation of practical competences. This method involves the organization of exercises. During the exercise, the student repeats practical and mental actions several times. They are offered assignments, they work independently with handouts. Both collective and individual forms of exercise are used. In addition to mastering and strengthening knowledge, group exercise can also be used for supervision. Individual exercise serves to guide students to group activities while performing the same function.

DISCUSSION

Studying these issues from a scientific-pedagogical point of view is necessary to take into account the need of students for independent education and to create sufficient conditions for independent education; lack of preparation of primary education teachers for organization, implementation and control of independent education of students in taught subjects; lack of formation of knowledge, skills and qualifications for independent education among teachers; Issues such as the inadequacy of educational and methodical literature, recommendations, developments, instructions, and instructions related to the organization, implementation, and control of students' independent education are particularly relevant.

"Project" technology provides for the collection of information, research and implementation of the work of students individually or in groups for a specified period of time on a specified topic. This technology forms the skills of students to participate in the processes of planning, decision-making, implementation, verification and conclusion and evaluation of results. Project development can be individual or group. Group development of a solution to a problem situation. Provide a description of the problem situation. Divide into groups. Groups to determine the causes of the problem situation and think about the consequences. Choosing the right solutions is a coordinated result of joint activities. The project should serve learning, apply theoretical knowledge to practice, create the possibility of independent planning, organization and implementation by students.

Below are the stages and known methods of "Project" technology. Stages of the "Project" method: the stages of the method are as follows: the students of medical institutions of higher education develop assignments on the project work. Students independently collect information about the assignment based on textbooks, schemes, handouts; students develop a work plan independently. In the work plan, students should plan the stages of work, the time allocated to them and the technological sequence, material, equipment; small groups present their work plans. Students make a decision on completing the assignment based on the work plan. Students discuss the results of the decisions made together with the students of medical institutions of higher education. Different solutions are compared and the most optimal option is selected. Develops the "Evaluation form" of students of medical higher education institutions together with students; students perform the task independently based on the work plan. They can work individually or in small groups; verification, implementation, conclusion works are carried out.

In addition, small groups are involved in checking each other's work results. The results of the inspection are recorded in the "Evaluation Sheet".

Method of problem-based education. Activation of cognitive activity of students during the educational process and high level use of their intellectual capabilities depends on the following general factors: creation of a system of problematic questions on the subject being studied; teaching the topic materials

explained by the interview method based on the system of set problematic questions and revealing its essence; setting research tasks based on a problematic question.

The learning process created on the basis of solving problem situations is called problem-based education. In problem-based education, the teacher's activity consists in the fact that, in necessary cases, he explains the content of the most complex concepts, regularly creates problematic situations between students with the subject material being studied, informs students of facts, as a result, students independently draw conclusions based on the analysis of these facts. extract and summarize.

Problem situations are based on the improvement of students' independent works, which are based on the formation of scientific concepts, practical skills and qualifications, and deep logical analysis of other materials. It is necessary to know well the ways of creating problem situations before passing the problem training session. Attention is paid to the following: asking specific questions: encouraging generalization, proof, clear logical thinking; asking students questions that encourage thinking and offering them to find their solution independently; encouraging students to compare, generalize, draw conclusions, and compare given facts through theoretical and practical assignments; explain the need to look at the same question from different points of view and encourage to justify the given answers; to offer students to consider the phenomenon through different situations and inform about the contradictions encountered in the process of practical work.

Thus, the problem is not directly posed without any preparation. It is presented as the main issue in the training session. The complexity of the problems should naturally correspond to the level of the students. The materials presented should not be complicated. Only if students can solve the material, especially problems and assignments, their problem-solving potential will increase.

CONCLUSION

Any pedagogical technology introduced by the physics teacher into the educational process, regardless of whether its components are passed through the content of the lesson, the curriculum, the textbook or the activity of the teacher, the student's free and it is required to be aimed at the development of creative activity. Teaching methods are the main part of the training process. Pedagogical activities cannot be carried out without appropriate methods.

DARSLARNI SAMARALI TASHKIL ETISH VA ZAMONAVIY XORIJ METODLARIDAN FOYDALANISH

Annotatsiya. Darslarni tashkil etish va zamonaviy xorijiy usullarni qo'llash o'quv jarayonini samarali tashkil etishning hal qiluvchi elementlari hisoblanadi. Samarali tashkil etilgan o'quv xona qurollari, o'qitishning innovatsion yondashuvlarini o'z ichiga olgan holda, talabalarning ta'lim natijalarini sezilarli darajada oshirishi, akademik yutuqlarni yaxshilashi va intellektual o'sish uchun qulay muhitni yaratishi mumkin. So'nggi yillarda talabalarning turli ehtiyojlarini qondirish uchun an'anaviy o'qitish usullarini yangilash va zamonaviy xorijiy yondashuvlarni o'z ichiga olish zarurati tobora ortib bormoqda. Ushbu maqolada darslarni samarali tashkil etish va ta'lim natijalarini oshirishda zamonaviy xorijiy usullardan foydalanish muhimligini o'rganadi.

Kalit so'zlar: o'qitish metodlari, zamonaviy usullar, xorij tajribasi, malakali o'qituvchilar, innovatsion yondashuvlar.

EFFECTIVE ORGANIZATION OF LESSONS AND USE OF MODERN FOREIGN METHODS

Abstract. The organization of lessons and the use of modern foreign methods are decisive elements of the effective organization of the educational process. Effectively designed classroom equipment, including innovative teaching approaches, can significantly increase student learning outcomes, improve academic achievement, and create an environment conducive to intellectual growth. In recent years, there has been an increasing need to update traditional teaching methods and incorporate modern foreign approaches in order to meet the diverse needs of students. This article examines the importance of using modern foreign methods in effectively organizing lessons and improving educational outcomes.

Key words: teaching methods, modern methods, foreign experience, qualified teachers, innovative approaches.

Kirish: Darslarni samarali tashkil etishning asosiy afzalliklaridan biri shundaki, u o'qituvchilarga tuzilgan va yaxshi rejalashtirilgan o'quv muhitini yaratishga imkon beradi. Darslar yaxshi tashkil etilganda, o'qituvchilar har bir

mavzu uchun yetarli vaqt ajratishlari, barcha talabalar ishtirok etish uchun teng imkoniyatlarga ega bo'lishlarini ta'minlashlari va qo'shimcha yordamga muhtoj bo'lganlarga individual e'tibor berishlari mumkin. Bu, o'z navbatida, talabalar o'rtasida intizom va mas'uliyat hissini rivojlantirishga yordam beradi, chunki ular ulardan nima kutilayotganidan xabardor va o'z ishlarini shunga muvofiq rejalashtirishlari mumkin. Bundan tashqari, uyushgan o'quv xona sozlamalari chalg'itadigan narsalarni kamaytirishga, shovqin darajasini pasaytirishga va o'rganish uchun qulay muhit yaratishga yordam beradi.

Tuzilgan o'quv muhitini targ'ib qilishdan tashqari, darslarni samarali tashkil etish o'qituvchilarga ko'proq talabalarga yo'naltirilgan yondashuvni qo'llashga imkon beradi. Loyiha asosida o'qitish, o'quv xonalari va hamkorlikda o'qitish kabi zamonaviy xorijiy usullarni o'z ichiga olgan holda, o'qituvchilar talabalarni o'z bilimlariga egalik qilishga, tanqidiy fikrlash qobiliyatlarini rivojlantirishga va ijodkorlikni rivojlantirishga undashlari mumkin. Masalan, loyiha asosida o'qitish talabalarga jamoalarda ishlashni, tadqiqot o'tkazishni va yechimlarni ishlab chiqishni talab qiladigan haqiqiy muammolarni berishni o'z ichiga oladi. Ushbu yondashuv nafaqat muammolarni hal qilish ko'nikmalarini oshiradi, balki jamoaviy ish, muloqot va vaqtni boshqarish ko'nikmalarini rivojlantiradi.

Zamonaviy xorijiy usullarni qo'llashning yana bir muhim afzalligi shundaki, ular talabalarning turli ehtiyojlarini qondirishga yordam beradi. An'anaviy o'qitish yondashuvlari ko'pincha ma'ruzalar va darsliklarga tayanadi, ular barcha talabalar uchun qiziqarli yoki tegishli bo'lmasligi mumkin. Aksincha, gamifikatsiya, simulyatsiya va virtual haqiqat tajribalari kabi zamonaviy xorijiy usullar o'rganishni yanada interaktiv va samarali qilishi mumkin. Masalan, gamifikatsiya o'rganishni yanada qiziqarli qilish uchun ballar, nishonlar va yetakchilar taxtasi kabi o'yin dizayni elementlaridan foydalanishni o'z ichiga oladi. Ushbu yondashuv talabalarning motivatsiyasini, ishtirokini ushlab turish stavkalarini oshirishi ko'rsatilgan.

Bundan tashqari, zamonaviy xorijiy usullardan foydalanish nazariya va amaliyot o'rtasidagi tafovutni bartaraf etishga yordam beradi. Ko'pgina talabalar nazariy tushunchalarni Real stsenariylarga qo'llash uchun kurashadilar, bu esa tushunishning yetishmasligi va yomon akademik ko'rsatkichlarga olib kelishi mumkin. Amaliy tadqiqotlar, rol o'ynash mashqlari va sohaga oid loyihalarni o'quv dasturiga kiritish orqali o'qituvchilar talabalarga amaliy ko'nikmalarni rivojlantirishga va nazariy tushunchalarni real stsenariylarga tatbiq etishga yordam berishlari mumkin. Ushbu yondashuv nafaqat talabalarning tushunishini kuchaytiradi, balki ularga tegishli ko'nikma va tajribani taqdim etish orqali ularni ishchi kuchiga tayyorlaydi.

Darslarni samarali tashkil etish va zamonaviy xorijiy usullardan foydalanish muvaffaqiyatli ta'lim tizimining muhim tarkibiy qismidir. Tuzilgan va yaxshi rejalashtirilgan o'quv muhitini yaratish, talabalarga yo'naltirilgan yondashuvlarni qabul qilish, talabalarning turli ehtiyojlarini qondirish va nazariya va amaliyot o'rtasidagi farqni bartaraf etish orqali o'qituvchilar talabalarning

ta'lim natijalarini yaxshilashlari, ilmiy yutuqlarni yaxshilashlari va intellektual o'sish uchun qulay muhitni yaratishlari mumkin. O'qituvchilar XXI asr o'quvchilarini o'qitish muammolari bilan kurashishda davom etar ekan, ular yangi g'oyalarga ochiq bo'lishlari, o'qitish amaliyotini moslashtirishga tayyor bo'lishlari va talabalarni tobora murakkablashib borayotgan muvaffaqiyatga tayyorlaydigan yuqori sifatli ta'lim berishga sodiq bo'lishlari shart.

Shunday qilib, ular talabalarga tobora raqobatbardosh global iqtisodiyotda muvaffaqiyat qozonish uchun zarur bo'lgan ko'nikma, bilim va malakalarni rivojlantirishga yordam berishi mumkin.

Bundan tashqari, darslarni samarali tashkil etish va zamonaviy xorijiy usullardan foydalanish ham o'qituvchilarning malakasini oshirishga ijobiy ta'sir ko'rsatadi. O'qituvchilarni yangi yondashuvlar va metodologiyalarni qabul qilishga da'vat etilganda, ular o'z amaliyotlari haqida fikr yuritishga, bilim va ko'nikmalarini yangilashga va o'zgaruvchan talabalar ehtiyojlariga moslashishga majbur bo'ladilar. Bu nafaqat o'qituvchilarning ishonchi va malakasini oshiradi, balki maktablarda doimiy takomillashtirish madaniyatini ham rivojlantiradi.

Intensiv metodologiyaga muvofiq ish amaliyoti nutq faoliyatining barcha turlarini bir darsda ham, darslar tizimida ham ularning integratsiyasi va o'zaro bog'liqligiga asoslangan parallel rivojlanishining dolzarbligini ko'rsatadi. Shuningdek, o'quv maqsadlari va nutq faoliyati turlarining tegishli ierarxik bo'ysunishini hisobga olish muhimdir. Shu bilan birga, bu erda asosiy rol o'qishga beriladi. Nutq qobiliyatini rivojlantirish uchun samarali vosita bo'lib xizmat qiladigan o'qish funktsiyasi tufayli kommunikativ kompetentsiyaning shakllanishi va rivojlanishi katta darajada tezlashishi mumkin.

Gapirishdan oldin o'qitishni tushunish nutq ko'nikmalarini shakllantirishni tezlashtirish uchun haqiqiy imkoniyat yaratadi. Guruhlar tizimida tematik printsipga muvofiq o'quv materialini tanlash va oqilona tashkil etish – tuzilishi va mazmuni jihatidan yaxlit birlikni ifodalovchi o'zaro bog'liq guruhlar tizimi – o'quv jarayonini optimallashtirishga yordam beradi. Shu bilan birga, tematik jihatdan birlashtirilgan darslar tizimidagi har bir darsning o'ziga xos xususiyatlari va o'ziga xosligi borligini yodda tutish kerak: maqsad, mazmun, tuzilish va qurilish mantig'i kabilarni.

Muayyan mavzu bo'yicha o'quv mashg'ulotlarini rejalashtirish va uslubiy rivojlantirishda faol assimilyatsiya qilish uchun mo'ljallangan materialni (nutq faoliyatining barcha turlari uchun umumiy) va passiv ravishda o'zlashtiriladigan materialni oqilona taqsimlash ham muhimdir. Shuni hisobga olish kerakki, tayyorlangan nutq ko'nikmalarini rivojlantirish uchun ishlatiladigan "og'zaki" matn (matn-dialog) xarakter jihatidan o'qishni o'qitishda ishlatiladigan matnlardan, yozma nutqdan barcha xususiyatlari bilan (sintaksisning murakkabligi va boshqalar) tubdan farq qiladi. Taklif etilayotgan texnologiya kelishilgan birgalikdagi faoliyat va o'quv materialini yetkazib berish (tanishtirish), uni matn bilan takroriy uchrashuv orqali xotirada saqlash

(faollashtirish va o'qitish) va materialni muloqotda amaliy qo'llash orqali o'qitish tezligini oshirishga imkon beradi.

Tematik guruhlangan matnlar talabalarning ko'nikmalarini rivojlantirish uchun tuzilgan asos yaratadi. Ushbu matnlar taklif qilingan vaziyatlar kontekstida ularni hal qilish uchun o'quv jarayoniga kiritilmoqda.

Shuni ta'kidlash joizki, darslarni samarali tashkil etish va zamonaviy xorijiy usullardan foydalanish maktab ma'murlari va siyosatchilarining doimiy yordamini talab qiladi. O'qituvchilarni yetarli tayyorgarlik, resurslar va avtonomiyalar bilan ta'minlash ularning innovatsion yondashuvlarni samarali amalga oshirishlarini ta'minlash uchun juda muhimdir. Bundan tashqari, siyosatchilar ta'lim infratuzilmasiga, shu jumladan texnologiyaga asoslangan guruhlariga va raqamli resurslarga sarmoya kiritish muhimligini tan olishlari kerak.

Xulosa

Xulosa qilib aytganda, darslarni samarali tashkil etish va zamonaviy xorijiy usullardan foydalanish muvaffaqiyatli ta'lim tizimining muhim tarkibiy qismidir. Innovatsiyalarni qabul qilish, texnologiyadan foydalanish va talabalarga yo'naltirilgan yondashuvlarni birinchi o'ringa qo'yish orqali o'qituvchilar talabalarni tobora murakkablashib borayotgan dunyoda muvaffaqiyatga tayyorlaydigan qiziqarli o'quv tajribalarini yaratishi mumkin. Biz tez o'zgarish va texnologik taraqqiyot bu davrda oldinga harakat sifatida, biz o'qituvchi professional rivojlantirish oshirishga qaratilgan ta'lim islohoti sa'y-harakatlarini birinchi o'ringa kerak.

TRENDS IN INNOVATIVE ECONOMIC DEVELOPMENT OF THE TRANSPORT SYSTEM OF UZBEKISTAN

Abstract. The article examines how the development of transport infrastructure affects the increase in the competitiveness of the economy of Uzbekistan. A detailed analysis of the current state of transport infrastructure in the country is being carried out. Possibilities for improving and improving performance indicators in this area are identified.

Key words: logistics, transport infrastructure, economic development, export potential, competitiveness.

Considering the fact that the countries of Central Asia are landlocked, in order to realize their production and trade potential, it is very important to develop land and air transport infrastructure and improve the technical support in this area. Improving the transport sector and the logistics system primarily leads to a reduction in production costs and reduces costs associated with the risks of transporting and storing products.

Secondly, this is an attractive indicator for both local producers and external investors. In addition, a developed transport infrastructure contributes to the development of tourism, provides safe and fast transportation of passengers and goods, and thereby contributes to social development.

Uzbekistan strives to achieve high rates of economic development. Quick access to production sources, safe and efficient delivery of products are key factors in realizing the country's export potential.

In international practice, in order to assess how efficiently the transport and logistics sectors function, a special unified logistics efficiency index has been introduced, which includes transport infrastructure, timeliness of transportation, efficiency of customs clearance, international transportation, the ability to track transportation and the quality of logistics services. The LPI (logistics performance index) is an interactive benchmarking tool designed to help countries identify challenges and benchmarking designed to help countries identify the challenges and opportunities they face in their trade logistics activities, and what they can do to improve their performance.

According to the Presidential Decree [2], “On measures to improve transport infrastructure and diversify foreign trade routes for the transportation of goods for 2018–2022,” the priority tasks are the construction of new railway lines, increasing the level of electrification of railway tracks, expanding the geography of flights, promoting the existing infrastructure and the range of services provided services to international air transport services markets. The Resolution notes that currently the existing transit potential of the republic is not fully utilized. The current inflexible transit and tariff policy hinders the attraction of additional transit cargo traffic. In this regard, it is recommended that commercial banks of the Republic of Uzbekistan provide loans for the purchase of vehicles, special equipment for transportation and storage of goods, from the date of issue of which no more than 3 years have passed, as well as other goods intended for the provision of transport and logistics services, with an interest rate not higher than the refinancing rate of the Central Bank of the Republic of Uzbekistan, with a grace period of up to 1 year.

Until January 1, 2022, national road transport enterprises engaged in international road transport and transport and logistics companies are exempt from paying:

- value added tax, property tax, as well as land tax, subject to the condition of directing the released funds to expand its own fleet of vehicles, modernize production facilities, create modern warehouse terminals and repay bank loans;
- customs payments (except for customs clearance fees) for imported warehouse equipment, loading and unloading equipment, units, spare parts and other goods not produced in the Republic of Uzbekistan, intended for the provision of transport and logistics services, according to lists approved in the prescribed manner.

The implementation of the above and a number of other reforms within the framework of the Resolution contributes to the further improvement of the transport infrastructure system and will thereby help develop the competitiveness of the national economy and realize the production and export potential of Uzbekistan.

Specifically, a system has been created that classifies transport subsectors into 4 categories with different problems and specific policy needs:

1. Strong industry with low sales prospects:

This is a negative situation that will develop towards the decline of the industry if strategic measures are not taken. The industry has a good competitive position in international markets, but new demand preferences will move away from the traditional products and services offered by the industry, forcing it to adapt to modern conditions. In this situation, public policy should support industrial transformation by focusing on the most competitive innovation areas and promoting cross-fertilization between different sectors. Demand management tools targeting the most competitive innovation areas will stimulate the transport sector's innovation efforts.

2. Strong industry with high sales prospects:

This ideal situation is associated with the high innovative potential of the private sector. The industry has the resources to innovate and the ability to meet future demand and preferences that align with its core business. In this case, government support should follow the priorities of the industry, providing a combination of innovative demand-side measures and innovative supply-side measures, but rather as a complement.

Government support should be aimed at filling innovation gaps caused by market failures.

3. Weak industry with low sales prospects:

This is the worst case scenario from an industry perspective. It reflects a declining industry that has failed to adapt to current demand patterns and will have to continue to contend with new changes in demand that will put additional pressure on traditional business models. Public policy should focus on supporting innovation, both on the demand and supply sides. This will support the industry's competitiveness at a time when it is driving deep industrial transformation through increased skills and specialization, focusing on the most promising innovative areas.

4. Weak industry with high sales prospects:

This is a case of low industry specialization in promising markets. Government support should be aimed at strengthening the innovative potential and competitiveness of those industries that are well positioned in those innovative areas with high sales prospects. Supply-side measures, such as innovation finance, will help companies facing the most critical challenges identified in each scenario.

Transport and infrastructure, like virtually all economic activities, are vulnerable to technological disruptions that transform services and processes. These technologies help create smarter, safer and more integrated systems.

SOME CONSIDERATIONS ABOUT USING GEOGEBRA IN INTEGRATED LESSONS BASED ON THE STEAM APPROACH

Abstract. This article delves into the integration of Geogebra, an interactive mathematics software, within the framework of STEAM (Science, Technology, Engineering, Arts, and Mathematics) education. It examines the benefits and challenges of incorporating Geogebra into integrated lessons, aiming to provide educators with valuable insights and considerations for effective implementation. Through a comprehensive analysis, this article offers practical recommendations for maximizing the potential of Geogebra as a powerful tool for STEAM learning.

Keywords: Geogebra, STEAM education, integrated lessons, mathematics software, interdisciplinary learning.

In the realm of contemporary education, the integration of Science, Technology, Engineering, Arts, and Mathematics (STEAM) has emerged as a pedagogical approach that fosters holistic learning and encourages creativity and innovation among students. At the heart of this interdisciplinary framework lies the endeavor to bridge the gaps between traditionally distinct subject areas, promoting a more cohesive and interconnected understanding of concepts. Within this context, the utilization of educational technology has become increasingly prevalent, offering educators versatile tools to enhance the learning experience. One such tool that has gained prominence in recent years is Geogebra, an interactive mathematics software that enables users to explore mathematical concepts through dynamic visualizations. While Geogebra has long been recognized for its efficacy in traditional mathematics instruction, its potential as a facilitator of integrated STEAM learning is perhaps less explored but no less significant. By harnessing the power of Geogebra, educators can create immersive and interactive learning experiences that transcend disciplinary boundaries, fostering a deeper understanding of complex concepts and nurturing the development of essential 21st-century skills. We delve into the integration of Geogebra within the framework of integrated STEAM lessons, exploring the benefits and challenges of incorporating this powerful tool into interdisciplinary instruction. Through a comprehensive analysis, we aim to provide educators with valuable insights and considerations for effectively leveraging Geogebra to enhance STEAM learning experiences. By understanding the potential of Geogebra and its implications for integrated education, educators can unlock new

avenues for engaging students and promoting meaningful learning across multiple disciplines.

Understanding Geogebra: Geogebra stands as a versatile software tool that seamlessly combines geometry, algebra, calculus, and other mathematical tools into a single platform. Its user-friendly interface allows students to create geometric constructions, manipulate mathematical objects, and visualize abstract concepts in real time. By offering multiple representations of mathematical ideas—graphical, algebraic, tabular, and geometric—Geogebra caters to diverse learning styles and preferences, enabling students to explore concepts from various perspectives. Its dynamic visualizations make abstract mathematical concepts tangible and accessible, facilitating deeper conceptual understanding.

The STEAM Approach: The STEAM educational paradigm integrates Science, Technology, Engineering, Arts, and Mathematics to foster interdisciplinary learning and creativity. This approach emphasizes the interconnectedness of these disciplines, encouraging students to make connections between different areas of knowledge. By engaging in STEAM activities, students develop problem-solving skills, critical thinking abilities, and innovative thinking—essential competencies for success in the 21st century. STEAM education promotes inquiry-based learning, collaborative problem-solving, and real-world application of knowledge, preparing students to tackle complex challenges in an increasingly interconnected world.

Enhancing Visualization and Conceptual Understanding: Geogebra's dynamic visualizations help students visualize abstract mathematical concepts, making them more tangible and easier to comprehend. Through interactive exploration, students can develop a deeper conceptual understanding of mathematical principles and their applications across STEAM disciplines.

Promoting Inquiry-Based Learning: Geogebra facilitates inquiry-based learning by allowing students to investigate mathematical phenomena and discover patterns through hands-on exploration. By engaging in open-ended tasks and guided inquiry, students develop problem-solving skills and mathematical reasoning while exploring STEAM concepts in authentic contexts.

Supporting Multimodal Learning: Geogebra supports multimodal learning experiences by providing multiple representations of mathematical concepts, catering to diverse learning styles and preferences. Students can engage with mathematical ideas through graphical representations, algebraic expressions, and dynamic animations, enhancing their comprehension and retention of STEAM concepts.

Access to technology and proficiency in using Geogebra may vary among students and educators, posing challenges to implementation in diverse educational settings. Educators must address technological barriers by providing adequate training and support to ensure all students can effectively utilize Geogebra in their learning.

Integration Across Disciplines: Integrating Geogebra into interdisciplinary STEAM lessons requires careful planning and coordination among educators from different subject areas. Collaborative curriculum design and interdisciplinary professional development can help facilitate seamless integration and alignment of Geogebra with STEAM learning objectives.

Provide Scaffolded Learning Opportunities: Scaffold students' learning experiences by providing guided activities and structured tasks that gradually increase in complexity. Incorporate formative assessment strategies to monitor student progress and provide targeted support as needed.

Foster Collaboration and Peer Learning: Encourage collaborative problem-solving and peer learning by promoting group activities and cooperative projects that require students to work together. Emphasize the value of communication, teamwork, and collective problem-solving skills in STEAM learning environments.

Geogebra allows for differentiated instruction by providing customizable learning experiences tailored to individual student needs and abilities. Educators can create activities and assignments that cater to diverse learning styles, levels of proficiency, and interests. For example, advanced students can explore more complex mathematical concepts or engage in extension activities, while struggling learners can receive additional support and scaffolding to build foundational skills. By adapting Geogebra resources to meet the unique needs of each student, educators can promote inclusive learning environments where all learners can thrive. Geogebra facilitates the exploration of real-world applications of mathematical concepts across STEAM disciplines. Through modeling and simulation features, students can apply mathematical principles to analyze real-world phenomena, solve authentic problems, and make informed decisions. For instance, students can use Geogebra to design and test engineering prototypes, analyze data in scientific investigations, create digital artworks inspired by mathematical concepts, or explore the principles of geometry in architectural design. By engaging in hands-on, project-based learning experiences with Geogebra, students develop a deeper appreciation for the relevance and applicability of mathematics in everyday life and professional contexts. Geogebra's interactive and visually engaging interface captivates students' attention and fosters intrinsic motivation to learn. By enabling students to actively explore mathematical concepts through dynamic manipulations and visualizations, Geogebra makes learning more enjoyable and meaningful. Students become active participants in their learning process, eagerly experimenting with mathematical ideas, making discoveries, and solving problems. Furthermore, the creative possibilities offered by Geogebra empower students to express their mathematical understanding in innovative ways, fostering a sense of ownership and pride in their learning achievements. As a result, student engagement and motivation are heightened, leading to deeper learning outcomes and long-term retention of knowledge.

In conclusion, the integration of Geogebra within the framework of integrated STEAM lessons holds tremendous promise for transforming the educational landscape and preparing students for success in a rapidly evolving world. Geogebra's dynamic visualization tools, interactive features, and multimodal representations empower educators to create immersive learning experiences that transcend disciplinary boundaries and promote deep conceptual understanding. By leveraging Geogebra effectively, educators can foster inquiry-based learning, collaborative problem-solving, and real-world application of knowledge across STEAM disciplines. Despite the challenges of technological barriers and integration across disciplines, thoughtful planning, collaborative curriculum design, and ongoing professional development can help educators harness the full potential of Geogebra in STEAM education. By providing scaffolded learning opportunities, fostering collaboration and peer learning, and promoting differentiated instruction, educators can create inclusive learning environments where all students can thrive. Ultimately, Geogebra enables educators to ignite students' curiosity, creativity, and passion for learning, equipping them with the skills and competencies needed to navigate the complexities of the 21st century and make meaningful contributions to society. As we continue to embrace the transformative power of technology in education, Geogebra stands as a beacon of innovation, inspiring educators and students alike to explore new horizons and unlock their full potential.

USING IDIOMS IN THE CLASSROOM

Abstract. This article explores the pedagogical value of integrating idioms into language instruction, highlighting their role in enhancing language proficiency, cultivating critical thinking skills, and promoting cultural literacy and empathy. Idioms, those colorful expressions rooted in cultural and historical contexts, offer a gateway to language enrichment and deeper understanding. Through interactive activities and exploration of idiomatic language in context, students develop nuanced language skills and a broader appreciation for cultural diversity. Practical strategies for integrating idioms into the classroom are discussed, emphasizing the importance of scaffolding and support to ensure effective communication.

Keywords: Idioms, language proficiency, critical thinking skills, cultural literacy, language instruction.

In the ever-evolving landscape of education, educators are constantly seeking innovative approaches to engage students and foster deeper understanding. While textbooks serve as foundational resources, the richness of language extends far beyond their confines. Idioms, those colorful expressions rooted in cultural and historical contexts, offer a gateway to language enrichment and cultural literacy. Integrating idioms into the classroom not only enhances language proficiency but also cultivates critical thinking skills and fosters a deeper appreciation for the intricacies of communication. As the saying goes, "A picture is worth a thousand words." Similarly, idioms, often vivid and metaphorical in nature, encapsulate layers of meaning within a few words or phrases. These linguistic gems provide a window into cultural norms, historical events, and societal values, offering students insights into the nuances of language and the contexts in which it operates. From "raining cats and dogs" to "spill the beans," idioms infuse language with color, allowing students to explore the depths of expression beyond literal interpretation.

One of the primary benefits of incorporating idioms into the classroom is the enhancement of language proficiency. Idioms challenge students to decipher figurative language and understand the underlying messages conveyed. By exploring idiomatic expressions in context, students not only expand their vocabulary but also develop a deeper understanding of syntax and semantics. Moreover, exposure to idioms fosters language acquisition by immersing students in authentic linguistic experiences, mirroring real-world communication scenarios. Beyond linguistic proficiency, idioms serve as catalysts for critical thinking and problem-solving skills. Deciphering the meaning of idiomatic

expressions requires students to engage in deductive reasoning, drawing upon their linguistic knowledge and contextual clues.

Incorporating idioms into classroom activities can take various forms, from interactive games to creative writing exercises. For instance, teachers can organize idiomatic scavenger hunts, where students search for idioms in literature or everyday conversations and analyze their meanings. Alternatively, students can create their own idiomatic expressions based on personal experiences or cultural references, promoting creativity and self-expression. By integrating idioms into diverse instructional strategies, educators can cater to different learning styles and promote active engagement in language learning. However, while idioms offer myriad benefits, their usage requires careful consideration to ensure effective communication. As idiomatic expressions are often context-dependent, students must learn to discern appropriate usage and avoid misinterpretation. Moreover, educators must provide scaffolding and support to help students navigate the complexities of idiomatic language, fostering a supportive learning environment where students feel empowered to experiment and take risks.

Idioms, those fascinating linguistic quirks, offer a treasure trove of pedagogical opportunities within the classroom. At their core, idiomatic expressions are more than mere phrases; they encapsulate cultural nuances, historical anecdotes, and societal norms. By incorporating idioms into language instruction, educators can foster a holistic approach to language learning that goes beyond rote memorization and grammar drills. One of the primary benefits of integrating idioms into the classroom is the enhancement of language proficiency. Idioms challenge students to move beyond literal interpretations and decipher the underlying meanings embedded within figurative language. This process not only expands students' vocabulary but also deepens their understanding of syntax and semantics.

Consider the idiomatic expression "hit the nail on the head." While its literal meaning might elude students, unpacking its figurative interpretation—accurately identifying or addressing a problem—offers valuable insight into the complexities of language. By exploring idioms in context, students develop a nuanced understanding of how words and phrases function within the broader framework of communication. Moreover, exposure to idiomatic language mirrors authentic linguistic experiences, immersing students in the richness of everyday communication. Whether encountered in literature, conversations, or media, idiomatic expressions provide students with real-world examples of language in action, fostering language acquisition in meaningful contexts.

Beyond language proficiency, idioms serve as catalysts for critical thinking and problem-solving skills. Deciphering the meaning of idiomatic expressions requires students to engage in deductive reasoning, drawing upon contextual clues and prior knowledge to unlock meaning. This cognitive process encourages analytical thinking and fosters cognitive flexibility as students navigate the complexities of language ambiguity. For instance, consider the idiomatic

expression "barking up the wrong tree." Through exploration and analysis, students discern its figurative meaning—misdirecting efforts or pursuing a mistaken course of action. By dissecting idiomatic language in this manner, students hone their ability to infer meaning, evaluate context, and make informed interpretations—a skill set essential for success in both academic and real-world settings. Moreover, discussing the origins and cultural significance of idioms prompts students to delve into historical and cultural contexts, fostering a multidisciplinary approach to learning. By exploring the stories behind idiomatic expressions, students gain insights into the socio-cultural fabric of language, enriching their understanding of human experiences across time and space.

In addition to linguistic enrichment, the integration of idioms into classroom instruction promotes cultural literacy and empathy. Idioms often reflect cultural values, traditions, and beliefs, offering glimpses into the diverse perspectives that shape human experiences. By exploring idiomatic expressions from different cultures and linguistic backgrounds, students develop a deeper appreciation for cultural diversity and cultivate empathy towards others. For example, the idiomatic expression "breaking the ice" carries different connotations in various cultural contexts. While it may signify initiating conversation or overcoming social barriers in Western cultures, its interpretation may differ in cultures where ice is not a prevalent metaphor. By exploring such nuances, students gain a broader understanding of cultural differences and learn to navigate intercultural communication with sensitivity and respect.

In conclusion, the integration of idioms into classroom instruction offers a multifaceted approach to language enrichment and cultural understanding. By exploring idiomatic expressions, students not only enhance their language proficiency but also develop critical thinking skills, cultural empathy, and intercultural competence. As educators, embracing the richness of idiomatic language opens doors to transformative learning experiences, empowering students to navigate the complexities of language and engage with the world with greater depth and understanding. By harnessing the power of idioms, educators can cultivate a generation of language learners who are not only proficient in their linguistic abilities but also equipped with the cultural competence to thrive in an increasingly interconnected global society.

FREQUENCY OF OCCURRENCE OF THROMBOCYTOPENIC PURPURA AND METHODS OF THEIR TREATMENT

Abstract. Clinical cases of treatment of thrombotic thrombocytopenic purpura using multiple exchange plasmapheresis are presented. The difficulties of rapid diagnosis and the importance of early initiation of pathogenetically determined therapy are described. The tactics of using extracorporeal hemocorrection in the treatment of this disease are discussed.

Keywords: Treatment, moschkowitz disease, method, thrombotic thrombocytopenic purpura, plasmapheresis.

INTRODUCTION

This disease was first described by E. Moschcowitz in 1924 [1] and subsequently named after him. Moschkowitz disease or thrombotic thrombocytopenic purpura (TTP) (microangiopathic hemolytic anemia, thrombotic microangiopathy) is one of the types of thrombotic microangiopathy, which is based on systemic damage to small vessels by antigen-antibody complexes, causing endothelial proliferation, fibrinoid necrosis, formation of fibrin and hyaline thrombi [2].

MATERIALS AND METHODS

TTP is a rare disease. M. Noris et al. [4] note an incidence rate of 2–4 cases per 1 million population per year, and predominantly women suffer (the ratio of incidence of women to men is 3:2–5:2). People aged 30–50 years are most often susceptible to the disease.

The Oklahoma State Registry (USA, 2013) contains data on 4.46 cases of idiopathic TTP per 1 million residents per year [4]. Over time, there is no trend towards an increase in incidence. According to studies conducted in the USA in 1966–1991. [8, 9], the incidence was 3.7 cases per year per 1 million inhabitants. All researchers agree that TTP develops as an acute disease with a poor prognosis. The aggressive nature of the course of TTP requires the initiation of pathogenetically based therapy already in the first hours of the disease; in the absence of treatment, mortality approaches 90% [3].

The basis for the treatment of acquired TTP is the treatment regimen developed by J. George, taking into account the recommendations of the British Committee for Standards in Haematology, British Society for Haematology [4]. According to this scheme, basic therapy for TTP should be started as soon as possible, mainly on the 1st day of the disease. Therapy involving plasma exchange in a volume of 40–60 ml/kg body weight per day is pathogenetically justified [2].

If it is impossible to immediately begin plasma exchanges, it is recommended to carry out infusions of significant doses of fresh frozen plasma – FFP (25–30 ml/kg body weight per day) [4]. The advantage of plasma exchange, including in terms of improving the prognosis and reducing mortality in this group of patients, has been shown in a number of randomized studies, and is explained by the fact that plasma exchange allows the removal of a metalloprotease inhibitor, and FFP infusion only introduces this enzyme into the body from the outside.

The purpose of the work is to use the example of two cases from practice to describe the features of the clinical picture, variants of the *course, diagnosis and treatment of such a severe and rare disease as TTP*.

RESULTS AND DISCUSSION

Clinical observation No. 1

Bol'ny G., 37 years old. From the anamnesis: the first signs of the disease appeared 2 weeks later. after an acute respiratory viral infection and included weakness, pale skin, changes in behavior (unmotivated aggressiveness, mental disorders), dizziness, and fever. He sought medical help at his place of residence, and examination revealed severe anemia (hemoglobin 65–70 g/l), thrombocytopenia ($12\text{--}16 \times 10^9/l$), moderate hyperbilirubinemia (total bilirubin 40 $\mu\text{mol/l}$, mainly due to - direct fraction). A day after hospitalization, progression of neurological symptoms was noted - depression of consciousness up to stupor, right-sided hemiparesis; The appearance and increase of respiratory failure, which required the start of artificial pulmonary ventilation (ALV), and severe bronchorrhea with the release of a large amount of serous-hemorrhagic sputum, were also noted.

Clinical observation No. 2

Sick M., 39 years old. From the anamnesis: he noticed the first signs of the disease 1.5 months before hospitalization (weakness, headache, fever up to 38 °C). He was treated independently, after a short (about 2 weeks) improvement he noted the appearance of yellowness of the skin, pain in the lumbar region, and transient swelling of the legs. He sought medical help at his place of residence and was hospitalized in the infectious diseases department. The examination excluded acute viral hepatitis, leptospirosis, and HIV infection. 2 weeks after hospitalization, a sharp deterioration in condition was noted - impaired consciousness (stupor), progressive anemia (decrease in hemoglobin concentration to 65 g/l, red blood cells to $1.79 \times 10^{12}/l$), thrombocytopenia (up to $25 \times 10^9/l$), a moderate increase in the concentration of total bilirubin (up to 50 $\mu\text{mol/l}$) mainly due to the indirect fraction, LDH.

The described clinical cases have both a number of common features and significant differences. In both situations, TTP developed in men, which, according to the literature [2], is not typical for this disease and, accordingly, was a factor complicating diagnosis. The provoking factor in both situations was probably ARVI, which corresponds to the data published in the literature [3]. The clinical picture was not quite specific at the onset of the disease in both patients,

but gradually progressed over 1–1.5 months, which was reflected in the appearance of most of the known classical symptoms of TTP (microangiopathic hemolytic anemia, severe thrombocytopenia, neurological disorders, hemorrhagic syndrome, fever).

CONCLUSION

Thus, despite the fact that TTP is a severe and, in the absence of specific treatment, a highly lethal disease, with correct diagnosis and timely initiation of therapy, it is quite possible to achieve not only a clinical cure, but also long-term remission.

KORXONADA MAHSULOT SIFAT KO'RSATKICHLARINI INTELLEKTUAL BOSHQARISH

Annotatsiya. Ushbu maqolada mamlakatimizda iqtisodiyotni rivojlantirish, korxonalar faoliyatida boshqaruv tizimini takomillashtirish, korxonada mahsulot sifat ko'rsatkichlarini boshqarish jarayonlari haqida muallif tomonidan ilmiy-nazariy va amaliy jihatlar ochib berilgan.

Kalit so'zlar: korxonalar, iqtisodiyot, mahsulot sifati, sifatni boshqarish.

INTELLECTUAL MANAGEMENT OF PRODUCT QUALITY INDICATORS IN THE ENTERPRISE

Abstract. In this article, the author reveals the scientific-theoretical and practical aspects of economic development in our country, improvement of the management system of enterprises, management of product quality indicators in the enterprise.

Key words: enterprise, economy, product quality, quality management.

Kirish. Zamonaviy bozor iqtisodiyoti sharoitida mahsulotning nafliligi, uning xaridor iste'molini qondira olishi muhim ahamiyat kasb etadi. Shu bois bugungi kundagi bozor iqtisodiyoti ishlab chiqariladigan mahsulot va ko'rsatiladigan xizmat uchun qat'iy sifat talablarini qo'yadi. Shuningdek, mahsulot sifati uning raqobatbardoshlik darajasi yuqori bo'lishi uchun ham xizmat qiluvchi asosiy ko'rsatkich hisoblanadi. [1,2].

Korxonalarda sifat boshqaruvi uslublarini takomillashtirishning dolzarbligi so'nggi yillarda zamonaviy progressiv tashkilotlarga sifat vositalari va uslublarini joriy etish orqali mahsulot va xizmatlar sifatini oshirishga yo'naltirilganligi bilan izohlanadi. Sifat boshqaruvi tashkilotning iqtisodiy rivojlanishi uchun vosita bo'lib, sifat menejmenti uslublarini takomillashtirish korxonalar samaradorligini oshirishga bevosita ta'sir qiladi va ishlab chiqarish xarajatlarini optimallashtirishga olib keladi. Sifatni boshqarish uslublarini takomillashtirish tashkilotni baholashning eng muhim mezonlaridan biri hisoblanadi. Sifat

boshqaruvi kompaniya faoliyatining asosiy yo'nalishlaridan biri bo'lib, chunki u nafaqat mijozlar talablariga javob beradigan yuqori sifatli mahsulot yoki xizmatlarni ishlab chiqarish, balki bozorning yangi talablariga tez javob berish imkonini beradi [3,4].

Sifat ko'rsatkichlarining pasayishi tarkibiy qismlarning jismoniy eskirishi, ishlab chiqarilgan mahsulotning ichki tuzilishi yoki xususiyatlarining o'zgarishi, uning jismoniy eskirishi tufayli yuzaga kelishi mumkin. Sifat ko'rsatkichlari ishlab chiqarish jarayonida bir qator sabablarga ko'ra ma'lum jihatlari bilan farq qilishi mumkin. Ular bevosita mahsulotni ishlab chiqarish texnologiyasiga, yetkazib beriladigan komponentlarning sifatiga, mashinalar va ishlab chiqarish uskunalarning texnologik holatiga, o'lchash asboblariga, xodimlarni rag'batlantirish vositalariga, ichki va tashqi tashkiliy muhitning boshqa ko'plab omillariga bog'liq.
